British Imperial Antarctic Expedition. 1920-22. Name also seen as British Imperial Expedition. Grand name for a minor effort, by 4 young fellows, one of whom should have known better (and did — Hubert Wilkins, who rather limply claimed later that he was inveigled into going). The leader was John Cope, and the others were M.C. Lester (navigator) and Thomas Bagshawe (geologist and surveyor). A poorly planned expedition, the intention was manifold: 1. To explore the possibilities of mining minerals for the benefit of the Empire's coffers. 2. To do a similar thing with whales, with the intention of setting up a British whaling industry. 3. To investigate the meteorological and magnetic conditions of the Ross Sea area and of Cape Ann, in Enderby Land, as they might affect Australasia and South Africa. 4. To circumnavigate the continent. 5. To add to existing knowledge of Antarctica in general. They planned to take an airplane to Graham Land, and possibly, if the circumstances were right, to make the first ever flight from there to the Pole. They would set out from NZ, in July 1920 in the *Terra Nova*, Scott's old ship, and make their primary base at New Harbor, on the W edge of the Great Ice Barrier, in Dec. 1920. After establishing other bases in the area of the Ross Sea, they would, about Oct. 1921, set sail west, surveying the coast as they went, as far as Cape Ann, which they would reach in Feb. 1922. They proposed to winter-over here, and then carry on around the coast continuing Nordenskjöld's exploration along the west coast of the Weddell Sea, then with two more stops, to arrive back at New Harbor, having circumnavigated the entire continent in five or six years. However, Cope couldn't get a plane, or, indeed, the *Terra Nova*. In fact, he couldn't get a ship of any color. By March 1, 1920 the Royal Geographical Society had finally and officially turned him down, Prince Albert (later George VI) withdrew his support, and the £100,000 funding (later in 1919 estimated at £150,000) needed for the expedition (they planned to take 50 people on a 6-year expedition!) was not forthcoming, so their sights were reduced to merely 4 lads and the Weddell Sea effort. However, the boys of Mill Hill School, in London, in Jan. 1920, gave the expedition a gift — a Samoyed sledge-dog named Sir John, after their headmaster. **Sept. 27, 1920**: With no ship and inadequate everything, Cope, with movie camera in hand, set out from England for New York. **Early Oct. 1920**: Bagshawe and Lester left Cardiff on separate boats, with the stores. **Oct. 28, 1920**: Cope, in an interview in NYC, said that his trip would be the "greatest exploration ever undertaken by England." He then left Norfolk, Va., bound for Montevideo, where he intended to meet up with the other three. **Nov. 14, 1920**: Bagshawe arrived in Port Stanley. **Nov. 15, 1920**: Bagshawe left Port Stanley on the Norwegian whaler *Svend Foyn I* (Captain Ole Andersen). Lester had already gone to Deception Island on the *Ørn II*. **Nov. 18, 1920**: The *Svend Foyn I* was in 60°32' S, 60°15' W. **Nov. 19, 1920**: At noon the *Svend Foyn I* was in 61°58' S, 61°56' W. That evening they were a few miles off Smith Island, in the South Shetlands. **Nov. 20, 1920**: By 7 A.M., the *Svend Foyn I* was just to the west of Snow Island, and they could make out Deception Island in the distance. They arrived in Whalers Bay later that day. Lester, who was living on the *Ørn II*, was out whaling when Bagshawe arrived. **Nov. 23, 1920**: Lester returned from his whaling trip. When Cope arrived in Montevideo he found that Wilkins, M.C. Lester (navigator), and Thomas Bagshawe (geologist and surveyor), had already gone on to Deception Island. In the Uruguayan capital Cope learned that his dogs hadn't arrived, and that he couldn't get film for his camera because it was so expensive. **Dec. 12, 1920**: Cope left Montevideo. **Dec. 24, 1920**: Cope met up with the rest of them at Deception Island. Wilkins had already arrived separately. From Deception Island they planned to go by whaler to Snow Hill Island, to stay in Nordenskjöld's old hut there, but Snow Hill Island was iced in. So was Hope Bay, their next choice. So, instead, they went to Paradise Bay, on the Danco Coast, on the west coast of Graham Land, given a lift on the *Svend Foyn I*. Their revised intention now was to traverse Graham Land by foot, from north to south, to see if it was, indeed, part of the continent. **Jan. 11, 1921**: The four lads left Deception Island, Cope and Wilkins traveling on the *Odd I*, Bagshawe on the *Svend Foyn* I, and Lester on the *Thor I*. **Jan. 12, 1921**: They got to Paradise Bay, where they slept under a jolle (a strong, wooden barge used for transporting water to floating whaling factory ships) which had been beached at Waterboat Point by whalers from the *Neko*, 8 years before. They also found lifeboats from the sunk *Guvernøren*. This base of theirs was in 64°49' S, 62°51' W, close to where Presidente Gabriel González Videla Station was later established. They built a tiny hut on top of the jolle, and another beside it, out of suitcases, for storage, but realized that they would never be able to continue with the expedition, not even the revision of their revised plan, which was now to sledge the 100 km across the width of the Antarctic Pensinula to the Weddell Sea on the E coast of the Peninsula. However they did conduct explorations in a lifeboat. **Feb. 26, 1921**: Cope, Lester, and Wilkins left Bagshawe alone while they set out in the lifeboat for Port Lockroy, in search of a whaler to take them to Montevideo, in order to look there for a boat that would take them the following season to Snow Hill Island, their original destination. A week later Lester arrived back at Waterboat Point on the *Bjerk*, to join Lester. **March 4, 1921**: Cope and Wilkins hitched a ride on the *Solstreif* to Montevideo. **March 5, 1921**: Ole Anderson, captain of the *Svend Foyn I*, visited Bagshawe and Lester, and promised to return for them the next season. **Early April 1921**: Cope and Wilkins arrived in Montevideo. Lester and Bagshawe were not good friends, and the mental image of them living and quarreling together in the most desolate place on Earth has amused Antarctic historians for decades. Actually the two did substantial work there in zoology, meteorology, and tide observations. **Dec. 18, 1921**: Lester and Bagshawe refused a lift in the *Graham*, a whale catcher from the Norwegian factory ship *Svend Foyn I*. Capt. Ole Andersen was surprised to find them alive, let alone in good health and spirits. **Jan. 13, 1922**: Lester and Bagshawe accepted a second offer from the *Graham*, and headed home with the dogs, via Port Stanley, Montevideo, Pensacola, and New Orleans, and finally Sandefjord. **June 16, 1922**: Lester and Bagshawe arrived back in England. Cope had already gone home, and Wilkins had departed in disgust to take a position with Shackleton. Bagshawe wrote an account of the expedition, *Two Men in the Antarctic*. Cope's further plans for the acquisition of a ship and airplane for another 5-year trip did not materialize.

British Imperial Expedition *see* **British Imperial Antarctic Expedition**

British Imperial Transantarctic Expedition. 1914-17. This is the much-celebrated expedition led by Shackleton on the *Endurance.* Scott's failure to be the first to reach the South Pole in 1911-12 led Shackleton to try to recapture some glory for the British Empire in 1914, a bad year as it turned out — World War I began. So, even if had succeeded, his achievement would have gone largely unnoticed — at the time. His aim was to cross Antarctica by land, but the whole scheme ended in disaster and glorious failure. However, the heroics and fantastical adventures haunted the public imagination ever thereafter, and in the 1990s the publicity machine got behind it and it has become, quite justifiably, the most famous Antarctic expedition of them all. The principal backer of the expedition was Sir James Caird. The expedition was to be two-pronged. Shackleton was to go down to the Weddell Sea in the *Endurance*, establish a base on the coast, then cross the continent with five other men, via

the Pole, to McMurdo Sound, 1800 miles away. Aeneas Mackintosh, on the *Aurora*, was to go to Ross Island, McMurdo Sound, and lay depots en route to the Pole from the other end, so that Shackleton's party would have supplies during the last stages of the trip. 5000 people applied to join the trip, including a few women. **Aug. 8, 1914**: The *Endurance* sailed from Plymouth with 28 men aboard, including Frank Wild (2nd-in-command of the expedition), James Wordie (geologist and chief of the scientific staff), Reginald James (physicist), Robert Clark (biologist), James McIlroy and Alexander Macklin (surgeons), L.D.A. Hussey (assistant surgeon and meteorologist), Putty Marston (artist and general handyman), Harry McNish (carpenter), Charlie Green (cook), and Thomas Orde-Lees (storekeeper and motor expert). The *Endurance* crew consisted of: Frank Worsley (captain), Lionel Greenstreet (he came aboard only 24 hours before the ship left Plymouth, as replacement 1st officer), Tom Crean (2nd officer), Alf Cheetham (3rd officer), Huberht [sic] Hudson (navigating officer), Ricky Rickinson (chief engineer), Alexander Kerr (2nd engineer), Tom McLeod, Bill Stephenson, and Ernie Holness (all firemen), John Vincent (bosun), Wally How, Sir Daniel Gooch [sic], and Tim McCarthy (able seamen). Shackleton was there to see them off. He would be leaving later. They sailed via Madeira and Montevideo, and at Buenos Aires took on their only American, a stranded able seaman named Bill Bakewell. Frank Hurley, photographer and film maker, joined the expedition at Buenos Aires, as did Shackleton a few days later. Unknown to Shackleton, Bakewell and How smuggled a stowaway on board, Perce Blackborow, another stranded sailor, who would later prove his worth as steward and factotum. Two gentlemen named Barr and Irving, who had actually proved dangerous at Madeira, were dismissed at Buenos Aires, along with two others. **Sept. 1914**: The *Aurora* arrived in Sydney from Britain. **Sept. 18, 1914**: 11 men of the Ross Sea party left St. Pancras Station, in London, waved off by Shackleton, and later that evening, left Dover, on the *Ionic*. Joseph Russell Stenhouse was in charge of the party. He would be 1st officer on the *Aurora*. Others in the party were: H.G. Leonard (to be 2nd officer of the *Aurora*), Donald Mason (to be chief engineer of the *Aurora*), Alf Larkman (to be 2nd engineer of the *Aurora*), Ernie Wild (in charge of stores and dogs), Howard Ninnis (motor expert), Victor Hayward (dog driver), Arnold Patrick Spencer-Smith (photographer and padre), John Cope (biologist and quasi-surgeon), and Alex Stevens (biologist and chief of the scientific staff). Capt. C.E. Starck was master of the *Ionic*. **Sept. 19, 1914**: Shackleton left Liverpool for Buenos Aires. **Oct. 10, 1914**: The *Ionic* put in at Cape Town. **Early Oct. 1914**: Aeneas Mackintosh, who was to be captain of the *Aurora* and leader of the Ross Sea party, arrived in Sydney, having traveled separately from the others. He went to Hobart to pick up the *Aurora*, and hired a crew of 13 to take her to Sydney. Four of that crew would go to Antarctica: able seamen Charles Glidden and Sydney Atkin, fireman Samuel Grady, and bosun James Paton. Albert Thompson was engineer on this short trip (he did not go south). **Oct. 26, 1914**: With the *Endurance* painted black, and loaded with supplies and 69 Canadian sledge dogs, they sailed on to South Georgia (54°S). **Oct. 27, 1914**: The *Aurora* left Hobart, bound for Sydney. **Oct. 30, 1914**: The *Ionic* arrived at Hobart. **Nov. 1, 1914**: The *Aurora* arrived in Sydney. **Nov. 5, 1914**: The *Endurance* arrived at South Georgia. **Nov. 30, 1914**: Leonard quit the *Aurora* after a row with Stenhouse. **Dec. 3, 1914**: While the *Aurora* was in Sydney, Mason got cold feet, staged a drunk act in order to get fired, and was, duly, fired. Larkman, the 2nd engineer, then became chief. **Dec. 3, 1914**: Sir Daniel Gooch left the *Endurance* to return to Scotland. **Dec. 5, 1914**: After a month with the Norwegian whalers at Grytviken, the *Endurance* left Cumberland Bay, South Georgia early in the morning, with 160 tons of coal, and two live pigs on board. **Dec. 6, 1914**: The *Endurance* encountered icebergs. **Dec. 7, 1914**: The *Endurance* was in Antarctic waters, at the edge of the worst, most stubborn pack-ice ever seen. **Dec. 12, 1914**: Adrian Donnelly was taken on as 2nd engineer of the *Aurora*. **Dec. 15, 1914**: The *Aurora* left Sydney in the early afternoon. New expedition members had been taken on by Mackintosh at Sydney: Dick Richards (scientist), Irvine Gaze, Andrew Jack (physicist), Lionel Hooke (radioman), and new crewmen Shortie Warren, Jack Downing, and Ginger Kavanagh (who had all been working on the *Aurora* as casual laborers during the ship's refit. They were taken on at £6 per month), as well as the cook, Edward Wise. **Dec. 20, 1914**: At 7.10 A.M. the *Aurora* docked in Hobart. **Dec. 23, 1914**: The post of 2nd officer was filled, by Leslie Thomson, just hours before the *Aurora* sailed. And Émile d'Anglade (steward) and Harry Shaw (3rd fireman) were also taken on at the last minute. **Dec. 24, 1914**: The *Aurora* left Hobart, heading for Antarctica. The expeditioners were: Stevens, Jack, Cope, Richards, Gaze, Spencer-Smith, Ninnis, Wild, and Hayward. The *Aurora*'s crew were: Mackintosh, Stenhouse (he would be skipper during Mackintosh's time on land), Thomson, Hooke, Larkman, Donnelly, Grady, William Mugridge, and Shaw (all fireman), Wise (cook), d'Anglade (steward), and Paton, Downing, Ernest Joyce, Atkin, Glidden, Warren, and Kavanagh (all able seamen). **Dec. 25, 1914**: Christmas pudding and mince pies for dinner aboard the *Endurance*. **Dec. 31, 1914**: After 3 weeks of forcing her way south through the pack, the *Endurance* crossed the Antarctic Circle. **Jan. 4, 1915**: The men on the *Endurance* saw a huge iceberg in 62°S. **Jan. 5, 1915**: The *Endurance* was in 64°S. **Jan. 6, 1915**: The *Endurance* moored to an ice floe, the men got out for exercise, while the dogs chose a more violent form of exercise and some fell into the water. The sheep were killed for food. **Jan. 7, 1915**: The *Aurora* arrived at Hut Point. There were 28 men aboard. **Jan. 7-8, 1915**: The *Endurance* had to backtrack to find a new way through the pack. **Jan. 9, 1915**: Joyce and Stenhouse went ashore from the *Aurora*, at Cape Crozier, to look for the site for a hut for the three biologists who were going to study emperor penguins there. The *Aurora* hit the barrier in a whiteout. **Jan. 10, 1915**: The *Endurance* spotted Coats Land. **Jan. 11, 1915**: Sally, one of the dogs on the *Endurance*, gave birth to five pups. **Jan. 12, 1915**: Now under steam, the *Endurance* came clearly in sight of the Caird Coast. **Jan. 13/14, 1915**: The *Endurance* was held fast by the ice, in beautiful weather and a temperature of 25°F. **Jan. 14, 1915**: The *Endurance* was in 74°10' S, 27°10' W. **Jan. 16, 1915**: After a good run of 124 miles, the *Endurance* ran into a gale and could make no further progress through the pack. **Jan. 18, 1915**: The *Endurance* had a good run of 24 miles. **Jan. 19, 1915**: The *Endurance* ran into trouble in the pack-ice, only 85 miles from her destination, Vahsel Bay. Frank Wild shot a 9-foot crabeater seal for food. **Jan. 21, 1915**: Three parties from the *Aurora* went ashore to establish 2 depots, one in 79°S, and one in 80°S. Joyce, Jack, and Gaze went out first, followed by Mackintosh, Wild, and Spencer-Smith. Ninnis, Hooke, and Stenhouse would get back after 3 weeks, and be picked up by the *Aurora*, whereupon the ship would anchor at Cape Evans for the winter. Stevens, Richards, Gaze, and Spencer-Smith occupied Scott's old hut at Cape Evans. **Jan. 22, 1915**: The *Endurance* reached 77°S, her farthest south. **Jan. 23, 1915**: The *Endurance* was down to 75 tons of coal, and they were stuck fast, with winter coming on and no hope of the the ship making it back to South Georgia. They had no choice but to establish winter quarters on the beleaguered NW-floating ship. **April 3-4, 1915**: The pack began nipping at the *Endurance*'s sides. **May 1, 1915**: The sun disappeared for the men of the *Endurance*, not to be seen again for another 4 months. **May 6, 1915**: The ice broke away in one huge solid mass, from the bay north of Cape Evans, taking the *Aurora* with it. The moorings were snapped from the stern of the ship, and the *Aurora* drifted away in a blizzard, leaving the men on shore stranded. The 18 men on board the *Aurora* at this time were Stenhouse and Thomson (the only two officers), Hooke, Mauger, Paton, Larkman, Donnelly, Ninnis, Shaw, Kavanagh, Wise, Atkin, Grady, Warren, Downing, Glidden, Mugridge, and d'Anglade. **May 7, 1915**: The *Aurora* was 8 miles NW of Cape Barne, drifting along with the ice, unable to go anywhere except where the pack dictated. Thick ice came all the way up to the railings of the ship. They hoped that eventually they would be able to get back to shore, to replenish their fresh water supply. They had only 2 days' worth of fresh water in stock, and there was no doctor aboard. It was that morning that Richards, on shore, found that the *Aurora* had gone. They feared that the ship might have gone down. The *Aurora* constantly tried to radio the shore, but no luck. **May 10, 1915**: The most horrendous storm hit the *Aurora*, making a return to Cape Evans unlikely. **May 23, 1915**: A snowfall enabled the men on the *Aurora* to augment their

water supply. It was just in time. **June 2, 1915**: In the Ross Sea party, Mackintosh, Ernest Wild (Frank's brother), Hayward, Joyce, Cope, and Jack, arrived from their depot-laying in the far south. **June 16, 1915**: The Dog Derby (q.v.) was held on the ice by Shackleton's group. **June 30, 1915**: The *Endurance* had drifted more than 670 miles to the north, each mile bringing her closer to warmer water, disintegration of the ice, and freedom from the pack. **June 22, 1915**: The men of the *Aurora*, still beset by ice, got off the ship and played football. On a bet, Hooke ran naked across the ice. This was followed by Midwinter's dinner, consisting of mock turtle soup, roast mutton, boiled ham, plum pudding, and liqueur. Wise, the cook, collapsed in a drunken stupor the minute dinner was served. The *Aurora* was now 120 miles from Cape Evans, and floating north with the ice. **July 12, 1915**: A gale blew up around the *Endurance*. **July 13, 1915**: The gale turned into a blizzard. The ice was now pinching the *Endurance* even harder. "What the ice gets, the ice keeps," predicted Shackleton. **July 21, 1915**: 90 miles SW of Coulman Island, and about 150 miles from Cape Adare, the *Aurora* found herself free of ice, in a pool of water. However, by the end of the day the ice was not only back, it wrecked the ship's rudder, and threatened to smash the ship. The situation was very tense. The men prepared to evacuate to an ice floe. **Aug. 1, 1915**: With the return of the sun for the *Endurance* men, and with the ice breaking up and causing havoc, the dogs, who had been basically living on the ice, were brought aboard, just in time, as their dogloos were crushed between two floes. **Aug. 6, 1915**: The sun rose for the men on the *Aurora*. They were near Cape Adare, and 350 miles from the men left behind at Cape Evans. **Aug. 26, 1915**: Just when it looked as if the pressure of the pack had gone around the *Endurance*, it came back. **Sept. 1, 1915**: A series of relaying expeditions set out from Ross Island, to set up a depot at every degree south, as far south as Mount Hope (83°34' S), at the southern edge of the Ross Ice Shelf. Spencer-Smith was sick, and was left at 83°S while the other five — Mackintosh, Hayward, Wild, Joyce, and Richards — pushed on to Mount Hope. **Sept. 2, 1915**: The *Endurance* was squeezed out of the water, up onto the ice, but then settled back again. **Sept. 10, 1915**: Richards, of the Ross Sea party, had an apparent heart attack. **Sept. 20, 1915**: The worst pressure yet on the *Endurance*, for an hour. **Oct. 3, 1915**: Far from expectation, the *Endurance* remained faster in the ice than ever. **Oct. 10, 1915**: Temperatures up to 29°F, and the character of the ice around the *Endurance* was changing. **Oct. 14, 1915**: The floe finally broke, freeing the *Endurance*, but only for 100 yards before she became wedged again. **Oct. 16, 1915**: Again, the *Endurance* was squeezed up out of the water between two enormous floes, then thrown onto her port side, listing to about 30 degrees, wreaking havoc on board. A few hours later she righted herself. **Oct. 19, 1915**: With the pack breaking up, Shackleton prepared to get under way. A killer whale appeared off the side of the ship. **Oct. 23, 1915**: There was now as much as 22 hours of sunlight a day for the lads on the *Endurance*. **Oct. 24, 1915**: Great damage to the *Endurance* as she was nipped between three ice floes. With desperate determination, the men stopped the water rushing in. **Oct. 26, 1915**: Eight emperor penguins marched up the to the *Endurance*, and let out a collective wail. This was an omen. **Oct. 27, 1915**: Enormous pressure tore off the rudder and sternpost, the keel went, and the *Endurance* adopted an unnatural posture, i.e., she started to sink. The men got out in anticipation of the ship going down. Shackleton was the last to leave. They began living on an ice floe, 364 miles from the nearest land, and with no ship. Each man was assigned a sleeping bag and would sleep in one of five thin, linen tents, on groundsheets that were not waterproof. What made it worse was that the ice floe beneath them kept cracking up, and they had to keep moving. **Oct. 30, 1915**: "Now we start for Robertson Island, boys!" cried Shackleton. Their destination was 200 miles to the NW. All but the most vital possessions had been dumped, and they dragged the three lifeboats on composite sledges. Crean shot three of the puppies and Mrs. Chippy, the feline mascot. Macklin had to shoot his trusted friend Sirius twice in the head as the dog jumped up to lick his hand. Shackleton, Hudson, Wordie, and Hurley set out on the advance party to clear as many obstacles for the haulers as they could. **Nov. 1, 1915**: After managing only a short distance due to the terrible surface conditions and the thick snow, Shackleton's group set up Ocean Camp, 1½ miles from the stricken *Endurance*, the masts of which could be seen in the distance. Robertson Island was out of the question. Their only hope was to let the floe take them north to a point where Paulet Island, at this moment 400 miles away, would be feasible by the lifeboats. SwedAE 1901-04 had built a hut there, and there were emergency supplies in it. And, from there to Graham Land, where they hoped to meet Norwegian whalers. The next several days were spent retrieving as many objects (3 tons) as they could from "Dump Camp," including certain volumes of *Encyclopaedia Britannica*. They also cannibalized the dying ship. **Nov. 9, 1915**: Hurley and Shackleton selected the best photographic negatives to take with them on the lifeboats. The sailors erected a lookout tower. **Nov. 21, 1915**: What they were waiting for happened. "She's gone, boys," Shackleton said, as the *Endurance* was crushed by the ice and disappeared. For five months the 28 men lived alone on the northbound floe as it took them away from Antarctica, "dwelling on a colossal ice raft, with but five feet of ice separating us from 2,000 fathoms of ocean & drifting along under the caprices of wind & tides, to heaven knows where," said Hurley, in his diary. Morale was getting lower, and the dangers that came with that lurked ominously. In addition they were often being blown to the NE where it was only open ocean ahead, no land. The land was to the NW. **Dec. 18, 1915**: Northerly winds blew Shackleton's group back the way they had come. **Dec. 20, 1915**: Shackleton comtemplated another march over the floes to land, with the intention of setting up a new camp 60 miles to the west. **Dec. 23, 1915**: The march by Shackleton's group began, covering 1¼ miles on the first day, hauling tents, galley, stores, supplies, and two of the three boats, all pulled over the disintegrating ice. They had left Ocean Camp behind. **Dec. 27, 1915**: With morale disastrous in Shackleton's group, McNish mutinied. **Dec. 30, 1915**: Patience Camp was set up by Shackleton's group, 8 miles from Ocean Camp, which was now pretty much unreachable (even if they had wanted to go back) due to the crack-up of the floe. **Dec. 31, 1915**: Shackleton and his men floated over the Antarctic Circle (66°30' S). **Jan. 14, 1916**: In Shackleton's party, Wild had to shoot 27 dogs. Hurley and Macklin made a dangerous sledge run to Ocean Camp, and brought back 900 pounds of supplies the following day. **Jan. 26, 1916**: Of the Ross Sea party, Mackintosh, Hayward, Wild, Joyce, and Richards reached Mount Hope. **Jan. 29, 1916**: Mackintosh, Hayward, Wild, Joyce, and Richards were back with Spencer-Smith, who was now incapable of walking. They were now heading back to base, their mission having been completed under the most terrible conditions. In addition to Spencer-Smith, Mackintosh was becoming progressively worse and incapable. The (mostly) inexperienced dogs had all died on the return trip. **Jan. 31, 1916**: Shackleton's group crossed 66°S, heading north. They were now 150 miles from Snow Island. **Feb. 2, 1916**: The *Stancomb-Wills*, the third boat, that had been left at Ocean Camp, now joined (courtesy of a very dangerous sledging expedition) the *James Caird* and the *Dudley Docker*. However, food was now running out. **Feb. 17-23, 1916**: In the Ross Sea party, Mackintosh, Wild, Hayward, Richards, Joyce, Mackintosh, and Spencer-Smith were trapped immobile in a blizzard 10 miles south of Bluff Depot (79°S). **Late Feb. 1916**: 300 Adélie penguins were captured and killed by Shackleton's group for food and fuel for the stove. **March 1, 1916**: In the Ross Sea party, Mackintosh, Hayward, Wild, Richards, Joyce, and Spencer-Smith reached the depot. **March 5, 1916**: The pack was drifting at an average of 2 miles a day, and Shackleton's group were now within 70 miles of Paulet Island. **March 7, 1916**: A blizzard afflicted Shackleton's group. **March 8, 1916**: In the Ross Sea party, the Reverend Spencer-Smith died of scurvy and exhaustion. **March 11, 1916**: The remaining 5 men of the Ross Sea Party reached the Discovery Hut on Ross Island. They were in terrible condition. Their aim was to get to Scott's other hut, at Cape Evans, not too far away, but because the sea ice was still soft, they didn't dare venture across it. Mackintosh and Hayward finally became impatient, and died trying to get across. **March 21, 1916**: The first day of a new winter and the weather got colder for Shackleton's group each day from now on. **March 23, 1916**: Shackleton's group spotted Joinville Island, the first land they had seen in 16 months, but they couldn't get to

it. **March 30, 1916**: The last of the dogs of Shackleton's group was shot, and the younger ones were eaten. Several big seals were killed too. **March 31, 1916**: The floe cracked, separating the men of Shackleton's group from the three lifeboats. **April 2, 1916**: The *Aurora* rendezvoused with the tug *Dunedin*, off Stewart Island, NZ. **April 7, 1916**: Shackleton's group spotted Clarence Island, and then, later in the day, Elephant Island. **April 9, 1916**: The floe cracked again, immediately beneath the *James Caird*. The boys were now on a floe that measured 90 by 100 by 120 yards. At 1.30 P.M. they launched the three boats within sight of Elephant Island. Shackleton and Wild commanded the *James Caird*, with Clark, Hurley, Hussey, James, Wordie, McNish, Green, Vincent, and McCarthy also in it. Worsley commanded the *Dudley Docker*, with Greenstreet, Kerr, Orde-Lees, Macklin, Cheetham, Marston, McLeod, and Holness. The *Stancomb-Wills*, the smallest boat, and the one in the worst shape, was commanded by Hudson and Crean, with Rickinson, McIlroy, How, Bakewell, Blackborow, and Stephenson. They camped on a floe that night, in tents. A crack opened up beneath the tent containing How and Holness, the latter still in his sleeping bag, and they were pitched into the water. How got out, and Shackleton got Holness out. Meanwhile, the killer whales lurked. **April 10, 1916**: At 8 A.M. they set out again in the boats, in a gale, heading, hopefully, for either Clarence Island or Elephant Island, both about 60 miles away. With a mist obscuring their direction, and the *Stancomb-Wills* making heavy going, it was a difficult day. They finally broke through the pack into the open ocean, but it was too much for the small boats, and they turned back, instead heading due west for King George Island. They camped that night on another floe. **April 11, 1916**: In the wind, and snow, and heavy swells, the floe started to break up. They finally got off, late in the day, and that night tried to camp on yet another floe, but it was too dangerous, so they slept in the boats as they were moored to another floe. The rain, snow, swells, seasickness, and constant and close attention given by killer whales, rendered it a bad night. **April 12, 1916**: After breakfast, they were sailing again, by 9 A.M. That day Worsley took the first available reading of their position. They fully expected to have made several miles toward their destination, but instead had been blown backwards and eastwards, so that they were now farther away from land than they had been when at Patience Camp. Shackleton decided to try the calmest way, to make for Hope Bay, 130 miles to the SW. That night they couldn't even moor to a floe, let alone camp on one, and they drifted through the ever colder night, with snow coming down. **April 13, 1916**: They awoke to find the boats sheathed with ice, which they had to break off with axes. The men were in a desperate way, and Shackleton decided to make a run for Elephant Island. It was now a race against time for the men, and by 4 P.M. they were being inundated by gales and swells in the open ocean. Dysentery was setting in from the eating of uncooked dog pemmican, and this was causing additional havoc. The *Stancomb-Wills* was shipping water badly. That night was again spent in the boats, which were all lashed together. **April 14, 1916**: They awoke to see Clarence Island 30 miles away. And then they saw Elephant Island, easier to land on. It had been exactly where Worsley had predicted. By 3 P.M. they were within 10 miles of Elephant Island, but storms prevented them getting there. The *James Caird* now took the *Stancomb-Wills* in tow. They sailed on during the night, and the *Dudley Docker* disappeared. Shackleton had not slept since leaving Patience Camp. **April 15, 1916**: They were under the cliffs of deserted Elephant Island before they saw them, due to the heavy mist. They cruised the coast until 9 A.M., when they found Cape Valentine. The *Stancomb-Wills*, now with Shackleton aboard, went in first, and he accorded Perce Blackborow the honor of being the first to step ashore, he being the youngest of the group. But Blackborow had severe frostbite and couldn't walk. Shackleton assisted him. Then came the *Dudley Docker* from its absence, and beached, then the *James Caird* was unloaded in painful relays, before it could be beached also. It was their first land in 497 days. They now had their first hot meal in days, and slept at Cape Valentine. It was a good night. **April 16, 1916**: Wild, Marston, Vincent, Crean, and McCarthy set out in the *Dudley Docker* to find better protection than this little beach. They found one, 7 miles down the north coast, and then returned to Cape Valentine with the news. **April 17, 1916**: At dawn the men loaded the three boats, leaving behind what they simply could not take, and set out in a gale that threatened at any moment to send them out to sea. But they made it, to Cape Wild, with Hudson and Blackborow suffering from frostbite, and Rickinson believed to have had a heart attack. That night a blizzard blew down their tents, destroyed the big one, and blew away several supplies. **April 18, 1916**: The blizzard raged all day. The men now had no shelter. **April 19, 1916**: With the blizzard raging, some of the men attempted revolt. This is where officers come in handy. **April 20, 1916**: With the blizzard in full force, Shackleton made the decision that a party of 6 would head for South Georgia in the *James Caird*, a 22½-foot open lifeboat, 800 miles across the worst ocean in the world, in the winter. All they had was a sextant and chronometer, with low visibility, and no land in between. It was an impossible idea — to get to the Norwegian whalers, and bring help for the rest, who would stay on Elephant Island. But, impossible or not, it was the idea Shackleton came up with. McNish, the carpenter, immediately began to ready the *James Caird* for the trip. **April 22, 1916**: The *James Caird* was ready, and the blizzard blew itself out, although the snow continued heavily and the conditions were terrible. **April 24, 1916**: With conditions improved, at 12.30 P.M. Shackleton launched the *James Caird*, with food for a month. If they didn't get back to rescue the men on Elephant Island, Wild, who was in command of that party, would set out for Deception Island the following spring. Those who left for South Georgia on the *James Caird* were: Shackleton, Worsley, Crean, McCarthy, Vincent, and McNish. At 4 P.M. Wild, looking through binoculars, saw the *James Caird* disappear into the pack-ice. **April 25, 1916**: The *James Caird* was 45 miles from Elephant Island, and the gales were horrific. Back at Elephant Island, the bay near Cape Wild was now full of pack-ice. If Shackleton had left it just one more day, the *James Caird* would never have gotten out. **April 26, 1916**: Worsley was able to take his first sextant reading, as the sun came out briefly. They were 128 miles from Elephant Island. **April 29, 1916**: They covered 92 miles heading in the right direction, NE, and were now about 550 miles from South Georgia. **April 30, 1916**: The boys on Elephant Island began constructing a shelter, "The Snuggery," out of the two boats. **May 1, 1916**: With the accumulated ice the *James Caird* was now in danger of sinking, and the men had to chip away in the most incredibly arduous and dangerous conditions. **May 2, 1916**: At midnight, just as Shackleton took over from Worsley at the helm, he saw the sky clear behind him, and hopes lifted — but only for two seconds. It wasn't a lightening of the sky at all, it was a wave, of such monstrous proportions that not one of the sailors had ever seen anything like it. And it was coming right at them. However, the *James Caird* survived. **May 3, 1916**: The sun appeared, and Worsley was able to take his first sextant reading in 6 days. They had covered 444 miles, more than halfway, and spirits rose. **May 5, 1916**: The *James Caird* covered 96 miles, their best day yet. Willis Island, off the western tip of South Georgia, was now only 155 miles away. **May 6, 1916**: They ran out of fresh water. **May 7, 1916**: A piece of kelp floated by. **May 8, 1916**: They saw seaweed and land birds. At this point they made the decision to head for the west (and deserted) side of the island, rather than the eastern side, where the whalers were. If they aimed for the eastern side, and missed, the prevailing west winds would take them out into 3000 miles of open ocean. If they went for the west side, at least they stood a chance of striking land and making their way around to the whaling station. McCarthy spotted land at 12.30 P.M. It was Cape Demidov, on South Georgia, and was 10 miles away. By 3 P.M. they were looking at their first vegetation since Dec. 5, 1914. However, the nearest whaling station was 150 miles way, around the other side of the island. And they were now desperate for water. They spent the night 18 miles offshore, in a desperate state. **May 9, 1916**: The dawn brought hail, sleet and snow, and a hurricane. The *James Caird* was shipping water badly and by noon was being thrown toward deadly cliffs. They fought the tempest for 9 hours, and it finally subsided by nightfall, and they survived. **May 10, 1916**: It took them five attempts to get into King Haakon Bay, but by dusk they were safe. There was a stream, and as Shackleton said, it was a "splendid moment." They slept in a cave that night, and almost lost the *James Caird*, their

only way out. **May 11, 1916**: Shackleton made a decision. Farther around the island was the Norwegian whaling harbor of Stromness, with several whaling stations, but separating Stromness from Shackleton's crew were the high, dangerous mountains that no one had ever crossed. 22 miles as the crow flies. He would attempt to make the crossing by land, with two companions. There were a few problems with this plan. One was that no one had ever done it before. In fact, no one had ever been even a mile into the interior of South Georgia. Two, there were no maps of the interior. And three, the terrain was impossibly treacherous, with jagged peaks and crevasses abounding. **May 12, 1916**: McNish was at work on the *James Caird*, and Shackleton, Worsley, and Crean were out scouting land. **May 15, 1916**: They all got in the *James Caird* and made for the head of the bay, from where a pass led into the interior of the island. The men turned the boat over on shore, and formed Peggoty Camp. They now had food, water, and fuel, but it began to snow and hail again. Winter was fast approaching on South Georgia. **May 19, 1916**: At 3 A.M. Shackleton took Crean and Worsley and, with three days rations packed in socks, set out again, this time to cross the mountains that it was considered by others could not be crossed. The other three men stayed behind, led by McNish. By 9 A.M. when they stopped for breakfast, they were over 1000 feet up, and still climbing. By 4 P.M., after some setbacks, they were ready to descend to the other side of the island, and actually slid down, covering 1500 feet in a few minutes. **May 20, 1916**: In the early morning they thought they had reached Stromness, but it was an error. They backtracked, and continued marching. They had been marching non-stop since leaving King Haakon Bay. Just before dawn they saw Stromness. At 6.30 A.M., and again at 7 A.M. they heard the whaling ship's whistle blow to get the Norwegians to work. It was their first outside human noise since Dec. 5, 1914. At 1.30 P.M. they saw other men. At 3 P.M. they arrived at the station. They had marched for 36 hours without rest. Two small children ran from them in fright. They looked as if from another world. Their faces were black, and hair an absolute mess. Their clothes were in tatters, and they were totally unrecognizable as civilized men, indeed, as human beings. Other people avoided them, as if they were a plague, and finally, Shackleton approached the station foreman, Matthias Andersen, and asked to be taken to Captain Anton Andersen, the station manager who had seen them off what seemed like a lifetime ago. But Thoralf Sørlle was now the station manager, a man Shackleton knew. "Who the hell are you?," asked Sorlle as they knocked on his door. "Don't you know me?," Shackleton asked. "I know your voice," replied the manager. "You're the mate of the *Daisy*." Shackleton said, "My name is Shackleton." They were treated royally, and after dinner Worsley went with the relief ship *Samson* to pick up the three men at King Haakon Bay. Shackleton and Sørlle discussed Elephant Island. **May 21, 1916**: Worsley arrived at King Haakon Bay. Vincent, McNish, and McCarthy did not recognize the shaved and tonsured man who greeted them. They thought Worsley was a Norwegian. While this was going on, Shackleton went to Husvik Bay to arrange the loan of the English-owned *Southern Sky*, to act as a rescue ship for the boys on Elephant Island. Captain Ingvar Thom, an old friend, immediately volunteered as skipper, and there was no shortage of other volunteers. **May 23, 1916**: The *Samson*, beaten back by weather, was finally able to get back into Stromness. Shackleton, Crean, and Worsley left for Elephant Island on the *Southern Sky*, while McNish, Vincent, and McCarthy headed back for Britain. The effort to get to Elephant Island was thwarted by the pack-ice, so they went to the Falkland Islands, from where Shackleton cabled England. They had thought he was dead. A cable came back from high places, "Rejoice to hear of your safe arrival in the Falkland Islands and trust your companions on Elephant Island may soon be rescued.—George, R.I." However, the British being at war, couldn't help with an ice-cutter. The UK government asked around, and Shackleton toured around, looking for a South American vessel. **June 10, 1916**: Uruguay volunteered the *Instituto de Pesca No. I*, with crew, free of charge. **June 13, 1916**: The *Instututo de Pesca No. I* came within sight of Elephant Island, but the pack would not allow her in. **June 15, 1916**: They took Blackborow's toes off at Elephant Island (*see* **Amputations**). **June 16, 1916**: The *Instituto de Pesca No. I* arrived home. In Punta Arenas the British Institution had a whip-round among its members and chartered the *Emma*. **July 12, 1916**: The *Emma* set out for Elephant Island, with the Chilean steamer *Yelcho* accompanying her down as far as 60°S. The *Emma* came to within 100 miles, but could get no farther in. **July 15, 1916**: On the Ross Sea party, Wild, Joyce, and Richards made it to Cape Evans. They took a bath. It was Wild's first bath in 300 days. **Aug. 3, 1916**: After three weeks of terrible weather, the *Emma* arrived back in Punta Arenas. Meanwhile the men on Elephant Island had been four months with no outside contact. **Aug. 25, 1916**: With the British government unable or unwilling to help further, Shackleton secured the *Yelcho*, and set sail for Elephant Island once more. **Aug. 30, 1916**: On Elephant Island Marston spotted the *Yelcho*. "All well!," the men yelled out as Shackleton and Crean pulled in in a small boat. Within one hour the 22 men were aboard the *Yelcho*. Orde-Lees was the last to leave. At 2.15 P.M., the ship pulled away. **Sept. 3, 1916**: The *Yelcho* pulled into Punta Arenas, to a tremendous reception. **Oct. 8, 1916**: The expediton was finally over, when they arrived at Buenos Aires. Not one of the 28 men on this part of the expedition had been lost. **Nov. 11, 1916**: Hurley arrived in Liverpool. **Dec. 13, 1916**: Austin Le Gros signed on to the *Aurora*, as 2nd officer. **Dec. 20, 1916**: At 7.40 A.M., the *Aurora*, under the command of Capt. John King Davis, and with Shackleton aboard, left Port Chalmers, NZ, bound for Cape Evans, to pick up the depot-laying party there. The rest of the *Aurora*'s crew that relief season were: C.P. de la Motte (1st officer), Austin Le Gros (2nd officer), William Aylward (3rd officer), Morton Moyes (4th mate and navigator), James Paton (bosun), F.J. Gillies (chief engineer), Arthur Dakin (2nd engineer), Michael Hannan (donkeyman), Howard Ninnis (purser and photographer), Frederick Middleton (surgeon), T.M. Ryan (radioman), Alexander Webster (chief steward), Baden Robertson (2nd steward), Henry Voegeli (chief cook), William Peacock, Alasdair MacKinnon, Ewen McDonald, Malcolm McNeil, C. Brock (able seamen), John Rafferty, E. Murphy, and T. Smith (firemen). **Dec. 26, 1916**: The *Aurora*, at noon, was in 59°30' S, 172°E. **Dec. 27, 1916**: The *Aurora* spotted two large icebergs at 6.30 A.M. **Dec. 31, 1916**: The *Aurora* spotted her first seals and penguins. **Jan. 6, 1917**: The *Aurora* spotted Mount Sabine. **Jan. 8, 1917**: After a pretty clement trip, the *Aurora* was in 73°31' S, 180 miles from Cape Evans. **Jan. 9, 1917**: At 11.30 A.M. the *Aurora* spotted Mount Erebus and Mount Terror. **Jan. 10, 1917**: At 7.30 A.M. the *Aurora* entered McMurdo Sound, 20 miles from Cape Evans. Wild, Joyce, Gaze, Cope, Jack, Stevens, and Richards were picked up by the *Aurora*, along with dogs (Towser, Oscar, Gunner, and Beechie were the only ones left of the original 26) and two sledge-loads of equipment. The story of the reunion of the two parties cannot be told any better or more dramatically than as written by McElrea and Harrowfield in their brilliant book, *Polar Castaways*. At 7.45 P.M. the *Aurora* drifted into McMurdo Sound. **Jan. 12, 1917**: The *Aurora* was anchored to the ice, and the men began a fruitless search for the bodies of Mackintosh and Hayward. **Jan. 17, 1917**: The *Aurora* sailed north. **Jan. 23, 1917**: The *Aurora* was in 73°46' S. **Jan. 26, 1917**: The *Aurora* passed Cape Adare. The irony of the Ross Sea party was that they need not have gone through all that. But they could never have known that Shackleton was never going to be using the depots, that his side of the expedition had been aborted. **Jan. 30, 1917**: The *Aurora* was in 68°04' S. **Jan. 31, 1917**: The *Aurora* left the pack-ice, heading north. **Feb. 1, 1917**: The *Aurora* crossed the Antarctic Circle. **Feb. 3, 1917**: The *Aurora* was in 60°15' S. **Feb. 4, 1917**: The *Aurora* was in 57°30' S. **Feb. 6, 1917**: The *Aurora* covered 216 miles that day. **Feb. 7, 1917**: The *Aurora* was in 47°04' S. **Feb. 9, 1917**: The *Aurora* arrived in Wellington. **Feb. 19, 1917**: Moyes, Gillies, Le Gros, Ryan, Robertson, Voegeli, and McNeill all disembarked at Sydney. **May 1917**: Shackleton arrived in England. The first successful land traverse of the entire continent did not take place until March 2, 1958, when Fuchs arrived at Ross Island.

British Joint Services Expedition, 1970-71. There have been many British Joint Services expeditions to several different parts of the world. This was the first one to Antarctica, actually to Elephant Island, in the South Shetlands, led by Malcolm Keith Burley (b. Sept. 28, 1927, Flintshire, Wales. d. Aug. 23, 2010). There were 14

men altogether. Chris Furse was deputy leader. Dave Burkitt was on it, as was Crispin Agnew (*see* **Mount Irving**). Topography was the main aim. They flew to Buenos Aires, and picked up the *Endurance* from there, and were helicoptered in off the ship, to Elephant Island. On Dec. 6, 1970, they climbed Mount Irving, the highest peak on Clarence Island.

British Joint Services Expedition, 1976-77. Led by Chris Furse (q.v., and also see the entry immediately below), to Elephant Island and neighboring islands. This one continued the expedition of 1970-71. Two parties landed from the *Endurance*, one on Gibbs Island on Dec. 15, 1976, and one on O'Brien Island on Dec. 17, 1976. The Gibbs Island party consisted of: Chris Furse, Chris Brown, Andy Simkins, Tim Hallpike, Jem P. Baylis (botanist), Nick Martin, Frank Mogford, and Alan Milne. What was called the Clarence Island party consisted of: John E. Highton (deputy leader of the expedition), Mike Wimpenny, Dave Monteith, Len Hunt, Chris Hurran, Gordon Turnbull, John Chuter, and Nigel Davies. They moved around to different islands in the Elephant Island group in canoes, and were finally picked up on March 13, 1977.

British Joint Services Expedition, 1983-85. Sometimes acronymed to JSEBI (Joint Services Expedition to Brabant Island). Backed by 65 sponsors. 34 persons, in two teams, were put off on Brabant Island, in the Palmer Archipelago, from the *Endurance*, and spent from Jan. 4, 1984 to March 1985 there. Main Base was established at Metchnikoff Point, and several other camps and caches were established along the island's coastline. One group, of 10, led by Cdr. Chris Furse, RN, deliberately used only tents for shelter, to see what effects long-term exposure to cold would have on humans. Others in Furse's party included François de Gerlache (grandson of the great explorer), Jon Beattie, Mike Ringe, Jim Lumsden, Ted Atkins, and Martin Kimbrey. The other party, purely a mountain-climbing party, led by Lt. Cdr. Chris Waghorn, aged 36, came to grief just south of Cushing Peak, or at least Cdr. Waghorn did, when, on March 4, 1985, he plunged down a crevasse 2500 feet up a mountain and broke his leg 4 inches above the knee. While the rest of the party went for help, Lance Corporal Kerry Gill, aged 22, stayed with Waghorn in their tent, playing scrabble. On March 9, 1985 Lt. Cdr. John White took off from the *Endurance* in a Royal Marine Wasp helicopter, and, while the world waited, plucked the injured man off the mountain.

British Joint Services Expedition, 1995-96. Led by Martin Kimbrey, on the *Endurance*, it tried, but failed, to climb Mount Foster, on Smith Island, in the South Shetlands.

British National Antarctic Expedition. 1901-04. Also called the Royal Society Expedition, and the *Discovery* Expedition. This was Scott's first expedition, and as far back as Nov. 1893 it had been the brainchild of Sir Clements Markham, president of the Royal Geographical Society, in London. Repeated attempts to get the government to sponsor such an expedition failed, so finally, in 1898, the RGS and the Royal Society joined forces to launch Britain's big, prestigious expedition. Germany, Belgium, and Sweden were also mounting big expeditions, and the four countries split their areas of interest. Britain got the Ross quadrant. The aims of the expedition (after they had finally been thrashed out and agreed to) were geographic and scientific. The RS wanted a scientist to lead the expedition, and a naval officer merely to carry the expeditioners to Antarctica. On the other hand, Markham wanted a young, aggressive naval officer to lead the entire expedition. **March 22, 1899**: Llewellyn Longstaff, a wealthy member of the RGS, contributed £25,000 to the expedition. This brought the kitty to £40,000. **April 24, 1899**: the committee announced that the Prince of Wales (very soon to be King Edward VII) had agreed to be patron of the expedition. **June 1899**: Scott learned from Markham that a national expedition was on the cards, and immediately applied to lead the naval part of it. The societies began looking for a scientist to be head of the overall expedition. **July 20, 1899**: The government reluctantly gave a grant of £45,000. **Dec. 14, 1899**: A contract was signed with the Dundee Ship Building Company to build the *Discovery*, the first British ship ever built for specifically scientific purposes. **Feb. 1900**: Geologist, explorer, and mountain climber John Walter Gregory was chosen to lead the expedition. However, Markham, going behind the committee's back, applied to the Admiralty for the release from active naval service of 3 possible overall leaders of the expedition: Cdr. John de Robeck, Scott, and Charles Royds. **March 16, 1900**: The keel of the *Discovery* was laid. **April 5, 1900**: Scott and Royds were released by the Admiralty. **April 18, 1900**: Markham told an outraged committee that Scott was to lead and Royds was to be 2nd-in-command. **May 4, 1900**: The committee met to vote, but deadlocked. **May 25, 1900**: Scott's appointment was confirmed, unanimously. **May 29, 1900**: Albert Armitage, and not Royds after all, was picked as 2nd-in-command. Reginald Koettlitz was picked as doctor, and Edward Wilson as assistant surgeon (he would also be the artist). On the naval side, Royds was picked as 1st lieutenant, Michael Barne as 2nd lieutenant, and Reginald Skelton as chief engineer (he would also be chief photographer). The post of naturalist was offered to William S. Bruce, but as he was organizing his own expedition (ScotNAE 1902-04), he declined, and the post went to Thomas Hodgson. Louis Bernacchi was physicist (he would travel to NZ separately), and Hartley Ferrar was geologist. **June 9, 1900**: Scott received his letter of command, and promotion from lieutenant to commander. **June 11, 1900**: Scott wrote his acceptance letter. **Oct. 1900**: Scott traveled to Christiania to consult Nansen, the great Arctic explorer. Nansen suggested dogs, so Scott acquired dogs. **Dec. 1900**: Gregory arrived from Australia, shocked at the turn of events, and began to conspire to overthrow Scott. **Feb. 1901**: Ernest Shackleton, then a young merchant seaman, had been rejected for the expedition, but used connections to get an interview with Armitage, who then recommended him to Scott. Scott made him 3rd lieutenant, in charge of stores and deep-sea water analysis. **March 21, 1901**: Lady Markham launched the *Discovery*. **May 15, 1901**: Gregory, offered the usual choice, resigned in disgust. **June 1901**: Dr. George Murray, head of the botanical department at the British Museum, replaced Gregory, but would only advise the scientists as far as Melbourne, and then return. Llewellyn Longstaff contributed £5000 toward the purchase of a relief ship, the *Morgenen*. **July 31, 1901**: The *Discovery* left London. **Aug. 5, 1901**: At Cowes the new king and queen came aboard. The queen's peke fell overboard and was rescued by a sailor who dived in after the animal. More importantly, able seaman George Croucher joined the expedition from the *Narcissus*. **Aug. 6, 1901**: The *Discovery* left England, bound for NZ, 14,000 miles away. In addition to those personnel already mentioned were: Edgar Evans, David Allan, Jacob Cross, William MacFarlane, William Smythe, and Thomas Kennar (all RN petty officers), Alfred Feather (bosun), Fred Dailey (carpenter), James Dellbridge (assistant engineer), and James Duncan (shipwright). The able seamen were: James W. Dell, John Mardon (aged 25), Harry J. Baker, John Masterton (aged 33), Charles S. Bonner (aged 23; born London; he had come from the *Jupiter*), John D. Baker (aged 23), William Heald, William Peters, Arthur Pilbeam, Frank Wild, Thomas Williamson, and John Walker. There were 4 RN leading stokers: Arthur Quartley, William Lashly, Thomas Whitfield, and William Page; and a Merchant Navy leading stoker, William Hubert. A Royal Marine corporal, Arthur Blissett, was also aboard; he would serve as a ward-room domestic. Albert Dowsett (aged 23) was steward. Sydney Roper (aged 23) and J. Hancock were the cooks, and baker Charlie Clark was assistant cook. Job Clarke was mess steward, and Reginald Ford was ship's steward. Hugh Miller (aged 36) was sail maker. Oceanographer Hugh Robert Mill was also aboard. **Aug. 15, 1901**: The *Discovery* arrived at Madeira, where Mr. Mill got off, as planned. **Aug. 16, 1901**: The *Discovery* left Madeira, heading for Cape Town. **Sept. 1901**: The *Morgenen* sailed from Norway to England, and her name was changed to the *Morning*. William Colbeck was appointed her commander. Colbeck had also been on BAE 1898-1900. **Oct. 3, 1901**: The *Discovery*, now a badly leaking ship, pulled into Cape Town. Scott decided to abort the Australian part of the trip, so Dr. Murray was dropped off in South Africa. Certain changes were made in personnel. At Simon's Bay, Masterton and Mardon were discharged by mutual consent, to be replaced by Robert Sinclair (aged 31) and George Vince respectively (Vince came off the *Beagle*). John W. Waterman (aged 21) was invalided off, and replaced by able seaman Ernest Joyce and leading stoker Frank Plumley, both of whom joined the expedition from the *Gibraltar*. Horace Buckridge

also joined here, as did Royal Marine private Gilbert Scott (no relation to the expedition leader). Like Blissett, he would serve as wardroom domestic. Job Clarke ("useless trash," according to Sir Clements Markham) was also dismissed. Harry J. Baker was dismissed for drunkenness. **Oct. 14, 1901**: The *Discovery* left South Africa. **Nov. 12, 1901**: In 50°S, 131' E, Scott turned south. **Nov. 16, 1901**: They saw their first ice. **Nov. 17, 1901**: Scott turned NE toward NZ. **Nov. 23, 1901**: The *Discovery* landed at Macquarie Island. **Nov. 25, 1901**: Auckland Island was sighted. **Nov. 28, 1901**: The *Discovery* arrived at Lyttelton, NZ, at midnight. Re-fitting and repairs began. More changes in personnel were made. Roper, the cook, was discharged by mutual consent (Scott found him unsuitable), and replaced by Henry Brett; J. Hancock, the other cook, also failed to pass muster; Dowsett, the steward, was similarly discharged, and replaced by Clarence Hare. Louis Bernacchi joined the expedition here, with his instruments, and William Weller joined with the dogs. Petty Officer Smythe, caught up, as most of the others were, in the overwhelming hospitality offered by the New Zealanders, went AWOL in Christchurch, and was demoted to able seaman (he would later be re-instated as P.O. at the end of the season). **Dec. 18, 1901**: Scott, in NZ, received a telegram from the UK, which said, "The King wishes you all God-speed, all success, and a safe return." **Dec. 21, 1901**: Amid cheering crowds, the *Discovery* was escorted out of Lyttelton Harbor to Port Chalmers, by the *Ringaroona* and *Lizard*. The *Discovery* carried provisions for 2 years and 9 months, 350 tons of coal, 45 sheep, and 23 dogs. There were 46 men on board. **Dec. 22, 1901**: At Port Chalmers certain changes were made in personnel. Tom Crean and Jesse Handsley joined from the *Ringaroona*; seaman Charles Bonner (aged 23), probably drunk, shinnied up onto the mainmast to show off, and fell to his death; Sinclair, holding himself responsible for this tragedy, deserted, along with seaman John D. Baker. Miller, the sail maker, was invalided off. He was not replaced. **Dec. 24, 1901**: The *Discovery* left Port Chalmers. **Jan. 2, 1902**: The first icebergs were encountered, in 65°30' S. **Jan. 3, 1902**: They crossed the Antarctic Circle. **Jan. 8, 1902**: At 10.30 P.M. they sighted Antarctica. **Jan. 9, 1902**: They landed at Cape Adare. **Jan. 10, 1902**: They left Victoria Land, going south. **Jan. 18, 1902**: Due to delays caused by gales and heavy ice the *Discovery* arrived behind schedule at Wood Bay. **Jan. 1902**: Scott placed the cook, Henry Brett, in irons. Charlie Clark, the assistant cook, pretty much took over. **Jan. 21, 1902**: They pulled into McMurdo Bay, which Scott re-defined as a sound. **Jan. 23, 1902**: The *Discovery* was at the Ross Ice Barrier. They discovered the Edward VII Peninsula (calling it King Edward VII Land). **Feb. 3, 1902**: They anchored in the Bay of Whales. **Feb. 4, 1902**: Lt. Armitage and 4 men went sledging, and Scott went up in his balloon. Shackleton went up next, and the sledging party returned, having set a new southing record of 79°03' S. They set up winter quarters on Hut Point Peninsula on McMurdo Sound. **March 4, 1902**: Royds set out leading a party 40 miles out, with 4 sledges, a total of 4 officers, and 8 men, including Barne, Skelton, Koetlitz, Vince, Evans, Hare, Quartley, Frank Wild, Weller, Plumley, and Heald, to leave a record at the penguin rookery at Cape Crozier. Scott was to have led the party but had injured his knee in a skiing accident. **March 5, 1902**: The Royds party had only made 5 miles. **March 8, 1902**: After a disastrous trip so far, Royds decided to press on with Skelton and Koettlitz, and send the other 9 back under Barne. **March 11, 1902**: A blizzard blew up and the 9 men under Barne tried to make for the ship, rather than stay put, which they should have done, but they got lost. Evans, Barne, and Quartley all disappeared down a slope, just pulling up in time before they pluged over the edge into the sea, far below. A dog wasn't so lucky. Wild led Weller, Heald, Plumley, and Vince toward the ship. Wild almost went over Castle Rock in the zero visibility, but Vince's luck had run out. He was the first man to die in McMurdo Sound, falling perhaps 200 feet into the sea. Clarence Hare also disappeared. **March 13, 1902**: Failing to find the rookery, and in terrible conditions, Royds, Skelton, and Koettlitz turned back. **March 17, 1902**: Wild, Weller, Heald, and Plumley eventually made it back to base, and Royds, Skelton, and Koettlitz arrived back at base. Wild organized a search party and led it back into the blizzard. They found Evans, Barne, and Quartley in an incoherent state at Castle Rock. **March 18, 1902**: Hare stumbled into camp. He had got lost and fallen asleep in the snow for 36 hours until he was found. But, incredibly, he was fine. **March 24, 1902**: Scott deliberately froze-in the *Discovery*. **1902 winter.** The *South Polar Times* was begun during the winter-over. The lowest temperature recorded during the winter was -62°F. **July 10, 1902**: The *Morning* left England, bound for NZ, then for Antarctica, with Colbeck in command; Rupert England (1st officer); Lt. Edward R.J. Evans (2nd officer); Gerald Doorly (3rd officer); George Mulock (sub lieutenant; 4th officer), Frederick Somerville and Neville Pepper (midshipmen); J.D. Morrison (chief engineer); George Davidson (surgeon); Alf Cheetham (bosun); Chippy Bilsby (carpenter); James Sullivan (steward); George Rolfe (sail maker); Tom Good (bosun's mate); Arthur Chester (steward's assistant); Arthur Casement, Owen Riley, Bill Burton, George Leary, Walter Hender, Leonard Burgess, and James Paton (able seamen); Frederick Kemp (fireman). 8 petty officers, 9 seamen, and 3 firemen. A total of 29 men. Those names who were on this trip, but are unaccounted for as above, were: A. Coelho, C. Parkins, J.A. Beer, J. Wainwright, A. Noyon, T. Taylor, J.W. Kemp (presumably not Fred Kemp), and H. King. **Sept. 2, 1902**: Sledging parties began. Scott and 8 others set out to lay a depot for their attack on the South Pole. **Sept. 5, 1902**: Scott's sledging party returned. It had not been a success. **Sept. 17, 1902**: Scott, Barne, and Shackleton set out on a reconnaissance expedition, and almost came to grief with frostbite and the gales. **Sept. 19, 1902**: Scott's party returned. **Sept. 27, 1902**: The depot laying party set out again, Barne replaced by Feather, and they set up Depot A at 10 A.M. **Nov. 2, 1902**: Scott, Wilson, and Shackleton, who made up the Polar party, set out. **Nov. 3, 1902**: The Polar party caught up with the support party, led by Barne, which had set out earlier. **Nov. 13, 1902**: They reached 79°S, photos were taken, and half the support party turned back as arranged. **Nov. 15, 1902**: The other half of the support party turned back. The 3 polarfarers pushed on alone. **Nov. 16, 1902**: The *Morning* arrived in Lyttelton, from London, after a trip of 130 days. **Nov. 25, 1902**: Scott's party crossed 80°S. **Nov. 29, 1902**: Armitage set out leading a sledge party into Victoria Land via Ferrar Glacier. **Dec. 6, 1902**: The *Morning* left Lyttelton, NZ. **Dec. 9, 1902**: Scott's first dog died. All the animals were suffering, and so were the 3 men. Instead of bringing dog biscuits, they had brought dried stockfish, which had gone off in the tropics on the way down. The dogs wouldn't eat it, so they starved. At 80°30' S the men laid Depot B. **Dec. 20, 1902**: Only 14 of the 19 dogs were still alive in Scott's party, Shackleton had scurvy, and the hunger was increasing. **Dec. 25, 1902**: The *Morning* crossed the Antarctic Circle, heading for the *Discovery*. **Dec. 26, 1902**: Wilson went snow-blind, and from then on would haul the sledges blindfolded. **Dec. 27, 1902**: The polarfarers discovered Mount Markham. **Dec. 30, 1902**: Scott reached 82°16' 33" S, a new southing record. They then returned under dreadful circumstances. **Jan. 3, 1903**: The *Morning* sighted Victoria Land. **Jan. 4, 1903**: Bismarck (the dog) was killed in Scott's party, and Boss dropped behind, and was never seen again. **Jan. 5, 1903**: Armitage became the first man ever to walk on the Polar Ice Cap, or the Polar Plateau as it is better known. **Jan. 8, 1903**: The *Morning* landed at Cape Adare. **Jan. 13, 1903**: Scott was back at Depot B. All of them had scurvy, and Shackleton was in a very bad way. **Jan. 14, 1903**: The *Morning* left a record at Franklin Island. **Jan. 18, 1903**: The *Morning* found Scott's letters on Cape Crozier. In Scott's party, Shackleton finally collapsed. **Jan. 19, 1903**: Armitage's sledging party got back to base. **Jan. 21, 1903**: The *Morning* sighted the *Discovery*. **Jan. 23, 1903**: The *Morning*, the expedition's relief ship, arrived. **Jan. 28, 1903**: Scott got to Depot A, 60 miles from the ship. **Jan. 29, 1903**: With Shackleton being pulled on a sledge, they covered 15 miles. The last leg was a nightmare. **Feb. 2, 1903**: With Scott and his boys in disastrous condition, they spotted White Island. **Feb. 3, 1903**: The polarfarers got back to base, having been gone 93 days and covering 960 miles. **March 2, 1903**: The *Morning* left. Mulock had replaced the protesting Shackleton, and all but 2 of the Merchant Navy men were sent home. Sub Lt. Gerald Doorly would replace Mulock on the *Morning*. The decision to send Shackleton back on the *Morning*, immediately aroused controversy which has never died down. Did Scott

want him out of the way? Was it an RN vs Merchant Navy affair? Was it personal? Shackleton had basically recovered. Armitage, also a Merchant Navy man, violently disagreed with sending Shackleton back, and the feud between Armitage and Scott really began at this time. So, the following *Discovery* men went back to NZ on the *Morning*: Lt. Shackleton; Petty Officer MacFarlane; and seamen Hare, Hubert, Peters, Page, Duncan, Walker, Buckridge, and Brett. 41 men remained on the *Discovery*. Scott suggested that Armitage go home too, but he refused. Scott then settled down for another winter-over because he could not get the *Discovery* out of the ice. **March 25, 1903**: The *Morning*, skippered by Colbeck, arrived at Lyttelton, NZ, to a great reception. **May 6, 1903**: Shackleton left Wellington for San Francisco. **May 10, 1903**: The *Paparoa* docked at Plymouth, bringing the first expeditioner back to England, as well as one of the *Morning* crew. **June 22, 1903**: The Admiralty took over responsibility for the relief expedition from the societies, and insisted on a 2nd relief ship. That day, at Winter Quarters, the Midwinter dinner menu consisted of turtle soup (made from a turtle supplied by J.J. Kinsey, of Christchurch), halibut cutlets, roast beef with potatoes and "fonds d'artichokes," plum pudding jellies, devilled skuas, pineapple muscatels and almonds, and coffee. **July 6, 1903**: The Admiralty purchased the *Terra Nova*. **Aug. 26, 1903**: The *Terra Nova* left England under tow, and under the command of Capt. Harry MacKay, bound for Aden, and from there (alone) to Hobart, to rendezvous with the *Morning*. 7 officers and 30 men and petty officers. All the men were whalers, most of the them in the RNVR. *See* **Hahn, Percival Ethelbert**. The best that can be done here as far as the crew list goes, is to list the 31 winners of the Bronze Polar Medal who served on the *Terra Nova* that season: Harry MacKay (captain), Alfred P. Jackson (1st mate), Arthur Elms (2nd mate), R.W. Day (3rd mate), Alexander Aiken (bosun), Alexander Sharp (chief engineer), William Smith (2nd engineer), Colin MacGregor (3rd engineer), William Souter (surgeon), Thomas Shearer (assistant steward), Alexander Smith, Sr. (carpenter), Alexander Smith, Jr. (carpenter's mate), Edward Morrison (sail maker), John Dair, Cyrus Stanistreet, James Reilly, James Clarke, George Lawrance, James Coupar, James Cairns, Thomas Cosgrove, Tasman Spaulding (joined later, at Hobart), Alexander McNeil, Robert Christie, David Frederick, Alec Morall, and M. Strachan (able seamen), David T. Milne and John Frederick (firemen), John Grant (cook), and William Clarke (assistant cook). **Sept. 7, 1903**: Wilson, Royds, Cross, Whitfield, Williamson, and Blissett set out to collect emperor penguin eggs from Cape Crozier. They were successful. **Sept. 9, 1903**: Scott, Skelton and 4 others set out on a depot laying journey for their assault on the western mountains. **Oct. 8, 1903**: Capt. Colbeck arrived in Wellington, NZ, on the *Papanui*. **Oct. 12, 1903**: Scott, Skelton, and 4 men, with a supporting party of 6, set out west for the Polar Plateau. Armitage had wanted to try for the Pole, but Scott wouldn't allow this. Was Scott afraid that Armitage would do it, and receive the limelight? Or, did he consider it too dangerous without dogs? **Oct. 18, 1903**: Scott's party got to 5000 feet up the Ferrar, 80 miles from base, when they were forced to return. **Oct. 21, 1903**: Scott's party arrived back at base. **Oct. 26, 1903**: Scott tried again, leading 9 men to the Polar Plateau. **Oct. 31, 1903**: The *Terra Nova* arrived at Hobart, after a trip of 65 days. **Nov. 11, 1903**: Scott's party reached the Polar Plateau. He then led what was the first sledging party on the Polar Plateau (as opposed to the Ross Ice Shelf, far below). Ferrar took 2 men and explored the Ferrar Glacier valley, and on the Polar Plateau Scott split up the 6 remaining men into 2 teams: himself, Feather, and Evans; and Skelton, Handsley, and Lashly. **Nov. 22, 1903**: Skelton, Handsley, and Feather had to return to base. Scott, Evans, and Lashly went west, for over 8 days, reaching 78°S, 146°30' E, 270 miles from the ship. **Nov. 30, 1903**: Scott's party turned back, in grossly uncomfortable circumstances. At one point, Scott, Evans, and the sledge fell into a crevasse, Lashly alone supporting them until they managed to struggle out. **Dec. 6, 1903**: The *Morning* and *Terra Nova* left Hobart for Antarctica. New faces on the *Morning* included: Walter Marsh (2nd engineer), John H. Maxwell (cook), Arthur Beaumont, Herbert D. Jarvis, Bill Knowles (able seamen), David Nelson and Jack Partridge (firemen). Tasman Spaulding had joined the *Terra Nova* as a replacement for a crewman who was doing three months in a Hobart jail. **Dec. 14, 1903**: Scott's party made it back to the Ferrar Glacier. **Dec. 23, 1903**: The *Terra Nova* sighted her first iceberg. **Dec. 24, 1903**: They got back to base, after 59 days, and hauling their sledge 725 miles. **Dec. 26, 1903**: The *Terra Nova* entered the pack ice in 66°35' S, 179°18' W. **Dec. 27, 1903**: The *Terra Nova* sighted Scott Island. **Jan. 5, 1904**: The *Morning* returned, with the *Terra Nova*, with instructions to abandon the *Discovery* if she couldn't be broken free of the ice. **Feb. 14-15, 1904**: Miraculously (i.e., by using explosives), the *Discovery* was freed. **Feb. 19, 1904**: The 3 ships set sail for NZ. **March 2, 1904**: They proved that the Balleny Islands and the Russell Islands were the same feature, as they passed through the group. **March 15, 1904**: The *Discovery* arrived at Auckland Island, with only 10 tons of coal left. **March 19, 1904**: The *Terra Nova* arrived at Auckland Island. **March 20, 1904**: The *Morning* arrived at Auckland Island. **April 1, 1904**: The *Discovery*, along with the relief ships *Morning* and *Terra Nova*, arrived at Lyttelton, NZ. **June 8, 1904**: The *Discovery* sailed from Lyttelton for England. **July 17, 1904**: The *Morning* arrived at Port Stanley, in the Falkland Islands, minus a cook and a steward. **July 29, 1904**: The *Morning* left the Falklands, bound for England. **Sept. 10, 1904**: The *Discovery* arrived at Portsmouth. Asked how the expedition's experiences had been, Scott replied "Pleasant." He had a promotion to captain waiting for him, but surprisingly, not a knighthood. All the Siberian dogs taken aboard a few years back had died, but some had bred, and there were now 4 new ones. **Oct. 6, 1904**: The *Morning* arrived in Plymouth. Altogether the expedition discovered 900 miles of land and 150 miles of ice shelf, explored 200 miles of land, and ascertained that no sea passage led through the Ross Ice Barrier (later named the Ross Ice Shelf). They also found that the barrier was floating. They secured much information (and specimens) of flora and fauna, and fossils (including plants at 8000 feet). Scott, after trudging over 300 miles directly across the Ross Ice Shelf, concluded that dogs were a bad investment and that manhauling the sledges was the best idea. It was the worst idea he ever had, one that would cost him his life. They also discovered and explored a bit of the Polar Plateau, and concluded that the Pole was on the plateau, high above sea level. This was the first real land expedition in Antarctica.

British Naval Expedition, 1839-43 *see* **Ross Expedition**

British Point. 62°05' S, 58°23' W. A small cape, immediately E of the old Fids Base G (Admiralty Bay Station), on Keller Peninsula, King George Island, in the South Shetlands. Named by the Poles in 1980.

British Royal Society Expedition. 1955-59. **Aug. 3, 1955**: British government Treasury approval was given for the Royal Society Expedition, to be arranged and managed (at least the logistics were) by FIDS, its purpose being to establish and manage a British base in Antarctica in readiness for, and during, IGY (July 1957 to Dec. 1958). **Nov. 22, 1955**: The *Tottan*, skippered by Captain Leif Jakobsen, left Southampton, with 200 tons of supplies, 3 tractors, a small boat, masses of sundry supplies, and the advance party of 10 aboard (i.e., those who would winter over in 1956): David Dalgleish (base leader and medical officer), Gus Watson (2nd-in-command; chief scientist and electronic engineer), Stan Evans (physicist), Dwm Limbert (meteorologist), Casey Powell (diesel mechanic), Robin Dalgliesh (tractor driver and handyman), George Lush (bosun, tractor driver, and handyman), Charlie Le Feuvre (radio operator), and Johnny Raymond and his brother-in-law Doug Prior (carpenters). Sir Edmund Hillary, in his book *No Latitude for Error*, describes them as "a cheerful bunch, mostly tradesmen"! Also on board was ex-FID George E. Hemmen, stores and logistics officer for the entire operation, who would return with the *Tottan* in order to continue getting stores from England (he would not winter-over, either). **Dec. 25, 1955**: Via Rio, the *Tottan* reached South Georgia (54°S). **Jan. 6, 1956**: In Antarctica, Dr. Dalgliesh selected the site for the base, about a mile and a half inland, at Halley Bay, on the coast of Coats Land, on the Weddell Sea. They had originally selected Vahsel Bay, but couldn't land because of the ice. It was, in fact, proposed that this expedition and the BCTAE share the same base, but that didn't work out. **Jan. 22, 1956**: The *Tottan* left, with Hemmen on board, and headed back toward South Georgia, and then back to Nova Scotia to

resume her sealing career. **Feb. 21, 1956**: The base kitchen was ready for use. **Feb. 26, 1956**: The men moved out of their tents into the partially ready hut. **Feb. 29, 1956**: The first official day of the post office. **March 31, 1956**: The outer shell of the hut was finished and weatherproofed. There was no official opening ceremony or dedication of the site, or anything like that. **Oct. 1956**: Col. Robin Smart, RAMC, was chosen to relieve Dalgliesh at Halley Bay for the upcoming year. **Nov. 15, 1956**: The *Magga Dan* (being shared with BCTAE) left London (Hemmen was on board again, and again, he would not winter-over), and headed south. **Jan. 1957**: The *Magga Dan* spent about a week at Halley Bay, before leaving with the 1956 winterers. 21 new men stayed for the 1957 winter. **March 13, 1957**: the *Magga Dan* arived back in London. In Antarctica, meanwhile, the new team of 21 men built new buildings, set up scientific eqipment, and explored. The new group of 21 were: Robin Smart (base leader and medical officer), Joe MacDowall (met man, glaciologist, seismologist, and geomagnetician), Andrew Blackie, Jim Burton, Derek Ward, Peter Jeffries, and David T. Tribble (all meteorological and geomagnetic men, loaned by the Meteorological Office); Bill Bellchambers, David Cansfield, Les Barclay, and Gwynne Thomas (all ionospherics men); Philip Brenan and David Harrison (radio astronomy men); Alf Amphlett and Ivor Beney (diesel mechanics); Henry Dyer and Ron Evans, RAF (radio operators); Ken Amy and Fred Morris (carpenters), Malcolm Edwards (cook), and Len Constantine (assistant cook). **Nov. 1957**: MacDowall was chosen to replace Smart as leader, as from Jan. 1958. **Jan. 7, 1958**: The ship left Antarctica, leaving the new (mostly old, actually) winterers of 1958. Heading home were: Smart, Amy, Evans, Jeffries, and Morris. Bert Brooker came in to replace Smart as doctor. Ben Ellis and John Smith came aboard (so to speak) as meteorologists, and John Gane as radio mechanic, but basically the crew remained the same until the end of IGY. **Nov. 19, 1958**: Brenan and Barclay set out on a sledging trip. **Nov. 28, 1958**: Brenan and Barclay got back from their sledging trip, 125 miles in 10 days, manhauling with one dog, Stumpy. **Dec. 31, 1958**: IGY ended. The men were taken back to Cape Town, and from there to London. On Sept. 19, 2000 there was a 44th anniversary reunion, held in London. Those present included Brooker, Smith, Burton, Amphlett, Cansfield, Constantine, MacDowall, Bellchambers, Barclay, Harrison, and Ward. There were others, alive, who were not there.

Britt Peak. 76°03' S, 135°07' W. A small peak, rising to 3070 m, just SW of the summit of Mount Moulton, in the Flood Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1974, for Dale Raymond Britt, USN, builder who wintered-over at Pole Station in 1969. He was later a lieutenant.

Brittain, Michael Francis "Mike." b. Dec. 12, 1934, Stourbridge, Worcs, son of Bertram Brittain and his wife Mary L. McLoughlin. He joined FIDS in 1960, as a radar technician, and wintered-over at Halley Bay Station in 1961 and 1962. He died in June 2001, in Warwickshire.

Britten Ice Front. 72°40' S, 72°30' W. Jan. 1973 Landsat images of the area of SW Alexander Island convinced the British that a separate feature, worthy of a separate name, existed, i.e., the ice front of the Britten Ice Shelf, and on Dec. 8, 1977, UK-APC so named the seaward front of this ice shelf. It appears in the 1980 British gazetteer. *See* **Brahms Ice Shelf** for a brief commentary on this sort of naming.

Britten Ice Shelf. 72°36' S, 72°30' W. The ice shelf in Britten Inlet, in the SW part of Alexander Island. Named by UK-APC on Dec. 8, 1977, it appears in the 1980 British gazetteer. US-ACAN accepted the name in 2006.

Britten Inlet. 72°36' S, 72°30' W. An ice-filled indentation in the SW part of Monteverdi Peninsula, in the SW part of Alexander Island. Delineated from U.S. Landsat imagery of Jan. 1973, and mapped from these images by BAS cartographers. Named by UK-APC on Dec. 8, 1977, for the British composer Edward Benjamin Britten (known as Benjamin Britten) (1913-1976). It appears in the British gazetteer of 1980, and on British charts of 1984 and 1987. US-ACAN accepted the name.

Cabo Brizuela *see* **Mercury Bluff**

Nunatak Brizuela. 65°58' S, 60°57' W. One of the numerous nunataks on Jason Peninsula named by the Argentines.

Nunataki Brjusova. 80°39' S, 28°32' W. A group of nunataks, S of Lister Heights, in the E part of the Shackleton Range. Named by the Russians.

Broad Bay *see* **Breid Bay**

Broad Peninsula *see* **Breidnes Peninsula**

Broad Valley. 63°32' S, 57°55' W. A broad, glacier-filled valley on the S and SW sides of the Laclavère Plateau, Trinity Peninsula. Named descriptively by Vic Russell of FIDS following his April-May 1946 survey from Base D. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears on a British chart of 1962.

Broadbear, Norman Reginald. b. Sept. 8, 1923, Teignmouth, Devon, son of Reginald Broadbear and his wife Cecilia Amy I. Savage. He joined FIDS in 1949, as a meteorologist, and wintered-over at Base F in 1950 and 1951. After his tour was up, he worked at the Met Office, in their instrumental department. He died in 1972, in Newton Abbot, Devon.

Broady Valley. 77°16' S, 161°37'. A steeply-inclined valley, 2 km (the New Zealanders say 4 km) long, opening SW to the snout of Victoria Upper Glacier, W of Lanyon Peak, in the Saint Johns Range, of Victoria Land. Named by NZ-APC on Sept. 12, 2005, for Paul Adrian Broady, microbial biologist with the University of Melbourne (later with the University of Canterbury, in NZ), who worked with NZARP for 8 seasons from 1981, at the McMurdo Dry Valleys, Ross Island, Marie Byrd Land, and other areas, conducting investigations into terrestrial microbial biology. He wintered-over as a member of BAS, at Signy Island Station, in 1972 and 1973, and was with ANARE in the early 1980s. US-ACAN accepted the name in 2006.

Brock, C. Able seaman on the *Aurora*, in 1917, during BITE 1914-17. There was a C. Brock, plying the seas as an able seaman from 1900 on, on the London to Sydney route, and he seems to have been born in London in or around 1883. A check of all C. Brocks born in London around that time reveals nothing conclusive.

Brock Gully. 76°44' S, 159°44' E. A gully, 1.5 km S of Windwhistle Peak, in the Allan Hills of Victoria Land. Discovered and reconnoitered by the NZARP Allan Hills Expedition of 1964, and so named by them for its resemblance to English badger country ("brock" being another name for a badger). NZ-APC accepted the name on July 15, 1965, and US-ACAN followed suit that year. ANCA accepted the name on Aug. 10, 1966.

Mount Brockelsby. 67°34' S, 50°11' E. Rising to 1290 m, about 12 km NNE of Simpson Peak, in the Scott Mountains of Enderby Land. Plotted by Australian cartographers from air photos taken by ANARE in 1956, and named by ANCA on Nov. 24, 1961, for W. Keith Brockelsby, ionosphere physicist at Mawson Station in 1961. US-ACAN accepted the name in 1965.

Islotes Brockhamp *see* **Brockhamp Islands**

Brockhamp Islands. 67°17' S, 67°56' W. Two small islands at the N end of Laubeuf Fjord, 5 km SW of Mothes Point, off Adelaide Island and also off the Loubet Coast, on the W coast of Graham Land. Photographed aerially by RARE 1947-48, surveyed from the ground by FIDS between 1948 and 1950, photographed aerially again, by FIDASE in 1956-57, and plotted by FIDS cartographers from all these efforts. Named by UK-APC on Sept. 23, 1960, for German glaciologist Bernhard Brockhamp (1902-1968), professor of geophysics at the University of Münster. He and Hans Mothes (*see* **Mothes Point**) made the first seismic soundings of a glacier, in Austria in 1926. He was a member of Alfred Wegener's German Greenland Expedition of 1930-31. US-ACAN accepted the name in 1965. The Argentine gazetteer of 1991 accepted the name Islotes Brockhamp.

Mount Brocklehurst. 76°08' S, 161°27' E. A dome-shaped mountain rising to 1310 m, N of Mawson Glacier, 10 km W of Mount Murray, and 24 km WSW of Mount Smith, in the Prince Albert Mountains of Victoria Land. First charted by BAE 1907-09, and named by Shackleton for Philip Brocklehurst. US-ACAN accepted the name in 1949, and NZ-APC followed suit.

Brocklehurst, Sir Philip Lee. b. March 7, 1887, Swythamley Park, Staffs, he became 2nd baronet on May 10, 1904 when his father, Sir Philip Lancaster Brocklehurst, 1st Bart., died, the baronetcy having been created only a year before. He (the father) left a widow, the former Annie Lee Dewhurst. In 1906, while at Cambridge (where he boxed), the young 2nd baronet met Shackleton, and paid to be junior geologist on that explorer's BAE 1907-09. He was the youngest member of the expedition. He climbed

Mount Erebus in 1908 but suffered severe frostbite as a result, and had to have some of his toes amputated. He was one of the supporting party during Shackleton's push to the Pole in 1908. On July 9, 1913, at Swythamley, he married Gwladys Gostling Murray. Shackleton was best man. He served in World War I with the 1st Life Guards, which he eventually commanded, and in 1918-20 with the Egyptian Army. During World War II he commanded the 2nd Regt., Arab Legion, Mechanized Brigade, in Palestine, as a lieutenant colonel, and on Dec. 10, 1946, his wife successful divorced him for adultery. On Jan. 1, 1952, at Helensburgh, Dunbartonshire, he married again, to Mrs Audrey Evelyn Mackenzie, daughter of Hugh Miller Macmillan. He imported wallabies onto his estate, but they multiplied and got out, running wild over the Peak District, and in 1961 he spearheaded a "Don't Chase the Wallabies" campaign. In 1972, when he was 85, his 2nd wife left him. She was much younger than him, and they never got on, but her going left a blank in his life, all alone in his huge rambling house, with no one to talk to except Mrs. Dorothy Knight who lived in a house in the nearby park. In the last few years of his life he drew up no fewer than nine wills, and the eccentric and autocratic baronet died on Jan. 28, 1975, the last survivor from his Antarctic expedition. He left a fortune.

Brocklehurst Ridge. 71°02' S, 67°06' E. A partly snow-covered rock ridge, about 1.5 km S of Taylor Platform, in the Prince Charles Mountains of Mac. Robertson Land. Plotted by Australian cartographers in 71°02' S, 67°08' E, from ANARE air photos taken in 1956 and 1960, and named by ANCA for Frank I. Brocklehurst, electrical fitter at Mawson Station in the winter of 1964. US-ACAN accepted the name in 1967, with new coordinates.

Brockmuller, William. Fireman on the *Jacob Ruppert*, during ByrdAE 1933-35. This information comes from the *New York Times* of Oct. 14, 1933, but aside from that mention, Stoker Brockmuller's participation in the expedititon has been uncorroborable.

Brockton Station. 78°45' S, 178°25' W. An American manned weather station built in Oct. 1965, on the Shirase Coast of Marie Byrd Land, to replace Little Rockford Station (which had closed in Feb. 1965). It was relocated in Oct. 1966 to 80°01' S, 178°02' W, and renamed Brockton II. For the historical record, the original Brockton now became known as Brockton I. Brockton II had 4 buildings, and was closed in Feb. 1972.

Brockton II *see* **Brockton Station**

Mount Brocoum. 70°12' S, 63°45' W. Rising to about 1700 m, it is the dominant peak on the NE ridge of the Columbia Mountains, in northern Palmer Land. Mapped by USGS from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for Stephan John Brocoum (b. Feb. 16, 1941, NY) and his wife, Alice V. Brocoum, USARP geologists from Columbia University who studied the structure of the Scotia Ridge area in 1970-71. Mr. Brocoum had been there before in 1968-69. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Brodie Peak. 69°25' S, 66°05' W. Rising to 1410 m, it is one of the Bristly Peaks, 8 km SSE of Mount Castro, in the Eternity Range, on the Fallières Coast, on the W coast of Graham Land. Surveyed by BAS personnel from Base E in 1970-73. Named by US-ACAN in 1977, for Earl E. Brodie, USARP engineer who wintered-over at Palmer Station in 1969. UK-APC accepted the name on May 21, 1979. It appears on the 1979 USGS sketch map of the N part of Palmer Land, and also in the 1980 British gazetteer.

Brodie Ponds. 77°57' S, 163°40' E. A group of 4 meltwater ponds W and SW of the base of Mount Kowalczyk, on the surface of Blue Glacier, in Victoria Land. Visited by an NZARP geological party led by Rob Finlay, 1979-80, and named after Ken Brodie, a geologist with the party. NZ-APC accepted the name in 1982, and US-ACAN followed suit.

Brødrene *see* **Brødrene Rocks**

Brødrene Rocks. 66°17' S, 56°06' E. A small group of rocks in the entrance to Wheeler Bay, just NW of Magnet Bay, in Kemp Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Brødrene (i.e., "the brothers"). On April 26, 1958, ANCA renamed the feature Wheeler Rocks, for G.T. Wheeler (*see* **Wheeler Bay**). US-ACAN accepted the name Brødrene Rocks in 1965.

Mount Brøgger. 76°52' S, 161°48' E. Rising to over 1400 m (the New Zealanders say 1280 m), about 6 km N of Referring Peak, it forms part of the N wall of Cleveland Glacier, about 6 km NW of the confluence of that glacier with Mackay Glacier (which is just to the S), in the Prince Albert Mountains of Victoria Land. Charted by BAE 1910-13, and named by them for Waldemar Christofer Brøgger (1851-1940), Norwegian mineralogist. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Brøka *see* **Broka Island**

Broka Island. 67°07' S, 58°36' E. A rocky island, about 6.5 km long, 6 km wide, and rising to 140 m above sea level, with a prominent cove indenting the N side, 3.7 km N of Law Promontory, and 1.6 km W of Havstein Island, in Kemp Land. Photographed aerially by LCE 1936-37, mapped by Norwegian cartographers from these photos in 1946, and named by them as Brøka (i.e., "the knee breeches"), for the outline of the island. US-ACAN accepted the name Broka Island in 1947. First visited by an ANARE party led by Bob Dovers in 1954. ANCA accepted the name Brøka Island, on Nov. 28, 1955.

Isla Broken *see* **Broken Island**

Broken Island. 67°49' S, 66°57' W. An island, 3.8 km long, 2.3 km N of Centre Island, in the N part of Square Bay, off the Fallières Coast, in Marguerite Bay, off the W coast of Graham Land. Discovered and named by BGLE 1934-37. At first they thought it was a promontory, but on Aug. 6, 1936 found that it was, actually, an island. It appears as such on Rymill's 1938 map of that expedition, and on a British chart of 1948. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955. It appears on a Chilean chart as Isla Broken, and that was the name accepted by the Chilean gazetteer of 1974. After toying with the name Isla Roca (i.e., "rock island"), the Argentines chose Isla Quebrada, which is a translation of Broken Island, and that was the name that appeared in the 1970 Argentine gazetteer.

Broknes. 69°23' S, 76°21' E. Also called Broknes Peninsula. A large rock peninsula on the E extremity of the Larsemann Hills, on the Ingrid Christensen Coast of Princess Elizabeth Land. Plotted by Norwegian cartographers in 1946, using air photos taken by LCE 1936-37, and named by them as Broknes (i.e., "broken cape"). The peninsula is broken by Nella Fjord. ANCA accepted the name without modification on Nov. 24, 1987. Progress Station was here.

Broknes Peninsula *see* **Broknes**

Broknesdalen *see* **Clemence Fjord**

Brolly, John. b. 1886, Philadelphia, but raised in Ireland, then Glasgow, son of Irish parents, dock laborer James Brolly and his wife Annie Kilhoni. He made his first voyage as an able seaman (which was a bit of a stretch, considering he was not really an able seaman) on the *Nimrod*, when he joined the ship at Sydney on May 7, 1909, at the tail end of BAE 1907-09, thus not making it to Antarctica. He was discharged from the *Nimrod* at Poplar (in London) on Aug. 31, 1909. He picked up a berth as a trimmer on the *Makura*, a Dunedin ship plying between Glasgow and Sydney, and then transferred to the *Anchises*, as a donkeyman. He was still sailing the Atlantic into his late 30s, as a trimmer, greaser, and fireman on Anchor Line ships out of Glasgow.

Bromley, Anthony Maurice "Tony." b. Sept. 18, 1945. He went to work for the NZ Meteorological Service in Christchurch, moved to Wellington, went as a met observer on Campbell Island (not in Antarctica) in 1967-68, and spent the summer of 1968-69 at Vanda Station. He wintered-over at Vanda in 1970, and was station leader there for the 1974 winter.

Bromley, Arthur Charles Burgoyne. b. 1847, Dublin, son of Sir Richard Madox Bromley and his wife Clara Moser. He graduated from naval school in 1860, and went to the *Bristol*, on which he served for years, during which time he became a sub lieutenant, took part in the Abyssinian campaign of 1868, and was promoted to lieutenant in 1869. On Nov. 15, 1872 he was appointed lieutenant on the *Challenger* Expedition, 1872-76. Immediately after returning he married Juliette Brown, in London. He served on the *Martin*, and in 1882 became a commander, and a captain in 1888. He was later skipper of the *Endymion*, the *Blake*, and the *Hood*. On Nov. 5, 1901 he was promoted to rear admiral, and in 1905 became superintendent of Malta Dockyard (the latter post until Feb. 1907, when he was succeeded by Jackie Fisher). On March 8, 1906 he was promoted to vice admiral. He died on Oct. 25, 1909, at Eastbourne.

Bromley Peak. 77°38' S, 162°04' E. A peak, overlooking the SW side of King Valley, in the Asgard Range of Victoria Land. Named by NZ-APC on Jan. 30, 1998, for Tony Bromley. US-ACAN accepted the name later that year.

Cabo Broms *see* **Cape Broms**

Cape Broms. 64°20' S, 58°18' W. Marks the S side of the entrance to Röhss Bay, on the SW side of James Ross Island, off the NE end of the Antarctic Peninsula. Discovered and mapped in Oct. 1903, by SwedAE 1901-04, and named by Nordenskjöld as Kap Broms, for Gustaf Emil Broms (1849-1903), consul and Swedish industrialist, and a financial patron of the expedition. It appears on a British chart of 1921 as Cape Broms, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears in the 1955 British gazetteer. It was being called Cabo Broms by the Argentines as early as 1908, and that was the name accepted by the 1970 Argentine gazetteer. The Chileans also call it Cabo Broms. It was surveyed by Fids from Base D between 1952 and 1955.

Kap Broms *see* **Cape Broms**

Bromwich Terrace. 79°28' S, 157°13' E. A high, relatively flat ice-capped area of about 7 sq miles, at an elevation of about 2000 m above sea level, about 200 m below the adjoining Festive Plateau, and 850 m below the towering Mount Longhurst (both those features to the N of this terrace). Starbuck Cirque and Mount Hughes adjoin this terrace to the south, in the Cook Mountains. Named by US-ACAN in 2001, for David H. "Dave" Bromwich (b. Feb. 15, 1948) of the Polar Meteorology Group, Byrd Polar Research Center, at Ohio State University, who carried out climate investigations of Antarctica for 20 years beginning about 1978.

Mount Bronk. 84°24' S, 175°48' E. A snow-covered mountain top rising to 3530 m, 6 km NE of Mount Waterman, and about 20 km NNE of Mount Kaplan, in the Hughes Range. Discovered aerially by Byrd on Nov. 18, 1929, during ByrdAE 1928-30, and surveyed by Bert Crary in 1957-58. Crary named it for Detlev Wulf Bronk (1897-1975), president of Johns Hopkins University, 1949-53, and president of the U.S. National Academy of Sciences, 1950-62, which actively supported Antarctic operations during the IGY period, 1957-59. From 1953 to 1968 he was president of Rockefeller University. Famous for his stand against Joe McCarthy. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Brook Glacier. 78°42' S, 85°09' W. Flows westward between Mount Strybing and Mount Allen into Bender Glacier, in the S part of the Sentinel Range, in the Ellsworth Mountains. Named by US-ACAN in 2006, for Edward J. Brook, professor of geosciences at Oregon State University, a USARP investigator of Antarctic paleoclimate in several field seasons from 1988. He was chairman of the U.S. National Ice Core Working Group, for use of Antarctic ice cores for research purposes, 2004-05.

Mount Brooke. 76°49' S, 159°54' E. An immense, isolated mountain, rising to 2675 m above sea level, 27 km (the Australians say 37 km) NW of Mount Gran, and dominating the area near the heads of Mackay Glacier and Mawson Glacier. Named by BCTAE 1956-57 for Richard Brooke. US-ACAN accepted the name in 1961, and ANCA followed suit.

Brooke, Francis Richard. Known as Richard. b. 1926, London, son of Yorkshireman Roderick St. Clair Brooke and his wife Muriel Gertrude Hovil (who had been raised in Cairo). He entered the Royal Naval College at 13, and served on the *Warspite* at Normandy in 1944. A noted climber, he was 3rd officer on the *John Biscoe*, in Antarctic waters between 1948 and 1950. In the early to mid 1950s he spent a lot of time as a young lieutenant in Greenland, in 1952-54 being surveyor on the British North Greenland Expedition. By the time he was a lieutenant commander, he became surveyor and dog driver in Hillary's party during BCTAE 1957-58, and leader of the Northern Survey Party during that expedition. He wintered-over at Scott Base in 1957. In 1965, in Bath, he married Valerie Brooks.

Brooker, Bertram Keir "Bert." b. Jan. 3, 1932, Wallasey, Cheshire, son of Bertram Brooker and his wife Mary H. Logan. He became a doctor on Sept. 2, 1955, joined the RAF as a flight lieutenant, and succeeded Robin Smart as medical officer at Halley Bay Station during the 3rd part (i.e., from Dec. 1957 to Jan. 1959) of the British Royal Society Expedition, wintering-over there in 1958. He studied sleep and emperor penguins while he was there. He became a psychiatrist in the Liverpool and Cheshire area, and retired in 1997.

Brookes. 68°32' S, 78°11' E. An Australian field hut established in 1972, on Shirokaya Bay, on the Ingrid Christensen Coast.

Brookfield, Geoffrey Herbert "Geoff." b. June 28, 1922, Lewisham, London, son of Algernon W. Brookfield and his wife Emily J. Brand. He was living in Essex when he joined FIDS in 1952, as a meteorologist, and wintered-over at Base D in 1953 and 1954. In 1956, in Tonbridge, Kent, he married Hilda M. Lintott. He died in 1983, in Crawley.

Brookins, John *see* **USEE 1838-42**

Île Brooklyn *see* **Brooklyn Island**

Isla Brooklyn *see* **Brooklyn Island**

Brooklyn Island. 64°39' S, 62°05' W. An island, 4 km long and 2.5 km wide, about 1.8 km SE of Nansen Island, in the E part of Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Discovered and roughly charted on Feb. 7, 1898, by BelgAE 1897-99, and named by de Gerlache as Île Brooklyn, for the home of Dr. Frederick Cook. It appears as Brooklyn Island on Dr. Cook's map of that expedition. It appears as such on a 1945 British chart, and was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. Capt. Johannessen's chart of 1919-20 refers to Pilseneer Island (sic) as this island and Pelseneer Island together, but Lester amended this to 2 islands on his chart of 1920-22 (British Imperial Antarctic Expedition). Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Portal Point in 1957-58. The Argentines were calling it Isla Brooklyn as early as 1908, and that was the name accepted by the 1970 Argentine gazetteer and also by the 1974 Chilean gazetteer.

Brookman Point. 74°19' S, 131°51' W. The snow-covered NW point of Grant Island, off the Marie Byrd Land coast and the Getz Ice Shelf. Discovered and first charted by personnel on the *Glacier*, in Feb. 1962. Named by US-ACAN in 1974, for Lt. Peter J. Brookman, USN, officer-in-charge at Byrd Station in 1970.

Cabo Brooks *see* **Cape Brooks**

Cape Brooks. 73°37' S, 60°38' W. A cape marked by steep, conspicuous walls rising to 465 m, and forming the S side of the entrance to New Bedford Inlet, on the Lassiter Coast, on the E coast of Palmer Land. Discovered and photographed aerially on Dec. 30, 1940 by USAS 1939-41. It was photographed aerially by RARE 1947-48, and, that season, also surveyed from the ground by a combined RARE/FIDS sledging team. Named by FIDS for Charles Ernest Pelham Brooks (1888-1957), British meteorologist on the staff of the Met Office from 1907 to 1948. He was also secretary of the Royal Meteorological Society, 1927-31, and vice president 1932-33. He wrote The *Climate and Weather of the Falkland Islands and South Georgia* (1920). UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears on a 1954 British chart, in the 1955 British gazetteer, and on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. It appears as Cabo Brooks on an Argentine chart of 1957, and that was the name accepted by both the 1974 Chilean gazetteer and the 1991 Argentine gazetteer.

Islotes Brooks. 65°34' S, 65°08' W. A group of islets lying between Milnes Island and Hook Island, in the Biscoe Islands. Named by the Argentines.

Brooks, Charles. b. 1834, Maidstone. Engineer on the *Polar Star* during DWE 1892-93.

Brooks, Edward. 1st Lt. on the *Speedwell* in 1719, under Shelvocke.

Brooks, John *see* **USEE 1838-42**

Brooks Island *see* **Ivanoff Head**

Brooks Nunatak. 84°59' S, 66°18' W. An isolated nunatak, rising to 1615 m, 10 km SW of Shurley Ridge, on the S side of the Mackin Table, in the S part of the Patuxent Range, in the Pensacola Mountains. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN in 1964, and mapped from these efforts by USGS. Named by US-ACAN in 1968, for Robert E. Brooks, USARP biologist at Pole Station in 1966-67. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Brooks Point. 66°45' S, 108°25' E. A small rock point on the W shore of Vincennes Bay, about 8 km WNW of Mallory Point, on the Knox Coast of Wilkes Land. First mapped from air photos taken during OpHJ 1946-47. Remapped from ANARE air photos. Named by US-ACAN in 1973, for John Brooks of USEE

1838-42. ANCA accepted the name. *See also* **Ivanoff Head**.

Mount Broome. 73°35' S, 61°45' W. A mountain, rising to about 1500 m, W of Cape Brooks, in the N part of the range which lies between the mouths of Douglas Glacier and Bryan Glacier, in the Werner Mountains, on the Lassiter Coast, on the E coast of Palmer Land. Mapped by USGS from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Howard W. Broome, Jr., electrician who wintered-over at Pole Station in 1967. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Broome, George Eric. Known as Eric. b. Oct. 15, 1912, Preston, Lancs, son of David Broome and his wife Hannah Burrows. An ex-Army man, he joined FIDS in 1955, as a meteorologist, and wintered-over at Base G in 1956. At 43, he was the oldest man on the base, and a lot of fun. He was due to winter-over a second year, but his father's illness necessitated an early return to the UK. He died in 1980, in Colwyn, Wales.

Brophy, Richard Gale "Dick." b. Oct. 20, 1901, Glenwood, Minn., but raised in Carlos, Minn., son of restaurant cook William W. Brophy and his wife Maud. A newspaperman and publicist, he was the manically efficient manager of ByrdAE 1928-30. On Nov. 24, 1928, while they were in NZ, Byrd made Brophy 2nd-in-command of the expedition. He went south in December but did not winter-over. On March 25, 1929, he resigned while on a 2-month vacation in NZ, where he felt he was being shadowed as a spy, left the Antipodes in May, and on June 7, 1929, arrived in San Francisco, met there by his destitute wife Ferne and their son Richard. It is of note that no Antarctic feature bears his name. By Aug. 25, 1929, it was beginning to look as if Brophy had done himself in. He had certainly disappeared. They found his clothes in a bath house by the sea. The letter said, "I am going to Coney Island. I am going to walk into the waves until they cover me, and then I will be no more." However, the wetness of the water at New York's playground of the rich dissuaded him and he stuck his thumb out on one of the great western roads. In Ohio he worked as a busboy in a sleazy restaurant, then made his way to Nebraska, which is where they found him on Dec. 1, 1929, working as a copy editor at the *Omaha Bee* under the name Charles Manning Mitchell, and only going out at night. He immediately got on the train heading for New York, but when the train pulled into Grand Central at 3.20 the following afternoon, his eagerly expectant family there to meet him, no Brophy. He re-surfaced on Nov. 12, 1935, when he stole a cab in NYC. In the chase that followed a cop shot him in the hip, and they sent Brophy to Bellevue. A letter from Admiral Byrd helped, and Brophy was freed. In 1937 he announced plans for an autogyro expedition to the North Pole. After another spell in Bellevue, he tried to poison himself, and was admitted to Boston's City Hospital, in a coma. On May 18, 1938, a dead body was found in a downtown hotel room in Minneapolis. By May 28 they had indentified him, and on May 30, 1938, they laid the troubled Dick Brophy to rest in Carlos, Minnesota. He was 36.

Brörvika *see* **Wheeler Bay**

Brosnahan Island. 79°28' S, 160°59' E. An island, 1.5 km long, rising above the W part of the Ross Ice Shelf, 17.5 km NE of Cape Murray. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1959 and 1963. Named by US-ACAN in 1965, for Cdr. James Joseph Brosnahan (b. Sept. 23, 1921, Mass. d. Jan. 22, 2005, Oak Harbor Island, Wash.) USN, winter commander of McMurdo in 1961. NZ-APC accepted the name on May 20, 1965.

Brotherhood, John Rowland "Bro." b. 1940, Louth, Lincs, son of William Rowland Brotherhood and his wife Margaret Sutcliffe. He became a doctor in London, and joined BAS in 1965, as a medical officer, wintering-over as base leader at Signy Island Station in 1966. In 1967 he wintered-over as medical officer (only) at Halley Bay Station. In Nov. 1967 he seriously injured his spine, and had to be flown out to NZ by American Hercules aircraft (*see* **International cooperation**). In 1976 he moved to Australia, and became medical director of the Institute for Fitness Research and Training, in Adelaide. In 1980 he moved to the Commonwealth Institute of Health, working in research and consultancy in environmental and work physiology. He later moved to the National Institute for Occupational Health and Safety, and in 1998 became senior lecturer at the School of Exercise and Sport Science, at the University of Sydney, specializing in environmental medicine. He advised the Australian Olympic team in 2008.

Brothers Hill *see* **Three Brothers Hill**

Brouardel Point. 65°03' S, 63°59' W. North of Port Charcot, along the W side of the Mount Lacroix peninsula, on Booth Island, in the Wilhelm Archipelago. First charted by FrAE 1903-05, and named by Charcot for toxicologist Dr. Paul-Camille-Hippolyte Brouardel (1837-1906) of the Institut de France. US-ACAN accepted the name in 1952.

The *Brough*. A U.S. Edsell-class destroyer escort DE-148. Named for Lt. David Atkins Brough, U.S. aviator killed in the Aleutians in 1942. 1200 tons and 306 feet long, she was launched on April 10, 1943, by Consolidated Steel, in Orange, Texas, and commissioned on Sept. 18, 1943. She could move at 21 knots. Lt. Cdr. Kenneth J. Hartley was first skipper, but he was killed on board on Nov. 12, 1943. The ship made 24 Atlantic crossings, escorting Allied shipping to Europe. On March 22, 1948, in Florida, she was placed out of commission in reserve, but was re-commissioned on Sept. 7, 1951. During OpDF II (1956-57; skipper was Lt. Cdr. Willis B. Duhon, of Kaplan, La.) she was an aircraft and weather picket ship in NZ waters, with an occasional trip to Campbell Island, and thus did not sail in Antarctic waters. However, on Feb. 5, 1958, during OpDF III (1957-58; Captain Bobby E. Boney), she crossed the Antarctic Circle, the first DE to do so. She was in Antarctic waters again during OpDF IV (1958-59), again under Capt. Boney. On Feb. 7, 1959 she left Dunedin and became the first DE to sail unaccompanied around the world, before going back to the USA. She then became a training ship, based at Key West, was decommissioned in 1965, and on Oct. 13, 1966 sold for scrap to Boston Metals, of Baltimore.

Brough Nunatak. 76°31' S, 162°27' E. In the NW part of Evans Piedmont Glacier, 6 km WSW of Boney Point, in Victoria Land. Named by NZ-APC on Nov. 4, 1999, for the *Brough*. US-ACAN accepted the name in 2000.

Broune Insel *see* **Brown Peninsula**

Mount Brounov. 71°58' S, 14°20' E. Rising to 2370 m, 2.5 km S of Mount Kibal'chich, it is the smaller of the Kvaevenutane Peaks, in the N part of the Payer Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. First plotted from air photos taken by GermAE 1938-39. Mapped from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1960-61. Named by the USSR in 1966 as Gora Brounova, for geographer Pyotr Ivanovich Brounov (1852-1927), the founder of agricultural meteorology in Russia. US-ACAN accepted the name Mount Brounov in 1970. The Norwegians call it Brounovkollen.

Gora Brounova *see* **Mount Brounov**

Brounovkollen *see* **Mount Brounov**

Mount Brouwer. 72°35' S, 31°26' E. Rising to 2460 m, between Mount Hoge and Mount Launoit, in the Belgica Mountains. Discovered by BelgAE 1957-58, and named by Gaston de Gerlache as Mont de Brouwer, for Carl de Brouwer (b. 1902), electrical engineer at Louvain University, a patron of the expedition. US-ACAN accepted the name Mount Brouwer in 1966.

Arrecife Brown *see* [1]**Brown Island**

Bahía Brown(s) *see* **Browns Bay**

Base Brown *see* **Almirante Brown Station**

Cabo Brown *see* **Cape Brown**

Cape Brown. 69°17' S, 69°48' W. A prominent ice-covered cape, 9 km NNE of the summit of Mount Nicholas, it marks the E side of the entrance to Schokalsky Bay, and also the W entrance point to George VI Sound, and projects from the NE part of Alexander Island into the S part of Marguerite Bay, opposite Cape Jeremy. First seen, from a distance, in Jan. 1909 during FrAE 1908-10, and charted by Charcot as part of a small island. Photographed aerially on Feb. 1, 1937, by BGLE 1934-37, and later roughly mapped from these photos. ChilAE 1946-47 named it Punta 8 de Octubre, and it appears as such on their 1947 chart, commemorating the famous battle of Angamos (Oct. 8, 1879). Surveyed from the ground by Fids from Base E in 1948-49, specifically by Colin Brown, and named for him by UK-APC on March 31, 1955. US-ACAN accepted the name later that year, and it appears on a U.S. Hydrographic Office

chart of that year, as well as on a British chart of 1957. It appears on a 1957 Argentine chart as Cabo Nicolás (*see* **Mount Nicholas** as to why), but on a 1960 Argentine chart as Cabo Brown. The 1970 Argentine gazetteer chose Cabo Nicolás. This feature has been plotted several times, with varying coordinates. The coordinates given here are the latest British ones, and are, presumably, the most up to date. The Chilean gazetteer rejected the name Cabo Nicholás in favor of Cabo Nicolás, then discovered that the Argentines were calling it that, and changed to Cabo Brown.

Île Brown *see* [1]**Brown Island**

Isla Brown *see* [1]**Brown Island**

Mount Brown. 68°18' S, 86°25' E. An elongated rock peak, rising to 1982 m above sea level, and protruding slightly above the continental plateau ice of Princess Elizabeth Land, about 260 km E of the Vestfold Hills, and 160 km SSW of Cape Penck. Delineated from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Lt. (jg) Eduardo P. Brown (b. March 6, 1916. d. Feb. 21, 2006, Cape Coral, Fla.), who joined the U.S. Navy in 1935, served in the South Pacific during World War II, and was photographic officer for the Western Group during OpHJ 1946-47. He retired as a lieutenant commander in 1965. Despite his name, he was thoughly American. His father was from Georgia and his mother from Virginia, his father being a chemist superintendant of a sugar factory for several years in Cuba, where our subject was born, hence his name. However, he was raised mainly in New Orleans and in Chula Vista, Calif. ANCA accepted the name on Oct. 22, 1968.

Brown, Christopher Tibbits "Chris." b. 1920, Walsall, Staffs, son of Ernest H. Brown and his wife Edith Tibbits. He was an RAF pilot during World War II, and in 1948, in Wareham, Dorset, married June M. Butler. In 1951 he became a doctor, in Bristol, and, at the age of 41, and with 4 children, he became FIDS medical officer who wintered-over at Halley Bay Station in 1962. In fact, 6 weeks before he left England for Antarctica, he had to have his kneecap replaced. While in Antarctica he fell into a crevasse and damaged his back and ankle. On his return to the UK, he resumed his private medical practice, in Wareham.

Brown, Colin Chalmers. b. Dec. 28, 1926, Leatherhead, Surrey. He was commissioned in the Royal Engineers just after World War II, and was trained in surveying. He was in Germany with the 14th Field Squadron, RE, in 1947, when he volunteered to be a FIDS surveyor, wintering-over at Base E in 1948 and 1949. He surveyed the S part of Marguerite Bay and George VI Sound to Ablation Point. After the expedition he left Santos, Brazil, on the *Andes*, and arrived back in Southampton on April 16, 1950. On his return to London, he helped Fuchs set up the FIDS Scientific Bureau. He was sick for a while, then spent two years studying aeronautical engineering. In 1955 he went back to surveying, and joined Hunting Surveys, Ltd., and with them spent the summer seasons of 1955-56 and 1956-57 in Antarctica, as surveyor on FIDASE. He stayed with Hunting, and between 1957 and 1965 was expedition manager to 5 expeditions in Africa and Asia. In 1961, in Bath, he married Valerie E. "Val" Burn. In 1966 he became Hunting's deputy chief surveyor, and worked in several parts of Asia and Africa again. In 1969, in Liberia, he contracted cerebral malaria, which eventually forced his retirement 11 years later. He died on June 25, 1997, in Watford, Herts. *See also* **Tern Nunatak**.

Brown, David Kenneth "Ken." b. Dec. 16, 1922, Swansea, son of Jack Brown and his wife Gladys Merchant. He joined FIDS in 1955, as a meteorologist, and wintered-over at Base G in 1956, and at Base D in 1957. After FIDS he worked in an aircraft factory in the Midlands. He died in Swansea, in Feb. 1991.

Brown, Duncan Alexander "Alex." b. June 6, 1925. Radio operator at Macquarie Island in 1956, at Mawson Station in 1958, and at Davis Station in 1961. The Brown Range was named after him.

Brown, Franklin *see* **USEE 1838-42**

Brown, Gavin Robert Lockhart. b. 1882, Glasgow, son of stevedore Gavin Brown and his wife Elizabeth Shirlaw. He trained as a shorthand clerk, and in Dec. 1914 arrived in the Falkland Islands from Britain, as an intinerant schoolteacher. In Jan. 1915 he became a government teacher; in Feb. 1916 he became a 2nd clerk in Treasury & Customs; and then chief clerk in the Colonial Secretary's office. About 1920 he married Lillian, a woman 16 years his junior, and they had a daughter, Dorothy, in 1921. Assistant colonial secretary in 1929-30, he was sent to the South Shetlands that season by Governor Hodson, of the Falkland Islands, to inspect the whaling fleet. He was private secretary to Governor Hodson in 1931. The family returned to Britain in 1933. He died in Easthampstead, Berks, in 1967.

Brown, George. An Enderby ship's captain, on June 22, 1821, he was appointed captain of the *Sprightly*, and took that vessel to the South Shetlands for the 1821-22 sealing season, which was her second tour of the islands.

Brown, Guillermo. b. 1777. This is the famous Almirante (Admiral) Brown, first commandant of the Buenos Aires Navy. In 1815 he was leading a privateering expedition from Río de la Plata to the Pacific, and as the ships were going around Cape Horn, they got blown off course, as far as 65°S. They saw no land. The ships were: the *Hércules*, the *Trinidad*, the *Halcón*, and the *Constitution Oribe*. Almirante Brown died in 1857. His name is perpetuated in Almirante Brown Station.

Brown, Gustav Leon. Known as "Skipper." b. June 6, 1892, Kalmar, Sweden. He went to sea at 15, was in the USA from 1920, and skippered, for 5 years, the *Grace Line* on its run from Peru, through the Panama Canal, to New York. He was captain of the *Eleanor Bolling* during ByrdAE 1928-32. He married Emma, they lived in Baltimore, and he was still plying the merchant seas, as a junior 3rd officer on U.S. Army Water Division ships when he died on Dec. 3, 1950, in Stapleton, NY.

[1]**Brown, James**. Leader of the *Pacific* expedition of 1829-31.

[2]**Brown, James** *see* **USEE 1838-42**

[1]**Brown, John** *see* **USEE 1838-42**

[2]**Brown, John** *see* **USEE 1838-42**

Brown, John Alexander. b. 1925, Montrose, Scotland. He joined FIDS in 1950, as a radio operator, and wintered-over at Signy Island Station in 1951. At the end of his tour he returned to Port Stanley, and lived there for a year, working at the radio station. In 1953, he made his way to Buenos Aires, along with Gordon Howkins and his family, where they caught the *Highland Monarch* for home, arriving in London on June 18, 1953. He lived at that time in Birkhill, Dundee.

[1]**Brown, John B.** *see* **USEE 1838-42**

[2]**Brown, John B.** *see* **Brown Nunataks**

Brown, Matthew. From Deptford, London. Captain (and co-owner) of the *Susanna Ann*, he took the ship to the South Shetlands, for the 1823-24 sealing season. He died on the voyage, and Capt. Robinson took over, bringing the ship back to Buenos Aires on Aug. 12, 1824, from the Falklands, and thence back to London. Capt. Brown left a widow, Ann. Their daughter, Susanna Ann, born on Oct. 23, 1818, in Stepney, was named for the ship.

Brown, Miguel. b. 1777. Captain of the *Hércules*, when that ship and three others were blown off course to 65°S, in 1815 (*see* **Brown, Guillermo**).

Brown, Norman Roy. b. 1929, Bladon, Northumberland, but raised in South Shields, son of John W. Brown and his wife Margaret J.M. Blackburn. He left school at 14, and became a welder. One day, in July 1944, he was welding on a ship under repair at Jarrow Dock, when a colleague fell into the water. Brown dived in (full welding gear and all) to save him. Local hero. He joined the Merchant Navy, and was 2nd officer on the *John Biscoe* in 1947-48 (he was still in that position in 1953). In 1956-57 he took command of the *Shackleton*, and was the skipper on Nov. 30, 1957, when the *Shack* got holed. He resigned his command in April 1958, rumor has it after differences with the governor of the Falklands, Sir Edwin Arrowsmith. However, Brown really felt that the *Shackleton* was inadequate, and he said, "I'm fed up with ships." He lived in Wembley at that time.

Brown, Peter *see* **USEE 1838-42**

Brown, Robert *see* **USEE 1838-42**

Brown, William *see* **USEE 1838-42**

[1]**Brown Bay** *see* **Browns Bay**

[2]**Brown Bay**. 66°17' S, 110°33' E. A cove just SE of Casey Station, on Bailey Peninsula, in the Windmill Islands, off the Budd Coast. Photographed aerially by OHJ 1946-47, SovAE 1956, and ANARE, also in 1956. Named by ANCA on Oct. 22, 1968, for Alan M. Brown, senior engineer with the Antarctic Division,

Melbourne, who helped supervise the construction of Casey. US-ACAN accepted the name in 1971.

Brown Bluff. 63°32' S, 56°55' W. An ice-capped, flat-topped mountain, rising to 744 m, with a prominent cliff of reddish-brown volcanic rock on the N face (hence the name), 14 km S of Hope Bay, on the E side of Tabarin Peninsula (it forms the highest point on that peninsula), at Antarctic Sound, on Trinity Peninsula, at the NE end of the Antarctic Peninsula. On a 1908 Argentine map there is a feature in this area called Cabo Hope, named in association with Hope Bay, and which possibly refers to this bluff. Named by Fids from Base D after their March 1946 survey. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer, and also on a 1963 British chart. There is a 1978 Argentine reference to it as Monte Bardas Coloradas (i.e., "red walls hill"), and the Chileans call it Cerro Carbonell, for Major (later Lt. Col.) Sebastián Carbonell Santander, of the Chilean Army, who took part in ChilAE 1946-47.

Brown Bukt *see* **Browns Bay**

Brown Buttress. 81°41' S, 160°30' E. A wedge-shaped buttress rising to about 800 m, near the head of Dickey Glacier (which flows into Beaumont Bay), on the Shackleton Coast, on the Ross Ice Shelf. Named by NZ-APC on Feb. 27, 2003, for Raymond Frederick Brown, who wintered-over at Hallett Station in 1960, working as a NZ technician on the geomagnetic project. US-ACAN accepted the name.

Mount Brown-Cooper. 70°42' S, 64°12' E. Name also seen as Mount Browne-Cooper. A partly ice-covered rock feature, 1.5 km SW of Mount Forecast, surmounting the SE extemity of the Bennett Escarpment, and about 46 km SW of Mount Crohn, in the Prince Charles Mountains of Mac. Robertson Land. Mapped from terrestrial photographs taken by Syd Kirkby, surveyor at Mawson Station in 1956, and also from ANARE aerial photos taken in 1965, and named by ANCA on Aug. 10, 1966, for Peter J. Brown-Cooper, geophysicist at Wilkes Station in 1965. US-ACAN accepted the name in 1970.

Brown Glacier. 74°50' S, 65°08' W. A large glacier on the W side of the Latady Mountains, flowing SSE to join Ketchum Glacier, W of Gardner Inlet, where the Orville Coast meets the Lassiter Coast, on the E coast of Palmer Land. Mapped by USGS from air photos taken by USN between 1965 and 1967. Named by US-ACAN, for Lawrence Edward Brown, geologist, a member of the USGS field party which crossed this glacier in 1968-69. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Nov. 13, 1985.

Brown Hills. 79°46' S, 158°33' E. To the immediate N of, and in the lower reaches of, the Darwin Glacier, they are a group of mainly snow-free hills in the Cook Mountains, in the Queen Alexandra Range. Named for their color by the Darwin Glacier Party of BCTAE 1956-58. NZ-APC accepted the name on May 24, 1961, and ANCA followed suit on Nov. 24, 1961. US-ACAN accepted the name in 1965.

[1]**Brown Island**. 64°58' S, 63°47' W. A small, brown, almost snow-free island, in the SE part of the Wauwermans Islands, 3 km SW of Wednesday Island, in the Wilhelm Archipelago. Charted in Jan. 1936, by BGLE 1934-37, and so named by Rymill because its color stands out among all the other (snow-capped) islands. The island and attendant rocks appear on a 1946 U.S. Hydrographic Office chart as Brown Island Reef, and, on a 1947 Chilean chart, translated as Arrecife Brown. The name Brown Island appears on a 1948 British chart, and was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the 1955 British gazetteer. It appears on a 1954 French chart as Île Brown. It was re-charted by an RN Hydrographic Survey unit on the *Protector*, in 1956-57, and appears on a British chart of 1958. The island and its rocks appear on a 1957 Argentine chart as Islas Pardas (i.e., "brown islands"), and that is how the feature appears in the 1970 Argentine gazetteer. The island appears on a 1962 Chilean chart as Isla Brown, and that is how it appears in the 1974 Chilean gazetteer.

[2]**Brown Island** *see* **Brown Peninsula**

Brown Island Reef *see* [1]**Brown Island**

Brown Nunataks. 82°37' S, 53°30' W. Three nunataks, rising to 755 m, 1.5 km NW of Walker Peak, at the SW extremity of the Dufek Massif, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for John B. Brown (b. July 19, 1926, Delaware. d. July 7, 2006, Wilmington, Del.), ionosphere physicist at Ellsworth Station in 1957. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Brown Peak. 67°25' S, 164°35' E. Rising to 1705 m (the New Zealanders say about 1524 m), in the N part of Sturge Island, in the Balleny Islands. Discovered in Feb. 1839, by Balleny, who named it Brown's Peak, for William Brown, one of the merchants who helped Enderby Brothers send out the expedition. In 1841 Ross, the next to sight it, accidentally re-named it Russell Peak, but the earlier name prevails, except that it has been shortened to Brown Peak, a name accepted by US-ACAN in 1947. It appears in the 1958 NZ gazetteer.

Brown Peaks. 85°35' S, 158°05' W. A series of low peaks surmounting a ridge 6 km long, 11 km E of Robinson Bluff, at the E side of Amundsen Glacier, in the Queen Maud Mountains. First roughly mapped from ground surveys and air photos taken during ByrdAE 1928-30. Named by US-ACAN in 1967, for Kenneth R. Brown, biologist who wintered-over at McMurdo in 1964. NZ-APC accepted the name on June 29, 1967.

Brown Peninsula. 78°07' S, 165°30' E. Also called Broune Insel. A nearly ice-free peninsula in the S part of Victoria Land, 16 km long and 6 km wide, rising above the Ross Ice Shelf at the bottom of the N slopes of Mount Discovery leading to McMurdo Sound, and connected to Mount Discovery by a low isthmus. The highest point on it is 2654 feet. Discovered by BAE 1901-04, and named by them as Brown Island because of its color and island-like quality. On May 24, 1961, NZ-APC redefined it as Brown Peninsula, and US-ACAN accepted that name in 1962.

[1]**Brown Range**. 68°08' S, 62°24' E. A group of 5 peaks, only one of them individually named (Gordon Peak), about 4 km S of Mount Twintop, at the S end of the David Range, in the Framnes Mountains of Mac. Robertson Land. Named by ANCA on July 22, 1959, for Alex Brown (*see* **Brown, Duncan Alexander**). This entry should really be read in conjunction with Sørtindane Peaks. Nearly all the gazetteers have the Brown Range and Sørtindane Peaks as one and the same, but the two features are not synonymous.

[2]**Brown Range**. 79°45' S, 158°30' E. Named by the Russians. So says the SCAR gazetteer, and gives it a separate entry, as a distinct feature, that is. However, it can't be. It must be a Russian name for one of the established ranges in Victoria Land, probably the Conway Range.

Brown Ridge. 83°38' S, 55°06' W. A bare rock ridge, 5 km long, and rising to 1400 m, it extends NNW from Nelson Peak, on the Washington Escarpment, in the Neptune Range of the Pensacola Mountains. Photographed aerially in 1964 by USN, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1965, for Robert D. Brown, geologist with the USGS Patuxent Range field party of 1962-63. At that stage it was plotted in 83°38' S, 54°52' W, but the coordinates were corrected by 1969. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Brown Scarp. 78°04' S, 161°24' E. A narrow, wedge-like massif, 2.5 km long and rising to 2410 m, with a notable S escarpment but moderate N slopes, between Palais Glacier and Waddington Glacier, in Victoria Land. Named by US-ACAN in 1995, for Arthur J. Brown, deputy program director with ITT Services, 1982-90. From 1994 he was head of the safety, environment, and health implementation team at the NSF's Office of Polar Programs.

Brown skua *see* **Skuas**

Brown Station *see* **Almirante Brown Station**

Brown Valley. 75°38' S, 132°12' W. A rectangular, ice-covered valley, between Mount Kauffman and Mount Kosciusko, in the NE end of the Ames Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Thomas I. Brown, USARP meteorologist at Byrd Station in 1963.

Browngletscher. 73°26′ S, 166°44′ E. A glacier, SW of Dessent Ridge, in the Mountaineer Range of Victoria Land. Named by the Germans.

Mount Browning. 74°37' S, 164°03' E. Rising to 762 m, 3 km to the N of Gerlache Inlet, at the NW side of Terra Nova Bay, at the N end of the mountain mass dominated by Mount Abbott, and opposite the terminus of Boomerang Glacier, in the Northern Foothills, on the coast of northern Victoria Land. Mapped by BAE 1907-09, and explored and mapped in greater detail by Campbell's Northern Party of 1911-12, during BAE 1910-13. They named it for Frank Browning. US-ACAN accepted the name, and NZ-APC followed suit.

Browning, Frank Vernon. b. June 27, 1882, Stockland, near Axminster, Devon, but raised in Lympstone, son of gardener Frank Albert Browning and his wife Rhoda Phillips. He joined the Royal Navy as a boy 2nd class, in June 1900, in Nov. 1905 becoming a petty officer, 2nd class, which is the rank he still held while serving on the *Talbot*, when he transferred to the *Terra Nova*, for BAE 1910-13. He was part of Campbell's Northern Party during the expedition, and came close to dying on this trip. He left a diary. In Sept. 1913 he returned to Britain, just promoted to petty officer, 1st class, and when World War I broke out was serving on the cruiser *Carnarvon*, taking part in the Battle of the Falkland Islands in December 1914. He stayed with the *Carnarvon* until Nov. 1917. In 1920, by now a chief petty officer, he joined the *Warspite*, and on March 16, 1921, at Ellacombe, Devon, he married Marjorie Helen Bending, and they lived in Torquay, having two children there. He retired in June 1922, and died on March 14, 1930, at the Cottage Hospital, in Henley-on-Thames, Oxfordshire.

Browning Island *see* **Browning Peninsula**

Browning Pass. 74°36' S, 163°59' E. An ice-covered pass, 16 km long, just to the N of Gerlache Inlet, at the N end of Terra Nova Bay, between the the Northern Foothills and the main mass of the Deep Freeze Range, in northern Victoria Land. The pass facilitates movement between the lower ends of Priestley Glacier and Campbell Glacier, and was first mapped as part of Campbell Glacier by Campbell's Northern Party of 1911-12, during BAE 1910-13. There is, however, a divide to the E of the mouth of Boomerang Glacier where the flow to the E of the divide enters Campbell Glacier. So, the area was re-mapped accordingly, by the Southern Party of NZGSAE 1962-63, and the pass named by them for Frank Browning. NZ-APC accepted the name on July 16, 1964, and US-ACAN followed suit in 1967.

Browning Pass Automatic Weather Station. 74°37' S, 163°55' E. An Italian AWS at Browning Pass, at the N end of Terra Nova Bay.

Browning Peninsula. 66°28' S, 110°33' E. Also called Browning Island. A rocky outcrop, 6 km long, connected to the continental ice on the Budd Coast, it separates Penney Bay from Eyres Bay, at the S end of the Windmill Islands. First plotted from air photos taken in 1947, during OpHJ 1946-47, and in 1948, during OpW 1947-48. Named by US-ACAN in 1956, for Cdr. Charles L. Browning, USN, chief staff officer with OpW 1947-48, and later staff officer with Task Force 43, during OpDF I (1955-56). The Australians established a field hut here. ANCA accepted the name on July 4, 1961.

Bahía Browns *see* **Browns Bay**

Punta Browns. 64°31' S, 63°01' W. A point at the end of Briggs Peninsula, on Discovery Sound, on the W side of Inverleith Harbor, Anvers Island, in the Palmer Archipelago. Named by the Argentines.

Browns Bay. 60°43' S, 44°36' W. A bay, 2.5 km wide, between (on the one hand) Thomson Point and Cape Mabel, and (on the other) Cape Geddes, along the NW side of Laurie Island, in the South Orkneys. Charted in Nov. 1903 by ScotNAE 1902-04, and named by Bruce as Brown's Bay, for Dr. R.N. Rudmose Brown. It appears as Brown Bukt on Petter Sørlle's chart of 1930, and on a 1933 Argentine chart as Bahía Brown. It appears on the Discovery Investigations charts of 1930 and 1935, as Brown Bay, but as Browns Bay on a British chart of 1938, and that latter name was the one accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears as Bahía Brown's on a 1945 Argentine chart, and on a 1953 Argentine chart as Bahía Browns, and that latter name was the one accepted by the 1970 Argentine gazetteer (it is not a very good translation, but, then again, they didn't have much to work with).

Browns Butte. 85°15' S, 167°30' E. A bare rock butte at the N side of the mouth of Koski Glacier, in the Dominion Range. Named by US-ACAN in 1965, for Craig W. Brown, USARP meteorologist at Pole Station in 1963. NZ-APC accepted the name on Nov. 16, 1965.

Browns Glacier. 68°56' S, 78°00' E. A small glacier, 6 km N of Chaos Glacier, it flows westward into the N extremity of Ranvik Bay, in the SE part of Prydz Bay, on the Ingrid Christensen Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers (but, apparently not named by them). It was re-photographed aerially during OpHJ 1946-47, and mapped again, from these photos, in 1952, by U.S. cartographer John Roscoe, who named it that year for Lt. (jg) Eduardo P. Brown (*see* **Mount Brown**). US-ACAN accepted the name in 1956, and ANCA followed suit.

Brown's Peak *see* **Brown Peak**

The *Brownson*. A 2425-ton Gearing-class destroyer, 390 feet 6 inches long, the second ship to be named for Admiral Willard H. Brownson. DD-868 was built by Bethlehem Steel at Staten Island, and launched on July 7, 1945. She was commissioned on Nov. 17, 1945. On Nov. 2, 1946, Capt. Harry Gimber became skipper, and on Dec. 2, 1946 took her out of Norfolk, Va., bound for Antarctica, as part of the Eastern Task Group of OpHJ 1946-47. On Dec. 10, 1946, they passed through the Panama Canal, and served primarily as a weather station, crossing the Antarctic Circle 76 times. On March 3, 1947 she left Antarctic waters, headed for Brazil, arriving back in Norfolk on April 8, 1947. It was her only voyage to Antarctica. The vessel was decommissioned in 1976, and then scrapped in 1977.

Brownson Islands. 74°10' S, 103°36' W. A group of 20 or so small islands just outside the entrance to Cranton Bay, about 22 km SW of the SW tip of Canisteo Peninsula, in the E extremity of the Amundsen Sea. Delineated from air photos taken in Dec. 1946, during OpHJ 1946-47. Named by US-ACAN in 1955, for the *Brownson*.

Lake Brownworth. 77°26' S, 162°45' E. Also called Wright Lake. A meltwater lake immediately W of Wright Lower Glacier, at the E end of Wright Valley, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1960. Named by US-ACAN in 1972, for Frederick S. Brownworth, Jr. (b. Aug. 25, 1926. d. Oct. 19, 1996, Reston, Va.), USGS topographic engineer in Antarctica for several seasons. In 1970-71 he supervised aerial photography of the dry valleys of Victoria Land, including this lake.

Bru Buttress *see* **Repeater Buttress**

[1]Cape Bruce *see* **Bruce Point**

[2]Cape Bruce. 67°25' S, 60°47' E. The N tip of a small, unnamed island, at the E side of Oom Bay, separated by a shallow channel from the mainland rocks just W of Taylor Glacier, in Mac. Robertson Land. BANZARE discovered this cape, and landed here on Feb. 18, 1931, Mawson naming it for Stanley Melbourne Bruce (1883-1967; in 1947 created 1st Viscount Bruce of Melbourne), prime minister of Australia, 1923-29. US-ACAN accepted the name in 1947, and ANCA followed suit.

Isla Bruce *see* **Bruce Island**, **Bruce Islands**, **Bruce Nunatak**

Islas Bruce *see* **Bruce Islands**

Islotes Bruce *see* **Bruce Islands**

Meseta Bruce *see* **Bruce Plateau**

Mount Bruce. 70°32' S, 162°30' E. A prominent snow-covered mountain, rising to 1640 m (the New Zealanders say 853 m), it is the northernmost of the Bowers Mountains, and also the highest summit in those mountains, just S of Stuhlinger Ice Piedmont and the Lillie Glacier Tongue, and between Gannutz Glacier and Barber Glacier, in Oates Land. Discovered by the men on the *Terra Nova* in Feb. 1911, and named for Wilfred M. Bruce. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Nunatak Bruce *see* **Bruce Nunatak**

Roca Bruce *see* **Bruce Nunatak**

Bruce, Wilfrid Montague. b. Oct. 26, 1874, Scotland, 4th son of Canon Lloyd Stewart Bruce. He was Robert Falcon Scott's brother-in-law. He was a lieutenant with the P & O line, and joined BAE 1910-13 in NZ, as the man in charge of zoological work aboard the *Terra Nova*. He had also helped to collect and transport the dogs from Vladivostok. He was not a member of the shore party, but he did keep a diary of the expedition. On Nov. 25, 1913, at St. Anne's Soho, he married Dorothy, the daughter of Sir Jesse Boot, the famous head of Boot's Chemists chain. He served in the Navy during World War I, in

charge of the Lowestoft minesweepers, retiring as captain, RNR, just after the war to take up pig farming near Oxford. He died on Sept. 21, 1953.

Bruce, William Robert. Known as Robert. b. Britain. He was head of the Ciopletti Meteorological Station at Río Negro, in Argentina, in 1904, and was leader of the 1908 wintering-over party at Órcadas Station.

Bruce, William Speirs. b. Aug. 1, 1867, London, son of Scottish physician Samuel Noble Bruce and his Welsh wife Mary Lloyd. In 1892-93, after abandoning his medical studies, he was naturalist and doctor on the *Balaena*, during the Dundee Whaling Expedition. He planned to go on the *Antarctic* expedition, led by Bull in 1894-95, but couldn't get to Melbourne in time to meet the ship. Around this time he conceived the idea of a transantarctic traverse, in order to test the theoretic Ross-Weddell Graben. He worked at the Ben Nevis met station in 1895-96, and in 1896-97 was part of the Jackson-Harmsworth expedition in the Arctic, where he met Nansen and Hjalmar Johansen. He went back to work at Ben Nevis, and then, in 1898, joined Maj. Andrew Coats in the Arctic, which is how he got to know the Coats family. In 1899 he was back in the Arctic with Prince Albert of Monaco. In 1901 he married Jessie Mackenzie, a former nurse, and they lived in Edinburgh, where he helped found Edinburgh Zoo. He refused the post of naturalist on Scott's BNAE 1901-04 because he was planning his own expedition, ScotNAE 1902-04. The British government, however, refused to back his expedition, and so, being intensely patriotic, Bruce approached the Coats family, who became his main backers on his purely Scottish-financed expedition. After the expedition Bruce continued in science, and in Arctic research, going north seven times, mostly in pursuit of minerals for commercial exploitation. In 1908 he proposed a new Antarctic expedition (*see* **Scottish National Antarctic Expedition 1908-11**), but nothing came of it. In 1915-16 he managed a whaling station in the Seychelles. He died on Oct. 28, 1921, in Edinburgh, and his ashes were scattered over the Indian Ocean. In 2003 Peter Speak wrote his biography, *William Speirs Bruce*.

Bruce Bukt *see* **Borge Bay**

Bruce Coast. That part of the coast of Coats Land, trending southwestward between longitudes 16°30' W and 23°00' W. It consists of undulating slopes fronted by an ice cliff between 6.1 and 45.7 m high. Discovered by Bruce on March 3, 1904, in the *Scotia*, when that vessel was in 72°18' S, 17°59' W, during ScotNAE 1902-04. Named by Shackleton in 1915, for Bruce. It appears on a 1945 U.S. Hydrographic Office chart. In 1956, US-ACAN discontinued the term, the W part of Bruce Coast going to the Caird Coast and the E part going to the Princess Martha Coast.

Bruce Harbor *see* **Borge Bay**

Mount Bruce Harkness *see* **Mount Harkness**

Bruce Island. 64°54' S, 63°08' W. An island, 0.8 km off the SW corner of Bryde Island, in Gerlache Strait, off the Danco Coast, on the W coast of Graham Land. Discovered, mapped, landed upon, but not named, in Feb. 1898, by BelgAE 1897-99. Named by David Ferguson in 1913 for William S. Bruce. It appears on his 1918 chart, and also on a British map of 1921. It appears on a 1929 chart as Banck Island, named in association with Mount Banck (see that entry for more on this). It appears on an Argentine chart of 1949 as Isla Bruce, and that was the name accepted by the Argentine gazetteer of 1970. It appears on a Chilean chart of 1951 as Isla Bank, but on a Chilean chart of 1962 as Isla Banck, and that latter was the name accepted by the Chilean gazetteer of 1974. It has also been seen as Islote Banck. The island was re-surveyed by Fids on the *Norsel* in April 1955. Bruce Island was the name accepted by UK-APC on Sept. 4, 1957, and it appears that way on a British chart of 1959. US-ACAN accepted that name in 1963.

Bruce Islands. 60°41' S, 44°54' W. A group of small islands and rocks, 2.5 km NW of Eillium Island and 5 km NW of Route Point (the NW tip of Laurie Island), and also NW of Mackenzie Peninsula, in the South Orkneys. Discovered in Dec. 1821 by Powell and Palmer, it is roughly shown on Powell's chart published in 1822. It was roughly charted by Petter Sørlle in 1912-13, and named by him (at least it appears on his 1930 chart) as Binnie Øyane (i.e., "the Binnie islands"), named for Edward Binnie. In March 1919 it was charted by personnel on the *Uruguay*, and appears on a 1930 Argentine chart as Islas Corbeta (the *Uruguay* was a famous Antarctic "corbeta"—the Spanish name for a corvette). Re-surveyed by the personnel on the *Discovery II* in 1933, and, to mark the hydrographic work done by ScotNAE 1902-04, renamed by them as the Bruce Islands, for William S. Bruce. The name Bruce Islands was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953, and was the name seen in the 1955 British gazetteer. The group appears (singularized, by error) as Isla Bruce on a 1945 Argentine chart, but Moneta refers to the group as Islas Bruce in 1951. A 1953 Argentine chart shows it as Islas Corbeta, and that was the name accepted by the Argentine gazetteer of 1970. However, that same gazetteer also accepted Islotes Bruce.

Bruce Nunatak. 65°05' S, 60°15' W. Rising to 320 m, 3 km W of Donald Nunatak, in the Seal Nunataks, 16 km WNW of the extreme NW point of Robertson Island, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. First charted in 1902 by SwedAE 1901-04, and named by Nordenskjöld as Nunatak Bruce, for William S. Bruce. It appears in a 1908 Argentine reference as Isla Bruce, on a 1921 British chart as Bruce Nunatak, and on a Chilean chart of 1947 as Roca Bruce. It was re-surveyed in Aug. 1947, by Fids from Base D. The name Bruce Nunatak was accepted by UK-APC on Jan. 22, 1951, and by US-ACAN in 1952. It appears as such in the 1955 British gazetteer. The Chilean gazetteer of 1974 accepted the name Nunatak Bruce, and that is what the Argentines call it too.

Bruce Plateau. 66°00' S, 64°00' W. An ice-covered plateau, about 150 km long and rising to about 1830 m, it extends NE from the heads of Erskine Glacier and Gould Glacier to the vicinity of Flandres Bay, in Graham Land. It is not known who first saw this plateau, but it was presumably sighted in Jan. 1909, from Pendleton Strait, by FrAE 1908-10. In 1946-47, Fids from Base E surveyed its S and W parts, and it was named by UK-APC on Sept. 22, 1954, for William S. Bruce. It appears in the 1955 British gazetteer. US-ACAN accepted the name in 1956, and it appears on a British chart of 1957. It was further surveyed by Fids from Base D in 1960-62. The Chilean gazetteer accepted the translated name Meseta Bruce. Originally plotted in 66°50' S, 63°35' W, it has since been replotted, and extends between 65°15' S to 66°30' S.

Bruce Point. 76°08' S, 162°26' E. A rocky point at the S side of Charcot Cove, on the E coast of Victoria Land. Discovered by BNAE 1901-04, and named by Scott as Cape William Bruce, for William S. Bruce. He plotted it in 75°38' S, 162°26' E. The name was later shortened to Cape Bruce, and then redefined as Bruce Point, the name accepted by NZ-APC on Feb. 1, 1965, and by US-ACAN in 1966. It has since been replotted.

Bruce Ridge. 60°00' S, 35°00' W. A submarine feature to the E of the South Orkneys. Named by international agreement in 1967, for William Speirs Bruce.

Bruce Rise *see* **Bruce Spur**

Bruce Spur. 63°30' S, 101°15' E. Also called Bruce Rise. A submarine feature, an elevated area of the ocean floor, actually a spur. Discovered on Jan. 14, 1914, during the cruise of the *Aurora*, while part of AAE 1911-14. The name was accepted by international agreement in June 1963.

Bruces Peak *see* **Summers Peak**

Brückner Glacier. 67°20' S, 67°01' W. Flows NE on Arrowsmith Peninsula and enters the Müller Ice Shelf, in the SW part of Lallemand Fjord, just W of Humphreys Hill, on the Loubet Coast of the Antarctic Peninsula. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS. Named by UK-APC on Sept. 23, 1960, for Eduard Brückner (1862-1927), German glaciology pioneer. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. It was not realized, until the late 1970s, that the glacier actually flows into the Müller Ice Shelf, rather than directly into Lallemand Fjord, which had been the prevailing belief. Originally plotted in 67°14' S, 66°56' W, and then in 67°18' S, 67°00' W, it has since been replotted.

Lake Bruehwiler. 69°24' S, 76°21' E. A small round lake nestled in a wedge between 2 hills, about 1.3 km SW of Law-Racovitza Station, in the Larsemann Hills. Named by ANCA on Sept. 29, 1988, for Albert Bruehwiler, plant inspector who wintered-over at Macquarie Island in 1982, at Davis Station in 1986, Mawson Station in 1990, and again at Mawson in 1993. During his 2nd tour, he greatly assisted in the establishment of what was then known as Law Base.

Brugda *see* **Brugda Ridge**

Brugda Ridge. 72°05' S, 2°50' E. A mountain ridge extending ESE from the SE side of Jutulsessen Mountain, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Brugda (i.e., "the basking shark"). US-ACAN accepted the name Brugda Ridge in 1966. *See also* **Gora Puschina**.

Brugdebreen. 72°04' S, 2°52' E. A glacier in the vicinity of Troll Station, in the Gjelsvik Mountains of Queen Maud Land. Named by the Norwegians on Oct. 12, 2007, in association with Brugda Ridge. The name really means "the basking shark glacier," but should be translated as Brugda Glacier.

Brugdedalen. 72°02' S, 2°47' E. A valley in the area of Troll Station, in the Gjelsvik Mountains of Queen Maud Land. Named by the Norwegians on Oct. 12, 2007. Strictly speaking, the name means "the basking shark valley," but should be interpreted as Brugda Valley.

Brugdeskaret. 72°04' S, 2°48' E. A pass in the area of Troll Station, in the Gjelsvik Mountains of Queen Maud Land. Named by the Norwegians on Oct. 12, 2007, in association with Brugda Ridge. "Skaret" means "gap" or "pass."

Bruggman(n) *see* **Brugmann**

Montes Brugmann *see* **Brugmann Mountains**

Monts Brugmann *see* **Brugmann Mountains**

Mount Brugmann *see* **Brugmann Mountains**

Brugmann Mountains. 64°02' S, 61°58' W. Rising to 852 m, they are steep and rugged on the E slopes, but are ice-capped and descend gently toward the W, extending in a NE-SW arc along the eastern-central axis of Liège Island, in the Palmer Archipelago. They include Pavlov Peak and Mount Vesalius. Discovered and roughly mapped on Jan. 25, 1898, by BelgAE 1897-99, and named by de Gerlache as Monts Brugmann, for banker Georges Brugmann (1829-1900), consul general for the Norwegians and Swedes in Brussels, and a patron of the expedition. On Dr. Frederick Cook's maps of the expedition, the feature appears variously as Mount Brugmann and the Brugmann Mountains. It appears spelled erroneously on several British charts — Bruggman Mountains (1909), Brüggmann Mountains (1916), Bruggmann Mountains (1930), and Brugman Mountains (1942). On a 1943 U.S. Hydrographic Office chart it appears as "Bruggman (Brugmann) Mountains." On an Argentine chart of 1949 it appears as Montes Bruggman, on another (from 1957) as Montes Bruggmann, and on a third (from 1959) as Montes Brugmann, which is correct (that name also appearing on a 1962 Chilean chart), and which was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It appears as Brugmann Mountains on British charts of 1948 and 1949, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The feature was photographed aerially by FIDASE in 1956-57. It appears on a 1961 U.S. Hydrographic Office chart as "Brugmann (Bruggman) Mountains.

Bruhns, Ernst. b. 1887, Germany. Former German Merchant Navy officer, who moved to Argentina, and was many years at La Quica Observatory. He was 2nd-in-command at Órcadas Station for the winter of 1923. He later led the 1925, 1928, 1931, and 1932 expeditions.

Caleta Bruix *see* **Bruix Cove**

Bruix Cove. 62°38' S, 59°59' W. A small cove in the S part of Moon Bay, on the E part of Livingston Island, in the South Shetlands. Named by the Argentines about 1970, as Caleta Bruix, for Alexis-Vital-Joseph, Baron de Bruix, known in South America as General Alejo Bruix (ca. 1790-1826), a hero of the revolutions. UK-APC accepted the translation Bruix Cove, on Dec. 16, 2003. The British were the latest to replot this cove, in late 2008.

The *Brulson* *see* **The *Brussa***

Mount Brundage. 75°16' S, 65°28' W. Rising to 1260 m, 20 km WSW of Mount Terwileger, in the S part of the Scaife Mountains, on the Orville Coast, in southern Palmer Land. Discovered aerially on Dec. 21, 1947, by RARE 1947-48, and named by Finn Ronne as Mount Burr Brundage, for Burr Cartwright Brundage (1912-1993), a history professor who was with the Department of State from 1944 to 1947, and who helped arrange the expedition. Ronne plotted it in 75°40' S, 65°00' W. US-ACAN accepted the shortened form of the name, Mount Brundage, in 1949. Mapped by USGS from USN air photos taken between 1965 and 1967, it appears with the corrected coordinates on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Brune, Ewald *see* **The *Icebird***

Bruner Hill. 75°39' S, 142°25' W. Rising to 770 m and mostly snow-covered (except for some exposed rock on the N face), it stands on the N side of El-Sayed Glacier, 13 km SW of Mount Shirley, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken betwen 1959 and 1965. Named by US-ACAN in 1972, for Lt. Michael J. Bruner, USN, LC-130 Hercules aircraft commander during OpDF 70 (i.e., 1969-70) and OpDF 71 (i.e., 1970-71).

Brunet, Léonard. b. July 14, 1812, Marmande, France. Ordinary seaman on the *Zélée* during FrAE 1837-40.

Brunhilde Peak. 77°38' S, 161°27' E. A rock peak between Sykes Glacier and the upper part of Donner Valley, in the Asgard Range of Victoria Land. Named by NZ-APC on Aug. 3, 1972, for the mythical Teutonic figure. US-ACAN accepted the name in 1976.

Brunner Glacier. 85°14' S, 175°38' W. A narrow, steep-walled glacier, 3 km long, it flows from the W slope of the Cumulus Hills, between Landry Bluff and Halfmoon Bluff, into Shackleton Glacier. Named by the Texas Tech Shackleton Glacier Expedition of 1964-65 for Staff Sgt. Donald R. Brunner, member of the U.S. Army Aviation Detachment that supported the expedition. US-ACAN accepted the name in 1965, and NZ-APC followed suit on Nov. 16, 1965.

Bruno, F. *see* **Órcadas Station**, 1930

Brunow, Benjamin J. "Ben." American captain of the *Henry*, 1820-21, and probably 2nd-in-command of the New York Sealing Expedition of that season. He was back in the *Henry* for the 2nd part of the expedition, 1821-22.

Brunow Bay. 62°43' S, 60°08' W. A small indentation into the SE side of Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Ben Brunow. US-ACAN accepted the name in 1960. It appears on a 1962 British chart. The British were the latest to replot this bay, in late 2008.

Mount Bruns. 84°29' S, 64°23' W. Rising to 910 m, 6 km N of Mount Lowry, in the Anderson Hills, in the N part of the Patuxent Range, in the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for John E. Bruns, glaciologist who wintered-over at Palmer Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Bruns, Herbert. b. 1908, Germany. He went to sea in May 1931, as an electrician, and was electrical engineer on the *Schwabenland* in the 1930s, under Capt. Kottas, when he, his captain, his ship, and some of the crew went on GermAE 1938-39.

Bruns Knoll. 67°24' S, 10°30' W. A submarine feature in the Weddell Sea. Named by Heinrich Hinze in Jan. 1997, the name was accepted by international agreement in June of that year.

Bruns Nunataks. 72°05' S, 1°10' E. A small group of nunataks, including Tua Hill, 4 km WNW of Brattskarvet Mountain, in the Sverdrup Mountains of Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Bruns-Berge, for Herbert Bruns. Later geographers, unsure of the German aerial photography, selected these nunataks as the ones Ritscher intended, and named them in English. US-ACAN accepted that situation in 1970.

Brunsvighorten. 74°44' S, 11°57' W. A mountain crag W of Bieringmulen, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Paal Brunsvig (1921-1988), a Resistance hero of Telemark, during World War II.

Brunt Basin. 75°00' S, 25°00' W. A glacially eroded basin of the Brunt Ice Shelf, and also partially of Stancomb-Wills Glacier. Named by Heinrich Hinze in Jan. 1997, in association with the ice shelf. The name was accepted by international agreement in June of that year.

Brunt Ice Front. 75°00' S, 23°00' W. The seaward face of the Brunt Ice Shelf, off the Caird Coast. Named by UK-APC on Sept. 23, 1960. It appears on a British chart of that year.

Brunt Ice Shelf. 75°30' S, 25°00' W. An ice shelf bordering the coast of Coats Land, and extending NE from the Dawson-Lambton Ice Stream to the NE side of the Stancomb-Wills Ice Stream. Discovered in March 1904, by ScotAE 1902-04. It was next seen in Jan. 1915, during BITE 1914-17. It provided the site for the Halley Bay stations. Named by UK-APC on Sept. 23, 1960, for David Brunt (1886-1965; knighted in 1949), Welsh meteorologist who, as physical secretary of the Royal Society, 1946-57, was partially responsible for getting the original expedition to Halley Bay off the ground (see British Royal Society Expedition). It appears on a British chart of 1960. US-ACAN accepted the name in 1965. The SW limit of the ice shelf was originally given as 76°00' S, 26°30' W, with the NE limit undefined. The ice shelf was surveyed by BAS personnel from Halley in 1967 and 1970, and photographed aerially by USN in 1967-68 and again in 1969-70. Its extent was not fully shown until U.S. Landsat images taken in Feb. 1974, and the definition was revised accordingly.

Brunt Icefalls. 75°55' S, 25°00' W. A line of icefalls extending along the Caird Coast for almost 80 km where the steep, ice-covered coast descends to the Brunt Ice Shelf. Discovered on Nov. 5, 1967, on a VX-6 flight, and plotted by USGS from air photos taken at that time. Named by US-ACAN in 1970, in association with the ice shelf.

Brunvold, Arnold and Saebjørn. Brothers. Saebjørn was born in Norway, in 1900, and joined the Merchant Marine. On Oct. 27, 1924, he signed on at Oslo to the Norwegian Pacific Line steamer *Borgland* for a cruise around the west coast of the Americas, as 3rd officer. He and his younger brother Arnold then became whalers, and were both captains who explored the coast of East Antarctica in the *Seksern* in Jan. 1931.

Brunvoll Glacier. 67°48' S, 66°48' E. A broad glacier, flowing between Murray Monolith and Torlyn Mountain on the E, and Scullin Monolith and Mikkelsen Peak on the W, as far as the coast. Named by Bjarne Aagard (*see* **Aagard Glacier**) for the Brunvold [sic] brothers, Arnold and Saebjørn. US-ACAN accepted the name in 1953.

Brunvollbotnen. 74°43' S, 11°24' W. A cirque (or corrie) between Sanengenrusta and Malmrusta, in the NW side of Sivorgfjella, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Kirsten Brunvoll (1895-1976), a Norwegian housewife who, together with her husband Jonas, and their two sons Jonas (aged 21) and Gunnar (17), printed and distributed illegal (i.e., anti-Nazi) newspapers during the occupation of Norway, in World War II. She was arrested in 1941, and sent to a concentration camp. In 1950, the two boys started the Norwegian Opera Company.

Islote Brusa. 60°32' S, 45°31' W. A small island, with offlying rocks, in Ommanney Bay, on the N coast of Coronation Island, in the South Orkneys. Its N point is Foul Point. The island, although discovered in 1821, by Powell, has remained unnamed to this day, except by the Argentines.

Brusen *see* **Brusen Nunatak**

Brusen Nunatak. 68°12' S, 58°13' E. A lone peak, about 5 km W of Mount Gjeita (what the Australians call Mount Banfield), in the Hansen Mountains of Kemp Land. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, and named by them as Brusen, after the rock in the Lofoten Islands, off the NW coast of Norway. Re-plotted by Australian cartographers from ANARE aerial photos. US-ACAN accepted the name Brusen Nunatak in 1967. ANCA named it (for themselves only) as Foley Nunatak, for Noel Foley (*see* **Foley Promontory**), weather observer who wintered-over at Mawson Station in 1965, and who was a member of one of the survey parties which carried out a tellurometer traverse passing through the Hansen Mountains that year.

Brusen Point. 62°26' S, 59°49' W. A narrow rocky point, projecting 200 m in a NNW direction, and forming the N extremity of Greenwich Island, 990 m W of Agüedo Point, 4.55 km E of Aprilov Point, and and 1.02 km SW of Dee Island, in the South Shetlands. Mapped by the British in 1968, by the Chileans in 1971, by the Argentines in 1980, and by the Bulgarians in 2005 and 2009. Named by the Bulgarians on Dec. 6, 2010, for the settlements of Brusen, in northwestern and western Bulgaria.

Brush Glacier. 74°29' S, 111°36' W. A broad glacier in the NW part of Bear Peninsula, flowing W into the Dotson Ice Shelf to the N of Jeffrey Head, in Marie Byrd Land. First mapped by USGS from air photos taken in Jan. 1947, during OpHJ 1946-47. Named by US-ACAN in 1967, for Bernard Eugene "Gene" Brush (b. Nov. 2, 1941. d. Nov. 21, 2007, Lafayette, Colo.), station engineer at Byrd VLF Station in 1966. Altogether he wintered-over 4 times, in both military and civilian capacities. NZ-APC accepted the name on June 29, 1967.

Brusilov Nunataks. 66°42' S, 52°24' E. A group of nunataks, 10 km N of Mount Morrison, in the Tula Mountains of Enderby Land. The geology of these nunataks was investigated by SovAE 1961-62, who named them Gory Brusilova, for Arctic explorer Georgiy Lvovich Brusilov (1884-1914). ANCA accepted the translated name Brusilov Nunataks on Oct. 22, 1968, and US-ACAN followed suit in 1971.

Gory Brusilova *see* **Brusilov Nunataks**

Nunataki Brusilova. 71°03' S, 66°16' E. An isolated group of nunataks in the Prince Charles Mountains. Named by the Russians for G.L. Brusilov (*see* **Brusilov Nunataks**).

The *Brussa*. Also called *Brulson* or *Brusso*. A 164-ton brigantine, built at Rotherhithe in 1818, and owned by Middleton & Co., of London. She was repaired in 1820, and plied the Mediterranean. On May 3, 1821, Alexander Benjamin Greaves was appointed her skipper in London, and she left that port on May 11, 1821, leaving Gravesend on May 16, 1821, bound for the South Shetlands and the 1821-22 sealing season. She anchored in Clothier Harbor for the summer. On March 2, 1823 she was at the Azores, bound for England with 300 barrels of sperm and 100 barrels of whale oil.

Brustad, Alf Christoffer. b. Sept. 23, 1899, Vang, Norway, as Alf Kristoffer Brustad, son of farmer Oscar Brustad and his wife Elise Dorthe Henaug. He went to New Zealand, and became a famous mountain climber and Hermitage guide, as well as a farmer in North Canterbury. He went to the Ross Sea on a whaling expedition in 1924-25, and was back in Antarctica for the second (1929-30) half of ByrdAE 1928-30, as a seaman on the *City of New York*. On Sept. 23, 1931, he married Mary Lucy Clifford, daughter of the 4th Baronet Clifford, but she died in 1933. Alf died in May 1965, in Christchurch.

Monte Bruyne *see* **[1]Mount Reeves**

Bryan, Rorke Bardon. b. Sept. 30, 1939, Dublin. A geographer, he graduated from Trinity in 1961, and almost immediately joined FIDS, as a meterologist. He wintered-over at Base T in 1962 and 1963, as FIDS was becoming BAS. In 1967 he got his doctorate from the University of Sheffield, and retired in 2008 as dean of forestry at the University of Toronto.

Bryan Coast. 73°35' S, 84°00' W. That portion of the coast of Antarctica along the S shore of the Bellingshausen Sea, between Pfrogner Point (at the very edge of the Eights Coast) and the N tip of Rydberg Peninsula (at the edge of the English Coast). The E end of the coast was discovered aerially during USAS 1939-41, and seen again during RARE 1947-48. Originally called the George Bryan Coast, for Rear Adm. George S. Bryan, hydrographer of the U.S. Navy, 1938-46, that was the name accepted by US-ACAN in 1947. The entire coast was mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. US-ACAN accepted the shortened name Bryan Coast, in 1966.

[1]Bryan Glacier. 73°30' S, 61°33' W. Flows N along the E side of the Werner Mountains into Douglas Glacier at New Bedford Inlet, on the Lassiter Coast of Palmer Land. Mapped by USGS from ground surveys conducted between 1961 and 1965, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Terry E. Bryan, USARP glaciologist at Byrd Station in 1966-67. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

[2]Bryan Glacier. 77°24' S, 160°56' E. Flows S from a divide with Papitashvili Valley, in the Apocalypse Peaks of Victoria Land. Named by NZ-APC on Sept. 12, 2005, for John Bryan, an Australian coal geologist who led a scientific party mapping the Permian coal measures of the areas around the Upper Wright Valley, Mount Fleming, Mount Electra, Shapeless Mountain, and Mistake Peak, during one visit in 1982-83. US-ACAN accepted the name in 2006.

The *Bryanskles*. A Polish B-514 timber carrying ship, built in 1962, and owned by Sudoimport, that took part in SovAE 1978-80 (Capt. Arkadiy Sergeyevich Konoshev). She was pierced

by an ice floe while in the Arctic in 1981, and sank.

Cabo Bryant *see* **Cape Bryant**

Cape Bryant. 71°14' S, 60°55' W. A high, completely snow-covered cape with a rounded summit, forming the N side of the entrance to Palmer Inlet, and projecting from the E coast of the Antarctic Peninsula into the S end of the Larsen Ice Shelf, below Steele Island, 33 km SSE of Cape Sharbonneau. Discovered and photographed aerially in Dec. 1940 by members of East Base during USAS 1939-41, surveyed from the ground by them, and named by them for Herwil Bryant. It appears on a 1942 USAAF chart in 71°12' S, 61°00' W, and also on a 1943 U.S. Hydrographic Office chart. It appears on a 1946 Argentine chart as Cabo Bryant, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name Cape Bryant in 1947, and UK-APC followed suit on Jan. 28, 1953. For a long time it appeared in gazetteers with the coordinates 71°12' S, 60°55' W, and that was based on the 1947-48 survey conducted by a combined FIDS/RARE sledging team, and on Dougie Mason's 1950 map of that survey. Those coordinates were finally corrected from 1966 USN air photos, and the feature appears with the new coordinates in the 1977 British gazetteer. It appears, misspelled, as Cabo Briant, on a 1958 Argentine chart.

Bryant, Glenn Henry. b. April 3, 1906. Geophysicist with the Seismograph Service Corporation, who left the USA, arrived at Dunedin, NZ, and from there took the *Bear of Oakland* on Jan. 2, 1935, headed for Little America to help Tom Poulter with the final series of seismic soundings, on the 2nd half of ByrdAE 1933-35. He married Bernice Cochran, a Texan girl who had moved to Oklahoma with her family in the 1920s, and who had the same birthday he did (except 3 years later), and in 1941 they were in Oklahoma City. They moved to Stillwater, Okla., where he died in May 1967, and Bernice died on May 2, 1999.

Bryant, Herwil McClure. b. Jan. 29, 1916, Berkeley, Calif., but grew up partly in Washington, DC, son of Dr. Harold Child Bryant, ornithologist with the California Fish & Game Commission, and his wife Amy Morrish. He was a member of the band while attending American University in Washington, DC, and was later a graduate assistant at the University of Toronto. He was working for the Smithsonian when he became biologist at East Base during USAS 1939-41. In 1944, he married Genie Ulmer Crooks. After World War II, he worked for the government, and in 1990-91 was a lecturer on a Lindblad Travel cruise. He died from the flu on Dec. 11, 2003, in Riverside, Calif. His *Antarctic Journal* is an invaluable resource (*see* the Bibliography).

Île Bryde *see* **Bryde Island**

Isla Bryde *see* **Bryde Island**

Bryde, Leif. b. 1881, Sandefjord, Norway, son of shipping owner Johan Bryde and his wife Karen. As a teenager he went to sea, sailing on ships skippered by his brother Alf. He was manager of the *Guvernøren*, 1913-15, and in the 1920s he owned the Ishavet Whaling Company. He married Ragnhild, lived in Sandefjord, and died in 1950.

Bryde Channel *see* **Lientur Channel**

Bryde Island. 64°52' S, 63°02' W. About 8.8 km long and 5 km wide, immediately SW of Lemaire Island, at the entrance to Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Discovered and roughly charted on Feb. 10-11, 1898, by BelgAE 1897-99, and named by de Gerlache as Île Bryde, or Île de Bryde, for shipowner and agent Johan Bryde (1858-1925), the expedition's representative in Sandefjord, Norway, and his brother Ingvald (1860-1931), who arranged the purchase of the *Belgica*. It appears as Bryde Island on Dr. Frederick Cook's map of the expedition, and also on a 1901 British chart, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The British Imperial Antarctic Expedition, of 1920-22 made corrections to old whaling maps of the island, but Lester and Bagshawe (who did the correcting) spelled it Bride Island and even McBride Island. It was photographed aerially by FIDASE in 1956-57. It appears, by error, as Bruce Island, on a 1959 USAF chart. Both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted the name Isla Bryde.

Bryde Refugio. 64°53' S, 62°56' W. Argentine refuge hut built on Orne Harbor — Paradise Harbor, Bryde Island, and opened on Nov. 12, 1953, as Refugio Naval Bryde. It has since been covered with snow.

Bryde's whale. Not found in Antarctic waters.

Brygga *see* [1]**Forbes Glacier**

Bryggeholmen *see* **Gibbney Island**

Brynildsen, Karl. b. 1880, Stokke, Norway. Fireman on the *Southern Cross* during BAE 1898-1900. He returned to Stokke after the expedition.

Bryozoans. Aquatic invertebrates which lie on the sea bed, near the shore (*see also* Fauna).

Bryse Peaks. 72°43' S, 74°50' E. A small nunatak with 2 peaks, 6 km NNE of Mason Peaks, and about 19 km NNW of Mount Harding, in the Grove Mountains of Princess Elizabeth Land. Mapped by Australian cartographers from ANARE air photos taken between 1956 and 1960. Named by ANCA on July 29, 1965, for R.A. Bryse, topographic draftsman with the Division of National Mapping, of the Australian Department of National Development. US-ACAN accepted the name in 1967.

Bubble Spur. 77°59' S, 161°50' E. A flattish rock spur that separates the lower ends of Blankenship Glacier and Tedrow Glacier, to the W of Table Mountain, in the Royal Society Range, in Victoria Land. Named by NZ-APC in 1992, in keeping with other surveying terms used here for certain geographical features. A bubble on a surveying instrument is used to indicate its directional tilt, and to facilitate its leveling. US-ACAN accepted the name in 1993.

Mount Bubier. 71°51' S, 97°48' W. Also called Bubier Head. A mountain, visble from seaward, its summit is about 6 km S of the N tip of Edwards Peninsula, on Thurston Island. First delineated from air photos taken in Dec. 1946, during OpHJ 1946-47. Named by US-ACAN in 1968, for Ken Bubier.

Bubier, Kennard F. "Ken." b. Oct. 18, 1902, Providence, RI. He joined the U.S. Marines in 1923, becoming a gunnery sergeant. He was with Byrd in the Arctic, and was also aviation mechanic on ByrdAE 1928-30. He died on July 2, 1983, in Orange County, Calif.

Bubier Head *see* **Mount Bubier**

Bubnoffnunatakker. 80°43' S, 23°46' W. A group of nunataks, just E of Eskola Cirque, on the S side of the Read Mountains, in the Shackleton Range. Named by the Germans.

Bahía Buchan *see* **Buchan Bay**

Buchan Bay. 60°47' S, 44°42' W. A small bay, between Cape Hartree and Cape Murdoch, near the SW end of Laurie Island, in the South Orkneys. It was possibly discovered by Powell and Palmer in Dec. 1821. On March 25, 1903, it was charted by ScotNAE 1902-04, and named by Bruce for Scottish meteorologist Alexander Buchan (1829-1907), secretary of the Scottish Meteorological Society from 1860 until his death. It was re-charted by the Discovery Investigations in 1933. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on an Argentine chart of 1930, as Bahía Buchan, and that was the name accepted by the 1970 Argentine gazetteer.

Cabo Buchanan *see* **Buchanan Point**

Cape Buchanan *see* **Buchanan Point, Cape Valavielle**

Kapp Buchanan *see* **Cape Valavielle**

Punta Buchanan *see* **Buchanan Point, Cape Valavielle**

Buchanan, Cecil Douglas. b. 1889, Ireland, but raised partly in Ramsgate, Kent, by his grandmother. Artificer on the *William Scoresby*, 1930-32, and on the *Discovery II*, 1932-39, consequently many times in Antarctic waters. During World War II he was 4th engineer on the *Rapidol*. He was serving as chief engineer on the *Limol* when he died in London in 1947.

Buchanan, John Young "J.Y." b. Feb. 20, 1844, Glasgow, son of John Buchanan and his wife Jane Young. Highly educated chemist, mineralogist, and linguist, he served as chemist and physicist on the *Challenger* expedition of 1872-76. It was on this trip that he established the true nature of the slime Bathybius. He started up research labs in Edinburgh and London, lectured at Cambridge, and lived for 20 years at Christ's College there, finally moving to London. He was a patron of AAE 1911-14. Disgusted with the outbreak of World War I, he moved to Cuba and lived the rest of his life in the western hemisphere. He died on Oct. 16, 1925, in London.

Buchanan Bay. 67°05' S, 144°42' E. A sheltered bay formed by the junction of the W side of Mertz Glacier Tongue and the coast of George V Land. Cape de la Motte marks the W entrance

point. Discovered by AAE 1911-14, and named by Mawson for J.Y. Buchanan. US-ACAN accepted the name, and ANCA followed suit.

Buchanan Channel *see* **Southwind Passage**

Buchanan Hills. 79°39' S, 82°55' W. A cluster of rugged hills N of Union Glacier, and between the Collier Hills and the Nimbus Hills, in the Heritage Range. Named by US-ACAN in 1966, for Roger Buchanan, USARP biologist in Antarctica in 1964-65.

[1]**Buchanan Passage** *see* **Southwind Passage**

[2]**Buchanan Passage**. 66°48' S, 67°42' W. A marine channel separating Liard Island from Adelaide Island, at the N end of Hanusse Bay, on the Loubet Coast, on the W coast of Graham Land. Discovered and first charted by Charcot in 1908-10. Photographed aerially in late 1947 by RARE 1947-48. Named by UK-APC on Dec. 20, 1974, for Capt. (later Vice Admiral) Peter William Buchanan (b. May 14, 1925; later knighted), RN, commander of the *Endurance*, 1968-70. He showed that the passage can be used to approach Marguerite Bay from the N, through The Gullet. US-ACAN accepted the name in 1975.

Buchanan Point. 60°43' S, 44°28' W. A point, 4 km NW of Cape Dundas, between that cape and Cape Valavielle, 1.5 km SE of Mackintosh Cove, at the NE end of Laurie Island, in the South Orkneys. The name Cape Buchanan was originally given by Bruce in 1903 (during ScotNAE 1902-04) to a point 5 km to the NW which Dumont d'Urville had already named Cape Valavielle in 1838. Bruce named this feature as Cape Valavielle. In other words, he got them the wrong way around. It was named for John Young Buchanan. It appears on a 1930 Argentine government chart as Punta Buchanan, on a 1942 USAAF chart as Cape Buchanan, and on a 1945 Argentine chart as Cabo Buchanan. The feature was re-surveyed by the Discovery Investigations in 1933. On March 31, 1955, UK-APC rectified the error, and US-ACAN followed suit in 1956.

Bucher Glacier. 67°39' S, 66°50' W. A small glacier, flowing W into Bourgeois Fjord just N of Bottrill Head, on the Fallières Coast, on the W coast of Graham Land. Surveyed by Fids from Base E in 1948. Named by UK-APC on July 7, 1959, for Edwin Bucher (b. 1911), Swiss glaciologist. US-ACAN accepted the name in 1960.

Bucher Peak. 75°20' S, 110°52' W. Rising to 2445 m, it is one of the highest peaks in the W central summit area of the Mount Murphy massif, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1976, for Walter Herman Bucher (1888-1965), professor of geology at Columbia University, 1940-56.

Bucher Rim. 76°19' S, 112°09' W. A rocky eminence on the S portion of the rim of the extinct volcano Mount Takahe, in the E part of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1975, for Peter Bucher, from the University of Bern. He was a USARP geologist at Byrd Station in 1969-70.

Buchia Buttress. 67°17' S, 68°13' W. A rock buttress on the SW end of Mount Bouvier, in the E part of Adelaide Island. Surveyed by Fids from Base T in 1961-62, investigated by BAS personnel from the same station in 1980-81, and found to contain marine fossils, including a bivalve species of the genus Buchia. Named by BAS by 1972. The name was accepted by UK-APC on April 3, 1984, and US-ACAN followed suit. It appears in the 1986 British gazetteer.

Skali Buchino *see* **Buchino Rocks**

Buchino Rocks. 62°23' S, 59°53' W. A group of rocks off the N coast of Greenwich Island, 1.5 km NW of Stoker Island, 1.6 km SE of Romeo Island, and 1.9 km NNW of Tvarditsa Rocks, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, as Skali Buchino, after the settlements of Golemo Buchino (i.e., Great Buchino) and Malo Buchino (i.e., Little Buchino), in the area of Sofia, in Bulgaria. The name has been translated into English as Buchino Rocks.

Buckett, Henry *see* **USEE 1838-42**

Buckeye Table. 84°49' S, 114°45' W. A high-level snow-covered plateau, 20 km long and between 3 and 8 km wide, with precipitous N cliffs, it occupies the central part of the Ohio Range, in the Horlick Mountains. The surface merges gradually with the inland ice to the south. Bill Chapman (*see* **Mount Chapman**), USGS surveyor here in 1958-59, named it for Ohio State University (Ohio being nicknamed the Buckeye State), which has sent many researchers here. US-ACAN accepted the name in 1962.

Buckinghamspitze. 70°48' S, 163°31' E. A peak in the Bowers Mountains, in Oates Land. Named by the Germans.

Buckle Island. 66°50' S, 163°12' E. A roughly triangular island, with long E and W coasts, and a relatively short N coast, it is about 21 km long and between 3 and 5 km wide (123.6 sq km in area), with precipitous coasts, and rising to an elevation of about 740 m, 25 km NW of Sturge Island and 8 km SE of Young Island, in the Balleny Islands. The island is capped by a gently-sloping icecap that descends steeply into the sea between rocky cliffs. Discovered on Feb. 9, 1839 by Balleny, who named it for John William Buckle, one of his sponsors. Balleny reported it to be an active volcano, and, apparently it last erupted in 1899. Studies conducted in 1904, 1936, and again in 1938, revealed no volcanic activity. It appears in the 1958 NZ gazetteer. Originally plotted in 66°47' S, 163°14' E, it has since been replotted. One sees several different coordinates listed for this island, some quite wildly variant.

Buckle Island Automatic Weather Station. 66°49' S, 163°14' E. American AWS installed on Buckle Island, in the Balleny Islands, at an elevation of 520 m, on Feb. 20, 1987. It was visited on Oct. 10, 1987, but had been covered in snow, and was abandoned. However, it kept transmitting data until July 1988, and was removed in Dec. 1988.

Mount Buckley. 84°58' S, 163°56' E. An ice-free mountain, rising to 2645 m (the New Zealanders say 2555 m), close NE of Mount Darwin, it is the central and highest summit of the massif known as Buckley Island, on the W side of the head of the Beardmore Glacier, and is on the Polar Plateau, in the most southerly sector of the Queen Alexandra Range. Discovered in Dec. 1908, by the South Pole party of BAE 1907-09, and named by Shackleton for George Buckley. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Buckley, George Alexander Maclean. b. Oct. 25, 1866, Heathcote Valley, NZ, 2nd son of George Buckley. After Christ's College, Christchurch, NZ, and Cheltenham College, he entered the East Lancashire Regiment, in 1885, and from 1887 to 1889 (when he resigned) he was a 2nd lieutenant in India, with the Hampshire Regiment. He married Mabel Gertrude Warren in 1890, and shortly afterwards returned to NZ, where he inherited estates from his uncle John Maclean. He lived at Ashburton, NZ, as a wealthy sheep farmer, a great horseman, yachtsman, and swimmer, and served with the NZ Defence Force until 1900. In 1897 he took part in an exploring trip to Patagonia, and in 1904 took his master mariner's ticket. Literally on the spur of the moment, he went along on the *Nimrod* for the first half of BAE 1907-09, equipped only with his summer suit, a change of underclothing, and his toothbrush. He was a backer of the expedition, and went only as far as the Ross Sea before returning on the *Koonya*, the ship which had towed the *Nimrod* that far. He later backed AAE 1911-14, and later still became a lieutenant colonel, fighting in World War I with the Leinster Regiment. His wife died in 1929, and in 1937 he took a drive in his car through Finland to the Arctic circle, and later that year through the Balkans. Only two weeks after returning from Constantinople, he died suddenly in London, on Nov. 10, 1937, on the eve of a new expediton.

Buckley, Thomas C.T. "Tom." b. 1909, NY, son of Julian Gerard Buckley. A rower at Harvard, he took part in the Henley Regatta of 1931. He was a dog driver with ByrdAE 1933-35, during which he led the first dog team across the ice from the ship to Little America on Jan. 17, 1934, when the *Jacob Ruppert* landed at the Bay of Whales. His dogs got across a crevasse, but he didn't. As he fell he threw himself sideways, and landed on an ice-ledge 10 feet down, with a sheer drop below him of 60 feet into the freezing water of the Bay of Whales. As they pulled him out, he said, grinning, "Well, I was the first." In 1937 he married Elizabeth Simkins Cheney in Connecticut, in one of the big society weddings of the year. He died of a heart attack on Nov. 3, 1962, at Genseo, NY, while hunting (on horseback).

Buckley Bay. 68°22' S, 148°20' E. An embayment formed between the E side of Ninnis Glacier Tongue and the mainland, on the W side of the Cook Ice Shelf, at the base of the George V Coast, in Wilkes Land. Discovered by AAE 1911-14, and named by Mawson for George

Buckley. He plotted it in 68°16' S, 148°12' E. US-ACAN accepted the name, but with new coordinates.

Buckley Island. 84°57' S, 164°00' E. An island-like mountain massif, surmounted by Mount Bartlett, Mount Buckley, and Mount Bowers, it rises above the ice at the middle of the head of the Beardmore Glacier, near Mount Darwin. The "island" is almost free of snow, although there is a small tributary glacier flowing gently down its E slope. Discovered on Dec. 16, 1908, by the South Polar party, during BAE 1907-09, and named by Shackleton in association with Mount Buckley. Wild discovered coal here during their visit. It appears in the 1958 NZ gazetteer. US-ACAN accepted the name in 1966. Originally plotted in 84°58' S, 163°56' E, it has since been replotted.

Buckley Nunataks. 74°55' S, 72°10' W. Three nunataks, 22 km E of the Cheeks Nunataks, and 20 km SW of the British Sky-Blu Camp, where the S part of Palmer Land meets Ellsworth Land. Used in estimating limits of visibility for aircraft operations. Named by UK-APC on June 26, 2001, for Peter Buckley (b. 1958), BAS pilot who first identified the site for the Sky-Blu ice runway.

Buckman, Herbert James "Jim." b. March 5, 1922, Norwich, son of Herbert Buckman and his wife Blanche Rosina Balls. He was a Royal Navy radioman when he left Cape Town on the *Winchester Castle*, arriving in Southampton on Aug. 8, 1952. He joined FIDS in 1953, and wintered-over at Base F in 1954 and 1955 as radio operator. Although he was only in his early 30s, he looked much older, gnarled and weather beaten, so they called him "Granddad." He returned to England in 1956, and lived in Alpington, Norfolk, in a house he named "Galindez" (after Galíndez Island, in Antarctica). In 1959, in Norwich, he married Olive M. Amies. He died in Sept. 1993, in Norwich.

Buckminster, Jeremiah Hooper "Jerry." b. June 22, 1823, Deer Isle, Hancock County, Maine, son of John Buckminster and his wife Margaret. Jerry was named for his grandfather, fishing captain Jeremiah Hooper. He went to sea in the late 1830s, as a Maine fisherman, and worked his way up to be an experienced skipper, living in Vinalhaven (near Carver's Harbor), in Knox County, Maine, which is where he married Hannah Cross Sylvester on Oct. 16, 1845, and had a large family. He was captain of the *Lion* on its 2nd and last trip to the South Shetlands, in 1853-54. The ship was wrecked on English Bank (not in Antarctica) on March 22, 1854. That was Jerry's only trip to the ice. His next command was the schooner *S.E. Perry*, and in 1857-58 he was captain of the *Pride of the Sea*. During the Civil War he was skipper of the 65-ton fishing schooner *James Wyman*, and in 1865, of the *Northern Light*. After the war, he and Hannah moved to Landis, NJ, and, in the 1870s, Jerry gave up the sea and went into farming. He died on June 24, 1900, in Vineland, NJ. History's corruption of Buckminster's name is worth a monograph in itself.

Bucknell, Ernest Selwyn. b. Oct. 28, 1926, Upper Hutt, NZ. Fitter and turner with NZ Railways, who also worked with the Wildlife Division. In 1956 he became cook of the Ross Sea party of BCTAE, at Scott Base, and wintered-over there in 1957. He retired from the Wildlife Dvision in 1991, and died on March 14, 2001.

Bucknell Ridge. 79°58' S, 158°38' E. A prominent mountainous ridge just above the Cranfield Icefalls, extending E-W along the S side of Darwin Glacier near its mouth. Mapped by the Darwin Glacier Party of BCTAE 1957-58, and named for Ernest Bucknell. ANCA accepted the name on Nov. 24, 1961, and US-ACAN followed suit in 1965.

Buckridge, Horace Edgar. b. 1876, Hackney, London, son of silk manufacturer Valentine Buckridge and his wife Eliza Elizabeth Treadaway. He was educated at George Matthews' boarding school in Hornsey, and became a traveler, served as an Imperial Light Infantry sergeant in command of a unit of Australians during the South African War, and later joined Scott's Railway Guards (Mounted) at Cape Town. He joined the *Discovery* at Simon's Bay, South Africa, in Oct. 1901, as lab attendant for BNAE 1901-04. He had volunteered his services free of charge, but Scott wound up paying him anyway. He returned on the relief ship *Morning* after one season. He died at sea on Dec. 3, 1903.

Cerro Los Bucles *see* **Cerro Muga**

Budd, Grahame Murray. b. Jan. 5, 1930. Medical officer at Mawson Station in 1959.

Budd, Thomas Augustus. b. April 28, 1813, Haverstraw, NY, but raised in Westfield, NJ, son of Charles Augustus Budd and his wife Catharine Augusta. He joined the U.S. Navy as a midshipman on Feb. 2, 1829, and on July 3, 1835 was promoted to passed midshipman. He went on USEE 1838-42, joining the *Vincennes* at Fiji. He was acting captain of the *Peacock* for a while, and on Sept. 8, 1841, was promoted to lieutenant. On Dec. 13, 1842, in New York, he married Louisa Talman. In the late 1840s he took command of the first Pacific mail steamer, the *California*, and was one of the first officers to enter the mail service. He became the first American steamship captain to navigate the Straits of Magellan, and skippered steamers throughout the California gold rush. He resigned from the Navy on April 29, 1853, but when the Civil War started he volunteered, was given the rank of acting lieutenant on May 13, 1861, and placed in command of the gunboat *Penguin*. He was killed during a skirmish at Mosquito Inlet, Fla., on March 22, 1862.

Budd, William Francis "Bill." b. Oct. 16, 1938. Glaciologist who wintered-over at Wilkes Station in 1961 and at Mawson Station in 1964.

Budd Coast. 66°30' S, 112°00' E. Also called Budd Land. That portion of the coast of East Antarctica that faces the Davis Sea between the Hatch Islands (109°16' E) and Cape Waldron (115°33' E), or between Totten Glacier and Vincennes Bay, in Wilkes Land. Discovered on Feb. 12, 1840, by Wilkes, and named by him as Budd's High Land, for Thomas Budd. First delineated from air photos taken during OpHJ 1946-47. US-ACAN accepted the name Budd Coast in 1947, and ANCA followed suit on Aug. 11, 1955.

Budd Ice Rumples. 71°30' S, 68°45' E. A significant persistent recognizable glaciological feature exposed as a surface disturbance in the flow of the Lambert Glacier, 24 km E of the Fisher Massif, in the Prince Charles Mountains. Named by ANCA on May 28, 2003, for Bill Budd. US-ACAN accepted the name on Oct. 20, 2009.

Budd Islands *see* **East Budd Island**, **West Budd Island**

Budd Land *see* **Budd Coast**

Budd Peak. 66°40' S, 52°40' E. A peak, 1.5 km W of Mount Berrigan, and 36 km WSW of Stor Hånakken Mountain, in Enderby Land. Plotted from 1957 ANARE aerial photos. Named by ANCA for Bill Budd. US-ACAN accepted the name in 1968.

Budde, Carl *see* **Órcadas Station**, 1921

Buddenbrock Kette *see* **Buddenbrock Range**

Buddenbrock Range. 71°52' S, 5°24' E. A group of scattered mountains and nunataks between Austreskorve Glacier and Vestreskorve Glacier, in the Mühlig-Hofmann Mountains of Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and the general area was named by Ritscher as Buddenbrock-Kette, for Friedrich Wilhelm Freiherr von Buddenbrock, the director of Lufthansa. The name was later translated into English, and, as such, accepted by US-ACAN in 1970.

Budenbrockkette *see* **Buddenbrock Range**

Lake Buddha. 78°03' S, 163°45' E. A large proglacial lake on the S margin of Joyce Glacier, in Shangri-la. Named by VUWAE 1960-61, in association with the valley of Shangri-la. US-ACAN accepted the name in 1973.

Buddington, James Waterman. Name also seen spelled as Budington. b. 1839, Groton, Conn. One of the Buddington family who had lived in Groton since 1689 (one of his cousins was Capt. Sidney O. Buddington). His mother was Lydia, and his father was Capt. James M. Buddington, very successful whaler, who had freed the *Resolute* in the Arctic after it had become stuck looking for Sir John Franklin. James W. was a 15-year-old cabin boy on that trip. He made 1st mate on the whaling schooner *Leader*, in Hudson's Bay in 1864, and was back there in 1866, as skipper of the *U.D.* He was 2nd mate on the *Peru* in the South Shetlands for the 1871-72 season, master of the *Franklin* in the South Atlantic in the 1972-73 and 1874-75 seasons, and of the *Lizzie P. Simmons* in the South Atlantic in 1875-76, 1876-77, and 1878-79. He married Maria. He was skipper of the *Sarah W. Hunt*, in the South Shetlands, in 1887-88, 1888-89, and 1891-92, and in 1908 he sailed the last whaling voyage out of New London. He spent the last several years of his life at Sailors Snug Harbor Home in Richmond, NY, where he died on March 11, 1928.

Buddington Peak. 62°12' S, 58°48' W. Rising to 235 m, N of Marian Cove, between that cove

and Collins Harbor, in the SW part of King George Island, in the South Shetlands. ArgAE 1953–54 named it Cerro Agudo (i.e., "sharp pointed hill"), and it appears as such on their 1954 chart. However, on a 1958 Argentine chart it appears as Monte Agudo. Photographed aerially by FIDASE in 1956, and surveyed from the ground by FIDS in 1957–58. Named by UK-APC on Sept. 23, 1960 for James W. Buddington. US-ACAN accepted the name in 1965. There is a 1978 Argentine reference to it as Monte Gómez, named for a sailor on the *Uruguay* in 1904–05. The British were the latest to replot this peak, in late 2008.

Budd's High Land *see* **Budd Coast**

Büdel Islands. 65°47' S, 65°38' W. A group of islands and rocks between Laktionov Island and Schule Island, with their center about 9 km NE of the extreme SE point of Renaud Island, in the Biscoe Islands. Photographed aerially by FIDASE in 1956, and first shown accurately (but, apparently, not named) on a 1957 Argentine chart. Named by UK-APC on July 7, 1959, for Julius Büdel (1903–1983), German geographer and sea ice specialist. US-ACAN accepted the name in 1971. The name appears as Islas Aldea on a 1962 Chilean chart, named for Juan de Dios Aldea, of the Chilean Navy, one of the heroes of the naval battle of Iquique, May 21, 1879.

Büdelberg. 62°12' S, 59°00' W. A peak on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Budington *see* **Buddington**

Budnick Hill. 66°17' S, 110°32' E. A small, rounded hill, oval in plan, rising between Crane Cove and Geoffrey Bay, about 500 m W of Casey Station, and joined by a narrow strip of land to the N part of Bailey Peninsula, in the S part of Newcomb Bay, in the Windmill Islands, off the Budd Coast. Photographed aerially by OpHJ 1946–47, by SovAE 1956, and by ANARE in 1956, 1962, and 1963. The hill was used as a trigonometrical station during a large-scale survey of the N part of Bailey Peninsula by Keith Budnick, ANARE surveyor who was here from Wilkes Station in the winter of 1964, after whom it was named by ANCA on Oct. 22, 1968. US-ACAN accepted the name in 1970.

Buell Peninsula. 70°36' S, 164°24' E. An ice-covered peninsula, 24 km long and 13 km wide at its broadest, terminating in Cape Williams, between the lower ends of Lillie Glacier, George Glacier, and Zykov Glacier, at the NW end of the Anare Mountains. Photographed aerially during OpHJ 1946–47, and again by USN between 1960 and 1962, and mapped by USGS in 1962–63. Named by US-ACAN in 1973, for Lt. (later Lt. Cdr.) Kenneth Richard Buell (b. Aug. 24, 1939, Wisc.), who joined the U.S. Navy in July 1959, and was VX-6 navigator in Antarctica, 1965–66 and 1966–67. NZ-APC accepted the name on April 5, 1973.

Buen Suceso. 62°58' S, 60°43' W. A hill at the extreme SW of Port Foster, Deception Island, in the South Shetlands. The SCAR gazetteer says it was named by the Russians, but it is much more likely to have been by the Argentines.

Nunatak Buen Suceso. 63°24' S, 56°30' W. East of Hope Bay, Trinity Peninsula. Named by the Argentines.

Cabo Buen Tiempo *see* **Cape Fairweather**

Ensenada Buen Tiempo. 62°57' S, 60°36' W. An open inlet of moderate depth, a natural anchorage for ships, S of Pendulum Cove, Port Foster, Deception Island, in the South Shetlands. Named by ChilAE 1947, during which the *Covadonga* and the *Angamos* reconnoitered this coast. Also seen as Rada Buen Tiempo.

Islotes Buen Tiempo *see* **Symington Islands**

Rada Buen Tiempo *see* **Ensenada Buen Tiempo**

Caleta Buena Nueva. 62°42' S, 60°23' W. A cove, at the SE side of Argentina Glacier, Livingston Island, in the South Shetlands. Named by Spain for the *Buena Nueva*, Gabriel de Castilla's ship of 1603.

Buennagel Peak. 77°30' S, 146°46' W. A rock peak, 1.5 km E of Alexander Peak, in the N part of the Haines Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939–41, and again by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Lawrence Albert Buennagel (b. 1942), geomagnetist and seismologist at Byrd Station in 1968.

Glaciar Buenos Aires *see* **Dawson-Lambton Glacier**

Pico Buenos Aires. 83°10' S, 39°30' W. An isolated peak, due S of Nunatak Iberá, in the Panzarini Hills, in the Argentina Range. Named by the Argentines for their capital city.

Buettner Peak. 75°17' S, 110°55' W. A sharp peak rising midway along the N wall of Roos Glacier, in the NW part of the Mount Murphy massif, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1976, for Robert J. Buettner (b. Sept. 7, 1914, Buffalo, NY. d. Dec. 3, 1975, Los Angeles), manager of contract logistics for Holmes and Narver. He was in Antarctica at least 5 times between 1969 and 1974.

Islas Buff *see* **Buff Island**

Islote Buff *see* **Buff Island**

Islotes Buff *see* **Buff Island**

Buff Island. 64°51' S, 64°35' W. An island rising to an elevation of 24 m, 5 km SW of the Joubin Islands, 17 km SW of Cape Monaco (which is on Anvers Island), W of Bismarck Strait, at the extreme SW end of the Palmer Archipelago. First charted in Jan. 1935 by BGLE 1934–37, and named by them as Buffon Island. It appears as such on Rymill's 1938 map of the expedition. On a 1942 USAAF chart, and on a 1945 British chart, it appears as Buff Island, and on a 1948 British chart as Buff Islet. Buff Islet was the name accepted by US-ACAN in 1953, and by UK-APC on Sept. 20, 1955. It appears as such on a British chart of 1958, but, after the island was charted anew by an RN Hydrographic Survey Unit, 1956–58, UK-APC re-defined it on July 7, 1959, as Buff Island, and it appears as such on a British chart of 1960. US-ACAN followed suit with the naming in 1960. One 1947 Chilean chart shows it as Islote Edmundo, and another from the same year shows a feature called Islotes Buff, which included this island and the Walsham Rocks together. This sitution was reflected in Argentine charts of 1953 and 1957, on which it is shown as Islas Buff (or Islas Bluff, depending on the degree of sloppiness on any given chart; and this sloppiness is not confined to the Argentines, by any means — the island appears as Bluff Island on a 1961 American chart). However, in the 1970 Argentine gazetteer it appears as Islotes Buff. In 1962 a Chilean chart has the island as Islote Buff, and that is the name that appears in the 1974 Chilean gazetteer.

Buffer Ice Rise *see* **Buffer Island**

Buffer Island. 69°10' S, 67°19' W. A mostly ice-covered island, W of the former Wordie Ice Shelf (the British say it was in the center of that ice shelf), 14 km NW of Mount Balfour, on the Fallières Coast, on the W coast of Graham Land. Photographed aerially on Dec. 22, 1947, by RARE 1947–48, and surveyed from the ground by FIDS in Nov. 1958. Named by UK-APC on Aug. 31, 1962, as Buffer Ice Rise, for the fact that it obstructed the NE-SW flow of the ice shelf, which, at that time, was rifted and crevassed in this vicinity. It appears as such in the British gazetteer of 1962. US-ACAN accepted the name later in 1962. Satellite imagery of 1989 showed that the Wordie Ice Front had receded eastward, leaving an island where the ice rise used to be. So it was renamed by both UK-APC and US-ACAN in 1999, as Buffer Island.

Chenal Buffon. 66°40' S, 140°01' E. The channel separating Pétrel Island (to the W) from the Buffon Islands and Lamarck Island (to the E), in the central part of the Géologie Archipelago. Named by the French in 1977.

Îles Buffon *see* **Buffon Islands**

Buffon Canyon. 65°15' S, 145°00' E. A submarine feature along the continental rise off George V Land. Named by international agreement.

Buffon Island *see* **Buff Island**

Buffon Islands. 66°40' S, 140°01' E. A group of 3 (the French say 2) adjoining rocky islands, altogether about 0.4 km in extent, about 150 m E of Pétrel Island, and separated from that island by Chenal Buffon, in the central part of the Géologie Archipelago. Charted by the French in 1951, and named by them for Georges Buffon, the naturalist (1707–1788). US-ACAN accepted the name in 1962.

Podlëdnaja Dolina Bugaeva. 67°30' S, 51°56' E. A valley, NE of Litke Nunatak, E of the Scott Mountains in Enderby Land. Named by the Russians.

Islas Bugge *see* **Bugge Islands**

Bugge Island *see* **Bugge Islands**

Bugge Islands. 69°12' S, 68°25' W. A group of 3 small, ice-covered islands in the S part of Marguerite Bay, close off the front of the former Wordie Ice Shelf (i.e., off the former Wordie Ice Front), between 6 and 17.5 km NW of Mount

Guernsey, off the Fallières Coast, on the W coast of Graham Land. Discovered and photographed aerially on Aug. 16, 1936, by BGLE 1934-37, and subsequently roughly mapped from these photos. Observed on March 23, 1947 from the *Port of Beaumont, Texas*, by RARE 1947-48, plotted in 69°10' S, 68°55' W, and named at that point in time by Finn Ronne, as Ruth Bugge Islands, for his niece, Miss Ruth Bugge, of Molde, Norway, who supplied woolen clothing for the expedition, and it appears as such on an American Geographical Society map of 1948. ChilAE 1947 named the most northerly of the islands as Isla Eleuterio Ramírez and the central one as Isla Aldea, and they are seen as such on the expedition's chart of that year. The name of the northern one was later shortened to Isla Ramírez (*see* **Ramírez Island**). *See also* **Aldea Island**. Landrum Island (q.v.) is the southern one. The islands were surveyed from the ground by Fids from Base E in 1948. The name Ruth Bugge Islands was later shortened by US-ACAN, to Bugge Islands, and UK-APC accepted the new name on March 31, 1955. It appears as such on a British chart of 1961. It appears in error as Bugge Island, in the 1956 U.S. gazetteer. It appears as Islas Bugge on a Chilean chart of 1962, and, as such, in the Chilean gazetteer of 1974 and the Argentine gazetteer of 1991.

Buggisch Peak. 79°50' S, 83°46' W. Rising to 1445 m, 1.5 km SW of Lester Peak, in the Edson Hills, in the Heritage Range of the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN for German stratigrapher and paleontologist Werner Buggisch (b. Dec. 2, 1943, Bensheim Auerbach), a member of the field party with the USARP Ellsworth Mountains Expedition 1979-80, led by Gerald F. Webers.

Ledopad Bugristyj. 81°31' S, 34°00' W. An icefall, W of the Shackleton Range. Named by the Russians.

Nunataks Bugry. 70°18' S, 71°45' E. A group of nunataks at the N extremity of Gillock Island, in the Amery Ice Shelf. Named by the Russians. The coordinates are so close to those of the Corry Rocks, that the two features are almost certainly one and the same.

Bugueño Pinnacle. 78°37' S, 85°15' W. A slender rock peak, reported to rise to over 4400 m, between Mount Rutford and Rada Peak, on the crest of Craddock Massif, in the Sentinel Range. Named by US-ACAN in 2006, for Chilean biochemist Manuel Bugueño (b. 1978), a member of the Omega Foundation High Antarctic GPS Expedition to the Sentinel Range in 2005. He climbed Mount Craddock and Rada Peak, and, with Camilo Rada, ran the GPS measurements of both.

Bührenberg. 71°32' S, 161°45' E. A summit on the W side of Berg Peak, in the N part of the Morozumi Range. Named by the Germans.

Lednik Buhtovyj. 67°37' S, 69°40' E. A glacier, NE of Cape Darnley, in Mac. Robertson Land. Named by the Russians.

Gora Bujnickogo. 83°38' S, 54°53' W. A hill, due E of Brown Ridge, in the Neptune Range of the Pensacola Mountains. Named by the Russians.

Ostrova Bulahova. 70°55' S, 71°15' W. A group of islands, N by NE of the Walton Mountains, on Alexander Island. Named by the Russians.

Bukhta Bulatnaja *see* **Bulatnaya Bay**

Bulatnaya Bay. 68°28' S, 78°10' E. On the N side of Long Peninsula, in the Vestfold Hills. First mapped by Norwegian cartographers in 1946 from air photos taken by LCE 1936-37. Photographed aerially again during OpHJ 1946-47, then again by SovAE 1956. ANARE re-photographed it aerially in 1957 and 1958. Named by the Russians as Bukhta Bulatnaya (i.e., "sword-shaped bay"), and renamed into English on Nov. 27, 1973, by ANCA.

Bulbur Glacier. 72°27' S, 98°33' W. A glacier flowing S along the W side of Boker Rocks, into O'Dowd Cave, in the south-central part of Thurston Island. Named by US-ACAN in 2003, for Edward R. "Ed" Bulbur (b. 1927, Boston; it is a Polish name; his mother was Irish; his father was a commission salesman for a cheese company), photographer's mate with the Eastern Group of OpHJ 1946-47. Mr. Bulbur later lived in Chico, Calif.

Cerros Bulcke *see* **Mount Bulcke**

Mont Bulcke *see* **Mount Bulcke**

Monte Bulcke *see* **Mount Bulcke**, **Bulcke Finger**

Mount Bulcke. 64°29' S, 62°37' W. A bold summit, rising to 1030 m, at the end of an ice-covered spur which descends S from the Solvay Mountains, in the S extremity of Brabant Island, in the Palmer Archipelago. Discovered by BelgAE 1897-99, roughly mapped by them on Jan. 31, 1898, and named by de Gerlache as Mont Bulcke, for Auguste and J. Bulcke, of Antwerp, patrons of the expedition. It appears as Mount Bulcke on a British chart of 1908, and on a 1908 Argentine chart as Cerros Bulcke (i.e., "Bulcke hills"). US-ACAN accepted the name Mount Bulcke in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears (spelled wrong as Mount Bulke) in the 1955 British gazetteer. It appears on a Chilean chart of 1947 as Monte Bulcke, and as such on an Argentine chart of 1953, in the Argentine gazetteer of 1970, and the Chilean gazetteer of 1974. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground at the same time by FIDS.

Bulcke Finger. 64°28' S, 62°37' W. Also called Monte Bulcke. A prominent fingerlike pinnacle, rising to about 700 m, projecting from the W slopes of Mount Bulcke, in the S part of Brabant Island, in the Palmer Archipelago. Discovered by BelgAE 1897-99. Photographed aerially by FIDASE in 1956-57, and named later by FIDS in association with the mountain. UK-APC accepted the name on Sept. 23, 1960, and US-ACAN followed suit that year.

Bulfinch Ridge. 76°29' S, 162°13' E. A ridge, 6 km long, extending E from the N part of the Endeavour Massif, in the Kirkwood Range, in Victoria Land. Named by US-ACAN in 1999, for Cdr. Charles Bulfinch (b. Feb. 1, 1915, Dover, Mass. d. Oct. 15, 1999, Skagit, Wash.), USN, skipper of the *Atka* during OpDF II (i.e., 1956-57) and OpDF III (i.e., 1957-58). NZ-APC accepted the name on Nov. 4, 1999.

Bulgaria. Ratified as the 20th signatory of the Antarctic treaty on Sept. 11, 1978. The Bulgarian Antarctic Expeditions began in 1987-88, summer only, no winters. The Bulgarian Antarctic Place Names Commission was established on Nov. 17, 1994, by the Bulgarian Antarctic Institute, and they have named many, many features. On Nov. 16, 2001 the commission became affiliated with the Ministry of External Affairs. The following are the Bulgarian Antarctic Expeditions (BulgAE), all based at St. Kliment Ohridski Station. **BulgAE 1987-88**. Nov. 1987-May 1988. Not independent; they went down as part of the Russian and British efforts, and were supplied by the Spanish ship *Hespérides*, which also supplied their own Rey Juan Carlos I Station, only 1.7 km away on the south coast of Livingston Island, in the South Shetlands. The Bulgarian team was: Christo Pimpirev, Zlatil Verguilov, and Borislav Kamenov (geologists), Nikolai Mihnevski (meteorologist), Stephan Kaloyanov (radio operator), and Asen Chakurov (engineer). In April 1988 they set up St. Kliment Ohridski, as a refugio. **BulgAE 1993-94**. Nov. 1993-May 1994. This was the second Bulgarian expedition, consisting of members of the Atlantic Club of Bulgaria. They were carried south by the Spanish expedition's ship *Hespérides*. St. Kliment Ohridski Station was built. Geologist Christo Pimpirev (geologist and leader), Borislav Kamenov (geologist), Kroum Velchev (meteorologist), Nikola Vasilev (doctor), Kouzman Touhchiev (mechanic; *see* **Tukhchiev Knoll**), and Iliya Maslarov (cook). Also present at King George Island were: Solomon Passy (from the Atlantic Club of Bulgaria); Simeon Idakiev (journalist) and Nilai Yotov (cameraman), both from Bulgarian National Television; and Julia Gurkovska, journalist. **BulgAE 1994-95**. Nov. 1994-March 1995. Again, the Spanish took them down on the *Hespérides*. Christo Pimpirev (geologist and leader), Kouzman Touhchiev (base commander), Dimo Dimov (geologist), Dimitar Balabanski and Vasil Gourev (physicists), Kroum Velchev (meteorologist), and Nesho Chipev (biologist). There were also some guests that summer: Solomon Passy and Lyubomir Ivanov, both from the Atlantic Club of Bulgaria; Lyubomir Donkov (engineer); Elena Yoncheva (journalist) and Nikolai Petrov (cameraman), both from Bulgarian National Television; and a distinguished visitor indeed, Chavdar Nikolov, Bulgarian ambassador to Brazil. **BulgAE 1995-96**. Nov. 1995-March 1996. Ljubomir Ivanov led the summer operations, and they were again transported to Antarctica on the Spanish ship *Hespérides*. Christo Pimpirev (geologist and leader of the ground party), Kouzman Touhchiev (base commander), Nikola Petkov (geologist and cook), Dimo Dimov (geologist), Dimitar Balabanski (geologist and physicist), Nesho Chipev (biologist), Vasil Gourev (physicist), Dobri Hazurbasanov (doc-

tor), Yordan Yankov (radio operator), Nikolai Stanchev (engineer), and Lubomir Ivanov (general assistant). Guests that summer were: Solomon Passy (from the Atlantic Club) and Emiliyan Dinov (cameraman for Bulgarian National TV). **BulgAE 1996-97**. Nov. 1996-March 1997. Ljubomir Ivanov led the summer operations, and, again, they were transported to Antarctica on the Spanish ship *Hespérides*. **BulgAE 1997-98**. Nov. 1997-March 1998. Christo Pimpirev (leader). They went south on the *Hespérides* again. **BulgAE 1998-99**. Nov. 1998-March 1999. Christo Pimpirev (leader). Again, transportation was on the Spanish ship *Hespérides*. **BulgAE 1999-2000**. Nov. 1999 to March 2000. Christo Pimpirev (leader). Transportation was provided by the Spanish ship *Hespérides* and the chartered Russian vessel *Grigoriy Mikeev*. **BulgAE 2000-01**. Nov. 2000-March 2001. **BulgAE 2001-02**. Nov. 2001-March 2002. **BulgAE 2002-03**. Nov. 2002-March 2003. **BulgAE 2003-04**. Nov. 2003-March 2004. **BulgAE 2004-05**. Nov. 2004-March 2005. **BulgAE 2005-06**. Nov. 2005-March 2006. **BulgAE 2006-07**. Nov. 2006-March 2007. **BulgAE 2007-08**. Nov. 2007-March 2008. **BulgAE 2008-09**. Nov. 2008-March 2009. **BulgAE 2009-10**. This was the 18th such expedition, led by Christo Pimpirev, on the Spanish ship *Las Palmas*, and ran into trouble when the *Las Palmas* sustained serious damage before it got to Antarctica.

Bulgarian Beach. 62°38' S, 60°21' W. A beach in the E part of Livingston Island, in the South Shetlands, its coastline extends 2.3 km from Hespérides Point (in the SW) to Perunika Glacier (in the NE). Really it is 4 small beaches (or beachlets) composed mostly of boulders, and these beaches are separated by three landmarks. The first landmark is a rock rising to 6 m on the shore known locally as Greenpeace Rock, located 800 m NE of Hespérides Point. The second landmark is Spanish Point, and the third is an unnamed point 400 m ENE of Spanish Rock. That last section of the beach is a narrow strip beneath the cliff of part of the glacier which terminates at the beach. Surmounting the beach is an unnamed chain of 5 hills — Hespérides Hill; an unnamed hill rising to 36 m; Sinemorets Hill; Spanish Knoll; and Belozem Hill. In summer the area is mainly snow-free, and is crossed by 4 meltwater streams which drain the NW slope of Balkan Snowfield, with the mouths of each stream at the W extremity of each of the respective beachlets. The first of these little beaches is known locally as Base Beach (q.v.). The area has quite obviously been well known since the early 1820s. The British, Argentines, and Chileans all mapped it, as did the Spanish in 1991, and the Bulgarians surveyed it in detail in 1995-96. The name was already in common use when, on March 16, 1994, the Bulgarians formally named it as Kraybrezhie Balgarsko (Bulgarian Beach). UK-APC accepted the name Bulgarian Beach, on Dec. 7, 1994, and US-ACAN followed suit in 1995. The British were the latest to replot this feature, in late 2008.

Mount Bulke *see* **Mount Bulcke**

Bulken *see* **Bulken Hill**

Bulken Hill. 71°51' S, 26°58' E. Rising to 2220 m, 5 km N of Balchen Mountain, in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Bulken (i.e., "the lump"). US-ACAN accepted the name Bulken Hill in 1966.

Bulkington Pass. 65°49' S, 62°43' W. Trending NE-SW for 6 km, W of Bildad Peak, on the Oscar II Coast, on the E side of Graham Land, it provides a route from the ice piedmont N of Adit Nunatak to Flask Glacier (which flows to the N). Surveyed by BAS personnel from Base E in 1965. Named by UK-APC on July 21, 1976, for the *Moby Dick* character. US-ACAN accepted the name later in 1976.

Bulkisen. 71°48' S, 26°47' E. A blue icefield between Austhamaren Peak and Bulken Hill (which stands to the SE), E of Byrdbreen and N of Balchen Mountain, in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them in association with the hill. Name means "lump ice." US-ACAN accepted the name, without modification, in 1966.

Isla Bull *see* **Bull Nunatak**

Lake Bull. 77°32' S, 161°42' E. Also called Bull Pond. A small lake, 0.8 km E of Lake Vanda, in Wright Valley, Victoria Land. From here the Onyx River feeds Lake Vanda. Named by NZ-APC in the 1960s either in association with nearby Bull Pass, or for Colin Bull himself, for whom the pass was named. US-ACAN accepted the name in 1976.

Mount Bull *see* **Gustav Bull Mountains**

Nunatak Bull *see* **Bull Nunatak**

Roca Bull *see* **Bull Nunatak**

Bull, Alfred Benjamin. b. Aug. 2, 1885, Oatlands, Tasmania, son of William Cuper A. Bull and his wife Louisa Doran. He joind the Merchant Navy, and, as an able seaman, signed onto the *Nimrod* on Dec. 1, 1908, for the 2nd half of BAE 1907-09.

Bull, Colin Bruce Bradley. One of the seminal scientific figures in modern Antarctic history, he also, without actually re-inventing himself, lived several different lives. b. June 13, 1928, Birmingham, England, raised in Herefordshire, son of George Ernest Bull and his wife Alice Matilda Collier. He received his PhD from Birmingham in 1951 in condensed matter physics. He spent the early and mid 1950s in the Arctic, and in 1956, in Golders Green, married Diana Gillian Garrett (known as Gillian) and went to NZ, where he became a senior lecturer at Victoria University (College) of Wellington. He was leader of VUWAE 1958-59, and it was he who named Wright Valley. He organized VUWAE 1959-60, and in 1961 he began a 25-year stint at Ohio State University, from 1965 to 1969 being head of (what became) the Byrd Polar Institute there. He was based out of Byrd Station in 1963-64, taking part in the traverse to the Whitmore Mountains, and in 1969 he was responsible for Lois Jones's party to the Antarctic. In 1971 he and Valter Schytt were at the Argentine base on Deception Island, studying the effects of the volcano, when the *Lindblad Explorer* pulled into the harbor. He retired in 1986 and moved to Washington state, where he became involved in the Antarctic tourist business. He also wrote books: *Silas* (about Charles S. Wright), in 1993, and *Innocents in the Dry Valleys*, in 2009. He died on Sept. 7, 2010, aboard the *Amsterdam*, while cruising Alaska.

Bull, George John. Known as John Bull. b. Aug. 5, 1931, in Brighton, but raised in several places, mainly Coventry, son of aero engineer George John Bull. He was living in Coventry when it was blitzed by the Germans. He apprenticed as an engineer with Armstrong Siddeley, and in 1954 answered an ad for FIDS, becoming the diesel electric mechanic who wintered-over at Signy Island Station in 1955, and at Base N in 1956, that year as general assistant and mountain climber (mountain climbing being his hobby). He and John Thompson were the first up Mount Français. He was offered a job by FIDASE, and had even signed the contract, but the deal fell through, and Mr. Bull went off mountain climbing in the Andes before he made his way to the Alps, where he climbed for 6 months. In Oct. 1958, back in England, he married Pat Penketh (Peter Hooper was best man), and they gradually made their way farther and farther north over the years, with Mr. Bull repping at various jobs, until they settled in Carlisle.

Bull, Gustav Buun. b. Aug. 19, 1882, Tønsberg, Norway, son of Henrik Johan Bull (q.v.). He went to sea as a teenager, married Elna, and they lived in Sandefjord. In the 1920s he and Anders Jahre owned the Interessantskape Company, which ran the whaler *Sevilla* in Antarctic waters. He was later manager of the *Thorshammer*, 1930-31 and 1932-33 (Hjalmar Bråvold was the ship's captain). He died on March 7, 1938.

Bull, Harold Boyer. b. 1883, Hindmarsh, Adelaide, South Australia, son of Robert P. Bull. Harold's grandfather, who arrived in South Australia in 1838, wrote a book on the early history of the colony. When he 14, after Whinham College, Harold worked for a brief while in the printing office of the local newspaper, and then left Adelaide on a little barque called the *East Croft*. He entered the service of P & O, and became a quartermaster, serving for several years, and also being a member of the British Navy's RNR. He was picked out of 500 candidates to go on the *Nimrod* as an able seaman, for BAE 1907-09, going on 2 trips to the Antarctic. Being a teetotaler was probably what got him the job. After the expedition, he returned to England with the ship, and was awarded a medal by King Edward VII. He was still sailing, as a coxswain, during World War I. He moved to Fremantle, WA, married Amy Eleanor, and became a signalman, a job he would hold for years. His wife died in 1934, and he continued to live in Fremantle, with his daughter, Elsie, until he died in 1942.

Bull, Henrik Johan. b. Oct. 13, 1844, Langøy,

Stokke, Vestfold, Norway, son of Kornelius Markussen Bull and his wife, Petrine Sybille Petersen. A businessman, he married Agnes Alvilde Eugenie Olsen in Notterøy, on Nov. 9, 1869, and in 1885, with his wife and five children (including Ole Olsen Bull, Daisy Bull, and Gustav Bull, the last having his own entry, above), he emigrated to Australia. He led the *Antarctic* Expedition 1893-95, and in 1896 wrote the very entertaining *The Cruise of the* Antarctic *to the South Polar Regions*. He continued sealing and whaling after this, in Dec. 1906 being wrecked in the *Catherine* at the Crozet Islands, along with 10 companions, while leader of the Norwegian Commercial Expedition. He died in 1930, in Vestre Aker, Oslo.

Bull Island. 71°59' S, 171°06' E. A high, rocky island, with vertical sides, between Kemp Rock and Heftye Island, it is the middle large island in the the Possession Islands. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Henrik Bull apparently named it James Ross Island (for James Clark Ross), in Jan. 1895, while cruising this area in the *Antarctic*. In order to avoid confusion with the larger James Ross Island (which Nordenskjöld named in 1903), it was re-named by US-ACAN in 1968, for Bull. NZ-APC accepted the name on Dec. 4, 1968.

Bull Nunatak. 65°05' S, 60°23' W. Rising to about 175 m above the Larsen Ice Shelf, about 6 km W of Bruce Nunatak, in the Seal Nunataks, and almost 16 km WNW of the extreme NW of Robertson Island, off the Nordensjköld Coast, on the E coast of the Antarctic Peninsula. Charted in 1902 by SwedAE 1901-04, and named by Nordenskjöld as Nunatak Bull, for Henrik J. Bull. It appears as Bulls Nunatak and Bull Nunatak, in some of the English-language maps of the Nordenskjöld expedition. There is an erroneous 1908 reference to it as Isla Bull. In some Chilean charts of 1947 it appears as Roca Bull. It was surveyed by Fids from Base D in 1947. UK-APC accepted the name Bull Nunatak, on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears in the 1974 Chilean gazetteer as Nunatak Bull. The Argentines also call it Nunatak Bull.

Bull Pass. 77°28' S, 161°42' E. A dry valley forming a low pass through the Olympus Range, between Mount Jason and Mount Orestes, it joins McKelvey Valley and Wright Valley, in Victoria Land. Named by VUWAE 1958-59 for Colin Bull, leader of the expedition. It appears in the 1960 NZ gazetteer. US-ACAN accepted the name in 1964.

Bull Pond *see* **Lake Bull**

Bull Ridge. 64°41' S, 63°28' W. About 700 m above sea level, S of Mount Français (from which it is separated by a distinct col), and N of Börgen Bay, in the SE part of Anvers Island. Surveyed by Fids from Base N between 1955 and 1957, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for John Bull (*see* **Bull, George John**), who took part in the FIDS survey. It appears on a British chart of 1959. US-ACAN did not accept the name until 1971.

Bullfinch Ridge *see* **Bulfinch Ridge**

Bullough, Kenneth "Ken." b. April 7, 1927, Farnworth, Lancs, son of Ronald Bullough and his wife Edna Morrow. He graduated from the University of Manchester in 1951, and was at Jodrell Bank Experimental Station between 1951 and 1955, when he got his masters' degree from Manchester. He then moved to the École Normale Supérieure, in Paris, where he continued to develop and construct radar equipment, some of which was used to study aurorae in Adélie Land, in Antarctica. In fact, he was the ionosphere physicist on the French Polar Expedition of 1956-58, wintering-over at Dumont d'Urville Station in 1957. Coming back home, he caught the *Arcadia* from Fremantle, arriving back in London on March 23, 1958, and going straight into an academic role at the University of Sheffield, working on rockets. He was awarded his doctorate in Paris, in 1963, and was responsible for the design and development of the VLF receivers on the British Ariel 3 and Ariel 4 satellites in the mid to late 1960s. Some of the goniometer receivers he developed were used by BAS at Halley Bay Station. He died in March 1994, in Sheffield.

Bulls Nunatak *see* **Bull Nunatak**

Bullseye Lake. 77°25' S, 161°15' E. A very small pond near the center of an elliptical depression in the Insel Range, 7 km NE of Mount Boreas, in Victoria Land. Named in 1964 by U.S. geologist Parker Calkin, for its size and position. US-ACAN accepted the name in 1970, and NZ-APC followed suit on July 15, 1971.

Bullseye Mountain. 83°55' S, 160°05' E. A rounded, mainly ice-covered mountain rising above the Peletier Plateau, 6 km NW of Mount Ropar, in the Queen Elizabeth Range. Named by US-ACAN in 1965, for the semicircular bands of snow on the S side of the mountain. NZ-APC accepted the name on Nov. 16, 1965.

Isla Bulnes *see* **Bulnes Island**

Islote Bulnes *see* **Bulnes Island**

Punta Bulnes. 63°51' S, 60°55' W. A point at the extreme W of Trinity Peninsula, directly E of Farewell Rock (from which it is separated by a "channel" 500 m wide), and 7.5 km NW of Skottsberg Point. Named by ChilAE 1947, as Punta M. Bulnes, for Manuel Bulnes Sanfuentes (*see* **Bulnes Island**). By 1952 it was being called Punta Bulnes.

Bulnes Island. 63°18' S, 57°58' W. A small, cliffed, island, with an abrupt relief, 3 km NW of Cape Legoupil, it is the westernmost of the Duroch Islands, off Trinity Peninsula, on the W coast of the Antarctic Peninsula. When seen from the E or the W, it is composed of two conical hills joined by a low gorge. Discovered by FrAE 1837-40. Charted by ChilAE 1947-48, and named by the expedition leader Capt. González Navarrete (q.v. under G) as Isla Manuel Bulnes Sanfuentes, for Manuel Bulnes Sanfuentes (1911-1975), Chilean minister of defense during the time of the previous ChilAE (of 1947). It appears as such on a Chilean chart of 1948, but by 1959 a Chilean chart was showing Isla Bulnes, and (despite appearing on a 1967 Chilean chart as Islote Bulnes) that is how it appears in the Chilean gazetteer of 1974. It first appears on a U.S. chart, as Bulnes Island, in 1963, and that was the name that was accepted by US-ACAN in 1964, and by UK-APC on Dec. 15, 1982. It appears as such in the 1986 British gazetteer.

Bahía Buls *see* **Buls Bay**

Baie Buls *see* **Buls Bay**

Isla Buls *see* **Maipo Island**

Buls Bay. 64°23' S, 62°19' W. Between 3 and 4 km wide, it indents the SE side of Brabant Island, just N of D'Ursel Point, between that point and Terrada Point, in the Palmer Archipelago. Discovered by BelgAE 1897-99, roughly mapped by them between Jan. 30 and Feb. 6, 1898, and named by de Gerlache as Baie Buls, or Baie de Buls, for Charles Buls, burgomeister of Brussels, 1891-99, a supporter of the expedition. It first appears with the English translation Buls Bay on a 1900 British chart, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears in the British gazetteer of 1955. It was re-surveyed by Fids from the *Norsel* in April 1955, and photographed aerially by FIDASE in 1956-57. Its Spanish-language form, Bahía Buls, first appears in 1908, and was accepted by the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Buls Island *see* **Maipo Island**

Buls Islet *see* **Maipo Island**

The Bulwark. 78°17' S, 163°33' E. A steep-walled, granite bastion-type mountain, mantled in places by basalt cones, on the W side of Koettlitz Glacier, and around which that glacier flows on its descent to Walcott Bay, in southern Victoria Land. At its S end it is joined by a narrow ridge to Pyramid Nunatak, but when the Koettlitz Glacier occupied Pyramid Trough, it was completely surrounded by ice. First mapped by BAE 1910-13, and named by VUWAE 1960-61, for its shape. The N tip of this feature was a jumping-off point for a traverse made by the expedition, in Jan. 1961. NZ-APC accepted the name, and US-ACAN followed suit in 1963.

Bulwark Stream. 78°16' S, 163°32' E. A melt stream on the edge of the Koettlitz Glacier, flowing into Trough Lake, in southern Victoria Land. Named by NZ-APC on Dec. 1, 1993, in association with The Bulwark. US-ACAN accepted the name in 1995. Originally plotted in 78°01' S, 163°32' E, it has since been replotted.

Bump Buttress. 74°41' S, 163°48' E. A spur, 400 m above sea level, on Browning Pass, 6 km NNE of Cape Canwe, at the N end of Terra Nova Bay, in northern Victoria Land. Named by the Italians on July 17, 1997.

Mount Bumstead. 85°39' S, 174°10' E. Also called Windy Nunatak. A large, isolated mountain, rising to 2990 m (the New Zealanders say about 3220 m), 16 km SE of the Otway Massif, in the Grosvenor Mountains, SW of the head of the Shackleton Glacier, in the Queen Maud Mountains. Discovered by Byrd on his flight to the Pole in Nov. 1929, during ByrdAE 1928-30, and named by him for Albert Hoit Bumstead (1875-1940), chief cartographer of the National Geographic Society, and inventor of the sun

compass. US-ACAN accepted the name, and NZ-APC followed suit. Originally plotted in 85°39' S, 174°16' E, it has since been replotted.

Bunce, Jason. b. Sept. 30, 1792, Hartford, Conn., son of James Bunce and his wife Hannah. He was a private with Brainerd's Connecticut militia regiment during the war of 1812. He was blacksmith on the *Huron*, in the South Shetlands, in 1820-22.

Bunch, Peter James. b. 1930, Croydon, Surrey, son of Alfred Bunch and his wife Bessie Winkworth. Just after World War II he joined the Royal Navy, as a boy sailor, and was on the *Mauritius* in the Mediterranean. Dick Hillson was an able seaman on the same ship. Bunch became a signals petty officer, and was seconded to FIDS in 1955, as a radio operator, and in October of that year left Southampton on the *John Biscoe*, bound for Port Stanley. From there he took the *Shackleton* to Port Lockroy Station, where he wintered-over in 1956. In 1957 he wintered-over at Base G (Admiralty Bay).

Bundermann, Max. b. 1904. Flight photographer at Hansa Luftbild, in Berlin, and first director of the company. He was the aerial photographer on the flying boat *Passat* during GermAE 1938-39.

Bundermann Ketten *see* **Bundermann Range**

Bundermann Range. 72°01' S, 2°42' E. A small range immediately N of Nupskammen Ridge and Terningskarvet Mountain, in the Gjelsvik Mountains of Queen Maud Land. A range in this area (it may not have been this one exactly) was discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Bundermann-Ketten, for Max Bundermann. Later geographers arbitrarily selected this range as the one discovered by the Germans. US-ACAN accepted the name Bundermann Range in 1970.

Bundermannketten *see* **Mount Grytøyr, Skigarden**

Bungenstock Plateau. 68°57' S, 6°30' W. An undersea feature in the Southern Ocean. It actually runs between 68°24' S and 69°30' S, and between 4°W and 9°W. The name was proposed by Dr. H.W. Schencke of the Alfred Wegener Institute, in Germany, and accepted by international agreement in June 1999. Named for Dr. Herwald Bungenstock (1928-1998), German geologist and geophysicist who carried out scientific work in the Red Sea and the Pacific Ocean, from the *Valdivia* and the *Sonne*. He was the initiator of post-World War II marine and polar research in Germany, and adviser on the same disciplines to the government, 1979-91.

Bungenstockrücken. 81°30' S, 69°00' W. A ridge on the Filchner Ice Shelf. Named by the Germans for Herwald Bungenstock (*see* **Bungenstock Plateau**) .

Bunger, David Eli. b. July 10, 1909, Harrison, Preble Co., O., son of farmer Robert Eugene Bunger and his wife Golda Captola Brown. He enlisted in the U.S. Navy on March 21, 1942, and became a pilot in World War II. He was living in Coronado, near San Diego, and was a lieutenant commander, when he went on OpHJ 1946-47, and became famous as the pilot who discovered the Bunger Hills when he landed on a frozen lake here on Feb. 11, 1947. He served in Korea, and died on April 21, 1971. He is buried in Pensacola.

Bunger Hills. 66°17' S, 100°47' E. A group of moderately low, rounded, rock coastal hills, overlain by morainic drift, notably ice-free in the summer months, and marked by numerous meltwater ponds, they occupy an area of several hundred sq km, being nearly bisected by the E-W trending Algae Lake, and lie just S of the Highjump Archipelago, just behind the Shackleton Ice Shelf, at the W end of the Knox Coast, in Wilkes Land. The SW extremity was seen from Watson Bluff, on David Island, from a distance of about 76 km, by Alexander Kennedy, during AAE 1911-14. However, the feature was really discovered on Feb. 11, 1947, by David Bunger, who made a landing on an unfrozen lake here during OpHJ 1946-47. Known originally as Bunger Lakes, and Bunger Oasis, the feature became the best known of all the OpHJ discoveries, especially after the press started calling the area "Shangri-la." The hills were mapped from air photos taken during that expedition. US-ACAN accepted the name Bunger Hills in 1955, and ANCA followed suit on Aug. 11, 1958.

Bunger Lakes *see* **Bunger Hills**

Bunger Oasis *see* **Bunger Hills**

Piki Bunina *see* **Tufsane**

Bunker, Calvin. b. Nov. 11, 1771, Nantucket, Mass., son of Uriah Bunker and his wife Susannah Giles. He was a whaler, and was owner, manager, and captain of the *Diana* in Antarctic waters for the 1820-21 season. On Jan. 7, 1813, in Nantucket, he married Lydia Myrick, and died on Oct. 20, 1840, in Nantucket.

Bunker Bluff. 73°04' S, 166°40' E. A notable bluff, just S of the mouth of Gair Glacier, and forming part of the W wall of Mariner Glacier, in Victoria Land. Mapped by USGS from ground surveys, and from air photos taken by USN, 1960-64. Named by US-ACAN in 1968, for William H. Bunker, meteorologist at Hallett Station in 1962. NZ-APC accepted the name on Dec. 4, 1968.

Bunker Cwm. 83°10' S, 165°00' E. A glacial cirque lying below a rock escarpment of Mount Miller, about 16 km W of the summit of that mountain, in the Holland Range. The cwm is adjacent to the Bowden Névé, from which it is separated by a wall of rock 600 m high. The cwm is encircled on nearly all sides by an escarpment of rock and ice, but from one side a small glacier leads into the Lowery Glacier. Named descriptively by NZGSAE 1959-60, the feature being a scooped-out hollow in the flanks of Mount Miller resembling a bunker. NZ-APC accepted the name on May 24, 1961. It appears in the 1963 NZ gazetteer.

Bunn, Thomas. b. 1794, Downton, Wilts. He became a sailor, and, working his way up through the Merchant ranks, became a skipper, and as such was captain of the London sealer *Minerva*, in the South Shetlands for the 1820-21 season. About 1826 he married Elizabeth, and they set up home at Oak Street, in Newtown, Alverstoke, Hants, and had a family. His wife died in 1861, but he continued to sail until his 60s, when he moved to Bitterne, in Southampton, and from there to Sholing, living on his Greenwich pension. He died in 1882, in Alverstoke. His name has caused much confusion over the years — Bunn or Binn. It is Bunn.

Bunner Glacier. 74°28' S, 110°40' W. In the NE part of Bear Peninsula, flowing to the sea along the SE side of Gurnon Peninsula, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Sgt. Donald R. Bunner, here with the U.S. Army Aviation Detachment during OpDF 1965 (i.e., 1964-65) and OpDF 66 (i.e., 1965-66). Originally plotted in 74°26' S, 110°18' W, it has since been replotted. NZ-APC accepted the name on June 29, 1967.

Bunning Hill. 68°35' S, 77°52' E. The prominent bare hill that comprises the entire S end of Gardner Island, off Breidnes Peninsula, in the Vestfold Hills. It is surmounted by a monumented survey control point. Named by ANCA on April 23, 1996, to honor Stephen Bunning (*see* **Deaths**, 1985).

Isla Bunster *see* **Fitzroy Island**

Punta Bunster. 64°48' S, 63°00' W. The extreme NW of Lemaire Island, in the N part of Paradise Harbor, off the W coast of the Antarctic Peninsula. Named by ChilAE 1950-51, for Capitán de corbeta Víctor Bunster del Solar, skipper of the *Lientur* that season.

Mount Bunt. 70°46' S, 66°22' E. A sharp, conical peak, rising to 2315 m, and which appears slightly truncated when viewed from the NW, situated on the SW end of a group of low peaks the Russians call Gory Kosmonavtov, about 11 km ESE of Mount Hollingshead, in the Aramis Range of the Prince Charles Mountains, in Mac. Robertson Land. Discovered in Jan. 1957 by Bill Bewsher's ANARE Southern Party, and named by ANCA on July 22, 1957, for John Stewart Bunt (b. April 20, 1927), biologist who wintered-over at Mawson Station in 1956. He had also been on Macquarie Island in 1951. US-ACAN accepted the name in 1961. This is probably the peak the Russians call Gora Gorbataja.

Bunt Island. 67°09' S, 50°57' E. Just E of Bowl Island and Beaver Island, at the head of Amundsen Bay, in Enderby Land. Spotted in 1956 by an ANARE airborne field party, and named by ANCA on Nov. 24, 1961, for John Bunt (*see* **Mount Bunt**). US-ACAN accepted the name in 1965.

Buntley Bluff. 79°12' S, 160°24' E. A prominent rock cliff, 3 km long, just northward of Cape Lankester, at the mouth of Mulock Glacier. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1959 and 1963. Named by US-ACAN in 1965, for Ensign (later Lt. Cdr.) Ronald E. Buntley, USN, personnel manager at Williams Field during OpDF 64 (i.e., 1963-64). NZ-APC accepted the name on May 20, 1965.

Buoy boats. There were several attached to a floating whaling factory ship. Each would be in command of a gunner, usually one who was on probation waiting to command a factory. They were usually old catchers, and acted as tugs or holding units during busy intervals. In addition, they picked up whales whose tails had become severed during towing, and they also went out looking for lost whales.

Buråsbotnen. 74°19' S, 9°44' W. A corrie between Helsetskarvet and Schivestolen, in the N part of Milorgfjella, in the N portion of the Heimefront Range, in the S part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for lumberjack Ole Burås, father of 12, who was killed by the Gestapo while guiding refugees across the border to Switzerland.

Mount Burch. 70°49' S, 164°25' E. A distinctive peak, rising to 1400 m, about 5 km SE of Mount Kelly, on the S side of George Glacier, in the Anare Mountains. Named by ANCA for William Martin "Bill" Burch (b. 1938), geophysicist who went to Antarctica on the *Magga Dan*, and wintered-over at Wilkes Station in 1961. He was on the *Thala Dan* in 1962 (but did not winter-over again). US-ACAN accepted the name in 1964. In 2007-08 Mr. Burch, who became a biomedical technologist, re-visited Wilkes, on the *Aurora Australis*.

Burch Lake. 68°27' S, 78°16' E. A small oval-shaped lake, about 450 m long and 150 m wide, on the N shore of Taynaya Bay, in the Vestfold Hills. The surface of the lake was marginally beneath sea level in Nov. 1987. The maximum recorded depth is 6 m, although deeper spots may occur. The water below 4 m is anoxic. Named by ANCA on March 7, 1991, for Dr. Michael D. "Mike" Burch, who wintered-over at Davis Station in 1979, during which he made important studies of the phytoplankton of Ace Lake and other lakes in the Vestfold Hills.

Burch Peaks. 66°52' S, 53°02' E. A group of peaks, 10.5 km E of Mount Torckler, in Enderby Land. Plotted from ANARE air photos taken in 1957, and later named by ANCA for Bill Burch (*see* **Mount Burch**). US-ACAN accepted the name in 1965.

Cabo Burd *see* **Cape Burd**

Cape Burd. 63°39' S, 57°09' W. A low rock cliff, rising to an elevation of 80 m above sea level, and forming the SW extremity of Tabarin Peninsula, Trinity Peninsula, at the NE end of the Antarctic Peninsula. Surveyed and charted by Fids from Base D in March 1946, and named by them for Oliver Burd. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1953. It appears in the British gazetteer of 1955, and on a British chart of 1957. It appears as Cabo Burd on a Chilean chart of 1961, in the Chilean gazetteer of 1974, and in the Argentine gazetteer of 1991.

Burd, Oliver Richard "Dick." b. 1921, Saskatchewan (although the family was of Scalby, Yorks), son of Walter Burd, Bishop of Saskatchewan, and his wife Elizabeth Millington, a teacher. Royal Canadian Naval Volunteer Reserve lieutenant, he served in subs during World War II, joined FIDS in Oct. 1946, and was meteorological observer and base leader at Base F for the winter of 1947. He was also meteorological observer at Base D, in the winter of 1948, and died in the fire there in Nov. 1948 (*see* **Deaths**, 1948).

Estrecho Burden *see* **Burden Passage**

Paso Burden *see* **Burden Passage**

Burden, Eugene Moores. b. 1892, Carbonear, Newfoundland. He went to sea in 1912 for Bowring & Co.'s Liverpool ships out of St. John's, and served as an able seaman on RN destroyers during World War I, taking part in the Feb. 1918 rescue of the 44 survivors of the *Florizel*, a Bowring ship that went down off Cape Race, Newfoundland. He then skippered small schooners all over the world, such as the *Little Princess* in the Caribbean in 1921. He was 2nd mate on the *Rosalind* in 1926, and when World War II broke out was skipper of the *Imogene*. During World War II he was a lieutenant commander and harbormaster at St. John's. After the war he was captain of the *Trepassey*, in Antarctica, 1946-47. In later years he taught navigation in St. John's, and died in 1979.

Burden Passage. 63°08' S, 56°32' W. The NW-SE trending marine passage separating d'Urville Island from Bransfield Island, off the extreme NE end of Trinity Peninsula. Charted in Jan. 1947 by Fids aboard the *Trepassey*, who named it for Eugene Burden (q.v). It appears on a British chart of 1949. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the British gazetteer of 1955, and on a British chart of 1962. It was photographed aerially by FIDASE in 1956-57. It appears on a 1953 Argentine chart as Estrecho Burden (which means the same thing), and that is the name that appears in the 1970 Argentine gazetteer. It appears on a 1961 Chilean chart of 1961 as Paso Burden (which, again, means the same thing), and that is the name that appears in the 1974 Chilean gazetteer.

Nunatak Burdenko *see* **Vortesteinen**

Burdick, Christopher. Captain (and one of the owners) of the *Huntress*, a vessel in the South Shetlands for the 1820-21 season, and which teamed up with the *Huron* during that period in order to maximize the take of seals. On Feb. 15, 1821 Burdick sighted the continent of Antarctica while in command of the *Cecilia* during a Feb. 12-19, 1821 exploration of Low Island. He died in 1831.

Burdick, Stanton L. b. 1803. Able seaman on the *Hero* during the Fanning-Pendleton Sealing Expedition, 1820-21. He was only 5 foot 3.

Burdick Channel *see* **Pendleton Strait**

Burdick Peak. 62°38' S, 60°15' W. Rising to 751 m, SW of Mount Bowles, in the central part of Livingston Island, in the South Shetlands. Photographed aerially by FIDASE 1956-57, and named by UK-APC on July 7, 1959, for Christopher Burdick. US-ACAN accepted the name in 1960.

Burdick Ridge. In the E part of Livingston Island, in the South Shetlands. Not an official name.

Burdick South Peak. 62°39' S, 60°16' W. A narrow peak, with steep and partly ice-free N and S slopes, it rises to 544 m, and extends 1 km WSW as an offshoot from the SE extremity of Burdick Ridge, 900 m SSW of Burdick Peak, 5.26 km E of Sinemorets Hill, 1.5 km NE of Willan Nunatak (to which it is connected by Willan Saddle), and 1.5 km W by N of the summit of Pliska Ridge, in the E part of Livingston Island, in the South Shetlands. Mapped by the Spanish in 1991, and surveyed in detail in 1995-96 by the Bulgarians, who named it on Oct. 29, 1996, as Vrah Yuzhen Burdick (i.e., "Burdick south peak") in association with Burdick Peak. US-ACAN accepted the name Burdick South Peak in 1997.

Burdick West Peak. 62°38' S, 60°16' W. Partly ice-free, it rises to 455 m, at the NW extremity of Burdick Ridge, 1 km NW by W of Burdick Peak, 620 m SSE of Rezen Knoll, 3.86 km ESE of Aleko Rock, and 4.75 km E by N of Sinemorets Hill. Roughly mapped by the British in 1968, mapped in more detail by the Spanish in 1991, and surveyed in great detail by the Bulgarians in 1995-96. The Bulgarians named it on Oct. 29, 1996, as Vrah Zapaden Burdick (i.e., "Burdick west peak"), in association with Burdick Peak. US-ACAN accepted the name Burdick West Peak in 1997.

Burel Hill. 62°27' S, 60°22' W. An ice-free hill rising to 152 m, 2.1 km NNW of Iratais Point, and 1.2 km SSE of Cape Danger, surmounting Kozma Cove to the E and Hero Bay to the S and SW, in the NW part of Desolation Island, off Livingston Island, in the South Shetlands. Mapped by the British in 1968, and by the Bulgarians in 2005 and 2009. Named by the Bulgarians on Sept. 14, 2010, for the Burel region in western Bulgaria.

[1]**Lake Burevestnik** *see* **Petrel Lake**

[2]**Lake Burevestnik**. 66°19' S, 100°47' E. In the Bunger Hills. Mapped by SovAE 1956, and named by the Russians, as Ozero Burevestnik (i.e., "lake petrel"). ANCA translated the name on Jan. 19, 1989. *See also* **Lake Petrel**.

Ozero Burevestnik *see* **Lake Burevestnik, Lake Petrel**

Burgan, Michael Jeremy Stuart. b. Oct. 2, 1953, Surrey, son of John G. Burgan and his wife Shirley E.M. Stuart. In 1974 he first went south as a cadet trainee on British Antarctic research ships, rising to chief officer over the years. Cargo handling and small boat operations were his specialty. In 1985, in Weston-super-Mare, he married Debra Mundy.

Poluostrov Burgas *see* **Burgas Peninsula**

Burgas Peninsula. 62°38' S, 59°55' W. Bounded by Bruix Cove and Moon Bay to the N, and Bransfield Strait to the SSE, it extends 10.5 km in an ENE direction toward Renier Point, on Livingston Island, in the South Shetlands. Roughly mapped by the British in 1968, and in more detail by the Argentines in 1980, it was named by the Bulgarians on March 15, 2002, as Poluostrov Burgas (i.e., "Burgas peninsula"), after the Bulgarian town of the same name.

Lake Burgess. 69°25' S, 76°08' E. A branched

lake in a wide open area of land, about 1.3 km NE of Blundell Peak, in the Larsemann Hills. Named by ANCA on Sept. 29, 1988, for Dr. Jim Burgess, Australian geomorphologist and limnologist from the University of New South Wales, who did extensive research in the area, and who was a member of the 1987 summer field party at Law Base.

Burgess, Leonard. b. 1869, Denton, Lancs, son of hatter James Burgess and his wife Sarah Ann Clayton. He moved to Hull, became a fisherman on the North Sea trawlers, married Mary Ethel Mortimer in 1891, and raised a family at 9 Prings Terrace. Able seaman on the *Morning* in 1902-03, and on the *Terra Nova*, 1903-04, both relief expeditions during BNAE 1901-04. He left a log.

Burgess, Thomas "Tommy." b. 1927, Ayr, Scotland. He joined FIDS in 1949, as a radio operator, and later that year left Tilbury Docks bound for Montevideo, and then on to Port Stanley. He wintered-over at Port Lockroy Station in 1950, and at Base G in 1951. It is said he went to Canada, and there was, indeed, a Thomas Burgess, born 1927, leaving Liverpool in 1952, bound for Montreal.

Burgess Glacier. 85°26' S, 171°55' E. A glacier, 11 km long, flowing NW through the Otway Masif to enter Mill Stream Glacier. Named by US-ACAN in 1965, for Robert William "Bill" Burgess, USARP ionosphere physicist who wintered-over at Pole Station in 1963. NZ-APC accepted the name on Nov. 16, 1965.

Burgess Ice Rise. 70°23' S, 73°21' W. A small ice rise in the Wilkins Ice Shelf, off the NW coast of Alexander Island. Mapped aerially by BAS, on a radio echo-sounding Twin Otter flight on Feb. 11, 1967, and later accurately positioned from U.S. Landsat images from Feb. 1979. Named by UK-APC on Dec. 9, 1981, for Flight Lt. Robert William "Bob" Burgess (b. 1929), pilot of the Otter, who had wintered-over as BAS pilot at Base B in 1966. US-ACAN accepted the name.

Burgess Island. 69°22' S, 75°55' E. An island in the Larsemann Hills. Named by ANCA on March 12, 1992, for Jim Burgess (*see* **Lake Burgess**).

The *Burghead Bay*. British frigate built by Charles Hill, of Bristol, and launched on March 3, 1945. She was in Antarctic waters in 1951-52, when she went to Hope Bay with Sir Miles Clifford, governor of the Falkland Islands, aboard, in order to investigate the fracas with the Argentines there (*see* **Wars**). Captain that year was John Augustine Ievers (b. Dec. 2, 1912, Tonbridge, Kent. d. Aug. 1995, Hampshire, as an admiral). They did some charting, and visited all the FIDS stations except Port Lockroy. Ievers' successor as skipper was Cdr. J. Wilkinson, who took command on Nov. 8, 1952, and on May 7, 1954, Cdr. Patrick Durrrant Hoare was appointed captain. In 1954-55, under Capt. Hoare, she visited the South Orkneys and South Shetlands. In May 1958, under Capt. Stanley Lawrence McArdle, she tried to get into the W coast of the Antarctic peninsula to rescue stranded Fids, but couldn't do so because of the ice. On May 12, 1959, she was sold (along with the *Bigbury Bay*) to the Portuguese Navy.

Burgruine. 71°18' S, 164°45' E. Described as an island. It lies just SE of the Greenwell Glacier, in the S part of the Everett Range, in Oates Land, in Victoria Land. Named by the Germans.

Gora Burhanova. 75°08' S, 161°08' E. A hill, just NW of Mount Stierer, in the Prince Albert Mountains of Victoria Land. Named by the Russians.

Burhoe, Richard H. b. 1913, Reading, Mass., son of banker and attorney Winslow P. Burhoe and his Canadian wife Mary T. Stumbles. He is mentioned in the crew list in the *New York Times* of Oct. 14, 193, as a messman on the *Jacob Ruppert* during ByrdAE 1933-35, but may not have actually made the trip.

Burke, Arleigh Albert. b. Oct. 19, 1901, Boulder, Colo., son of farmer Oscar A. Burke and his wife Clara. He graduated from Annapolis in 1923, married Roberta Gorsuch, and came to fame during World War II, in the Pacific. He fought in the Korean War, and was an admiral when he became chief of Naval Operations (which included OpDF), 1956-61. He died on Jan. 1, 1996, in Bethesda, Md.

Burke, Thomas *see* **USEE 1838-42**

Burke Basin. 68°28' S, 78°18' E. A roughly triangular basin, 1 km long and 800 m wide, in Taynaya Bay, one of the approximately 7 stratified marine basins that occur in the Vestfold Hills. Such basins are rare, and these are the only known examples in Antarctica. The maximum known depth of this basin is 32 m, but deeper spots may occur. Named by ANCA on April 27, 1995, for Chris Burke, who wintered-over at Davis Station in 1983, studying the photosynthetic sulphur bacteria of the meromictic lakes and stratified fjords of the Vestfold Hills.

Burke Boulevard. One of the main streets in McMurdo, named in May 1956. Named after Adm. Arleigh Burke.

Burke Island. 73°05' S, 104°52' W. An ice-covered island, 24 km long and 10 km wide, 62 km SW of Cape Waite (at the end of King Peninsula), at the entrance to Pine Island Bay, in the Amundsen Sea. Plotted in 73°08' S, 105°06' W, from air photos taken by VX-6 in Jan. 1960. Named by US-ACAN in 1961, for Adm. Arleigh Burke. It has since been replotted.

Burke Ridge. 74°40' S, 65°25' E. A low ridge, partly snow-covered, with 3 prominent rock outcrops, about 65 km S of Mount Newton, in the S part of the Prince Charles Mountains, in Mac. Robertson Land. Photographed aerially in 1960, by ANARE, and first identied from these photos in 1971. The ridge was triangulated from several survey stations during the ANARE Prince Charles Mountains Survey of 1972. Named by ANCA on Nov. 27, 1973, for Edward H. "Ed" Burke, technical officer (survey) with the Prince Charles Mountains Surveys of 1970 and 1972. On Jan. 17, 1971, an ANARE helicopter crashed here.

Burkett Islands. 66°56' S, 50°19' E. A group of small islands just W of Mount Gleadell, in the E part of Amundsen Bay, in Enderby Land. Mapped by Australian cartographers from air photos taken by ANARE in 1956, and named by ANCA on Nov. 24, 1961, for Graeme E.L. Burkett, radio officer at Wilkes Station during the 1960 winter-over. US-ACAN accepted the name in 1965.

Burkett Nunatak. 72°42' S, 162°14' E. Rising to 2180 m, 1.5 km E of Minaret Nunatak, in the Monument Nunataks. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1968, for Willis A. Burkett (b. June 16, 1937. d. April 5, 1998), VX-6 aviation electronics technician, 6 times in Antarctica, and over 100 flights at McMurdo. NZ-APC accepted the name on Dec. 4, 1968.

Burkitt, David Michael "Dave." b. March 17, 1944, Nettleham, Lincs, son of farmer Fred Burkitt and his wife Mabel. He joined the RN at 15, and apprenticed as a shipwright. After several ships, he was posted in the north of Scotland, as part of a mountain rescue team, when he became part of the British Joint Services Expedition to Elephant Island, in the South Shetlands, 1970-71. On retiring from the Navy he joined BAS, and wintered-over as a general assistant at Base E in 1973. He wintered-over on South Georgia in 1974 and 1976. He was at Rothera Station in 1980-81, and at James Ross Island in 1981-82. In 1996 he was in charge of the restoration at Port Lockroy, and has been many times to Antarctica since, on cruise ships. He retired in Nettleham.

Burkitt Nunatak. 69°42' S, 66°53' W. A small nunatak, rising to about 1200 m above sea level, in the NW part of the Dyer Plateau, 14 km (the British say about 17 km) WSW of Crescent Scarp, on the Fallières Coast, on the W coast of Graham Land. BAS personnel (including Dave Burkitt) did glaciological work here in 1980-81. Named by UK-APC on Dec. 9, 1981. US-ACAN accepted the name.

Cape Burks. 74°45' S, 136°50' W. A prominent rock cape marking the E side of the entrance to Hull Bay, and also forming the NW seaward extension of McDonald Heights, on the coast of Marie Byrd Land. Discovered and mapped by personnel on the *Glacier* on Jan. 31, 1962. Named by US-ACAN in 1962, for Lt. Cdr. Ernest Burks, USN, senior helicopter pilot with the *Glacier*, and the first person to set foot on this cape.

Burlock Peak. 86°03' S, 132°20' W. Rising to 2070 m, on the spur descending from Mount Simsarian, along the E face of the Watson Escarpment. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for James U. Burlock (b. Oct. 20, 1939, Miss.), builder who wintered-over at Byrd Station in 1962.

Burmester Dome. 83°22' S, 50°56' W. An ice-capped dome rising to 2095 m, in the W central part of the Saratoga Table, in the Forrestal Range, in the Pensacola Mountains. Photographed

aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965–66, and mapped by USGS from these efforts. At the suggestion of USGS party leader Art Ford, this dome was named by US-ACAN for geologist Russell F. Burmester, of Western Washington State University, at Bellingham, who worked in the area in 1978–79. UK-APC accepted the name on May 21, 1979.

Burn Cliffs. 70°06' S, 69°47' W. Two rock outlier ridges, rising to a height of about 455 m above sea level, near the head of Haydn Inlet, and westward of Mount Ethelwulf, in the Douglas Range, in the NW part of Alexander Island. Surveyed by BAS between 1973 and 1977. Named by UK-APC on Dec. 8, 1977, for Richard William Burn (b. 1954), BAS geologist who summered over on Adelaide Island, and in the N part of Alexander Island, in 1975–76 and 1976–77. It appears in the 1980 British gazetteer. US-ACAN accepted the name. Originally plotted in 70°06' S, 69°52' W, it has since been replotted.

Cape Burn Murdoch *see* **Cape Murdoch**

Burn Murdoch, William Gordon "W.G." Name also seen as Burn-Murdoch, but there really was no hyphen, even though Burn Murdoch was his last name. b. 1862, Edinburgh, son of physician William Murdoch Burn Murdoch and his wife Jessie Cecilia Mack. Scottish artist and assistant surgeon on the *Balaena* during DWE 1892–93. Captain Alexander Fairweather was not too happy having an artist on his vessel, but Burn Murdoch was an accomplished piper, and, as one of the first men ever to play the bagpipes in Antarctica, this more than compensated. He wrote an entertaining, if somewhat casual, account of this expedition, *From Edinburgh to the Antarctic* (*see* the Bibliography). Later he was a supporter of ScotNAE 1902–04 (but did not go on the expedition). In 1905–06 he followed the Prince of Wales on his historic trip to India, and wrote about it in another book, *From Edinburgh to India and Burmah*. He also wrote a book about his experiences as whale hunter and bear hunter, and others about his vast travels. He died on July 19, 1939, in Edinburgh.

Burn Murdoch Nunatak *see* **Murdoch Nunatak**

Mount Burnett. 67°53' S, 62°45' E. Rising to 1050 m, 2.5 km SW of Trost Peak, it is the W peak of the South Masson Range of the Framnes Mountains, it is generally free of snow, and used as a navigation mark by ground parties traveling through the gap between Mount Hordern and the David Range. Mapped by Norwegian cartographers in 1946, from aerial photographs taken by LCE 1936–37. Re-mapped by ANARE over the period 1957–60, and named by ANCA on July 22, 1959, for Eric John Burnett (b. Feb. 9, 1926), radiophysicist who wintered-over at Mawson Station in 1958. US-ACAN accepted the name in 1961.

Burnett Island. 66°13' S, 110°36' E. A rocky island, 1.5 km long in an E-W direction, lying N of Honkala Island, it is the central feature of the Swain Islands. First photographed aerially during OpHJ 1946–47, and in 1956 by ANARE and by SovAE. It was included in a 1957 ground survey of the Swain Islands, by a party led by Carl Eklund from Wilkes Station, and Eklund named it for Lt. (jg) Donald R. "Don" Burnett (b. Nov. 1931, Kansas City, Kans., but raised in Chicago. d. Sept. 11, 2010), USN, military leader of Wilkes Station throughout 1957, until Jan. 30, 1958, when he handed over to Lt. R.S. Sparkes. US-ACAN accepted the name in 1960, and ANCA followed suit on July 4, 1961. Don Burnett was a mechanical engineer with Lockheed for 30 years, and was mayor of Cupertino, Calif., 1994 and 1995.

Burnette Glacier. 72°01' S, 170°04' E. A steep glacier flowing SW between Honeycomb Ridge and Quartermain Point, in the Admiralty Mountains, into Moubray Bay. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Airman 2nd Class Robert L. Burnette (*see* **Deaths**, 1958). NZ-APC accepted the name on July 16, 1964.

Burnette Rock. 75°23' S, 143°13' W. Rising to 45 m, about 1.1 km NW of Groves Island, off the coast of Marie Byrd Land. Chief Warrant Officer Desmond Burnette, U.S. Army, was a helicopter pilot on the Marie Byrd Land Traverse of 1966–67, and, on Dec. 4, 1966 landed on this rock, which was named for him by Charles E. Morrison, Jr., also on this traverse. On that date, Morrison, Burnette, Thomas Bray (of USGS), and Sgt. Donald Bunner (of the United States Army) occupied and positioned this rock. US-ACAN accepted the name in 1967.

Burney, David. In 1817 he became commander of the *Nelson*, a British sealer in the South Shetlands, 1820–21 and 1821–23. His name is also seen as Barney, or Bana.

Burney, James "Jem." b. June 13, 1750, London, but raised in his early years at Kings Lynn, Norfolk, son of musician Charles Burney and his first wife Esther Sleepe, and older brother of novelist Fanny Burney. He joined the Navy as a cabin boy at the age of 10. Just returned from India, he joined the *Resolution* on Dec. 17, 1771, as an able seaman, for Cook's 2nd voyage, 1772–75. At Cape Town, on the way down, he was promoted to 2nd lieutenant on the *Adventure* on Nov. 18, 1772, when Joseph Shank had to go home, sick. At Grass Cove, NZ, in Dec. 1773, he led the party that found the cannibalized leftovers of Rowe and his mates. Burney kept a diary of the expedition, and after the voyage he sailed to Boston on the *Cerberus*, but was soon with Cook again, on the 3rd voyage, as 1st lieutenant on the *Discovery*, under Clerke. On. Aug. 23, 1779, after Clerke's death, Burney transferred to the *Resolution*, the late Cook's ship. Again, he kept a diary. He was made captain in 1782, but became seriously ill in India in 1784, returned home, and retired. In 1785 he married Sally Payne, son of Thomas Payne the London bookseller. In 1798 he eloped with his half-sister Sarah, and lived with her for 5 years before returning to his wife and 2 children, when he began writing books about his travels. He died a rear admiral on Nov. 17, 1821.

Burney Peak. 62°19' S, 58°52' W. Rising to 150 m, W of Duthoit Point, in the E part of Nelson Island, in the South Shetlands. Photographed aerially by FIDASE in 1956–57, and surveyed from the ground by FIDS in 1957–58. Named by UK-APC on Aug. 31, 1962, for Captain David Burney. It appears on a British chart of 1962. US-ACAN accepted the name in 1965.

Burney Point. 62°19' S, 58°51' W. A rocky promontory S of Burney Peak, in the E part of Nelson Island, in the South Shetlands. Named by the Poles in 1984, in association with the peak.

[1]**Mount Burnham**. 71°34' S, 159°50' E. An ice-covered projecting bluff-type mountain, rising to 2810 m, along the W wall of the Daniels Range, and forming the SW extremity of that range, 10 km S of Big Brother Bluff, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken in 1960 and 1962. Named by US-ACAN in 1964, for James B. "Jim" Burnham, ionosphere physicist who wintered-over at Pole Station in 1958 and 1961.

[2]**Mount Burnham**. 77°16' S, 142°05' W. Rising to 1170 m, 3 km N of Mount Van Valkenburg, in the Clark Mountains, in the Ford Ranges of Marie Byrd Land. Discovered aerially in 1940 by members from West Base during USAS 1939–41, and named for Guy Harvey Burnham (b. March 10, 1895, Gloucester, Mass. d. Sept. 5, 1972, Worcester, Mass.), Clark University cartographer. US-ACAN accepted the name in 1947.

Burning Mount *see* **Bridgeman Island**

Burns, David *see* **USEE 1838–42**

Burns, Frederick "Fred." b. 1926, Washington, Durham. After national service in the Royal Marines, he joined FIDS in 1951, as a meteorologist, and wintered-over at Base G in 1952. After his tour he returned to Port Stanley, and there caught the *Fitzroy* for home, arriving in London on Feb. 3, 1953. Last heard of in 1960.

Burns, Stanley. b. 1897, Darlington, Durham, son of Emanuel Wilson Burns and his wife Elizabeth Brougham. Emanuel managed his father-in-law's grocery shop in nearby Crook. Stanley joined the Merchant Navy, working for the Furness Line, out of Liverpool, and he was also Royal Naval Reserve. In 1924 he married Ruby Gertrude Rundle, in Penarth, near Cardiff, and they had their daughter Margaret there (at his mother-in-law's house), in 1927. In 1928 Furness sent Burns to work out of Bermuda, and moved his family to Hamilton, with Burns plying between Bermuda and New York every week as 2nd officer on the *Fort St. George*, in 1927, and as chief officer on the *Bermuda*, between 1928 and 1931. In 1931 the family moved to West New Brighton, in Staten Island, NY, where they lived for several years, the whole family often traveling together on the ships. Burns was chief officer on the *Monarch of Bermuda* in 1932, chief officer on the *Queen of Bermuda* between 1933 and 1935, and, for a brief while staff captain on that ship. In 1936 he went back to the *Monarch of Bermuda*, and in 1937 was again on the *Queen of Bermuda*. Between 1938 and 1939 he skippered

ships out of Newfoundland and Nova Scotia — the *Fort Amherst* and the *Fort Townsend*, then he was back to the *Queen of Bermuda*, as staff captain in 1939. He was navigating officer on the same ship during the 1940-41 season in Antarctica. He had very few charts of the Antarcic waters they visited, and had to make his own. He found, for example, that Clarence Island, was a mile off the accepted charted reference. After the war he was pilot warden and harbormaster for Bermuda, which is where he died, in 1971.

Burns Bluff. 70°22' S, 67°56' W. On the W coast of Palmer Land, immediately to the S of Naess Glacier, on the E coast of George VI Sound. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for Frederick Michael "Mike" Burns (b. Dec. 16, 1942, Hendon, Mdsx), BAS geophysicist who wintered-over at Base E in 1969 and 1970. It appears on the 1979 USGS sketch map of the N part of Palmer Land. US-ACAN accepted the name.

Burns Glacier. 73°57' S, 164°15' E. A tributary glacier, 20 km long, it flows N along the E side of Pinckard Table, and enters the SW side of Tinker Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for John P. Burns, radioman who wintered-over at McMurdo in 1963 and 1967.

Burnside Ridges. 69°14' S, 157°10' E. Three roughly parallel ridges running approximately NE-SW, with their NE extremities terminating at Matusevich Glacier, in Oates Land, in Victoria Land. Photographed aerially by OpHJ 1946-47. Sketched and photographed by Phil Law on Feb. 20, 1959, during an outing from the *Magga Dan*. Named by ANCA on July 22, 1959, for Lt. Cdr. Ian Malcolm Burnside (b. Nov. 16, 1925. d. Feb. 20, 2006). A product of the Australian Naval College (joined RAN as a cadet midshipman, on Jan. 1, 1939, aged 13), he saw active service during World War II, on the *Australia* and the *Arunta*, in the Coral Sea, the Solomons, and New Guinea, and at war's end, as an acting sub lieutenant (promoted Feb. 1944) was navigator (on loan to the Royal Navy) on the destroyer *Liddesdale*, in the Mediterranean. In Dec. 1945, he returned to Australia on the *Berwick*. He continued in the RAN, and was hydrographic surveyor on the *Magga Dan*, 1958-59, in Antarctica, surveying much of Macquarie Island. In Dec. 1961 he was promoted to commander, and placed in command of the *Duchess*, serving in Vietnam. In 1977 he was promoted to commodore, and retired in July 1979. US-ACAN accepted the name in 1961.

Cape Buromskiy. 69°00' S, 156°05' E. The N point of Krylov Peninsula. Photographed aerially during OpHJ 1946-47. Mapped from air photos taken by SovAE 1958, and named by them as Mys Buromskogo, for Nikolay I. Buromskiy (*see* **Deaths**, 1957), the expedition's hydrographer. US-ACAN accepted the translated name, Cape Buromskiy, in 1961, and ANCA followed suit.

Buromskiy Island. 66°32' S, 93°00' E. A small island, 0.6 km S of Haswell Island, in the Haswell Islands, off the coast of Queen Mary Land. Discovered and mapped by AAE 1911-14. Photographed by SovAE 1958, and named Ostrov Buromskogo, by the Russians at Mirnyy Station, for N.I. Buromskiy (*see* **Cape Buromskiy**). There is a cemetery there, established by the Russians in 1960. ANCA accepted the translated name Buromskiy Island, on Oct. 11, 1960, and US-ACAN followed suit in 1961.

Mys Buromskogo *see* **Cape Buromskiy**

Ostrov Buromskogo *see* **Buromskiy Island**

Burr, John Davall. b. 1746, London, son of Daniel Burr and Elizabeth Davall. In 1771 he joined the *Resolution* as master's mate for Cook's 2nd voyage, 1772-75, and kept a diary of the expedition. In Aug. 1775 he became a lieutenant, and served with Robert Palliser Cooper on the *Hawke*.

Mount Burr Brundage *see* **Mount Brundage**

Burrage Dome. 75°33' S, 161°05' E. A mainly ice-covered dome rising to 840 m, 6 km NE of the summit of Mount Joyce, in the Prince Albert Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for Roy E. Burrage, Jr., construction mechanic who wintered-over at Pole Station in 1966.

Mount Burrill. 72°50' S, 167°30' E. Rising to 2310 m, on the E edge of the Malta Plateau, 6 km S of Mount Hussey, at the head of Hand Glacier, in the Victory Mountains of Victoria Land. Named by NZ-APC for Dr. Meredith F. "Pete" Burrill (1903-1997), executive secretary of the U.S. Board on Geographic Names, 1943-73. US-ACAN accepted the name in 1966.

Burris Nunatak. 71°47' S, 160°27' E. Near the N extremity of Emlen Peaks, 3 km NW of Mount Cox, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1969, for James M. Burris, assistant to the USARP representative at McMurdo, 1967-68. NZ-APC accepted the name in Nov. 1969.

Burro Peaks. 62°26' S, 59°47' W. Twin rock peaks in the SE part of Dee Island, the higher rising to an elevation of 188 m, they form the summit of the island, in the English Strait, in the South Shetlands. Descriptively named Picos Orejas de Burro (i.e., "burro's ears peaks"), by ChilAE 1962-63. The feature appears on their 1963 expedition chart, and that is the name seen in the 1974 Chilean gazetteer. BAS did geological work here in 1975-76, and UK-APC named the feature Burro Peaks, on Feb. 7, 1978. US-ACAN accepted the name Burro Peaks.

Mount Burrows. 74°18' S, 163°39' E. Rising to 2260 m, it towers high above the lower (east) side of Priestley Glacier, 8 km WSW of Mount Queensland, in the Deep Freeze Range of Victoria Land. Named by NZ-APC for Albert Leon "Buzz" Burrows, technician at Scott Base in 1957-58, who also wintered-over there in 1958, and who was seismic lab senior technical officer and scientific team leader at the same base in 1964-65, and also for the winter of 1965. In 1962 he was part of the U.S. party that located the South Magnetic Pole. US-ACAN accepted the name in 1966.

Burrows, Silas Enoch. b. Oct. 29, 1794, Mystic, Conn., son of the Hon. Enoch Burrows. He married Mary Van Buskirk. He was a passenger on the *Athenian*, when that vessel went to the South Shetlands in 1836-37. In 1854 he was one of the first traders into Japan, and, during the Civil War, he tried to assist in the prisoner exchange program between the Union and the Confederacy. He died in 1870.

Burrows Glacier. 78°02' S, 163°56' E. A small hanging glacier on the S wall of Garwood Valley, and opposite Garwood Glacier, in the Denton Hills, on the Scott Coast of Victoria Land. It provides the water and nutrients for the existence of Nostoc beds below. It was first noted in 1985 by a University of Canterbury biology team, and the university's teams have done much biology work in this area over the years. It was named by NZ-APC on May 15, 2003, for emeritus professor Colin Burrows, teacher in the department of plant and microbial science, at the University of Christchurch. US-ACAN accepted the name in 2006.

Mount Bursey. 76°01' S, 132°38' W. A broad, ice-covered volcano rising to 2780 m, and which forms the E end of the Flood Range, overlooking the Hobbs Coast, in Marie Byrd Land. Discovered aerially in 1940 by USAS 1939-41. Named by US-ACAN in 1947, for Jack Bursey.

Bursey, Jacob "Jack." Also known as "Hob." b. Sept. 20, 1903, St. Lunaire, Newfoundland, son of fisherman William Bursey. He forewent a missionary career to work on the river boats in New York. He was a radio operator and later lieutenant commander in the U.S. Coast Guard, and became radio operator on ByrdAE 1928-30. He was back in Antarctica as dog driver at Little America III (West Base) during USAS 1939-41, and during that expedition led a 1250-mile dog-sledge traverse out of West Base to the Hal Flood Range in Marie Byrd Land. During OpDF I (1955-56), he traveled south on the *Glacier*, and led 6 volunteers out of Little America V on Jan. 14, 1956, into Marie Byrd Land, to pioneer the 600-mile trail to what was to become Byrd Station. They say his views of dogs and machines was hopelessly outdated; nevertheless, he left his mark. He wrote *Antarctic Night* (*see* the Bibliography), and died on March 23, 1980, in Shelby, Mich.

Bursey Icefalls. 75°59' S, 132°48' W. They drain the N slope of Mount Bursey, in the Flood Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, in association with the mountain.

Mount Bursik. 79°43' S, 84°23' W. Rising to 2500 m, it is the central peak of the Soholt Peaks, in the Heritage Range of the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for

Vlada Donald "Don" Bursik (1918-1973), USN, fighter pilot during World War II, and deputy commander, U.S. Naval Support Force, Antarctica, during OpDF 66 (i.e., 1965-66).

Burt, John Taylor "Jack." b. 1895, Glen Brae Cottage, East Wemyss, Fife, son of coal miner David Burt and his wife Christina Joan Taylor. In 1921 he emigrated to Canada, to take up a position with a fur-trading company in Montreal. He moved on to NZ, and, it is said, became a lighthouse keeper. He served as a crewman on the *Jacob Ruppert*, 1933-34, i.e., during the first half of ByrdAE 1933-35. Burt rocked the boat a bit when he got back to NZ, claiming that he had suffered an accident on the *Jacob Ruppert*, and had also been injured when falling down a crevasse. He also claimed he had been put ashore at Dunedin, and "left to charity." He claimed compensation, and took it to court in Dunedin in Oct. 1934. The expedition denied the charges, but it does seem fairly certain that Burt did go snowblind at one point. It is said he went to the USA, and it is said he was in the U.S. Navy during World War II, on patrol boats. He died on Dec. 6, 1945, in Ipswich, Queensland.

Burt Rocks. 69°35' S, 159°09' E. A cluster of rocks at the W margin of Noll Glacier, 2.5 km S of Axthelm Ridge, and 7.4 km SE of the Parkinson Peaks, in the Wilson Hills of Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1964. Named by US-ACAN in 1970, for DeVere E. Burt (b. Sept. 1941), biologist at Hallett Station in 1968-69, director of the Cincinnati Natural History Museum, and a wildlife painter. ANCA accepted the name on July 31, 1972.

Burtis Island. 73°04' S, 125°29' W. A small island, 16 km E of Cape Dart, Siple Island, off the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1962 and 1965. Named by US-ACAN in 1966, for William J. "Bill" Burtis, ionosphere physicist at Byrd Station in 1965.

Mount Burton. 72°33' S, 166°44' E. A greywacke peak, rising to 2740 m (the New Zealanders say about 2900 m), 10 km S of Mount McDonald, at the W side of the mouth of Osuga Glacier, where that glacier enters Trafalgar Glacier, in the Barker Range, in the Victory Mountains of Victoria Land. Named by the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, for Bill Burton. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Punta Burton *see* **Burton Point**

Rocas Burton *see* **Burton Rocks**

Burton, Alan George "Albie." b. 1925, Bradfield, Berks. He joined FIDS in 1949, as a meteorologist, and wintered-over at Base G in 1950 and 1951. In 1952 he returned to Port Stanley, and from there to Montevideo, where, with Ken Gooden, he caught the *Andes*, bound for Southampton, arriving there on April 13, 1952. He became a schoolteacher in Hastings.

Burton, Charles Robert "Charlie B." b. Dec. 13, 1942, Cape Town, son of a Royal Navy commander. After Millfield, he joined the Royal Sussex Regiment, part of the time being stationed in Libya, and was with the SAS. He later worked in private security, in South Africa and London. He met Oliver Shepard in a pub, and became general assistant and cook of the Trans-Globe Expedition of 1980-82, which crossed Antarctica, via the Pole, in 66 days. In 1981, in Sydney, he married Thelma "Twink" Petts, and never went on another expedition. He died of a heart attack on July 15, 2002, in Framfield, Sussex.

Burton, Francis William "Bill." b. 1871, Hull, Yorks, son of ironmonger (later a ship's steward) Henry Arnold Burton and his Lincolnshire wife Mary Ann Dale. In 1895, in Hull, he married Susan Ruston, and he had 3 young children when he became able seaman on the *Morning,* 1902-03, during the relief of the Scott party on BNAE 1901-04.

Burton, James Michael Crowther "Jim." b. Aug. 12, 1930, Stockport, Cheshire, son of Clarence Turner Burton and his wife Annie A. Crowther. As a young child he moved with his family to Cookridge, Leeds. A well-known cricket player, he studied accounting for 2 years, then joined the Met Office in 1950, and did his national service as an RAF met man. He was meteorologist, seismologist, glaciologist, and geomagnetician on the 2nd and 3rd parts (i.e., 1956-58 and 1957-59) of the British Royal Society expedition, and as such, he wintered-over at Halley Bay in 1957 and 1958. There is a notorious photo of him at Halley, wearing a cricket blazer. After the expedition, he left Cape Town on the *Kenya Castle*, arriving back in London on Feb. 27, 1959, and working on his report for several months at the Royal Society. In 1960 he married in London, to an Australian girl, Dawn Harris, and went to work at the RAF experimental station at Boscombe Down. In Jan. 1962 he and his wife moved to Australia, where Jim went to work at the Bureau of Meteorology, first in Tasmania, then in Cairns and later Darwin. They returned to England in 1970, Burton going to work at the Met Office at Heathrow. He got his university degree in the 1970s, and in 1984 a new weather center opened in Leeds, and he went with it. He was awarded his PhD in 1988, and retired in 1993. He won the MBE in 2003, for his work in preserving the Yorkshire Dales. He died of Alzheimer's Disease, on July 30, 2008, in Ilkley.

Burton, Robert Wellesley "Bob." b. June 18, 1941, Sherbourne, Dorset, son of Dr. Maurice Burton (from 1948 deputy keeper of zoology at the British Museum) and his wife Margaret R. MacLean. He joined BAS in 1963, as a meteorologist, and wintered-over at Signy Island Station in 1964 and 1965. He made an important study of brown skuas. In 1971-72 he was one of the BAS group who established Bird Island Station on South Georgia. Between 1977 and 1994 he made 18 summer trips to the Arctic, and in 1995 became curator of the whaling museum at Grytviken, in South Georgia. He wrote the book *Animal Senses* (1978: David & Charles), and was later editor of the BAS newsletter. Mr. Burton refused to be interviewed for this book.

Burton, William "Bill." b. April 7, 1888, Limehouse, London, but raised in Camberwell, son of Norfolk blacksmith William Burton and his wife Minnie Busby. His mother died when he was 4, and the boy was sent to school in North Wales while his father was off in Venezuela engaged in railway construction. Then he went to St Vincent's Home, in Paddington. On Jan. 13, 1908, after several odd jobs, he joined the RN, for 12 years, serving first on the *Pembroke*, the shore-based ship at Chatham. After a variety of real ships, as a 2nd stoker, he was on the *Invincible* when he transferred to the *Terra Nova* on May 3, 1910, for BAE 1910-13. After the expedition he returned to the *Pembroke*, was promoted to petty officer stoker on Dec. 18, 1913, served on a number of ships in World War I, and was promoted to chief petty officer in 1917. His hearing was going, and on Oct. 5, 1920 he was invalided out of the Navy. In 1921 he, his wife, and 3 children, sailed from Southampton, bound for Wellington, NZ. Bill worked for 27 years as a welder with the Christchurch Tramway Board. In 1962-63 he was guest of the USN in Antarctica, and died in Christchurch on Feb. 16, 1988, just short of 100, the last survivor.

The *Burton Island*. A 6515-ton, 269-foot, 10,000 hp, U.S. Navy wind-class icebreaker, capable of 13.4 knots, built by Western Pipe & Steel, of San Pedro, Calif., launched on April 30, 1946, and commissioned on Dec. 28, 1946, named after an island off the coast of Delaware. Commanded by Jack Ketchum, she left San Diego on Jan. 17, 1947, bound for the Ross Sea, as part of Task Force 68, during OpHJ 1946-47, for which she carried a helicopter on board. On her return to the States, she went to the Arctic, and then, under the command of Edwin A. McDonald, she took part in OpW 1947-48, leaving San Pedro, Calif., on Nov. 22, 1947, and during which expedition she circumnavigated Antarctica, and rescued the *Port of Beaumont, Texas* (Finn Ronne's ship—*see* **Ronne Antarctic Research Expedition**) from the ice on Feb. 20, 1948. She also took part in OpDF III (1957-58; Capt. Henry J. Brantingham), and OpDF 60 (1959-60; her commander during this latter expedition, from Dec. 7, 1959 to Nov. 14, 1960, was Cdr. Griffith C. Evans, Jr.). This ship was back in Antarctica during OpDF 62 (1961-62; Capt. William Deacon III); OpDF 64 (1963-64; Capt. George H. Lewis); and OpDf 66 (1965-66; Capt. Charles L. Gott). She transferred from the Navy to the Coast Guard on Dec. 15, 1966, and was back in Antarctica for OpDF 68 (1967-68; Capt. Bain B. Leland); OpDF 69 (1968-69; Capt. Leland), OpDF 70 (1969-70; Capt. Frank E. McLean); OpDF 71 (1970-71; Capt. McLean); OpDF 73 (1972-73; Capt. George Schmidt); OpDF 75 (1974-75; Capt. Robert G. Moore); OpDF 76 (1975-76; Capt. James M. Fournier); OpDF 77 (1976-77; Capt. Fournier); and OpDF 78 (1977-78; Capt. Robert Farmer). On May 9, 1978, she was decommissioned, and sold for scrap in 1980 (the scrapping took place in 1982).

Burton Island Glacier. 66°49' S, 90°20' E.

A channel glacier, about 14 km wide and 11 km long, flowing N from the continental ice to Posadowsky Bay, just W of Cape Torson, on the coast of Wilhelm II Land. Mapped from air photos taken during OpHJ 1946–47. Named by US-ACAN in 1955, for the *Burton Island*.

Burton Island Rock *see* **Bigelow Rock**

Burton Lake. 68°38' S, 78°06' E. A small, hypersaline lake, with its surface at sea level. It is located in Marine Plain, in the Vestfold Hills. It connects with Krok Fjord by a channel one meter deep, and opens into that fjord, therefore being affected by the tides. The bottom water of the lake, i.e., below 10 meters, is much saltier than that of the sea. Detailed, year-round, limnological research is conducted here. Named by ANCA for Harry Roy Burton, biologist at Davis Station in 1974 and 1978. He worked on the biology of lakes in the Vestfold Hills.

Burton Point. 66°16' S, 66°56' W. The NE point of Krogh Island, in the Biscoe Islands. Photographed by FIDASE in 1956–57, and mapped by FIDS cartographers from these photos. Named by UK-APC on Sept. 23, 1960, for Alan Chadburn Burton (1904–1979), Anglo-Canadian physiologist specializing in the cold. US-ACAN accepted the name in 1965. The Argentines call it Punta Burton.

Burton Rocks. 68°14' S, 67°02' W. A small group of 3 rocks in Marguerite Bay, 1.5 km S of Neny Island, off the entrance to Neny Fjord, on the Fallières Coast, on the W coast of Graham Land. Roughly charted by ChilAE 1946–47, as one rock, and named by them as Roca Grumete Sánchez, after a cabin boy named Sánchez, who was on the expedition ("grumete" means "cabin boy"). It appears as such on their expedition chart of 1947. Surveyed in 1947 by Fids from Base E, found to be three rocks, and named by them as Burton Rocks, for the *Burton Island*. UK-APC accepted the name Burton Rocks, on March 31, 1955, and US-ACAN followed suit in 1956. They appear on a British chart of 1956. The feature appears on a 1962 Chilean map as Rocas Burton, and that is the name listed in the 1974 Chilean gazetteer, and also in the 1991 Argentine gazetteer.

Burtscheid, Alex. Deck boy on the *Schwabenland* during GermAE 1938–39.

Buse, Franz John "Frank." Some called him "Frankie." b. Feb. 18, 1927, Stanley, Falkland Islands, son of laborer Franz Carl Emil Buse and his wife Pauline Ovedia Johnson. He joined FIDS in 1946, as a handyman, and wintered-over at Base B in 1947 and Base F in 1948. On Dec. 20, 1951, in Stanley, he married Evelyn May Coutts. His later career was mainly as a cook around the Falklands, and he was working as such on the local steamer *Forrest* when that vessel was boarded by the Argentines in 1982, during the Falklands War. He died on June 8, 1986, in Stanley.

The *Busen*. Actually there were several whale catchers with this name, belonging to the Tønsbergs Hvalfangeri. The most important ones, as far as Antarctic history is concerned, were the *Busen 2* (*see* **The *Helier 2***), the *Busen 6* [*see* [2]**The *Star I***], and the *Busen 9*.

The *Busen 9*. A 384-ton Norwegian whale catcher, built in Oslo in 1929, and owned by the Tønsbergs Hvalfangeri. 137 feet 6 inches long, and 27 feet 1 inch wide, she had 118 nhp. She was in Antarctic waters in 1940–41. In Oct. 1941 she was hired by the Royal Navy as an anti-submarine vessel, and renamed *Mastiff*. In Dec. 1945 she was returned to Norway, and assumed her old name, *Busen 9*. In Nov. 1959 she was sold to H.L. Hansen, for breaking up in Odense.

Mount Bush *see* **Mount Wade**

Bush, Ellsworth Lyle. b. April 12, 1895, Stockton, Calif., son of dry goods man George W. Bush and his wife May. He grew up in San Jose and San Francisco, and went to sea the very day he turned 18. It was the prospect of Margaret that made him give up the sea, settle down in Vallejo, and become a rotary helper in the oil fields of Brea, Calif. In the 1920s, he and his wife split up, and he moved to Seattle, going back to sea. He was one of the replacement sailors on the *North Star* for the second half of USAS 1939–41. During World War II he was skipper of the *P.E. Crowley*, and also of the Liberty ship *Charlotte Cushman*, out of Seattle. On June 18, 1945, in Portland, Oreg., he took command of the Liberty ship *Skidmore Victory*, took her to Okinawa, and was back in San Francisco in the September, at the end of the war with Japan. After the war, he skippered a number of ships.

Bush Mountains. 84°57' S, 179°30' E. Also called Prince Olav Mountains (but see also that entry for the other feature of that name). A group of rugged foothills rising to 1219 m, at the heads of Ramsey Glacier and Kosco Glacier, and extending from Mount Weir in the W to Anderson Heights in the E, just E of the Shackleton Glacier, and overlooking the Ross Ice Shelf from between the Shackleton Glacier and Beardmore Glacier. Discovered in Nov. 1929 by ByrdAE 1928–30, and photographed aerially at a distance by them during several flights to the Queen Maud Mountains. Named by Byrd for NY stockbroker James I. Bush (1885–1961), long associated with Madison Square Garden, and a patron of ByrdAE 1928–30. The mountains were further defined from aerial photos taken by USAS 1939–41, OpHJ 1946–47, and by various OpDF expeditions between 1956 and 1963. US-ACAN accepted the name in 1947. The feature appears in the 1958 NZ gazetteer.

Bushell Bluff. 71°28' S, 67°36' W. On the W coast of Palmer Land, immediately S of Norman Glacier, on the E coast of George VI Sound. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for Anthony Norman "Tony" Bushell (b. 1943, Newcastle), BAS meteorological assistant at Base F in the winters of 1965 and 1966. He was also general assistant at Base E for the winters of 1969 and 1970, and in between those two stints was at Fossil Bluff Station in the summer of 1969–70. It appears on the 1979 USGS sketch map of the N part of Palmer Land. US-ACAN accepted the name.

Mount Bushnell. 85°36' S, 150°48' W. Rising to 840 m, between Mount Durham and Pincer Point, in the NW part of the Tapley Mountains. First roughly mapped by ByrdAE 1928–30. Remapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Vivian Carol Bushnell (1910–1994), editor of the American Geographical Society's *Antarctic Map Folio* series.

Buskin Rocks *see* **Borceguí Island**

Buskirk Bluffs. 70°47' S, 165°39' E. A sheer rock bluff on the W side of McMahon Glacier (the New Zealanders call this glacier Nielsen Glacier), about 1.5 km S of Nielsen Fjord, in the Anare Mountains, on the N coast of Victoria Land. Named by ANARE for Maj. Harvey Buskirk (b. Aug. 28, 1935. d. June 27, 2004), official U.S. observer with ANARE on the *Thala Dan* in 1962. NZ-APC accepted the name on June 27, 1963, and US-ACAN followed suit in 1964. Maj. Buskirk had also been a Marine, was a well-known skydiver, and worked for 9 years at the Pentagon. He died during a jump at Belen Alexander Airport, in New Mexico. He was 69.

Bussey Glacier. 65°16' S, 64°01' W. Flows W from Mount Peary to the head of Waddington Bay, on the Graham Coast, on the W coast of Graham Land. Ascended and first charted in March 1909, by FrAE 1908–10, but, apparently, not named by them. In Sept. 1936, it was charted by BGLE 1934–37 as Waddington Bay Glacier. Photographed aerially by FIDASE in 1956–57. Re-named Bussey Glacier by UK-APC on July 7, 1959, for Group Capt. John Bussey (1895–1979), RAF, assistant director (air) at the Directorate of Overseas Surveys. It appears on a British chart of 1960. US-ACAN did not accept the name until 1971.

Butamya Glacier. 65°36' S, 64°00' W. A glacier, 6.9 km long and 2.5 km wide, on Barison Peninsula, NW of Talev Glacier and NNE of Chernomen Glacier, it flows northward into Beascochea Bay, on the Graham Coast, on the W coast of Graham Land. Mapped by the British in 1971, it was named by the Bulgarians on Sept. 14, 2010, for the seaside locality of Butamya, in southeastern Bulgaria.

Butcher Nunatak. 76°32' S, 146°30' W. At the S end of Birchall Peaks, 6 km SW of Swarm Peak, in the Ford Ranges of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Robert S. Butcher, USN, builder at Byrd Station in 1967.

Butcher Ridge. 79°12' S, 155°48' E. A large, mostly ice-free ridge, extending NW for about 22 km from Mount Ayres in the form of an arc, in the W part of the Cook Mountains, just to the N of the Darwin Mountains, in southern Victoria Land. Mapped by the Darwin Glacier Party of BCTAE 1956–58, and named by US-ACAN in 1965, for Cdr. Harold Kenneth Butcher (b. Aug. 27, 1916, West Riverside, Calif. d. Dec. 11, 2008, Hagerstown, Md.), in the U.S. Navy since 1935, and an officer since May 1943, flew Hellcats during World War II, took part in the landing at Iwo Jima, and was air operations officer on the staff of the commander, U.S. Naval Support Force, Antarctica, during OpDF 63

(i.e., 1962-63) and OpDF 64 (i.e., 1963-64). NZ-APC accepted the name on May 20, 1965, and ANCA followed suit on Aug. 27, 1975.

Butchers Shoulder *see* **Butchers Spur**

Butchers Spur. 85°34' S, 166°30' W. High, and ice-covered, it descends southwestward from Mount Don Pedro Christophersen to the Polar Plateau, on the S edge of the Queen Maud Mountains. It is actually a shoulder of the Polar Plateau, and is the highest point for miles around. Amundsen's "Butcher's Shop" was here, where, in Nov. 1911, they had to slaughter the excess dogs during their push to the Pole. Named by NZGSAE 1961-62 as Butcher's Spur. NZ-APC accepted the name, and US-ACAN followed suit (without the apostrophe) in 1966.

Isla Butler *see* [2]**Butler Island**

Mount Butler. 78°10' S, 155°17' W. Also called Mount Navy. The most southerly of the Rockefeller Mountains, on Edward VII Peninsula, in Marie Byrd Land, it is almost submerged in the ice-cap. Discovered aerially on Jan. 27, 1929, during ByrdAE 1928-30, and later named by Byrd for Raymond Butler. US-ACAN accepted the name in 1947.

Pasaje Butler *see* **Butler Passage**

Butler, Abe. St John's, Newfoundland, sealing skipper, picked by Capt. Bobby Sheppard to be his 1st officer on the *Eagle*, 1944-45, during the 2nd phase of Operation Tabarin.

Butler, Adrian Rothwell Lane. b. March 29, 1912, Pontypool, Wales, younger son of Major Aubrey Isaac R. Butler and his wife Dorothea Agnes Ebsworth. In the late 1920s and throughout the 1930s, beginning from the time he was a naval cadet, he was a Navy champion rackets and tennis player. He became a midshipman in 1931, an acting sub lieutenant in 1932, and in 1933 was on the *Devonshire*, as a sub lieutenant. In 1935 he was promoted to lieutenant, went on the *Acheron* and then to the *Wessex*, being promoted to lieutenant commander during World War II. On Oct. 12, 1946, in London, he married Violet Susan Wilson, and in Dec. 1947 he was promoted to full commander. He was skipper of the famous *Amethyst* (of the Yangtze) during the war in Malaya in the early 1950s, bombarding terrorist camps up the Sungei Perak. He was promoted to captain, and by this time had become a champion golfer. He was captain of the *Protector* in Antarctic waters, 1957-58 and 1958-59. He retired on Jan. 4, 1963, but not from golf. He died in Chichester, in 1981.

Butler, Kenelm Somerset Priaulx Pierce "Ken." Name often seen as K.S. Pierce-Butler, a hyphenated situation that tended to be perpetuated by himself; however it was not a hyphenated name, at least not when he started out in life. b. Nov. 17, 1917, Bideford, Devon, son of the Rev. Pierce Rollo Butler, vicar of Melcombe Bingham, Dorset, and his wife, Ethel Florence Symes. His father was appointed port chaplain of Southampton in 1923. Ken became an airlines radio operator, and went into the Territorial Army, becoming a 2nd lieutenant in the Royal Signals on Sept. 2, 1939. He was at Dunkirk, and was later a captain, being in Norway at the end of the war. It was as Major Ken Butler, meteorologist, that he wintered over at Base E in 1946, and on Feb. 5, 1947 relieved E.W. Bingham as overall FIDS commander, and as commander of the 11-man FIDS team at Base E, wintering-over there again in 1947. For a while in 1947 he teamed up with Finn Ronne of RARE (he was signing his letters Major K.S. Pierce-Butler by then). He was secretary of FIDS (SecFIDS) from 1948 to 1950, and, as such, on Jan. 30, 1950 he arrived back at Stonington Island (*see* **Base E** for story), then returned to England. On Oct. 16, 1950 he left Southampton on the *John Biscoe*, bound for Port Stanley, and from there to take up his appointment as magistrate in South Georgia from March 15, 1951 until April 19, 1954 (he was succeeded by Bob Spivey in 1954). On Aug. 14, 1954, in London, he married Janet Cooper Horne (née Gilmour), who was 12 years older than him, and from 1954 to 1958 he was manager of the whaling department, at the Compañía de Pesca, in Buenos Aires. He and his wife left Grytviken and returned to London on the *Teie*, on May 7, 1958, and for a while they lived in Hampton, Mdsx, and the major was promoted to lieutenant colonel within the Falkland Islands Defence Force. However, in 1959 he and his wife moved to South Africa, where he was involved in the whaling industry. He died in Cape Town in 1995.

Butler, Raymond Archibald "Ray." Also known as "Zeke." b. Nov. 13, 1906, Windsor, Va., son of Robert Bracken Butler and his wife Odie Virginia Underwood (they divorced when Zeke was a very young child), and he and his mother went to live with the Underwood grandparents in Windsor. He was considering applying for ByrdAE 1928-30 and ByrdAE 1933-35, but considered himself unprepared. He was cartographer, assistant geologist, and dog driver at West Base, during USAS 1939-41, and was one of the party which occupied the Rockefeller Mountains seismic station in Nov. and Dec. of 1940. After World War II he was in the USAF, and lived in Windsor, a member of the American Society of Photogrammetry. He died on Nov. 9, 1982.

Butler Glacier. 77°24' S, 152°40' W. A broad glacier draining the N side of Edward VII Peninsula near Clark Peak, and flowing generally northeastward through the Alexandra Mountains, to its terminus at Sulzberger Bay. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Lt. F.M. Butler, USN, expedition navigator, in charge of all navigation watch sections on the *Glacier*, 1961-62.

[1]**Butler Island**. 69°22' S, 76°13' E. A generally flat island, with a peak near the center, between Betts Island and Easther Island, in the Larsemann Hills. Named by ANCA on Sept. 29, 1988, for Paul L. Butler, officer in charge of Mawson Station in 1981, and at Davis Station in 1985 and 1987.

[2]**Butler Island**. 72°12' S, 60°20' W. A circular, ice-covered island (actually it is an ice rise on the Larsen Ice Shelf rather than an island), 10 km wide, and rising to 185 m above sea level, 11 km E of Merz Peninsula, and E of Schott Inlet, midway between Hilton Inlet and Violante Inlet, on the Black Coast, 16 km SE of the extreme SE part of Cape Darlington, off the E coast of Palmer Land. Discovered in Dec. 1940, by USAS 1939-41, and photographed aerially by them. On Nov. 20, 1947 it was re-photographed aerially by RARE 1947-48, and that season (1947-48) was also surveyed from the ground by a joint RARE-FIDS sledging team. Named by FIDS for Ken Butler. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears on a British chart of 1954, and in the British gazetteer of 1955, plotted in 72°13' S, 60°08' W. In 1966 USN re-photographed it aerially, and it was re-plotted in time for the 1977 British gazetteer. It appears on the 1979 USGS sketch map of the N part of Palmer Land. It appears as Isla Butler on a 1957 Argentine chart, and that is the name seen in the 1974 Chilean gazetteer, as well as in the 1991 Argentine gazetteer.

Butler Island Automatic Weather Station. 72°12' S, 60°21' W. A British Antarctic Survey (BAS) AWS on Butler Island, off the E coast of Palmer Land, at an elevation of 91 m. It was installed in 1983, but didn't work. The unit was removed, and sent back to Wisconsin for repairs. The tower and other equipment were left in place. When they came back with a new one in 1985-86, the equipment was almost totally buried in snow, and the solar panel, aerovanes, and the top tower secton were all removed to Rothera Station. The new one was installed on March 1, 1986, and has performed frustratingly erratically ever since.

Butler Nunataks. 68°03' S, 62°24' E. A group of rock outcrops of low relief, which have a ridgelike appearance when seen from Mount Twintop, in the Framnes Mountains of Mac. Robertson Land, from which feature they are about 4 km to the north. Mapped by Australian cartographers from ANARE surveys taken between 1954 and 1962, plotted in 68°04' S, 62°22' E, and named by ANCA on Oct. 22, 1968, for William J. "Bill" Butler, senior diesel mechanic at Mawson Station in 1967. US-ACAN accepted the name in 1971. This feature has since been re-plotted.

Butler Passage. 64°58' S, 63°44' W. A marine channel between the Wauwermans Islands and the Puzzle Islands, connecting Peltier Channel and Lemaire Channel, off the Danco Coast, on the W coast of Graham Land. This route was probably first used by FrAE 1903-05 and FrAE 1908-10, on their trips between Port Lockroy and Booth Island. Surveyed by an RN Hydrographic Survey unit on the *Protector*, in 1956-57, and named by UK-APC on July 7, 1959 for Capt. Adrian Butler. It appears in the British gazetteer of 1959, and on a British chart of 1960. US-ACAN accepted the name in 1971. It appears in the 1991 Argentine gazetteer as Pasaje Butler.

Butler Peaks. 71°31' S, 67°10' W. A group of peaks at the S end of the Batterbee Mountains, rising to about 2000 m, 6 km S of Mount Bagshawe, between Armstrong Glacier and

Conchie Glacier, in Palmer Land. Named by UK-APC on July 21, 1976, for Peter Francis Butler (b. Oct. 13, 1946), BAS geophysicist who wintered-over at Base E in 1970 and 1973. US-ACAN accepted the name later that year. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Butler Rocks. 82°35' S, 47°57' W. Two inland rock nunataks, rising to 910 m, 4 km SW of Vanguard Nunatak, at the N end of the Forrestal Range, in the Pensacola Mountains. In Jan. 1962, when the Argentines flew to the South Pole (q.v. for more details), they spotted a feature below them in this area, and named it Nunatak CTA-12, for the registration number of one of their two airplanes. It is referred to as such in an Argentinian text of 1964, the same year USN photographed these rocks aerially. In 1965-66 the rocks were surveyed from the ground by USGS, who mapped them from these surveys and from the USN air photos. US-ACAN named the feature in 1968, for William A. Butler, aerologist at Ellsworth Station in 1957. It appears on a U.S. map of 1969. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974. It is probably the same feature as the one seen by the Argentinians in 1962, and appears as Nunatak CTA-12 in the 1970 Argentine gazetteer. *See also* **Vanguard Nunatak**.

Butler Summit. 77°33' S, 161°06' E. A peak rising to about 1000 m, in the extreme W part of The Dais, in Wright Valley, in the McMurdo Dry Valleys. Named by US-ACAN in 2004, for Dr. Rhett G. Butler, of Incorporated Research Institutions for Seismology (IRIS), program manager for the Global Seismograph Network, and USAP investigator for the South Pole Station seismic observatory installed jointly by IRIS and USGS. NZ-APC accepted the name on Nov. 30, 2004.

Butson, Arthur Richard Cecil "Dick." b. Oct. 24, 1922, Hankow, China, son of British civil engineer Cecil Walter Butson and his wife Doris Neave Stanton-Cook. After Cambridge, he trained to become a doctor. Just after marrying Joyce M. Scott-Cowell in London, in 1946, he joined FIDS, and wintered-over at Base E in 1947. On July 26, 1947 he rescued Harcly Peterson of RARE 1947-48 from a crevasse in Northeast Glacier, for which he received the Albert Medal (later converted to the George Cross). He left Antarctica in 1948, for Port Stanley, and there caught the *Lafonia* back to London, where he arrived on April 21, 1948. He became an M.D. in 1951, moved to Canada in 1952, and practiced medicine in Hamilton, Ont., from 1953. From 1956 to 1982 he was in the Canadian Forces Reserve (the militia), as a doctor, and achieved the rank of lieutenant colonel. A mountain climber, he has been in the Himalayas. On June 30, 1967 he married Eileen Callon. From 1970 to 1994 he was clinical professor of surgery at McMaster University. He later farmed in Ancaster, Ont., and unsuccessfully tried politics. In 2000 he was retired, living in Hamilton. His book, *Young Men in the Antarctic: A Doctor's Illustrated Diary*, was published in June 2010.

Butson Ridge. 68°05' S, 66°53' W. A rocky ridge with several ice-covered summits on it, the highest being 1305 m, it forms the N wall of Northeast Glacier, and lies between that glacier and McClary Glacier, on the Fallières Coast, on the W coast of Graham Land. Surveyed in 1936 by BGLE 1934-37, and again in 1947-48 by Fids from Base E, who named it for Dick Butson. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit later that year. The Argentines tend to call it Cordón Molinero, after (according to the SCAR gazetteer) Lt. Juan Molinero, who was lost here with his dog team. However, the only Argentine death this researcher can find of anyone by the name Molinero, is Adolfo Molinero Calderón (*see* **Deaths**, 1949).

Butter, George *see* **USEE 1838-42**

Butter Point. 77°39' S, 164°14' E. A low point forming the S side of the entrance to New Harbor, 45 km W of Cape Evans, and 56 km W of Hut Point, in Victoria Land. Discovered by BNAE 1901-04, and named by them for the can of butter left here in Oct. 1903 by the Ferrar Glacier party of that expedition. They expected to obtain fresh seal meat at this point on their return journey. US-ACAN accepted the name, and it appears in the 1958 NZ gazetteer.

Butter Point Piedmont *see* **Bowers Piedmont Glacier**

The *Buttercup*. Don McIntyre's 50-foot yacht, in at Commonwealth Bay during the 1992-93 season.

Butterfly Knoll. 80°20' S, 28°09' W. One of the La Grange Nunataks, it rises to about 900 m, 7 km SW of Mount Beney, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed by BAS between 1968 and 1971. So named by UK-APC on Jan. 5, 1972, because in plan it resembles a butterfly. It appears in the British gazetteer of 1974. US-ACAN accepted the name.

Mount Butters. 84°53' S, 177°28' W. Snow-capped and rising to 2440 m, it forms the summit of a buttress-type escarpment at the extreme SE end of Anderson Heights, between Mincey Glacier on the S, and Shackleton Glacier on the E. Discovered aerially on Feb. 16, 1947 during OpHJ. Named by US-ACAN in 1962, for Raymond Butters.

Butters, Raymond J. b. April 29, 1921, Boston, Mass., son of newspaper engraver Edwin Butters and his wife Mary. He joined the U.S. Marines in 1943, and flew transport planes in the South Pacific during World War II and later during the Korean War. He was captain/navigator of Flight A, which flew over the South Pole (q.v. for further details of this flight) on Feb. 15-16, 1947, during OpHJ. He retired in 1963 from Quantico Marine Base, moved to Fairfax Co., Va., and died at Bethesda Naval Hospital, on June 19, 1989. He was buried in Arlington National Cemetery.

Mount Butterworth. 70°42' S, 66°45' E. A mountain consisting of 4 peaks and a long, low ridge extending in an E-W direction, 7 km NE of Mount Bunt and 8 km S of the Thomson Massif, in the Aramis Range of the Prince Charles Mountains, in Mac. Robertson Land. Plotted from ANARE air photos taken in 1956 and 1960, and named by ANCA for Geoffrey "Geoff" Butterworth, radio officer at Wilkes Station in 1963 and radio officer-in-charge at Mawson Station in 1966. US-ACAN accepted the name in 1967.

Butthornet. 72°01' S, 26°01' E. One of the 5 nunataks comprising Horna, on Mount Bergersen, in the east-central part of the Sør Rondane Mountains, W of Byrdbreen. The name means "the lumpy horn" in Norwegian.

The Buttons. 65°14' S, 64°16' W. Two small islands, 320 m NW of Galíndez Island and Faraday Station, in the Argentine Islands, in the Wilhelm Archipelago, off the Graham Coast, on the W coast Graham Land. Charted and descriptively named in 1935 by BGLE 1934-37, the feature appears on Rymill's 1938 map of the expedition, and on a 1947 British chart. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955. It appears translated (but in the singular) as Isla Botones, on a 1953 Argentine chart, but on a 1958 Argentine chart as Islas Botones, the latter being the name that appears in the 1970 Argentine gazetteer. The Chileans call them Islas Buttons.

Islas Buttons *see* **The Buttons**

Cerro Buttress *see* **Buttress Hill**

Nunataks Buttress *see* **Buttress Nunataks**

Buttress Hill. 63°34' S, 57°03' W. A flat-topped hill rising to 690 m (the British say 650 m), with its W side being a steep rocky cliff, 3 km E of the most northern of the Seven Buttresses, on Tabarin Peninsula, on Trinity Peninsula, and 4 km E of Duse Bay, at the NE end of the Antarctic Peninsula. Surveyed by Fids from Base D in March 1946, later charted by FIDS, and so named by them because of its proximity to the Seven Buttresses. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears as such in the British gazetteer of 1955. It appears on a Chilean chart of 1961 as Cerro Buttress, and that is the name that appears in the 1974 Chilean gazetteer. The Argentines call it Cerro El Fuelle (i.e., "clouds above the top of a mountain"; and "cerro" means "hill").

Buttress Nunatak. 78°01' S, 161°13' E. A nunatak, 4 km E of Pivot Peak, at the NE edge of Skelton Névé, in the Skelton Glacier, on the W side of the Royal Society Range. Named descriptively by NZ-APC on June 29, 1989, it has the appearance of a ridge leading to the summit. US-ACAN accepted the name in 1995.

Buttress Nunataks. 72°22' S, 66°47' W. A group of prominent coastal rock exposures, the highest being 635 m, close inland from the E coast of George VI Sound, and 16 km WNW of the Seward Mountains, on the W coast of Palmer Land. Discovered from a distance and roughly surveyed in Oct. 1936 by BGLE 1934-37. Visited and resurveyed in Dec. 1949, by Fids from Base E, who so named the feature descriptively. UK-APC accepted the name on March 31, 1955, and

US-ACAN followed suit that year. Photographed aerially by USN between 1966 and 1969. The feature appears on the 1979 USGS sketch map of the N part of Palmer Land. The Argentines call them Nunataks Buttress.

[1]**Buttress Peak**. 72°26' S, 163°45' E. At the E end of the central ridge of Gallipoli Heights, in the Freyberg Mountains. The name was suggested by NZ geologist P.J. Oliver, who studied this peak in 1981-82. It is unlikely that this name will be accepted officially, as there is already a Buttress Peak (see below). Another reason for changing the name is that even the NZ gazetteer itself has confused this feature with its namesake.

[2]**Buttress Peak**. 84°27' S, 164°15' E. A buttress of dark volcanic rock, rising to an elevation of 2950 m above sea level (the New Zealanders say 3048 m), the E part projecting as a rock buttress into the head of Berwick Glacier, 5 km S of Mount Stonehouse, at the E end of the Marshall Mountains, in the Queen Alexandra Range. Named descriptively by the Northern Party of NZGSAE 1961-62. NZ-APC accepted the name on June 28, 1962, and US-ACAN followed suit in 1966.

Butuzo-daira. 72°02' S, 27°38' E. A tabular hill at the N extremity of Berrheia, on Balchen Mountain, in the Sør Rondane Mountains. JARE photographed it aerially in 1981-82, and again in 1987, and surveyed it from the ground in 1987-88. The Japanese named it thus on Oct. 23, 1989, because in plan view it looks like a flat Buddha ("Butuzo" means "Buddha"). The Norwegians call it Butuzoflya (which means the same thing).

Butuzoflya *see* **Butuzo-daira**

Buys, John. Known as Johnny. b. Sept. 24, 1902, Holland. He left home at the age of 11, joined the merchant marine, and served all over the world, interrupting his seagoing career occasionally with stints in a bottle factory in Holland, as a cab driver, and as a coal shoveler. He eventually moved to New York, where he became more American than Americans. He happened to be a sign painter when, on Aug. 28, 1928, he and Eddie Roos enlisted for ByrdAE 1928-30. Just before they sailed, a Swedish waitress from a local restaurant came running on to the ship to wish him a cheerful goodbye. He had only known the girl for 4 days. He served as a seaman on the *Eleanor Bolling* during the expedition, and for his efforts he won American citizenship. He died on March 27, 1980, in Galveston, Texas.

Buzfuz Rock. 65°28' S, 65°53' W. A submerged rock 2.5 km W of Snubbin Island, and NW of Renaud Island, in the Pitt Islands, in the N part of the Biscoe Islands. Charted in 1969 by an RN Hydrographic Survey unit on the *Endurance*. Named by UK-APC on Nov. 3, 1971, for Serjeant Buzfuz, the Dickens character in *Pickwick Papers*. US-ACAN accepted the name in 1972. It appears in the British gazetteer of 1974, and on a British chart of 1984.

Ostrova B'yarne-Ogor *see* **Bjarne Aagard Islands**

Mount Byerly. 81°53' S, 89°23' W. A major peak in the E part of the Nash Hills. It was positioned by the U.S. Ellsworth-Byrd Traverse Party, on Dec. 10, 1958, and named by US-ACAN in 1964, for Perry Byerly (b. May 28, 1897, Clarinda, Iowa. d. Sept. 26, 1978, Oakland, Calif.), Berkeley seismologist and chairman of the panel on seismology and gravity for IGY.

Cabo Byers *see* **Cape Page**

Península Byers *see* **Byers Peninsula**

Byers Peninsula. 62°38' S, 61°04' W. An ice-free peninsula, terminating in Essex Point, on the extreme NW of Livingston Island, and separating Barclay Bay from New Plymouth, in the South Shetlands. Perhaps discovered by Bransfield in Jan. 1820, it was certainly visited by 19th-century sealers, as witnessed by a stone hut on the peninsula. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground in 1957-58, by FIDS, who named it for James Byers, the leading NY shipowner who, in Aug. 1820, tried unsuccessfully to get the U.S. government to found a settlement in, and take possession of, the South Shetlands. It was he who sent out the New York Sealing Expedition. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960. The Argentines and Chileans both call it Península Byers, the Argentines honoring James Byers, but the Chileans, using a great ingenuity forced upon them by the need to avoid imitation of the Argentines, honoring Squadron Leader Enrique Byers del Campo, of the Chilean Air Force, who was part of the Air Force delegation on the *Angamos* during ChilAE 1947. In 1967 it became SPA #10, and in 1975 was re-designated SSSI #6. The British replotted this feature in late 2008.

Cape Byewater *see* **Byewater Point**

Punta Byewater *see* **Byewater Point**

Byewater Point. 62°45' S, 61°30' W. Forms the NW point of Snow Island, in the South Shetlands. Charted by Foster in Jan. 1829, during the *Chanticleer* Expedition of 1828-31, and named by him on the original survey field sheet as Cape Brewster, for Scottish philosopher David Brewster (1781-1868; knighted in 1832), who, in 1816, invented the kaleidoscope. As such, the name appears on the expedition's chart of 1829. However, later in 1829, when Foster got down to thinking about it, he re-named it Cape Byewater (absolutely no one knows why). FIDASE aerial photos showed it to be a point, rather than a cape, and the name Byewater Point was accepted by UK-APC on Aug. 31, 1962, and by US-ACAN in 1965. The Argentines call it Punta Byewater.

Nunataki Bykova. 83°06' S, 57°00' W. A group of nunataks, N of Robbins Nunatak, in the Schmidt Hills portion of the Neptune Range, in the Pensacola Mountains. Named by the Russians.

Utësy Bykovskogo. 79°53' S, 160°25' E. A group of cliffs at the S side of Darwin Glacier, where that glacier flows into the Ross Ice Shelf, near MacDonald Point. Named by the Russians.

Monte Bynon *see* **Bynon Hill**

Bynon Hill. 62°55' S, 60°36' W. Also seen spelled as Binon Hill. Ice-covered and dome shaped, it rises to about 335 m and has two rounded summits. It is the most northerly elevation on Deception Island, 2.5 km N of Pendulum Cove, in the South Shetlands. The name Monte Bynon appears on an Argentine government chart of 1953, and seems to have been given by ArgAE 1952-53, possibly for a member of the expedition. UK-APC named it Goddard Hill, on Sept. 4, 1957, for Midshipman (later Lt.) William Henry Goddard (d. 1849), who, in 1821, drew up one of the earliest charts of the South Shetlands. US-ACAN named it Bynon Hill in 1965. The British were the latest to re-plot this hill, in late 2008. The Chileans have been known to call it Cerro Goddard.

Bynum Peak. 85°03' S, 173°41' W. A rock peak 5 km SE of Mount Finley, overlooking the N side of McGregor Glacier, in the Queen Maud Mountains. Named by US-ACAN in 1965, for Gaither Daniel Bynum, Jr., satellite geodesist who wintered-over at McMurdo in 1965. NZ-APC accepted the name on Nov. 16, 1965.

Byobu-iwa *see* **Byobu Rock**

Byobu-nagaone. 72°37' S, 31°05' E. A ridge with walls over 200 m high and 3 km long, at the SW extremity of the Belgica Mountains. JARE took air photos in 1976, and surveyed it from the ground in 1979-80. Named by the Japanese on Nov. 24, 1981 (name means "folding screen ridge").

Byobu Rock. 68°22' S, 42°00' E. A large, flat-topped, ice-free coastal rock crag exposure whose seaward face presents a crenulate or irregular shoreline, 1.5 km E of Gobamme Rock, and 46 km E of Cape Omega, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-59, and named by them on Oct. 1, 1962, as Byobu-iwa (i.e., "folding screen rock"). They plotted it in 68°23' S, 42°03' E. US-ACAN accepted the name Byobu Rock in 1968. The Norwegians translated it from the Japanese as Bratthamaren (i.e., "steep crag"). It has since been re-plotted.

Bypass Hill. 72°28' S, 168°28' E. Rising to 660 m, on the ridge on the upstream side of the junction of Tucker Glacier and Trafalgar Glacier, in Victoria Land. Named by NZGSAE 1957-58, who established a survey station here. It appears in the 1960 NZ gazetteer. US-ACAN accepted the name in 1962.

Bypass Nunatak. 68°01' S, 62°28' E. A nunatak, 3.5 km (the Australians say 6 km) S of Mount Tritoppen, in the David Range of the Framnes Mountains, in Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Steinen (i.e., "the stone"). Renamed by ANARE as Bypass Nunatak, because this is where Ian Adams' 1958 ANARE Southern Party changed course, in order to avoid dangerous terrain to the SW. ANCA accepted the new name on July 22, 1959, and US-ACAN followed suit in 1965.

Cabo Byrd *see* **Cape Byrd**

Cape Byrd. 69°38' S, 76°07' W. A low, ice-covered cape forming the NW extremity of

Charcot Island, W of Alexander Island, at the easternmost end of the Ruppert Coast of Marie Byrd Land. Discovered aerially and roughly mapped by Wilkins on Dec. 29, 1929, during a flight from the *William Scoresby*, and named by him for Admiral Byrd. It appears as such on a British chart of 1933. US-ACAN accepted the name in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955, plotted in 69°52' S, 75°55' W. The Chileans and Argentines call it Cabo Byrd. In 1959-60 Searle of the FIDS remapped it from air photos taken by OpHJ 1946-47, and in Feb. 1975 satellite imagery corrected its coordinates to what we know today. These new coordinates appear on a British chart of 1984, and in the UK gazetteer of 1986.

Mount Byrd. 77°10' S, 144°38' W. Rising to 810 m, 1.5 km N of the E end of Asman Ridge, in the Sarnoff Mountains of the Ford Ranges, in Marie Byrd Land. Mapped by USAS 1939-41. Named by US-ACAN in 1970, for Richard E. Byrd, Jr., son of the famous admiral. Dickie (as he was known) was of assistance to US-ACAN in helping to clarify a large number of Antarctic name suggestions proposed by his late father.

Byrd, Richard Evelyn "Dick." This is Admiral Byrd. b. Oct. 25, 1888, Winchester, Va., son of Richard Byrd and his wife Eleanor Flood. Arguably the most famous of all the Antarctic heroes (to Americans at least, that is until the resurgence of Shackleton in recent years), he was born into the old Byrd family of Virginia, and followed a naval career. He claimed to have flown over the North Pole on May 9, 1926, and in June 1927 he flew across the Atlantic Ocean. He led 5 major expeditions to Antarctica, or rather he led two and his name appears as titular head on 3. During the first — ByrdAE 1928-30 — he established Little America, and made his first Antarctic flight on Jan. 15, 1929. Also during that expedition he flew to the South Pole and back, in Nov. 1929, the first leader to do so (although he did not set foot there, as such). During ByrdAE 1933-35 he became the first man to winter-over alone in the heart of the continent, from March 28 to Aug. 10, 1934 (*see* his book *Alone*, and *see also* the entry **Bolling Advance Weather Station** in this book). He headed USAS 1939-41 (the United States Antarctic Expedition), but did not winter-over. In 1946-47 he was head of Operation Highjump. During this stay he flew over the Pole again, on Feb. 15-16, 1947. From 1955 until his death in 1957 he was technical director and overall titular head of OpDF, arriving at McMurdo Sound on Dec. 17, 1955, on the *Glacier*. On Jan. 8, 1956 he again flew over the South Pole, in a Skymaster. This was a difficult role for Byrd, now a tired and dying man, a declining hero from the past, with no operational command. But he was effective, nonetheless. On Feb. 3, 1956, Byrd left Antarctica on the *Arneb*. He had married Marie Ames (Marie Byrd, as she became), who died in 1974. Byrd himself died quietly on March 11, 1957, at his home in Boston, and is buried in Arlington National Cemetery. Admiral Byrd opened up Antarctica more than any other man, propelled Antarctic exploration into the modern, mechanized age, proved that Antarctica really is a continent and that the Ross-Weddell Graben does not exist, developed the use of two-way radio, and wrote (or had written for him) 5 books (*see* the Bibliography). He was also the hero and inspiration for millions of boys of all ages. There is a memorial to Admiral Byrd at McMurdo Station (*see* **Richard E. Byrd Memorial**). Amusingly, the Chileans jokingly referred to him as Ricardo Avelino Pájaro. In 1988 some of his belongings were sold. It was the 100th anniversary of his birth. That year also, his son, Richard E. Byrd, Jr., died (see below). His grandson, Robert Byrd Breyer, was a field engineer with Holmes & Narver, in Antarctica in 1973-74.

Byrd, Richard Evelyn "Dickie." b. Feb. 12, 1920. The son of Admiral Byrd (Richard Evelyn Byrd) and his wife Marie Ames, he graduated from Harvard in 1942, served as a naval lieutenant in the Pacific during World War II, took part in OpHJ 1946-47, and later assisted in naming several Antarctic features. In 1948 he married Leverett Saltonstall's daughter, Emily. While suffering from Alzheimer's he was found in a Baltimore warehouse on Oct. 3, 1988, dead of malnutrition and dehydration. He was buried next to his parents in Arlington National Cemetery.

Byrd Aurora Substation. 79°26' S, 118°04' W. The smallest of the American stations (really a prefabricated shelter), it was built in Jan.-Feb. 1961, about 64 km NE of Byrd Station. Its original name was Delta-One Substation. It was open for the summer of 1961-62 (aurora scientist David Sylwester was there that summer), by which time its name had been changed to Byrd Auroral Substation, or Byrd Aurora Substation. It was occupied by four men in the 1962 winter — Alan E. Hedin, Larry R. Martin, Graeme N. "Johnny" Johnstone, and John P. Turtle. It was occupied again in the 1962-63 summer, by Helmut P. Jaron, James H. Kinsey, Art Rundle, Allan Gill, and William W. "Mike" Bowman. Gill, Rundle, and Bowman wintered-over there, between March and Oct. 1963. The station was closed on Oct. 9, 1963, by Edmond R. Siemiatkowski.

Byrd Automatic Weather Station. 80°00' S, 120°00' W. An American climate-monitoring site at an elevation of 1750 m, at Byrd Station. It began operating on Feb. 5, 1980, was discontinued in 1988, and re-opened in 1990, continuing into 2009.

[1]**Byrd Bay** *see* **Byrdbukta**

[2]**Byrd Bay** *see* **Atka Iceport**

Byrd Camp. 80°05' S, 119°32' W. A U.S. camp set up close to Byrd Station. It is not manned permanently.

Byrd Canyon. 75°30' S, 157°15' W. An undersea canyon, off the coast of Marie Byrd Land. Named for Admiral Byrd. US-ACAN accepted the name in 1988. However, by 2004 it was apparent that this feature does not exist.

Byrd Coast Camp. 76°55' S, 144°00' W. An American refuge hut (a 16' × 16' Jamesway) at Mount Farley, in the Ford Ranges of Marie Byrd Land. Operated between Oct. 1966 and Jan. 1967.

[1]**Byrd Glacier**. 80°20' S, 159°00' E. The fastest (it flows at a rate of 7½ feet a day) and one of the largest (anywhere between 138 and 190 km long, and 24 km wide) of the Antarctic glaciers, draining an extensive area of the Polar Plateau, and flowing eastward between the Britannia Range and the Churchill Mountains, to enter the Ross Ice Shelf at Barne Inlet. Explored by Harry Ayres and Roy Carlyon of BCTAE 1956-58. It was going to be called Barne Glacier, but that name had already been taken, so Arthur S. Helm (former secretary of the Ross Sea Committee) suggested Byrd Glacier, and that was the name NZ-APC accepted, named after Admiral Byrd, and it appears in the 1960 NZ gazetteer. US-ACAN accepted the name in 1961. Originally plotted in 80°15' S, 160°20' E, it was later re-plotted.

[2]**Byrd Glacier** *see* **Byrdbreen**

Byrd Glacier Automatic Weather Station *see* **Marilyn Automatic Weather Station**

Byrd Head. 67°27' S, 61°01' E. Also called Bergnes. A conspicuous rocky promontory 1.5 km SE of Colbeck Archipelago, just W of Howard Bay, on the coast of Mac. Robertson Land. Discovered on Feb. 18, 1931 by BANZARE, and named by Mawson for Admiral Byrd. US-ACAN accepted the name in 1947.

Byrd Highway. The road running out to Hut Point from McMurdo Station. Named in May 1956.

Byrd Land *see* **Marie Byrd Land**

Byrd Mountains *see* **Harold Byrd Mountains**

Byrd Névé. 81°00' S, 154°00' E. A gigantic névé at the head of Byrd Glacier. Named by NZ-APC, in association with the glacier. US-ACAN accepted the name in 1965.

Byrd — South Pole Traverse. 1960-61. Also called the Byrd — Pole Tractor Train, or the Byrd — South Pole Overland Trek. The first American land party to traverse to the South Pole, a trip of 805 miles. An 11-man party, Task Group 43.4, comprising Major Antero Havola, U.S. Army Transportation Corps, and trail expert (leader); the two USARP scientists there on a grant from the NSF, to study weather and other subjects — Forrest Dowling and Henry Rosenthal (the latter from the Arctic Institute of North America; *see* **Mount Brecher**); mechanics/drivers Walter Davis, Gene Cunningham, CMH3 Marvin F. Medlin, and James R. Douglas; radio operators/Weasel drivers Shirley Mahan and Edward A. "Marty" Martens; and cook Meredith "Jack" Radford. Chief Warrant Officer George W. Fowler was land navigator and scout, and went up ahead in a Weasel, while a VX-6 Dakota aircraft occasionally scouted the terrain ahead. They would use an untraveled route across Marie Byrd Land, and travel via the east end of the Horlick Mountains. In order to illustrate what a traverse of this type could be like, and using Gene Cunningham's diary, one can follow the expedition day by day. **Nov. 11, 1960**: They were meant to leave McMurdo for Byrd,

but the trip was called off due to bad weather. **Nov. 14, 1960**: Same thing — delay. **Nov. 15, 1960**: Big VX-6 party that night. A lot of hangovers the following morning. **Nov. 18, 1960**: Still at McMurdo, the boys getting skiing lessons from Maj. Havola. **Nov. 19, 1960**: More ski lessons. **Nov. 21, 1960**: They left McMurdo at 8 A.M., for Byrd. **Nov. 26, 1960**: Medlin picked up the wanigans from New Byrd Station. **Nov. 27, 1960**: Medlin had an accident with a cutting torch. A barrel flashed up on him, and he had to cut his beard and hair off, which saved him from having his face burned too bad. **Dec. 1, 1960**: The schedule departure date came and went — delay. **Dec. 8, 1960**: They finally left Byrd Station at 11 A.M., on a bright, sunny day, taking two 38-ton D-8 LGP tractors (the heaviest pieces of equipment to arrive by land at the Pole to that date), two sledge-mounted wanigans (one for cooking and one for sleeping), three 20-ton sledges, one 10-ton sledge, and two tracked Weasels. The tractors were for use at the Pole, for maintaining a snow landing strip, and to assist in station construction, and also for retrieving air-drops The tractor train covered 17 miles the first day. **Dec. 9, 1960**: They reached mile 57. **Dec. 10, 1960**: They reached mile 90. **Dec. 11, 1960**: At this point George Fowler got snowblindness, and couldn't see to lead. However, their course was straight, and they pressed on. By the end of the day they had covered a total of 125 miles. **Dec. 12, 1960**: Due to bad weather, they couldn't set out until 3 P.M., and only made 10.8 miles that day. They had now covered a total of 135.8 miles. **Dec. 13-14, 1960**: They were stuck fast because of weather. **Dec. 15, 1960**: They set out on a a fine day, and made it to mile 160 by 4 P.M., when the weather closed in again. **Dec. 16, 1960**: Fowler recovered his sight, and they made it to mile 197. **Dec. 17, 1960**: Despite a whiteout, they made it to mile 225. **Dec. 18, 1960**: At about 11.55 a.m, they spotted 3 mountain tops 20 miles to their left. They finished the day at mile 261. **Dec. 19, 1960**: They stopped early, at mile 294, because of a whiteout. **Dec. 20, 1960**: A very bad wind in the morning prevented their leaving before 3 P.M., and they reached mile 305. **Dec. 21, 1960**: They left at 9.15 a.m, and it was rough snow and ice. They had to travel in 3rd gear, and a Weasel threw its track. They finished the day at mile 324. **Dec. 22, 1960**: Due to whiteout conditions, and because they were in crevasse territory (being near the Horlick Mountains), they decided not to travel unless they had good weather and sun. They practised rope-climbing, in case of a crevasse accident, and left at 4.30 p.m, finishing the day at 9 P.M., at mile 337. **Dec. 23, 1960**: They reached mile 357. Whiteout most of the day. **Dec. 24, 1960**: The sun was very bright. At 10 A.M. they spotted the Horlick Mountains, which were not where they were meant to be (on the map, that is; part of the reason for the traverse was to map the mountains accurately). This was good, as it might save them 100 miles. They finished the day at mile 387. **Dec. 25, 1960**: At 7.50 everyone was awakened by Marty yelling Happy Christmas. They drove in the morning, and broke at noon for a big meal and celebration. Gene and Marty were the waiters at the dinner. The major gave each of them a New Testament. This was the first group to spend a Christmas Day in the Horlick Mountains, or anywhere near them. They finished the day at mile 399. **Dec. 26, 1960**: An R4D flew overhead at 2 P.M. Bad conditions, and they finished the day at mile 416. **Dec. 27, 1960**: They changed course, leaving at 3.15 p.m, and traveling until 8 P.M., getting to mile 429. **Dec. 28, 1960**: An error in calculation meant that the crevasse field lasted longer than they thought it would, and they lost their 100-mile advantage. At 6 P.M. they spotted a nunatak on their left. Then they changed course again. It was slow and dangerous (with the crevasses), and they reached mile 446. **Dec. 29, 1960**: They spent the morning positioning the mountains, and submitted names for the nunatak they'd spotted. Mr. Fowler would judge the entries. They sighted more mountains at 3.30 p.m, but the going was rough and slow. They reached mile 466. **Dec. 30, 1960**: Medlin won the nunatak-naming prize, with Little Dot. They changed course again, and finished the day at mile 492. **Dec. 31, 1960**: They set out at 5 A.M., and at 9 A.M. they changed course to due south. They reached mile 522. **Jan. 1, 1961**: They spent most of the morning taking sun shots, and changed their course 31 degrees. "Look out South Pole, here we come!" At 7.10 P.M. they stopped for New Years Dinner. Marty and Gene waited tables again. They finished the day at mile 548. **Jan. 2, 1961**: It was a beautiful day at 8.30 A.M., when they started out, but by 9 A.M. a whiteout had closed in, and they had to stop. At 15 minutes past noon they started out again, but at 4.30 p.m they were halted by another whiteout. They set out again at 5.45 P.M., and got as far as mile 575. **Jan. 3, 1961**: They passed a lot of crevasses on their left, but made 20 miles in the morning alone, and by the end of the day were at mile 610. **Jan. 4, 1961**: They got trapped in the crevasse field. The major radioed McMurdo for a spotter plane. They hooked up a crevasse detector to one of the Weasels, and took the other one off the sledge. The major and Gene took one Weasel, and Mahan and Fowler took the one with the crevasse detector. Chief Davis's tractor almost plunged through a crevasse. This was at mile 623, and it was very tense. **Jan. 5, 1961**: The Weasel with the crevasse detector stopped working. The plane came out from Byrd Station, and helped (also by dropping mail), but really the boys were on their own, 175 miles from the Pole. They finally got the Weasel working again. They finished the day at mile 627. **Jan. 6, 1961**: They got out of the crevasse area, and finished the day at mile 647. **Jan. 7, 1961**: Surprisingly back in the crevasses, but they still did 14 miles in the morning, and 19 miles in the afternoon. They finally got out of the crevasses, and reached mile 680. **Jan. 8, 1961**: They made 20 miles in the morning, and 25 miles in the afternoon, arriving at mile 725. **Jan. 9, 1961**: They did 50 miles that day, reaching mile 775. **Jan. 10, 1961**: A whiteout almost got them again, but they made it to the Pole, after 805 miles and 34 days.

Byrd Station. A lonely U.S. scientific base, set up in 1957 in 79°59' S, 120°01' W (Harry Wexler actually chose 80°S, 120°W; there was also a move to make it closer to Little America, but the IGY Committee insisted on those coordinates), in Marie Byrd Land, at an elevation of 5012 feet above sea level, 885 miles from McMurdo Sound, and 646.5 miles from its home base, Little America. Named for Admiral Byrd, its construction was planned during OpDF I and it was a high priority to get it ready for IGY, which would begin on July 1, 1957. As it happened, it wasn't until OpDF II that it was constructed, as an all-year station. It had 11 buildings, and was designed to hold 25 persons. **Jan. 14, 1956**: Jack Bursey led a trail-blazing team out of Little America, to Byrd Station, with 2 Sno-cats and a Weasel. The men were Alvah Edwards (construction driver), George Moss (chief surveyor and navigator), Roland Levesque (driver), Raymond Dube (radioman), Chester Stevens (photographer), and Charles Wedemeyer (mechanic). An Otter would help the trail party as far as Prestrud Inlet, and then they would carry on up onto the Polar Plateau. **Feb. 3, 1956**: Bursey's trail party was 381 miles from Little America, having driven a gross total of 461 miles to get to that point. That day, Seabee chief Herb Whitney declared that that was far enough, that this was the site for Byrd Station. **Feb. 5, 1956**: Bob Streich flew an Otter out to pick them up. Also on board were Lt. Cdr. Glen Lathrop (co-pilot), John Floyd (airplane crew chief), and Lloyd Beebe (Disney photographer). The Otter couldn't carry all the men back to Little America, so Bursey, Dube, Wedemeyer, and Beebe stayed behind to await the 2nd airlift. **Feb. 6, 1956**: The returning Otter crashed, and the 7 men started walking toward Okuma Bay. Streich, Moss, Lathrop, Floyd, Edwards, Levesque, and Stevens. **Feb. 9, 1956**: The 7 men were rescued 10 miles from Okuma Bay, by another Otter sent out from McMurdo. **Nov. 5, 1956**: Major Merle Dawson's trail party left Little America for the Byrd Station site. The 6 Army men were Dawson, Major Palle Mogensen, Lt. Philip M. Smith (the crevasse expert), and 3 enlisted men: Master Sgt. Clarence N. Coleman (*see* **Coleman Glacier**), Master Sgt. Samuel Fields (*see* **Fields Peak**), and Sgt. Alvin Krigsvold (*see* **Krigsvold Nunataks**). There were also 5 Navy men, 2 Weasels, two D-8 tractors, and a Sno-cat, all pulling 8 sledges. The name of their new trail became Army-Navy Drive. Lt. Harvey Speed flew Otter reconnaissance and Lt. Pete Kenney flew helo reconnaissance. A C-124, piloted by C.J. Ellen, dropped supplies. The crevasses had to be filled in or bridged. 183.5 miles out of Little America, along the new trail, they came to Crevasse Junction, which lasted until the 190.9 mile mark. Fashion Lane was created through Smith's use of crevasse-field flags, and it was these flags that gave the new, safe path its name. **Nov. 28, 1956**: Work was finished on Fashion Lane, a

name that would become official. **Dec. 3, 1956**: Dawson's party was on the Rockefeller Plateau. **Dec. 4, 1956**: Six D-8 tractors (each pulling 2 Otaco sledges), and a Weasel, left Little America at 4 P.M., on the 650-mile-long trek to establish Byrd Station. Vic Young was in charge of the "train," riding in the Weasel. The rest of the group included Hammer Hon, Bill Stroup, Will Beckett, Willie Burleson, and Ray Mishler (cook). **Dec. 9, 1956**: Young's party reached Fashion Lane. Then an R4D airplane landed with Cdr. Paul Frazier and crevasse expert Phil Smith. **Dec. 18, 1956**: Dawson's party reached the Byrd Station site. **Dec. 23, 1956**: Young's party arrived at Byrd, after the longest ever (until that time) tractor trek in Antarctic history. Harvey Speed landed an R4D, and dropped off another 10 workers. Construction began immediately. **Jan. 3, 1957**: Glaciologist Vern Anderson arrived at Little America on the *Merrell*. **Jan. 28, 1957**: The Byrd Station Traverse Party set out from Little America, bound for Byrd Station. The party consisted of geophysicist and seismologist Charles Bentley; seismologist Ned Ostenso; glaciologist Vern Anderson; Argentine glaciology observer Mario Giovinetto; mechanic Anthony Morency; and 3 Sno-cats. **Jan. 29, 1957**: The 2nd big tractor train left Little America for Byrd Station, led by Lt. Robert K. White. Seven D-8 tractors pulled 14 sledges, 220 tons of material. The first building to be finished at Byrd was the science building, which could sleep 9, then the weather balloon inflation shelter with a separate shed for manufacturing the hydrogen gas, then the geomagnetism buildings. **Feb. 1, 1957**: the Bentley party reached Fashion Lane. **Feb. 2, 1957**: Seven scientists were flown in to Byrd Station. **Feb. 4, 1957**: The tractor train, led by Lt. White, caught up with Bentley's party. **Feb. 12, 1957**: Lt. White's tractor train arrived at Byrd. **Feb. 18, 1957**: The first Globemaster supply flight to Byrd Station. **Feb. 23, 1957:** The 17th and last Globemaster supply flight to Byrd Station. **Feb. 27, 1957**: Bentley's party reached Byrd Station. It was still touch and go as to whether the new station would work out. **March 7, 1957**: Last flight of the season in to Byrd Station, bringing Giovinetto, Robert Marsh (cook), and Walton "Denny" Welch (Seabee electronics man). **1957 winter**: 23 "Byrd Knights": 13 IGY staff: George Toney (IGY leader); meteorologists Wesley Morris, Bob Johns (the first black man to winter-over in modern-day Antarctica), Norbert Helfert, and Ed Alf; Bentley; Ostenso; gravity physicist Anthony Morency; aurora and air glow specialist Dan Hale; ionosphere physicist and radio ham Virgil Barden; Giovinetto; Anderson; and Leo E. Davis (geomagnetician). The 10 USN personnel were: Lt. Brian Dalton (medical officer and leader); Gordon Abbey (radioman); Welch; William Nichols and Don Blubaugh (construction mechanics); Marsh; Curtis Brinton (utilitiesman); Jack Penrod (Seabee builder 3rd class, carpenter, and official postal clerk); Bill Lowe (radioman); and Clifford Reynolds (electrician). **Oct. 18, 1957**: The first of 33 airdrops to Byrd Station by C-124s. Al Wade and Norman Vaughan had both turned down the offer of leading the station for the winter of 1957. Finn Ronne had then recommended Per Stoen, a Norwegian with Arctic experience. He had accepted, then backed out, accepted, and finally, on Dec. 16, 1956, backed out again, citing diabetes. So, George Toney did the job. Byrd Station's first program (1957) was the same as that of South Pole Station (q.v.). **Oct. 22, 1957**: The first of two tractor trains arrived at Byrd Station. **Dec. 4, 1957**: The last of 33 airdrops to Byrd Station by C-124s, a total of 430 tons of fuel and supplies. The ice runway was primitive, with no refueling capability. **Dec. 8, 1957**: Lt. Peter Ruseski took over from Dalton, and Stephen Barnes took over from Toney, both for the 1958 winter. The entire Navy crew had been replaced by OpDF III personnel. **1958 winter**: Navy personnel included: Peter Ruseski (medical officer and officer-in-charge), Herbert Kelly (radioman), Jack B. Long (mechanical equipment), Richard Cressey (storekeeper), Dean Fadden (utilitiesman), Lawrence Langford (builder), and James Gallaher (electrician). The scientific personnel included: Stephen Barnes (scientific leader), Charlie Bentley (geologist), Joseph Knack, William Noble, and Norman Peters (meteorologists), Leonard LeSchack (traverse seismologist), John Annexstad (geomagnetician and seismologist), John Kelly (ionosphere physicist), Donald Spencer (atmospheric noise scientist), Marion Todd (aurora scientist). **1959 winter**: Navy personnel included: Edward Galla (medical officer and officer-in-charge), Richard Sage (builder), Harold McCrillis (construction electrician), Keith Feeley (construction mechanic), Thomas Gibbon (construction driver), and Ray Spiers (cook and mechanic). The scientific personnel included: Jock Pirrit (scientific leader), George Doumani (geologist), Bernard Weiss (chief meteorologist), Allen Tusing (meteorologist), Alvis Woolam (ionosphere physicist), Feng-Keng Chang (seismologist), Howard Le Vaux (aurora physicist), William Lavris (meteorological technician), and Jerome Mintz (meteorological electronics technician). **1960 winter**: Navy personnel included: Lt. Eugene Bartlett (officer-in-charge), Shirley Mahan and Edward Martens (radiomen), Robert Manke (Seabee utilitiesman), Walter Davis (chief construction mechanic), Leonard Fiedler (electrician), James McCarthy and John Saunders (electronics technicians), and Stephen Pastor (equipment operator). Scientific personnel included: Luis Aldaz (meteorologist and scientific leader), John B. Bennett (geomagnetist and seismologist), Frede Iversen and Dale Reed (ionosphere physicists), William Feyerharm, Preston Tuning, and Richard Urbanak (meteorologists), Henry Rosenthal and Theodore Dolan (glaciologists), and George Widich (traverse engineer). **Nov. 10, 1960**: By now the snow and ice were crushing the station, and the site for a new one was selected. **Dec. 12, 1960**: Beginning on this date, the new station was built by Lt. Dave de Vicq and his 65 Seabees. This was New Byrd Station, or New Byrd, for short. The old one now became known as Old Byrd. The new one was 6.1 miles away from the old station, and had 15 buildings. Its new location was 80°01' S, 119°32' W, at the site of Old Byrd's airfield. **1961 winter**: Navy personnel included: Don Walk (medical officer and officer-in-charge), Charles Kirby and William Berry (radioman), John Vito (electronics technician), Bernie Gierloff (builder), Franklin Ford (construction mechanic), Earl Sweatt (construction electrician), Raymond Mickler (equipment operator), Robert O'Neil (utilitiesman), and Raymond Griffith (cook). Scientific personnel included: Norman Benes (scientific leader), Thomas Holmes, Carl Garczynski, Martin Goorhigian, and Travis Baker (meteorologists), Hiromu Shimizu (glaciologist), Lawrence Victor (aurora scientist), David Perkins (geomagnetist), and Gordon Angus (ionosphere physicist). **1962 winter**: Navy personnel included: Lt. Archie Nash (officer-in-charge), Lt. Eldon Evans (medical officer), G.S. Wotkyns (hospital corpsman), Julius Mims and Tommy Morales (radiomen), John Carmer (electronics technician), Henry Savage, Joe Heathcock and James Burlock (builders), Douglas Pool, Milton Spear, and Richard Gardiner (construction electricians), John Gratton (construction mechanic heavy equipment), Julius Hatcher (construction mechanic), Harold Mink, Ernest Strickland, and Steven Kivi (utilitiesmen). Scientific personnel included: Larry Martin (scientific leader), Monte Poindexter, Edward Steinfeld, Donald Bowyer, Franklin Shibuya, and Richard Coleman (meteorologists), Alan Hedin (aurora scientist), John Turtle (aurora researcher), Delbert Patton and Ronald Sefton (ionosphere physicists), Ward Helms (radioscience researcher), and Johnny Johnstone (NZ observer). Radioman Tommy Morales's only contact with the outside world was via a ham radio owned by Barry Goldwater (R.-Ariz.), who sent on messages to the families in the USA, at no charge. **1963 winter**: Navy personnel included: Lt. J.L. Crow (medical officer and co-officer-in-charge), Lt. (jg) W.F. Frazier (co-officer-in-charge), Emilio DeLeon (heavy equipment operator), and Raymond Griffith (cook). Scientific personnel included: Henry Morozumi (scientific leader), Edward Landry, Neil Coulter, Andrew Daley and Thomas Brown (meteorologists), David Lewis, Kenneth Hartkopf, Dale Vance, and Arno Kosko (ionosphere physicists), Herbert Pearson (seismologist), Helmut Jaron and James Kinsey (aurora scientists), and Nathaniel Roper (aurora researcher). **1964 winter**: Navy personnel included: Lt. Carl Andrus (officer-in-charge), and Leonard Fiedler (electrician). Scientific personnel included: Ronald Sefton (ionosphere physicist and scientific leader), Benjamin Groves and Raymond Erven (meteorologist), Dale Blake and David Webster (ionosphere physicist), Edmond Siemiatkowski (aurora physicist), Norman Peddie (seismologist), Bob Flint (geomagnetist), and Jimmy Johnstone (NZ observer). **1965 winter**: Navy personnel included: Lt. Herbert McClung and Lt. David H. Gerdel (officers-in-charge), and Willard Robinson (construction

mechanic). Scientific personnel included: Michael L. Trimpi (radioscience researcher and scientific leader), James Lovill (chief meteorologist), Douglas Johnson, Thomas Thurston, and Jack Trice (meteorologists), Bill Burtis, Carl Disch, and Frank Recely (ionosphere physicists), Leroy Pankratz (seismologist), James Pranke (aurora researcher). Carl Disch disappeared. **1966 winter**: Navy personnel included: Lt. Gordon Callendar (officer-in-charge), Lt. Robert Hunt (medical officer), Leo Dorrel (hospital corpsman), Ronald Hodgson and Howard Spaulding (builders), Billy Partridge (chief equipment operator), James Jaynes and Wayne McGee (equipment operators), Michael Madden (electrician's mate), Robert Teeters (storekeeper), George Melbert and Harold Mink (utilitiesmen), China Cabrera (vehicle mechanic), and Henry Wunneburger (cook). Scientific personnel included: Ronald Sefton (ionosphere physicist and scientific leader), Gary Davey (meteorologist), Brent Scudder (meteorologist — ozone measurements), Samuel Gerrish, Larry Spitz, and Stuart Jeffery (ionosphere physicists), Chung Gun Park (ionosphere physics researcher), Philip Benedict (aurora scientist), Tony Cox (geomagnetist and seismologist). **1967 winter**: Navy personnel included: Richard McKinzie (hospital corpsman), Everett Suchland (radioman), James Adams and Robert Butcher (builders), Donald Sneddon (electronics technician), George Webber (electrical engineer), Rafael Favela (equipment operator), Walter Backer (chief construction mechanic), Edward Weikman (construction mechanic), Warren Reddick, Glenn Crummey and Peter Rea (construction electricians), Elton Clark (utilitiesman), Roger Groux (shopfitter), George Breeding (storekeeper), and Don Dyment (cook). Scientific personnel included: Rossman W. Smith (ionosphere physicist and scientific leader), Terry Bryan (glaciologist), Edward Velie, Harold Slusher and Lawrence Manthe (meteorologists), Michael Maish and Donald Shepherd (ionosphere physicists), Robert Moses (seismologist), and Jan Siren (radio scientist). **1968 winter**: Scientific personnel included: Gregory S. Richter (meteorologist and leader), George Thode and Michael Kramer (meteorologists), J.P. Hannah, Michael Olson, and Fred Cady (ionosphere physicists), Terry Mathis (engineer). **1969 winter**: Navy personnel included: Lt. Donald Hagey (officer-in-charge), Alan Chandler (electronics engineer), Keith Birdwell (electronics technician), China Cabrera (vehicle mechanic), and Lawrence Cole (builder). Scientific personnel included: Stephen Andrews (ionosphere physicist and scientific leader), Robert Mutel and Charles Ranney (ionosphere physicists), Albert Buennagel (geomagnetist and seismologist). **1970 winter**: Navy personnel included: Lt. Peter J. Brookman (officer-in-charge), Lt. Thomas Dee (medical officer), Donald Grayson (engineer), Evans W. Paschal (co-scientific leader), John Billey (ionosphere physicist and co-scientific leader), Robert Kohler (geomagnetist), Madison Post and Thomas Stanford (ionosphere physicists). **1971 winter**: Navy personnel included: Lt. Ronnie Hoyt (officer-in-charge), and Lt. Cdr. Ronald Swarsen (medical officer). Scientific personnel included: John P. Billey (ionosphere physicist and scientific leader), James Robertson (geophysicist), Leroy Holcomb (ionosphere physicist), Ronald Gester (seismologist). **Jan. 19, 1972**: Byrd, which had become crushed by the snow, became a summer-only station, after having been continuously occupied since Feb. 13, 1962. It was now known as Byrd Surface Camp, and was a fuel stop and weather station for planes flying between McMurdo Station and other destinations, such as the Siple Station area. It consisted of sledge-mounted modules. **1983-84**: A new Byrd Station (summer only) was built. **1985-86**: The new Byrd was opened for summer business. **1991-92**: Last summer season for Byrd Station.

Byrd Subglacial Basin. A subsurface feature centering on 80°S, 115°W. The major subglacial basin of West Antarctica, it extends E-W between the Crary Mountains and the Ellsworth Mountains, beneath Marie Byrd Land, being bounded to the S by a low subglacial ridge which separates this basin from Bentley Subglacial Trench. During the 1950s and 1960s, American seismic parties from Byrd Station, Little America, and Ellsworth Station, went out and roughly delineated it, plotting its center in 85°S, 125°W. It was named by US-ACAN in 1961, in association with Byrd Station and Marie Byrd Land. In 1967-69, a major radio echo-sounding program was carried out by the NSF, SPRI, and the Technical University of Denmark (TUD), which, once studied in detail years later, re-plotted its center.

Byrd Traverse *see* **Marie Byrd Land Traverse**

Byrd VLF Sub-Station. 79°54' S, 120°30' W. A small outpost of Byrd Station, and about 24 km from it, in Marie Byrd Land, set up in Dec. 1965, and nicknamed "Longwire Station" because its principal piece of equipment was a 21-mile-long radio antenna. The station was built on the surface, but was covered by snow until it lay beneath the ice. It was composed of 3 trailer vans covered by a big Jamesway hut. It tested very low frequency radio waves (hence its name). It was closed permanently on Dec. 1, 1970, the last complement of staff including 2 women, Irene Peden (the scientific leader) and Julia Vickers.

ByrdAE *see* **Byrd's 1928-30 Expedition, and Byrd's 1933-35 Expedition**

Byrdbreen. 71°45' S, 26°00' E. Also called Byrd Glacier (but not by many; it is only the English-language translation of the Norwegian original; pretty much everyone calls it Byrdbreen; sounds somewhat like "birdbrain"). A very large glacier, 60 km long and 17.5 km wide, it flows NW between Mount Bergersen and Balchen Mountain, in the E part of the Sør Rondane Mountains of Queen Maud Land. Photographed aerially by OpHJ 1946-47, and mapped from these photos in 1957 by Norwegian cartographers, who called it Byrdbreen, after Admiral Byrd. They plotted it in 72°00' S, 26°30' E. In 1962 US-ACAN accepted this name, without modification (partly because the name Byrd Glacier had already been taken the year before), but with coordinates of 72°25' S, 26°30' E. It has since been re-plotted.

Byrdbukta. 69°45' S, 1°10' W. A bay on the W side of Trolltunga, the easternmost part of the Princess Martha Coast. Named by the Norwegians for Admiral Byrd, the name means Byrd Bay.

Byrd's 1928-30 Expedition. Shortened to ByrdAE 1928-30. This was the biggest, most ambitious, best-equipped, and most important Antarctic expedition to date. It was also the most expensive, at a million dollars (Byrd paid off the debt within 7 months of returning to the USA). It was also Dick Byrd's first expedition to Antarctica. He was already an American hero, having flown over the North Pole and across the Atlantic Ocean. Just days after word of his Antarctic adventure got out, Byrd announced that he was going to leave the USA in September 1927, arrive in Antarctica in December, and fly to the South Pole and back. But, by the beginning of Aug. 1927, he had prudently postponed the trip until 1928. There were 15,000 applicants (some say 60,000) to join the expedition. Not all were picked. Floyd Bennett, Byrd's pal and pilot in the Arctic, and Bernt Balchen, were both early on named as pilots for this expedition, with Bennett as 2nd-in-command. Byrd selected many of the boys who had been with him on the *Chantier*, in the Arctic: Noville, Haines, Grenlie, Balchen, Feury, DeGanahl, Mulroy, Konter, Demas, Parker, Tennant, Gould, Fritzson, Black, Reed, Sutton, Gething, and Kessler (see below for more details on these men). **Aug. 1927**: Balchen set off for Norway, to recruit, while Bennett attended to most of the preparation. The expedition was backed by the likes of John D. Rockefeller, Jr., Edsel Ford, Charles Evans Hughes, Vincent Astor, Paul Block, Harold S. Vanderbilt, Lindbergh, and the American Geographical Society. **April 25, 1928**: Bennett died of pneumonia in Quebec. 4 ships took the men, equipment and supplies down south. Two were Byrd's, his flagship, the bark *City of New York*, and his supply ship, the *Eleanor Bolling*. There were two others, the fast Norwegian whalers *Sir James Clark Ross* and *C.A. Larsen*, both having volunteered to assist Byrd in transporting men and supplies to Antarctica. The *Sir James Clark Ross* transported 95 sledge dogs as well as Walden, Vaughan, Goodale, and Crockett, and Willy Riley, the dog handler. The *C.A. Larsen* took the airplanes. **Aug. 25, 1928**: The *City of New York* left Hoboken, NJ, bound first for Panama, with 31 expeditioners on board, as well as 200 tons of supplies for the Antarctic base. The crew of the *City of New York* were: Fred Melville (master), Nomad McGuinness (1st mate), Sverre Strøm (2nd mate), Ben Johansen (bosun), Lt. Tom Mulroy (chief engineer), Esmonde O'Brien (1st assistant engineer), Teddy Bayer (2nd assistant engineer), Walker Perkins and Burt Creagh (seamen), Henry T. Harrison (meteorologist and seaman), John Jacobson (sail

maker), Chips Gould (carpenter), William Jennings Cummins and Art Berlin (firemen), Jim Feury (fireman, who would eventually become mechanic and snowmobile driver), William J. Olchuski and Benjamin F. Jett (oilers), Dick Konter (steward, musician, and seaman), Taffy Davies (physicist and seaman), Mike Thorne (geologist, ski man, and seaman), Vic Czegka (machinist), Quin Blackburn (surveyor and seaman), Francis Dana Coman (medical officer and news correspondent), Joe Rucker (photographer), Lloyd Berkner, Lloyd Grenlie, and Carl Petersen (radiomen), Louis Reichart (cook) Roy Ellis Cullens (assistant cook), Charley Lofgren (personnel manager), George Black (mechanic and supply officer), Paul Siple (boy scout), Robert J. Rogers (dog driver and seaman), and Chris Braathen (ski man and seaman). There were several stowaways (*see* **Stowaways**), and Jonathan Duff Reed failed to go at the last moment. **Aug. 28, 1928**: Edward Roos and John Buys were enlisted as seamen for the *Eleanor Bolling*, making the total number of expeditioners 79 (on all ships together). Meanwhile Balchen, June and Smith, and even Byrd himself, were busy test flying the planes at Curtiss Field and at Mitchell Field — a 3-motored Ford, the *Floyd Bennett*; a single-motored Fairchild, the *Stars and Stripes*; and a small General Aircraft three-place monoplane. A fourth plane, a single-motored Fokker Super-Universal, named *Virginia*, was delivered later. **Sept. 7, 1928**: All 4 planes were ready. Through the good graces of Frank W. Clarke, president of Clarke Trading Company, 79 sledge dogs were rounded up and shipped to Quebec on the *North Shore*, and shipped down to NY on the *Fort St. George*, then shipped to Norfolk, Va., and from there across country to San Pedro, Calif. Arthur T. Walden was in charge of the dogs, with three assistants. **Sept. 14, 1928**: Benny Roth joined the expedition, as a mechanic. **Sept. 16, 1928**: After having undergone repairs at the Tebo Yacht Basin, in Brooklyn, the *Eleanor Bolling* left for Norfolk, Va., at 6.30 A.M. Her crew were: Gustav Brown (master), Joe DeGanahl (1st mate), Harry Adams and Harry King (2nd mates), S.D.I. Erickson (3rd mate), Clair Alexander (supply officer), Frank McPherson (chief engineer), John Cody (1st engineer), Elbert Thawley (2nd engineer), John Sutton and Frank Fritzson (oilers), Eldred A. Stewart, George Sjögren, Chink Foster, Edward R. Mulroy, and Arnold H. Clark (all inexperienced volunteer firemen), Malcolm Hanson and Howard Mason (radio operators), Sid Greason (steward), George Tennant (chief cook; his assistant and baker, Albert E. Gething, of NY, did not get to go), Rudolph Benson (2nd cook), Charles Kessler, Leland Barter, John Buys, and Edward Roos (seamen). Also on board were: Larry Gould (geologist, geographer, and bosun), William C. Haines (meteorologist and assistant steward), Haldor Barnes (surgeon and quartermaster), Ashley McKinley (aerial photographer and coal passer; he replaced Robert A. Smith), Jack O'Brien (surveyor and coal passer), and Jerry De Cecca (aviation mechanic with Wright Aviation). Just this short trip produced adventure. A tremendous gale threatened their very existence, they were delayed by sluggish steam pressure, and were boarded by the Coast Guard on suspicion of being a rum runner. **Sept. 16, 1928**: The *City of New York* arrived at Panama, where they lost Olchuski (a retired U.S. Navy chief petty officer, from Detroit) and fireman Cummins (both unfit), and, unfortunately, Mr Lanier, the stowaway. **Sept. 17, 1928**: The *City of New York* passed through the Panama Canal from the Atlantic to the Pacific, amid more fanfare than had attended any other ship since the *Fram*. Capt. Melville needed volunteer stokers to replace Olchuski and Cummins, but the U.S. Navy refused him the services of two sailors, so Lyle Womack and Max Boehning, who just happened to be in Panama, were picked up instead. R.J. Rogers, unwilling to stoke coal, left the ship at this time, leaving the engine room still undermanned. **Sept. 18, 1928**: The *City of New York* set sail from Balboa, but engine difficulties forced them back to port. They took on another fireman, William Darling, and the ship was delayed for a few days. Each day's delay meant a delay in getting to the Antarctic, which could be fatal. **Sept. 21, 1928**: The *City of New York* finally cleared Balboa, heading for Tahiti and then Dunedin. At this point, the expedition as a whole was $120,000 short in funding. The *C.A. Larsen* set sail from Norfolk, under the command of Capt. Oscar Nilsen. 1st mate was Johansen, and radio operators were Hansen and Haugh. The captain's wife was on board too. Also on board were 7 of Byrd's expeditioners — Balchen, Smith, June, Martin Rønne, and the 3 aviation mechanics, Czegka, Bubier, and Roth. **Sept. 25, 1928**: The *Eleanor Bolling* left Norfolk for the Panama Canal, and on to San Pedro, then bound for Dunedin. **Sept. 27, 1928**: The *C.A. Larsen* passed through the Panama Canal. **Sept. 30, 1928**: The *Sir James Clark Ross* left Balboa, bound for Dunedin. **Oct. 1, 1928**: The luxury train *Wolverine* left Grand Central Station in NYC, heading for Chicago. On it then, or would be soon, were Byrd, Dick Brophy (the expedition's business manager), Owen, Shropshire, Van der Veer, and Lofgren, as well as Mrs. Byrd and the terrier mascot Igloo. From Chicago they took the Gold Coast Limited to Los Angeles. **Oct. 5, 1928**: The Byrd party arrived by train in Los Angeles, and the *Eleanor Bolling* arrived in Panama at the same time. It had been rough going on the *Bolling* stokers, with several scientists volunteering, and in Panama, Stewart was shipped back after having sustained an accident to his back when he slipped on a wet deck. **Oct. 6, 1928**: The *Eleanor Bolling* passed through the Canal, the last of the expedition's ships to do so. **Oct. 9, 1928**: After 3 days laid up for repairs, the *Eleanor Bolling* headed out into the Pacific, and about that time they found the stowaway Bill Gawronski. The *C.A. Larsen* pulled into San Pedro (Los Angeles's port) and loading began. Byrd and his colleagues, including Alton Parker and Pete Demas (mess boy), boarded. **Oct. 10, 1928**: The *C.A. Larsen* put out to sea, and by that date all 4 ships were in the Pacific, en route to NZ. **Oct. 12, 1928**: Two stowaways were found aboard the *C.A. Larsen*. **Oct. 31, 1928**: The *Eleanor Bolling* and the *City of New York* arrived at about the same time in Tahiti, and Howard Mason was transferred to the *City of New York*, in exchange for Carl Petersen. There were 63 expeditioners together at the same time, for a few days. **Nov. 3, 1928**: The *Eleanor Bolling* left for NZ. **Nov. 5, 1928**: The *C.A. Larsen*, with Byrd aboard, docked at Wellington, NZ. The New Zealanders waived customs formalities. The *Sir James Clark Ross* had already arrived. **Nov. 18, 1928**: The *Eleanor Bolling* arrived at Dunedin. **Nov. 21, 1928**: The *Eleanor Bolling* proceeded to Wellington with 24 members of the expedition to take on board the planes and then head back to Dunedin. Larry Gould, Haines, McKinley, Tennant, and Alexander remained at Dunedin. **Nov. 19, 1928**: The expedition lost Will Riley, who had to return home because his father had died (*see* **Riley** for the interesting sequel). But they gained NZ sail maker Percy J. Wallis, who joined the *City of New York* as a tailor, and F. Lockwood, who joined the same ship as a crewman. The dogs and handlers Walden, Vaughan, Goodale, and Crockett, were quartered on Quarantine Island, 6 miles from Dunedin. **Nov. 24, 1928**: Brophy was made 2nd-in-command of the expedition. **Nov. 26, 1928**: The *City of New York* arrived at Dunedin, NZ, and the expedition consolidated there. The *C.A. Larsen* then went whaling in Antarctic waters. **Nov. 27, 1928**: With the *City of New York* docked in Dunedin, and the *Eleanor Bolling* back from Wellington, the group was finally together, and they celebrated Thanksgiving there. There was some shifting of personnel from one ship to another, for example mates McGuinness and Johansen were transferred to the *Eleanor Bolling*. Vaclav Vojtech joined here. **Dec. 2, 1928**: At 6 A.M. the incredibly heavily loaded *City of New York*, with Byrd aboard, sailed, being towed by the *Eleanor Bolling* in order to conserve fuel on Byrd's flagship. For the first few days they averaged 170 miles a day. **Dec. 7, 1928**: A heavy gale, in which albatrosses were seen flying backwards, tore the two ships apart, and it took the entire crew of the *City of New York* to reel in the 30 fathoms of dangling towline. **Dec. 8, 1928**: They were in 62°10' S, 174°27' E. **Dec. 9, 1928**: Early in the morning they saw their first iceberg. **Dec. 10, 1928**: They were in 60°00' S, 179°27' W, and Byrd saw and confirmed the existence of Scott Island, unseen since Colbeck sighted it in 1903. While maneuvering to avoid icebergs, the hawser connecting the two ships broke again, and whipped over the *Eleanor Bolling*'s deck, almost killing Kessler. Then they harpooned a whale, just for the sport. **Dec. 11, 1928**: The 2 ships aligned and for 12 hours the crews worked non-stop to unload 87 tons of coal in bags from the *Eleanor Bolling* to the *City of New York*, then the *Eleanor Bolling* left and headed back to NZ, with Dick Brophy aboard. **Dec. 12, 1928**: The *C.A. Larsen* arrived and took the *City of New York* in tow, in order to get her through the heav-

iest pack-ice seen in 13 seasons. **Dec. 13, 1928**: Coincidentally, the *Sir James Clark Ross* got stuck in the pack-ice. **Dec. 17, 1928**: The *C.A. Larsen* and the *City of New York* were in 69°07' S, in the pack-ice. **Dec. 20, 1928**: The *Eleanor Bolling* arrived in Dunedin to pick up more supplies before heading back to Antarctica. **Dec. 23, 1928**: The *City of New York* and the *C.A. Larsen* emerged into the Ross Sea, and at that point the *C.A. Larsen* left to resume her whaling activities. **Dec. 25, 1928**: Strøm sighted the Ross Ice Barrier (as the Ross Ice Shelf was called then), and the ship reached it in 177°25' W. **Dec. 26, 1928**: They moored in Discovery Inlet. Alton Parker was the first ashore. **Dec. 28, 1928**: Byrd sighted the Bay of Whales, and that night the shore party camped near Framheim, even though they could not find Amundsen's hut, as it had been buried over by snow. **Dec. 30, 1928**: Byrd had selected the site for Little America, his base. After a few sledge trips, some quite extensive, he and Vaughan, Peterson, and Balchen set out to establish the base, while the rest of the crew stayed behind, beset by killer whales. This expedition was a mixture of the new and the old, but, with radio, airplanes, ground vehicles, and so on, it really heralded the new age of mechanized Antarctic exploration, as well as the USA's re-entry into Antarctica. **Jan. 2, 1929**: Harry Shrimpton and Jack Robinson joined the expedition in NZ, as seamen. **Early Jan. 1929**: Little America was completed. **Jan. 5, 1929**: In the USA, Wright Aviation mechanic Alfred "Frank" Wolfgang received 2½ hours notice to get himself to San Francisco to board a ship that would get him to Dunedin by the 26th, so he could board the *Eleanor Bolling* which would take him to Little America to replace the ailing Jerry De Cecca as the Whirlwind engine expert. **Jan. 13, 1929**: The airplane *Stars and Stripes* was unloaded at Little America. **Jan. 14, 1929**: The *Eleanor Bolling* left Dunedin without Mr. Wolfgang, but with 900 tons of gear and supplies, including 2 airplanes — the *Floyd Bennett* and the *Virginia* — a snowmobile, food, clothing, gasoline, kerosene, Skoodum (a new and very popular Alaskan husky), and much more, including Harry Shrimpton and Richard Perks, the cook. This was to augment the 400 tons taken down on the *City of New York*. **Jan. 15, 1929**: The *Stars and Stripes* made the first flight, with Parker at the wheel, and accompanied by mechanic Benny Roth. In fact, that day it made 7 short flights, all successful, and was in the air 3½ hours all told. Babe Smith flew the next one, with Bubier and Demas along. June and Balchen took the 3rd, with June flying, then Balchen took No. 4, with Teddy Bayer and Russell Owen. Byrd himself took the controls for an hour and 20 minutes, with Smith and June exploring 1200 square miles. Then Balchen and June took the plane over to the camp for the night. **Jan. 26, 1929**: The *Eleanor Bolling*, on her way south, met the *C.A. Larsen*, in 74°S, 180°W, took aboard 80 tons of coal, and 5 tons of whale meat for Byrd's dogs, then proceeded through the pack-ice toward the Bay of Whales, to supply Little America. **Jan. 27, 1929**: The *Eleanor Bolling* arrived at the Bay of Whales, the same day that Byrd flew for more than 5 hours in the *Stars and Stripes* over Edward VII Land, discovering 14 new mountains (the Rockefeller Mountains) and a new island. Balchen was the pilot and June the radio operator. Meanwhile, in Dunedin, 15 very fine sledge dogs arrived in the care of Alan Innes-Taylor, as a gift from Charles V. Bobb of New York, one of the expedition's backers. They would have to wait until the *Eleanor Bolling*'s next trip south. **Jan. 31, 1929**: Disaster struck that night, just before the *Eleanor Bolling* was to leave. Part of the ice barrier collapsed above them, causing absolute pandemonium. It looked as if the *Eleanor Bolling* would sink. More important, several men went into the drink to one degree or another. Benny Roth, who couldn't swim, was saved from the icy water by Byrd and others in a most desperate rescue, and Joe DeGanahl saved Harrison. It was a heroic moment. In the end, though, the disintegrated barrier made the trip shorter from the ship to Little America. **Feb. 2, 1929**: The *Eleanor Bolling* left, with the sick Jerry De Cecca aboard, it having taken only 5½ days to unload the ship, a phenomenal achievement by the Byrd workmachine. **Feb. 16, 1929**: The *Eleanor Bolling* pulled into Dunedin Harbor, 3 days late thanks to a most terrific storm in the Pacific. She hurriedly put on board another airplane, 2 tractors, gasoline, food, and other equipment. **Feb. 18, 1929**: The *Eleanor Bolling* left Dunedin with Dick Brophy on board acting as coal passer, but immediately hit another major storm. Harry Bridge was also on board, as the newly taken-on assistant cook with no pay. Frank Paape had also joined the ship, as an able seaman. Richard Perks was back as cook. **Feb. 18, 1929**: The *Virginia* (Byrd, Balchen, and Berkner) and the *Stars and Stripes* (Parker and June) flew over Edward VII Land to explore. They saw, claimed and named Marie Byrd Land. **Feb. 22, 1929**: The *City of New York* left for NZ, with Adams, Bayer, Berkner, Berlin, Boehning, Creagh, Erickson, Gawronski, Greason, Jacobson, Johansen, Konter, Melville, Esmonde O'Brien, Reichart, Roos, Shropshire, Sutton, Sjögren, Wallis. **Feb. 26, 1929**: Byrd ordered the *Eleanor Bolling* back to NZ. She had been having a few mechanical problems, and they were preparing to trans-ship the equipment to the *C.A. Larsen* to take down. But now the new shipment proved unnecessary. The *City of New York* had a tough early part of the journey out of the rapidly closing-in ice pack. 42 men wintered-over: Alexander, Balchen, Black, Blackburn, Braathen, Bubier, Bursey, Byrd (in command), Clark, Coman, Crockett, Czegka, Davies, DeGanahl, Demas, Feury, Goodale, Chips Gould, Larry Gould (2nd-in-command), Haines, Hanson, Harrison, June, Lofgren, Mason, McKinley (3rd-in-command), Mulroy, Jack O'Brien, Owen, Parker, Petersen, Rønne, Roth, Rucker, Siple, Smith, Strøm, Tennant, Thorne, Van der Veer, Vaughan, and Walden. **March 6, 1929**: The *Eleanor Bolling* staggered into Dunedin. Quin Blackburn got lost out on the trail in Antarctica for 8 hours as he was driving a dog team back to Little America from a supply dump out on the barrier. He was found (alive) curled up with his huskies. **March 7, 1929**: The first airborne expedition ended in disaster (*see* **Airlifts**). **March 25, 1929**: It was announced that Dick Brophy had resigned in NZ. Harold Livingston Tapley, former member of Parliament and ex-mayor of Dunedin, took over, in NZ anyway. In NZ a dozen expeditioners decided not to hang around in that country but to go back to San Francisco on the *Tahiti*, and arrived in the USA on April 12, 1929. They were Adams, Boehning, Womack, Jacobsen, Gawronski, Greason, Sjögren, Creagh, and Roos, as well as Ben Denson and John Olsson (firemen from the *Eleanor Bolling*), and finally Wolfgang, who had never made it south after all. They were met by Robert S. Breyer, who represented Byrd on the Pacific Coast, and fêted everywhere they went. Meanwhile, back at Little America, the boys had plenty to occupy them, like trying to find Amundsen's old hut, doing ballooon tests, making radio calls, watching movies, reading, boxing, building a snow gym, crawling down crevasses, and watching Dana Coman run naked between houses. **Sept. 5, 1929**: The *C.A. Larsen* and the *Sir James Clark Ross* passed through the Panama Canal en route to San Pedro, Calif., where they would be loaded up with provisions, movies, books, phonograph records, and letters for Byrd. Harry Adams sailed with them. In NZ the men had been working on their 2 ships. **Oct. 15, 1929**: In Antarctica the first major sledging trip of the spring began, when Walden (the leader), DeGanahl (navigator), Bursey, and Braathen set off south from Little America with 3 dog teams to blaze a trail for Larry Gould's Southern Geological Party in November. They set up 4 depots, 50 miles apart, each depot stocked mainly with dog food. **Oct. 21, 1929**: Walden's party was 61 miles south of Little America. **Oct. 26, 1929**: Walden's party had passed the halfway mark and had created two depots. By nightfall they had only 63 miles to go. **Oct. 28, 1929**: During the night, Walden's party had reached 81°S, and established the 3rd depot. But between them and the 4th depot site lay the crevasses. In the meantime 5 dog teams, handled by Vaughan, Goodale, Thorne, Crockett, and Jack O'Brien, were relaying, i.e., stocking the depots with more supplies as far as 100 miles out from Little America. Meanwhile, that night, the relaying teams made it back to base. The 4 men in the deep south were bedeviled by the crevasses for 2 days, but made 81°45' S, and then returned. **Nov. 4, 1929**: Despite the Wall Street crash affecting some members, the 6-man Southern Geological Party set out for the Queen Maud Mountains, led by Larry Gould. They met Walden's supporting party coming back. The Gould party also consisted of Vaughan, Goodale, Crockett, Thorne, and Jack O'Brien. Their aim was to spend a month studying the Queen Maud Mountains, at the edge of the Polar Plateau. **Nov. 9, 1929**: They got to the second depot, and Walden's advance party got back to

Little America. **Nov. 18, 1929**: After several test flights by Parker, Balchen, Smith, and June, Byrd flew 440 miles to the south in the *Floyd Bennett* to lay a depot for the Gould party at the Queen Maud Mountains, and on his way back was forced to land 95 miles from Little America, the plane being out of gas. Smith was the pilot, and also aboard were June and McKinley. Balchen and Petersen flew out in the *Stars and Stripes* to bring fuel. **Nov. 28, 1929**: The highlight of the entire expedition was Byrd's flight to the Pole and back in the *Floyd Bennett*. At 3.29 P.M. (GMT), Thanksgiving Day, the plane took off from Little America, with Balchen (pilot), Byrd (navigator and commander), June (radio), and McKinley (photographer). At 8.45 P.M. they sighted Gould's party far below on the Ross Ice Shelf, and parachuted some supplies, messages and aerial photos taken by McKinley on Nov. 18. The plane reached the Transantarctic Mountains and Byrd chose to fly up the Liv Glacier. They had to jettison perhaps 300 pounds of food to be able to clear the plateau ridge at the top of the glacier. **Nov. 29, 1929**: At 1.14 A.M. Byrd radioed Little America that the Pole had been reached. Byrd dropped a U.S. flag weighted by a stone from Floyd Bennett's grave. They failed to find Amundsen's Carmen Land, and at 4.47 A.M. they made their first landing, at their fuel cache at the foot of the Queen Maud Mountains, the cache that had been laid 10 days before. About 6 a.m, they took off again, arriving back at Little America at 10.08 a.m, after 18 hours 30 minutes, of which 17 hours 26 minutes had been in the air. They had covered 1600 miles. Only a few days later Trygve Gran became the first of many over the years who have openly voiced doubt as to Byrd's claim. **Dec. 1, 1929**: Gould's party reached the Queen Maud Mountains. They tried to climb Liv Glacier, failed, and then tried the Axel Heiberg. **Dec. 4, 1929**: It was announced that Auckland radio expert Jack Orbell had joined the expedition, and was going to leave on the *City of New York*. **Dec. 5, 1929**: At 10.30 a.m Byrd made the 3rd attempt to fly over King Edward VII Land, with Parker flying, and also with McKinley and June. **Dec. 7, 1929**: June, McKinley, and Haines went up, and McKinley photographed the Bay of Whales. **Dec. 9, 1929**: C. Wilson signed on as a seaman on the *City of New York*. **Dec. 25, 1929** (give or take a few days): Byrd got a nice Christmas present. He had been made an admiral by a grateful U.S. government. **Jan. 5, 1930**: At 2.30 P.M. skipper Fred Melville pulled the *City of New York* out of her winter quarters of Dunedin Harbor, heading for Antarctica. Aboard were some new lads, all of whom had signed on on Dec. 9 — Griff Robinson (bosun), Newt Woolhouse and Alf Brustad (seamen), William Kelley and Eddie Royal (coal passers), William Gribben (messman), and W.J. Armstrong, all New Zealanders. Jack Bird, an American ornithologist, also came aboard as a seaman. Haldor Barnes was aboard too, going to join the Norwegian whaler *Kosmos* at the pack-ice, to replace Ingvald Schreiner, the surgeon lost earlier that season. Jack Orbell was also aboard, with his new radio equipment. Benny Jett (the oiler) had gone back to the USA. **Jan. 6, 1930**: Gould's geological party was halfway back to base, being at Depot 4, in 82°16' S. **Jan. 8, 1930**: By morning Gould's party was only 229 miles from Little America. **Jan. 19, 1930**: At 9.30 A.M. the Gould party, after 3 months on the trail, and 1500 miles, staggered into camp. **Jan. 20, 1930**: June and McKinley went up in a plane and photographed Discovery Inlet. The *Eleanor Bolling* left Dunedin. Richard Perks was now chief cook (George Tennant having stayed on the ice), and Frank Paape was back on board. D. Blair, M.W. Dobson, and H. Austen were also new crewmen. Other new faces on board were Neville Newbold, Leslie Jones, Clem Samson (assistant radio operator), and Jack Morrison. Raymond Mercola was also part of the new half of the expedition. **Jan. 21, 1930**: Byrd flew over the barrier in the *Floyd Bennett* with June, McKinley and Petersen. Babe Smith was pilot. **Jan. 22, 1930**: The *City of New York* had reached the northern edges of the pack-ice, but it was impenetrable. The *Eleanor Bolling* was due in in a few days and the situation was dangerous. The expedition must be off Antarctica by Feb. 20 and if the 350-mile-thick pack didn't disintegrate by then it would mean another year on the ice, and the boys were very keen to get off. Norwegian and British whalers stood by ready to help. **Jan. 25, 1930**: The whales came into the bay named after them and the pack-ice started to crack. **Jan. 30, 1930**: The *Eleanor Bolling* reached the pack-ice, where she joined the *City of New York*, the *Kosmos*, the *C.A. Larsen*, the *Southern Princess*, the *Sir James Clark Ross*, and the *Nilsen-Alonso*. **Feb. 1, 1930**: The *Eleanor Bolling*, which had cruised as far south as Scott Island, got orders from Byrd to return to Dunedin, pick up coal and stores for the *City of New York*, and return as soon as possible. She left that day for NZ. **Feb. 7, 1930**: The *City of New York* broke through the pack into the Ross Sea, and the winterers were packing up as quickly as they could, so as to make a quick getaway. **Feb. 8, 1930**: The *Eleanor Bolling* arrived back in Dunedin. **Feb. 11, 1930**: The *Eleanor Bolling* left Dunedin, heading south for her 5th voyage to Antarctica. **Feb. 18, 1930**: The *City of New York* pulled into sight. **Feb. 19, 1930**: Little America was closed up, and the ship was heading north with everyone on board: Alexander, Balchen, Black, Blackburn, Braathen, Bubier, Bursey, Byrd, Clark, Coman, Crockett, Czegka, Davies, DeGanahl, Demas, Feury, Goodale, Gould and Gould, Haines, Hanson, Harrison, June, Lofgren, McKinley, Mason, Mulroy, O'Brien, Owen, Parker, Petersen, Rønne, Roth, Ricker, Siple, Smith, Strøm, Tennant, Thorne, Vander Veer, Vaughan, and Walden. **Feb. 26. 1930**: They cleared the pack-ice. **Feb. 28, 1930**: The *City of New York* met the *Eleanor Bolling* and transferred the dogs and some men, then sailed north. The *Eleanor Bolling* then met the *Kosmos* and transferred 27 dogs and their handlers, Bursey and Innes-Taylor, to that ship. Mason, who had appendicitis, also transferred to the *Kosmos*. **March 1, 1930**: The *Eleanor Bolling* met the *C.A. Larsen* and, as well as 39 dogs, and transferred Owen, McKinly, Rucker, Rønne, Siple, and Walden. The *C.A. Larsen* then headed for Dunedin. Larry Gould, Balchen, Bubier, Jack O'Brien, and Clark all stayed on the *Eleanor Bolling*, as she also headed (slower) for NZ. **March 2, 1930**: The *City of New York* crossed the Antarctic Circle, and both ships, the *City of New York* and the *Eleanor Bolling*, headed north to NZ, never far away but never in sight of each other. **March 10, 1930**: Both ships arrived at Dunedin Harbour together. The expedition was bankrupt. Vojtech took charge of the penguins on their return trip to the USA. McKinley set sail early for the USA to develop his film, and Harold June went on the same ship. **March 11, 1930**: Dr. Barnes, now on the *Kosmos*, was replaced by NZ doctor Hilton L. Willcox on the *Eleanor Bolling*, a ship that had taken on other new lads that day — Percy Hart, William Hamilton, and William Dobson. Harry Shrimpton was also aboard. **March 17, 1930**: The *C.A. Larsen* left Wellington with the dogs and Walden, Rønne, Vaughan, Goodale, Black, Alexander, Vojtech, and Walter Leuthner, the cook, bound for Balboa and NY. **March 22, 1930**: The *City of New York* left with Balchen, Bayer, Blackburn, Braathen, Bursey, Coman, Creagh, Crockett, Czegka, Davies, Feury, Chips Gould, Hanson, Harrison, Johansen, June, Melville, Mulroy, Esmonde O'Brien, Paape, Petersen, Roos, Roth, Shropshire, Siple, Strøm, Sutton, Tennant, Robinson, and Woolhouse. **March 27, 1930**: The *Marama* left NZ with McKinley, Parker, and Thorne on board, bound for San Francisco. **April 1, 1930**: The *Eleanor Bolling* left with Adams, Barter, Brown, Bubier, Buys, Clark, Demas, Foster, Gawronski, Larry Gould, Grenlie, Haines, Kessler, McGuinness, McPherson, Jack O'Brien, Perkins, Reichart, Thawley, Thorne, Paape, Shrimpton, and Willcox. **April 2, 1930**: The liner *Remuera* left with 2 expeditioners aboard. **April 3, 1930**: A stowaway, Colin Gillespie, was found on the *Eleanor Bolling*. **April 8, 1930**: Rucker and Vanderveer arrived in Brooklyn with 20 miles of movie. They had been the first to leave NZ, on the *Tamaroa* for Balboa, and there had transferred on March 30 to the *Santa Cruz* for Brooklyn. **April 11, 1930**: The *City of New York* arrived at Tahiti. **April 15, 1930**: The *Eleanor Bolling* arrived at Tahiti. The *C.A. Larsen* arrived at Balboa. McKinley, Parker and Thorne arrived in San Francisco on the *Marama*. **April 18, 1930**: The *City of New York* left Tahiti, twice, the first time having to take back 4 stowaways who had earlier run from a tramp. But she did take on an assistant cook, 30-year-old American Arthur Fritsh, who had run an unsuccessful coconut plantation there, but had been reduced to running a clothes-pressing machine in order to suport his wife and 4 children. **April 19, 1930**: The *Sir James Clark Ross* arrived in NY, commanded by Capt. Gerald Tortensen. **April 24, 1930**: The *Eleanor Bolling* left Tahiti. Smith and DeGanahl arrived at Balboa on the *Remuera*, and would spend a month flying in Panama while they waited for Byrd to

arrive. **April 24, 1930**: After much politicking in Dunedin, Byrd left for Wellington, where he boarded the steamer *Rangitiki* for Panama, along with Mr. Berkner (and Mrs. Berkner), Haines, Konter, Lofgren, and Owen. **April 25, 1930**: The *C.A. Larsen* steamed into New York, minus Rønne, who had stayed in Panama. Curiously, Alexander was listed on the ship's manifest as a stowaway. **April 30, 1930**: The *Eleanor Bolling* took the *City of New York* in tow in mid-Pacific. **May 14, 1930**: Byrd arrived in Balboa. **May 17, 1930**: 1016 miles from Balboa, the *Eleanor Bolling* dropped the tow to go it alone to Balboa. **May 23, 1930**: The grimy *Eleanor Bolling* pulled into Balboa, to be met by Byrd. She took on 130 tons of coal and set out the next day to go back for the *City of New York*, at that point 700 miles out. **May 27, 1930**: The two ships met up and towing was resumed. **May 31, 1930**: The two ships arrived in Balboa. **June 19, 1930**: Byrd arrived in NYC. The reception for him and his men was tremendous. The expedition was over. Rounding out the roster for this expedition (but unable to determine their movements precisely): Charles Aldous and M. Tracy (radiomen on the 2nd half of the expedition), R. Eva, W. Harvey, Hansen Hausten (he was a fireman on the 2nd half of the expedition), J. Walling, R. Young.

Byrd's 1933-35 Expedition. Abbreviated to ByrdAE 1933-35. By July 1930, a month after his return from ByrdAE 1928-30, word was already out — Byrd was thinking of a second expedition to Antarctica. Tom Mulroy, one of his engineers from the first trip, had said that within two years Byrd would be back. Byrd denied it. Mulroy was dead right. **March 9, 1933**: Byrd announced the new expedition. Harold E. Saunders was cartographer to the expedition, although he didn't actually go down. Likewise, Donald G. Shook, in charge of the mail. Leo McDonald and John McNeill were expedition managers, who would remain in NY. There were two ships, the flagship *Pacific Fir*, and the supply ship *Bear of Oakland*. **Sept. 21, 1933**: Byrd changed the name of his flagship to *Jacob Ruppert*, in honor of his principal backer. **Sept. 25, 1933**: At 10.51 A.M., the *Bear of Oakland* left Boston, marking the beginning of the expedition. In an absolutely last minute move, Terrence Keough, the skipper, who had failed to acquire his captain's papers, was replaced by Lt. Bob English, of San Diego, on the day of sailing. The rest of the personnel were: Bendik Johansen (ice pilot), Stephen Rose (1st mate), Burt Davis (2nd mate), George De Locke (chief engineeer; replaced by Leland Barter before sailing), Seth Pinkham (1st assistant engineer), Thomas Litchfield (2nd assistant engineer), Ed Roos (oceanographer and engine room wiper), Joe Hill (2nd cook; he would transfer to the *Jacob Ruppert* on the way south, as Byrd's mess boy), Ervin Bramhall (physicist), Albert Eilefsen and Finn Ronne (ski experts), William Mackay (physician), George Grimminger (meteorologist), Dick Black and Quin Blackburn (surveyors), and the crew: Thomas D'Amico (clerical), William Robertson, Hugh Dickey (fireman), Walfred Miller (sailmaker), Joseph Callahan (carpenter), Cornelius Royster (electrician), Joseph Coats, Andrew Christensen, Jad Albert (cook and steward), Vernon Boyd, Rudolph Van Reen, Fred Wilder, Russell Robinson (aeronautical engineer), Bud Waite (chief radio operator), Howard Lawson (seaman), George Frizzell (machinist; he went over to the *Jacob Ruppert* when Virl Davenport backed out of the expedition), Richard Watson (radio operator), Paul Kallenberg (baker and galleyman), Robert Armstrong, John Von der Wall, William G. Smith, Byron Gay, Clarence Abele, Dick Russell, and Henry Hough. Also aboard was Nome, a Spitz dog, and Snowshoes, a gray and white kitten with six toes on each of its forepaws. **Sept. 27, 1933**: Hjalmar Gjertsen was named commodore of the Byrd Antarctic Fleet, to sail on the *Jacob Ruppert*. **Sept. 28, 1933**: After experiencing dense fog outside Boston, the *Bear of Oakland* docked at Bayonne, NJ, to take on oil. Capt. English's wife came on board to say good-bye. **Sept. 29, 1933**: The *Bear of Oakland* left Bayonne. **Oct. 1, 1933**: The *Bear of Oakland* docked at Norfolk, Va., for final loading. **Oct. 5, 1933**: The *Bear of Oakland* had to pull into Southport, NC, to avoid a storm. **Oct. 6, 1933**: John Oliver Gorce was sworn in as postmaster for Little America, and Leroy Clarke as his assistant. **Oct. 10, 1933**: The *Bear of Oakland* was ordered to Norfolk for repairs. **Oct. 11, 1933**: The *Jacob Ruppert* left Boston. George Noville, Byrd's chief aide, was in charge of this part of the expedition. The ship's crew were: Bill Verleger (captain), Hjalmar Gjertsen (commodore), William O'Brien (1st mate), Henry Burke (2nd mate; aged 46, from Mass.), J.J. Muir and Thomas Cowell (3rd mates), Joe Healy (4th mate), Walter Queen (chief engineer), Morgan Crisp (1st assistant engineer; he never made it; went to Denmark instead; q.v. anyway), William Manson (2nd assistant engineer), Peter MacCurrach (3rd assistant engineer), John McNamara (boatswain), Fred Dustin, Malcolm Mackintosh, and Calvin Toler (able seamen), Gus Shogren (ordinary seaman), Edgar Cox, Octavius Davis, and Wilfred Lowd (carpenters), H. Hodgins (quartermaster), Granville Lindley (gyro compass electrician), Virl Davenport (machinist; he didn't make the trip, but q.v. anyway; he was replaced by George Frizzell), Frank Giroux, Guy Kelly, E.L. Tigert, and Walter Stewart (oilers), William Gaynor, Louis Colombo, Edward Bauman, Frank Mitchell, Phil Gargan, Anton Vestby (photographer), William Brockmuller, and Victor Niewoehner (firemen; Niewohner had transferred from the *Bear of Oakland*, on which he had been a mechanic), Lawrence Kennedy (sailmaker), John L. Hermann, Burt Creagh (steward), Leroy Clark (chief commissary officer), Al Carbone (cook), William Orr (mess/galley), Richard Burhoe, Gordon Fountain (never actually sailed on this vessel, as such; he would make his own way down to NZ), Joseph Gallant and Gordon Desmond (messmen), John Dyer (communications engineer), Thomas McCaleb (chief radio engineer), Clay Bailey, Stanley Peirce, and Guy Hutcheson (radio operators). Also on board were: Charles Morgan (geophysicist), Vic Czegka and Stevenson Corey (supply officers), Alan Innes-Taylor (chief of the dog department), Tom Buckley, Francis Dane, Ed Moody, Olin Stancliff, and Stuart Paine (dog drivers), Guy Shirey (medical officer and chief personnel officer), David Paige (an artist, hired by Byrd on this very day), Earle Perkins (zoologist), Paul Siple (biologist; he and Perkins shared a cabin), Alton Lindsey (assistant biologist), Tom Poulter (senior scientist), Cyclone Haines (meteorologist), Kennet Rawson (aide to Byrd), Chips Tinglof, Charlie Murphy (communications officer), Jim Sterrett (biologist and pharmacist), Bill McCormick (autogyro pilot), Pete Demas, Ralph Smith (assistant pilot), Dick Russell (socialite and general assistant), and John Herrmann (Paramount news cameraman). Byrd was in New York, but would join the ship later. There were 3 airplanes, the *William Horlick*, the *Miss American Airways*, and the *Blue Blade*; a snowmobile; and an autogiro, the first in Antarctica, the *Pep Boy's Snowman!* There were also 153 dogs, 3 head of cattle, 2 goats, 2 pigs, 2000 tons of food, and 4 tractors. This was the largest motorized squadron to date in Antarctica. **Oct. 12, 1933**: The *Jacob Ruppert* docked at Bayonne, NJ, to take on gasoline, fuel, and other supplies, and to discharge a few crew members. Burke, the chief officer, left the expedition (some said because he refused to milk the cows), and his place was taken by Muir, the 3rd mate. **Oct. 14, 1933**: The *Jacob Ruppert* left Bayonne at 11.20 P.M. **Oct. 15, 1933**: The *Bear of Oakland* put in at Newport News for repairs. Kate Smith visited the ship. FDR was supposed to also, but never did. **Oct. 21, 1933**: The *Jacob Ruppert*, which had sailed to Newport News to meet the *Bear of Oakland*, left that harbor heading south. **Oct. 30, 1933**: The *Jacob Ruppert* arrived at the Panama Canal. Harold June, chief pilot, was now aboard. Three of the 150 huskies had been lost to the heat. **Nov. 12, 1933**: The *Bear of Oakland* arrived at the Panama Canal. Two days out of Norfolk, they had discovered a stowaway, Bob Fowler, and put him to work as a messboy. He would prove valuable, so they kept him on. At Balboa, Bernard Skinner was taken on the *Bear of Oakland* as dog driver and tractor driver. **Dec. 4, 1933**: One of the dogs hanged himself. Another had already fallen overboard on the passage from Panama. **Dec. 5, 1933**: The *Jacob Ruppert* arrived in Wellington, NZ. 18 men were signed on there, including A.L.G. McLennon, Eric Griffiths, Percy Dymand, B.O.J. Bradley, Jack Burt, Lawrence Cox, P. Dempster, Bryan O'Brien, Jim Sissons, Peter Barbedes, Henry Bayne, Bernard Fleming, Bob Young, Edward Hawlley, Newt Woolhouse (he had been part of ByrdAE 1928-30), George Kerr, T. Johnson, Jim Sissons (radio operator), and Dr. Hilton Willcox (he had been part of ByrdAE 1928-30). Three men were dropped. **Dec. 12, 1933**: The *Jacob Ruppert* left Wellington. 19 hours out, Finn Ronne found 3 stowaways in one of the lifeboats — Robert E. Christian, Geoffrey B. Wray, and Michael Pilcher, all Auckland lads, the eldest being 23. They

were signed on as deck hands, bringing the total number of men on the ship to 95. **Dec. 20, 1933**: Klondike, one of the cows, had a bull calf named Iceberg as they were approaching the Antarctic Circle. **Dec. 22, 1933**: Byrd made a flight, with June at the controls, and also with aerial photographer J.A. Pelter, Petersen, and Bowlin. **Dec. 24, 1933**: Olaf, a husky, tried to off himself by jumping overboard. Fred Dustin finally got him out of the drink, and Innes-Taylor got him drunk on good whiskey, which led to a rash of threatened suicides on the ship, both canine and human. **Dec. 27, 1933**: Henry Bayne was now chief officer on the *Jacob Ruppert*. **Jan. 3, 1934**: The *Bear of Oakland* called in at Napier, NZ, to refuel. That day, from the *Jacob Ruppert*, Byrd, Bowlin, June, Pelter, and Petersen flew over the pack-ice. **Jan. 7, 1934**: Byrd, on the *Jacob Ruppert*, had been hemmed in by dense fog for days. "Don't the sun never shine around here?," grumbled Capt. Verleger, who had promised sunny weather all the way. At Byrd's request, Bernt Balchen and Chris Braathen, from Ellsworth's rival expedition, visited Little America. **Jan. 8, 1934**: Kanaka Pete, the rooster, died (*see* **Chickens**), thus bringing to an end Antarctica's first poultry farm. **Jan. 9, 1934**: "Little America is as you left it," radioed Ellsworth. **Jan. 11, 1934**: The *Bear of Oakland* left Wellington for Dunedin. That day conditions for the *Jacob Ruppert*, which had been dense fog and thick pack-ice, changed for the better. At 3.30 A.M., in 69°50' S, 152°21' W, Byrd took off for another flight, with June, Bowlin, and Petersen. In 2 hours 5 minutes they saw no land. **Jan. 16, 1934**: The *Jacob Ruppert* was now 150 miles north of Little America. **Jan. 17, 1934**: The *Jacob Ruppert* arrived at the Bay of Whales. **Jan. 18, 1934**: Part of the ice barrier collapsed, almost crushing the ship. June, Bowlin, and Hutcheson flew to Little America, and almost crashed on landing. They did, indeed, find Little America intact, and as they turned on the still-playable gramophone they heard their old song, "The Bells of St. Mary's." Finn Ronne found a desk on which his father had carved the son's name back in 1929. Byrd found the squeaking rubber ball his dog Igloo used to play with. The phone and the electric lights worked immediately. The base would now be known as Little America II. **Jan. 19, 1934**: Pete Demas heroically saved one of the 5 Caterpillar tractors from going into the water as it was being unloaded. Another one burst into flames and was destroyed. Unbelievably, another one burst into flames, but was extinguished. Two more had mechanical problems. **Jan. 22, 1934**: Dick Black, aboard the *Bear of Oakland*, learned that his wife had died. **Jan. 23, 1934**: The *Jacob Ruppert* was torn from its moorings by a gale and drifted away, marooning 20 men at Little America. **Jan. 25, 1934**: The ship was back. A road, 4½ miles long and 15 feet wide, was beaten between the ship and Pressure Camp, the depot where they were temporaily stocking the supplies, and it carried the supplies for the base and for the wintering-over party. Along Misery Trail (also known as The Bad Lands), which included a bridge over a crevasse known as The Bridge of Sighs, ran a never-ending stream of dog-sledges packed with supplies, and the *Miss American Airways* left every half hour on the same mission. **Jan. 26, 1934**: It looked as if the Bay of Whales was breaking up, which would have meant aborting the expedition. The ship was again torn from her moorings, marooning 43 men at Pressure Camp and another 4 at Little America. **Jan. 27, 1934**: The ship was back again. **Jan. 28, 1934**: For a third time the ship was torn from its moorings, this time as unloading was taking place. The pressure was on to unload the ship before Feb. 10, when the *Jacob Ruppert* had to sail or get stuck in the ice. They needed three straight clear days. **Jan. 29, 1934**: A crack appeared, threatening Pressure Camp and all the supplies stocked there. The effort to move stuff from there to Little America was prodigious. The *Jacob Ruppert* was able to moor again, and unload, but only briefly. The *Pep Boy's Snowman?* was unloaded, and Bill McCormick flew it to Little America. **Jan. 30, 1934**: The *Bear of Oakland* arrived at the Bay of Whales, and moored beside the *Jacob Ruppert*. **Feb. 5, 1934**: The cows were unloaded. **Feb. 6, 1934**: The *Jacob Ruppert* left for NZ, with a sick Dr. Shirey aboard, and a sick Capt. Verleger. **Feb. 9, 1934**: The *Bear of Oakland*, with Byrd aboard, went exploring. **Feb. 11, 1934**: Joe Pelter's father died in Virginia. **Feb. 13, 1934**: The *Bear of Oakland* got trapped in the ice. At the same time, on the trail to the base, Joe Healy, leading a 9-dog team, saw 7 of the dogs plunge into a crevasse before he could stop the sledge. He and Pete Demas managed to pull them out. **Feb. 15, 1934**: The *Discovery II* left Port Chalmers, NZ, bound for the Ross Sea, with Dr. Louis Potaka aboard. **Feb. 16, 1934**: The *Bear of Oakland* finally rammed her way through the pack, the worst pack-ice Byrd had ever seen. **Feb. 17, 1934**: The *Bear of Oakland* returned to the Bay of Whales, to find that the new station was technically afloat. There were fears that soon they would be broadcasting to the USA from an iceberg. **Feb. 18, 1934**: The *Jacob Ruppert* arrived at Port Chalmers, NZ, for the winter. **Feb. 25, 1934**: The *Bear of Oakland* rendezvoused with the *Discovery II* in the Ross Sea, and took aboard Dr. Potaka. **Feb. 26, 1934**: The *Bear of Oakland* sailed for NZ, fighting her way north in the dark of early winter, temperatures of-30 F, and raging gales and blizzards. Nome, the Siberian husky and ship's mascot, was left at Little America. However, Snowshoes, the cat with 6 fingers, was on board, as was a very pregnant Black Bottom, another mog they'd picked up in Dunedin. **March 1, 1934**: A dog team set out from Little America for Bolling Advance Weather Station, 123 miles away across the Ross Ice Shelf, where Byrd planned to winter-over alone. 6 men and 45 dogs. A blizzard cut radio contact. That same day, the Southern Sledging Party set out (see March 31, 1934 for details of that party). **March 2, 1934**: The *Bear of Oakland* escaped the ice heading north. **March 5, 1934**: June, Skinner, and Waite loaded a tractor and set out after the dog team. In 16 hours they found them camped 50 miles south of Little America, and pressed on. **March 12, 1934**: The *Bear of Oakland* reached Dunedin, where she would winter. **March 13, 1934**: The *Blue Blade* crashed 500 yards south of Little America. Schlossbach was flying it. Zuhn, Dustin, and Young were also in it. No one was hurt, but Zuhn was slightly cut. The *Miss American Airways* then flew out with 800 pounds of food for the depot 100 miles out, on the way to Bolling. **March 16, 1934**: The gasoline tank in the administration building caught fire, but was extinguished. As this was happening, Dr. Potaka removed Pelter's appendix. June and Demas left overland to set up Bolling. **March 17, 1934**: As the ice froze the Bay of Whales in, the danger of floating away disappeared. **March 18, 1934**: Bowlin and Bailey, returning in the *Miss American Airways* from Bolling, came down onto the ice, and were trapped, 15 miles from Little America. **March 20, 1934**: Byrd and McCormick flew out in the *Pep Boy's Snowman?* to find the missing aviators. They were asleep in their tent. A dog team arrived to rescue them, the autogiro couldn't get off the ground, and Byrd had to return by dog team to Little America. **March 22, 1934**: Bowlin flew the *Miss American Airways* back to Little America, with Bailey, Hutcheson, and Blackburn aboard. McCormick brought back the autogiro, with Swan, Poulter, and Dane. That left only Moody and Russell out there on the trail. **March 23, 1934**: A tractor party, led by June, arrived at Bolling to start building the base for Byrd. **March 24, 1934**: In -30° F, Byrd flew to Bolling in the *Miss American Airways* to supervise the setting up of his base. **March 28, 1934**: The construction crew of June, Siple, Waite, Tinglof, Dustin, Black, and Petersen, left Byrd alone at Bolling. Byrd had been planning this solitary stay since 1930. Poulter was left in command at Little America. **March 31, 1934**: The Southern Sledging Party returned to Little America after a month out on the Ross Ice Shelf. Innes-Taylor led the party, with Ronne, Paine, and Black. Black was injured and had to be brought back by tractor. There were 3 teams of 9 dogs each. Two died in harness — one a Labrador in Ronne's team, and the other, Skeela, a wheel dog, had to be shot. At the 75-mile depot on the homeward march, Neige, a file dog on Innes-Taylor's team, collapsed. They carried him on a a sledge for a while, then let him walk. He drifted farther and farther behind, and the next day disappeared. Altogether, this party had covered 180 miles south, and the same distance back. Out of their 31 days on the trail, blizzards had prevented all movement on 13 of them. **April 20, 1934**: Winter arrived in Antarctica. The 1934 wintering-over shore party comprised 56 men: Byrd, Poulter (2nd-in-command), Haines (3rd in command), Abele, Bailey, Black, Blackburn, Bowlin, Bramhall, Boyd, Carbone, Clark, Corey, Cox, Dane, Demas, Dustin, Dyer, Eilefsen, Bernard Fleming, Grimminger, Herrmann, Joe Hill, Hutcheson, Innes-Taylor, June, Lewisohn, Lindsey, McCormick, Miller, Moody, Morgan,

Charles Murphy, Noville, Paige, Pelter, Perkins, Petersen, Paine, Potaka, Ronne, Rawson, Russell, Schlossbach, Siple, Skinner, Ralph Smith, Stancliff, Sterrett, Swan, Tinglof, Von der Wall, Wade, Waite, Young, and Zuhn. For Byrd it was -63° F, and he was alone. **May 9, 1934**: Dog Town was completed at Little America. **May 22, 1934**: A 12-day spell of unbelievably warm weather began in Antarctica. **May 24, 1934**: The temperature at Little America was 25°F, and this was winter! **June 1934**: Byrd started to suffer from the fumes of the generator that powered his radio set. **June 21, 1934**: Toby, the great husky, disappeared from Little America. **July 2, 1934**: Toby returned to Little America, after 10 days out on the ice. No one knew what he was doing out there, or how he had survived. Jock's frostbitten tail was amputated. **July 6, 1934**: Byrd went off the air, and was not heard of for 9 days. **July 12, 1934**: Bill Verleger arrived back in the USA, at Los Angeles. That night, at Little America, was witnessed the greatest meteor shower anywhere on Earth since 1833. **July 18, 1934**: Byrd's home in Boston was robbed. Police were having a problem handing a summons to Byrd to appear in court as a witness. **July 20, 1934**: In a radio conversation, Byrd told Poulter he had a bad arm. Then the radio went out again. Byrd's main radio was out, and he was now using a hand-cranked set. Poulter, Skinner, Waite, Petersen, and Fleming set out to rescue Byrd in a tractor. **July 23, 1934**: Poulter's party had to turn back after covering about half of the 123 miles to Bolling. **July 24, 1934**: Poulter's party returned to Little America, after an abortive trip of 186 miles, the longest journey ever undertaken in winter in Antarctica to that time. **July 27, 1934**: Byrd re-established contact, and learned that Poulter's team had had to turn back. **July 28, 1934**: The first seal ever seen at the Bay of Whales during winter, a monstrous Weddell. **Aug. 4, 1934**: Poulter left Little America again in Tractor #3, in another rescue attempt, with Demas driving the tractor, and Waite as radio engineer. **Aug. 7, 1934**: Poulter's party was stopped again, and returned to base. **Aug. 8, 1934**: Poulter, Demas, and Waite set out a third time in Tractor #1. **Aug. 10, 1934**: After a daring and desperate journey, Poulter's crew arrived at Bolling. Byrd was sitting on the roof of his hut, waiting for them. "Hello, fellows," he said. "Come on down, and get warm. I have some hot soup for you" (an ever so slight variation on the words to be found under the entry Bolling Advance Weather Station). Byrd had been alone for 4½ months. **Sept. 4, 1934**: The autogiro made its first flight of the new season, up to 7200 feet, piloted by McCormick, thus opening spring operations at Little America. **Sept. 23, 1934**: The plane *William Horlick* was dug out of the snow. **Sept. 28, 1934**: A 4-man party, June (leader), Von der Wall (driver), Rawson (navigator), and Petersen (radioman), set out from Little America II in Tractor #1, the Citroën, at 8.15 A.M., to lay dumps of food every 35 miles, as well as a depot, all the way to Mount Grace McKinley, in the Edsel Ford Range, 240 miles east of Little America II, for the benefit of Paul Siple's sledge party that would later travel into Marie Byrd Land. By nightfall they had covered 35 miles. **Sept. 30, 1934**: The autogiro crashed after 10 flights. McCormick suffered a broken arm. **Oct. 3, 1934**: McCormick spoke to his mother. **Oct. 7, 1934**: Tractor #2, with Noville, Hill, and Skinner, set out for Bolling, with 3000 pounds of dog pemmican for the upcoming sledge parties. **Oct. 11, 1934**: Noville's party reached Bolling. **Oct. 13, 1934**: Bowlin flew out to Bolling to pick up Byrd and Poulter. At 2.20 P.M. they were back at Litle America. Byrd had been away 12 days short of 7 months. **Oct. 14, 1934**: The first of the sledging parties, the Marie Byrd Land expedition, consisting of Siple, Wade, Corey, and Stancliff, left Little America for a 3-month trip in the field, with three 9-dog teams. Stancliff's old lead dog, Slim, had foundered, a few days before and he was breaking in a new dog. Ronne and Eilefsen were the support group. **Oct. 16, 1934**: Quin Blackburn's party, which included Paine and Russell, set out for the Queen Maud Mountains. **Oct. 20, 1934**: June's 4-man party returned successfully to Little America in Tractor #1, with only 25 gallons of fuel left. They had proved the worth and practicality of automotive land transport in Antarctica. **Oct. 24, 1934**: The 2nd phase of the the southern operations began with Innes-Taylor leading out his dog teams and Pete Demas leading out two tractors, Numbers 2 and 3, traveling all together as support team for Siple's Marie Byrd Land party and Quin Blackburn's geological party (with Paine and Russell), and heading for the Queen Maud Mountains, 425 miles away, where they would split up for their respective missions. With Demas were Bramhall and Morgan, and Joe Hill and Bud Waite. **Oct. 26, 1934**: The *William Horlick* was tested by June and Bowlin. Ralph Smith also tested the *Miss American Airways*. **Nov. 1, 1934**: Pete Demas's tractor expedition got into trouble with crevasses around the 81st parallel. **Nov. 3, 1934**: The *William Horlick* was tested again, this time with Byrd aboard. Skinner made a parachute jump. **Nov. 5, 1934**: Siple's Marie Byrd Land party reached Mount Grace McKinley. **Nov. 7, 1934**: Byrd was elected Mayor of Little America, on the Democratic ticket, 55-1. Byrd cast his vote for Al Carbone. **Nov. 14, 1934**: Ronne and Eilefsen, having laid the last of the depots for Blackburn's party, turned for home. **Nov. 15, 1934**: Byrd, June, Bowlin, Bailey, and Rawson flew an exploration flight of 6 hours and 50 minutes, and surveyed 50,000 square miles of unexplored territory to the east of Little America. **Nov. 16-17, 1934**: June, Bowlin, Rawson, Bailey, and Pelter flew to the 81st parallel, where Demas's tractor expedition was in trouble. The *William Horlick* was in the air 6 hours and 46 minutes. **Nov. 19, 1934**: June flew another recon mission over Marie Byrd Land, with Bowlin, Pelter, Rawson, and Petersen. **Nov. 22, 1934**: June, Ralph Smith, Rawson, Bailey, and Pelter set out on a long recon flight. **Nov. 24, 1934**: Byrd, June, Bowlin, Rawson, and Petersen, flew the *William Horlick* on another recon mission. It was this flight that almost certainly disproved the existence of the Ross-Weddell Graben. **Dec. 2, 1934**: Demas's tractor group passed the crevasses. **Dec. 7, 1934**: Siple's Marie Byrd Land party turned for home, after 55 days out in the wilderness. **Dec. 14, 1934**: Gjertsen flew from New York, bound for NZ. **Dec. 29, 1934**: Siple's Marie Byrd Land party returned to Little America. Of the 36 dogs who went out, 3 didn't make it back. **Jan. 2, 1935**: The *Bear of Oakland* left Dunedin, bound for Little America. On board were 31 men. New faces included: Charles Anderson, of the U.S. Post Office Department; Dr. William Highet, of Dunedin, the ship's surgeon; physicist Glenn Bryan; Griff Robinson (2nd officer; he had just come off Ellsworth's expedition); John Murphy (boatswain), C.J. Garner, Ted Griswold (steward), T.W. Joss, Horace Robinson, Harold Hambleton (galley boy), William McCrystal, John Mathias (wiper), Neville Newbold (2nd mate), and J.W. Sorensen. **Jan. 12, 1935**: Quin Blackburn's party arrived back at Little America after 88 days. They had turned back at 87°S, 180 miles from the Pole, the closest land traverse to 90°S since Scott and Amundsen. **Jan. 20, 1935**: The *Bear of Oakland* arrived at the Bay of Whales. In one year the tractors had covered 12,500 miles of snow and ice. The airplanes had explored 450,000 square miles of territory (Byrd had predicted half a million). A purely scientific expedition, with masses of material gathered, no attempt was made to reach the Pole. **Late Jan. 1935**: The *Jacob Ruppert* arrived. New faces on the *Jacob Ruppert* for this 2nd half of the expedition: Thomas Van Reen (3rd officer), James Gillies (chief engineer), William Loudon (boilerman), Bert Paul (1st assistant engineer), John Ellis (2nd assistant engineer), P.O. Dornan, W.H. Clement, John Morrison, T.M. McLennon, D.R. Mackintosh, Cecil Melrose, Irving Spencer Ortiz (electrician), Robert Round, J.H. Himelright (mess boy), F.H.P. Schonyan, F.W. Smoothy, S.J. Sullivan, Thomas Sanderson, Fred C. Voight (postmaster for Little America), and Max Winkle (chief cook). **Feb. 6, 1935**: The two ships left the Bay of Whales. **Feb. 8, 1935**: The ships left Discovery Inlet, the *Bear of Oakland* with 37 penguins aboard. 12 of the females would die. **Feb. 18, 1935**: The *Jacob Ruppert* arrived at Port Chalmers, NZ. **Feb. 19, 1935**: Poulter got married in NZ. **Feb. 20, 1935**: The *Bear of Oakland* arrived in Dunedin, at 9 A.M. local time. **Feb. 26, 1935**: Byrd, who had flown to Auckland to meet his wife, who had sailed there from the USA, returned with her to Dunedin. **March 4, 1935**: Tinglof died in Dunedin. **March 13, 1935**: The two ships left Dunedin for the USA. Byrd took a train to Wellington. **March 23, 1935**: The *Mariposa* arrived in Los Angeles from NZ, with Charlie Murphy, Quin Blackburn, Herrmann, Petersen, McCormick, Paige, Rawson, and Charles Anderson aboard. **April 3, 1935**: Byrd arrived at the Panama Canal on the *Rangitiki*. **April 22, 1935**: The *Jacob Ruppert* arrived at the Panama Canal. **April 27, 1935**: The *Jacob Rup-*

pert left the Panama Canal, with Byrd aboard, bound for Norfolk. There is a check list of personnel aboard the *Ruppert* that day: Byrd, of course; the following personnel who had also wintered-over: Abele, Bailey, Bowlin, Barter, Boyd, Bramhall, Carbone, Leroy Clark, Corey, Edgar Cox, Dane, Demas, Dustin, Dyer, Grimminger, Haines, Hutcheson, Joe Hill, Lindsey, Moody, Noville, Paine, Perkins, Ronne, Russell, Schlossbach, Siple, Smith, Stancliff, Sterrett, Swan, and Wade. Also Vic Czegka (supply officer; he did not winter-over during this expedition). And the ship's crew: Commodore Gjertsen; Stephen Rose (captain); J.J. Muir (1st mate), Joe Healy (2nd mate), Thomas van Reen (3rd mate), John McNamara and Fred Voight (bosuns), James Gillies (ex chief engineer), Bert Paul (chief engineer), Peter MacCurragh (2nd assistant engineer), Walter Stewart (3rd assistant engineer), Octavius Davis and Wilfred Lowd (carpenters), Irving Spencer Ortiz (electrician), Cecil Melrose and E.L. Tigert (able seamen), Harold Hambleton (galley boy; he had come over from the *Bear of Oakland*), Phil Gargan (fireman), Frank Giroux, William Gaynor and Gordon Desmond (oilers), Bill Dornin (photographer and wiper), Eddie Roos and and J.V. Mathias (wipers), Percy Dymand, J.H. Himelwright, and B.B. Flood (mess men), and Max Winkle (chief cook). **May 10, 1935**: Byrd arrived in Washington, DC. **May 16, 1935**: Byrd arrived home in Boston.

Byrne, Frederick Donald "Fred." Some called him "Paddy," even though it was his grandfather who came from Ireland. b. Feb. 27, 1933, Eckington, Derbyshire, but from the age of 15 months raised in the mining village of Clowne, son of miner John Byrne and his wife Ada Taylor. He left school in 1949, joined the Met Office, did his national service in the RAF, and was in Scotland in Feb. 1953 when he saw an ad for FIDS, and applied. He was not due to be demobbed from the RAF until the November, but FIDS got him out early. He should have taken his medical in London, but, instead they allowed him to take it at the Army Hospital for Tropical Diseases, in Leith, Edinburgh. In May 1953 he sailed from the UK on the liner *Highland Brigade*, to Montevideo, and then caught the *Fitzroy* to Port Stanley, where he arrived on June 6, 1953. He worked there for FIDS until just after Christmas Day 1953, when he took the *John Biscoe* to Base F, where he wintered-over in 1954 and 1955 as meteorologist. From Christmas 1955 to May 1956, i.e., in the summer of 1955-56, he and Ash Widgery worked at Base Y, then they took the *John Biscoe* to Port Stanley, then back on the *Shackleton* to England. Fred went back to the Met Office, and was posted to the Shetlands for 6 months (replacing a very sick Taffy Winstone, who was being posted to Stornoway). On Dec. 26, 1956, in Chesterfield, he married June Pearson, and the following day they left England, bound for Port Stanley, where Fred worked for 3 years in the Met Office. They returned to London in March 1960, and Byrne spent 1960-64 in the Shetlands (in Scotland), then was attached to the RAF in Tobruk for 2 years. In 1970 he moved to Bourne, Lincs, where he settled. He did a year in the Persian Gulf, and, during the Falklands War, 6 months in Ascension, and then set up the new Met Office in Port Stanley. He retired from the Met Office.

Bystander Nunatak. 71°21' S, 159°38' E. An isolated nunatak rising to 2435 m, 8 km SW of Forsythe Bluff, well out from the W side of the Daniels Range, in the Usarp Mountains of Oates Land. Named descriptively by NZGSAE 1963-64, and in association with Spectator Nunatak. It was occupied as a survey and gravity station. NZ-APC accepted the name on July 16, 1964, and US-ACAN followed suit later that year.

Bystrov Rock. 71°47' S, 12°35' E. A small but prominent nunatak-like rock, 1.6 km SSE of Isdalsegga Ridge in the Südliche Petermann Range, in the SE part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1960-61, and named by the Russians as Skala Bystrova, for Soviet paleontologist Alexey Petrovich Bystrov (1899-1959), of Leningrad. US-ACAN accepted the translated name Bystrov Rock in 1970. The Norwegians call it Bystrovnabben (which means the same thing).

Skala Bystrova *see* **Bystrov Rock**

Bystrovnabben *see* **Bystrov Rock**

Bystry Stream. 62°06' S, 58°09' W. A fast-flowing stream at the W end of the Sukiennice Hills, at King George Bay, on King George Island, in the South Shetlands. It carries water from the area of Wet Crag, at the N margin of White Eagle Glacier. Named by the Poles on Sept. 1, 1999. The word bystry means "rapid." It was part of SSSI #34 (Lions Rump).

Byvågåsane *see* **Byvågåsane Peaks**

Byvågåsane Peaks. 69°25' S, 39°48' E. Three low aligned rock peaks surmounting the E shore of Byvågen Bay, between Skarvsnes Foreland and Honnør Glacier, on the E side of Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named this feature Byvågåsane (i.e., "the town bay peaks"), in association with Byvågen Bay. US-ACAN accepted the name Byvågåsane Peaks in 1966.

Byvågen *see* **Byvågen Bay**

Byvågen Bay. 69°23' S, 39°44' E. A small indentation in the E shore of Lützow-Holm Bay, between Skarvsnes Foreland and Byvågåsane Peaks, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Byvågen (i.e., "the town bay"). US-ACAN accepted the name Byvågen Bay in 1968.

Byway Glacier. 66°30' S, 65°12' W. A northern tributary of Erskine Glacier, flowing W from Slessor Peak, on the Loubet Coast, on the W coast of Graham Land. Photographed aerially by FIDASE 1955-57, surveyed from the ground by Fids from Base W in 1957, and mapped by FIDS cartographers from these efforts. So named by UK-APC on July 7, 1959, because it is a sledging route inferior to the main "highway" up Erskine Glacier. US-ACAN accepted the name in 1964.

C-16 Automatic Weather Station *see* **Mark II**

The *C.A. Larsen*. Formerly the Eagle Oil Transport Company 12,093-ton tanker *San Gregorio*, built in 1913, in Sunderland by Swan Hunter, she was bought by the Rosshavet Whaling Company, of Sandefjord (Johan Rasmussen and Magnus Konow) in Feb. 1926, renamed the *C.A. Larsen*, for the company's famous employee Carl Anton Larsen, and was the first large oil-fired tanker to be converted into a factory whaling ship (at Fredrikstad Mek., in 1926). She had a bow slip, and, at 12,759 tons, and with a power of 8000 hp, she was the largest whaler in the Rosshavet fleet. She was in Antarctic waters (the Ross Sea) in 1926-27. During the 1927-28 season she was about to enter Paterson Inlet, at Stewart Island, NZ, when she was carried by the tide onto Whero Rocks. She was carrying 76,000 barrels of oil, half of which were lost. However, she managed to extricate herself, albeit with a damaged hull, and went to Port Chalmers for repairs. She was back in Antarctica for the 1928-29 season (in which she brought back a million dollars worth of cargo, as well as losing one of her catchers in the Ross Sea — the *Star II*), and the 1929-30 season as part of the great *Kosmos* whaling fleet, and volunteered to play a part in ByrdAE 1928-30 (see that expedition for details). In order to give an idea of the make-up of a big whaling ship of those days, and the people who populated her, this a list of the Norwegian crew in the 1929-1930 season, who signed on at Sandefjord: Oscar Nilsen (captain; b. 1887), Alf Kristiansen (1st mate; b. 1895), Jakob Jakobsen (2nd mate; b. 1886), Bjarne Hansen (3rd mate; b. 1886), Olaf Olsen (4th mate; b. 1888), Frithjof Andersen (mate), Johan Haga (bosun; b. 1888), Ole Olsen, Aksel Hjalmar Simonsen, Isak Jakobsen, and Gullik Gulliksen (stewards), Berhnhart Arntsen (cook; b. 1890), Kristian Kristiansen (2nd cook; b. 1901), Johan Mos (baker; b. 1882), Sverre Raymond (galley boy; b. 1912), Johannes Sørensen, Harald Berggreen, Knut Gjertsen, Reidar Trevland, Kåre Mathiesen, Karl Benjaminsen, Kristian Antonsen, Kristian Sverinsen Helm, and Andreas Lie (mess boys), Kristian Johansen and Sigvald Andreassen (carpenters), Karl Gran, Johan O. Eide, Rolf Anker Pedersen, Adolf Kristoffersen, Rudolf Andersen, Johan Anker Johansen, and Ole Sørensen (seamen), Johan Jensen, Ragnvald Simonsen, Trygve Helgesen, Alf Andersen (ordinary seamen), Yngve Kleppan, Ragnar Hansen, and Hans Nilsen (youngmen), Bjarne Therstensen, Sigurd Karlsen, Johan Abrahamsen, Lindgaard Haugen, and Ore Trettan (deckboys; Mr. Trettan died on board during the voyage; he was 17), Petter Varild (chief engineer; b. 1883), Thor Christian

Paulsen (2nd engineer; b. 1884), Henry Iversen (3rd engineer; b. 1896), Frithjof Pedersen (4th engineer; b. 1904), Harald Jacobsen and Anders J. Andersen (engineers), Ivar Olsen (donkeyman; b. 1882), Thorleif Andersen and Harry Gogstad (repair men), Ole Svartangen, Sigurd Jacobsen, Sverre Svendsen, Sigurd Abrahamsen, Einar A. Riise, Johan Antonsen, Kristen Wilhelmsen, Thorbjørn Børresen, and Alf Martinsen (firemen), Agnar Ness, Arthur Kristensen, Sigmund Gulliksen, Gustav Wettermark, and Oscar Larsen (oilers; Mr. Wettermark was a Swede), Anders Haugen, Georg Olsen, and Karsten Haugen (blacksmiths; Mr. Olsen was a Swede), Petter Hansen and Christan D. Haug (radiomen), Botolf Brodtkorb, Eyolf Wold, Hans Engedahl, and Sigurd Bjønnes (boilermen), Anton Klaveness and Harry Solli (separators), Halfdan Hansen, Konrad Olaf Hansen, Edvard Mathiesen, and Kristian Johansen (blubber cookers), Carl A. Nilsen and Alfred Haugland (press coookers; Mr. Nilsen was a Swede, 60 years old), Hans Borgersen, Gustav Skorge, Kristian Svendsen, Magnus Larsen, Dagfin Jørgensen, Ole Karlsen, Alfred Josefsen, Håkon Andersen, Mathias Eliassen, Bjarne Berntsen, Wilhelm Østensen, Georg Mørk, Alfred Edvardsen, Simon Berntsen, Ole Børresen, Erik Solberg, and Jonny Johansen (blubber cutters; Mr. Josefsen was a Swede), Eilif Rambo, Hilmar Pedersen, Lars Olden, Anton Jørgensen, Ole Westergaard, Harald Grimholdt, Hans Hagen, Henry Hansen, Johannes Osvaldsen Braathen, Julis Sørensen, Arvid Lindegaard, and Ole Larsen (meat cutters; Mr. Lindegaard was a Swede), Mathias Klaveness, Ragnvald Sti, and Harald Emil Johansen (cutters), Ivar Johansen, Andreas Mikkelsen, Bjarne Lavold, Ole Hvidsten, Henrik Hagtvedt, and Gullik Hegstvedt (boiler cleaners), Alf Bolt-Hansen, Hans M. Halvorsen, Trygve Johansen, and Rolf Spange Norby (boiler stewers), Arthur Kristiansen, Thoralf Thorsen, Ole Olsen, Harald Johansen, Martin Thorsen, Leif Svanberg, Einar Larsen, Otto Hoff, Hans Trolas, Martin-Omsland Sørensen, Torger Navra, Wilhelm Karlsen, and Haakon Trevland (laborers), Sverre Sørsdal (ship's surgeon; b. 1900), Salmon Jørgensen, Ingemar Martinsen, Karl O. Stene (q.v.), and Edvard Jørgensen (gunners), Hans Karlsen (gunnery captain), Kristian Myrsve, Hans V. Hansen, Johan Stene, Alf Andersen, Anker Thorsen, Anker Johanessen, Mikal Hansen, Peder Kristensen, Henry Jørgensen, and Andreas Johansen (sailors). The *C.A. Larsen* was back in Antarctic waters in 1930-31, and was sold in Sept. 1936 to the Blåhval Whaling Company of Sandefjord (Jørgen Krag), being back in Antarctic waters, under charter to Germans, in 1936-37, 1937-38, and 1938-39. She was seized by the Nazis in May 1940, and used as a tanker throughout World War II. In June 1945 she was returned to Norway, and sold to the Antarctic Whaling Company, of Tønsberg, and renamed the *Antarctic*. As such, she was in Antarctic waters in 1945-46, 1946-47, 1947-48, 1948-49, 1949-50, 1950-51, and 1951-52. She usually had 10 catchers, among them the *Star III*. In Sept. 1952, at Kiel, she was converted into a 10,776-ton steam tanker, and in July 1954 was sold for scrap to a company in Hamburg, where she arrived on Aug. 7, 1954, and was finally broken up in April 1955.

Rocas Caballero *see* **Knight Rocks**

Isla Caballete *see* **Ridge Island**

Islote Cabañas *see* **Islote Alagon**

Punta Cabassa. 64°37' S, 62°26' W. A point in the region of Cape Anna, on the W coast of Graham Land, named by the Argentines.

Isla Cabeza *see* **Head Island**

Monte Cabeza *see* **Mount Cabeza**

Mount Cabeza. 64°09' S, 62°11' W. Rising to about 1150 m, between Bouquet Bay and Hill Bay, on the SE side of Paré Glacier, 1.5 km SW of Hales Peak, in the NE portion of Brabant Island, in the Palmer Archipelago. It was first named by ArgAE 1953-54, descriptively, as Monte Cabeza (i.e., "head mountain"), and appears as such on their 1954 chart, as well as on a 1957 Argentine government hydrographic chart. Photographed aerially by FIDASE in 1956-57. On Sept. 23, 1960, UK-APC named it (for themselves only) as Mount Morgagni, after Giovanni Battista Morgagni (1682-1771), Italian anatomical pathologist. US-ACAN accepted the Argentine name in translated form (i.e., Mount Cabeza) in 1965.

Seno Cabinet *see* **Cabinet Inlet**

Cabinet Inlet. 66°35' S, 63°10' W. An ice-filled inlet, 60 km long and 45 km wide at its entrance, and running in a NW-SE direction, it is a Larsen Ice Shelf indentation into the Foyn Coast of the E coast of Graham Land, between Cape Alexander and Cape Robinson, on Cole Peninsula. Photographed by RARE from the air in Dec. 1947, and surveyed at the same time by Fids from Base D, it was erroneously called Crane Inlet (*see* **Crane Glacier**), and as such appears on Ronne's map of 1949, and also, as Seno Crane (which means the same thing) on an Argentine chart of 1952. FIDS plotted it in 66°31' S, 63°25' W. On Jan. 22, 1951, UK-APC re-named it Cabinet Inlet, for the war cabinet which authorized Operation Tabarin in 1943, and as such it appears on a British chart of 1952, and in the British gazetteer of 1955. US-ACAN accepted the name in 1952. It appears on a 1953 Argentine chart as Bahía Gabinete ("gabinete" meaning "cabinet"), but on a 1957 Argentine chart as Ensenada Gabinete (this time a closer translation), and the latter is the name used in the 1970 Argentine gazetteer. Until 1963 Chile was calling it Seno Cabinet or Ensenada Gabinete, but that year the Hydrographic Institute of the Chilean Navy decided to name it (for themselves only) Ensenada Reales Cédulas, for Pope Alexander VI's papal bull of 1493, which gave the Spanish authority in this area. This cumbersome name appears on a 1964 Chilean chart, and also (after Seno Cabinet was rejected) in the 1974 Chilean gazetteer. It has since been re-plotted.

Islote Cabo Basso *see* **Basso Island**

The *Cabo de Hornos*. Argentine Navy transport ship, built by Príncipe, Menghi & Penco, in Buenos Aires, for Patagonian coastal work (see also the *Canal de Beagle* and the *Bahía San Blas*). She took part in ArgAE 1988-89 (Capt. Jorge Luis Carlos).

Punta Cabo del Medio. 64°04' S, 60°46' W. A point at the S side of Curtiss Bay, on the W coast of Graham Land. Named by the Argentines.

Cabo Gutiérrez Vargas Refugio. 62°57' S, 60°35' W. Chilean refuge hut built near Pendulum Cove, Deception Island, in the South Shetlands, in early 1956. It was abandoned in 1967, when the volcano blew. It is now a ruin.

Cabo Lorenzo Vega Refugio. 77°25' S, 33°23' W. Argentine refuge hut on the Filchner Ice Shelf, not far from Ellsworth Station. Inaugurated on Jan. 6, 1964, as Refugio Naval Cabo 2° Vega, or Cabo Lorenzo Vega, it was usually called Vega Refugio, or just Vega.

Isla Cabo Paredes *see* **Jingle Island**

The *Cabo San Roque*. An 18,000-ton, 169.58-meter Spanish ship built in Bilbao, and launched on April 23, 1955, for Ybarra & Co. and the Sociedad Española. With her twin ship the *Cabo San Vicente* (see below), she was the biggest cruise ship yet built in Spain. Her average speed was 20 knots, although she could do 22, and she could carry 231 persons. She made 3 cruises in Antarctic waters. On the first one, she left Salvador, Brazil on Jan. 16, 1973, bound for Buenos Aires, where the cruise actually began. She left there on Jan. 22, 1973, bound for Ushuaia, reaching there on Jan. 26, 1973. From there she crossed the Drake Passage. On Jan. 30, 1973 she visited Almirante Brown Station, and here she met the *Lindblad Exoplorer* and Jacques Cousteau's yacht *Calypso*. The following day she was in at Esperanza Station. Then she headed out of Antarctic waters. On Feb. 2, 1973 she was at Port Stanley, in the Falklands, and at Santos, in Brazil, on Feb. 9, 1973, where the 26-day cruise ended on Feb. 10. She was back for 3 individual 16-day trips to Antarctica during the 1973-74 season, alternating trips with the *Cabo San Vicente*, between Dec. 1973 and Feb. 1974. She was back in 1974-75 (alone), visiting the South Shetlands and the Antarctic Peninsula, under the command of Capt. José Luis Arria Balaga. However, the cruises (for both ships) proved unrewarding, and this was the last year. In 1977 she caught fire in Spain, but was saved, and sold later that year, her name being changed to the *Golden Moon*. In 1978 the Cuban government bought her as a troop transport, changing the name to *Africa-Cuba*. In 1982 she was sold to the Mogul Line, of India, as the pilgrim transport *Noor Jehan*, and in 1985 she was sold for scrap in Pakistan.

The *Cabo San Vicente*. An 18,000-ton, 169.58-meter Spanish tourist ship built in Bilbao, and launched on Oct. 8, 1956, for the Ybarra Co. She and the *Cabo San Roque* (see above), were the largest cruise ships yet built in Spain. Like the *Cabo San Roque*, her average speed was 20 knots, although she could do 22, and she could carry 231 persons. She made

three cruises in Antarctic waters between Dec. 1973 and Feb. 1974, alternating tours with the *Cabo San Roque*.

Islote Cabot. 63°23' S, 54°36' W. A little island off Heroína Island, in the NE part of the Danger Islands, to the E of Joinville Island. Named by the Argentines.

Cabral *see* **Sargento Cabral Refugio**

Islas Cabrales *see* **Hennessy Islands**

Pasaje Cabrales. 64°54' S, 63°07' W. A passage that opens between Mount Banck Island and Léniz Point, and allowing access to Lautaro Channel toward the S, off the W coast of the Antarctic Peninsula. Named by the Chileans for Gaspar Cabrales, a Chilean Navy cornet on the corvette *Esmeralda*, a hero in the Battle of Iquique, May 21, 1879. The Argentines call it Pasaje Trinquete.

Nunatak Cabre. 66°12' S, 61°32' W. Next to Nunatak Lagos, on Jason Peninsula, on the E coast of Graham Land. Named by the Argentines.

Cabrera Nunatak. 75°46' S, 128°12' W. A nunatak, 11 km NE of Putzke Peak, in the McCuddin Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974 for Quirino "Chino" Cabrera, USN, vehicle mechanic at Byrd Station in 1966 and 1969.

Seno Cabut. 62°56' S, 62°32' W. A fjord on the W side of Smith Island, in the South Shetlands. Named by the Argentines. It is also seen as Cabut Cove.

Cabut Cove *see* **Seno Cabut**

The *Cacapon*. (AO-52). A U.S. Navy twin-screw, geared turbine propelled 7144-ton oil tanker of the Cimarron class, built in Maryland in 1943, and named after the river in West Virginia. 553 feet long, with a 75 foot beam, and 39 foot depth, she could travel at 18 knots. She carried fuel to the ships fighting in the Pacific theatre during World War II (under Lt. Cdr. George Eyth), and to those in the Korean War. In between she was the tanker of the Western Task Group of OpHJ 1946-47, her job to fuel the other two ships of the group, the *Currituck* and the *Henderson*. She left San Pedro, Calif., on Dec. 2, 1946, Captain Ray A. Mitchell commanding (he had taken over 4 days before), with Lt. Cdr. Rhodes E. Day as executive officer. The *Cacapon* rendezvoused with the *Currituck* and *Henderson* at the Marquesas Islands on Dec. 12, and arrived at the pack-ice NE of the Balleny Islands, where she acted as weather station for the Western Group. In early Jan. 1947 she was operating off the coast of George V Land, and on Jan. 16, 1947, rendezvoused with the *Philippine Sea* at Scott Island. On Feb. 8, 1947 she re-fueled the *Currituck* and *Henderson*, and on March 3 left for Sydney, arriving back in California on April 8, 1947. On Dec. 3, 1947, Capt. Mitchell was succeeded by Capt. Mellish M. Lindsey, who died on board at sea an unlucky 13 days into his tour (Rhodes Day took over). The vessel was decommissioned in Aug. 1973.

Cacapon Inlet. 66°10' S, 101°00' E. An inlet, 3 km wide and 15 km long, between Thomas Island and Fuller Island, in the Highjump Archipelago, and bounded on the W by the Edisto Ice Tongue and on the E by the Knox Coast of Wilkes Land, it has a very narrow entrance in the Bunger Hills. Mapped from air photos taken by OpHJ in Feb. 1947. Named by US-ACAN in 1956 for the *Cacapon*. ANCA accepted the name on Oct. 22, 1968.

Caleta Cáceres *see* **Caleta Villegas**

Cáceres, Lorenzo *see* **Caleta Villegas**

Cachalot Peak. 65°38' S, 62°16' W. Rising to 1040 m, between Stubb Glacier and Starbuck Glacier (it is on the S side of that glacier), 5.5 km W of Mount Queequeg, near the Oscar II Coast, on the E coast of Graham Land. Surveyed by BAS personnel from Base E in 1963-64, and named by them for a type of whale. UK-APC accepted the name on July 21, 1976, and US-ACAN followed suit later that year. It appears in the British gazetteer of 1977.

Cachalot Rock. 60°48' S, 45°47' W. A term no longer used, except perhaps by the Russians. Seems to have been a rock to the SW of Buchan Bay, Laurie Island, and about 10 km S of Signy Island, in the South Orkneys. Named for a type of whale. The Argentines used to refer to it as Roca Cachalote.

Roca Cachalote *see* **Cachalot Rock**

Cache Heights. 73°27' S, 94°06' W. Broad, snow-covered heights, about 5 km long and 3 km wide, just NE of Bonnabeau Dome, in the Jones Mountains. Much lower than Bonnabeau Dome, these heights rise considerably above the adjacent ice surface. Mapped and named by the University of Minnesota Jones Mountains Party of 1960-61. A food cache placed here by the party during a blizzard was never recovered. US-ACAN accepted the name in 1963.

Playa Cachorros. 62°27' S, 60°47' W. A beach on the SE side of Bahía Mansa, between Punta Cachorros to the W and Punta Lobos to the E, on the E side of Cape Shirreff, on Livingston Island, in the South Shetlands. Named by the Chileans.

Punta Cachorros. 62' 27' S, 60°47' W. A point on the S coast of Bahía Mansa, which separates Playa Chungungo to the W from Playa Cachorros to the E, on the E side of Cape Shirreff, on Livingston Island, in the South Shetlands. Named by the Chileans.

Punta Cacique *see* **Labbé Point**

Mount Cadbury. 71°21' S, 66°38' W. Rising to 1800 m (the British say 1560 m), the most easterly of the Batterbee Mountains, ESE of Mount Ness, and 29 km inland from George VI Sound, on the W coast of Palmer Land. The coast in this vicinity was first seen and photographed from the air by Ellsworth, during his momentous flight of Nov. 23, 1935. However, this mountain seems to have been obscured from his line of sight by clouds or by intervening summits. The U.S. cartographer W.L.G. Joerg mapped it (as such) from these photos. Roughly surveyed in Oct. 1936 by BGLE, and named by Rymill for Lucy Bellows (1881-1956), who as the wife of Henry Tylor Cadbury (former director of the London *Daily News*, and a philanthropist; he and his wife were Quakers) was a major force in child welfare, and who raised a special fund to defray the cost of refitting the *Penola* at South Georgia in 1936. It was re-surveyed by FIDS in 1948-49. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears on a U.S. Hydrographic Office chart of 1955. BAS surveyed it yet again between 1962 and 1972, estimated its height at 1560 m, and plotted it in 71°22' S, 66°41' W, but its height and coordinates have since been amended.

Punta Cadena. 67°27' S, 67°36' W. A point in the area of Mount Veynberg, in the S part of Haslam Heights, on Arrowsmith Peninsula, in Graham Land. Named by the Argentines.

Cadenazzi Rock. 76°18' S, 112°39' W. A rock outcrop, 2.5 km E of Roper Point, on the W slope of Mount Takahe, in Marie Byrd Land. Mapped by USGS from ground surveys and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1975 for Lt. Michael P. Cadenazzi (b. April 1, 1947), USN, LH-34 helicopter commander who flew close support missions for USARP scientists in Antarctica, 1969-70 and 1970-71.

Cadete Guillochón Refugio. 65°59' S, 65°59' W. Argentine refuge hut built on the W coast of Rabot Island, in the Biscoe Islands, off the NW coast of the Antarctic Peninsula. It was inaugurated on Feb. 24, 1957, as Refugio Naval Cadete Naval Edgardo Luis Guillochón, but was known more popularly as Cadete Guillochón, or just Guillochón, It was used until the following month.

Cadieux González, Miguel. Ordained on Dec. 17, 1932, he was the first Chilean Catholic chaplain in Antarctica, during ChilAE 1948-49. In the 1950s he was on Easter Island.

Cadle Monolith. 71°40' S, 60°58' W. A conspicuous, somewhat isolated bare rock monolith or headland, rising to 215 m, at the E end of Condor Peninsula, 15 km SE of Cape MacDonald, on the Black Coast, on the E coast of Palmer Land. Seen from the air on Dec. 30, 1940, by USAS 1939-41, and surveyed from the ground in Nov. 1947, by a combined team of RARE and Fids from Base E. Photographed from the air by USN in 1966, further surveyed from the ground by BAS personnel from Base E in 1972-73, and mapped by USGS in 1974 from these efforts. Named by US-ACAN in 1976 for Gary L. Cadle (b. June 28, 1947), USN, electrician who wintered-over at Palmer Station in 1973. It appears on a British map of 1976, and UK-APC accepted the name on July 21, 1976.

Glaciar Cadman *see* **Cadman Glacier**

Cadman Glacier. 65°37' S, 63°47' W. A glacier, 11 km long, and 2.5 km wide at its mouth, flowing NW into the head of the S arm of Beascochea Bay, on the Graham Coast, on the W coast of Graham Land. Discovered and roughly surveyed in 1909 by FrAE 1908-10. Surveyed in its lower reaches in Aug. 1935 by BGLE 1934-

37. Named by UK-APC on Sept. 22, 1954, for John Cadman (1877-1941), oil magnate, and patron of BGLE 1934-37, who was created Baron Cadman in 1937. US-ACAN accepted the name in 1955, and it appears on a U.S. Hydrographic Office chart of that year, as well as the British gazetteer of 1955, and on a 1957 British chart. It appears on a 1962 Chilean chart as Glaciar Cadman, and that was the name accepted by the 1974 Chilean gazetteer. The Argentines also call it Glaciar Cadman.

Cadwalader Beach. 76°58' S, 166°53' E. A beach, 1.3 km long and 0.4 km wide at its widest point, at the S end of Beaufort Island, in the Ross Archipelago. There is easy access to the beach from the sea when the coast is ice-free, and there is a large Adélie penguin rookery here. Named by NZGSAE 1958-59 for Capt. John Cadwalader (b. 1922), USN, chief of staff to the U.S. Antarctic Projects Officer, who assisted the expedition. NZ-APC accepted the name on May 26, 1960, and US-ACAN followed suit in 1962.

Cadwalader Inlet. 72°07' S, 96°22' W. An ice-filled inlet, indenting the NE coast of Thurston Island for 35 km between Evans Peninsula and Lofgren Peninsula. Discovered in Feb. 1960 on helicopter flights from the *Burton Island* and the *Glacier*, during the Bellingshausen Sea Expedition Named by US-ACAN in 1960, for Capt. John Cadwalader (*see* **Cadwalader Beach**), representative of the Task Unit commander aboard the *Burton Island* in Feb. 1960. Originally plotted in 72°04' S, 96°18' W, it has since been re-plotted.

Cady Nunatak. 77°13' S, 142°51' W. A nunatak, 5 km E of Mount Ziegler, in the NE part of the Allegheny Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Frederick M. Cady (b. 1936), who had not long graduated from Penn State when he became USARP ionosphere physicist at Byrd Station for the winter of 1968. After the expedition, he taught for 10 years in NZ, getting his PhD from the University of Canterbury in 1980, and later became professor of computer and electrical engineering at Montana State University.

Monte Café *see* **Monte Sagues**

Punta Café *see* **Café Point**

Café Point. 64°39' S, 61°59' W. A point, 3 km S of Zapato Point, and 3 km E of Nansen Island, in Plata Passage, on the E side of Wilhelmina Bay, on the Danco Coast, on the W coast of Graham Land. Roughly charted on Feb. 7, 1898, by BelgAE 1897-99. The name Punta Café first appears on an Argentine government chart of 1954, and on another from 1957. In 1956-57, it was photographed aerially by FIDASE, and surveyed from the ground by Fids from Portal Point. On Sept. 23, 1960, UK-APC named it (for themselves only) as Lana Point, for Francesco de Lana (1631-1687), an Italian Jesuit who made the first properly formulated proposal for a lighter-than-air aircraft, in 1670. It appears as such on a British chart of 1961. US-ACAN accepted the translated name Café Point in 1965.

Caffin Valley. 77°19' S, 160°36' E. A broad, ice-free cirque-type valley, between Mount Bastion and Gibson Spur, in the Willett Range of Victoria Land. To the N it opens out and lies as a distinct valley/terrace above the Webb Glacier Valley-Barnacle Valley system. Plotted by the New Zealanders in 77°17' S, 160°50' E. Named by NZ-APC on May 2, 1985, for James Maurice Maitland Caffin, NZ Antarctic historian who, between 1973 and 1984, was editor of *Antarctic*, the magazine put out by the NZ Antarctic Society. US-ACAN accepted the name.

Cagle Peaks. 79°33' S, 85°28' W. A group of sharp peaks that surmount the S end of the White Escarpment, in the Heritage Range. Named by the University of Minnesota Geological Party in 1963-64, for Maj. Paul Marvin Cagle (b. June 21, 1917, East Bend, Champaign, Ill. d. Nov. 15, 1998, Champaign, Ill.), World War II army veteran, and helicopter commander, who assisted the party. US-ACAN accepted the name in 1966.

Mount Cahill. 74°53' S, 71°14' W. One of the Sky-Hi Nunataks, it rises to 1755 m, ENE of Mount Carrara, in the Ellsworth Mountains of Ellsworth Land. Named by US-ACAN in 1987, for Laurence James Cahill, Jr. (b. Sept. 21, 1924, Frankfort, Maine), physicist at the University of Minnesota at Minneapolis, principal investigator in upper atmospheric physics at Siple Station and Pole Station for many seasons from 1973. UK-APC followed suit with the naming on Feb. 15, 1988.

Cahoon, Sister Mary Odile. b. July 21, 1929, Houghton, Mich., daughter of William James Cahoon and his wife Ruth Smothers. She graduated from DePaul in 1954, and got her master's degree from the same university in 1958, in 1961 receiving her PhD in cellular physiology from the University of Toronto. She was an instructor at the College of Saint Scholastica, in Duluth, and a professor (and chairman of the biology department) there from 1961. Not only a biologist, but a Benedictine nun, she lived at McMurdo in 1974 under the direction of Dr. Mary Alice McWhinnie. They were the first women scientists to winter-over in Antarctica. She retired from Saint Scholastica in 2004, as senior vice president, and became treasurer of Saint Scholastica Monastery.

Cima CAI. 80°03' S, 81°23' W. Rising to 1121 m above sea level (according to the map), it is the southernmost summit of Gliozzi Peak, and 8 km SSE of the main summit, in the Douglas Peaks of the Heritage Range. From the W it looks like a nunatak. Climbed in 1997 by the Club Alpinista Italiano (CAI), who measured it at 1245 m. It was named by the Italians on Feb. 22, 2002. "Cima" means "summit."

Montes Caillet Bois. 65°02' S, 63°47' W. Mountains on Renard Island, at the entrance to Lemaire Channel, on the Danco Coast. Named by the Argentines.

Caillet Bois Refugio *see* **Capitán Caillet Bois Refugio**

Cain Nunatak. 63°34' S, 57°42' W. The more westerly of 2 isolated nunataks, rising to about 400 m, on the S side of Broad Valley, on Trinity Peninsula. Surveyed by Fids from Base D in 1960-61, named by them in association with nearby Abel Nunatak, and plotted by them in 63°33' S, 57°45' W. UK-APC accepted the name on Feb. 12, 1964, and US-ACAN followed suit that year. It appears in the British gazetteers of 1964 and 1974. It has since been re-plotted. The Argentines were calling it Cerro Roca del Paso, certainly by 1978, and it appears as such in the Argentine gazetteer of 1993.

Costa Caird *see* **Caird Coast**

Caird Coast. 76°00' S, 24°00' W. Also called Caird Land. The NW portion of the coast of Coats Land, between the terminus of Stancomb-Wills Glacier (20°W) and the area around Hayes Glacier (27°54' W), or between the Luitpold Coast and the Princess Martha Coast, in Queen Maud Land. The discovery, charting, and naming of this coast was done in various stages. On Jan. 12, 1915, Shackleton discovered and charted the part lying E of 23°W (i.e., what would, for a few decades, be called the Bruce Coast), and then, later that month, he sailed W along the rest of the coastline, naming the part between 74°00' S, 22°30' W and 76°40' S, 28°20' W for Sir James Caird (b. 1864. d. Sept. 27, 1954), Scottish jute magnate, baronet, ship owner, philanthropist, and principal backer of BITE 1914-17. It appears as such on the expedition map of 1919, and on a British chart of 1924. UK-APC accepted the name on Aug. 30, 1951, but with both segments of the coast together, and US-ACAN did the same in 1952. This enlarged Caird Coast appears on a British map of 1955, and in the British gazetteer of the same year. It was plotted in 75°25' S, 20°00' W. The coast was further re-charted during BCTAE 1955-58, and again, during the period 1973-79, this time using U.S. Landsat imagery. Its longitudinal boundaries are now defined as between 20°00' W and 26°40' W, and as such it appears on a German map of 1990. The Argentines call it Costa Caird.

Caird Land *see* **Caird Coast**

Cairn Hill. 63°30' S, 57°04' W. A hill with 2 summits, one of 475 m and the other of 460 m, 3 km E of the beach NE of Duse Bay, and 1.5 km SW of Mineral Hill, near the N end of Tabarin Peninsula, Trinity Peninsula, off the extreme NE portion of Graham Land. Surveyed and charted by Fids from Base D in 1946, and named by them for a cairn they built on the eastern of the 2 summits. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the British gazetteer of 1955, and on a British map of 1961. The Argentines originally named it (for themselves) as Cordón Don Bosco (for the religious order), and later Cerro Don Bosco, but seem to have settled on Colina Cairn. The Chileans call it Cerro Garrido, for aviation mechanic

Ezequiel Garrido Pino, who was on board the *Angamos* during ChilAE 1946-47, as part of the Chilean Air Force contingent.

Cairn Ridge. 82°35' S, 52°50' W. A rock ridge rising to 1010 m, adjoining the N side of the Dufek Massif, 3 km NE of Hannah Peak, in the Pensacola Mountains. A cairn was built here during a visit in Dec. 1957, by the US-IGY traverse party from Ellsworth Station who surveyed it. It was photographed aerially by USN in 1964, and from these photos and from the 1957 survey the USGS mapped it. US-ACAN named it in 1968, and it appears on a USGS map of 1969. UK-APC accepted the name on Dec. 8, 1971, and it appears in the British gazetteer of 1974.

Cairns, James. b. 1875, Glasgow. Moved to Dundee as a child, and became a seaman, working on trawlers in the North Sea. Able seaman on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04.

Cairns Glacier. 78°34' S, 86°00' W. On the W slope of the Vinson Massif, flowing W between Branscomb Glacier and Tulaczyk Glacier, into Nimitz Glacier, in the Sentinel Range. Named by US-ACAN on Nov. 1, 2006, for Stephen Douglas "Steve" Cairns (b. 1949), research zoologist with the department of invertebrate zoology at the Smithsonian, 1985-2006.

Massif Calais *see* **Mount Calais**

Monte Calais *see* **Mount Calais**

Mount Calais. 69°11' S, 70°15' W. A massive mountain, rising to 2347 m, 20 km NW of Cape Brown, at the NW side of Schokalsky Bay, and S of Roberts Ice Piedmont, in the extreme NE part of Alexander Island. First seen by FrAE 1903-05, roughly surveyed in 1909 by FrAE 1908-10, and named by Charcot as Massif Calais, for the French town. It appears as such on his map of 1912. It appears on a 1914 British chart as Calais Mount, but the British were calling it Mount Calais by 1916. It was re-surveyed from the ground in 1947-48 by FIDS, and that same season was photographed from the air by RARE 1947-48. It was plotted in 69°10' S, 70°18' W. UK-APC accepted the name Mount Calais on Sept. 8, 1953, and it appears in the British gazetteer of 1955. US-ACAN accepted the name in 1956. It appears on a 1947 Chilean chart as Monte Calais, and that was the name accepted by the 1974 Chilean gazetteer. The Argentines also call it Monte Calais.

Mancha La Calavera *see under* **L**

The *Calcaterra*. A 1253-ton American destroyer escort of the Edsell class. 306 feet long, she had a top speed of 21 knots, and was named for Herbert A. Calcaterra, a hero of World War II. Launched Aug. 16, 1943, by Brown Shipbuilding Company, in Houston, and commissioned as DE-390 on Nov. 17, 1943, H.J. Wuensch commanding. After World War II service she was placed out of commission in 1946, but brought back on Oct. 28, 1954 as DER-390, converted into a radar picket ship, and re-commissioned on Sept. 12, 1955. On Aug. 16, 1965 she left Newport, RI, under the command of Lt. Cdr. William C. Earl, and, via Panama and Lima, headed to Dunedin, operating out of that port for OpDF 1966 (i.e., 1965-66), going into Antarctic waters that season. She was back in Rhode Island on April 26, 1966 (when Bill Earl was promoted to full commander), and then went to Key West as a sonar school ship. On Aug. 21, 1967, under the command of Cdr. Brian McCrane, she left Key West, going through Panama, Pearl Harbor, Pago Pago, to Dunedin, and again, operated out of there for OpDF 1968 (i.e., 1967-68), again going into Antarctic waters. On May 3, 1968 she arrived back in Key West. Struck from the Navy Register on July 2, 1973, she was sold for $15,000 to the Gillette razor blade company for scrap on May 14, 1974.

Calder, William "Bill." b. 1924. He joined FIDS in 1949, as a radio operator, and sailed from Tilbury to Montevideo in late 1949, then on to the Falklands, and from there to winter-over at Base B in 1950 and 1951.

Isla Calderón *see* **Islote Calderón**

Islote Calderón. 63°18' S, 57°58' W. One of the Duroch Islands, just NW of Cape Legoupil, on the N coast of Trinity Peninsula. Named by ChilAE 1947-48, as Isla Comandante Rafael Calderón S., for the aide-de-camp who accompanied President Gabriel González Videla on his 1948 voyage to Antarctica. In 1951 the Chileans abbreviated this to Isla Calderón, and in 1959 re-defined the feature as an islote.

Punta Calderón. 64°44' S, 62°12' W. A point at the E side of the entrance to Piccard Cove, in Wilhelmina Bay, on the W coast of Graham Land. Named by the Argentines.

Mount Caldwell. 72°03' S, 101°33' W. A mountain, 3 km SE of Mount Lopez, in the Walker Mountains, near the W end of Thurston Island. Delineated from air photos taken by OpHJ 1946-47, and named by US-ACAN in 1960 for Capt. Henry Howard Caldwell. Originally mapped in 72°04' S, 101°46' W, and estimated at 3 km SE of Mount Lopez, it was later re-positioned and re-plotted.

Caldwell, Henry Howard. Known as Howard. b. Oct. 3, 1905, Rocklin, Calif., son of railroad conductor Elmer Caldwell and his wife Rachel. In 1923, he went to the Naval Academy, at Annapolis, where he was a football star. He married Dorothea G. Matz. During World War II he won the Navy Cross for heroism as commander of the *Saratoga*, in the Solomons, and was also a heroic pilot in New Guinea. He was captain of the *Pine Island* during OpHJ 1946-47, and, on Dec. 30, 1946, he narrowly escaped death when the plane in which he was observer crashed during a white-out, killing Hendersin, Lopez, and Williams (*see* **Deaths**, 1946, and **The *Pine Island***). He later lived in Jacksonville, Fla., and was promoted to rear admiral. He died on March 22, 1985, and was buried in the Academy cemetery, in Annapolis.

Caldwell Peak. 77°29' S, 167°54' E. Rising to about 1300 m, 1.5 km S of Oamaru Peak, and about 2.5 km N of Mount Terra Nova, on Ross Island. At the suggestion of Phil Kyle, it was named by US-ACAN in 2001, for David A. "Dave" Caldwell (b. 1961), geologist then doing his masters' degree at the New Mexico Institute of Mining and Technology, who worked two field seasons on Mount Erebus (the first, 1986-87), and who completed his Masters thesis on lava flows at the summit of the mountain. Since then, Mr. Caldwell has spent years in the Western states of the USA, as a mining geophysicist (usually gold). NZ-APC accepted the name on Feb. 21, 2001.

Caledoniafjellane *see* **Detroit Plateau**

The *Caledonian Star*. Built in Bremerhaven in 1965, as the fishing trawler *Marburg*, and launched on Feb. 26, 1966. In 1982 she was renamed *Lindmar*, and in 1983, in Gothenburg, Sweden, was converted into the passenger-carrying ship *North Star*. She was bought by Noble Caledonian in 1987, converted again (in Vancouver), and in 1989 became the 110-passenger tourist ship *Caledonian Star*. Rebuilt in 1990, she was sold in 1997 to Lindblad Travel out of the USA, was re-modeled in 1998, and was in Antarctic waters in 1998-99, 1999-2000 (Capt. Leif Skog on both voyages), and 2000-01 (captains Skog and Karl-Ulrich Lampe). She could carry 110 passengers. On March 2, 2001, she was struck by a 100-foot wave in the Drake Passage, but survived. In June 2001 she was sold, re-furbished, and re-named the *Endeavour*, operated under charter by Lindblad, and was in Antarctic waters in 2002-03. In 2005 she was renamed the 2557-ton, 87.7-meter *National Geographic Endeavour*, registered in the Bahamas, and was back in Antarctic waters in 2005-06. Not pretty, perhaps, but tough. An expedition ship, not a cruise ship.

Calendar Lake. 68°31' S, 78°27' E. An irregular lake, 200 m by 100 m, in the Vestfold Hills. Named by ANCA on July 26, 1983. Fossil shells collected here were used for carbon dating, hence the association with calendar (dates on a calendar, etc).

Isla Caleta Carnero *see* **^{2}Beer Island**

Isla Caleta Cordero *see* **^{2}Beer Island**

Refugio Caleta de Cobre *see* **Coppermine Cove Refugio**

Caleta Péndulo Refugio *see* **Péndulo Refugio**

Caleta Potter Refugio *see* **Jubany Station**

Caley Glacier *see* **Cayley Glacier**

Calf Point. 71°30' S, 169°45' E. Between the terminus of Nielsen Glacier and Penelope Point (1.5 km to the E), it forms the SE boundary of Relay Bay, on the W shore of Robertson Bay, in northern Victoria Land. Surveyed and named in 1911 by Campbell's Northern Party during BAE 1910-13, for the large number of young seals here. US-ACAN accepted the name, and it appears in the NZ provisional gazetteer of 1958.

Calf Rock. 70°31' S, 68°38' W. A rock mass rising to 500 m above sea level, 3 km NE of Lamina Peak, and 3 km inland from George VI Sound, on the E coast of Alexander Island. First photographed from the air by Ellsworth on Nov. 23, 1935, and mapped from these

photos in 1936 by U.S. cartographer W.L.G. Joerg. Surveyed from the ground in early 1949 by Fids from Base E, and named by them for its offlying position, being separated from the Lamina Peak ridge by faulting. UK-APC accepted the name on March 31, 1955, and it appears in the British gazetteer of 1955, plotted in 70°31' S, 68°41' W, and described as rising to 655 m. US-ACAN accepted the name in 1956. The feature has since been re-plotted, and its height more acccurately ascertained.

Calfee Nunatak. 74°19' S, 161°40' E. An isolated nunatak on the E side of Reeves Névé, 6 km W of Mount Fenton, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for David W. Calfee, field assistant at McMurdo, 1965-66.

Cerro Caliente *see* **Caliente Hill**

Caliente Hill. 62°58' S, 60°43' W. A geothermally heated hill, about 107 m above sea level, W of Albufera Lagoon, and 400 m inland from the end of the SW part of Fumarole Bay, on Deception Island, in the South Shetlands. Known colloquially by Spanish scientists as Cerro Caliente (i.e., "hot hill"). The name Caliente Hill was accepted by UK-APC on March 17, 2010. It is the site of Antarctic Specially Protected Area #140 (sub-site C).

California Plateau. 86°04' S, 145°10' W. An undulating, ice-covered plateau, 50 km long and between 3 and 20 km wide, at the E side of Scott Glacier. Its maximum height is Mount Blackburn (3275 m) at the S end. The NW side of the plateau is marked by the steep rock cliffs of the Watson Escarpment, whereas the SE side grades gradually to the elevation of the interior ice. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for the several branches of the University of California, which have sent many researchers to Antarctica.

Caliper Cove. 73°34' S, 166°56' E. A rounded, ice-filled cove, in Lady Newnes Bay, between the mouths of Wylde Glacier and Suter Glacier, along the coast of Victoria Land. Named by NZ-APC on April 19, 1966. The shape of the cove and the points that encompass it are almost symmetrical, suggesting calipers. US-ACAN accepted the name later in 1966.

Calkin Glacier. 77°46' S, 162°17' E. A small glacier flowing N from the Kukri Hills toward the terminus of Taylor Glacier, near Wright Valley, just W of Sentinel Peak, in Victoria Land. Charted by BAE 1910-13. Named by US-ACAN in 1964, for Parker Emerson Calkin (b. April 27, 1933, Syracuse, NY), Tufts University geologist here in 1960-61 and 1961-62. NZ-APC accepted the name on July 16, 1964.

Callahan, Joseph A. b. 1911, Quincy, Mass., son of Irish immigrant parents William and Margaret Callahan. He became a merchant seaman, and was the carpenter on the *Bear of Oakland*, during both halves of ByrdAE 1933-35.

The *Callas*. A 49-foot Argentine steel ketch, skippered by owner Jorge Trabuchi, which visited the South Shetlands and the Antarctic Peninsula in 1993-94 and 1994-95. Also aboard as part of the crew were 3 Swedes, a Finn, and the Chilean pilot.

Callender Peak. 75°18' S, 110°18' W. A precipitous and mainly ice-covered subsidiary peak on the Mount Murphy massif, 14 km ENE of the summit of Mount Murphy itself, on the Walgreen Coast of Marie Byrd Land. Photographed aerially by OpHJ in Jan. 1947, and mapped from these photos by USGS. Named by US-ACAN in 1967, for Lt. (later Cdr.) Gordon Warren Callender, Jr. (b. April 1945), USN, officer-in-charge of Byrd Station in 1966. NZ-APC accepted the name on June 29, 1967.

Callisto Cliffs. 71°03' S, 68°20' W. Two inland cliffs rising to 550 m, one forming the S margin of Jupiter Glacier and the other the E margin of Alexander Island, on George VI Sound. Mapped originally from trimetrogon aerial photographs taken by RARE 1947-58, and from ground surveys conducted by FIDS, 1948. The feature was surveyed again by BAS between 1962 and 1973, and plotted by them in 71°01' S, 68°20' W. Named by UK-APC on Dec. 20, 1974, after Callisto, one of the moons of the planet Jupiter. US-ACAN accepted the name in 1975, and it appears on a British map of 1984. It has since been re-plotted.

Bahía Calma *see* **Bahía Silva**

Bahía Calmette *see* **Calmette Bay**

Cabo Calmette *see* **Cape Calmette**

Cape Calmette. 68°04' S, 67°13' W. Marks the W extremity of a rocky peninsula which rises to over 625 m above sea level and projects for 5 km into Marguerite Bay from the Fallières Coast, to form the SW entrance to Calmette Bay, on the W coast of Graham Land. Discovered in Jan. 1909 by FrAE 1908-10, and thought by them to be an island, which Charcot named Île Calmette, for journalist Gaston Calmette (1858-1914), editor of *Le Figaro*, who gave Charcot two years' worth of back copies as reading material for the expeditioners. Calmette was shot to death by the wife of a politician he was attacking in the press. The expedition map of 1912 shows the feature thus, and it appears on a 1914 British chart as Calmette Island. It was re-defined by BGLE 1934-37, and appears as Cape Calmette on their map of 1938. UK-APC accepted the name Cape Calmette on Sept. 8, 1953, and US-ACAN followed suit. It appears in the British gazetteer of 1955. It appears on a Chilean chart of 1947 as Cabo Calmette, and that was the name accepted by both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974.

Île Calmette *see* **Cape Calmette**

Isla Calmette *see* **Cape Calmette**

Calmette Bay. 68°03' S, 67°10' W. A small bay, between Camp Point to the NE and and Cape Calmette to the SW, on the Fallières Coast, in the N of Marguerite Bay, just N of Stonington Island, on the W coast of Graham Land. Roughly charted by FrAE 1908-10, and more accurately charted by BGLE 1934-37, who named it in association with the cape. It appears on Rymill's 1938 map of that expedition, and on a FIDS chart of 1948. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit. It appears in the British gazetteer of 1955. It appears on a Chilean chart of 1947 as Bahía Calmette, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Caloplaca Cliff. 68°34' S, 78°27' E. A gneiss cliff, 2 km long and 30 m high, in the Vestfold Hills, facing S to SE, with prominent patches of the orange lichen Caloplaca visible from between one and two kilometers to the S. Named by ANCA on July 26, 1983.

Caloplaca Cove. 60°43' S, 45°35' W. Between Rethval Point and Pantomime Point, on the E coast of Signy Island, in the South Orkneys. Following much biological work here by BAS up to 1973, this feature was named by UK-APC on Dec. 20, 1974, for the abundant orange lichen Caloplaca which encrusts the seacliffs around the cove. US-ACAN accepted the name in 1975. It appears on a British map of 1975.

Caloplaca Hills. 86°07' S, 131°00' W. A distinctive group of rock hills, E of the Watson Escarpment, on the W side of Reedy Glacier. They include Mount Carmer and Heathcock Peak. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. The name was suggested by John H. Mercer for the orange lichen Caloplaca found here. US-ACAN accepted the name in 1967.

Calvé, Félix-Joseph-Olivier. b. June 21, 1811, Saint-Servan, France. Junior seaman on the *Astrolabe* during FrAE 1837-40.

Mount Calvin. 71°17' S, 165°06' E. Rising to over 1600 m, 6 km SE of Pilon Peak, in the S part of the Everett Range of Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. Calvin Luther Larsen (b. Aug. 24, 1927, Culbertson, Montana. d. Jan. 10, 2007, Sequim, Wash.), USN, navigator and VX-6 photographic officer in Antarctica during OpDF 1969 (i.e., 1968-69). He had joined the Navy in 1945, and had been the chief photographer's mate at Little America during the winter of 1957. His shots were used in the Sept. 1957 *National Geographic* article "Across the Frozen Desert to Byrd Station," but more important, he became a father while wintering on the ice. He retired as a lieutenant commander. His first name was used because the name Larsen has, if anything, been over-used in Antarctic place-names.

Calving. The discharging of icebergs into the sea from ice shelves, ice-sheets, or glaciers around the coast, as they break off. Warning: If you set up base on an ice shelf, it might calve into the sea, leaving you stranded.

Islote Calvo. 65°44' S, 65°05' W. A little island, 0.8 km wide, 360 m S of the extreme SE end of Duchaylard Island, in Grandidier Channel, off Cape García, between the Graham Coast and the N sector of the Biscoe Islands, off the W coast of the Antarctic Peninsula.

Named by the Chileans, for Lt. Jorge Calvo P., of the Chilean Army, who took part in ChilAE 1949-50. The Argentines call it Islote Morro.

The *Calypso*. Built as a 400-ton minesweeper in 1941 for the Royal Navy, by the Ballard Marine Railway Company of Seattle, and launched on March 21, 1942. She served in the Mediterranean during World War II, and in 1947 was struck from the Navy register. She was named *Calypso* (she had only had a number before that; no name), then plied between Malta and Gozo as a ferry, until 1950, when Loel Guinness bought her and leased her to Jacques Cousteau for one franc per month, as a research and oceanographic vessel. Cousteau turned her into a state of the art 402-ton, 139-foot wooden-hulled research ship, complete with submarines, diving saucers, and a helo pad. She was in Antarctica, anchored at Palmer Station in the 1972-73 summer season, and was back in Antarctic waters in the 1973-74 season, being anchored at Deception island on Dec. 19, 1973. On Dec. 28, 1973, Michel Laval, Cousteau's 2nd-in-command, was hit by a helicopter propeller and killed. In 1974-75 she spent the summer in Antarctica, and got trapped in the ice at Hope Bay, after staying too long into the early stages of the 1975 winter. One of the divers was killed while studying an iceberg. The vessel damaged a propeller and had to be escorted across the Drake Passage back to South America. On Jan. 8, 1996 she was accidentally rammed by a barge in Singapore, and sank. Eight days later she was pulled out, towed to Marseille, and then two years later went to La Rochelle, where it was intended to restore her and make her an exhibit at the maritime museum. However, family squabbles kept the restoration from happening, and the ship began to rot. Finally, after several vicissitudes, the ship was taken to Concarneau, in Brittany, in late 2007, to be restored.

Calypso Cliffs. 68°48' S, 64°13' W. Two prominent rocky cliffs rising to 850 m, on the S side of Mobiloil Inlet and Bowman Inlet, immediately W of the mouth of Cronus Glacier, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Photographed aerially on Sept. 28, 1940, by USAS 1939-41, and again on Dec. 22, 1947, by RARE 1947-48, using trimetrogon photography. Surveyed from the ground by Fids from Base E in Dec. 1958. It was named by UK-APC on Aug. 31, 1962, after the daughter of Atlas, in Greek mythology. US-ACAN accepted the name later that year. It appears on a British map of 1963.

Cam Rock. 60°43' S, 45°37' W. A low-lying, ice-worn offshore rock, not normally covered at high water, about 185 m E of Waterpipe Beach, and the same distance NNW of Billie Rocks, in Borge Bay, Signy Island, in the South Orkneys. Roughly surveyed, charted, and descriptively named (one has to suppose it resembles a wheel on a camshaft) by the personnel on the *Discovery* in 1927. It appears on the chart of 1929 made from these surveys, and was re-surveyed by Fids from Signy Island Station in 1947. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Isla Camacúa. 65°56' S, 65°05' W. An island in the entrance to Dimitrov Cove (an indentation into the NW coast of Velingrad Peninsula), near Rabot Island, on the Graham Coast, on the W coast of Graham Land. Named by the Argentines.

Camagne, Joseph. b. June 2, 1811, San Salvador, Piémont, France. Steward on the *Astrolabe* during FrAE 1837-40.

Cámara Station *see* **Teniente Cámara Station**

Mount Camber. 64°41' S, 63°16' W. A mostly snow-covered mountain, but with sides of a reddish color, rising to between 1350 and 1400 m (the Chileans are the most specific — 1351 m), 1.5 km NE of Molar Peak, 5 km W of the center of Lion Island, and 5.5 km NE of Copper Peak, in the Osterrieth Range, on the SE coast of Anvers Island, in the Palmer Archipelago, off the W coast of Graham Land. First seen by BelgAE 1897-99. Named High Peak, perhaps by J.M. Chaplin (q.v.), here in 1927 with the Discovery Investigations, on the *Discovery*, although it may well have been given that name before that. The DI charted it as such in 1929, and it was still appearing as High Point in the British gazetteer of 1955. It appears on some Chilean maps of 1947 as Pico Alto (i.e., "high peak"), but by 1957 the Chileans were calling it Pico High. However, after a 1955 survey by Fids from Base N, the name High Point was considered unsuitable, and the feature was renamed by UK-APC on Sept. 4, 1957, for the mountain's long and gently-sloping summit, somewhat like the ever-so-slightly dome-like camber on a road. It appears with the new name on a 1959 British chart. US-ACAN accepted the new name in 1960. It appears on a 1957 Argentine chart as Pico Elevado (i.e., "elevated peak"), and that is the name accepted by the 1970 Argentine gazetteer.

Roca Cambiasso. 60°48' S, 44°40' W. A rock off Cape Murdoch (the SE tip of Mossman Peninsula), on the S coast of Laurie Island, in the South Orkneys. Named by the Argentines.

Cambrian Bluff. 82°25' S, 160°33' E. A very prominent rock bluff, forming the S end of the Holyoake Range. It rises about 1500 m from the Cooper Icefall, and juts out into the N side of Nimrod Glacier, just to the N of the Queen Elizabeth Range. So named by the Southern Party of NZGSAE 1960-61 because the bluff is faced with vast seams of pink and white marble. NZ-APC accepted the name on May 24, 1961, and US-ACAN followed suit in 1966.

Cambridge Glacier. 76°57' S, 160°31' E. A wide, sheet-like glacier, between (on the E) the Convoy Range and (to the west) the Coombs Hills and Mount Brooke and its associated hills and ridges, and flowing slowly S into Mackay Glacier between Mount Bergen and Gateway Nunatak. Surveyed in Nov.-Dec. 1957, by the NZ Northern Survey Party of BCTAE, and named by them for Cambridge University, where many Antarctic scientific reports were written. It appears in the 1960 NZ gazetteer, and US-ACAN accepted the name in 1962.

Camel Nunataks. 63°25' S, 57°26' W. Two similar rock nunataks rising to about 435 m, 1.5 km apart, on the S side of Mott Snowfield, 13 km N of View Point, Trinity Peninsula, in northern Graham Land. Photographed aerially by FIDASE in 1956-57. Named descriptively by FIDS about 1959, and surveyed from the ground by Fids from Base D in 1960-61. The name was accepted by UK-APC on Feb. 12, 1964, and by US-ACAN later that year. It appears in the British gazetteer of 1974. Refugio Abrazo de Maipú is here.

Camelback Ridge. 73°31' S, 94°24' W. A short rock ridge with topographic highs of 1180m and 1141 m at the ends, just W of Pemmican Bluff, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61, and named by them for its humped appearance. US-ACAN accepted the name in 1963.

Camell, William. During Shelvocke's voyage to Antarctic waters, on Oct. 1, 1719, at 7 P.M., this sailor, his hands too numb to hold on any longer, fell from the mainsail of the *Speedwell,* and drowned, supposedly in about 67°30' S, 5°00' W.

Cerro Camello *see* **Aureole Hills**

Mount Camelot. 72°11' S, 163°37' E. A mountain in the Alamein Range, it rises to 2590 m near the center of the Freyberg Mountains, and is the highest peak in those mountains. It is of geologic interest in that it is one of the localities where the sub-beacon erosion surface is exposed. Named by NZ-APC in 1968. The name was accepted by US-ACAN in 1969.

Camels Hump. 77°55' S, 162°34' E. A dark, bare, rock knob (small mountain), rising to 2316 m, at the head of Blue Glacier, 5 km S of Cathedral Rocks, in the N part of the Royal Society Range, in Victoria Land. Discovered and named descriptively by members of BNAE 1901-04. US-ACAN accepted the name in 1953, and it appears in the 1958 NZ gazetteer. The Russians call it Mount Camels Hump.

Mount Camels Hump *see* **Camels Hump**

Cameras *see* **Photography** and **Aerial photography**

Lake Cameron. 69°24' S, 76°21' E. A lake, 1.7 km SW of Law Base, in the Larsemann Hills, between the Lars Christensen Coast and the Ingrid Christensen Coast. Named by ANCA on Sept. 29, 1988, for Bruce Cameron, helicopter pilot, who assisted in the Initial Scientific Survey Party, in Feb. 1986.

Mount Cameron. 71°20' S, 66°30' E. A small mountain, oriented NE-SW, 8 km S of Mount Woinarski, and about 45 km SW of Mount Lanyon, in the Prince Charles Mountains of Mac. Robertson Land. Plotted by Australian cartographers in 71°20' S, 66°28' E, working from ANARE air photos taken in 1956 and 1960, and named by ANCA for Dr. Alexander Scott Cameron (known as Scott Cameron),

South Australian medical officer who wintered-over at Mawson Station in 1965. US-ACAN accepted the name in 1967. It has since been re-plotted.

Cameron, Henry Alan David. Known as Alan. b. July 15, 1934, Nottingham, son of carpenter Henry Evan Cameron and his wife Grace Adelaide Page. His father died of a heart attack 6 months before Alan was born. He had one job before his national service, which he did in the REME, 1952-54, learning radar and electronics. He then worked for a year or two at Erickson's electronic factory, and then saw an ad in the *Daily Telegraph* for FIDS electronics men. He went down to London for the interview, heard nothing for 6 months, and was then, all of a sudden, given 10 days notice before he sailed south. In that 10 days he did a crash course in ionospherics at Slough, and left Southtampton on the *Shackleton* on Oct. 1, 1957, bound for Montevideo, Port Stanley, and South Georgia. The *Shackleton* relieved Signy Island Station, and was then holed below the water line (*see* **The *Shackleton***). Once the ship was repaired in South Georgia, Cameron headed south again, helped relieve Base D, then wintered-over at Port Lockroy Station in 1958 and 1959 as ionosphere physicist. In 1960 the *Shackleton* came to pick him up. On his return to the UK he went to work as a technical officer in the department of geophysics, at the University of Birmingham, still affiliated with FIDS. He went to Antarctica that summer (1960-61), and for four successive summers. He married Diane Gurnham. He worked out of the UK for the Boston-based company EG&G, as chief engineer, doing a lot of international traveling, leaving them in the late 1970s for BP. From there he and four colleagues formed Hydrosearch Associates, as representatives for oil companies, from which he retired to Woking, Surrey.

Cameron, Richard Leo "Dick." b. 1930. He had graduated from the University of New Hampshire, in geology, when he became chief American glaciologist on IGY (1957-58), based at Wilkes Station from Aug. 1956 through May 1958. He was assistant to the director at the Institute of Polar Studies, at Ohio State, which is where he got his PhD. From 1975 to 1985 he was NSF program manager, and was later an adviser to NASA, on extreme climates.

Cameron Island. 66°13' S, 110°36' E. A small island, just N of Hailstorm Island, in the Swain Islands, off the Budd Coast. This region was photographed aerially during OpHJ 1946-47, and in 1956 by ANARE and SovAE. The feature was included in a ground survey carried out in 1957, by Carl Eklund, who named it that year for Dick Cameron. US-ACAN accepted the name in 1960, and ANCA followed suit on July 4, 1961.

Cameron Nunataks. 72°38' S, 163°43' E. A small cluster of nunataks rising above the W margin of Evans Névé, at the S end of the Freyberg Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1968, for Roy Eugene Cameron (b. July 16, 1929, Denver), biologist at McMurdo in 1966-67 and 1967-68. NZ-APC accepted the name on Dec. 4, 1968.

Isla Camp *see* **Camp Point**

Punta Camp *see* **Camp Point**

Camp A. 66°56' S, 141°33' E. The first French camp of 1950, on the edge of Zélée Glacier, SW of Port-Martin.

Camp B. 66°59' S, 140°28' E. The second French camp established in 1950, S of Cape Bienvenue, toward the W limit of Adélie Land.

Camp Flow *see* **Camp Slope**

Camp IV. 72°03' S, 165°12' E. Established by the Northern Party of the New Zealand Federated Mountain Clubs Antarctic Expedition of 1962-63, on Camp Ridge, in the SE part of the East Quartzite Range, in the Concord Mountains, in the NW part of Victoria Land.

Camp Hill. 63°41' S, 57°52' W. A small, ice-free hill, rising to 120 m, 3 km E of Church Point, on the E side of Botany Bay, on the S side of Trinity Peninsula. Probably first sighted in 1903, by SwedAE 1901-04. Charted by Fids from Base D in 1946, and named by them for the geological camp established at its foot. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer.

Camp Hills. 78°58' S, 85°50' W. A small group of hills, between the S portion of the Bastien Range and Minnesota Glacier, in the Ellsworth Mountains. Named by the University of Minnesota Geological Party of 1963-64, for their base camp (Camp Gould) here. US-ACAN accepted the name in 1966.

Camp Lake. 68°33' S, 78°05' E. A small, oval lake, 183 m long, 0.8 km W of the head of Weddell Arm, on Breidnes Peninsula, 7 km NE of Davis Station, in the Vestfold Hills. Photographed aerially during OpHJ 1946-47, and first mapped from these photos. A camp was established near the NE end of the lake, in Jan. 1955, by the first visitors, an ANARE party led by Phil Law. Named by ANCA on April 29, 1958. US-ACAN accepted the name in 1965.

Camp Norway *see* **Norway, Camp**

[1]**Camp Point** *see* **Laager Point**

[2]**Camp Point**. 67°58' S, 67°19' W. Marks the W extremity of the rugged heights between Square Bay to the E and Calmette Bay to the W (and, indeed, marks the S entrance point to Square Bay), on the Fallières Coast, on the W coast of Graham Land. Discovered by FrAE 1908-10, but not knowing this feature's relationship with adjacent features, Charcot mapped it as the extreme N of an island which extended, as far as he could tell, from Roman Four Promontory, an island separated from the continental coast by an arm of water which would join Neny Fjord with Square Bay. BGLE 1934-37 camped here during hydrographic survey work, mapped it, and named it for the camp. It appears on a Chilean chart of 1947 as Punta Campamento (which means the same thing), and appears as such in the Chilean gazetteer of 1974. Fids from Base E surveyed it in 1948-49. The Argentines showed it on a map of 1949, as Punta Camp, but in 1953 the feature appears on two separate Argentine maps as Isla Camp and Isla Campamento (i.e., they had re-mapped it as an island), but they later corrected the error, and now call it Punta Campamento, the same as the Chileans. UK-APC accepted the name Camp Point on Sept. 8, 1953, and it appears as such in the British gazetteer of 1955. US-ACAN followed suit with the naming. It appears on a Russian map of 1961 as Mys Kamp (which means Camp Point).

Camp Ridge. 72°03' S, 165°12' E. A prominent ridge, surounted by Mount Hayton, near the SE end of the East Quartzite Range, in the Concord Mountains, in the NW part of Victoria Land. Named by the Northern Party of the New Zealand Federated Mountain Clubs Antarctic Expedition of 1962-63, after Camp IV (q.v.), which was established here. NZ-APC accepted the name on June 27, 1963, and US-ACAN followed suit in 1964.

Camp Ridley *see* **Ridley, Camp**

Camp Slope. 77°32' S, 167°08' E. A concave slope, at an elevation of 3650 m above sea level, just S of Crystal Slope, on the W side of the summit cone of Mount Erebus, on Ross Island. It is the site of a slump which has occurred off the crater rim. It is also a former camp site used by summit parties. A small hut is located on the upper part of the slope. Named by US-ACAN in 2000. NZ-APC accepted the name on Feb. 21, 2001. The SCAR gazetteer says this is not Camp Flow, a lobate slump feature originating on the upper flank of the summit cone. From aerial photos it was originally thought that this flow was a lava flow, but on closer inspection it was revealed that it was underlain by ice and composed of pyroclastic material, mainly large volcanic bombs.

Camp Spur. 83°16' S, 50°50' W. A rock spur rising to about 1500 m, along the N wall of May Valley, on the E side of the Forrestal Range, in the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for Gary C. Camp, Seabee aerographer who wintered-over at Ellsworth Station in 1957. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974.

Camp II Point. 78°23' S, 163°18' E. A point of ice-covered moraine extending eastwards into Koettlitz Glacier, on the S side of the lower Renegar Glacier, in Victoria Land. It was named Point Anne by the New Zealanders, as they were making their second field camp here during a field survey. The name Camp II Point was chosen instead, in 1980, as being less likely to be confused with all the other features containing the name "Anne" or "Ann," and also as being much more indicative of the point's original purpose. They plotted it in 78°23' S, 163°10' E. US-ACAN accepted the name in 1995, and the feature has been re-plotted.

Camp Wisconsin. 79°16' S, 162°15' W. A

temporary American base camp on Roosevelt Island, established early in the 1961-62 season.

Isla Campamento *see* **Camp Point**

Punta Campamento *see* **Camp Point, Laager Point**

Campamento Point *see* **Laager Point**

Rocas Campastri *see* **Frederick Rocks**

Cape Campbell *see* **Cape Tennyson**

Lake Campbell. 68°28' S, 78°16' E. An irregular, circular lake, 200 m in diameter, in the Vestfold Hills. Named by ANCA on March 7, 1991, for Peter J. Campbell, limnologist, who wintered-over at Davis Station in 1975, and who conducted studies of the the limnology of the Vestfold Hills.

Monte Campbell *see* **Mount Pond**

Mount Campbell. 84°55' S, 174°00' W. A prominent peak, rising to 3790 m, 5.5 km (the New Zealanders say about 11 km) SSE of Mount Wade, and on the ridge that connects Mount Wade to Mount Fisher, on the massif formed by those two mountains, in the Prince Olav Mountains, in the Queen Maud Mountains. Discovered and photographed aerially by Flight C, on Feb. 29-March 1, 1940, during USAS 1939-41. Surveyed by Albert Crary in 1957-58, and named by him for Joel B. Campbell of the U.S. Coast and Geodetic Survey, Antarctic project leader for geomagnetic operations, 1957-60. US-ACAN accepted the name in 1962.

Campbell, Clifford Morgan. b. April 21, 1909, Danville Ferry, Wash., son of miner Albert Campbell and his wife Paulina. He graduated from the Naval Academy at Annapolis, in 1933, and, during World War II, won the Navy Cross for flying heroism. Commander of Base Group at Little America IV during OpHJ 1946-47. He was senior officer on Flight A during Byrd's flight to the South Pole on Feb. 16, 1947. He died on Jan. 4, 1989, in Virginia Beach.

Campbell, Lord George Granville. b. Dec. 25, 1850, 4th son of the 8th Duke of Argyle by his wife Elizabeth Georgina Sutherland-Leveson-Gower. Sub lieutenant on the *Challenger*, 1872-76. His private journal of the expediton was published. He married Sybil Lascelles Alexander on May 8, 1879, and died on April 21, 1915.

Campbell, Iain Bruce. b. 1935, Nelson, NZ. He graduated in geology from the University of Canterbury (in NZ) in 1960, and got his masters degree in 1962. He worked as a scientist in Antarctica for a total of 368 days over the course of 9 trips from 1964 to 1989, studying soil, in association with Graeme Claridge, and in 1990 was awarded his doctorate (in soil studies). Between 1990 and 2008 he has been to Antarctica a further 8 times.

Campbell, John James Williamson. b. 1862, Knaphill, Woking, Surrey, last child of Scottish surgeon Dr. John Campbell, M.D. at King's College. J.J.W. Campbell became a doctor in 1882, and was surgeon/naturalist on the *Diana*, during DWE 1892-93. In 1896 he was admitted to the Royal College of Physicians and the Royal College of Surgeons, both of Edinburgh. He married Eva Hope, and they lived at their house, Breadalbane, in Castleford, Yorks, where he died on Nov. 15, 1946.

Campbell, Robert *see* **USEE 1838-42**

Campbell, Stuart Alexander Caird. b. March 27, 1903, Sydney, son of Murray A. Campbell and his wife Caroline M. Caird. He graduated in engineering in 1926, from the University of Sydney, and that year joined the RAAF, as a flying officer, and, as such, was chief aviator on both halves of BANZARE 1929-31. During World War II he was a squadron leader, training pilots, and was discharged on April 23, 1946. In 1943, in Sydney, he married Mary Jean Barbier Mackerras. He was the first director of ANARE, 1947-48, and led ANARE 1947-48 (the first ANARE), to Heard Island, which, on Dec. 26, 1947, he annexed for Australia, an annexation witnessed by George Dixon, John Burgess, and Johnny Abbotsmith. In 1982 he became civil aviation adviser in Thailand, for 2 years, as UN trainer for the local air force, became virtually a Thai, and later moved back there. He died on March 7, 1988.

Campbell, Victor Lindsey Arbuthnot. b. Aug. 20, 1875, Brighton, son of naval captain Hugh Campbell and his wife Lucy Eleanor Archer. He left Eton in 1892, was a merchant seaman for a brief while before becoming an officer in the RN in 1895. In 1901 he resigned his commission to live as a country gentleman, but in 1910-13, as a lieutenant, RN (emergency list), he went with Scott on BNAE 1901-04, as 1st officer on the *Terra Nova*, leading the Northern Party that wintered-over twice in Victoria Land, in 1911 and 1912. He was promoted to commander, served in the Navy during World War I, at Jutland, Gallipoli (as commander of the Drake Battalion), and in 1918 took part in the Zeebrugge raid. He retired to Newfoundland in 1922. In World War II he served briefly in Trinidad and Canada, and died on Nov. 19, 1956, in Corner Brook, Newfoundland. He wrote *The Wicked Mate: The Antarctic Diary of Victor Campbell*.

Campbell Cliffs. 84°46' S, 174°55' E. A line of high, precipitous cliffs, mostly snow-covered, and with rock exposures resembling gun ports on a sailing man-o'-war, this feature forms the E wall of the Haynes Table, on a NW-SE face about 16 km long, and about 10 km SSE of Mount Odishaw, in the Hughes Range. The cliffs rise 1500 m or more from the snow surface in front of them, and, judging by the height of Odishaw, the cliffs rise to an elevation of more than 3048 m above sea level. Discovered and photographed aerially on Flight A of Feb. 16, 1947, on Byrd's flight to the Pole, during OpHJ 1946-47. Named by US-ACAN in 1962, for Cdr. Clifford Campbell. NZ-APC accepted the name on June 28, 1962.

Campbell Crag. 78°29' S, 163°32' E. Due W of Savage Ridge, and SW of Weidner Ridge, in the area of Barlow Rocks, below the NW slopes of Mount Morning, on the S margin of the upper Koettlitz Glacier, in Victoria Land. Named by US-ACAN on Jan. 31, 1995, for Rick Campbell, of Antarctic Services Associates, fixed-wing flight operations co-ordinator at McMurdo.

Campbell Crest. 68°30' S, 65°27' W. A peak rising to 1670 m, at the W end of the Bowditch Crests (it is the highest point on those crests), on the Bermel Peninsula, on the Bowman Coast of Graham Land. It appears in 1928 air photos taken by Wilkins, and in 1935 air photos taken by Ellsworth. In 1936, W.L.G. Joerg, the U.S. cartographer, roughly mapped the feature from Ellsworth's photos. It was photographed aerially again in 1940, by USAS 1939-41, again in 1966 by USN, and was surveyed from the ground by FIDS in 1958. Named by UK-APC on Dec. 2, 1993, for Jon C. Campbell, USGS geographer from 1981; member of USGS International GPS Campaign in Antarctica, 1991-92, at McMurdo, Byrd Station, and Pole Station, who conducted developmental GPS geodetic surveys from the *Polar Sea*, at Mount Siple and Pine Island Bay; and secretary of US-ACAN, 1993-96. US-ACAN accepted the name.

[1]**Campbell Glacier**. 67°47' S, 45°42' E. Flows N into Freeth Bay, Enderby Land. Plotted from ANARE air photos taken in 1956, and named by ANCA for S. Michael "Mike" Campbell, radio supervisor who wintered-over at Wilkes Station in 1960.

[2]**Campbell Glacier**. 74°25' S, 164°22' E. Also called Melbourne Glacier. A glacier of low gradient, about 100 km long and about 4 km wide, it starts near the S end of the Mesa Range, flows SW from the W slopes of Mount Melbourne, and then flows SE between Mount Melbourne and the Deep Freeze Range, to merge with the confluent ice on the coast of Victoria Land, in the form of the Campbell Glacier Tongue. The lower end of the glacier was discovered and explored by Victor Campbell's Northern Party, during BAE 1910-13, and named for Campbell. It was in the 1958 NZ provisional gazetteer, and US-ACAN also accepted the name. It was originally thought to discharge into the Nansen Ice Sheet, but surveys conducted by U.S. and NZ parties to the area in 1961-62 and 1962-63 determined that it actually discharges into the N part of Terra Nova Bay. It was these parties who also determined the extent of this glacier.

Campbell Glacier Tongue. 74°36' S, 164°24' E. The seaward extension of Campbell Glacier, in Victoria Land, it projects into the Ross Sea, at Terra Nova Bay. Named by US-ACAN in 1968, in association with the glacier.

Campbell Head. 67°25' S, 60°40' E. A bold headland on the W side of Oom Bay, Mac. Robertson Land. Discovered on Feb. 18, 1931, by BANZARE, and named by Mawson for Stuart Campbell. US-ACAN accepted the name in 1947, and ANCA followed suit.

Campbell Hills. 82°26' S, 163°47' E. A group of hills, 8 km WSW of Cape Lyttelton, on the S side of Nimrod Glacier, in the central Transantarctic Mountains. Mapped by USGS from tellurometer surveys, and USN air photos

taken between 1960 and 1962. Named by US-ACAN in 1965, for William Joseph Campbell (b. 1926), USARP glaciologist on the Ross Ice Shelf in 1962-63. NZ-APC accepted the name on Nov. 16, 1965.

Campbell Islands. 52°33' S, 170°E. A group of sub-Antarctic islands belonging to NZ. Due S of NZ, and SE of Auckland Island, the group consists of Campbell Island and several smaller islands.

Campbell Nunatak. 66°29' S, 110°45' E. Also seen as Nunatak Kempbell. One of 4 coastal nunataks at the SE limit of the Windmill Islands, overlooking the SE extremity of Penney Bay, about 5 km ENE of Alexander Nunataks, and about 6 km E of Browning Peninsula, on the Budd Coast. First mapped from air photos taken by OpHJ 1946-47 and OpW 1947-48. Named by US-ACAN in 1956, for H. Campbell, Jr., USN, photographer's mate on OpW 1947-48. In 1956 it was photographed aerially by ANARE and also that year by SovAE. ANCA accepted the name on July 4, 1961.

Campbell Ridges. 70°23' S, 67°35' W. An irregular complex of ridges, rising to about 1500 m, between Creswick Gap (to the W) and Mount Courtauld (to the E), in Palmer Land, at George VI Sound. Two N-S ridges are linked by an E-W ridge, on which stand the highest peaks. Surveyed by BAS between 1962 and 1972. Named by US-ACAN in 1976, for Lt. Cdr. Bruce H. Campbell, USN, LC-130 Hercules commander on the Lassiter Coast and elsewhere in 1969-70 and 1970-71. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Campbell Terrace. 77°41' S, 162°28' E. Immediately SE of Matterhorn, on the N wall of Taylor Valley, in Victoria Land. Named by NZ-APC on Jan. 30, 1998, for Iain Campbell. US-ACAN accepted the name later that year.

Campbell Valley. 76°55' S, 117°40' W. An ice-filled valley, or pass, extending E-W between Boyd Ridge and the the main group of peaks in the Crary Mountains, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Wallace Hall Campbell (b. Feb. 6, 1926, NY), ionosphere physicist at McMurdo in 1964-65. He had been at Macquarie Island in 1961-62. NZ-APC accepted the name on June 29, 1967.

Punta Campichuelo. 66°44' S, 67°28' W. A point on Liard Island, in Hanusse Bay, on the NE coast of Adelaide Island, off the W coast of the Antarctic Peninsula. Named by the Argentines.

Mount Campleman. 84°51' S, 64°20' W. A flat-topped, projecting-type mountain, rising to 1970 m, along the N edge of the Mackin Table, 5 km W of Stout Spur, in the S part of the Patuxent Range, in the Pensacola Mountains. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Richard Campleman, USN, petty officer in charge of Palmer Station for the winter of 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Campo Bove *see* **Italia Valley**

Seno Campos Urquiza. 64°24' S, 61°25' W. A bight, indenting Península Behn, between Yelcho Passage and Hughes Bay, on the W coast of the Antarctic Peninsula. Named by the Argentines.

Camps Molina, Arnoldo Pedro. b. April 1884, Rivera, Uruguay. He was an alférez de navío (ensign) on the *Instituto de Pesca No. 1*, in 1916, when that vessel set out to rescue (unsuccessfully) Shackleton's men from Elephant Island.

Punta Camus. 64°29' S, 62°25' W. A point, SW of Avicenna Bay, and immediately S of Lagrange Peak, in the SW part of Brabant Island, in the Palmer Archipelago. Named by the Chileans. The Argentines call it Punta Cervantes.

Camus, François-Marie. b. June 10, 1813, Plouberelance, France. Ordinary seaman on the *Astrolabe* during FrAE 1837-40.

Punta Comandante Camus *see* **Square Rock Point**

Canada. Canada has its own frozen wasteland, and thus has been slow to come to the Antarctican party, although there has been no shortage of eminent Canadians working the great southern continent. Sylvester L. Sullivan (b. 1812, Montreal) was a sailor living in NYC when he went to the South Shetlands on the New London sealer *Pacific* in 1834-35. Malcolm Macpherson was an ordinary seaman who took part in FrAE 1837-40. Canadian sealing vessels were frequently in the South Shetlands between 1894 and the 1911-12 season (e.g., *see* **The *Alice Gertrude*, The *Baden Powell,* The *Beatrice L. Corkum,* The *Edith R. Balcom***). Probably the first Canadian to go on a modern Antarctic expedition was naturalist Hugh Blackwell Evans (BAE 1898-1900), and he was followed by Rupert Michell (ship's surgeon on the *Nimrod*, during BAE 1907-09), and Silas Wright (physicist on Scott's BAE 1910-13). Wilkins used two famous Canadian pilots during the 2nd half of his Wilkins-Hearst Expedition of 1928-30, namely Al Cheesman and Herbert Hollick-Kenyon. Taffy Davies wintered-over at Little America with ByrdAE 1928-30, the only Briton (he was actually Welsh) to do so. Taff had become a Canadian, hence his inclusion in this list. Operation Tabarin, during World War II, saw not only Andy Taylor's prominent involvement, but also the crew of the *Eagle*. There were several Fids over the years who were, had been, or would become, Canadians. In 1969-70, the *Hudson*, a research vessel from the Bedford Institute of Oceanography, was in at the South Shetlands. On May 4, 1988, Canada was ratified as the 38th signatory of the Antarctic Treaty. The CPC (Canadian Polar Commission) has, since 1994, represented Canada at SCAR meetings, but CPC's role was given over to the newly formed CCAR (Canadian Committee on Antarctic Research). On Jan. 19, 2007 a team, led by Canadian Paul Landry, became the first ever to sledge to the Pole of Relative Inaccessibility.

Canada Glacier. 77°37' S, 162°59' E. Sometimes seen (erroneously) as Canadian Glacier. A small glacier flowing in a SE direction into the N side of Taylor Valley, immediately W of Lake Fryxell and Mount McLennan, in southern Victoria Land. Charted by BAE 1910-13, and named by them for Charles S. Wright's home country. US-ACAN accepted the name in 1952, and it appears in the 1958 NZ provisional gazetteer. It became SSSI #12.

Canada Peak. 77°37' S, 162°50' E. A sharp peak rising to 1350 m on the W side of (and overlooking) Canada Glacier, where that glacier feeds into Taylor Valley, in southern Victoria Land. Named on Jan. 30, 1998, by the NZ-APC, in association with Canada Glacier. US-ACAN accepted the name later that year.

Canada Stream. 77°37' S, 163°03' E. A small meltwater stream flowing ESE from the front of Canada Glacier into Lake Fryxell, in Taylor Valley, in southern Victoria Land. Named by NZ-APC in 1983, in association with Canada Glacier. US-ACAN accepted the name.

Canadian Glacier *see* **Canada Glacier**

Cañadón Anchorage. 61°28' S, 55°35' W. An anchorage on the N side of Gibbs Island, 24 km SSW of Elephant Island, in the South Shetlands. Named by ArgAE 1954-55, as Fondeadero Cañadón, and as such it appears on an Argentine chart of 1957, and in their gazetteer of 1970. UK-APC accepted the name Cañadón Anchorage on Dec. 16, 2003. The Chileans named it Fondeadero Ábrego, for 1st Lt. Francisco Ábrego Diamantti, an officer on the *Covadonga*, who made a landing on Peter I Island during ChilAE 1956. The British were the latest to replot this feature, in late 2008.

Glaciar Canal *see* **Channel Glacier**

Roca Canal *see* **Bowler Rocks,** [2]**Channel Rock**

Ventisquero Canal *see* **Channel Glacier,** [1]**Harbour Glacier**

The *Canal de Beagle*. Argentine Navy transport ship, built in 1978 by Príncipe, Menghi & Penco, in Buenos Aires, for Patagonian coastal work (*see also* The *Cabo de Hornos* and The *Bahía San Blas*), and named for the Beagle Channel, off the coast of Patagonia. She was in Antarctic waters as part of ArgAE 1992-93. Skipper was Jorge A. Gopcevich Canevari. She was back as part of ArgAE 2008-09.

Islote Canales *see* **Canales Island**

Canales Island. 62°30' S, 59°42' W. The largest of a small group of islands, about 175 m N of Ferrer Point, within Discovery Bay, on Greenwich Island, in the South Shetlands. In Jan. and Feb. 1947, ChilAE 1947 made a complete survey of Discovery Bay, and named this island as Islote Canales, after one of the hydrographers on the expedition. UK-APC accepted the name Canales Island, on March 31, 2004.

The British were the latest to replot this island, in late 2008.

Islote Cañas. 63°18' S, 57°59' W. The most easterly of the 3 islets lying about 175 m N of Isla Bulnes, 3 km NW of Cape Legoupil, on the W coast of the Antarctic Peninsula. Named by ChilAE 1947-48, as Isla Gral. Ramón Cañas (this name is short for General Ramón Cañas Montalva), for the Army commander in chief who accompanied President González Videla to Antarctica in 1948. In 1951 this was shorted to Isla Ramón Cañas, and in 1959 to Islote Cañas. Gen. Cañas was born in Santiago on Feb. 26, 1896, son of Gen. Ramón Cañas Pinochet and his wife Ana Rosa Montalva Vicuña. He died in 1976.

Le Cancer *see under* **L**

Punta Candado *see* **Stone Point**

Monte Candelaria *see* **Montaña Gana** (under **G**)

Pik Candera. 71°43' S, 8°54' E. One of the Hemmestad Nunataks, in the Drygalski Mountains, in the N part of the Orvin Mountains, in Fimbulheimen, in Queen Maud Land. Named by the Russians.

The *Cándido de Lasala*. Built by the Moore Dry Dock Company of Oakland, Calif., for the U.S. Navy, as the *Gunston Hall*, a 9375-ton, 138.64-meter Ashland-class dock landing ship, and launched on May 1, 1943. She served in World War II and was decommissioned in 1947. She was re-fitted as an Arctic ship, and recommissioned in 1949, served in Korea and Vietnam, and in 1970 was sold to Argentina, under the Military Assistance Program, and her name was changed to the *Cándido de Lasala* (named for an old Argentine naval hero). She took part in ArgAE 1975-76 (Captain Salvio O. Menéndez; skipper from June 11, 1975 to Feb. 2, 1976); ArgAE 1976-77 (Captain Gustavo R. Grunschlager; skipper from July 19, 1976 to Dec. 28, 1976); and ArgAE 1977-78 (Captain Mario H.A. Brusa; skipper from July 6, 1977 to Jan. 6, 1978). In 1981 she was decommissioned and struck from the Navy register.

Cándido de Lasala Refugio *see* **Lasala**

Punta Canelo *see* **Duthiers Point**

Canetti Peak. 62°43' S, 60°19' W. A peak with precipitous ice-free western slopes, and rising to 400 m on Friesland Ridge, 1.2 km WSW of MacKay Peak, and 2.2 km N by W of the summit of Veleka Ridge, it overlooks Zagore Beach and False Bay to the W and N, and Charity Glacier to the S, in the Tangra Mountains, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for Elias Canetti (1905-1994), Bulgarian-born Nobel Prize winner in literature.

Canfield Mesa. 77°25' S, 161°10' E. An ice-free mesa, 1.3 km in extent, 1.4 km ENE of Green Mesa, in the W part of the Insel Range of Victoria Land. Named by US-ACAN in 1998, for Donald Eugene Canfield, of the School of Interdisciplinary Studies at Miami University, Oxford, O., who, with William J. Green, made a geochemical analysis of the Onyx River and Lake Vanda, during the 1980-81, 1986-87, and 1987-88 field seasons. He was later with the department of geology and geophysics at Yale.

Bahía Cangrejo *see* **Cangrejo Cove**

Cangrejo Cove. 65°04' S, 63°39' W. A cove, 2.5 km wide, immediately W of Azure Cove, it indents the S coast of Flandres Bay for 1.5 km, directly SE of Azufre Point, and 7 km SE of Cape Renard, on the Danco Coast, on the W coast of Graham Land. First roughly charted by BelgAE 1897-99. Named Bahía Cangrejo (i.e., "crawfish bay") by ArgAE 1951-52 because, seen from the air, the small peninsula on the W side of the cove resembles the pincers of a crawfish. It appears as such on a 1954 Argentine chart, and that was the name accepted by the 1970 Argentine gazetteer. The feature was photographed aerially by FIDASE in 1956-57. It appears on a Chilean chart of 1962, as Bahía Chávez, named thus in association with nearby Chávez Island, and that was the name accepted by the 1974 Chilean gazetteer. US-ACAN accepted the name Cangrejo Cove in 1965. Cangrejo Cove being unacceptable to the British, UK-APC named it (for themselves only) as Crab Cove, on Feb. 7, 1978.

Cangxiu Shangu. 69°24' S, 76°08' E. A hill on the NE part of Stornes Peninsula, in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Mount Canham. 70°29' S, 64°35' E. At the N end of the Bennett Escarpment, 3.5 km S of the Corry Massif, in the Porthos Range of the Prince Charles Mountains, in Mac. Robertson Land. Plotted by Australian cartographers in 70°30' S, 64°28' E, from ANARE air photos taken in 1965, and named by ANCA for John Richard Canham (b. Feb. 4, 1917, Ipswich, Suffolk. d. Dec. 24, 1991), former long-time RAF officer (retired 1960, as wing commander), officer-in-charge at Wilkes Station in 1967. He also wintered-over as officer-in-charge at Macquarie Island, in 1969. US-ACAN accepted the name in 1971. It has since been replotted.

Canham, David W. "Dave," Jr. b. July 23, 1920, Idaho, but raised in Detroit, son of miner David W. Canham, and his wife Lula. He was a football star at the University of Michigan, became a mathematics teacher, and then joined the U.S. Navy in 1943, being promoted to lieutenant. On July 3, 1944 he married Betty J. Durham. As a lieutenant commander, he went to Antarctica on the *Wyandot*, from Norfolk, Va., on Nov. 14, 1955, to take part in OpDF I. He was the first ever military leader of McMurdo, for the 1955-56 summer season, and for the winter of 1956. On July 18, 1969 he and his wife divorced in Dallas, where he was a security officer at the University of Texas. He died on Feb. 5, 1986, in Galveston.

Canham Glacier. 71°49' S, 163°00' E. A tributary glacier, about 50 km long, marking the SW extent of the Bowers Mountains, it flows NW from the NW part of Evans Névé, between the Alamein Range on the one side, and on the other the Salamander Range and the Lanterman Range, in the Freyberg Mountains, and enters Rennick Glacier westward of Bowers Peak, in Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Dave Canham. NZ-APC accepted the name on July 16, 1964.

Monte Canícula *see* **Mount Canicula**

Mount Canicula. 63°43' S, 58°30' W. Formed of 2 rock peaks, one (the eastern one) at 890 m, and the other at 825 m, 5 km E of Sirius Knoll, on the divide separating Russell East Glacier and Russell West Glacier, SW of the Louis Philippe Plateau, in the central part of Trinity Peninsula, in northern Graham Land. Charted in Aug. 1946 by Fids from Base D, and named by them. Canicula = Sirius, the dog star. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the British gazetteer of 1955, and on a British map of 1974. The Argentines call it Monte Canícula, and the Chileans call it Monte Ramírez, for Squadron Leader Eleuterio Ramírez Betancour, of the Chilean Air Force, who was on the *Baquedano* during ChilAE 1956.

Canine Hills. 71°37' S, 163°50' E. A line of mostly snow-covered hills and ridges trending NW-SE for 17.5 km, and forming the E half of Molar Massif, in the Bowers Mountains, in Oates Land, in northern Victoria Land. The name was suggested by geologist Malcolm Laird (*see* **Cape Laird**), in association with Molar Massif and Incisor Ridge. NZ-APC accepted the name in 1983, and US-ACAN followed suit.

Caninus Nunatak. 71°06' S, 70°10' W. Rising to 700 m, E of Palindrome Buttress and the N end of the Walton Mountains, on Alexander Island. Surveyed by BAS personnel from Fossil Bluff, 1974-75, and so named by UK-APC on Dec. 8, 1977, for its resemblance in plan to the shape of a dog, and also because it marks the burial place of nine dogs that had to be put down during the reduction of BAS dog teams at that time. It appears in the British gazetteer of 1980, and on a British map of 1984. US-ACAN accepted the name.

Canis Heights. 70°26' S, 66°19' W. A mainly snow-covered ridge, rising to about 1500 m above sea level, between the two upper tributaries at the head of Millett Glacier, on the W edge of the Dyer Plateau, at George VI Sound, in the W part of Palmer Land. Surveyed by BAS between 1962 and 1972, it was named by UK-APC on July 21, 1976, for the constellations Canis Major and Canis Minor, this being an area with many features being named after stars and constellations. US-ACAN accepted the name later in 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

The *Canisteo*. A U.S. Ashtabula-class fleet oil tanker, AO-99, built by Bethlehem Steel at Sparrows Point, Md., launched on July 6, 1945, and commissioned into the U.S. Navy on Dec. 3, 1945. On Nov. 27, 1946, she left Norfolk,

Va., for the Panama Canal, and then on to Antarctica, as part of the Eastern Task Group during OpHJ 1946-47. Captain Edward K. Walker commanding. After the expedition, she made her way to Rio, and the Caribbean, making it back to Norfolk on April 23, 1947. After serving in several different parts of the world (but never again in Antarctic waters), she was decommissioned on Oct. 2, 1989, and on Aug. 31, 1991 was struck from the Navy register. In Oct. 2003 she sailed from Virginia for the north of England, to be scrapped.

Canisteo Peninsula. 73°48' S, 102°20' W. An ice-covered peninsula, 50 km long and 30 km wide, projecting into the E extremity of the Amundsen Sea between Ferrero Bay and Cranton Bay. Delineated from air photos taken in Dec. 1946 by OpHJ 1946-47. Named by US-ACAN in 1955, for the *Canisteo*.

Cann, Roswell *see* **USEE 1838-42**

Cannonball Cliffs. 71°47' S, 68°15' W. Cliffs consisting of two E-W ridges, about 500 m high, joined by a narrow N-S ridge, at the S side of the terminus of Neptune Glacier, on the E side of Alexander Island, at George VI Sound. Mapped by FIDS cartographers from air photos taken by RARE 1947-48, and from ground surveys conducted by FIDS between 1948 and 1950. Named by UK-APC on Dec. 20, 1974, for the sandstone here, which contains numerous spherical brown concretions known as "cannonball concretions." US-ACAN accepted the name in 1975. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Canoe Nunatak. 77°59' S, 161°16' E. A nunatak, 1.5 km long and 0.3 km wide, 3.3 km ESE of Mount Blackwelder, and 7 km NE of Pivot Peak, in the Wilkniss Mountains of Victoria Land. So named by Alan Sherwood, NZGSAE leader in this area in 1987-88, because in shape the feature resembles an upturned canoe. NZ-APC accepted the name on June 29, 1989, and US-ACAN followed suit in 1993.

Cañón Point. 64°34' S, 61°55' W. Marks the SW side of the entrance to Bancroft Bay, on the Danco Coast, on the W coast of Graham Land. First roughly charted on Feb. 7, 1898, by BelgAE 1897-99, which sailed between this point and Nansen Island to the W. It appears on Argentine charts of 1954 and 1957, as Punta Cañón. In 1956-57 FIDASE photographed it aerially, and Fids from Base O surveyed it from the ground. On Sept. 23, 1960, UK-APC named it (for themselves only) as Icarus Point (*see also* **Daedalus Point**), for the hero in Greek mythology. US-ACAN chose to accept the name Cañón Point in 1965.

Lake Canopus. 77°33' S, 161°31' E. A small but significant lake, 65 m above the S shore of Lake Vanda, in the Wright Valley, in Victoria Land. Named by VUWAE 1963-64, for Canopus, pilot for Menelaus, king of Sparta. NZ-APC accepted the name, and US-ACAN followed suit in 1976.

Mount Canopus. 81°50' S, 161°00' E. A prominent, ice-free peak rising to 1710 m (the New Zealanders say 2100 m), on the W edge of the Nash Range, 6.5 km E of Centaur Bluff. Named by the Southern Party of NZGSAE 1960-61, for the brightest of the stars (Carinae Canopus) used for astrofixes. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

Canopus Crags. 71°10' S, 66°38' W. A cluster of peaks rising to about 1000 m, and extending for 5 km between Vela Bluff and Carina Heights, on the S side of Ryder Glacier, in Palmer Land, at George VI Sound. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for the star Canopus (in the constellation Carina—*see* **Carina Heights**). US-ACAN accepted the name later that year. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Canopus Island. 67°32' S, 62°59' E. The southern of the 2 largest of the Canopus Islands, in Holme Bay, about 9 km NE of Mawson Station. The group of islands was photographed aerially by LCE 1936-37, mapped from these photos in 1946 by Norwegian cartographers as one island, and named by them as Spjotøy. Following a 1959 ANARE triangulation survey of the islands, the group (and this island) was re-defined, and renamed by ANCA on Feb. 18, 1959, for the star Canopus. US-ACAN accepted the name and the situation in 1965.

Canopus Islands. 67°32' S, 62°59' E. A group of small islands, including Canopus Island and Canopus Rocks, just N of the Klung Islands, in the E part of Holme Bay, Mac. Robertson Land. For a history of the photographing and naming, *see* the entry Canopus Island (above).

Canopus Pond. Unofficial name given to a small, undrained pond, 200 feet by 200 feet, 0.75 km SW of Lake Vanda, in Victoria Land. During winter it is frozen completely to the bottom.

Canopus Rocks. 67°31' S, 62°57' E. Two small, isolated, low-lying rocks, 1.5 km NW of Canopus Island, in the E part of Holme Bay, Mac. Robertson Land. Named by ANCA on July 4, 1961, in association with Canopus Island, which, with these rocks, forms a major part of the overall group called the Canopus Islands. US-ACAN accepted the name in 1965. For a more detailed history of the photographing, plotting, and naming of this feature, *see* the entry Canopus Island (above).

Canopy Cliffs. 84°00' S, 160°00' E. Cliffs, very steep in most places, that extend for about 26 km from Mount Allsup to Mount Ropar on the SE side of the Peletier Plateau, on the N side of Law Glacier, in the Queen Elizabeth Range. Named descriptively (for their precipitousness) by the Northern Party of NZGSAE 1961-62. NZ-APC accepted the name on June 28, 1962, and US-ACAN followed suit in 1966. ANCA also accepted the name.

Cansfield, David Lawrence Morton. b. May 17, 1927, London, son of Frederick James Cansfield and his wife Lena Lawrence. After North London Polytechnic, he became a chemist for ICI, in Harrogate, and it was there that he saw an ad in *Nature* magazine. He went to London for the interview, and thus became an ionosphere physicist on the 2nd and 3rd parts (i.e., 1956-58 and 1957-59) of the British Royal Society Expedition, and as such, wintered-over at Halley Bay in 1957 and 1958. After the expedition, he left Cape Town on the *Carnarvon Castle*, and returned to London on Feb. 27, 1959, going back to Harrogate and ICI. In the 1970s he joined Leeds University, as a researcher, and still lives in Harrogate, with his wife Unice.

Punta Canso. 63°41' S, 59°03' W. A point in the area of Bone Bay, Trinity Peninsula. Named by the Argentines, in association with Canso Rocks.

Rocas Canso *see* **Canso Rocks**

Canso Rocks. 63°39' S, 59°18' W. Two submerged rocks, W of Bone Bay, and 3 km NW of Notter Point, Trinity Peninsula. Surveyed by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, for the Canso aircraft used by FIDASE in 1955-57. US-ACAN accepted the name later in 1964. The Argentines call this feature Rocas Canso (which means the same thing).

Cant, William "Coiler." b. 1873, Broughty Ferry, Forfarshire, but raised in Monifeith, son of fisherman John Cant and his wife Jessie Annandale. He apprenticed as a butcher when he was 14, but at 18 gave it up to become a fisherman. He went on the *Balaena* during DWE 1892-93. After the expedition, he returned to Dundee and became a policeman.

Mount Cantello. 70°52' S, 163°07' E. Rising to 1820 m, on the N side of Crawford Glacier, 6 km NW of Mount Keith, in the Bowers Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1965. Named by US-ACAN in 1970, for Dominic Cantello, Jr., USN, electrician who wintered-over at Pole Station in 1965.

Canterbury Hill. 69°24' S, 76°20' E. A conical peak about 1.85 km SW of Law Base, in the Larsemann Hills. Named by ANCA on Sept. 29, 1988, for Graham Canterbury, carpenter who wintered-over at Davis Station in 1986, and who helped establish Law Base. The Chinese call it Taiyang Shan.

Canterbury Spur. 84°43' S, 113°45' W. A strong, flat-topped ridge leading N from the N face of Mount Glossopteris, 2.5 km E of Discovery Ridge, in the Ohio Range. Mapped by USGS from ground surveys, and USN air photos taken in 1958-59. Named by NZ-APC on May 2, 1985, after the Canterbury Museum, in Christchurch. The geology of this spur was studied in detail from camps at the top and bottom of the escarpment, by Canterbury geologists Jane Newman and Margaret Bradshaw, in 1984-85. US-ACAN accepted the name.

Canto Point. 62°27' S, 59°44' W. Separated from Punta Troncoso by Punta Hermosilla, it forms the NW entrance point of Discovery Bay, on the NE coast of Greenwich Island, in the

South Shetlands. It was charted by the Discovery Investigations in 1935, and wrongly called Fort William (q.v. for more details), an error that persisted for several years, appearing as such on a 1948 British chart. It was also the name accepted by US-ACAN in 1953, and by UK-APC on Sept. 8, 1953, and which appears in the 1955 British gazetteer. It appears on an Argentine map of 1947, as Punta Perro (i.e., "dog point"), but, following the British lead, on one of the Argentine 1949 charts as Punta Fort William, which is how the 1970 Argentine gazetteer listed the SE part of the point. ChilAE 1950-51 surveyed the point, and named the SE part of it as Punta Capitán Del Canto, for Capitán Raúl Del Canto (*see under* D), and the NW part of it as Punta Teniente Figueroa, for 1st Lt. Emiliano Figueroa González, an officer on the *Angamos* during that 1950-51 expedition. Both names appear on the expedition's 1951 chart, the former being abbreviated to Punta Del Canto, and the latter to Punta Figueroa. The name Punta Figueroa for the NW part would be accepted by the Chilean gazetteer of 1974 (after they had rejected the longer name Punta Teniente Figueroa). The name Punta Del Canto (as such) would disappear, and the Chilean gazetteer of 1974 would accept the name Punta Fort William for the SE part, as the Argentines had done. There is an erroneous 1966 reference to it as Punta Fort Williams. Following aerial photography by FIDASE in 1956-57, and identification of Fort William (q.v.), this point was renamed by UK-APC on Aug. 31, 1962, as Spark Point, after the *Spark*. It appears as such on a British chart of that year. In 1965, US-ACAN accepted the name Canto Point. The Argentines also refer to the entire point as Punta Spark. Last plotted by the UK, in late 2008.

Cantrell Peak. 71°12' S, 165°14' E. Rising to 1895 m, 10 km NNE of Mount Calvin, overlooking Ebbe Glacier from the S, in the N part of the Everett Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Major Robert L. Cantrell, U.S. Marine Corps, pilot on photographic flights in Antarctica during OpDF 68 (i.e., 1967-68) and OpDF 69 (i.e., 1968-69).

Cantrill Nunataks. 75°03' S, 69°17' W. A small group of nunataks reaching a height of 1566 m above sea level, NNW of Mount Jenkins, and NE of Mount Ballard, in the Sweeney Mountains of Ellsworth Land. Surveyed by USGS in 1961-62. Named by UK-APC on on Oct. 4, 2004, for David J. Cantrill, BAS geologist, 1999-2002, who, during summer seasons only, carried out research on plant fossils from this area.

Punta Canty *see* **Canty Point**

Canty, John. b. May 11, 1931, West Ham, London, son of Godfrey Canty and his wife Alice Maud P.M. Pye. He joined FIDS in 1954, as a radio operator and mechanic, and wintered-over at Base N in 1955. He died in Nov. 1997, in Bishop Stortford, Herts.

Canty Point. 64°45' S, 63°32' W. Forms the W side of the entrance to Börgen Bay, on the SE coast of Anvers Island, in the Palmer Archipelago, off the W coast of Graham Land. First roughly charted by BelgAE 1897-99. Surveyed by Fids from Base N in 1955. Named by UK-APC on Sept. 4, 1957, for John Canty (q.v.), a member of the sledging party that visited this point and who took part in the survey (1955-56 summer). It appears on a British chart of 1958. US-ACAN accepted the name in 1963. The Argentines call it Punta Canty.

Canvas tanks *see* **Tanks**

Cap Prud'homme Sub Base. 66°41' S, 139°55' E. French sub-station established on Cape André Prud'homme, on the Adélie Coast, in 1993.

Cape Canwe. 74°43' S, 163°41' E. Also called Cape Mossyface. A high rock bluff, 5 km N of Vegetation Island, it forms the W extremity of the Northern Foothills, and overlooks the foot of Campbell Glacier from the E, in Victoria Land. First explored, and named, by Campbell's Northern Party during BAE 1910-13. "*Can we* reach it?," they asked, from afar. US-ACAN accepted the name, and it appears in the 1958 NZ provisional gazetteer.

Canyon Glacier. 83°57' S, 175°20' E. A narrow glacier, 56 km long (the New Zealanders say 100 km), and with several bends in it, it flows N from the NW slopes of Mount Wexler, between steep canyon walls (hence the name) between the Hughes Range and the Commonwealth Range, in the Queen Maud Mountains, into the Ross Ice Shelf, immediately W of Giovinco Ice Piedmont. First seen on Dec. 20, 1959, from Mount Patrick, by members of the NZ Alpine Club Antarctic Expedition of 1959-60, who named it. NZ-APC accepted the name on May 26, 1960, and US-ACAN followed suit in 1962.

Canyon Lake. 68°36' S, 78°34' E. An irregular, elongated lake in the Vestfold Hills, trending N-S, and measuring about 1 km long and between 50 and 100 m wide. On the S it is bounded by rock, and on the E by moraine-covered ice and the edge of the ice cap. It drains via Cataract Canyon. Named by ANCA on July 26, 1983.

Canyons. Submarine features, notably off the East Antarctica coast, and off the Ross Ice Shelf. The main ones in Antarctica are (including names no longer used): Akademik Federov, Alaska, Antarctic, Aurora, Baeyer, Borchgrevink, Bowers, Buffon, Byrd, Carroll, Charcot, Connell, Cuvier, Daly, Deutschland, Drygalski, d'Urville, Echo, Endurance, Fimbul, Higgins, Hillary, Jussieu, Kapellet, Ketchum, Koppe, Kuznetsov, Lamarck, Lena, Leonard, Marie Byrd, Mawson, Mertz, Mikhailov, Moraine, Murray, Nash, Neumayer, Oates, Ob', O'Kane, Perkins, Philippi, Pobeda, Polarstern, Porpoise, Posadovsky, Ricker, Ritscher, Ross, San Martín, Sanae, Schwabenland, Scott, Shackleton, Somov, Terra Nova, Uruguay, Wegener, Wild, Wilkins, Wilson, Yelcho, Zavadovsky.

Isla Cap. Aguirre *see* **Islote Aguirre**

Capanegra Davel, Daniel. b. Argentina. Teniente de navío in the Argentine Navy, who commanded the *Uruguay* between Jan. 2, 1920 and Jan. 4, 1921.

Capart, Carlos Luis *see* **Órcadas Station**, 1938, 1943, 1945

Cape Adare Peninsula *see* **Adare Peninsula**

Cape Anna Peninsula *see* **Cape Anna** (under **A**)

Cape Armitage Promontory *see* **Hut Point Peninsula**

Cape Barne Glacier *see* **Barne Glacier**

Cape Bird Automatic Weather Station. An American AWS at Cape Bird, at an elevation of 38 m, installed in Jan. 1999. When it was visited on Feb. 4, 2005, a propeller was found to be missing, and was replaced.

Cape Bird Huts. 77°14' S, 166°28' E. NZ summer field station opened in 1966-67, next to the Adélie penguin rookeries, at the N tip of McDonald Beach, at Cape Bird, Ross Island. They can accommodate 8 persons, and can be reached by helicopter from McMurdo.

Cape Cross Massif *see* **Finley Heights**

Cape Crozier Automatic Weather Station *see* **Laurie AWS**

Cape Denison Automatic Weather Station. 67°00' S, 142°40' E. An Australian AWS, installed in Jan. 1990, at Cape Denison, Commonwealth Bay, on the coast of Adélie Land, at an elevation of 31 m.

Cape Denison Hut. 67°00' S, 142°40' E. An Australian refuge hut, or rather two huts, Granholm Hut (on the W side of Boat Harbor) and Sorensen Hut (1 km E of Boat Harbor). Granholm was built first, in 1978, by ANARE, and was 3.2 m by 2.2. m, and contained benches, seats, a gas-cooking stove and oven. It had a small porch. Sorensen was 7 m by 7 m, and was a living area with accommodations for 4, or 6 in a pinch. It had cooking facilities. Alongside the hut was an Apple hut, with room to sleep 3 more people. Cape Denison was still being used in 2009, to support field personnel carrying out repairs on Mawson's Huts, which are right here.

Cape Evans Huts. 77°38' S, 166°24' E. New Zealand huts established on Cape Evans, Ross Island, in 1988.

Cape Geddes Station *see* **Base C**

Cape Keeler Advance Base. An advance base built on Cape Keeler, in the Antarctic Peninsula, by RARE 1947-48, 210 km from their main base on Stonington Island. It was built on Sept. 29, 1947, was used as a field base for exploring parties, and dismantled on Dec. 22, 1947.

Cape Murray Bay *see* **Murray Harbor**

Cape Murray Harbour *see* **Murray Harbor**

Cape petrels *see* **Petrels**

Cape pigeon. Or pintado. *Procellario capensis*, or *Daption capense*. A bird sometimes seen in Antarctica.

Cape-Pigeon Rocks. 66°59' S, 143°47' E. Twin rocky promontories forming a headland

on the W side of Watt Bay, 5 km S of Garnet Point, on the coast of George V Land. Discovered by AAE 1911-14, and named Cape Pigeon Rocks by Mawson for the large Cape pigeon rookery here. In 1952, US-ACAN accepted the name, but with a hyphen. Originally plotted in 66°58' S, 143°50' E, this feature was later re-plotted.

Cape Reclus Refuge. 64°30' S, 61°46' W. Also called Reclus Hut, or Portal Point Refuge, it was a British refuge hut built for survey and geology work by Fids Brian Bayly, Dick Foster, Dave Evans, and Les Harris, from Base O, between Dec. 7 and Dec. 13, 1956 on Portal Point, Reclus Peninsula, on the Danco Coast. A party of 3 Fids (Denis Kershaw, Ray McGowan, and Dick Foster) from Base O wintered-over there in 1957 in order to continue local survey work. It closed on April 25, 1958, and was finally dismantled on April 1, 1997 and transported to the Falkland Islands Museum in Stanley, where in Dec. 1998 it was re-erected as an exhibit. Only the concrete foundations remain in Antarctica.

Cape Renard Towers *see* **Unas Peaks**

Cape Roberts Project. An international project conceived in 1993, to drill at Cape Roberts, to investigate the early history of the East Antarctic ice sheet, and also of the West Antarctic Rift. The participating countries were Australia, UK, Germany, Italy, Netherlands, NZ, and USA. After a first year of trial drilling near Cape Roberts (this was in late 1996), there were three actual seasons of operation: Nov. and Dec. 1997, Nov. and Dec. 1998, and Nov. and Dec. 1999. Jim Cowie was project manager for all four seasons, Alex Pyne was science support manager leading the core processing team, and Pat Cooper was drilling manager. Others who worked there throughout were Brian Reid (electrician), J.R. Ridgen (mechanic), Murray Knox (plant operator), and Peter Sinclair (carpenter). The actual international science team was only there for the last 3 years, with New Zealander Peter Barrett as chief scientist for those three years.

Cape Shirreff Field Station. 62°28' S, 58°28' W. Chilean field station, built in 1980, on Livingston Island, in the South Shetlands. Known as Shirreff.

Cape Spencer Automatic Weather Station. 68°24' S, 147°28°E. An American AWS, installed at Cape Spencer (in the area of the Ninnis Glacier), in Jan. 1999, at an elevation of 37 m. In Nov. 2004 the site was relocated 75 feet away, but was removed in Jan. 2005.

Cape Webb Automatic Weather Station. An Australian AWS, installed on Dec. 28, 1994, at Cape Webb, on the coast of Adélie Land, at an elevation of 37 m. It stopped transmitting on Feb. 23, 1997, and was removed in Dec. 1998.

Capella Rocks. 70°39' S, 66°32' W. A low, rocky ridge, rising to about 1050 m above sea level, comprising several nunataks, near the head of Bertram Glacier, 3 km NE of Auriga Nunataks, in Palmer Land, at George VI Sound. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for the star Capella (which is in the constellation of Auriga). US-ACAN accepted the name later in 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Capes. There are far too many in Antarctica to list in this entry, but the main ones are: Adams, Adare, Adriasola, Agassiz, Akarui, Alexander, Alexandra, Allen, Anderson, Andreas, Andreyev, Ann, Anna, Annawan, Anne, Archer, Armitage, Astrup, Bage, Barlas, Barne, Barrow, Batterbee, Bayle, Beale, Beck, Bellue, Belsham, Bennett, Bernacchi, Berteaux, Betbeder, Bickerton, Bienvenue, Birchall, Bird, Blake, Bliznetsov, Boggs, Boothby, Borley, Bowles, Braathen, Broms, Brooks, Brown, Bruce, Bryant, Burd, Burks, Buromskiy, Byrd, Calmette, Canwe, Carr, Casey, Cesney, Charcot, Chavanne, Cheetham, Child, Chocolate, Christie, Christmas, Church, Cloos, Close, Cockburn, Colbeck, Collier, Confusion, Conway, Cornely, Cornish, Cox, Crossfire, Crozier, Cuff, Dalton, Daly, Danger, Daniell, Darlington, Darnley, Dart, Davidson, Davies, Davis, Davydov, Day, Dayman, De la Motte, Deacon, Découverte, Dedo, Denison, Disappointment, Dmitriev, Douglas, Dovers, Drakon, Dubouzet, Ducorps, Dumoutier, Dundas, Dunlop, East, Elliott, Ellsworth, Eolovyj, Errera, Eva, Evans, Evensen, Fairweather, False Cape Renard, Fanning, Faraday, Felt, Feoktistov, Filchner, Fiske, Fletcher, Flying Fish, Flåodden, Folger, Foster, Framnes, Frances, Freeman, Freshfield, Gage, Garcia, Garry, Gates, Gaudis, Geddes, Geology, Gerlache, Goldie, Goldschmidt, Goodenough, Gordon, Gotley, Granat, Gray, Green, Grönland, Géodésie, Hallett, Hammersly, Hansen, Harrisson, Hartree, Hattersley-Smith, Healy, Henderson, Herdman, Herlacher, Herschel, Hickey, Hinks, Hinode, Hoadley, Hodgson, Hooker, Hordern, Howard, Hudson, Huinga, Hunter, Hurley, Ingrid, Irízar, Irwyn, James, Jeremy, John Rodgers, Johnson, Jones, Jules, Juncal, Kaiser, Kater, Keeler, Keltie, Kemp, Kennedy, Kerr, Kidson, King, Kinnes, Kinsey, Kjellman, Klövstad, Knowles, Kogot', Kolosov, Kosistyy, Koyubi, Krasinskiy, Lachman, Laird, Lamas, Lamb, Lancaster, Lankester, Lawrance, Lázara, Leahy, LeBlanc, Leblond, Legoupil, Leguillou, Lewis, Light, Lindsey, Lista, Little, Lloyd, Longing, Lookout, Lyttelton, Mabel, McCormick, MacDonald, MacKay, Mackintosh, McNab, Main, Maksimov, Manhue, Marescot, Margerie, Markov, Marsh, Mascart, Maude, Mawson, May, Mayo, Melville, Menzel, Mikhaylov, Monaco, Monakov, Moore, Morse, Mousse, Moyes, Murdoch, Murmanskiy, Murray, Musselman, Nakayubi, Nebbet, Neumayer, North, Northrop, Norvegia, Novosilskiy, Nutt, Oakeley, Obelisk, Omega, Ostryj, Page, Palmer, Parr, Penck, Pépin, Perekhodnyj, Peremennyy, Pérez, Petersen, Philippi, Phillips, Plenty, Poinsett, Polar Sea, Pollock, Possession, Pt'ich'je, Purvis, Reichelderfer, Renard, Rey, Reynolds, Robert, Roberts, Robertson, Robinson, Roca, Roget, Rol, Roquemaurel, Ross, Rouse, Roux, Royds, Russell, Rybachiy, Rymill, Ryugu, Sáenz, Sastrugi, Schlossbach, Scoresby, Scott, Scrymgeour, Sedov, Selborne, Seryj, Sharbonneau, Sheffield, Shirreff, Sibbald, Simonov, Simpson, Smith, Smyth, Sobral, Sørlle, South, Southard, Spencer, Spencer-Smith, Spieden, Spike, Spirit, Steregushchyy, Sterneck, Streten, Surovyj, Surprise, Teall, Tektonicheskij, Tennyson, Timberlake, Timblón, Tokarev, Torson, Tulenij, Tuxen, Vahsel, Valavielle, Valentine, Vestknapp, Vik, Vostok, Wadworth, Waite, Walcott, Waldon, Waldron, Walker, Wallace, Washington, Webb, Well-Met, Westbrook, Wheatstone, Wheeler, Whitson, Wild, Wilkins, Willems, Williams, Wilson, Wiman, Wollaston, Wood, Worsley, Yelcho, Yemel'Yanov, Yevgenov, Zumberge.

Isla Capitán Aguirre *see* **Islote Aguirre**

Capitán Arturo Prat Station. 62°30' S, 59°41' W. Year-round Chilean scientific station, on Guesalaga Peninsula, Discovery Bay, Greenwich Island, in the South Shetlands. Originally called Soberanía Station, but renamed for Arturo Prat Chacón, hero of the naval battle of Iquique. **Jan. 27, 1947**: Construction began. **Feb. 6, 1947**: Soberanía Station was established by ChilAE 1946-47, the first Chilean Antarctic station. A post office was established there that year. **1947 winter**: 6 men. Boris Kopaitic O'Neill (leader), Luis Coloma Rojas, Sargento 1° Carlos Rivera Tenorio, Cabo 2° (corporal) Carlos Arriagada, Agüedo Gutiérrez Sanhueza (marine), and Luis S. Paredes Uribe (seaman cook; *see* **Oluf Rocks** and **Charles Point**). **1948 winter**: 7 men. Francisco Araya Prorromont (leader). **1949 winter**: Augusto Varas Orrego (leader; *see* **D'Abnour Bay**), Sargento José del Pozo. **1950 winter**: 7 men. Fernando Dorión W. (leader). **1951 winter**: 6 men. Raúl Gastón Kulczewski Silva (*see* **Tetrad Islands**) (leader), Sargento Humberto Lobos. **Jan. 27, 1952**: The *Angamos*, *Lientur*, and *Leucotón* arrived. **1952 winter**: Julio Navarrete Torres (leader). **Dec. 25, 1952**: the relief ships arrived. **Dec. 31, 1952**: The relief ships left. **1953 winter**: Ramón Capetillo Ojeda (leader). **1954 winter**: Hernán Sepúlveda Gore (leader). **1955 winter**: Galvarino Sazo L. (leader). **1956 winter**: Julio Tagle B. (leader). **1957 winter**: Edgardo T. Appel (leader). **1958 winter**: Octavio Ehijo Moya (leader). **1959 winter**: José Días (leader). **1960 winter**: Raúl Torrens (leader). **1961 winter**: Pedro González Pacheco (leader; he died, and was replaced by Hernán Sepúlveda Gore). **1962 winter**: José Sir Rodríguez (leader; "Sir" was his name, not a title). **1963 winter**: Gastón Gutiérrez Gallegos (leader). **1964 winter**: Pedro Sallato P. (leader). **1965 winter**: Victor Capetillo Ojeda (leader). **1966 winter**: Ernesto Lillo Taucán (leader). **1967 winter**: Hernán Soto-Aguilar (leader). **1968 winter**: Vicente Torrens Salvo (leader). **1969 winter**: Javier Gantes Salcedo (leader). **1970 winter**: René Gajardo Alarcón (leader). **1971 winter**: Rubén Goma Calvo (leader). **1972 winter**: Gustavo Letelier Saavedra (leader). **1973 win-**

ter: Miguel Vera C. (leader). **1974 winter**: Sergio Villouta González (leader). **1975 winter**: René Gajardo Alarcón (leader). **1976 winter**: Jorge Barba Gianotti (leader). **1977 winter**: Jorge Keyer Ahumada (leader). **1978 winter**: Epolinario Mora Carrillo (leader). **1979 winter**: Jorge Enrique Castillo (leader). **1980 winter**: Gastón Mendoza G. (leader). **1981 winter**: Patricio Astorquiza Vivar (leader). **1982 winter**: Iván Vega Ramírez (leader). **1983 winter**: Jorge Keyer Ahumada (leader). **1984 winter**: Sergio Villouta González (leader). **1985 winter**: Carlos Madina Hinojosa (leader). **1986 winter**: Santiago Urbina (leader). **1987 winter**: Gonzalo Lorca Paredes (leader). **1988 winter**: Óscar Tapia Olmos (leader). **1989 winter**: Eduardo Velarde Lorca (leader). **1990 winter**: Raúl Carreño Marambio (leader). **1991 winter**: Carlos Rodríguez Sepúlveda (leader). **1992 winter**: Manuel Carrasco Campos (leader). **1993 winter**: Jaime Abarzúa Riffo (leader). **1994 winter**: Germán Iturra Mahuzier (leader). **1995 winter**: Arturo Chiarella Albornoz (leader). **1996 winter**: Juan Rojas Acosta (leader). **1997 winter**: Rodolfo Valdenegro d'Alencon (leader). **1998 winter**: Guillermo Godoy Brauer (leader). **1999 winter**: Guillermo Godoy Brauer (leader). **2000 winter**: Mario Montego (leader). Personnel from 2000, unknown.

Islote Capitán Bonert *see* **Bonert Rock**

Capitán Caillet Bois Refugio. 63°55' S, 60°48' W. Argentine refuge hut, built on rock at Mikkelsen Harbor, Watkins Island, on the S side of Trinity Island, in the Palmer Archipelago. It was inaugurated on Dec. 10, 1954, as Refugio Naval Puerto Mikkelsen, but its name soon changed to Refugio Naval Capitán Caillet Bois Refugio, or just Caillet Bois, named for Argentine hydrographer and historian Capt. Teodoro Caillet Bois (1879-1941), an officer on the *Uruguay*, 1904-05. It closed in 1959.

Capitán Campbell Refugio. 65°02' S, 59°39' W. Argentine refuge hut, built on Nov. 30, 1961, on the ice at Christensen Nunatak, NE of Robertson Island, in the Seal Nunataks, in the Larsen Ice Shelf, off the E coast of the Antarctic Peninsula. It was used as a staging area for the first Argentine flight to the South Pole, on Jan. 6, 1962. It was evacuated on Jan. 21, 1962.

The *Capitán Cánepa*. Originally the 1250-ton, 62.6-meter corvette *Barrie*, built in 1940 at the Collingwood Shipyards, in Ontario, and launched there on Nov. 23, 1940. After World War II she was decommissioned on Jun 26, 1945, and in 1947 sold to the Argentines, as a merchant ship, being renamed the *Gasestado*. On Nov. 23, 1954, the Argentine Navy acquired here, changed her name to the *Capitán Cánepa*, and converted her into an oceanographic research vessel. She operated in the Drake Passage in 1962, and took part in ArgAE 1963-64, under the command of Juan M. Haedo. On Dec. 15, 1972, she was struck off the Navy list, and on June 28, 1973, sold for scrap.

Capitán Cobbett Refugio *see* **Primavera Station**

Islote Capitán de la Fuente *see* **Fuente Rock**

Punta Capitán del Canto *see* **Canto Point**

Capitán Estivariz Refugio. 66°23' S, 67°13' W. Argentine summer refuge hut built by ArgAE 1955-56 on the W coast of Watkins Island, in the Biscoe Islands, off the NW coast of the Antarctic Peninsula. It was opened on Feb. 29, 1956, as Refugio Aeronaval Capitán Estivariz, but was more commonly known as Estivariz. It lasted until the following year. Capitán de corbeta Eduardo Aníbal Estivariz, of the Argentine navy, for whom the refugio was named, contributed to the success of the 1955 revolution, but was killed in an airplane crash.

Capitán Fliess Refugio. 64°51' S, 62°33' W. Argentine refuge hut built by the Navy on March 9, 1949, and opened on April 4, 1949, on the SE point of Neko Harbor, Andvord Bay, on the Danco Coast, on the W coast of Graham Land. It was originally called Refugio Neko, and included Estación de Salvamento y Observatorio Pingüino (i.e., the Penguin Refugio and Observatory). Its name was soon changed to Refugio Naval Capitán Fliess, named for Felipe Fliess (q.v.), and more popularly known as Fliess. It burned down in 1951, but was re-built in 1952, for occasional occupation. It functioned until 1955, and has since been dismantled.

Cabo Capitán Lafalce *see* **Cape Barrow**

The *Capitán Luis Alcázar*. A 240-ton, 46.54-meter Chilean motor ship, built in 1961, she could do 12 knots. She took part in the following expeditions: ChilAE 1981-82 (Captain Juan González Sendra); ChilAE 1982-83 (there were two captains this season, first Captain González, as in the previous season, and then Manuel Lagunas Alfaro); ChilAE 1983-84 (same captain situation as in the previous season); ChilAE 1984-85 (Captain Manuel Lagunas Alfaro); ChilAE 1985-86 (Captain Manuel Lagunas Alfaro); ChilAE 1986-87 (Captain David Pérez de Arce Becerra); ChilAE 1987-88 (Captain Leopoldo Moraga), ChilAE 1988-89 (Capt. Moraga again), ChilAE 1989-90 (Captain Sergio Yuseff Sotomayor; *see* **Punta Yuseff**), ChilAE 1990-91 (Capt. Yuseff), ChilAE 1991-92 (Capt. Yuseff), ChilAE 1993-94 (Capt. Eugenio Oliva Bernabe).

Islote Capitán Martínez Canaveri *see* **Dobrowolski Island**

Monte Capitán Mendioroz *see* **Mount William**

Islas (or Islotes) Capitán Turrado *see* **Omicron Islands**

Capitanía de Puerto de Bahía Fildes. 62°12' S, 58°55' W. Chilean support station, opened at Fildes Bay, King George Island, in the South Shetlands. It could take 5 persons.

Capitanía de Puerto de Bahía Paraíso. 64°49' S, 62°51' W. Chilean support station, opened at Paradise Harbor, on the Danco Coast of Graham Land, on Dec. 3, 1995. It could take 4 persons in the summer.

Capitanía de Puerto de Rada Covadonga. 63°19' S, 56°55' W. Chilean support station, opened at Covadonga Harbor, Trinity Peninsula. It could take 2 persons in summer.

Mount Capley. 79°32' S, 83°13' W. Rising to 1810 m, in the Nimbus Hills of the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken on photographic flights over Marie Byrd Land and Ellsworth Land during the summer seasons of 1964-65 and 1965-66 (i.e., during OpDF 65 and OpDF 66). Named by US-ACAN in 1966 for Lt. Cdr. Joe Henry Capley (b. April 1, 1935, Lewisburg, Tenn.), who joined the U.S. Navy in Jan. 1956, and was a pilot on those photo flights. Cdr. Capley retired in July 1977.

Capling Peak. 72°26' S, 167°08' E. Rising to 2730 m, on the N side of Croll Glacier, 8 km SE of Bramble Peak, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Robert W. Capling, USN, aviation machinist's mate and flight engineer on LC-130 Hercules aircraft at McMurdo during OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1967-68). NZ-APC accepted the name in Nov. 1969.

Ensenada Cappagli. 62°35' S, 61' 26' W. An inlet, W of New Plymouth, on Livingston Island, in the South Shetlands. Named by the Argentines.

Cappelenbotnen. 74°36' S, 10°58' W. An ice corrie between Wrighthamaren and Bergravrista, in the N part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named for Johann Cappelen (1889-1947), lawyer and Norwegian Resistance leader against the Nazis at Trondheim. He was arrested but continued to lead the fight, even from behind bars.

Cappellari Glacier. 85°52' S, 158°40' W. About 17.5 km long, in the Hays Mountains, it flows W from the NW shoulder of Mount Vaughan, to enter Amundsen Glacier, just N of Mount Dort, in the Queen Maud Mountains. First roughly mapped by ByrdAE 1928-30. Re-mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lewis K. Cappellari (b. Jan. 1937), ionosphere physicist at McMurdo in 1965. NZ-APC accepted the name on June 29, 1967.

Cappus, Harald. b. Feb. 17, 1896, Buenos Aires, son of Guillermo Cappus and his wife Paulina von Burren. He joined the Argentine Navy, and studied at the Escuela de Guerra Naval, specializing in communications. He married Nélida. He was chief of communications at the Naval Aviation School at Puerto Belgrano, in Buenos Aires province, and, as a frigate captain, was selected as one of the naval contingent on the Lapez-Sueyro mission to Washington to enlist North American aid in 1941. In 1947 he was commandant of the naval base of Río Santiago, and also of the Plata Naval Zone. He was rear admiral in command of Argentine naval maneuvers in the South Shet-

lands and the Palmer Archipelago, in Feb. 1948. His ships were the *Veinticinco de Mayo*, *Almirante Brown*, *Entre Ríos*, *San Luis*, *Misiones*, *Santa Cruz*, *Mendoza*, *Cervantes*, and other auxiliary vessels. They did some hydrographic work, an aerial survey of Deception Island, and visited some of their Antarctic bases.

Le Capricorne *see under* **L**

Capsize Glacier. 74°02' S, 163°20' E. A tributary glacier in the Deep Freeze Range, it drains the slopes between Mount Cavaney and Mount Levick, and flows NE to enter Campbell Glacier, in Victoria Land. So named by NZGSAE 1965-66 because of the alarming capsize that the Northern Party of that expedition had there. NZ-APC accepted the name on April 19, 1966, and US-ACAN followed suit in 1968.

Capstan Rocks. 64°57' S, 63°26' W. A small group of rocks, sometimes awash at high water and in strong winds rising to a height of 10 m above sea level, 1.5 km S of Bob Island, in the S entrance to Gerlache Strait, WSW of Cape Willems, off the Danco Coast, on the W coast of Graham Land. It was shown on an Argentine government chart of 1950, but not named. Surveyed by an RN Hydrographic Survey unit in 1956-57. Named descriptively by UK-APC on July 7, 1959. US-ACAN accepted the name in 1960. It appears on a British chart of 1960.

Captain Ahab. 62°00' S, 57°37' W. A prominent stack built of basalt dyke, off the SE coast of Trowbridge Island, Destruction Bay, in the South Shetlands. Named by the Poles in 1984, for the central character in Herman Melville's novel *Moby Dick*.

Mount Cara. 82°45' S, 161°06' E. Rising to 3145 m, 6 km NNW of Mount Lysaght, in the Queen Elizabeth Range. Named by BAE 1907-09. US-ACAN accepted the name in 1966.

Pico Característico. 62°44' S, 60°10' W. A peak on the W side of Brunow Bay, on the SE coast of Livingston Island, in the South Shetlands. Named by the Argentines.

Carapace Nunatak. 76°53' S, 159°26' E. A prominent, isolated nunatak just to the N of, and near the head of, Mackay Glacier, just W of the Convoy Range, and 13 km SW of Mount Brooke, in Victoria Land. It rises to an impressive conical peak which is visible for a considerable distance from many directions. Named in 1957 by the NZ party of BCTAE for the carapaces of small crustaceans found in the rocks here. US-ACAN accepted the name in 1961. The feature was replotted by the Australians in late 2008.

Caraquet Rock. 62°07' S, 59°00' W. A submerged rock N of Fildes Peninsula, 6 km WSW of Bell Point, off the W part of King George Island, in the South Shetlands. Photographed by FIDASE in Dec. 1956. Named by UK-APC on Sept. 23, 1960, for the *Caraquette* [sic]. US-ACAN accepted the name later in 1960. It appears on a 1962 British chart. Originally plotted in 62°07' S, 59°02' W, it was replotted by the British in late 2008.

The *Caraquette*. Name also seen erroneously as *Caraquet*. A 77-ton Liverpool sealing smack, built at Caraquette Bay, New Brunswick, for merchant John Croft. In the early months of 1821 she was captured by African natives, but the crew managed to take her back. On Aug. 1, 1821, Joseph Usher was appointed skipper, and she left Liverpool on Aug. 17, 1821, bound for the South Shetlands and the 1821-22 sealing season. She is reported to have made a landing on the Antarctic Peninsula, south of Deception Island. She took only 487 fur seal skins, and arrived back in Liverpool in Oct. 1822. In late 1822 she was lost on a voyage, with all crew and papers.

Cabo Carbajal. 69°32' S, 68°16' W. A cape, due E of Zonda Glacier, on the Rymill Coast of Palmer Land. Named by the Argentines.

Islotes Carbajal. 67°33' S, 67°47' W. A group of small islands, immediately E of Piñero Island, and W of Covey Rocks, off the Loubet Coast of Graham Land. Named by the Argentines.

Mount Carbone. 76°22' S, 144°30' W. A mountain, 5 km E of Mount Paige, in the Phillips Mountains of Marie Byrd Land. Discovered and photographed aerially during ByrdAE 1928-30, and first plotted from these photos. Later named by Byrd, for Al Carbone. US-ACAN accepted the name in 1966.

Punta Carbone *see* **Punta Sarzosa**

Carbone, Alphonso "Al." b. Jan. 1, 1907, Cambridge, Mass., son of clothing store presser Angelo Carbone and his wife Vincenza, Italian immigrants. He joined the Marines and served in Nicaragua as a mess sergeant from 1926 to 1930. He was the cook who sailed south on the *Jacob Ruppert* for ByrdAE 1933-35. He was cook on the shore party, while they wintered-over at Little America. He later served as a State House police officer on Beacon Hill, in Boston, for 17 years. In 1942, in World War II, he was again with the Marines, in the South Boston (Mass.) shipbuilding annex. He died on June 30, 1983, in Cambridge, Mass.

Cerro Carbonell *see* **Brown Bluff**

Glaciar Carbutt *see* **Carbutt Glacier**

Carbutt Glacier. 65°09' S, 62°49' W. It flows NW into Goodwin Glacier to the E of Maddox Peak, close E of Flandres Bay, on the Danco Coast, on the W coast of Graham Land. It first appears, unnamed, on an Argentine government chart of 1954. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for John Carbutt (1832-1895), British-born American photography pioneer. US-ACAN accepted the name in 1965. The Argentines call it Glaciar Carbutt.

Carcelles, Alberto R. b. 1897, Argentina. The malacologist at the Museum of Natural Sciences, in Buenos Aires, who, from 1923 to 1927, conducted observations, and made collections, of the birds on South Georgia. In 1925-26 he was also in the South Shetlands and the South Orkneys, aboard the *Primero de Mayo*, thus becoming one of the pioneer Argentine scientists in Antarctica. In 1926-27 he was at the South Orkneys, aboard the *Lancing*, and in 1929 was aboard the *Primero de Mayo* again. He was back in the South Orkneys in Feb. 1933. He died in 1977.

Mount Cardell. 70°12' S, 65°11' E. An elongated mountain, 3 km NW of Bradley Ridge, and 9 km SE of Mount Peter, in the Athos Range of the Prince Charles Mountains, in Mac. Robertson Land. Plotted in 70°13' S, 65°12' E, from ANARE air photos, and named by ANCA for Norman "Norm" Cardell, who wintered-over as senior electronics technician at Mawson Station in 1964. The feature has since been re-plotted.

Cardell Glacier. 66°25' S, 65°32' W. Flows W into Darbell Bay between Shanty Point and Panther Cliff, on the Loubet Coast, on the W coast of Graham Land. Photographed aerially by FIDASE 1956-57, and mapped by FIDS cartographers from these photos, but with the coordinates 66°26' S, 65°27' W. Named by UK-APC on July 7, 1959, for British ophthalmic surgeon John Douglas Magor Cardell (1896-1966), snow goggles designer. US-ACAN accepted the name in 1971. It has since been replotted.

Mount Cardinall. 63°27' S, 57°10' W. A conical mountain, rising to 675 m, close SW of Mount Taylor, it overlooks the NE head of Duse Bay, Trinity Peninsula, at the NE end of Graham Land. Discovered by Dr. J. Gunnar Andersson's party in 1903, during SwedAE 1901-04. Charted in 1945 by Fids from Base D, and named by them for Allan Wolsey Cardinall (1887-1956), war-time governor of the Falkland Islands (1941-46). He was knighted in 1943. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the British gazetteer of 1955. Re-surveyed by FIDS in 1956. The South Americans have a tendency to call it Cerro Nevado (i.e., "snowy hill"). Refugio Independencia Argentina was established to the S of the mountain.

Anse Cardozo *see* **Cardozo Cove**

Caleta Cardozo *see* **Cardozo Cove**

Ensenada Cardozo *see* **Cardozo Cove**

Cardozo Bay *see* **Cardozo Cove**

Cardozo Cove. 62°10' S, 58°36' W. The northern of 2 coves at the head of Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. Charted in Dec. 1909, by FrAE 1908-10, and named by Charcot as Anse Cardozo, possibly for São Paolo engineer João Pedro Cardoso [sic] (1871-1957). The British were referring to it as Cardozo Bay by 1921, but it appears on a 1929 British chart as Cardozo Cove. Re-charted by the Discovery Investigations in 1934-35, the name Cardozo Cove was accepted by UK-APC on Sept. 8, 1953, and that is the name that appears in the British gazetteer of 1955. It appears on a 1947 Argentine map as Ensenada Cardozo, and on a 1947 Chilean chart as Caleta Cardozo. The name Caleta Cardozo was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. The British were the latest to replot this feature, in late 2008.

Care Heights. 69°25' S, 70°50' W. A group

of mostly ice-covered peaks and ridges, the southernmost of the Rouen Mountains, rising to about 1500 m, N of Tufts Pass, in the NW part of Alexander Island. Photographed aerially in late 1947 by RARE 1947-48, and plotted from these photos in 1959-60, by Searle of the FIDS. Further delineation was made from USN air photos taken in 1966-67, BAS surveys conducted between 1973 and 1977, and U.S. Landsat imagery made in Jan. 1974. Named by UK-APC on Dec. 8, 1977, for Bernard William "Bernie" Care (b. 1951, Worthing, Sussex), BAS geologist who wintered-over at Base E in 1974. He was back at Base T in the summer of 1975-76, and working in the field in the N part of Alexander Island during the 1976-77 summer. It appears in the 1980 British gazetteer. US-ACAN accepted the name.

Carew, Daniel. b. March 30, 1808, Stonington, Conn., son of ship owner Simon Carew and his wife Sally Goddard. On June 21, 1830, in Stonington, he married Grace Billings Palmer, and they moved to Buffalo, NY, where they had three children. Dan Carew, who owned many ships, was captain of the *Talma*, which, with the *Pacific*, was in the South Shetlands for the 1834-35 season. He died at sea on Aug. 9, 1837, while on a trip to see his brother in Alabama. Grace remarried, 15 years later, to Nathaniel Wilgus, and had a son by him in Buffalo. She was 42.

Carew, Eli. In 1880 a man living in Stonington, Conn., and calling himself Capt. Eli Carew, claimed that when he was a young man he had sailed into Antarctic waters on the *Free Gift*. Now, although Capt. Carew doesn't mention the year, or the expedition, the *Free Gift* was in Antarctica only during the Fanning-Pendleton Sealing Expeditions of 1820-21 and 1821-22. There had been a crew of 11, and we don't really know the names of any of them, so it may be true. Capt. Carew goes on to tell us that his companions included Uncle Bob Allison, a sailor named Page, and a colored man named Black Jim. Apparently, Uncle Bob was, at the time Carew was spinning this story, living in Jersey City Heights. This is the remarkable story the captain told in 1880: he, Uncle Bob, Page, and Black Jim were put ashore for 2 months on an island in the South Shetlands, as a small sealing gang (a common occurrence), but their ship never came back for them, and winter was approaching. Leaving Uncle Bob on the island, the three others got into their small boat and began rowing around the island. Page went mad, upset the boat, and was drowned. Carew, the hero, righted the boat, and pulled the unconscious Black Jim ashore, where they met up with Uncle Bob. Exhausted, Carew was cradling Black Jim, with Jim's head resting on Carew's shoulder, when, at that moment, lightning struck them both, killing Jim instantly, and searing an image of his face on Carew's shoulder, an image that was still there in 1880 (if you cared to look hard enough). They buried Jim, and finally, somehow, got off the island. That was the story that Carew was peddling in 1880, and at least one newspaper [the *North American*, out of Philadelphia, May 22, 1880] picked it up. Trouble is, Eli Carew doesn't seem to have existed, and maybe the newspaper invented Captain Carew. However, there is a disconcerting element of truth in the story: In 1880, there lived, in Jersey City, a saloon keeper named Bob Allison. He was just about old enough to have been on the *Free Gift* in the early 1820s. He would have been about eleven years old (young, but still possible).

Carey, William Melvin "Peter." b. 1887, Barnet, Herts, youngest son of produce broker Herbert Septimus Carey (of Carey & Browne) by his wife Frances Helen Clark. Trained at Eastman's Naval Academy, in Portsmouth, and in the Navy since 1902 (when he went to the *Britannia*), he served in World War I as a lieutenant and lieutenant commander (mostly on the *Barham*). In 1915, in Portsmouth, he married Winifred Oakeley Newington, sister of Beryl Newington [who married J.J.C. Irving (q.v.)]. After the war he skippered the minesweeper *Mistley*, and the fishery protection ship *Colne*. From 1926 to 1928 he was in Australia, as captain of the *Marguerite*, training Australian civilian reserves. He retired from the Navy to become the first captain of the *Discovery II*, 1929-33. On the way back to Europe, at the end of his second cruise on that vessel, he was sick (acute nervous breakdown on April 12, 1933; confined to bed), and not in actual command of the ship. Despite rumors concerning Cdr. Carey's death on the morning of May 2, 1933, off Ushant (in France), nothing was said publicly except that he left his cabin in a dazed condition, in the darkness, and was swept overboard. His widow died in 1972.

Carey Glacier. 78°53' S, 83°55' W. On the E side of Miller Peak, flowing SE into Minnesota Glacier, in the S end of the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Lt. David Wellington Carey, Jr. (b. Dec. 8, 1924, Okarche, Okla.) (*see* **Deaths**, 1956, and **Operation Deep Freeze II**, Oct. 18, 1956), of Warrington, Fla.

Carey Range. 72°53' S, 62°37' W. About 56 km long and about 16 km wide, with peaks rising to about 1700 m, between Hilton Inlet and Violante Inlet, or, put another way, between Mosby Glacier and Fenton Glacier, on the Black Coast, on the SE coast of Palmer Land. Mapped by USGS from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1979, for Samuel Warren Carey (1911-2002), professor of geology at the University of Tasmania, 1946-70. UK-APC accepted the name on May 21, 1979. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Lago Carezza. 74°43' S, 164°03' E. A seasonally frozen-over lake, 180 m long by 80 m wide, with a maximum depth of 2 m, at an altitude of 167 m above sea level, 6 km E of Mount Abbott, and 2.6 km SSW of Mario Zucchelli Station, at Terra Nova Bay, in Victoria Land. Named by the Italians on July 17, 1997, for its resemblance to Lake Carezza in the Italian Dolomites.

Cargill, John. An able seaman, he was bosun's mate on the *Discovery* 1925-26. He was bosun on the same ship, 1926-27, and on the *Discovery II*, 1929-31. By 1941 he could not be traced to receive his Polar Medal.

Cargo Pond. 76°55' S, 161°05' E. A frozen pond, or small lake, over 200 m in width, in a moraine-enclosed cirque basin at the foot of the cliffs to the S end of Alatna Valley, in the Convoy Range of Victoria Land. It was from here that a 1960-61 USARP geological field party, consisting of Parker Calkin, Roger Hart, and Ellory Schempp, had to be evacuated in a hurry. Equipment and provisions that had been stockpiled on the pond ice were eventually redistributed by the wind and lodged among the surrounding morainic boulders. A 1989-90 NZARP party, led by Trevor Chinn, camped nearby, and made frequent visits to the site, not only to clean up the area, but also to acquire exotic 30-year-old foods to supplement their standard camp fare. For the above reason, it was so named by NZ-APC in 1992. US-ACAN accepted the name in 1993.

Cargo ships. Some are ordinary ships, others are designed specifically for Antarctica. Usually they have reinforced hulls, sloping bows, and very powerful engines. The controls are normally at the top of the ship so the captain can plot his course far ahead of time.

Caria, María Adela. Argentine bacteriologist, chief of the microbiology department at the Bernardino Rivadavía Museum of Natural Sciences, in Buenos Aires. In 1968-69 she became one of the first women scientists to work on the Antarctic continent (*see* **Women in Antarctica**). She died in 1987.

The *Caribbean Intrepid*. A 708-ton, 81.85-meter Argentine merchant vessel, built by Bellinger, of Jacksonville, Fla., in 1967, as the *Inagua Bay*, and for 20 years flew the Liberian flag. In 1986 she was renamed *Panama Bay*, and in 1988 the *Caribbean Intrepid*. She was chartered by the Uruguayans to help relieve Artigas Station in 1987-88. In 1988 she was sold to Unitankers Naviera, of Argentina, and renamed *Río Grande*, but in 1989 the name was changed back to the *Caribbean Intrepid*. In 1994 she was sold again, and became the *Para Meru*, and in 1997 sold again to become, once more, the *Caribbean Intrepid*. In 2001 she was sold to a Paraguayan company, and became the *Doña Anneke*.

The *Cariboo*. Oceanographic ship that took part in the Italian Antarctic expedition of 1988-89. Skipper that season was Christian Boudray. She was back in Terra Nova Bay in 1989-90, same skipper.

Monte Caridad *see* **Mount Charity**

Carieiro, J. *see* **Órcadas Station**, 1932

The *Carina*. Polish ship that took part in PolAE 1985-86.

Carina Heights. 71°09' S, 66°08' W. A large sprawling elevation, rising to about 1600 m,

and bounded by crags to the SW, and by an icefall to the NW, it is located near the head of Ryder Glacier, at the W edge of the Dyer Plateau, in Palmer Land, at George VI Sound. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for the constellation. US-ACAN accepted the name later in 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Cabo Cariz *see* **Cabo Agrelo**

Carleton Glacier. 78°01' S, 162°30' E. A small glacier flowing N from the NW slopes of Mount Lister, in the Royal Society Range, into Emmanuel Glacier, and from there flowing through to Ferrar Glacier, in Victoria Land. Mapped by USGS from ground surveys and USN air photos. Named by US-ACAN in 1963, for Carleton College, Northfield, Minn., which has sent researchers here. NZ-APC accepted the name on June 27, 1963.

Punta Carlitos. 64°19' S, 62°54' W. A point on Isla Fondeadero, in Andersen Harbor, in the Melchior Islands, in the Palmer Archipelago. Named by the Argentines.

Cabo Carlos *see* **Charles Point**

Cabo Carlos *see* **Sherlac Point**

Monte Carlos V. 64°49' S, 62°54' W. Very close to the SE point of Lemaire Island, off the W coast of Graham Land. It is pronounced as Monte Carlos Quinto. Named by ChilAE 1950-51 for King Carlos V of Spain, who expedited the reales cédulas (*see* **Cabinet Inlet** for an explanation, if necessary).

Carlot, Jean-Nicolas. b. Dec. 7, 1806, Île d'Yeu, France. Ordinary seaman on the *Astrolabe* during FrAE 1837-40. He became a pilot on Nov. 1, 1840.

Bahía Carlota *see* **Carlota Cove**, **Charlotte Bay**

Carlota Cove. 62°22' S, 59°42' W. About 1250 m wide, it indents the W coast of Robert Island for about 900 m, between Coppermine Peninsula and Misnomer Point, and opens to the E of Fort William, in the South Shetlands. Charted by ChilAE 1949, and named by them, presumably as Bahía Carlota, which is the name that appears on a 1961 Chilean chart, and was the one accepted by the 1974 Chilean gazetteer. UK-APC accepted the name Carlota Cove on Nov. 3, 1971, and US-ACAN followed suit that year. It appears in the British gazetteer of 1974.

Carlsen, Sigurd. Name better rendered as Karlsen. b. Feb. 20, 1896, Hole, Norway, son of Karl Frithjof Andersen and his wife Karoline Kathrine. Whaler in Antarctic waters in the 1913-14 season, who died in a flensing accident on Dec. 16, 1913, off the Danco Coast, and was buried in the Whalers Bay Cemetery on Deception Island.

Bahía Carlson *see* **Carlsson Bay**

Isla Carlson *see* **Carlson Island**

Carlson Bay *see* **Carlsson Bay**

Carlson Buttress. 82°35' S, 52°27' W. A rock buttress, rising to about 1750 m, to the NW of Worcester Summit, on the N side of the Jaeger Table, on the Dufek Massif, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1979, for Christine Carlson, USGS geologist who worked on the Dufek Massif in 1976-77. UK-APC accepted the name on May 21, 1979.

Carlson Glacier. 69°25' S, 68°03' W. Flows NE for 14 km from the area between Mount Edgell and the Relay Hills into the Wordie Ice Shelf, at the Fallières Coast, on the W side of Graham Land. Photographed aerially by USN in 1966, surveyed by BAS personnel from Base E between 1970 and 1973, and mapped by USGS in 1974 from these efforts. Named by US-ACAN in 1979, for Cdr. Burford A. Carlson (b. Nov. 27, 1929, Jamestown, NY), USN, meteorologist on the staff of the commander, U.S. Naval Support Force, Antarctica, during OpDF 70 (i.e., 1969-70) and OpDF 71 (i.e., 1970-71). It appears on the 1979 USGS sketch map of the N part of Palmer Land. UK-APC accepted the name on May 21, 1979.

Carlson Inlet. 78°00' S, 78°30' W. About 150 km long and 40 km wide, and ice-filled, between Fletcher Ice Rise and Fowler Ice Rise, in the SW part of the Ronne Ice Shelf. Named by US-ACAN in 1978, for Lt. (later Cdr.) Ronald F. "Ron" Carlson (b. May 24, 1929, Astoria, Oreg.), who joined the U.S. Navy in Oct. 1950, and who was a VX-6 pilot often in Antarctica in the 1950s and 1960s. On Dec. 14-15, 1961, during an LC-130 Hercules flight from McMurdo across the Ellsworth Mountains to (what would become) Eights Station, he observed, photographed, and roughly sketched this inlet. Cdr. Carlson retired from the Navy in June 1981. This inlet was mapped in 1976 by USGS, from U.S. Landsat images taken in Feb. 1974. It was traversed by BAS on a radio echo-sounding flight from Siple Station in Jan. 1975. UK-APC accepted the name on Feb. 7, 1978.

Carlson Island. 63°53' S, 58°16' W. A rocky island, 1.5 km long and rising to 300 m above sea level, in Prince Gustav Channel, 3 km N of Lagrelius Point (on James Ross Island) and 5 km SE of Pitt Point, Trinity Peninsula, off the E coast of the Antarctic Peninsula. Discovered in 1903 by SwedAE 1901-04, mapped by them on Oct. 9, 1903, and named by Nordenskjöld as Wilhelm Carlson Island, for Stockholm banker Wilhelm Carlsson [sic], a major patron of the expedition. Although the name Carlsson is occasionally seen written in Nordenskjöld's text and charts, more often that not it is misspelled, and that misspelling was perpetuated by every country who put it on their maps or charts. *See also* **Carlsson Bay**. The name (and the error) was later shortened; it appears on a 1921 British chart as Carlson Island, but on a 1930 British chart as Carlson Islet. It was resurveyed by Fids from Base D in Dec. 1945 and Aug. 1952. The name Carlson Island was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a Chilean chart of 1947 as Isla Carlson, and that is the name that appears in the 1970 Argentine gazetteer, as well as in the 1974 Chilean gazetteer.

Carlson Islet *see* **Carlson Island**

Carlson Peak. 75°57' S, 70°33' W. Rising to 1290 m, it is one of the Bean Peaks, in the Hauberg Mountains, on the Orville Coast, where Ellsworth Land meets southern Palmer Land. Mapped by USGS from ground surveys conducted from 1961 to 1965, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Paul R. Carlson, USARP meteorologist at Byrd Station, 1965-66. It is shown on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Bahía Carlsson *see* **Carlsson Bay**

Carlsson Bay. 64°24' S, 58°04' W. Also seen (erroneously) as J. Carlson Bay, and John Carlson Bucht. A square bay, 4 km in extent, entered 5 km NW of Cape Foster, between that cape and Nygren Point, on the SW side of James Ross Island, off the E coast of the Antarctic Peninsula. Discovered in 1903 by SwedAE 1901-04, mapped by them on Oct. 9, 1903, and named by Nordenskjöld as J. Carlsonbukht, or John Carlson Bukht, for Swedish wholesale dealer John Carlsson [sic], a supporter of the expedition. All other countries with a vested interest in the area mapped it as Carlson; i.e., it appears on a British chart of 1921 as Carlson Bay, and on a 1947 Chilean chart as Bahía Carlson. Re-surveyed by Fids from Base D in Dec. 1948 and Aug. 1952. After rejecting the name John Carlsson Bay, US-ACAN accepted the shortened version Carlsson Bay in 1956, and UK-APC followed suit on Sept. 4, 1957 (Note: They didn't give Carlson Island its correct spelling, as they did with the bay). It appears as Bahía Carlsson on a 1960 Argentine chart, and also in their 1970 gazetteer and in the 1974 Chilean gazetteer. *See also* **Carlson Island**.

Carlstrom Foothills. 81°25' S, 159°00' E. A group of peaks and ridges, 16 km long, with summits rising to 1690 m above sea level, and running N-S between Mount Albert Markham and the Kelly Plateau, in the Churchill Mountains. Named by US-ACAN in 2003, for John Eric Carlstrom (b. Feb. 24, 1957, Hyde Park, NY), of the department of astronomy and astrophysics at the University of Chicago, who was projects director at the Center for Astrophysical Research in Antarctica, at Pole Station, from 2001. NZ-APC accepted the name on Feb. 27, 2003.

Carlyon, Roy Albert. b. 1933, Wellington, NZ, but raised partly in the Cook Islands. After university, he worked as a surveyor, and was with the railroad, at Wanganui, when he was chosen to be assistant surveyor and navigator in the NZ party during BCTAE 1957-58. He and Ayres made up the Darwin Glacier Party of that season, and wintered-over at Scott Base in 1957. On his return he went back to work for the railroad, later going into business. He died in 1980.

Carlyon Glacier. 79°34' S, 159°50' E. A large glacier flowing ESE from the névé E of

Mill Mountain, between Mulock Glacier and Byrd Glacier, in the N portion of the Cook Mountains, and feeds the Ross Ice Shelf through the Hillary Coast, at Cape Murray. Discovered in Dec. 1958 by the Darwin Glacier Survey Party of BCTAE (which comprised Roy Carlyon and Harry Ayres), mapped by them, and named by NZ-APC on May 27, 1960, for Mr. Carlyon. ANCA accepted the name on Oct. 11, 1960, and US-ACAN followed suit in 1962. Originally plotted in 79°37' S, 160°00' E, it has since been replotted.

Bajo Carmen. 64°42' S, 62°53' W. A shoal, about 900 m NW of the center of Useful Island, in the Gerlache Strait, 5 km W of the extreme W point of the Antarctic Peninsula. Named by ChilAE 1950-51, probably for a relative of one of the expeditioners.

Península Carmen *see* **Península Geiger**

Carmen Land. South of the Queen Maud Mountains, en route to the Pole. Discovered by Amundsen in 1911, but Byrd failed to confirm its existence when he flew over this area in Nov. 1929. Subsequent explorations have failed to turn up the elusive Carmen Land. Perhaps it was a mirage.

Mount Carmer. 86°06' S, 131°11' W. On the E side of Wotkyns Glacier, 3 km WNW of Heathcock Peak, in the Caloplaca Hills, E of the Watson Escarpment. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for John Leroy Carmer (b. 1934), electronics technician at Byrd Station in 1962.

Carmey, Isaac *see* **USEE 1838-42**

Bahía Carminatti *see* **Ambush Bay**

Carminatti, Gualterio. b. Switzerland, as Gualtiero Carminatti. He moved to Argentina, and became known there as Gualterio Carminatti (Gualtiero is the Italian form of Gualterio, which is the Spanish form of Walter). He was an engineer 3rd class when he became 2nd engineer on the *Uruguay* in 1903, during the rescue attempt of SwedAE 1901-04., and was in the Argentine Navy for 38 years.

Caleta Carmona *see* **Oscar Cove**

The *Carnarvon Castle*. Built by Harland & Wolff, of Belfast, in 1926, as Union Castle's first motor vessel, and their first ship of over 20,000 tons (20,122). She had a crew of 350, and could take almost 1000 passengers. She had two red and black funnels, the forward one being a dummy, and made her first mail run to Cape Town that year. Because she needed more speed, she was modernized at Harland & Wolff between 1936 and 1938, had the dummy funnel taken off, and in 1938 set a new record from London to Cape Town, of 12 days 13 hours, 38 minutes (a record that stood until 1954). In 1939 she was converted into a Royal Navy armed merchant cruiser. In Dec. 1940 she and the German cruiser *Thor* got into a fight, and the *Carnarvon Castle* lost, escaping after sustaining numerous hits and several dead and wounded crew. On Feb. 8, 1942, during ArgAE 1942, the *Primero de Mayo* visited Deception Island, in the South Shetlands, and, on behalf of the Argentine government, took possession of Antarctica between 25°W and 68°34' W, depositing on the island a bronze cylinder with the claim outlined therein. On Feb. 15, 1942 the pro-Nazi Argentine government reported this move officially to the British, who were not amused. Later that year the *Carnarvon Castle*, under the command of Capt. Ned Kitson, was sent south to take care of this situation, and in Jan. 1943 they recovered the offending cylinder, and replaced it with a stiff Union Jack, which they ran up a pole 15 feet high, and also left behind a record of their visit. The bronze cylinder was returned to Argentina. In itself, a relatively mild affair, but it was one of the (many) things that led the British to instigate Operation Tabarin. The *Carnarvon Castle* was decommissioned in Dec. 1943, and they thought of converting her into an aircraft carrier, but, instead, converted her into a troop ship, in New York, in 1944. After the war she continued to sail from London to Cape Town, and was scrapped in 1963.

Carnations. *Colobanthus crassifolius*. These flowers are found on Jenny Island, Graham Land, and nowhere else in Antarctica, it seems.

Carnebreen *see* **Shinnan Glacier**

The *Carnegie*. American scientific yacht, designed by Henry Gielow, built in 1909 by the Tebo Yacht Basin Company of Brooklyn, for the Carnegie Institution of Washington, at a cost of $115,000, and launched on June 12, 1909. Originally she was going to be called the *Franklin*. She was 155 feet 6 inches long, with a 568-ton displacement, and great pains were taken to make sure that none of the materials used in her construction would in any way affect the magnetic observations they intended to make from the vessel, in other words she was made of wood — the best woods available. She carried two 20-foot whaleboats and a 16-foot gig. After several adventures around the world, she was refitted, equipped with an observatory, and in 1915 set out on her next cruise. Her main intention was to make magnetic observations as she went. **March 3, 1915**: In NY, Redmond P. Doran (b. March 24, 1872, County Down, Ireland; came to the USA in 1890) signed on as 1st mate, Martin Hedlund (23; Swedish) signed on as 2nd mate, Murry G.R. Savary (b. Dec. 1, 1883, Brooklyn) signed on as engineer, Charles Heckendorn (19; from New York) signed on as mechanic, Carl Holth (35; Norwegian) and A.H. Sorensen signed on as cooks, and Charles Barker (51; Swedish) signed on as an able seaman. **March 6, 1915**: Under the command of magnetician J.P. Ault, she left Brooklyn, bound for Gardiner's Bay. **March 9, 1915**: W.F.G. Swann, the man installing and testing the new equipment, left the ship, which now left Gardiner's Bay, bound for Panama. The rest of the crew were: Harry M.W. Edmonds (magnetician, surgeon, and 2nd in command of the expedition; born June 25, 1862, Oshkosh, Wisc.), H.F. Johnston (observer), Ittai Albert Luke (observer; born March 24, 1891, Ada, Kansas. died Sept. 8, 1982, Sacramento. A professor at Stanford), Norman Meisenhelter (meterological observer and clerk; born Dec. 3, 1890, York, Pa.), and Sebastian Jacob Mauchly (b. July 9, 1878, Swanton, Ohio; he and H.F. Johnston had been helping Swann install and test the equipment). There were also a 3rd mate (name unknown), as well as 7 other seamen (not counting Charles Barker), and 2 cabin boys (one of whom was W. Stevens). **March 11, 1915**: Sorensen, the cook, died of sickness. **March 24, 1915**: Stevens, the cabin boy, died of sickness. **March 25, 1915**: They arrived at Colón, where Mauchly got off, and returned to NY, while observer Harry Edward Sawyer (born June 11, 1889, Scottsville, Kans.) came aboard. **April 7, 1915**: they left Colón for passage through the Panama Canal. **April 8, 1915**: They arrived at Balboa. **April 12, 1915**: After passing through the Panama Canal, the vessel set sail for Honolulu. **May 21, 1915**: They arrived at Honolulu. **July 3, 1915**: They left Honolulu, heading for the Arctic. **July 20, 1915**: They arrived at the Bogosloff Islands, in the Arctic. **Aug. 5, 1915:** The *Carnegie* left the Bogosloff Islands, heading south for Lyttelton, NZ. **Aug. 15, 1915**: Delayed by weather, she finally left the Bering Sea, headed south. **Sept. 12, 1915:** She passed Wake Island. **Oct. 2, 1915**: She crossed the Equator, heading south. **Nov. 3, 1915**: The vessel arrived at Lyttelton, where observer F.C. Loring (b. Oct. 5, 1882, Marion, Ind.) took the place of Sawyer, who went to Africa instead. **Dec. 1, 1915**: F. Collins (18; from Queensland) and J. Swell (14; from Suffolk, England) signed on as cabin boys. **Dec. 6, 1915**: The *Carnegie* left Lyttelton, for a sub-Antarctic circumnavigation cruise. **Dec. 18, 1915**: They sighted their first ice, in 60°12' S, 150°46' W, and had a snow storm that lasted 4 days. They reached 60°18' S. **Dec. 19, 1915:** They passed 30 icebergs, some 400 feet high and a mile long. They reached 60°19' S. **Dec. 20, 1915**: They reached 60°30' S. **Dec. 21, 1915**: They were in 60°14' S. **Dec. 22, 1915**: They were in 59°40' S. **Dec. 23, 1915**: They were in 60°43' S, their southing record. **Dec. 24, 1915**: They saw their last iceberg for 17 days. At first they thought it might be Dougherty's Island, but is was a berg, 225 feet high and a quarter of a mile long. They were in 59°59' S that day. **Dec. 25, 1915**: They were within 3 miles of the coordinates given for Dougherty's Island, and could see for 35 miles, but saw no land. **Jan. 2, 1916**: In 60°04' S, their first time south of 60°S in a week. **Jan. 3, 1916**: In 59°41' S. **Jan. 4, 1916**: In 60°09' S, in fog, their last day south of 60°S. **Jan. 10, 1916**: They passed 8 or 10 good-sized icebergs. **Jan. 12, 1916**: The *Carnegie* arrived at South Georgia. **Jan. 14, 1916**: The vessel was towed out of King Edward Cove, South Georgia, by the steam whaler *Fortuna*. **Jan. 22, 1916**: The vessel was off Lindsay Island, also known as Bouvet Island (54°29' S, 3°27' E). **March 1, 1916**: Heading south toward the Antarctic waters off Queen Mary Land, they saw their

first iceberg since Jan. 28. However, their compasses were misbehaving, so, in 59°24' S, they abandoned the idea of going farther south, and headed north. **April 1, 1916**: The *Carnegie* returned to Lyttelton, after a cruise of 120 days and a distance of 17,084 miles, but without finding the elusive islands she had been seeking. However, she did set a record as the first vessel ever to circumnavigate the Antarctic continent in high latitudes in one season (1915-16). At one point she almost met the *Aurora*, under Stenhouse (300 miles away and no radio on the *Carnegie*). **April 10, 1916**: L. Larsen (39; from Denmark) signed on as 3rd mate. **April 13, 1916**: Alex J. Ross (30; from Scotland), signed on as cook. **April 15, 1916**: Frans Tamminen (35; Finnish) signed on as able seaman. **April 29, 1916**: Alfred Beech (29; from Scotland), replaced Mr. Doran as 1st mate. **May 5, 1916**: M. Bloomgreen (36; Swedish), Arvid Idstrom (27; Finnish), and Fred Engelbretsen (29; Norwegian) all signed on as able seamen. **May 9, 1916**: W. Gilbert (28; English) signed on as able seaman. **May 12, 1916**: Henry Benson (24; Swedish) and Eric B. Gustafson (34; Swedish) signed on as able seamen. At Lyttelton observer Bradley Jones replaced Mr. Johnston. **May 17, 1916**: The *Carnegie* left Lyttelton, bound for Pago Pago. **June 7, 1916**: They arrived at Pago Pago. **June 19, 1916**: They left Pago Pago, bound for Guam. **July 17, 1916**: They arrived at Guam. **Aug. 7, 1916**: They left Guam, bound for San Francisco. **Sept. 21, 1916**: The *Carnegie* arrived in San Francisco. On all her trips combined, she had covered 160,615 miles, in all seven seas. In 1929, after several more cruises, the *Carnegie* was refueling in Samoa, when there was an explosion. The ship caught fire and sank. There were two deaths — Capt. Ault and the cabin boy.

Carnegie Range. 82°11' S, 161°10' E. A range, 30 km long, running N-S between Errant Glacier and the Holyoake Range on the W, and Algie Glacier and the Nash Range on the E. The range rises to over 1400 m, and is ice-covered except for peaks and ridges in the N portion and Russell Bluff at the S end. Named by US-ACAN in 2003, for Andrew Carnegie (1825-1919), the famous Scottish-American industrialist. NZ-APC accepted the name on Feb. 27, 2003.

Carnein Glacier. 74°41' S, 162°54' E. Flows from the SE corner of the Eisenhower Range, then S along the W side of McCarthy Ridge, to merge with the lower Reeves Glacier at the Nansen Ice Sheet, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Carl R. Carnein (b. Nov. 1943), glaciologist at McMurdo, 1965-66.

Carnell Peak. 79°28' S, 85°17' W. Rising to 1730 m, in the Watlack Hills, 4 km from the SE end of that group, in the Heritage Range of the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN for Lt. (later Cdr.) Donald Lee Carnell, USN, maintenance officer at Williams Field, 1965-66, who was responsible for the first piercing of the Ross Ice Shelf at 50 meters.

Mount Carnes. 77°39' S, 161°21' E. A mountain, 3 km E of Saint Pauls Mountain, in the Asgard Range of Victoria Land. Named by US-ACAN in 1976, for Philip A. Carnes, engineering and construction manager for Antarctic Support Services (ASA) (q.v.), who supervised construction and maintenance performed at Pole Station, Siple Station, and McMurdo, in 1973-74, 1974-75, and 1975-76.

Carnes Crag. 71°28' S, 162°41' E. A rock crag, rising to 1310 m, in the NW extremity of the Lanterman Range, in the Bowers Mountains, it overlooks the junction of Sledgers Glacier and Rennick Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for James J. Carnes, USN, who wintered-over as chief electrician's mate at McMurdo in 1967.

Carney Island. 73°57' S, 121°00' W. An ice-covered island, 110 km long, with all but its N coast lying within the Getz Ice Shelf, between Siple Island and Wright Island, along the coast of Marie Byrd Land. First delineated (except for its S part) from air photos taken in Jan. 1947 by OpHJ 1946-47. Named by US-ACAN in 1967, for Admiral Robert Bostwick Carney (b. March 26, 1895, Vallejo, Calif. d. June 25, 1990), USN, who fought in World War I, was chief of staff to Bull Halsey during World War II, and chief of naval operations during the organization of OpDF, in the pre-IGY period. NZ-APC accepted the name on June 29, 1967.

The *Caroline*. A 224-ton Australian sealer, built in Philadelphia (USA) around 1800, owned by Edward Lord of Hobart Town, and registered by him in London. She was in the South Shetlands in 1821-22, under the command of Capt. Daniel Taylor, arriving in the South Shetlands on Dec. 19, 1821, and remaining there for about 2 months, with no luck. On Feb. 8, 1822 they left the South Shetlands, bound for NZ. Taylor skippered her in the Macquarie Island elephant seal oil trade for the next several seasons. She left Sydney on Nov. 27, 1824 and arrived at Macquarie Island on Feb. 15, 1825, picked up 160 tons of oil, and on March 17, 1825 was wrecked at what is now called Caroline Cove. The sealers and crew came ashore and were preparing to set out in a longboat for Hobart when the *Wellington* spotted them on Aug. 30, 1825. The *Wellington* could only take a few of the crew off, but on Sept. 17 the *Cyprus*, hired by Lord to find out what had happened to his (uninsured) ship, found the rest and took them home, and they arrived back at Hobart on Oct. 1, 1825. The remains of the *Caroline* were auctioned off, being bought by the owner of the *Wellington*.

Mont Caroline. 66°40' S, 140°01' E. An important massif dominating the pré to the N, in the NE central part of Pétrel Island, in the Géologie Archipelago. Named by the French in 1977, for the emplacement of the great radio antenna, of the type Caroline.

Caroline Bluff. 61°55' S, 57°39' W. A bluff, 1.5 km SE of North Foreland, on King George Island, in the South Shetlands. Charted and named North Foreland Head by David Ferguson in 1921. Photographed aerially in 1956 by FIDASE. On Sept. 23, 1960, in order to avoid confusion with North Foreland, UK-APC changed the name to honor the *Caroline*. US-ACAN accepted the new name later in 1960. Originally plotted in 61°55' S, 57°42' W, it was replotted by the British in late 2008.

Mount Caroline Mikkelsen. 69°45' S, 74°24' E. A small coastal mountain, the highest summit in the Munro Kerr Mountains, rising to 235 m above sea level, at the head of Sandefjord Bay, 6 km NNW of Svarthausen Nunatak, between Hargreaves Glacier and Polar Times Glacier, overlooking the S extremity of Prydz Bay, on the Ingrid Christensen Coast of the American Highland, in Princess Elizabeth Land. The Munro Kerr Mountains were discovered aerially and named on Feb. 11, 1931, during BANZARE, and this individual mountain was discovered on Feb. 20, 1935 by Klarius Mikkelsen, and named for his wife, Caroline (born Caroline Mandel, in 1906). US-ACAN accepted the name in 1947, and ANCA followed suit on Nov. 24, 1953.

Carolyn Automatic Weather Station. 79°56' S, 175°53' E. An American AWS on the Ross Ice Shelf, at an elevation of 52 m, installed on Jan. 31, 2005. It was visited on Jan. 23, 2009.

Carpenter Island. 72°41' S, 97°57' W. An oval-shaped island, 11 km long, within the Abbot Ice Shelf of Peacock Sound, 27 km due E of Sherman Island. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Donald L. Carpenter, radio scientist at Byrd Station in 1966-67. Originally plotted in 72°39' S, 98°03' W, it has since been replotted.

Carpenter Nunatak. 73°37' S, 61°15' E. An isolated, snow-covered rock peak, about 19 km SW of Pardoe Peak (the summit at the SW end of the Mount Menzies massif), between that peak and Mount Mather, in the southern Prince Charles Mountains. Photographed aerially by ANARE in 1957 and 1960. Plotted from the summit of Mount Menzies by Dave Trail's ANARE dog-sledge party in 1961. They plotted it in 73°30' S, 61°20' E. Named by ANCA for carpenter Geoff Smith. It has since been replotted.

Islote Carpintero Heller *see* **Heller Rock**

Cape Carr. 66°09' S, 130°42°E. A prominent, ice-covered cape, 24 km (the Australians say 31 km) ENE of Cape Morse, on the W part of the Wilkes Coast. Discovered by Wilkes on Feb. 7, 1840, or rather he discovered an ice cape in 65°05' S, 131°30' E, and named it for Overton Carr. Delineated by U.S. cartographer Gard Blodgett in 1955, from air photos taken by OpHJ 1946-47, and replotted in 67°07' S,

130°51' E. This new calculation was based by Mr. Blodgett on a comparison between the Wilkes charts and the relatively new OpHJ photos, and also on the fact that Porpoise Bay had shifted position to the SW over the course of a century. US-ACAN accepted the name in 1955, and ANCA followed suit. It has since been plotted yet again.

Carr, Charles Roderick "Roddy." b. Aug. 31, 1891, Fielding, NZ, son of Charles Carr. He was an airman in the Royal Naval Air Service and Air Force during World War I, and in 1919 fought with Ironside's expedition with the White Russians against Lenin. He was aviator on the *Quest*, 1921-22, in Antarctica. In 1927 he and Squadron Leader Gaylord failed to set a non-stop air flight record, and in 1931 he married Phyllis Isabel Elkington, in England. In 1935 he was promoted from wing commander to group captain. From 1941 to 1945, now an air marshal, he served as Air Officer Commanding, 4th RAF Bomber Command, was knighted in 1945, and was chief of the Indian Air Force from 1946 to 1947, when he retired. His wife died in 1969, and he died on Dec. 15, 1971, in Bampton, Oxfordshire.

Carr, Overton. b. 1813, Louisa, Va., son of Jonathan Boucher Carr and his first cousin Barbara Ann Carr. He joined the U.S. Navy, and became a midshipman on March 1, 1827, a passed midshipman on June 10, 1833, and a lieutenant on Dec. 8, 1838, sailing on the *Vincennes* during USEE 1838-42. He was Wilkes's favorite during the expedition (the great man referred to him as "Otty"). He was promoted to commander on Sept. 14, 1855, and fought in the early stages of the Civil War. In June 1861, as skipper of the *Quaker City*, he captured the Confederate ship *General Green*, in the Chesapeake Bay. He retired on Dec. 8, 1861, to become a farmer in Albemarle, Va., and was a captain on the retired list, on April 4, 1867. He died in Virginia.

Carr Crest. 80°38' S, 159°23' E. A rock summit rising to 1200 m in the N extremity of the Churchill Mountains, 12 km ESE of Roberts Pike and overlooking Couzens Bay due E. Named by US-ACAN in 2003, for Roddy Carr. NZ-APC accepted the name on Feb. 27, 2003.

Mount Carrara. 74°54' S, 71°28' W. Rising to 1770 m in the center of the Sky-Hi Nunataks, it is the highest peak in that group, on the Orville Coast, in Ellsworth Land. Named by US-ACAN in 1985, for Paul Edward Carrara (b. Sept. 16, 1947, San Francisco), USGS geologist, a member of the USGS field party of 1977-78, which carried out geological reconnaissance mapping of the area between the Sky-Hi Nunataks and the Orville Coast. Mr. Carara and two other members of the party climbed the mountain in Jan. 1978. UK-APC accepted the name on Nov. 13, 1985.

Caleta Carrasco. 64°48' S, 63°22' W. A cove, 1.3 km wide, opening to the N, and indenting the NW coast of Wiencke Island for 1.4 km, 2.5 km S of Cabo Laure, Anvers Island, in the Palmer Archipelago. Named by the Chileans for Capitán de corbeta (later capitán de navío) Adolfo Carrasco Lagos, skipper of the *Yelcho*, which took part in ChilAE 1973-74. The Argentines call it Caleta La Vuelta.

Carrefour. 66°50' S, 139°18' E. A small French station 40 km SW of Dumont d'Urville Station. *See also* **Le Carrefour** (under **L**).

Mount Carrel *see* **Mount Carroll**

Carrel, Tom. b. 1868, Newfoundland. It was later circulated that Tom had served on Peary's 1908 North Pole ship, the *Roosevelt*, but this intelligence must be regarded as suspect, given that Peary never mentions him in his crew lists. Regardless of this, Tom was one of the legendary bosuns of the Newfoundland ice trade, going into Arctic waters a reported 60 times, 66 of those on Bowring ships. He served for years on the *Terra Nova*, and, by the time of World War II was caretaker of the old Bowring sealer *Eagle*, which was laid up in dock at St. John's. At the age of 81, Tom was bosun (and 3rd officer) on the *Eagle*, 1944-45, during the 2nd phase of Operation Tabarin. He retired after this, and died in 1961. In the late 1980s it was discovered that Tom's name was actually spelled Carroll, and not Carrel, even though everyone had thought it was Carrel, including Vivian Fuchs in his book *Of Ice and Men*. Mount Carrel was accordingly changed to Mount Carroll. We keep the spelling "Carrel" here, in this bio, even though it's wrong, because that's what Skipper Tom will always be known as.

Carrel Island. 66°40' S, 140°01' E. An important rocky island about 0.4 km long, 170 m S of Pétrel Island, in the central part of the Géologie Archipelago. Charted by FrAE 1950 and named by them as Île Alexis Carrel for Alexis Carrel (1873-1944), French surgeon and physiologist. The British and Americans called it Alexis Carrel Island, but in 1962, US-ACAN shortened this to Carrel Island, and UK-APC followed suit. The Russians apparently still call it Alexis Carrel Island (or, rather, presumably, Ostrov Alexis Carrel, or something like that). However, in 1999, the French changed the name (for themselves only) to Île Pascal Le Mauguen, for a polar technician at L'Institut Français (*see* **Deaths**, 1999). The name later became shortened to Île Le Mauguen.

Isla Carrera *see* **Piñero Island**

Punta Carrera Pinto *see* **Rock Pile Point, Vesconte Point**

Paso Carrion. 66°11' S, 61°55' W. A pass, pretty much due N of Nunataks Hoffman, and due W of Nunatak Castells Ortiz, and SW of Mount Del Valle, on the N side of Jason Peninsula, in Graham Land. Named by the Argentines. There seems to be no accent over the "o."

Morro Carrizo *see* **Morro Labra**

Carrizo, Segundo *see* **Morro Labra**

Carro Pass. 63°57' S, 58°07' W. A gently sloping snow pass that links Holluschickie Bay and the bay between Rink Point and Stoneley Point, W of Massey Heights, on the NW coast of James Ross Island. Surveyed by Fids from Base D between 1958 and 1961. Named by UK-APC on Feb. 12, 1964, for Argentine Army captain Ignacio Carro, a member of the team at General Belgrano Station, who first traversed the pass in 1959. He would be base leader there in 1967 and 1975. He also helped establish Teniente Matienzo Station in 1961, and in 1978 he was at Esperanza Station with his entire family. US-ACAN accepted the name later in 1964.

Mount Carrol Kettering *see* **Mount Giles**

Canal Carroll *see* **Carroll Inlet**

Ensenada Carroll *see* **Carroll Inlet**

Estero Carroll *see* **Carroll Inlet**

Estrecho Carroll *see* **Carroll Inlet**

Mount Carroll. 63°26' S, 57°03' W. A horseshoe-shaped mountain rising to 650 m, at the E side of Depot Glacier, 2.5 km S of Hope Bay, Trinity Peninsula, at the NE end of the Antarctic Peninsula. Discovered and roughly mapped by Dr. J. Gunnar Andersson's party in 1903, during SwedAE 1901-04. Surveyed by Fids from Base D in 1945-47, and named by them in 1945 as Mount Carrel, for Tom Carrel. UK-APC accepted that name on Nov. 21, 1949, and US-ACAN followed suit. The feature was re-surveyed by FIDS in 1955, and appears as Mount Carrel in the British gazetteer of 1955 and on a British map of 1961. However, in the late 1980s it was discovered that Tom's right name wasn't Carrel at all, even though everyone (including Fuchs) spelled it that way. It was Carroll, and the British changed the name of the feature to Mount Carroll, and the Americans did too. It appears as Mount Carroll in the 1988 British gazetteer. Not every country has yet caught up with this change. In the 1950s, for a while, it was also seen as Circo del Cerro Abrupto (i.e., "cirque of the steep hill").

Seno Carroll *see* **Carroll Inlet**

Carroll, Alan Michael. b. Dec. 10, 1932, London. He did his national service in the RAF, as an officer flying jets. After this, in 1954, he answered an ad for FIDS in the *Daily Telegraph* (this was the usual paper for the FIDS to advertise in in those days), and sailed south as ionosphere physicist. He arrived at Port Lockroy Station on Nov. 27, 1954, and wintered-over there as base leader in 1955 and 1956. He left Port Lockroy on the *Shackleton*, on March 1, 1957, and on his way home stayed at Base G for 2 days. Then he spent 15 years, 1957-72, in Bahrein, with Caltex, involved with PR, especially film-making for the company and for the Bahrein government, and even for Disney. He married Jane O'Pray. He ran his own film post-production business out of Banbury, Oxon, then worked for an engineering company, and finally at Oxford University, on the video and technical side, and retired in 1998. He last arrived at Port Lockroy on Nov. 27, 2006, and spent 19 days there, helping to prepare for the visit of Princess Anne. He has written the definitive account of the history of Port Lockroy Station.

Carroll, Arthur James "Art." b. Jan. 4, 1907, Avon, Ill., son of farmer Walter J. Carroll

and his wife Mabel. The family went out to Colorado, Arthur joined the U.S. Navy in 1924, and was a lieutenant in 1935 when he was aerial photographer of the mid-Pacific islands. As well as being an aerial map maker, he was also a first class cinematographer. He married Joan. He was the younger brother of George A. Carroll, chief photographer at the Navy Department, and instructor in the Navy Slide Film School. Both brothers were graduates of the Naval Photography School, and had studied cinematography with Paramount, in Hollywood. Both of them were also in charge of photographic labs at the Anacostia Air Station, in Washington, DC. Art was living in Capitol Heights, Md., when he became chief aerial photographer who made 10 aerial photographic flights from East Base during USAS 1939-41. He and Charles Shirley (of West Base) made a total of about 4000 photos during the expedition. Toward the end of World War II, he was with his brother George at Okinawa. He died on Jan. 24, 1992.

Carroll, Tom *see* **Carrel, Tom**

Carroll Canyon. 64°30' S, 130°00' E. Submarine feature off the Wilkes Coast.

Carroll Fjord *see* **Carroll Inlet**

Carroll Inlet. 73°18' S, 78°30°W. An inlet, 10 km wide, indenting the English Coast of Ellsworth Land for about 60 m in a SE fashion between Rydberg Peninsula and Smyley Island. The head of the inlet is divided into 2 arms by the presence of Case Island, and is bounded to the E by the Stange Ice Shelf. Discovered aerially on Dec. 22, 1940 by USAS 1939-41, and named for Arthur J. Carroll. It appears on an Argentine chart of 1946, as Ensenada Carroll, but on a 1952 Argentine chart as Seno Carroll. However, since 1966 the Argentines have been calling it Ensenada Carroll. US-ACAN accepted the name Carroll Inlet in 1947. It appears on a 1947 Chilean map as Ensenada Carroll, and on a 1947 chart of theirs as Estero Carroll, and on yet another of their charts as Estrecho Carroll. It is seen on a Norwegian chart of 1947 as Carroll Fjord. It was seen again aerially in Dec. 1947, by RARE 1947-48. In 1956 it appears on a Chilean chart as Seno Carroll, but on another one of theirs in 1962, it appears as Canal Carroll. Canal Carroll is the name that appears in the 1974 Chilean gazetteer (they rejected Estrecho Carroll). Mapped by USGS from USN air photos taken in 1965-66. It appears as Carroll Inlet on the 1968 USGS sketch map of the the Bryan Coast-Ellsworth Land. UK-APC did not accept that name until Dec. 20, 1974.

Carruthers Cliff. 62°11' S, 58°17' W. Prominent sub-vertical rock cliffs, rising to about 180 m above sea level, and extending inland for about 1900-2300 feet, they form the SSE flank of Vauréal Peak, at Admiralty Bay, King George Island, in the South Shetlands. Fossilized wood and leaf remains were discovered near the base of these cliffs in Feb. 1996. Named by UK-APC on Feb. 15, 1998, for Robert George Carruthers (1880-1965), a British stratigrapher, invertebrate paleontologist, and Quaternary geologist with the British Geological Survey. He was the originator of the undermelt theory, in which British glacial deposits resulted from a single glacial advance. US-ACAN accepted the name in 1999.

Cabo Carry *see* **Crystal Hill**

Carryer Glacier. 71°17' S, 162°38' E. A steep, heavily crevassed glacier, 20 km long, it flows W from the central part of the Bowers Mountains, to feed into Rennick Glacier between Mount Soza and Mount Gow, at the S end of the Explorers Range. Named by the Northern Party of NZGSAE 1963-64, for Simon John "Tas" Carryer, geologist with the party. The name was accepted by NZ-APC on July 16, 1964, and by US-ACAN later that year.

Carscaden, Wesley William "Wes." The name Carscaden is pronounced as if it has two "d"s. b. Dec. 27, 1920, Seattle, son of Canadian garage owner George Wesley Carscaden and his wife Justa I. Eastman (who did the books at the garage). He was raised by his maternal grandparents Nelson and Adda Eastman, in Auburn, Wash., although the reason for this is not clear. At 17 he joined the crew of the *North Star*, plying the west coast up to Alaska, and was on that vessel when she went to Antarctica for the 2nd half of USAS 1939-41. After the expedition, he joined the U.S. Naval Reserve on May 30, 1942, and in Jan. 1943 began flight training. He flew a variety of fighter planes against the Japanese, in the Pacific, and after the war commanded a base in Tsingtao, China. He joined the U.S. Marine Corps Reserve, became a major on Aug. 11, 1953, retired on June 30, 1964, and went to work as an artist and advertising executive in San Francisco. He died of a heart attack in his Telegraph Hill apartment in San Francisco, on May 30, 2007. His ashes were scattered over Puget Sound.

Carse, Verner Duncan. Known as Duncan. b. July 28, 1913, London, son of artist (Andreas) Duncan Carse and his wife Florence Marion Soames. He apprenticed on square-riggers in the Merchant Navy, and in 1933, while on the *Discovery II*, at the Falklands, he transferred to BGLE 1934-37 as a deck-boy, the youngest member of the expedition, working his way up to able seaman and radioman on the *Penola*. After the expedition he worked as an announcer at the BBC from May 1938, and in 1942 joined the RN as an ordinary seaman. He was commissioned as a sub lieutenant, RNVR, in 1943. In July 1946 he resigned from the BBC and did movie commentaries. On Sept. 26, 1949 he replaced Noel Johnson as the voice of "Dick Barton, Special Agent," on the BBC's first daily radio serial (1945-51). He did not act in the 3 late 1940s feature films they made of Barton (Don Stannard did). Between 1951 and 1957 he led 4 separate expeditions to South Georgia (54°S)—1951-52, 1953-54, 1955-56, and 1956-57—and wintered-over there alone in 1961, barely surviving a disastrous storm. All this and facing a bankruptcy in 1958, and his mother's death in 1961. By the mid-1950s he had changed his last name to Carse-Wilen. In 1973-74 he failed to recreate Shackleton's crossing of South Georgia. He continued to work for the BBC and went back to Antarctica to do a documentary. He died on May 2, 2004, in Chichester, survived by his 3rd wife, Venetia. He is also immortalized on a set of 4 South Georgia stamps.

Carse Point. 70°13' S, 68°13' W. On the S side of the mouth of Riley Glacier, it is the westernmost extremity of a rock massif with 4 peaks (the highest being 1250 m), and fronting on George VI Sound, in Palmer Land. It is separated from Mount Dixey to the NE by a low, ice-filled col, and from Mount Flower to the E by a small glacier. The massif itself was, it seems, first photographed aerially by Ellsworth, on Nov. 23, 1935, and mapped from these photos in 1936 by Walter Joerg, the U.S. cartographer. The point itself was surveyed and photographed aerially in 1936 by BGLE 1934-37, and surveyed again in 1949 by Fids from Base E, who named it for Verner Carse. UK-APC accepted the name on March 30, 1955, and US-ACAN followed suit that year. It appears on a 1955 U.S. Hydrographic Office chart, and on a British chart of 1957.

Mount Carson. 73°27' S, 163°11' E. A mountain, 3 km W of the Chisholm Hills, in the Southern Cross Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Gene A. Carson (b. Oct. 27, 1933, Fairfax, Mo. d. April 15, 1989, Rock Hill, SC), who joined the U.S. Navy in May 1953, and who was construction electrician at McMurdo in 1963 and 1967. He retired from the Navy in June 1979.

Carsten Borchgrevinkisen *see* **Borchgrevinkisen**

Carstens Shoal. 67°34' S, 62°51' E. An almost circular shoal, with a least depth of 11.89 m (although it has not been completely surveyed), just N of East Budd Island, in Holmes Bay, and 3 km from Béchervaise Island, in Mac. Robertson Land. Discovered and charted by Tom Gale, in Feb. 1961, during a hydrographic survey of Mawson Approaches, while aboard the *Thala Dan,* during ANARE of that year (Don Styles led that expedition). Named by ANCA for David Robert "Dave" Carstens (b. Sept. 29, 1934), who assisted the hydrographic survey, and who wintered-over as surveyor at Mawson Station in 1962. US-ACAN accepted the name in 1965.

Carstensfjella. 67°59' S, 44°03' E. A mountain area, about 9 km long, extending eastward from Kap Begichev, on the Prince Olav Coast of Queen Maud Land. Named by the Norwegians for Carsten Borchgrevink.

Carter, John Francis "J.C." b. March 28, 1945. BAS diesel mechanic who wintered-over at Halley Bay Station for 3 successive years, 1967, 1968, and 1969, and in 1970 at South Georgia. He also spent some summer time at Base T. In 1975-76 he was 3rd engineer on the *John Biscoe*. *See* **Carterknattane**.

Carter, William *see* **USEE 1838-42**

Carter Island. 73°59' S, 114°57' W. A small, ice-covered island, in Glade Bay, just off the W side of Martin Peninsula, in the Amundsen Sea, off the Bakutis Coast. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966, it was originally plotted in 73°58' S, 114°43' W (but was later replotted). Named by US-ACAN in 1967, for Lt. George William Carter (b. Jan. 17, 1925, Fla. d. July 24, 2008, Fishersville, Va.), USN, maintenance officer at the Strip, at Williams Field, 1965-66. A World War II veteran, he retired as a lieutenant commander after 26 years in the Navy. NZ-APC accepted the name on June 29, 1967.

Carter Peak. 70°19' S, 64°12' E. About 1.8 km W of Mount Bensley and between 14 and 20 km SW of Mount Starlight, in the W extension of the Athos Range of the Prince Charles Mountains, in Mac. Robertson Land. Mapped from terrestrial photos taken by Rob Lacey, surveyor at Mawson Station in 1955, and also from aerial photos taken by ANARE in 1959 and 1965. Named by ANCA on Aug. 10, 1966, for David Bruce Carter (known as Bruce), senior electronics technician at Mawson Station in 1965. US-ACAN accepted the name in 1970.

Carter Ridge. 72°37' S, 168°37' E. High and mountainous, 17.5 km long, between Coral Sea Glacier and Elder Glacier, in the Victory Mountains of Victoria Land. Mapped by NZGSAE 1957-58, and by USGS in 1960-62. Named by US-ACAN in 1973, for Herbert Edmund Carter (b. Sept. 25, 1910, Mooresville, Ind. d. March 4, 2007, Phoenix, Ariz.), chemist, member of the National Science Board, National Science Foundation, 1964-72, and chairman of that organization, 1970-72. NZ-APC accepted the name on April 5, 1973.

Carterknattane. 80°39' S, 19°06' W. Small nunataks in the Pioneers Escarpment, in the easternmost part of the Shackleton Range, in the most southwesterly part of Queen Maud Land. Named by the Norwegians for John Carter (q.v.). *See also* **Rileyryggen**, **Nobleknausane**, and **Gallsworthyryggen**.

Port Carthage *see* **Port Charcot**

Mount Cartledge. 70°17' S, 65°43' E. Just E of Mount Albion, in the Athos Range of the Prince Charles Mountains, in Mac. Robertson Land. Plotted from ANARE air photos taken in 1965, and named by ANCA for Bill Cartledge (q.v.). US-ACAN accepted the name in 1970.

Cartledge, William John "Bill." b. Oct. 30, 1920. Plumber at Wilkes Station in 1962, and carpenter at Mawson Station in 1966, both times wintering-over. In 1968 he summered at Repstat (the new Casey Station), and wintered-over at Mawson Station again in 1971 and 1973, as senior carpenter. He built the new surgery at Davis Station in 1971, while he was on his way to Mawson. He married Jean, and died in NSW in 1990.

Cartographers Range. 72°21' S, 167°50' E. A rugged range, about 40 km long, in the Victory Mountains of Victoria Land. It is bounded on the N by Pearl Harbor Glacier, on the E by Tucker Glacier, and on the S by Hearfield Glacier and Trafalgar Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for the cartographers and cartographic technicians of the USGS's Branch of Special Maps. NZ-APC accepted the name in Nov. 1969.

Cartography *see* **Map making**

Mount Cartwright. 84°21' S, 175°08' E. A sharp peak with high rock exposures, rising to 3325 m to surmount an elevated N-S ridge 11 km NNW of Mount Waterman, and 24 km N of Mount Kaplan, in the Hughes Range. Discovered and photographed on Flight C of Feb. 29-March 1, 1940, during USAS 1939-41. Surveyed by Albert Crary in 1957-58, and named by him for Gordon Cartwright. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Cartwright, Gordon David. b. June 1909, New Castle, Pa., but grew up partly in Arnot, Pa., son of English-born miner Enoch Cartwright and his wife Polly. In 1929 he went to work for the Weather Bureau in Pittsburgh, as a meteorological observer. He worked in Dallas, opened the first forecast center at LaGuardia Airport, in NY, and received one of the first bachelor's degrees in meteorology from New York University. Active for the government in meteorology during World War II, he went to the Arctic after the war, and was the first U.S. exchange scientist to a Soviet Antarctic station, at Mirnyy, in 1957 (he was, of course, also there for the 1956-57 summer). "Did they try to brainwash you?," asked the press. "Me? Absolutely not." "Did you discuss the Cold War?" "No." Then he went to Hawaii, as chief meteorologist, then to Washington, DC, to head the international affairs office, and between 1965 and 1975 he lived in Geneva, as liaison to the World Meteorological Association. After 46 years with the Bureau, he retired to San Rafael, Calif., and died of congestive heart failure on Jan. 1, 2007, in an assisted living home in Renton, Wash. He was 97. He had been married twice, first to Virginia Landphair (died 1988), and second to Kathleen Kniveton Holman.

Cartwright Valley. 77°29' S, 161°21' E. A hanging valley, for the most part free of ice, E of Mount Aeolus, in the Olympus Range of Victoria Land. Named by US-ACAN in 1997, for Keros Cartwright, of the Illinois State Geological Survey, who made hydrogeological studies with Henry Harris (*see* **Harris Ledge**), in Victoria Valley, Wright Valley, and Taylor Valley, during the Dry Valley Drilling Project, 1973-74, 1974-75, and 1975-76. NZ-APC accepted the name on Jan. 30, 1998.

Península Carvajal *see* **Beethoven Peninsula**

Carvajal Station *see* **Teniente Carvajal Station**

Îlot Casabianca *see* **Casabianca Island**

Islote Casabianca *see* **Casabianca Island**

Casabianca Island. 64°49' S, 63°31' W. A low rocky island in Neumayer Channel, NW of Port Lockroy, and 0.8 km NE of Damoy Point, on Wiencke Island, in the Palmer Archipelago, off the W coast of Graham Land. Discovered by FrAE 1903-05, charted by them, and named by Charcot as Îlot Casabianca, for one Monsieur Casabianca, French administrator of the Naval Registry. It appears as such in a French text of 1906, and on Charcot's 1912 map. On Dec. 26, 1908 a landing was made here, during FrAE 1908-10. It appears as Casabianca Islet on some of Charcots's 1912 translated maps, and also on a 1916 British chart, but as Casabianca Island on the Discovery Investigations chart of 1929. In 1921 David Ferguson charted it as both Isle Casabianca and Charcot Island. It was re-surveyed by Operation Tabarin personnel from Port Lockroy Station in 1944. It appears again as Casabianca Islet on a 1950 British chart, and that was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. On July 7, 1959, UK-APC re-defined it as Casabianca Island, and as such it appears on a British chart of 1960. US-ACAN accepted the name Casabianca Island in 1963. It appears on a 1947 Chilean chart as Islote Casabianca, and that is the name they used in their 1974 gazetteer. It also appears as such in the 1970 Argentine gazetteer.

Glaciar Casais *see* **Channel Glacier**

Casamayor, Domingo. b. Argentina. Teniente de navío in the Argentine Navy, he was skipper of the *Uruguay*, from Jan. 4, 1921 to May 10, 1921.

Casanovas Peak. 62°35' S, 60°43' W. The ice dome rising to 325 m at the base of Ioannes Paulus II Peninsula, 3.1 km W of Snow Peak, and 9.3 km NE of Rotch Dome, on Livingston Island, in the South Shetlands. Mapped in 2008 by the Bulgarians, who named it on Aug. 12, 2008, for Alex Simón y Casanovas, mountain guide and team leader at Juan Carlos I Station, one of the first group up this peak.

Casariego, Pedro Martín *see* **Órcadas Station**, 1927

Casatelli Peak. 80°22' S, 155°31' E. Rising to about 1600 m, 3 km E of Pritchard Peak, at the end of the W ridge that descends from Adams Crest, in the Ravens Mountains of the Britannia Range. Named by US-ACAN in 2001, for medical administration supervisor Michael F. Casatelli, with the 109 Airlift Wing during the transition of LC-130 operations from the U.S. Navy to the National Guard.

Cascade Bluff. 84°57' S, 178°10' W. A long, low, mainly ice-covered bluff that forms the SW wall of Mincey Glacier, in the Queen Maud Mountains. Named by Al Wade (q.v.) of the Texas Tech Shackleton Glacier Party of 1962-63, for the water cascading over this bluff in the summertime. US-ACAN accepted the name in 1964. NZ-APC accepted the name on July 16, 1964.

Cascade Cliffs. 64°00' S, 57°36' W. Inland cliffs, 0.5 km NW of Förster Cliffs, and separated from them by a steep scree slope, they extend eastward from Blancmange Hill, on

James Ross Island. Named by UK-APC on Nov. 15, 2006, due to the fact that meltwater cascades over these cliffs from the ice dome above Förster Cliffs.

Cascade Glacier *see* **Delta Glacier**

Cascade Lake. 67°26' S, 59°27' E. About 1.5 km by 0.25 km, about 2.4 km E of Kemp Peak, just SE of Stefansson Bay. The lake drains from its N end down a spectacular snow-ice cascade into Stillwell Lake, at the extreme W end of the Mawson Coast of Mac. Robertson Land. Named descriptively by ANCA on March 12, 1992.

Point Casco. 62°59' S, 60°40' W. A new point formed after the Deception Island volcanic explosions of the late 60s, at Crater Lake, NW of Mount Kirkwood, on the S side of Deception Island, in the South Shetlands. The SCAR gazetteer says it was named by the Russians, but is was probably named descriptively by the Argentines ("casco" means "helmet").

Point Case. A term no longer used. On Jan. 23, 1840 Wilkes was in a body of water that he called Disappointment Bay, and he saw a feature on the coast of what is now called George V Land. He named it for A.L. Case. It may well be what we call Mount Hunt today (*see* **Cape de la Motte** for further details).

Case, Augustus Ludlow. b. Feb. 3, 1812, Newburg, NY. He joined the U.S. Navy, and, on April 1, 1828, was promoted to midshipman, serving for 3 years off the coast of Brazil, on anti-slave patrol, on the only cruise of the frigate *Hudson*. In 1832-33 he was in the Caribbean, on the sloop *St. Louis*, and was promoted to passed midshipman (what would later be called an ensign), in 1834. After a year of coast survey work on the *Experiment*, he joined the *Vincennes* at Callao for USEE 1838-42. Now a lieutenant, he was in the East Indies, aboard the *Brandywine*, and then, during the Mexican War, 1846-48, took part in the capture of Vera Cruz and Tabasco. He was back on the *Vincennes*, in the Pacific, in 1849-51, and commanded the *Warren*, 1852-53. During a stint, 1853-57, as a lighthouse inspector in New York, he was promoted to commander. During the Civil War he was fleet captain of the Atlantic blockading squadron, being promoted to captain in Jan. 1863. In Dec. 1867 he was promoted to commodore, and again was a lighthouse inspector in New York. In 1869 he became chief of the bureau of ordnance. On May 24, 1872, he became a rear admiral, being made commander of the European squadron in 1873. He retired on Feb. 3, 1875, and died on Feb. 17, 1893, in Washington, DC.

Case Island. 73°19' S, 77°48' W. Actually an ice rise, 20 km wide, roughly circular, and (obviously) ice-covered, in the middle of Carroll Inlet, between the English Coast of Ellsworth Land and Smyley Island. Seen from the air in Dec. 1940, by USAS 1939-41, and again in Dec. 1947, by RARE 1947-48. Named by Finn Ronne for newspaperman Francis Higbee Case (1896-1962), Republican congressman from South Dakota, 1937-51; senator, 1951-62; and who helped get the ship for Ronne's expedition. Mapped by USGS from USN air photos taken in 1965-66. US-ACAN accepted the name in 1968, and it appears on the 1968 USGS sketch map of Bryan Coast-Ellsworth Land. UK-APC accepted the name on Dec. 20, 1974.

Casement, Arthur. b. May 21, 1871, Ballacorey, Andreas, Isle of Man, only son of brick and tile maker Thomas Casement (a former shoemaker) and his wife Margaret Kneale. His father died young, and his mother was forced to work on a farm to support herself and the lad. He joined the Merchant Navy, and in 1892 married Winifred Keenan, in Hull. They moved into 6 Ellas Avenue, and had 8 daughters. Casement was an able seaman on the *Morning* for the 1902-03 relief of the Scott party, during BNAE 1901-04. He was still plying the merchant marine seas in 1919 and 1920, as a bosun on Furness Withy's Cape Rio Line ship *Glenaffric*. He died in Hull, in 1943.

Cabo Casey *see* **Cape Casey**

Cape Casey. 66°22' S, 63°35' W. A conspicuous cape surmounted by a peak of 753 m, it marks the E extremity of the low peninsula projecting into the W side of Cabinet Inlet, immediately S of Bevin Glacier, and 16 km NNE of Stanley Island, on the Foyn Coast, on the E coast of Graham Land. Charted by FIDS in 1947, and photographed aerially in Dec. 1947 by RARE 1947-48. In keeping with other features named in this area for members of the War Cabinet, this cape was named by FIDS for great Australian statesman Richard Gardiner Casey (1st Baron Casey) (b. Aug. 29, 1890, Brisbane. d. June 17, 1976), Australian minister for external affairs from 1951 to 1960, governor general of Australia from 1965 to 1969, and who was a major force in opening up Antarctica. In 1929 he had been Australian political liaison in London when BANZARE was being planned, and during World War II had been an Australian member of the British War Cabinet, 1942-43. UK-APC accepted the name on May 23, 1951, and US-ACAN followed suit in 1952. It appears on a British chart of 1952, and in the British gazetteer of 1955. It appears on an Argentine chart of 1957 as Cabo Casey, and that is the name listed in the 1970 Argentine gazetteer, and also in the 1974 Chilean gazetteer.

Ensenada Casey *see* **Casey Inlet**

Glaciar Casey *see* **Casey Glacier**

Mount Casey. 73°43' S, 165°47' E. Rising to 2100 m, on the N side of the head of Oakley Glacier, 8 km ENE of Mount Monteagle, in the Mountaineer Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Lt. Denis Casey, USNR, catholic chaplain who wintered-over at McMurdo in 1967.

Casey Airstrip Automatic Weather Station. 66°17' S, 110°32' E. An Australian AWS, installed at Casey Station in 1991, at an elevation of 390 m.

Casey Bay. 67°30' S, 48°00' E. A large bay, the western of two large ones indenting the W coast of Enderby Land between the Prince Olav Coast and the Mawson Coast, or, more precisely, between Tange Promontory and Dingle Dome. On Jan. 14, 1930, Mawson discovered what he thought was one huge ice-pack-filled recession in the coastline, and called it Amundsen Bay. It was plotted in 67°20' S, 48°00' E. The following day, Riiser-Larsen, part of a Norwegian expedition there at the same time, flew over and saw it for what it really was, i.e., two bays, not one. Norwegian cartographers mapped it more accurately, but did not name the bays, so Amundsen Bay remained the name for both together. In 1956 an ANARE surveying party led by Peter Crohn was dropped off here by plane, and they mapped both bays in detail. In Feb. 1958 Phil Law led an ANARE party in by launch from the *Thala Dan*. ANCA renamed the western one Casey Bay, on April 29, 1958, after Richard G. Casey (*see* **Cape Casey**), and the eastern one as the new Amundsen Bay. US-ACAN accepted the new situation for Amundsen Bay in 1962, but did not accept the name Casey Bay, for the other one, until 1974. The Russians call it Zaliv Lena (i.e., "Lena bay"), after their ship, the *Lena*. *See* **Amundsen Bay** for more details.

Casey Channel *see* **Casey Glacier**

Casey Glacier. 69°00' S, 63°50' W. A glacier, 10 km wide, it flows N, then NE, from Hogmanay Pass, in Scripps Heights, into the Larsen Ice Shelf at Casey Inlet, between Cape Walcott and Miller Point, on the Wilkins Coast, on the E coast of the Antarctic Peninsula. Discovered aerially by Wilkins on Dec. 20, 1928. He thought it was a channel cutting right across the Antarctic Peninsula, and named it Casey Channel, for Major Richard G. Casey (*see* **Cape Casey**). He described it as "a channel filled with ice grounded below sea level and separating Graham Land from Scripps Island [now known as Scripps Heights] to the S." It appears as such on a Wilkins's map of 1929. It also became known as Casey Strait. However, using aerial photos taken by Lincoln Ellsworth in 1935, and preliminary reports made by BGLE 1934-37, American cartographer W.L.G. Joerg came to believe, by viewing it in relation to what Wilkins had called Lurabee Channel [now known as Lurabee Glacier], that Wilkins' Casey Channel was in fact a glacier. This new situation, with new coordinates, appears on Joerg's map of 1937, and was proved in 1940, by a survey conducted by members of East Base, during USAS 1939-41. US-ACAN accepted the name in 1947. Fids from Base E resurveyed it from the ground in 1947, UK-APC accepted the new name and situation on Jan. 28, 1953, and it appears in the British gazetteer of 1955. It was further surveyed from the ground by Fids from Base E in 1957-62. It appears on a Chilean chart of 1947 as Glaciar Casey, and that is the name listed in the 1974 Chilean gazetteer. The Argentines also call it Glaciar Casey.

Casey Inlet. 69°00' S, 63°35' W. An ice-filled inlet at the terminus of Casey Glacier,

between Miller Point and Cape Walcott, on the Wilkins Coast, on the E coast of Palmer Land. Photographed from the air by Sir Hubert Wilkins, on Dec. 20, 1928, and again by Ellsworth on Nov. 23, 1935, yet again in 1940 by USAS 1939–41, and finally in Dec. 1947 by RARE 1947–48. Surveyed from the ground by Fids from Base E in 1947, and again in 1961–62, and plotted by them in 69°00' S, 63°20' W. Named by UK-APC on Aug. 31, 1962, in association with the glacier. US-ACAN accepted the name later in 1962. The Argentines call it Ensenada Casey.

Casey Island *see* **Casy Island**

Casey Islands. 64°44' S, 64°16' W. A group of small islands on the W side of Wylie Bay, S of Cape Monaco, Anvers Island, in the Palmer Archipelago, off the W coast of Graham Land. FrAE 1903–05 charted some fringing islands in this position, but do not seem to have named them. FIDASE photographed them in 1956, and they were surveyed from the ground by FIDS between 1956 and 1958. Named by US-ACAN and UK-APC, both, on June 11, 1980, for Casey A. Jones, Jr., cook at Palmer Station, 1977–78, and at Pole Station for the winter of 1979 and the summer of 1979–80, who died in an accident at the Pole on Jan. 9, 1980 (*see* **Deaths**, 1980). It appears in the British gazetteer of 1982.

Casey Point. 73°27' S, 68°25' E. A narrow rock outcrop separating Sheraton Glacier from Arriens Glacier, on the Mawson Escarpment, along the E side of the Lambert Glacier. Plotted by Australian cartographers from ANARE air photos taken in 1956, 1960, and 1973, and named by ANCA for John Newbery Casey (b. 1927), assistant director (geology) at the Bureau of Mineral Resources from 1969.

The *Casey Rag*. Newspaper for Casey Station. Perhaps more correctly called *The Casey Chronicle*.

Casey Range. 67°47' S, 62°12' E. A jagged, razor-backed ridge and several nunataks running in a N-S line, 13 km W of, and parallel to, the David Range, and also running parallel to the Masson Ranges, in the Framnes Mountains of Mac. Robertson Land. Discovered on Jan. 5, 1930, by BANZARE 1929–31, and named by Mawson for Richard Casey (*see* Cape Casey), who was, at that time, Australian political liaison officer in London, and closely associated with the expedition. US-ACAN accepted the name in 1947. The Australians mapped it in 67°44' S, 62°13' E, but it has since been re-plotted.

Casey Station. 66°17' S, 110°32' E. Year-round Australian scientific station, on the N part of Bailey Peninsula, Vincennes Bay, on the Budd Coast of Wilkes Land. **Jan. 1965**: Construction began. During the building period (done mostly in the summer seasons), it was known as Repstat (Replacement Station). **Jan. 1969**: It was finally ready. At that point it was called Wilkes ANARE Station, being 2.5 km S of Wilkes Station. **Feb. 19, 1969**: It was opened, and renamed Casey Station, for Richard Casey (*see* **Cape Casey**). It replaced Wilkes Station, which had been used by the Australians since the summer of 1958–59 when the Americans left. **1969 winter**: Edward Christopher "Ted" Howells (officer-in-charge), Ken Bode (meteorologist-in-charge), Peter Twelvetree and Quentin Blades (meteorologists), Alf Svensson (meterological technician), Ross Anderson (glaciologist), Syd Little (assistant glaciologist), John Gras (UAP physicist), Phillip Johnstone (cosmic ray physicist), Trevor Stone (ionosphere physicist), Bert Holland, Gerry McGill, Mike McGinley, and Steve Kuhn (geodesists), Trevor Mahoney (electronics engineer), Dick Limpitlaw (medical oficer), Keith McDonald (radio operator-in-charge), Lee Collins, Sydney Henderson, and Mike Riley (radio operators), Graeme Currie [supervising technician (radio)], Peter Garone (plumber), John Gillies (q.v.) (senior radio technician), Len Holbrok and Colin Taylor (radio technicians), Bob Innes (carpenter), Jon P. Mason and Lyn Saunders (electricians), Dave Powell and Ron Wiggins (diesel mechanics), Charlie Weir (q.v.) (plant inspector), Bill Macha (general assistant), and Willi Kalss (chef). **1970 winter**: Gordon Elliot McInnes (officer-in-charge), Dave Bishop, David Blaby, David Blight, Alan Bodey, Dave Bromwich, Jim Carver, Irvin Clark, Alistair Crombie, Les Denham, Ron Gomez, Dave B. Grant, Roger Harrison, Nigel McDonald, Alan Phillips, Dick Phillips, John Singleton, Jorg Suckau, Jack Turner, Jerry Walter, Ian Waters, Mick Webb, John Young, Heinz Gherke. **1971 winter**: Jeffrey A. "Jeff" Walter (officer-in-charge), John Ackerly, Barry Allwright, Graham Barnes, Pat Bensley, Lex Brown, Dale Evans, Phil Fitzherbert, Don Grund, Murray Hall, Ray Hinchey, Kevin Hogan, Chris Hope, Terry Inglis, Bill Macha, Peter R. McLennan, Keith Martin, Doug Peterkin, Leon Sawyer, Peter Schwetz, John Sillick, Tony Warriner, Russ Willey, Ron Worden, Clint Wright, Neal Young. **1972 winter**: Dave Luders (q.v.) (officer-in-charge), Kerry Andrews, Craig Austin, Peter Bennett, Derek Cantellow, Graham Dadswell (q.v.), Laurie Davidson, Brian Ericksen, Graeme Goller, Reg Haywood, Mike Heap, Graham Henstridge, Graham Hinch, Mike Knox-Little (q.v.) (radio operator), Bruce Lauder, Dave McCormack (q.v.) [plant inspector (mechanical)], Hayden Merry, Ray Mitchell, Col Perger, Dave Pottage (q.v.), Murray Price, Murray Rowden-Rich, Bill Singleton, Adrian Stone, Terry Weatherson. **1973 winter**: Gordon Elliot McInnes (officer-in-charge), Bruce Aimer, David Bruce, Jim Carver, Peter W. Dawson, Allan Foster, Colin Gibbs, Vin Gibson, Peter Gormly, Chris Hicks, Ian E.B. Holmes, Ian James, Neil Jones, Dick Lightfoot, Terry McGlone, John McGregor, Ian McIntosh, Lloyd McMurtie, Ed Oniszk, Grant Reid, Alan Robinson, Werner Spitzer, Lyle Supp, Brian D. Taylor, Ian Waters, Mick Webb, Fred White, Alan Wilkinson, Bob Wilson. **1974 winter**: Paul Varma (officer-in-charge), Carl Brennan, Tom Brooks, Gary Burns, Peter Butcher, Chas Cosgrove, Graeme Currie, Hank Edwards, Keith Gooley, Graham Haw, Terry Hobbs, Greg Howarth, Jack Hughes, Alun Jones, Gordon Jones, John V. Morrissy, Lindsay Oxenham, Fred Prant, Frank Reid, David Russell, David "Duke" Schneider, Meil Simmonds, John Stalker, Dick Stephen, Mike Stracey, John Trott, Bill Vernon. **1975 winter**: Albert C. "Bert" Jagger (officer-in-charge), Rod Barton-Johnson, Bert Berzins, Col Christiansen, Glen Foote, Chris Gamgee, Brian Harrison, Rod L. Hutchinson, Dan Ives, Steve Karay, Martin Kros, John McLeary, Terry McNamara, Dick Neff, Dick Paynting, John Peters, Graeme Russell, Leon Sawyer, Arie Schellaars, Rod Schrapel, Eugene Stanfield, Graham Thompson, Peter Warren, Mick Webb, Graham Whiteside, David Wood-Smith. **1976 winter**: Kenneth I. "Ken" Chester (officer-in-charge), Leon Blakeley, Bill Breeze, Trevor Brooks, Rich Brown, Gerry Bryant, Gary Burns, Ralph Fletcher, Vin Gibson, Andrew Goode, John Gough, Ron Hayward, Paul Hedt, George Jaques, Peter Keage, Jim Linden. Jim MacConachie, Tony O'Mara, Robin Regester, Helmut Sell, John Simounds, Joe Tyrrell, Barry Vince. **1977 winter**: Barry W. Seedsman (officer-in-charge), Bill Allen, Ken Batt, Alan Cowan, Simon Gaddes, Bob Harding, Peter Hopper, Peter Wylie King (q.v.), Gary MacLeod, Ulai Nagatalevu, Geoff Naughton, Adrian Porter, Alan Reynolds, Don Robinson, Keith Schafer, Dieter Schmidt, Bob Sheerr, Barry Southern, Andrew Thollar, Egon Wehrle, Jeff Wilson, Andrew Zacharia. **1978 winter**: Doug Twigg (officer-in-charge; *see* **Mount Twigg**), Bob Bandy, Dave Blakeborough, Laurie Bredhauer, Ron Brown, Gary Carr, Trevor Hamley, Noel Hutchins, Richard King, Eric Leach, Ron Mackenzie, Graeme Mears, Ray Morris, Rod Parsons, Mike Phillips, Peter Quinn, Graeme Russell, Rod Schrapel, Graham K. Smith, Bob Stow, Mike Tierney, Jim Vallance, Stuart Waugh, Joe Xuereb. **1979 winter**: Graeme J. Manning (officer-in-charge), Colin Barrett, Oliver Benson, Paul Brammer, Rick Brown, Chris Cheney, Brian Clements, Laurie Cole, Tony Costello, Trevor Cruse, Klaas de Jonge, Don Dettmann, Horrie Down, Peter Horton, John Hudspeth, Frank O'Connor, John J. O'Connor, Geoff Reeve, Allen Rooke, David Sheehy, John Simounds, Ross Walsh, George Hedanek, Bob Sherwood, Michael Stone, John Sutton. **1980 winter**: Willem Philip "Phil" Barnaart (officer-in-charge), Ross Belcher, Tony Brockbank, Doug Cameron, Dave Chester, Paul Chesworth, John Corcoran, Vin Gibson, Ron Gorman, John Henry, Peter Hicks, Keith Lewis, Keith McCallum, Keith McKechnie, Ray Mason, Ken Murdoch, Tom Parrott, Ray Parry, Bill Plant, Max Riley, Rick Schmitter, Tony Smith, Peter Tuckwell, Alan Wilkinson, Ron Worden. **1981 winter**: B.V. Joseph "Joe" Johnson (officer-in-charge), Dave Ball, Mick Bence, David Bridger, Peter Carey, Evan Davis, Len Harwood, Martin Hendy, Rod Hosken, Bob N. Jones, Rex McCarthy, Ian

McDonald, Lindsay Meades, Wayne Miller, Lance Olsen, Eric Osborn, Ian Palmer, Geoff Pearce, Wayne Petschack, Richard Priddy, Lou Rayner, Don Reid, Graham K. Smith, Paul Richard Smith, Bruce Underwood, Glen von Bibra, Herman Westerhof. **1982 winter**: John A. Munro (officer-in-charge), Bob Ballantyne, Peter Barrett, Adrian Blake, Peter Browne, Dave Catesby, Ian Clifton, Max Dietrich, Peter Dougheney, Peter Ellis, Paul Fiske, Peter Foran, Bob Goldsworthy, Peter Gray, Gerry Hamilton, John Hetherington, Bob Hollingsworth, Ian Johnstone, Damien Jones, Tony Kelley, Jim Lawrence, Neil McIntosh, Phil McManus, Stephen Manning, Brian Martin, Jim Milne, Bob Orchard, Gary Pilmore, Paul Rea, Eric Smith, Neil Smith, Ivan Taylor, Garry Wilson, Greg Young, Xie Zichu. **1983 winter**: Donald R. "Don" Cheesman (officer-in-charge), Bob Abeyscherra, Chris Cheney, Ashley Delarue, Doug Green, Garry Hardie, Brian Harley, Lex Harris, Brian G. Harvey, George Hedanek, Rob Hollingshead, Ian E. Holmes, Peter James, Graham Kelly, Phil Liley, Mark Little, Jack McKenzie, Michael Martin, Tim Medhurst, Danny O'Reilly, Geoff Robertson, Allen Rooke, Adrian Smith, Ian Stone, Qian Songlin, Peter Stickland, Charles Taylor, Col Walker, Alan White, Bob Yost. **1984 winter**: Brian Whiteley (officer-in-charge), Bruce Adam, Garry Barclay, Brian Baxter, Mick Bence, Russell Brand, Gary Burton, Jim Clark, Neil Conrick, Qin Dahe, Ray Etherington, Dave J. Grant, Ken Hankinson, Peter Hesketh, Allan Hiscock, Trevor Lloyd, Jeff Longworth, Sandie McCombie, Andrew Martin, Paul Matthews, David Nicholas, Peter Norris-Smith, Bill Robinson, Jim Semmens, Merv Steele, Eric Szworak, Rick Thwaites, Andrew Wood, Bob Yeoman. **1985 winter**: John Smart (officer-in-charge), Ian Abbott, Bruce Alcorn, Graham Buis, Ken Butler, Bill Couch, Andrew Crook, Garry Dawe, Steve Dulfer, Wayne Eastley, Ian Goodwin, Jian Kang Han, Glen Hay, Alex Hindle, Terry Hobbs, Ian Johnstone, Denise Jones, Matthias Kaszechki, Pat Killalea, Graeme Lawrence, John Lee, Ray Lindupp, Gerry Love, Chris Miller, David Phillips, Bill Sinclair, David Steele, John Tibbits, Ross Walsh, Garry Watson, Don Waugh, Mick Whittle. **1986 winter**: Barry Martin (officer-in-charge), Peter Bannister, Darryl Byrne, Greg Clark, Xi Dilong, Lloyd Fletcher, Jim Hall, Rick Hancock, Lex Harris, Bill Hazelton, George Hedanek, Kim Hill, Shane Hill, Col Hobbs, Tony Howard, Brian Jury, Ian LeFevre, Dugald Mclaren, Chris Morrison, Bill O'Connor, Malcolm Parnell, Bob Phillips, Kevin Sheridan, Gary Pilmore, Neville Ryan, Keith Salmon, George Seidl, Charles Stenton, Sheryl White. **1987 winter**: Russell Rachinger (officer-in-charge), Colin Blobel, Joe Brennan, Chris Browne, Simon Catley, Kevin Christensen, Ray Clark, Gavin Day, Gary Eastwood, Paul Fenton, John H. Freeman, David Gillott, Brian Harley, Jeff Lawrence, Li Jun, Wayne MacDonald, Eric MacGibbon, Malcolm McKern, Peter Malcolm, Peter Mantell, Paul Marshall, Grahame Mills, Vernon Moo, Paul Myers, Scott Neilson, John O'Brien, Bill Robinson, Rob Schmith, Andy Speake, Merv Steele, Robin Thomas, Dave Thorn, Kevin C. Walker, Michael Wilson, Ray Wright, Mike Whitehouse. **1988 winter**: Thomas Raymond "Tom" Maggs (station leader), Erica Adamson, Lachlan Braden, Russell Brand, Ian Bruce, Peter Cummings, Andrew Delahoy, John Duncan, Erwin Erb, Ross Ferris, Arthur Gillard, Alan Hayes, Jonathon Kilpatrick, Eddy Kretowicz, Les Lever, Grant McGarry, Bernie McKinley, Roger McLennan, Dale Main, Ray Miller, Peter Orbansen, Leigh Reardon, Shane Spriggins, Chris Stucki, Phillip Webster, Bob Wicks, Calum Young. The new Casey Station, built in 1988-89, 500 m higher up the hill away from the sea spray, is in 66°17' S, 110°32' E. **1989 winter**: H. Joachim "Joc" Schmiechen (station leader), Geoff Bishop, Sandy Cave, Charlie Cholawinskyj, John Enfantie, John H. Freeman, Hau V. Ling, Owen Holmwood, Dale Ingarfield, Deirdre Johnson, Brenton Jones, Ross Jongejans, Gary McLeod, Peter Le Compte, Phil Manning, Ross Peterkin, Ann Roskrow, Phil Smart, Len Trace, John Van De Geyn, Bo Wen, Graeme Wills, Richard Wilson. **1990 winter**: Joan Russell (station leader), Helen Beggs, Luke Doran, Geoff Draper, Mal Ellson, Richard Freeman, Graeme Germein, Rodney Givney, Paul Gray, Paul Himsley, John Hoelscher, David Humphries, Nic Jones, Peter Orbansen, Des Pettit, Ed Piket, Adele Post, Ian Potrzeba, Ian Raymond, Peter Read, David Roser, Anthony Scerri, Kevin Shepherd, Patrick Smyth, Phil Smart, Ted Young. **1991 winter**: John Hancock (station leader), Florian Baciu, Russell Clark, Peter Corner, Philip Dawson, Kevin Denham, Phil Giese, David Glackin, Brian Griffith, Michael Hardie, Steve Hughes, Bronwyn Matheson, David Melick, Jim Ockensen, David O'Neill, Tony Powell, Perry Roberts, Neville Ryan, Ray Saunders, Robert Shaw, Ron Sherwood, Graeme Snow, Alec Taylor, Glen Turner, Gwyn Williams, Meredy Zwar. **1992 winter**: Noel Mifsud (station leader), Arthur Alexander, Denise Allen, Jeffrey Ayton, Robert Barclay, Alex Hindle, Kerrie Hindle, Mark Hovenden, John McKelvie, Gary MacLeod, Dale Main, John W. Mason, Devindar Singh, Mark Tapp, Christopher Tomes, Patrick Whelan, Denis Wiltshire. **1993 winter**: Graeme Armstrong (station leader), Peter Attard, Bill Collins, Tayne Cooper, Andrew Croke, Dave Harrison, Stuart Hodges, Mandy Holmes, Grant Hutchins, Anne Jackson, Shaun Johnson, Ric Kern, Didier Monselesan, Mark Spooner, Lloyd Symons, Peter Thompson, Trevor Tingate, Tony Vaughan, Shane Wheller. **1994 winter**: Angela Rhodes (station leader), Neil Adams, Bruce Copplestone, Miro Dubovinsky, James Giblin, Tim Gibson, Paul Hansen, Robert May, David Melick, Adrian Porter, Steve Rendell, Brett Sambrooks, Donna Simper, Dale Siver, Jeff Smith, Paul Richard Smith, Garth Thompson. **1995 winter**: Peter Melick (station leader), Obadur Azmi, Elizabeth Bulling, Neil Drummond, Arthur Gillard, Dave Glazebrook, Michael Halpin, Mandy Holmes, Patrick Kildea, Chris Langmaid, Roger Lurz, Cheryl McRae, Didier Monselesan, Noel Paten, Leigh Reardon, Darin Roberts, Glenn Scherell, Robert Thorne, Gwyn Williams. **1996 winter**: Mark Goodall (station leader), Craig Allardyce, Andrew Bicknell, Andrew Brooks, Adam Ewing, Christian Gallagher, Ross Garnsey, Annette Hackett, Cathy Marsh, Craig Marsh, Shane Procter, Darryn Schneider, Michael Shanahan, Graham K. Smith, George Spry, Trevor Williamson. **1997 winter**: Ian Sutherland (station leader), Bruce Eyers, Bruce Hewitt, Brendan Hill, Terry McCarron, Ian John McLean, Rod Miller, Frank O'Rourke, Simon Pearce, John Pizzinato, Jason Reinke, Janet Reynolds, Godfrey Terwin, Bob J. Thompson, Andrew Tink, George Wiseman. **1998 winter**: Graeme Beech (station leader). **1999 winter**: Marcus Tilbrook (station leader). **2000 winter**: Marilyn Boydell (station leader). **2001 winter**: Alan Henry (station leader). **2002 winter**: John Rich (station leader). **2003 winter**: Ivor Harris (staton leader). **2004 winter**: Karen Kristensen (station leader). **2005 winter**: Jeremy Smith (station leader). **2006 winter**: Marilyn Boydell (station leader). **2007 winter**: Jeremy Smith (station leader). **2008 winter**: Bob N. Jones (station leader). Casey had 12 buildings set on elevated frames in a line across the prevailing wind, to allow the snow to blow beneath it, with a half-round passageway, facing the wind, connecting them. However, being so near the coast the sea spray weakened the stilts. **2009 winter**: Graham Cook (station leader). **2010 winter**: Narelle Campbell (station leader).

Casey Strait *see* **Casey Glacier**

Cashman Crags. 77°32' S, 166°51' E. Two rock summits at 1500 m up the W slope of Mount Erebus, 1 km W of Hoopers Shoulder, on Ross Island. Named by US-ACAN in 2000, at the suggestion of NZ geologist Philip R. Kyle, for vulcanologist Katherine Venable "Kathy" Cashman (b. July 19, 1954, Providence, RI), USARP team member on Mount Erebus in 1978-79 while she was a Fulbright scholar studying for her master's degree at the Victoria University of Wellington, in NZ. After getting her PhD at Johns Hopkins in 1986, she was back on Mount Erebus in 1988-89, and from 1991 has been professor of geology at the University of Oregon. NZ-APC accepted the name on Feb. 20, 2001.

Cassandra Nunatak. 64°27' S, 63°24' W. Rising to 425 m (the British say 900 m), it marks the E side of the mouth of Iliad Glacier, at the N end of the Trojan Range, in the N part of Anvers Island, in the Palmer Archipelago, off the W coast of Graham Land. Surveyed from the ground by FIDS in 1955-57, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, in association with other features in the Trojan Range named for characters out of Homer's *Iliad*, for

Priam's daughter. It appears on a British chart of 1959. US-ACAN accepted the name in 1971.

Cassedy, Alfred *see* **USEE 1838-42**

Mount Cassidy. 77°27' S, 160°47' E. Rising to 1917 m, it forms a salient angle in the NE part of the Prentice Plateau, in the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Rude spurs descend from the E side of the mountain. Named by US-ACAN in 2004, for Dennis S. Cassidy, curator of the Antarctic Marine Geology Research Facility and Core Library, at Florida State University in Tallahassee, from 1962 to 1991. NZ-APC accepted the name on Nov. 30, 2004.

Cassidy Glacier. 77°46' S, 160°09' E. A glacier, 11 km long and 3 km wide, flowing NE into the upper Taylor Glacier between Depot Nunatak and the NW end of the Quartermain Mountains, in Victoria Land. Named descriptively by BNAE 1901-04 as South-West Arm, but later mapping has shown that this glacier is part of the Taylor Glacier system. Renamed by US-ACAN in 1992, for William A. Cassidy, of the department of geology and planetary science, at the University of Pittsburgh, who, over 13 field seasons between 1976 and 1990, led USARP field teams in the investigation and collection of Antarctic meteorites from diverse sites through Victoria Land and southward to Lewis Cliff, adjacent to the Queen Alexandra Range.

Cassini Glacier. 77°53' S, 163°48' E. A steep glacier between Goat Mountain and Bonne Glacier, descending NW from Hobbs Ridge into Blue Glacier, in Victoria Land. Named by NZ-APC in 1992, for the Cassini map projection, a cylindrical projection in which the cylinder is at right angles to the axis of the globe. US-ACAN accepted the name in 1993.

Monte Cassino *see under* **M**

Punta Castelli. 64°40' S, 62°18' W. A point in Wilhelmina Bay, SE of Cape Anna, on the W coast of Graham Land. Named by the Argentines.

Castellini Bluff. 78°09' S, 167°10' E. A rock bluff rising to about 500 m, between Dibble Bluff and Mount Nesos, in the W part of White Island, in the Ross Archipelago. Named by US-ACAN in 2005, for Michael A. Castellini, of the Institute of Marine Sciences, at the University of Alaska, Fairbanks, who studied the Weddell seal in the McMurdo Sound sea-ice areas between 1977 and 2004, including winter season research at White Island with Randall W. Davis (*see* **Davis Bluff**) in 1981. NZ-APC accepted the name on June 17, 2005.

Castells Carafí, Héctor. b. Barcelona, Spain. He migrated to Uruguay, and was an alférez de navío (ensign) in the Uruguayan Navy in 1916, when he went on the *Instituto de Pesca No. 1*, as part of the officer crew, to rescue (unsuccessfully) Shackleton's men trapped on Elephant Island.

Nunatak Castells Ortiz. 66°11' S, 61°35' W. One of a cluster of several nunataks on the N side of Jason Peninsula, in Graham Land. Named by the Argentines.

Castellvi Peak. 62°42' S, 60°23' W. Rising to 350 m on Hurd Peninsula, 800 m NE of MacGregor Peaks, and 1.4 km SW of Dorotea Peaks, on Livingston island, in the South Shetlands. Named by the Bulgarians on Aug. 12, 2008, for Josefina Castellvi y Pulachs (*see* **Spain**).

Casterz Camp. 83°30' S, 117°00' W. American field camp on the Polar Plateau, open only for the 1991-92 season.

[1]**Cabo Castex**. 63°20' S, 61°59' W. A small cape, in the area of Cape Hooker, Low Island, in the South Shetlands. Named by the Argentines.

[2]**Cabo Castex** *see* **Tay Head**

Castiglia, Marcelo *see* **Órcadas Station**, 1946

Paso De Castilla *see under* **D**

The *Castillo* *see* **The *Subofícial Castillo***

Cerro Castillo. 63°39' S, 57°30' W. A hill in the central part of the S half of Eagle Island, 11 km N of Vega Island, off Trinity Peninsula, on the E coast of the Antarctic Peninsula. Named by the Chileans for Squadron Leader Alamiro Castillo Ayala, of the Chilean Air Force, who took part in ChilAE 1971-71. The Argentines call it Cerro San Miguel.

Nunatak del Castillo *see under* **D**

Pico Castillo *see* **Castle Peak**

Punta Castillo. 63°36' S, 59°44' W. A point between Condyle Point and Cape Dumoutier, in the SE part of Tower Island, at the NE end of the Palmer Archipelago, off the W coast of the Antarctic Peninsula. Named by the Argentines.

Roca Castillo *see* **Fort Point** and [2]**Castle Rock**

Castillo Point. 75°30' S, 141°18' W. An ice-covered point marking the E side of the terminus of Land Glacier, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1972, for Rudy Castillo, USN, aerographer with the Marie Byrd Land Survey Party of 1968, during OpDF 68 (i.e., 1967-68). He was at Hallett Station in 1968-69.

Roca Castillo Scarborough *see* **Scarborough Castle**

The Castle *see* **Mount Macey**

Roca Castle *see* [2]**Castle Rock**

Castle Bluff. 69°24' S, 76°20' E. The highest point of a prominent, steep-sided ridge which extends in a NE-SW direction, about 1.9 km W of Law-Racovitza Station, in the Larsemann Hills. The NE end of the ridge is a vertical bluff which presents a barrier like a castle wall. Named descriptively by ANCA on Nov. 24, 1987. The Chinese call it Guanyin Shan.

Castle Crags. 82°01' S, 159°12' E. Prominent jagged peaks, 6 km N of Hunt Mountain, and overlooking Starshot Glacier, this feature is located on the ridge extending N from the Holyoake Range. Discovered by NZGSAE 1964-65, and named by them for its castellated appearance. NZ-APC accepted the name on July 15, 1965, and US-ACAN followed suit in 1966. ANCA accepted the name on Aug. 10, 1966.

Castle Peak. 67°00' S, 65°53' W. A prominent, ice-covered peak, shaped like a truncated cone with a rounded summit, and rising to over 610 m above the surrounding ice (i.e., 2380 m above sea level), immediately S of Murphy Glacier, and close off the W side of the Avery Plateau, and 27 km E of Lallemand Fjord, on the Loubet Coast, on the W coast of Graham Land. Surveyed by Fids from Base E in Dec. 1946, and named by them for its resemblance to a ruined medieval castle. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1957. The Argentines translated the name as Pico Castillo, but the Chileans, who considered this also, chose instead, in 1963, to name it Pico Catedral, claiming that to use the name "castillo" would be to invite confusion with all the other features containing that word. It appears as Pico Catedral in their 1974 gazetteer.

[1]**Castle Rock** *see* **Fort Point**

[2]**Castle Rock**. 62°47' S, 61°35' W. A conspicuous square, black rock, rising to 175 m above sea level, it is actually a rugged island, 2.75 km off the W side of Snow Island, in the South Shetlands. Named descriptively by Palmer on Nov. 12, 1820, it appears on Powell's British chart of 1822. Weddell, in 1825, apparently not knowing it had been named by Palmer, named it Gibraltar Rock, and that name was still being used by some into the 1930s. It appears on a British chart of 1839 as Castle Rock, was re-surveyed by the Discovery Investigations in 1933-35, and that was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears in the British gazetteer of 1955, and on a British chart of 1962. It appears on an 1861 Spanish chart as Roca Castle. In 1947 the Hydrographic Institute of the Chilean Navy translated this as Roca Castillo, and that was the name used in the 1974 Chilean gazetteer, and in the 1970 Argentine gazetteer. The British were the latest to replot this feature, in late 2008.

[3]**Castle Rock**. 77°48' S, 166°46' E. A high, bold, precipitous-sided rock crag with a flat top, rising to 415 m (the New Zealanders say 430 m), 5 km NE of Hut Point, on the central ridge of Hut Point Peninsula, Ross Island, it is the most conspicuous landmark on that peninsula. It consists of a plug (or pipe) of an ancient vent, from which the cone has long since disappeared. Discovered and named descriptively by Scott in 1902 during BNAE 1901-04. It was a landmark for sledging parties returning from the south. They estimated its height at 1350 feet. US-ACAN accepted the name in 1952, and it appears in the 1958 NZ gazetteer.

Castor *see* **Castor Nunatak**

The *Castor*. A 318-ton Norwegian sailing sealer, built in 1886 in Arendal, for a Danish owner. Chris Christensen bought her in 1893, and, under the command of Capt. Morten

Pedersen, she was in Antarctic waters with the *Hertha* and the *Jason* in 1893-94. She disappeared off Greenland in 1896.

Île Castor *see* **Castor Nunatak**

Îlot Castor. 66°40' S, 140°01' E. The NE of a group of 2 islets SE of Île du Lion, in the Baie des Gémeaux, in the Géologie Archipelago. So named by the French in 1977 because the islands are not only so close together, they are very similar (cf Castor and Pollux, of Greek mythology). *See also* **Îlot Pollux**.

Isla Castor *see* **Castor Nunatak**

Nunatak Castor *see* **Castor Nunatak**

Roca Castor *see* **Castor Nunatak**

Castor and Pollux. 69°24' S, 76°24' E. Twin peaks in the Larsemann Hills, 95 m and 89 m above sea level respectively, on a short ridge which marks the track from Law-Racovitza Station to the plateau, about 0.5 km SE of Law-Racovitza. Named by ANCA on Nov. 24, 1987, after the twins in Greek mythology. The Chinese call it Xiaowuzhi Shan.

Castor Insel *see* **Castor Nunatak**

Castor Nunatak. 65°10' S, 59°55' W. Rising to about 155 m, 5.5 km SW of Oceana Nunatak, it is the southernmost of the Seal Nunataks, off the W coast of Robertson Island, off the Oscar II Coast, on the E coast of the Antarctic Peninsula. First seen by Larsen on Dec. 11, 1893, and he charted it as an island, which he named Castor Insel, for the *Castor*. It appears on Friederichsen's 1895 map as Castorinsel. De Gerlache refers to it on his maps as Île Castor, and the chart of BAE 1898-1900 shows it as just Castor. It was re-defined on Oct. 8, 1902, by SwedAE 1901-04, when Nordenskjöld re-charted it as a nunatak, calling it Kastors Nunatak, Kastor Nunatak, or Nunatak Kastor. As early as 1908 the South Americans were calling it both Isla Castor and Nunatak Castor. It appears as Castor Nunatak on a British chart of 1921. It was surveyed from the ground by Fids from Base D in Aug. 1947. UK-APC accepted the name Castor Nunatak on Jan. 22, 1951, and US-ACAN followed suit in 1952. Fids from Base D re-surveyed it between 1952 and 1956, and the name appears in the British gazetteer of 1955. It appears on a 1947 Chilean chart as Roca Castor, but the name that is listed in the 1974 Chilean gazetteer is Nunatak Castor, which is also what the Argentines call it.

Castorinsel *see* **Castor Nunatak**

Castra Martis Hill. 62°34' S, 60°12' W. A conspicuous hill rising to 453 meters near Leslie Hill, 500 meters ESE of that hill, and linked to it by a saddle 418 m above sea level, and 4.1 km NW of Melnik Peak, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarian Tangra expedition of 2004-05, and named by them on April 11, 2005, after the old Roman settlement of Castra Martis (Mars Camp), the predecessor of the NW Bulgarian town of Kula.

Mount Castro. 69°20' S, 66°04' W. Rising to 1630 m, on the N side of Seller Glacier, 8 km SE of Mount Gilbert, E of Forster Ice Piedmont, on the Fallières Coast, in the central part of the Antarctic Peninsula. Photographed aerially in Jan. 1937 by BGLE 1934-37, and again in Dec. 1947 by RARE 1947-48. Surveyed from the ground in Nov. 1958 by Fids from Base E. Named by UK-APC on Aug. 31, 1962, for João de Castro (1500-1548), Portuguese navigator. US-ACAN accepted the name later in 1962. It appears on a British map of 1963.

Nunatak Castro. 66°08' S, 61°02' W. One of a group of nunataks on the N coast of Jason Peninsula, on the E coast of Graham Land. Named by the Argentines.

Punta Castro *see* **Cape Betbeder**

Castro Peak. 62°42' S, 60°24' W. Rising to 306 m on Hurd Peninsula, 750 m SWW of MacGregor Peaks, and 1.87 km NE of Binn Peak, on Livingston Island, in the South Shetlands. Mapped by the Spanish in 1991. Named by the Bulgarians, on Aug. 12, 2008, for Vicente Castro, mountain guide at Juan Carlos I Station, who took part in the first ascent of this peak in 2003-04.

Île Casy *see* **Casy Island**

Isla Casy *see* **Casy Island**

Roca Casy *see* **Casy Island**

Casy Island. 63°14' S, 57°30' W. Also called Casy Rock. The largest island in a group of small islands, 3 km SE of Lafarge Rocks, 5 km NE of Coupvent Point, and 6 km WSW of Prime Head (effectively it lies between Prime Head and Coupvent Point), off the N side of Trinity Peninsula. It has a rocky summit rising to 90 m. Discovered and charted in Feb. 1838 by FrAE 1837-40, and named by Dumont d'Urville, as Île Casy, for Joseph-Grégoire Casy (1787-1862), aide to French minister of marine Vice Admiral Claude de Rosamel, and a friend of Dumont d'Urville's (Casy became a vice admiral in 1845, and a senator in 1852). It appears on a British chart of 1901 as Casy Island, and a Norwegian chart of 1928 as Casy Øy. It was surveyed by Fids from Base D between 1945 and 1947. It appears on a Chilean chart of 1947 as Roca Casy, and on another one from 1961, and as such in their gazetteer of 1974. So, the Chileans have always called it Roca Casy. It appears on a 1949 British chart as Casy Islet, and UK-APC accepted that name on Nov. 21, 1949. It appears as such in the 1955 British gazetteer. It appears on a 1956 U.S. chart, misspelled as Casey Island. On July 7, 1959, UK-APC redefined it as Casy Island, and US-ACAN accepted that name in 1963. It appears as such in the 1964 British gazetteer. The Argentines used to call it Roca Casy (it appears as such in their gazetteer of 1970), but in their gazetteer of 1993 it appears as Isla Casy.

Casy Islet *see* **Casy Island**

Casy Øy *see* **Casy Island**

Casy Rock *see* **Casy Island**

Isla Cat *see* **Cat Island**

Cat Island. 65°47' S, 65°13' W. About 0.75 km long, midway between Duchaylard Island and Larrouy Island (about 4 km to the S), at the S end of Grandidier Channel, 24 km WSW of Cape García, off the Graham Coast, on the W coast of the Antarctic Peninsula. Discovered, charted, and named descriptively (for its shape) in 1935, by BGLE 1934-37. The Argentines showed it as Isla Cat on their 1943 translated BGLE map, but on a 1947 chart of theirs it is shown fully translated as Isla Gato. However, on yet another Argentine chart, from 1949, it is shown as Isla Kat. US-ACAN accepted the name Cat Islet in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the British gazetteer of 1955, and on a U.S. Hydrographic Office chart of that year. On July 7, 1959, UK-APC redefined it as Cat Island, and US-ACAN followed suit in 1963. It appears in the 1970 Argentine gazetteer as Isla Gato.

Cat Islet *see* **Cat Island**

Cat Lake. 68°34' S, 78°17' E. About 1 km long, with several bays, in the Vestfold Hills. So named by ANCA on July 26, 1983, because, on air photos, it resembles a cat.

Cat Nunatak. 77°29' S, 163°28' E. Due W of Hogback Hill, at Cape Bernacchi, in Victoria Land. Named by NZ-APC on Oct. 7, 1998, to commemorate the cats that accompanied the ships *Morning* and *Terra Nova* to McMurdo Sound. US-ACAN accepted the name later in 1998.

Cat Ridge. 71°10' S, 61°50' W. At an elevation of about 1200 m above sea level, in the middle of Gain Glacier, WNW of Palmer Inlet, on the Black Coast, in the E part of Palmer Land. Photographed aerially by USN in 1966, surveyed from the ground by BAS personnel from Base E, 1972-73, and mapped by USGS from these efforts. Named by US-ACAN in 1976. It is a descriptive term, for when viewed from the NE, the limbs of the feature resemble in shape those of a sprawling cat. UK-APC accepted the name on July 21, 1976.

Catacomb Hill. 78°04' S, 163°25' E. A prominent rock peak, rising to 1430 m, on the ridge that borders the E side of the head of Blue Glacier, in Victoria Land. The granite of the peak has been weathered into spectacular caverns, hence the name given by the NZ Blue Glacier Party of BCTAE who established a survey station on its summit on Dec. 19, 1957. It appears in the 1960 NZ gazetteer, and US-ACAN accepted the name in 1962.

Catacomb Ridge. 78°05' S, 163°24' E. Runs due S from Catacomb Hill, in association with which it was named by NZ-APC on Dec. 1, 1993. US-ACAN accepted the name in 1995.

Islotes Catalán. 62°31' S, 59°41' W. A group of islets and rocks very close to the S coast of Discovery Bay, about 1.2 km SE of Labbé Point, on Greenwich Island, in the South Shetlands. Named by ChilAE 1947 as Islotes Soldado Catalán, for the soldier Juan Catalán Barril, part of the team who built Capitán Arturo Prat Station (then known as Soberanía), the Chilean base on Greenwich Island. Since 1951 the name has been shortened.

Punta Catalina *see* **Catharina Point**

Catalunyan Saddle. 62°40' S, 60°09' W. At an elevation of 1260 m, on Friesland Ridge, in the Tangra Mountains, 3.4 km S of Kuzman Knoll, 11.5 km E of St. Kliment Ohridski Sta-

tion, on Livingston Island, in the South Shetlands. It is bounded by Lyaskovets Peak to the E and by Presian Ridge to the W. Part of the saddle is occupied by The Sphinx. Surveyed by the Bulgarians in 2004-05, during their Tangra survey, and named by them on April 11, 2005, as Sedlovina Katalunska for the Catalonian (i.e., Catalan, Catalunyan) scientists and alpine guides from Juan Carlos I Station, who established the first route via the saddle to Friesland Ridge, in 1991. The name has been translated into English.

Cataract Canyon. 68°36' S, 78°34' E. An asymmetric canyon in the Vestfold Hills, about 20 m deep and about 500 m long, and steeper on the N side, it drains Canyon Lake via a series of rapids and cataracts, hence the name given by ANCA on July 26, 1983.

Pico Catedral *see* **Castle Peak**

Catenary Nunatak. 77°59' S, 160°31' E. A nunatak, 1.5 km SW of Monastery Nunatak, on the S side of the Quartermain Mountains, in Victoria Land. Named by NZ-APC in 1992, for the catenary, the curve in which a survey chain hangs when it is suspended between two points at the same level. US-ACAN accepted the name in 1993.

Caterpillar tractors. Have been used in Antarctica since Scott took 3 with him on BAE 1910-13. He and Charcot had tested these sledges equipped with a motor and caterpillar tracks in the Alps before Scott took them south on the *Terra Nova*. D-6s were used on OpHJ 1946-47. There has been a wide range of tracked vehicles used in Antarctica.

The *Catharina*. Often seen (erroneously) as the *Catherine*. A 160-ton, 71-foot American sealing brig, registered in New London on July 17, 1820, and owned by W.W. Rodman, she took part in Alexander Clark's expedition to the South Shetlands in the summer of 1820-21. Captain Joseph Henfield commanded, and Elof Benson was 1st mate. Henry Perry (one of the mates), Thomas Pomeroy, Nahum Haynes, and Cory Manchester, were all drowned at the Falkland Islands on the way south on Oct. 27, 1820. The *Catharina* arrived back in Stonington on May 14, 1821, with 9,800 salted fur seal skins, and some oil. She was back in the South Shetlands for the 1821-22 season, under the command of Capt. David Churchill, and in company with the *Emeline* and the *Essex*. She took in 1000 seal skins, and 325 barrels of oil.

Catharina Point. 62°20' S, 59°37' W. The N point of Robert Island, in the South Shetlands. ChilAE 1949-50 named it Punta Varoli, and it appears as such on their 1951 chart, and also in the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in Dec. 1956. UK-APC, being unable to bring themselves to name it, say, Varoli Point (which they easily could have done), named it (for themselves only) on Aug. 31, 1962, as Catharina Point, for the *Catharina*. It appears as such on a British chart of that year. The Argentines, caught almost literally between a rock and a hard place (being unable to use a name already in use by either Chile or the UK), chose a translation of the girl's name "Catharina," and named it Punta Catalina, which in no way honors the old sealing vessel or anyone or anything else. The British were the latest to replot this feature, in late 2008.

Cathedral Crags. 63°00' S, 60°33' W. A rocky ice-free hill, rising to 140 m (the British say 160 m), and with steeply cliffed sides, that is actually a volcanic vent composed of massive yellow lapilli breccia showing indistinct, nearly horizontal stratification, and which surmounts the peninsula between Neptunes Window and Fildes Point, on the N side of Neptunes Bellows, on the SE side of Deception Island, in the South Shetlands. The very early sealers named part of it as The Convent, and that name is seen on Robert Fildes's chart of 1821. The German translation Das Kloster is seen on an 1827 Fildes chart. Convent (i.e., without the definite article) is seen on the Discovery Investigations chart of 1930, and The Convent is seen on a 1948 British chart. Lester (of the British Imperial Antarctic Expedition of 1920-22) refers to it as Weather Cock Hill, and a 1939 reference by Bagshawe (of the same expedition) refers to it as Weathercock Hill, both spellings reflecting a name given to it by whalers in the area in the 1906-20 period. FIDS surveyed it in 1953, and on Sept. 4, 1957 UK-APC named it Cathedral Crags. US-ACAN accepted the name in 1963. The British were the latest to replot this feature, in late 2008.

Cathedral Peaks. 84°44' S, 175°40' W. A long, steep, rugged mountain mass surmounted by several conspicuous peaks, close N of Lubbock Ridge, they extend for 13 km along the E margin of Shackleton Glacier. From the glacier the feature resembles the spires and turrets of a cathedral. Named by Al Wade (q.v.), who worked here in 1962-63, as part of the USARP Shackleton Glacier Party. US-ACAN accepted the name in 1964, and NZ-APC followed suit on July 16, 1964.

[1]**Cathedral Rocks** *see* **Granite Pillars**

[2]**Cathedral Rocks**. 77°51' S, 162°30' E. A series of 4 dark, abrupt cliffs interspersed by short glaciers, and surmounted by sharp peaks rising to about 2050 m, forming a right angle which extends W and then S for 13 km (the New Zealanders say about 16 km) along the S side of Ferrar Glacier, and forming part of the N shoulder of the Royal Society Range, in Victoria Land. Discovered on Dec. 7, 1902 by Albert Armitage, during BNAE 1901-04, and named descriptively by him. US-ACAN accepted the name in 1953, and it appears in the 1958 NZ gazetteer.

Catherall, Laurance "Laurie." b. Sept. 24, 1935, Lewisham, near London, son of William Augustus Catherall and his wife May Frances Howe. He became a Queens Scout, but, irreconcilable differences with his father led him to run away from home, and, lying about his age, he joined FIDS as a meteorologist. He shipped out from London to Montevideo in 1954, and wintered-over at Base F in 1955, and at Base D in 1956. In 1958 he went to Quebec, and worked in the bush. He married Mary Margaret. Then he worked at a General Electric plant in Peterborough, owned a lodge in Omemee, Ont., and then worked for the Ontario Ministry of Tourism, finally settling in Fort Frances, Ont., where he joined the Ministry of Indian Affairs. His wife died on Dec. 11, 2002, and he died on Sept. 30, 2005, at La Verendrye Hospital, in Fort Frances.

The *Catherine*. American schooner which, under Smyley, sailed from Newport, RI, on Sept. 10, 1845, as tender to the *America*, both vessels going to the South Shetlands. She was wrecked against a glacier in 1846.

Mount Catherine *see* **Mount Kathleen**

Catherine Sweeney Mountains *see* **Sweeney Mountains**

Catlow, Peter. b. Lancashire. A mountain climber, he joined FIDS in 1957, as a radioman, and wintered-over at Base J in 1958. After the expedition, he worked in a restaurant in Nelson, Lancs.

Rocas Catodon *see* **Catodon Rocks**

Catodon Rock *see* **Catodon Rocks**

Catodon Rocks. 63°30' S, 60°00' W. A small group of rocks, rising to about 6 m above sea level, NW of Tower Island, and just NE of Ohlin Island, in the Palmer Archipelago. They appear erroneously on Capt. Johannessen's whaling chart of 1919-20 as the Kendall Rocks. Mapped by FIDS cartographers in 1959-60 from air photos taken by FIDASE in 1956-57, and named by UK-APC on Sept. 23, 1960 for the sperm whale (*Physeter catodon*). US-ACAN accepted the name later in 1960. They appear on a 1962 British chart. The largest of the rocks appears in the 1974 British gazetteer as Catodon Rock.

Cats. In 1897 Johan Koren brought Nansen, a black and white kitten, aboard the *Belgica*, during BelgAE 1897-99. After the ship became trapped in the ice, Nansen went insane, and died on June 22, 1898. Blackwall and Poplar were the 2 cats on the *Discovery* during BNAE 1901-04. Blackwall, a tabby and black, became Scott's friend, and Poplar, a black cat, became Quartley's. In March 1904 Poplar was ripped apart and eaten by the huskies. This did Quartley no good at all. Blackwall made it back to NZ in 1904. During the relief of that expedition, the *Morning* had a black cat named Night, and her white kitten, Noon, but there also appeared a gray tabby stowaway whom they called Morning. Later, one morning, Morning fell overboard, from the *Morning*. There was much mourning on board. Just after the *Terra Nova* left London on Scott's 2nd expedition (BAE 1910-13), a black kitten was found curled up in a warm corner of the ship. Of course, they called him Nigger, and he became the immensely popular ship's mascot. Nigger fell overboard, and was revived with brandy. He soon became a drunk, and would fall overboard again and again, just to get plied with booze, and to amuse the crew, who made a little hammock for him. After three Antarctic cruises, he

jumped overboard again, but made the mistake of doing so in the very rough English Channel just before they arrived back in England. It was Nigger's last stunt. Mrs. Chippy is, without question, the most famous cat in Antarctic history. She stowed away in Chippy McNish's toolbox, on the *Endurance*, as Shackleton's BITE 1914-17 was getting ready to leave London, and became very possessive of McNish, hence her name. Actually his. He was a tomcat tabby from Glasgow (you could tell he was from Glasgow by his accent, which was more a burr than a purr). There is a good shot of Mrs. Chippy perched on the shoulder of his other good mate, Perce Blackborow, the stowaway. There was even a book, *Mrs. Chippy's Last Expedition*, written by Caroline Alexander (1997, Bloomsbury Publishing). In Sept. 1914, on the way south, Mrs. Chippy tried to commit suicide by jumping out of a porthole. He was in the water for 10 minutes before they fished him out. Finally, when the lads were on the ice, after their ship had gone down, and it was life and death, Mrs. Chippy was realistically determined to be — well, only a cat — and had to go. Shackleton ordered him shot, and Crean did the dirty deed. This did Chippy McNish no good at all, and he hated Shackleton for the rest of his life. The cat on the *Eleanor Bolling* during ByrdAE 1928-30 was Eleanor. As for BGLE 1934-37, Lumus (nicknamed Lummo), a black and white presented to the expedition by the Very Rev. H.E. Lumsdale, dean of the Falkland Islands, was the only one of the BGLE cats to survive the 1934 winter (for more on the Rev. Lumsdale, *see* **Churches**). Peter, a tabby, and the ship's official cat, died. In 1936, when Ellsworth's ship the *Wyatt Earp*, pulled into New York City, after the 1935-36 expedition, there was a stowaway cat named Hans aboard. On March 8, 1945 Tubby arrived at Port Lockroy Station, brought down by the boys on the *William Scoresby*. Tubby was neutered on March 11, 1945, so that he wouldn't breed with other cats in the area (!). Tubby is remembered in FIDS circles for knocking over a chess board during a critical match, but his fate is not known by anyone alive today. When Ralph Lenton arrived on the *John Biscoe* to take over Port Lockroy Station for the winter of 1952, he brought 8-week-old Tiddles with him from the Falklands. Tiddles hung around Port Lockroy for three years, and then something awful happened to him on March 2, 1955. A crystal oscillator fell on him, crushing him, and he died 5 days later. From Jan. 1958 to Jan. 1962 a female cat, Bridget (alias Dizzy) resided at Port Lockroy. There was a cat named Ginge (short for Ginger) at Signy Island Station for years in the early 1960s. In 1964 Bob Burton of BAS, had to go to the Falklands to have a tooth fixed, and Ginge went with him. Ginge never went back to Antarctica, and was last heard of living in Britain. A good book is *Ships' Cats in War and Peace*, by Val Lewis, published by Nauticalia, 2001.

Catspaw Glacier. 77°43' S, 161°42' E. A small, but steep alpine glacier, just W of Stocking Glacier, it flows S (the New Zealanders say it flows NW) from the slopes N of Taylor Glacier, in Victoria Land. Named by Grif Taylor during BAE 1910-13, for its resemblance to a cat's paw when seen from the middle of Ferrar Glacier. It appears in the 1958 NZ gazetteer, and US-ACAN accepted the name in 1964.

Catty, Robert Hugh Craig "Rob." b. Dec. 11, 1935, Finchley, London, son of Col. Thomas Claude Catty (retired, Indian Army) and his wife Eileen Dorothy Cole Baker (Cole Baker being the surname). He became a doctor in 1960, and joined FIDS that year, as a medical officer, wintering-over at Base D in 1961. On Aug. 31, 1963, at Tenterden, Kent, he married Louise Brocklebank. His second wife was Judith. A Quaker, he lives in Durham.

The Catwalk. 64°31' S, 60°56' W. A very narrow neck of land, forming a pass, and running at about 1400 m above sea level, between the Herbert Plateau and the Detroit Plateau, in the north-central part of Graham Land. Traversed and surveyed by Fids from Base D in 1957, and mapped by FIDS cartographers in 1959-60 from these surveys and also from air photos taken by FIDASE in 1956-57. Named descriptively by UK-APC on Sept. 23, 1960. US-ACAN accepted the name in 1965.

Caudal Hills. 73°10' S, 161°50' E. Between the Sequence Hills and the Lichen Hills, on the W margin of the upper Rennick Glacier, in Victoria Land. A series of spurs "tail" out to the N, hence the name "caudal" given by the Northern Party of NZGSAE 1962-63. NZ-APC accepted the name on June 27, 1963, and US-ACAN followed suit in 1964.

Caughley Beach. 77°14' S, 166°25' E. The northernmost beach on the ice-free coastline of Ross Island, just SW of Cape Bird. Behind it there is an ice-covered end-moraine of the Mount Bird Ice Cap, which here descends to sea level. In 1956 the U.S. Navy Hydrographic Office established a survey station at the S end of the end-moraine. Mapped in Jan. 1959, by NZGSAE 1958-59, and named by them for Graeme James Caughley (b. Sept. 29, 1937, Wanganui, NZ. d. Deb. 16, 1994, Canberra), biologist here in 1958-59, based at Scott Base. They also built a prominent rock cairn to mark it. NZ-APC accepted the name on May 24, 1961, and US-ACAN followed suit in 1964. It was designated SSSI #10; the northernmost of the 3 Adélie penguin rookeries in the area of Cape Bird is situated on this beach and on the slopes of the end-moraine.

Cauldron Lake. 66°38' S, 99°23' E. A remarkable, kidney-shaped ice marginal lake, 500 m long and 150 m wide, which directly abuts the rapidly flowing Denman Glacier, at Cape Jones, in the Obruchev Hills, in Wilkes Land. The water level in this lake is in delicate equilibrium, and fluctuates dramatically on a seasonal basis. The first impression gained, on visiting the lake, is that it has been formed by the uniform collapse of the bed, leaving sheer rock and ice walls up to 30-40 m high. Descriptively named by ANCA on March 7, 1991.

Caulfeild Glacier. 66 11 S, 65 00 W. The northern of 2 glaciers flowing W into Hugi Glacier (near the mouth of that glacier), E of Holtedahl Bay, on the Graham Coast, on the W coast of Graham Land. Mapped by FIDS from air photos taken by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Edward Vivian Stuart Caulfeild (known as Vivian Caulfeild) (1874-1958), British pioneer ski instructor, and author of that most influential 1910 book, *How to Ski*. US-ACAN accepted the name in 1971. The name Caulfeild has always tended to cause havoc among spellers.

Costa Caupolicán. 75°15' S, 63°00' W. The Chilean name for the stretch of coast S of Cape Schlosssbach, on the E side of the Antarctic Peninsula. Named for Caupolicán (*see* **Ventisquero Caupolicán**, below).

Punta Caupolicán *see* **Entrance Point**

Ventisquero Caupolicán. 64°48' S, 63°29' W. A glacier on the E coast of Puerto Angamos, about 1.2 km N of Port Lockroy, on the W coast of Wiencke Island, in the Palmer Archipelago. ChilAE 1946-47 conducted a survey of Puerto Angamos, and named this feature for Caupolicán, the war chief who led the first Mapuche uprising against the conquistadores in the 1550s.

Islotes Cauquenes *see* **Sillard Islands**

Caussinknappen. 72°20' S, 23°13' E. A nunatak at the S side of Mount Widerøe, in the south-central part of the Sør Rondane Mountains. Named by the Norwegians.

Punta Caution *see* **Caution Point**

Caution Point. 65°16' S, 62°01' W. A point, 6 km NE of Mount Birks, and 13 km N of Delusion Point, it marks the E end of a rocky range which forms the N wall of Crane Glacier, inside Exasperation Inlet, on the Oscar II Coast, on the E coast of Graham Land. Photographed aerially by Wilkins on Dec. 20, 1928. Fids from Base D charted and named it in 1947, suggesting caution when locating features from the air (*see* **Crane Glacier**) without the benefit of ground surveys. UK-APC accepted the name on Jan. 21, 1951, and US-ACAN did likewise in 1952. It appears on a British chart of 1952, and in the British gazetteer of 1955. The Argentines proposed (for themselves) the translation Punta Caution, but in 1956 accepted Punta Atención (which means the same thing), and it appears as such on a 1957 Argentine chart, and is the term preferred to this day by the Argentines. Fids from Base D surveyed it again in 1961. The Chileans call it Punta Lamperein, for geologist Carlos Lamperein, of the Instituto Antártico Chileno, who worked here in 1969.

Roca Cavalier *see* **Cavalier Rock**

Cavalier Rock. 67°50' S, 69°28' W. An isolated rock, rising one meter above sea level, 21.5 km WSW of Cape Adriasola, off the S part of Adelaide Island, off the W coast of Graham Land. Charted by an RN Hydrographic Survey unit on the *Protector*, in 1963, and named by UK-APC on Feb. 12, 1964, for Sub Lt. (from

1978 a commander) Geoffrey Alan Cavalier (b. 1941, Chippenham, Wilts), RN, helicopter pilot who flew the reconnaissance plane that located this feature. US-ACAN accepted the term later in 1964. The Argentines call it Roca Cavalier.

Mount Cavaney. 74°03' S, 163°03' E. Rising to 2820 m, just N of the head of Capsize Glacier, in the Deep Freeze Range of Victoria Land. Named by the Northern Party of NZGSAE 1965-66 for Roderick John Cavaney, geologist with the party. US-ACAN accepted the name in 1966.

La Cave *see under* **L**

Cave Island. 62°27' S, 60°04' W. A tiny island marked by a large cave on its S side, it is the second largest of the Meade Islands, off Duff Point, Greenwich Island, in the N entrance to McFarlane Strait, between Greenwich Island and Livingston Island, in the South Shetlands. Discovered by early 19th-century sealers, and named by them as Cave Rock, for what Capt. Robert Fildes described in 1821 as a "large cavern which affords good shelter in bad weather." It appears as such on a 1916 British chart. Charted by the personnel on the *Discovery II* in 1935. The name was seen erroneously on a 1943 U.S. Hydrographic Office chart as Cove Rock. US-ACAN accepted the name Cave Rock in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1953 Argentine chart translated as Roca Bóveda, which really means an archway. Following aerial photography by FIDASE in 1956-57, it was re-defined by UK-APC on Aug. 31, 1962, as Cave Island. US-ACAN accepted the change.

Cave Landing. 66°23' S, 110°27' E. An ice foot near Cave Ravine, Ardery Island, in the Windmill Islands, which affords a boat landing in spring and summer. Discovered in 1961 by Noel Orton (*see* **Orton Cave**), and named by ANCA in association with Cave Ravine. US-ACAN accepted the name in 1963.

Cave Ravine. 66°23' S, 110°27' E. A ravine, about 274 m from the W end of Ardery Island, in the Windmill Islands. Mapped from air photos taken during OpHJ 1946-47, and first visited in Dec. 1961, by Noel Orton, the doctor at Wilkes Station. So named by ANCA because of the cave in the W wall of the ravine. US-ACAN accepted the name in 1963.

Cave Rock *see* **Cave Island**

Île Cavelier de Cuverville *see* **Cuverville Island**

Cavenaugh, Lawrence *see* **USEE 1838-42**

Cavendish Falls *see* **Cavendish Icefalls**

Cavendish Icefalls. 77°49' S, 161°20' E. Also called Cavendish Falls. Between Solitary Rocks and Cavendish Rocks, in Taylor Glacier, in southern Victoria Land. Named by Silas Wright, during BAE 1910-13, for the Cavendish Laboratory in Cambridge, where Wright researched. It appears in the 1958 NZ gazetteer, and US-ACAN accepted the name in 1964.

Cavendish Rocks. 77°50' S, 161°24' E. Conspicuous bare rocks just S of Cavendish Icefalls, in the middle of Taylor Glacier, in southern Victoria Land. Named by US-ACAN in 1964, in association with the icefalls. NZ-APC accepted the name on Feb. 1, 1965.

Punta La Caverna *see under* **L**

Caverns *see* **Ice caverns**

Glaciar Cayley *see* **Cayley Glacier**

Cayley Glacier. 64°20' S, 60°58' W. Also seen spelled (erroneously) as Caley Glacier. Flows NW into the S side of Brialmont Cove, on the Danco Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and mapped from these photos by FIDS cartographers in 1959-60. Named by UK-APC on Sept. 23, 1960, for Sir George Cayley (1773-1857), aeronautics pioneer and designer of the first caterpillar tractor, in 1826. It appears on a British chart of 1961, in 64°25' S, 60°50' W. US-ACAN accepted the name in 1965, but re-plotted it. The Argentines call it Glaciar Cayley, and plot it as the British do.

Mount Caywood. 75°18' S, 72°25' W. A conspicuous mountain rising to about 1500 m, midway between Mount Chandler and Mount Huffman, NW of Cape Zumberge, in the interior ice-filled valley of the Behrendt Mountains, on the Orville Coast, in Ellsworth Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1966, for Lindsay Patrick "Pat" Caywood, Jr., geomagnetician at Sky-Hi Station in 1961-62. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

CCAMLR. Convention on the Conservation of Antarctic Marine Living Resources. When it became a worry that the uncontrolled harvesting of krill in the southern oceans was likely to have an effect not only on krill but on its predators, this convention was negotiated at Canberra between May 7 and 20, 1980, and ratified in 1981, in pursuance of Article IX of the Antarctic Treaty. Sixteen countries signed it — the 2 Germanys, Argentina, Australia, Belgium, Chile, France, Japan, NZ, Norway, Poland, South Africa, the USSR, USA, UK, and India. It went into effect on April 7, 1982, and established a protection zone for marine organisms south of a line that zigzags between 45°S and 60°S (effectively the Antarctic Convergence), around the Antarctic continent and all the way to the South Pole. This does not include controlled harvesting. A permanent secretariat is in Hobart, where they held the third convention to discuss limits to fin-fishing, and the recovery of fish stocks. Other countries have since joined: Brazil, China, Italy, Korea, Namibia, Poland, Spain, Sweden, the Ukraine, and Uruguay. All of these countries, and the original 16 (allowing for changes within their countries, such as Germany and USSR), belong to the Convention. Other countries belonging to the Convention, but not to the Commission, include: Bulgaria, Canada, the Cook Islands, Finland, Greece, Mauritius, Netherlands, Peru, and Vanuatu.

Cecca, Jerry *see* **De Cecca, Jeremiah**

Cecil Cave. 68°46' S, 90°42' W. A sea cave, indenting the S part of Cape Ingrid, on the W coast (the coast the Norwegians call Lazarevkysten) of Peter I Island. Discovered by personnel on the *Odd I*, in Jan. 1927. Capt. Eyvind Tofte and the 2nd mate rowed into the cave in an unsuccessful attempt to land on the island. They called the cave Cecilhola. US-ACAN accepted the translated name in 1952.

Cecilhola *see* **Cecil Cave**

The *Cecilia*. A seminal figure in Antarctic history, this was the vessel from which John Davis, coming over from Low Island, in the South Shetlands, made the first reputed landing on the continent, on Feb. 7, 1821 (*see* **Landings**). A small sealing schooner, the *Cecilia* was taken along in kit form from the USA, aboard the *Huron*, and assembled by Davis's men in the Falkland Islands. Also known as *Young Huron*, she served as tender — or shallop — to not only the *Huron*, but also the *Huntress*. She was a much used little vessel, and on Feb. 15, 1821 Capt. Burdick sighted the continent from her. From Feb. 22 to Feb. 24, 1821 Capt. Donald McKay took her out on a cruise. She accompanied the *Huron* (q.v. for details of that vessel's cruise) from March 1821 to Feb. 1822, and made it back to the USA on June 29, 1822.

Caleta Cecilia. 64°49' S, 62°51' W. A small cove in the NW part of Waterboat Point, in Paradise Bay, on the NW coast of the Antarctic Peninsula. Named by ChilAE 1950-51, for Cecilia, daughter of Capitán de corbeta Francisco Suárez Villanueva, disbursing officer on the expedition.

Cecilia Island. 62°25' S, 59°44' W. A conspicuous island, about 85 m long in an E-W direction, the most southerly of the Aitcho Islands, in the W part of English Strait, just over 3 km N of Canto Point (which is on Greenwich Island), and about 4.2 km S of Fort William (the extreme W point of Robert Island), in the South Shetlands. In the early 1820s, John Davis, the sealing skipper, gave the name Cecilia's Straits to what was later called English Strait, naming it for the *Cecilia*. The name English Strait became well-fixed, and on Aug. 31, 1962, UK-APC named this island as Cecilia Island, in order to preserve Davis's naming, if not his intention. US-ACAN accepted Cecilia Island in 1965. It appears on a 1968 British chart. It appears descriptively named Isla Torre (i.e., "tower island") on a Chilean chart of 1962, and that was the name accepted by the Chilean gazetteer of 1974 (after they had rejected Isla Tower). The British were the latest to replot this island, in late 2008.

Cecilia's Straits *see* **English Strait**

Mount Cecily. 85°52' S, 174°15' E. Rising to 2870 m (the New Zealanders say about 3000 m, which, although much vaguer than the American estimate, does give the impression that there is room for further maneuver on this score; although, having said that, see below the comment about how the NZ gazetteer locates this mountain), 4 km NW of Mount Raymond,

and 10 km SSE of Mount Emily, in the Grosvenor Mountains, to the E of the Otway Massif, in the Queen Maud Mountains. Discovered by Shackleton during BAE 1907-09, and named by him for his daughter, Cecily Shackleton (1906-1957), who never married. Shackleton incorrectly thought it was in the Dominion Range, a misapprehension apparently perpetuated by the NZ gazetteer (the Mill Glacier separates this mountain from the Dominion Range). Originally plotted in 85°52' S, 174°18' E, it has since been replotted.

Nunatak Cedomir *see* **Florence Nunatak**

Islotes Cefiro. 65°55' S, 65°47' W. A group of small islands, immediately SE of Zukriegel Island, in the Biscoe Islands. Named by the Argentines ("cefiro" means "zephyr").

Cehuixuezhe Wan. 62°14' S, 59°01' W. A cove on Dart Island, at the W entrance to Fildes Strait, in the South Shetlands. Named by the Chinese.

Celebration Pass. 83°59' S, 172°30' E. Also called Ancestor Pass. A low pass, just N of Mount Cyril, in the Commonwealth Range. Because it avoids the badly crevassed area between Mount Kyffin and the Granite Pillars it provides an easy traveling route from the Hood Glacier to the Beardmore Glacier for anyone going up the Beardmore. Crossed on Christmas Day, 1959, by the NZ Alpine Club Antarctic Expedition of 1959-60, and named appropriately by them. NZ-APC accepted the name on May 26, 1960, and US-ACAN followed suit in 1962.

Islote Celedón. 63°17' S, 57°58' W. A little islet, 100 m due N of Bulnes Island, and 3.2 km NW of Cape Legoupil, off the W coast of the Antarctic Peninsula. ChilAE 1947-49 gave it the name Isla Gral. Aurelio Celedón, for Air Marshal Gen. Aurelio Celedón Palma, commander in chief of the Chilean Air Force. It appears as such on their 1948 expedition chart. In 1951, this was shortened to Isla Aurelio Celedón, and in 1959 to Isla Celedón.

Celestial Peak. 69°33' S, 158°03' E. A granite peak, rising to 1280 m, 13 km N of Mount Blowaway, and SE of Mount Dalton, in the Wilson Hills of Oates Land, in Victoria Land. First mapped by the USGS Topo West Survey Party of 1962-63. So named by the Northern Party of NZGSAE 1963-64 (which occupied this peak as a survey and gravity station), because their first star observations were made here. NZ-APC accepted the name on July 16, 1964, and US-ACAN followed suit that year.

Celestino y Monti, Félix. b. Argentina. He was only two years out of agricultural school in Casilda, when he became deputy leader of Órcadas Station for the winter of 1929 and 1931. He was back at that station (but not in a leadership role) in 1932 and 1934, but he was 2nd-in-command again in 1936, and base leader in 1939.

Celiangyuan Shan. 69°22' S, 76°21' E. A hill in the Larsemann Hills. Named by the Chinese.

Nunataki Celishcheva. 83°27' S, 53°40' W. A group of nunataks in the Pensacola Mountains. Named by the Russians.

Celsus Peak. 64°25' S, 62°26' W. Rising to about 1350 m, 3 km W of D'Ursel Point, in the Solvay Mountains, in the SE part of Brabant Island, in the Palmer Archipelago. First mapped by BelgAE 1897-99. Named descriptively by ArgAE 1952-53, as Monte Falda (i.e., "skirt mountain"), it appears as such on their chart of 1953, and also in the 1970 Argentine gazetteer. Re-mapped in 1959 by FIDS, from air photos taken by FIDASE in 1956-57, and named by UK-APC on Sept. 23, 1960, for the 1st-century Latin medical writer Celsus. US-ACAN accepted that name later in 1960. It appears as such on a British chart of 1961.

Cemetery Bay. 60°42' S, 45°37' W. The shallow SW arm (shoals, really) of Borge Bay, immediately below Orwell Glacier, along the E coast of Signy Island, in the South Orkneys. It was surveyed by Fids from Signy Island Station in the years before 1957. Somewhere between 1957 and 1973, apparently, this body of water appears erroneously as Elephant Flats, which, according to the British gazetteer, was wrong (and it was wrong—*see* **Elephant Flats**). In explaining this error, the same gazetteer cites "Maling and Matthews, 1967," which must mean Derek Maling and Drum Matthews, who, even though they were both Fids at Signy, were not there at anywhere near the same time. Apparently, this is where the confusion began. Also apparently, a 1973 Signy Island sheet prepared by the British Directorate of Oversea Surveys, using the two aforementioned Fids as sources, shows it as Elephant Flats. However, on Dec. 20, 1974, UK-APC named it Cemetery Bay, for the whalers' graves on the E side of the bay. US-ACAN followed suit with the naming in 1975.

Cemetery Flats. 60°42' S, 45°36' W. A flat area on the E side of Cemetery Bay, along the E coast of Signy Island, in the South Orkneys. Surveyed by Fids from Signy Island Station between 1947 and 1950, and photographed aerially by the RN in 1968. So named by UK-APC on Sept. 29, 2004, because of the several Norwegian graves in the area.

Cemetery Lake. 68°38' S, 77°58' E. About 650 m long and 400 m wide, on the N side of Mule Peninsula, in the Vestfold Hills. Visited by an ANARE geological and biological party in Jan.-Feb. 1972. Mummified carcases of elephant seals, Weddell seals, giant petrels, and a skua, were found on its W beach, buried in sand and gravel. Named by ANCA.

Cendrikhügel. 70°52' S, 162°49' E. Hills immediately NE of Mount Hager, in the Bowers Mountains. Named by the Germans.

Cendron, Jean. b. Feb. 24, 1923, Mesnil-le-Roi, France. After school in Paris, he spent 1939 to 1943 in medical school there, and in 1943 became an intern in a hospital there, and then a resident for 4 years. He had already developed an interest in urology, when he was asked to become the doctor and biologist on the French Polar Exepdition of 1951. In July 1951, while wintering-over at Port-Martin, he twice operated on chief radioman Claude Tisserand for an intestinal obstruction (the first operation didn't work, so they had to do it all again the next day). Paul Rateau was anesthetist, and Pierre Mayaud was nurse. Bertrand Imbert took the patient's blood pressure regularly. Jacques Dubois and René Dova, in the tool shed, insured a constant flow of electricity into the operating room. Station leader Michel Barré was the assistant, and Jean Bouquin was his back-up, in case he (Barré) fainted. Monsieur Tisserand died about 1981. Cendron was later a leader in the field of pediatric urology, and was on the staff of the American Hospital in Paris, from 1960 to 1974. He married Norrine Whiting, and retired in 1988. His eldest son, Marc, followed in his father's medical footsteps, practicing in pediatric urology in Boston.

Punta Ceniza *see* **Ash Point**

Rocas Cenobita *see* **Cenobite Rocks**

Cenobite Rocks. 67°35' S, 69°18' W. A small, isolated group of rocks, rising to an elevation of 5 m above sea level, 8 km NW of Cape Adriasola, off the SW coast of Adelaide Island. First seen from the air and later charted by an RN Hydrographic Survey unit on the *Protector*, in 1963. So named by the unit in 1963 because the religious order of Cenobites are isolated too. UK-APC accepted the name on Feb. 12, 1964, and US-ACAN followed suit that year. The Argentines call them Rocas Cenobita (which means the same thing).

Cenotaph Hill. 85°13' S, 167°12' W. A rock peak, rising to 2070 m (the New Zealanders say 2000 m), on the W side of (and toward the head of) Strom Glacier, actually on the ridge separating the heads of that glacier and Liv Glacier, 13 km NNE of the summit of Mount Fridtjof Nansen, in the Queen Maud Mountains. Visited by the Southern Party of NZGSAE 1963-64, who named it for the unusual cenotaph-shaped knob of rock forming the summit. NZ-APC accepted the name on July 16, 1964, and US-ACAN followed suit in 1966.

Centaur Bluff. 81°50' S, 160°30' E. A steep bluff, about 2100 m high, on the E side of the Surveyors Range, 7 km W of Mount Canopus, on the E side of the high plateau lying W of Bridge Pass. It is the only traveling route between the Nimrod Glacier and Beaumont Bay. Named by the Southern Party of NZGSAE 1960-61, for the star Centauri, frequently used here to fix survey stations. NZ-APC accepted the name on May 24, 1961, and US-ACAN followed suit in 1966.

Centennial Peak. 84°57' S, 174°00' W. Rising to 4070 m, 11 km SSE of Mount Wade, in the Prince Olav Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1965. Named by US-ACAN in 1970, for the centennial of Ohio State University in 1969, the same year the university's Institute of Polar Studies celebrated its 10th anniversary. Ohio State has sent many researchers here. NZ-APC accepted the name in Nov. 1969.

Center Island *see* **Centre Island**

Centipede Nunatak. 77°45' S, 166°53' E. A narrow nunatak, 0.5 km long, 1.3 km NNW of Ford Rock, in the central part of Hut Point Peninsula, on Ross Island. Snow that cuts across parts of the nunatak gives it a segmented appearance, resembling that of a centipede. Named by US-ACAN in 2000. NZ-APC accepted the name on June 19, 2000.

Centkiewicz Hills. 66°16' S, 100°44' E. A group of hills near Dobrowolski Station, in the Bunger Hills. Named by the Poles in 1985, for Czeslaw Jacek Centkiewicz (1904-1996) and his wife Alina (1907-1993), who wrote children's books about, and lectured on, the Arctic and Eskimos.

Central Aisle Ridge. 78°21' S, 163°18' E. A ridge, running N-S, immediately E of The Stage (q.v. for the reasons it was so named), on the N side of the lower Renegar Glacier. *See also* **East Aisle Ridge**, and **West Aisle Ridge**. Named by NZ-APC in 1980. US-ACAN accepted the name in 1995.

Central Basin. A submarine feature, one of the three N-S trending sedimetary basins underlying the Ross Sea, it runs along the 175° meridian through the central part of the Ross Sea, to the W of Central High. *See also* **Victoria Land Basin** and **Eastern Basin**.

Central High. A broad basement high, it lies to the W of the Eastern Basin, in the Ross Sea. The top of the basement is a peneplain over large parts of the high.

Central Masson Range. 67°50' S, 62°52' E. The central part of the Masson Range, it extends 6 km in a N-S direction, and rises to 1120 m, in Mac. Robertson Land. Its highest point is Dallice Peak, toward the S end of the range. The Masson Range was discovered during BANZARE 1929-31, and (what would later become known as) the Central Masson Range was photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Mekammen (i.e., "the middle crest"). On July 22, 1959, it was renamed by ANCA as the Central Masson Range (which is a better identifier). US-ACAN accepted the Australian naming in 1965.

[1]**Gora Central'naja**. 70°45' S, 11°40' E. The central of a cluster of nunataks overlooking the Schirmacher Ponds, immediately S of Nadezhdy Island, in the Schirmacher Hills, in Queen Maud Land. Named by the Russians.

[2]**Gora Central'naja**. 73°05' S, 61°00' E. The central nuntak of 3 (the others being Gora Krutaja and Gora Bazal'tovaja) on what the Russians call Massif Zagadochnyj, in the Goodspeed Nunataks, at the W end of Fisher Glacier, in the S part of the Prince Charles Mountains, in Mac. Robertson Land. Named by the Russians.

Centre Island. 67°52' S, 66°57' W. An island, 6 km long in an E-W direction, and 3 km wide, it lies 1.5 km S of Broken Island, in the S part of, and more or less in the center of, Square Bay, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Discovered, mapped, and named descriptively in 1936-37 by BGLE 1934-37. It appears on Rymill's 1938 map of that expedition, on a 1943 U.S. Hydrographic Office chart (as Center Island), and on a 1948 British chart. It was resurveyed by Fids from Base E in 1948-49. The name was accepted by US-ACAN in 1951 (as Center Island) and by UK-APC (as Centre Island) on Sept. 8, 1953. It appears in the 1955 British gazetteer. It was still appearing as Center Island in the 1956 U.S. gazetteer, but, today, the U.S. spells it Centre Island. It appears on a Chilean chart of 1947 as Isla Centro, and that was the name accepted by the Chilean gazetteer of 1974. On an Argentine chart of 1949 it appears as Isla Centre, but on one of their 1957 charts as Isla del Centro, and that last-named was the one accepted by the Argentine gazetteer of 1970.

Isla (del) Centro *see* **Centre Island**

Islotes del Centro *see* **Kirkwood Islands**

Monte Centro *see* **Pavlov Peak**

Centropleura Spur. 71°17' S, 163°11' E. The SW spur of a small massif enclosing a cirque, at the head of Carryer Glacier, 5 km NE of Mount Jamroga, in the Bowers Mountains. The spur includes a sedimentary sequence which contains the Middle Cambrian trilobite fossil Centropleura, discovered by scientific parties to this area in 1974-75 and 1981-82.

Glaciar Centurión *see* **Centurion Glacier**

Centurion Glacier. 68°12' S, 66°56' W. A small, steep glacier that flows NW to Neny Bay between Mount Nemesis and Roman Four Promontory, on the Fallières Coast, on the W coast of Graham Land. First roughly surveyed in 1936 by BGLE 1934-37, and again in 1947 by Fids from Base E, who named it in association with Roman Four Promontory. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a 1960 British chart. It appears on a 1969 Chilean chart as Glaciar Centurión, a name the Argentines also use.

Morena Cepochka. 70°35' S, 66°43' E. A moraine in the Aramis Range of the Prince Charles Mountains. Named by the Russians.

Mount Cerberus. 77°26' S, 161°53' E. A prominent peak, rising to over 1600 m (the New Zealanders say 1980 m), between Lake Vida and Mount Orestes, in the Olympus Range of Victoria Land. Because of its many side peaks, it was so named by VUWAE 1958-59, for the three-headed dog of Greek mythology. NZ-APC accepted the name, as did US-ACAN in 1964.

Cerberus Glacier. 77°27' S, 161°54' E. A glacier, 1.5 km long, fringing the S and E lower slopes of otherwise ice-free Mount Cerberus, in the Olympus Range of Victoria Land. Named by US-ACAN in 1997, in association with the mountain. NZ-APC accepted the name on Jan. 30, 1998.

Cerberus Peak. 82°01' S, 158°46' E. A prominent mountain peak, rising to 2765 m (the New Zealanders say about 1770 m above sea level), at the head of Prince Philip Glacier, about 11 km NW of Hunt Mountain (what the New Zealanders call Mount Hunt), in the Churchill Mountains. Discovered by the Holyoake, Cobham, and Queen Elizabeth Ranges Party, during NZGSAE 1964-65, and, because of its sinister, dark appearance, and its position at the head of the steep northerly drop forming the only route in the vicinity into Starshot Glacier, it was thus named by them for the three-headed dog in Greek mythology. US-ACAN accepted the name in 1966, and NZ-APC followed suit on April 19, 1966. ANCA accepted the name on Aug. 10, 1966.

Cerberus Valley. 77°26' S, 161°56' E. An upland valley between Mount Cerberus and Euros Ridge, in the E part of the Olympus Range, it opens N to Victoria Valley, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, in association with the mountain. NZ-APC accepted the name on Nov. 30, 2004.

Punta Cerda. 63°52' S, 60°35' W. A point on the E end of Chionis Island, Trinity Peninsula. Named by the Argentines.

Ceres Nunataks. 72°03' S, 70°25' W. A group of 3 nunataks, rising to about 500 m, immediately E of the base of Shostakovich Peninsula, in the S part of Alexander Island. Surveyed by BAS between 1962 and 1973. Mapped by the (British) Directorate of Overseas Survey from NASA/USGS satellite imagery. Named by UK-APC on Dec. 20, 1974, for the asteroid. US-ACAN accepted the name in 1975.

Roca Le Cerf *see* **Klo Rock**

Cabo Conscripto Cerisola. 77°42' S, 41°00' W. A point just NE of Ellsworth Station. Named by the Argentines for Augusto Cerisola, a soldier who died in Argentina during the events of 1955.

Isla Cerrito *see* **Killingbeck Island**

Circo del Cerro Abrupto *see* **Mount Carroll**

Isla Cerro Nevada *see* **Snow Hill Island**

The *Cervantes*. A 101-meter Argentine destroyer built in Cartagena, Spain, and launched in 1925, as the Spanish vessel *Churruca*. In 1928 she was sold to Argentina, and became the *Cervantes*. She took part in the Argentine naval maneuvers of Feb. 1948, in the South Shetlands, under the general command of Contra Almirante Harald Cappus. Guillermo Carro Cattaneo was skipper of the *Cervantes*. In 1955, during the Argentine troubles, she took part in the naval battle of Río de la Plata. She was decommissioned in 1961.

Punta Cervantes *see* **Punta Camus**

Cervellati Glacier. 78°23' S, 85°43' W. Flows NE between Tyree Ridge and Epperly Ridge, and enters Crosswell Glacier on the E slope of the sentinel Range. Named by US-ACAN in 2006, for Roberto Cervellati, Italian representative to the rather extravagantly and self-servingly named SCAR Expert Group on Geographic Information, 1999-2006, and director of the SCAR Composite Gazetteer during the same period.

Mont Cervin *see* **Mount Cervin**

Mount Cervin. 66°40' S, 140°01' E. A small rocky hill, rising to 30 m above sea level, on the E side of Pétrel Island, in the Géologie Archipelago. Charted in 1951 by the French, and named by them as Mont Cervin because it resembles in shape the European mountain of that name (also known as the Matterhorn). US-ACAN accepted the name Mount Cervin in 1952.

Isla César *see* **Apéndice Island**

Cape Cesney. 66°06' S, 133°54' E. An ice-covered cape marking the W side of the entrance to Davis Bay, on the Wilkes Coast. Delineated from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for A.M. Cesney. Accurately mapped by Phil Law off the *Magga Dan*, in 1956. ANCA accepted the name on July 22, 1959.

Cesney, A.M. Master's mate on the *Flying Fish* during USEE 1838-42. He was detached at Honolulu. He was later found to have abused the grog rule (giving it to sailors, rather than actually imbibing himself), and was dismissed from the Navy.

Cestau, José *see* **Órcadas Station**, 1945

Cetacea *see* **Whales**

Cetacea Rocks. 63°43' S, 61°37' W. A small group of rocks, rising to an elevation of about 65 m above sea level, off the NE side of Hoseason Island, in the Palmer Archipelago. Charted by FrAE 1908-10, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for the Cetacea (whales and porpoises). These rocks lie in one of the chief Antarctic whaling areas. US-ACAN accepted the name later in 1960. The feature appears on a British chart of 1961.

Cetus Hill. 70°56' S, 66°10' W. A large, ice-covered mound, rising to about 1250 m, and coming to a point with 3 jagged rock peaks at its W end, at the head of Ryder Glacier, about 45 km ENE of Gurney Point, at George VI Sound, in the W part of Palmer Land. Surveyed by BAS between 1962 and 1972. So named by UK-APC on July 21, 1976, for the constellation Cetus (The Whale), because the back of the hill is whale-shaped. US-ACAN accepted the name later in 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Cézembre Point. 66°48' S, 141°26' E. A rocky point in Port-Martin, 0.75 km NE of Cape Margerie, between that cape and Cap des Mousses. Charted in 1950 by the French, and named by them as Pointe de Cézembre, for an island in the Golfe de Saint-Malo, in France. US-ACAN accepted the name Cézembre Point in 1962.

CGA *see* **Composite Gazetteer of Antarctica**

Roca Chabrier *see* **Chabrier Rock**

Rocas Chabrier *see* **Chabrier Rock**

Roche Chabrier *see* **Chabrier Rock**

Chabrier Rock. 62°11' S, 58°18' W. Rising to 40 m above sea level, 0.75 km SW of Vauréal Peak, and about 1400 m WNW of Syrezol Point, in the E side of the entrance to Admiralty Bay, King George Island, in the South Shetlands. Charted in Dec. 1909 by FrAE 1908-10, and named by Charcot as Roche Chabrier. It appears as Chabrier Rock on a 1929 British chart. It was re-charted by the Discovery Investigations in 1937. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1947 Argentine chart, as Roca Chabrier, but on a 1949 Argentine chart it has been pluralized as Rocas Chabrier. The name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer, was Roca Chabrier. One must admit to being puzzled by the name Chabrier. There was a French neurologist named Joseph-François Chabrier, who wrote a little book in 1911 called *Les émotions et les états organiques*. Charcot's father was a neurologist. This is perhaps the connection, somehow.

Islotes Chacabuco *see* **Powder Island**

Chacabuco Refugio. 68°06' S, 66°31' W. Argentine refuge hut built by the Army at 150 m above sea level, on the shelf ice at Bills Gulch, near The Amphitheatre, and inaugurated on Nov. 21, 1956, as Refugio Chacabuco, named after the famous 1817 battle against the Spanish.

Punta Chacao. 62°56' S, 60°41' W. A point which marks the S limit of Telefon Bay, on the NW coast of Port Foster, Deception Island, in the South Shetlands. Named on Jan. 22, 1947, by ChilAE 1946-47 (there doing hydrographic work), for the Chacao Channel, in Chile.

The *Chaco*. Argentine ship. **Feb. 28, 1945**: She relieved Órcadas Station. Captain Carlos Korimblum. Or rather, she didn't relieve Órcadas. She couldn't get in through the ice. The whale catcher *Petrel* was chartered to do so. **1945-46**: She relieved Órcadas. Captain Manuel A. Ruíz Moreno. **1946-47**: She was one of the ships on ArgAE 1947, with Capt. Alejandro C. Bras Harriott in command. **1948-49**: Part of ArgAE 1948-49. Captain Osvaldo C. Moreno. **1949-50**: Part of ArgAE 1949-50. Captain Ezequiel N. Vega.

Islote Chaco *see* **Låvebrua Island**

Lake Chad. 77°38' S, 162°46' E. A small lake E of the mouth of Suess Glacier, immediately to the W of Lake Leon, in Taylor Valley, in southern Victoria Land. Discovered and charted by Grif Taylor's Western Geological Party, during BAE 1910-13, and named by them for the African lake. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Mount Chadwick. 72°30' S, 160°26' E. A small, bare rock mountain rising to 2440 m, 4 km ESE of Mount Walton, in the Outback Nunataks. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for Dan M. Chadwick, meteorologist at Pole Station in 1968.

Isla Chaigneau. 66°19' S, 63°42' W. An island, 2 km long, and rising to an elevation of 723 m above sea level, 8 km NW of Cape Casey, off the Foyn Coast, on the E coast of Graham Land. Named by the Chileans for Col. Federico Chaigneau, of the Chilean Army, who took part in ChilAE 1970-71, on the *Piloto Pardo*. The Argentines call it Isla Zuloaga.

Pic Chaigneau *see* **Chaigneau Peak**

Pico Chaigneau *see* **Chaigneau Peak**

Chaigneau Peak. 65°13' S, 64°01' W. Rising to 760 m, just SE of Blanchard Ridge, 5 km SSE of Mount Scott, on the E side of Penola Strait, on the Graham Coast, on the W coast of Graham Land. Probably discovered (but certainly not named) by BelgAE 1897-99. Roughly mapped by FrAE 1908-10, and provisionally named by Charcot as both Mont Rude, possibly (although this fact has been proposed, it seems a stretch of the imagination) for sculptor François Rude (1784-1855), and Mont Diamant (i.e., "mount diamond"). It appears as both, on the expedition's early charts. However, just after the expedition, Charcot renamed it Pic Chaigneau, for Capitán de fragata Juan Federico Chaigneau, governor of the territory of Magallanes, in Chile, who assisted the expedition (not to mention wining and dining the explorer on his return). Don Federico had been a young naval lieutenant on the *Cochrane* during the 1879 naval battle of Iquique. The feature does show up as both Mount Rude and Mount Diamond, in English language translations of the French expedition's maps. It appears as Chaigneau Peak on a 1943 U.S. Hydrographic Office chart, and that was the name accepted by US-ACAN in 1951, and by UK-APC on July 7, 1959. It appears as such on a British chart of 1960. It appears as Pico Chaigneau on a 1946 Argentine chart, and that is still the form used by the Argentines today. It was also the name accepted by the 1974 Chilean gazetteer.

Chain Moraines. 77°11' S, 160°30' E. Drifting moraines, 5 km NW of Skew Peak, at the confluent flow of ice from Rim Glacier, Sprocket Glacier, and Mackay Glacier, including the moraines at the W side of Rim Glacier, in Victoria Land. Named by NZ-APC in 1995, as an allusion to the use of a bicycle as a practical means of transportation by a NZ glacial mapping party led by Trevor Chinn in 1992-93. There are several bike-theme names of features in this area. US-ACAN accepted the name in 1996.

Chain Nunataks. 77°50' S, 163°24' E. A linear series of nunataks to the W of Blue Glacier, running WNW-ESE for 5.5 km between Briggs Hill and Hannon Hill, in Victoria Land. Named by NZ-APC in 1992, in reference to a surveyor's chain. US-ACAN accepted the name in 1993.

The Chair *see* **Chair Peak**

Chair Peak. 64°43' S, 62°43' W. Rising to about 1000 m, W of Mount Britannia, on Rongé Island, off the Danco Coast, on the W coast of Graham Land. Named descriptively by Lester and Bagshawe of the British Imperial Antarctic Expedition of 1920-22, who used this peak as a prominent landmark during their survey. They called it both Chair Peak and The Chair. Surveyed by Fids on the *Norsel* in April

1955, and photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Chair Peak on Sept. 23, 1960, and US-ACAN followed suit in 1965. The British gazetteer says that by 1978 it had been named by one of the Argentine Antarctic expeditions, as Monte Lucía, presumably for the relative of one of the expeditioners. However, this may not be so. Monte Lucía seems to be the name the Argentines applied to the nearby Mount Tennant (q.v.).

Chakí, Alfonso. Argentine meteorologist with the geophysical division of the Central Observatory, in Buenos Aires, who wintered-over at Órcadas Station in 1928 and 1930, and led the party there in 1940, 1942, and 1946.

Challenge Passage *see* **Neptunes Bellows**

The *Challenger*. A 200 foot long British main deck corvette of 2306 tons, built for war use for the Royal Navy in 1858, and converted in 1872 into a survey ship. A square-rigged three-master with steam power, her auxiliary engine produced 1234 hp, and she was used for one of the greatest scientific explorations up to that time, the *Challenger* Expedition of 1872-76. After the expedition the *Challenger* became a coal hull, and was decommissioned in 1921.

Passe du Challenger *see* **Neptune's Bellows**

***Challenger* Expedition**. 1872-76. A purely scientific British expedition, sponsored in part by the Royal Society, and with government Treasury backing of £200,000 (a phenomenal grant). **Nov. 18, 1872**: At Sheerness 175 men boarded the *Challenger*, including 19 marines and a sergeant. That evening, one of the Marines, Tom Tubb, fell 27 feet off the gangplank, 12 inches for every year of his life, and drowned. He was replaced. **Dec. 7, 1872**: The *Challenger* left Sheerness for Portsmouth. **Dec. 11, 1872**: The *Challenger* arrived at Portsmouth. **Dec. 21, 1872**: The expedition, now with 243 men aboard, left Portsmouth, led by Wyville Thomson, whose brainchild this expedition was. The other scientists were: John Young Buchanan (chemist), Rudolf von Willemoës-Suhm (naturalist), John Murray (assistant naturalist), J.J. Wild, and H.N. Moseley. The ship itself was commanded by Capt. George Nares. The crew included: John Maclear (commander); Pelham Aldrich, Arthur Bromley, and George Bethell (lieutenants); Thomas Tizard (navigating lieutentant); Arthur Havergall and Herbert Swire (navigating sub lieutenants); Henry Charles Sloggett (1852-1905) (replaced by Henry Harston before Antarctica), Lord George Campbell, Alfred Balfour, and Arthur Channer (sub lieutenants); Richard Cox (boatswain, 2nd class); Richard Richards (paymaster); John Hynes (assistant paymaster); Alexander Crosbie (surgeon); George Maclean (assistant surgeon); James Ferguson (chief engineer); William Spry and Alfred Allen (engineers); William Howlett and William Abbott (assistant engineers, 2nd class); Frederick Westford (carpenter, 2nd class); Robert Higham (acting carpenter); Frederick Pearcey (domestic 3rd class); Joseph Matkin (steward's asssistant); and Richard Wyatt (writer, 3rd class). Passengers were: William Nares (the captain's 9-year-old son), and Adam Ebbels (the boy's tutor). Devoted to oceanography, the voyage really founded that science. As it was such a long trip, and covered the entire world (so to speak)—the ship covered 68,890 miles in 719 days (568 days of their 1281 days away from home were spent in one port or another), and the report of the expedition filled 50 volumes—yet very little time was spent south of 60°S, it is not proposed here to be tedious, the aim being to cover only the highlights of their non-Antarctican trip, but to go into detail with the appropriate southerly parts. **April 4, 1873**: Wyatt, the writer, discovered tutor Ebbels (b. 1837) dead in his hammock of a stroke. **May 9, 1873**: The *Challenger* arrived at Halifax, Nova Scotia. **July 16, 1873**: At Madeira. **Sept. 14, 1873**: At Bahia, Brazil. **Feb. 1874**: They left the Kerguélen Islands, heading south. **Feb. 7, 1874**: They left Heard Island, still heading south. **Feb. 11, 1874**: They sighted their first iceberg, in 60°30' S, 200 feet high and two thirds of a mile long. They trawled in 1260 fathoms. **Feb. 13, 1874**: They were 396 miles from Wilkes Land. **Feb. 14, 1874**: They reached the edge of the pack-ice, and dredged in 1675 fathoms. All they got was a squid and some stones. They were 420 miles from Wilkes Land by the end of the day, and in 65°30' S, 79°40' E. **Feb. 18, 1874**: Blocked by the pack-ice, they ran WSW for 38 miles. **Feb. 16, 1874**: They crossed the Antarctic Circle (66°30' S) in 78°22' E, the first steam-powered vessel to do so. **Feb. 25, 1874**: In 62°26' E, they headed north, bound for Melbourne. **Feb. 27, 1874**: They headed out of Antarctic waters, heading north. **March 4, 1874**: They saw their last iceberg, in 53°17' S. **Dec. 10, 1874**: Nares and Aldrich left at Hong Kong, to go to the Arctic. **Jan. 1875**: Nares was replaced by Frank Tourle Thomson, who came from the *Modeste*, and Aldrich by Lt. Alfred Carpenter (1847-1925), who came from the *Iron Duke*. **Sept. 13, 1875**: von Willemöes-Suhm died on the way from Hawaii to Tahiti. **May 24, 1876**: The ship arrived back at Spithead. 10 men had died during the trip, and 61 deserted. Curiously, Abbott and Allen would both die in the Royal Naval Lunatic Asylum.

Challenger Island. 64°21' S, 61°35' W. A tiny island, no more than 250 m long, 550 m to the E of Isla Kahn, and just to the N of Murray Island, off the Danco Coast, on the W coast of Graham Land. It is barely separated from the N end of Bluff Island. It was roughly mapped by SwedAE 1901-04, and named for the *Challenger* by Gunnar Andersson of that expedition. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name on Sept. 23, 1960, and it appears on a British chart of 1961. US-ACAN also accepted the name, in 1965. It appears on a 1954 Argentine chart as Isla Chica (i.e., "tiny island"), and that was the name accepted by the 1970 Argentine gazetteer. The Chileans call it Isla Farías, after 1st Sgt. Adolfo de Carmen Farías, who was on the *Piloto Pardo* during ArgAE 1962. It was once thought that the island now known as Isla Khan was part of this island, but, in fact, it was determined that there are 2 islands (*see* **Isla Kahn** for more details).

Challenger Pass (or Passage) *see* **Neptune's Bellows**

Mount Chalmers. 79°20' S, 159°29' E. Along the E escarpment of the Conway Range, about 8.5 km S of the summit of Mount Keltie. Discovered by BNAE 1901-04, and named by them for Robert Chalmers (1858-1938), assistant secretary to the Treasury, 1903-07, chairman of the Board of Inland Revenue, 1907-11, governor of Ceylon, 1911-16, joint permanent secretary to the Treasury, 1916-19, and master of Peterhouse, Cambridge, 1922-31. He was created Baron Chalmers in 1919. ANCA accepted the name on May 18, 1971, and US-ACAN followed suit.

Chalmers, David. b. Jan. 9, 1929. He joined FIDS in 1955, as a meteorologist, and wintered-over at Base Y in 1956, and at Base J in 1957. He died in Peterborough in March 1990.

Chamberlain Harbor *see* **Chamberlin Harbor**

Chamberlin Glacier. 67°34' S, 65°33' W. Flows NE into Whirlwind Inlet, about 6 km SE of Matthes Glacier, on the Bowman Coast, on the E coast of Graham Land. Discovered aerially by Wilkins on Dec. 20, 1928, and photographed aerially in 1940 by USAS 1939-41. Surveyed and charted in 1947 by Fids from Base E, who named it for Thomas Chrowder Chamberlin (1843-1928), glaciologist and geologist, president at the University of Wisconsin, 1887-92, and first head of the geology department at the University of Chicago, 1892-1918. He founded, in 1893, the *Journal of Geology*. It was Chamberlin who developed the planetesimal theory, which assumed that the Earth, like other heavenly bodies, was made up of the accretion of smaller objects. This, and other evidence, led him to speculate that the Earth was much older than the 100 million years proposed by Lord Kelvin. He was the first to discover conclusive evidence of successive glacial stages in the Pleistocene period. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears in the British gazetteer of 1955.

Chamberlin Harbor. 78°30' S, 164°00' W. On the W coast of the Bay of Whales, not far from Floyd Bennett Harbor, and 8 km NW of Little America I. When Byrd discovered it during a flyover on Jan. 15, 1929, he found that his compass was swinging bad, a problem that had befallen Clarence Duncan Chamberlin (1893-1976), Iowa pilot, during his flight across the Atlantic (June 4-6, 1927), with industrialist Charles A. Levine as his navigator. Byrd named the feature for Chamberlin. The feature disappeared with the massive re-configuration of the Bay of Whales. It appears (spelled Chamberlin Harbour) in the 1958 NZ gazetteer.

Chamberlin Rampart. 81°03' S, 159°53' E.

A series of ice-covered bluffs, interspaced by heavily crevassed ice, and rising to about 1200 m, midway along the W slope of the Darley Hills, in the Churchill Mountains. Named by US-ACAN in 2003, for Wellman Chamberlin (1908-1976), *National Geographic Magazine* cartographer between about 1935 and 1970, author of that publication's monograph "Round Earth on Flat Paper" (1947). NZ-APC accepted the name on Feb. 27, 2003.

Glaciar Chambers *see* **Chambers Glacier**

Chambers, Michael John Graham. Known as John. b. 1936, Blyth, Suffolk, son of Walter Chambers and his wife Eva M.G. Ginn. He joined FIDS in 1961, as a meterologist, and wintered-over at Signy Island Station in 1962 and 1963 (as BAS, as FIDS had become).

Chambers Glacier. 83°17' S, 49°25' W. Flows E into Support Force Glacier from Mount Lechner and Kent Gap, at the junction of the Saratoga Table and the Lexington Table, in the Forrestal Range of the Pensacola Mountains. Discovered and photographed aerially on Jan. 13, 1956 (*see* that date under Operation Deep Freeze I). Named by US-ACAN in 1957, for Capt. Washington Irving Chambers (1856-1934), USN, naval torpedo pioneer and airplane catapult pioneer for ships. Chambers Field, in Norfolk, Va., was named after him, as was a USN ship built in 2010. It appears on a 1966 Argentine map as Glaciar Chambers. Originally plotted in 82°30' S, 40°00' W (in 1957), then in 83°30' S, 48°00' W (in 1959), in 83°28' S, 49°00' W (in the U.S. gazetteer of 1960 and on an American map of 1962), the coordinates were corrected by 1969, after USGS had re-mapped it from 1964 USN air photos, and from their own 1965-66 ground surveys conducted during the Pensacola Mountains Project. UK-APC accepted the name and the new coordinates on Nov. 3, 1971, and it appears as such in the 1974 British gazetteer.

Chambers Hill. 77°55' S, 164°08' E. A ridge-like elevation, at 1105 m above sea level, on the divide between Hobbs Glacier and Blackwelder Glacier, 1.5 km W of Hofman Hill, on the Scott Coast of Victoria Land. Named by US-ACAN in 1992, for James L. Chambers, of Holmes and Narver, resident manager at McMurdo each summer from 1976 to 1980, and senior site manager from 1989 to 1994. This made him the head of all U.S. Antarctic support activities on the entire continent.

Chambers Inlet. 68°38' S, 77°56' E. On the S side of Ellis Fjord, in the Vestfold Hills, just inside the entrance. Named by ANCA on Nov. 27, 1973, for Brian McR. Chambers, senior radio technician (meteorology) at Davis Station in 1970.

Île du Chameau *see* **Chameau Island**

Chameau Island. 66°46' S, 141°36' E. A rocky "double island," about 160 m long, 1.3 km E of Cape Découverte, in the Curzon Islands. Charted and named in 1951 by the French as Île du Chameau. With its two humps, the island looks like a chameau (camel). US-ACAN accepted the name Chameau Island in 1962.

Mount Champaqui. 62°57' S, 60°44' W. Named by the Russians (so says the SCAR gazetteer). This is worrying on several counts. The first is that the name sounds more South American than Russian. The second is that in such a drastically important and prominent place as Deception Island, no one else has seen fit to name such a major feature as a mountain, this mountain. The third is there are several other features that fit this bill, any one of which might be the one the Russians gave this name to (if, indeed, they did). The fourth is that it should have an accent mark over the "i," but it doesn't. It seems to have been named after Mount Champaquí, in Argentina.

The *Champi*. French yacht, skippered by Jacques Peignon, which visited the South Shetlands and the Antarctic Peninsula in 1978-79.

Île aux Champignons. 66°40' S, 139°57' E. An island to the E of the Les Sept Îles and N of Gouverneur Island, in Baie Pierre Lejay, in the Géologie Archipelago. Named by the French in 1958, for the mushroom-shaped ice formations here caused by the frost made by the sea spray which covers it during the winter.

Champness Glacier. 71°25' S, 164°22' E. A tributary glacier, 24 km long, flowing NE from the vicinity of Ian Peak, in the Bowers Mountains, to enter Lillie Glacier at Griffith Ridge, in northern Victoria Land. Named by NZGSAE 1967-68 for Grahame Richard Champness, field assistant with the party (he wintered-over at Scott Base in 1968, as field assistant and dog handler). NZ-APC accepted the name on July 4, 1968, and US-ACAN followed suit in 1969. Originally plotted in 71°27' S, 164°15' E, it has since been replotted.

Chan Rocks. 72°45' S, 160°30' E. A group of rocks along an ice bluff, 8 km SE of Miller Butte, in the Outback Nunataks. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1969, for Lian Chan, lab management technician who wintered-over at McMurdo in 1968. NZ-APC accepted the name in Jan. 1969.

Roca Chance *see* **Chance Rock**

Rocas Chance *see* **Chance Rock**

Chance Rock. 64°00' S, 61°13' W. An isolated rock, 2 m above sea level, and awash in the center of Gerlache Strait, near its junction with Orléans Strait, 10.6 km NW of Cape Sterneck, and the same distance E of the N extremity of Small Island, in the Palmer Archipelago, off the Davis Coast, on the W coast of Graham Land. It appears, unnamed, on a Chilean chart of 1947, and on a 1957 Argentine chart. Photographed aerially by FIDASE in 1956-57. So named by UK-APC on Sept. 23, 1960, for its danger to shipping. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961. In Jan. 1964, a thorough survey of the area was made from a helicopter off the *Protector*, but this rock could not be found. However, more because of its dangerous nature than from sentiment, it was kept on the charts with the approximate coordinates 64°00' S, 61°13' W. It appears, as such, for the first time, on a 1964 British chart. The Chileans call it Roca Chance, and the Argentines (for some reason) have pluralized it, as Rocas Chance.

Chancellor Lakes. 78°13' S, 163°18' E. Small twin lakes near the crest of the ridge N of Walcott Glacier, in southern Victoria Land. Named by VUWAE 1960-61, for the chancellor of Victoria University of Wellington. NZ-APC accepted the name on May 24, 1961, and US-ACAN followed suit in 1973.

Chancellor Ridge. 78°12' S, 163°12' E. Separates Walcott Glacier from Howchin Glacier, in southern Victoria Land. At its E end, the ridge divides into a N branch and a S branch. Named by NZ-APC in 1980, in association with nearby Chancellor Lakes. US-ACAN accepted the name in 1995.

Rocas Chanchito *see* **Pig Rock**

Isla Chandler *see* **Sobral Peninsula**

Mount Chandler. 75°17' S, 72°33' W. Rising to about 1400 m, 4 km NW of Mount Caywood, in the Behrendt Mountains of Ellsworth Land. Named by US-ACAN in 1966, for Lt. Cdr. James L. Chandler, USN, R4D pilot here in 1961-62, supporting the Antarctic Peninsula Traverse (q.v.), which surveyed this feature. Mapped by USGS from that survey, and also from USN air photos taken between 1965 and 1967. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Chandler Baunen, Alberto. b. Chile. He was an ensign in the Chilean navy, invited by the Argentines to go along on the *Uruguay* in 1903, as part of the rescue attempt of SwedAE 1901-04.

Chandler Island. 77°21' S, 153°10' W. An island, 6 km long, the most southerly of the ice-covered White Islands, at the head of Sulzberger Bay. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Alan Chandler, electrical engineer who wintered-over at Byrd Station in 1969.

Chang He. 62°09' S, 58°56' W. A stream on Fildes Peninsula, on King George Island, in the South Shetlands. Named by the Chinese.

Chang Peak. 77°04' S, 126°38' W. A snow-covered subsidiary peak, rising to 2920 m, on the NE slope of Mount Waesche, in the Executive Committee Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1960. Named by US-ACAN in 1962, for Feng-Keng "Frank" Chang, traverse seismologist at Byrd Station in 1959, and a member of the Marie Byrd Land Traverse Party here in 1959-60.

Changcheng Station *see* **Great Wall Station**

Changcheng Wan. 62°13' S, 58°58' W. A cove indenting Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Changcheng Yan. 62°10' S, 58°55' W. A rock off Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Chang'e Hu *see* **Lake Spate**

Changing Col. 60°42' S, 45°37' W. Between Three Lakes Valley and Paternoster Valley, on Signy Island, in the South Orkneys. Surveyed by Fids from Signy Island Station between 1947 and 1950. Photographed aerially by the RN in 1968. Named by UK-APC on Sept. 29, 2004, in association with Changing Lake, immediately to the S.

Changing Lake. 60°43' S, 45°37' W. The central of 3 lakes in Paternoster Valley, in the NE part of Signy Island, in the South Orkneys. BAS did biological work here up to 1973. So named by UK-APC on Dec. 20, 1974, because this proglacial lake slowly changes shape and size as the retaining land ice gradually retreats. US-ACAN accepted the name in 1975.

Cerro Chango. 62°28' S, 60°47' W. A hill, E of the beach the Chileans call Playa del Plástico, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno, during ChilAE 1990-91, for the Changos, a pre-Hispanic people who inhabited the northern and central coasts of Chile.

Glaciar Channel *see* **Channel Glacier**

Islote (or Isla) Channel *see* **Passage Rock**

Roca Channel *see* **Bowler Rocks**, [2]**Channel Rock**, [3]**Channel Rock**

Roche Channel *see* **Passage Rock**

Ventisquero Channel *see* **Channel Glacier**, **Harbour Glacier**

Channel Glacier. 64°47' S, 63°19' W. A through glacier, 2.5 km long, it flows in an E-W direction across Wiencke Island, between Nipple Peak and the Wall Range, in the Palmer Archipelago. Discovered by BelgAE 1897-99. Possibly named by the Discovery Committee personnel on the *Discovery* in 1927 (it appears on their 1929 chart of the 1927 survey), although that name may well have been given prior to that, by whalers. US-ACAN accepted the name in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It was re-surveyed by Fids on the *Norsel* in April 1955, and appears on a 1957 British chart. It appears on a Chilean chart of 1947 as Ventisquero Canal (which means the same thing), and on a 1953 Argentine chart as Primera Garganta (i.e., "first pass"; they named Thunder Glacier as Segunda Garganta). It appears on an Argentine chart of 1957 as Glaciar Canal (which means the same thing), and that was the name accepted by the 1970 Argentine gazetteer, after they had rejected Glaciar Channel and Ventisquero Channel. The Chileans call it Glaciar Casais, for Miguel Casais Morales, Ministry of National Defense representative on the *Iquique* during ChilAE 1951-52. *See also* [1]**Harbour Glacier**.

[1]**Channel Rock** *see* **Passage Rock**

[2]**Channel Rock**. 62°28' S, 60°05' W. The larger of 2 rocks awash at the N end of McFarlane Strait, 0.8 km S of the Meade Islands, in the South Shetlands. Charted and named descriptively by the Discovery Committee personnel on the *Discovery II* in 1934-35. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit later that year. It appears in the 1955 British gazetteer. The Chileans call it Roca Channel, and the Argentine call it Roca Canal, or Roca Escarceo. The word "escarceo" does mean "evasion," but it is also a Spanish nautical word signifying small, bubbling waves caused by currents. *See also* **Bowler Rocks**.

[3]**Channel Rock**. 65°14' S, 64°16' W. An offshore rock (awash) in the NW entrance to Meek Channel, 200 m to the N of the extreme W point of Galíndez Island, in the Argentine Islands, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of the Antarctic Peninsula. Charted and named descriptively in 1935 by BGLE 1934-37. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. The Chileans refer to it as Roca Channel.

Mount Channon *see* **Nevlingen Peak**

Channon, James Edward Grey. Known as Grey Channon. b. March 19, 1915, King's Cross, Sydney, but raised in Killara, only son of Stanley James Channon and his wife Marian Eliza Edwards. After Sydney University, he became a doctor, and joined the Army during World War II. On Oct. 25, 1941, he married nurse Betty Lorraine Reid. Medical officer and 2nd-in-command at Mawson Station for the winter of 1958. He did, in fact, serve 3 months as base leader. He retired from medical practice in 1978, and Betty died in 1989. Grey Channon died on June 4, 2006, in Australia.

The *Chanson de Lecq*. British yacht, skippered by Josephine Hunter, which visited the South Shetlands and the Antarctic Peninsula in 1993-94, and again in 1994-95.

Chant, Robert Seymour. b. May 12, 1929, Yeovil, Somerset, son of Frederick C. Chant and his wife Alice M. Seymour. On the *Bransfield*, 1976-86, first as 2nd engineer and later as chief engineer.

The *Chanticleer*. A 237-ton British Navy sloop of war of 10 guns, built in 1804 in the Isle of Wight, she had just finished serving in the Mediterranean when she was chosen to be the ship to take Henry Foster's expedition to Antarctica (see below), which conducted an 1828-31 government-sponsored geological and oceanographical expedition that included the South Shetlands. She was rigged as a barque for the expedition, and reduced to 2 guns. After the expedition, in 1832, she became a hospital ship on the Thames.

Isla Chanticleer *see* **Chanticleer Island**

***Chanticleer* Expedition**. 1828-31. British government expedition led by Henry Foster to Antarctica, to determine the specific ellipticity of the Earth, to ascertain the chronometric difference of meridians of the principal stations in the Atlantic, and to make observations on magnetism, meteorology, etc. Including Foster there were 57 men aboard. 15 were ship's officers, and 6 were Marines. Other personnel on the expedition included Lt. Edward N. Kendall, Lt. Horatio Thomas Austin, John Caught (acting master), Lt. Williams, scientist W.H.B. Webster, and Miers, the carpenter. **Dec. 12, 1827**: Foster was commissioned to command the *Chanticleer*, which was then fitted out in Falmouth. **Dec. 14, 1827**: Webster was appointed doctor. **April 21, 1828**: They left Portsmouth. **April 27, 1828**: They left Spithead, bound for South America. **April 30, 1828**: They passed Eddystone Lighthouse. **May 1, 1828**: They arrived at Falmouth. **May 3, 1828**: They left Falmouth, a day late. **May 10, 1828**: They sighted Porto Santo, near Madeira. **May 11, 1828**: They put in at Madeira. **May 17, 1828**: They left Madeira. **May 19, 1828**: They sighted Tenerife from 90 miles away. **May 20, 1828**: They put into Santa Cruz, in the Canary Islands. **May 21, 1828**: They left Santa Cruz. **May 29, 1828**: They arrived at Cape Verde. **June 17, 1828**: They spotted St. Paul's Rocks. **June 18, 1828**: They crossed the Equator. **June 20, 1820**: They arrived at the island of Fernando Noronha. **June 26, 1828**: They left Fernando Noronha. **July 11, 1828**: They were fired on by a 12-gun British pirate ship, and they fired back, but nothing came of it. **July 13, 1828**: They arrived at Cape Frio, 64 miles from Rio. **July 16, 1828**: At 6 P.M. they dropped anchor at Rio. **July 26, 1828**: They left Rio. **Aug. 1, 1828**: They put in at St. Catherine's Island. **Aug. 6, 1828**: They left St. Catherine's Island. **Aug. 15, 1828**: At midnight they dropped anchor in Montevideo. **Oct. 5, 1828**: They left Montevideo, after 8 weeks in port, including pendulum experiments on Rat Island, heading south with 10 months supplies on board, and the best possible scientific instruments. **Oct. 25, 1828**: They anchored at Staten Island, near Cape Horn. **Dec. 21, 1828**: They left Staten Island. Caught was hurt in an accident. **Dec. 27, 1828**: They rounded Cape Horn. **Jan. 2, 1829**: At noon they were in 60°S, in Antarctic waters, in a temperature of 38°F. They saw their first iceberg. **Jan. 5, 1829**: During a snow storm, and surrounded by icebergs, they sighted Smith Island, in the South Shetlands. **Jan. 7, 1829**: They made land at what is now Cape Possession, on Chanticleer Island, and here they left a cylinder, claiming the island for George IV. **Jan. 9, 1829**: They landed on Deception Island, anchoring in Pendulum Cove, where they conducted research, including gravity studies for the British government, as part of Britain's effort to discover the true shape of the Earth. Foster left two self-recording thermometers (one for high and one for low temperatures) on the island, which would be sought unsuccessfully by Johnson in the *Sea Gull*, Dec. 10-17, 1838, during USEE 1838-42, and finally found by Smyley in Feb. 1842. **Jan. 27, 1829**: Foster also took possession of Hoseason Island, and roughly charted part of the Antarctic Peninsula. **March 4, 1829**: They headed north. **March 9, 1829**: They passed

Smith Island. **March 17, 1829**: They passed out of Antarctic waters. **March 25, 1829**: Back at Cape Horn. **April 17, 1829**: They met the *Adventure*, under Captain King. **May 24, 1829**: They left Cape Horn. **June 21, 1829**: They sighted South Africa. **June 27, 1829**: They anchored at Mossel Bay, 300 miles from Cape Town. **July 7, 1829**: They left Mossel Bay. **July 16, 1829**: They arrived at Cape Town. **Dec. 13, 1829**: After 4 months, they sailed for St. Helena. **Dec. 26, 1830**: They arrived at St. Helena. **Feb. 10, 1830**: They left St. Helena. **Feb. 14, 1830**: They arrived at Ascension, where Kendall transferred to the *Hecla*. **Dec. 22, 1830**: At Porto Bello, in Panama. **Feb. 5, 1831**: Foster died when he fell out of his canoe in a river in Panama. Austin took over command. **May 6, 1831**: They arrived in Falmouth, England. Webster wrote a book of the expedition (*see* the Bibiliography).

Chanticleer Island. 63°43' S, 61°48' W. A nearly snow-free island, 1.5 km long, off the NW end of Hoseason Island, in the Palmer Archipelago. It was presumably known to sealers in the 1820s, and on Jan. 7, 1829, Foster made a landing here during the *Chanticleer* Expedition of 1828-31. He charted it as part of what he called Prince William's Land (*see* **Palmer Archipelago**, for further details). It appears on a 1947 Chilean chart as Islote Vallenar (presumably named for the city in the Atacama, in Chile), and on a 1948 Argentine chart as Islote Grande (i.e., "big islet"), which was the name accepted by the 1970 Argentine gazetteer. Following FIDASE aerial photography in 1956, it was named Chanticler Island by UK-APC on Sept. 23, 1960, for the *Chanticleer*, and it appear as such on a British chart of 1961. US-ACAN accepted that name in 1965. Today, the Argentines tend to call it Isla Chanticleer.

Chanute Peak. 63°56' S, 59°58' W. Rising to 1095 m, on the SE side of Lanchester Bay, 6 km S of Wennersgaard Point, on the Davis Coast of Graham Land. Named by UK-APC on Sept. 23, 1960, for Octave Chanute (1832-1910), American glider designer. US-ACAN accepted the name later in 1960. It appears on a British chart of 1962.

Chaos Glacier. 69°01' S, 78°00' E. A glacier, 6 km S of Browns Glacier, it flows westward from the Ingrid Christensen Coast into the central part of Ranvik Bay. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers (who, apparently, did not name it). Named in 1952 by U.S. cartographer John H. Roscoe as he worked from photos taken by OpHJ 1946-47. The terminal glacial flowage appears chaotic. US-ACAN accepted the name in 1956. ANARE also photographed it aerially, and ANCA accepted the name on May 18, 1971. Originally plotted in 69°00' S, 77°58' E, it has since been replotted.

Chaos Reef. 62°22' S, 59°46' W. A mainly submerged reef, 1.1 km NE of Morris Rock, and 1400 m NW of Fort William (the extreme W end of Robert Island), in English Strait, at the N end of the Aitcho Islands, in the South Shetlands. Surveyed and mapped by personnel on the *Lautaro*, during ChilAE 1948-49, and named by them as Banco Cochecho (i.e., "Cochecho bank"), for José "Cochecho" Duarte Villaroel, skipper of the ship. It appears as such in the 1974 Chilean gazetteer, but since then, the name has been changed to Bajo Cochecho (i.e., "Cochecho reef"). Re-surveyed in 1967, by an RN Hydrographic Survey unit on the *Protector*. UK-APC accepted the name Chaos Reef, on Nov. 3, 1971 because this is a confused area of breakers and shoal water. US-ACAN accepted that name in 1972, and it appears in the 1974 British gazetteer. *See also* **Roca Cuca** and **Roca Ripín**.

Chaoyang Gou. 69°49' S, 76°09' E. A valley in the Larsemann Hills. Named by the Chinese.

Chapel Hill. 63°41' S, 57°58' W. Rising to 140 m, it forms the summit of a headland 2.5 km WSW of Church Point, on the Prince Gustav Channel, on the S coast of Trinity Peninsula. Charted by Fids from Base D in Dec. 1946, and named by them in association with nearby Church Point (a higher feature, of course). UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer. The magnificently devised difference between "church" and "chapel," and how these words were used not only as adjectives but as badges in British society of the pre-war days, should, one day, provoke an Orwellian book.

Chapel of Our Faith *see* **Churches, South Pole Station** (1958-59)

Chapel of the Snows. The first church built in Antarctica. During OpDF I, at McMurdo, it had been planned to hold religious services in the mess hall at the AirOpFac because there were no plans or materials for a church, as such. However, on March 12, 1956 base leader Dave Canham gave Father Condit permission to build an inter-denominational chapel, and it wasn't long before the chaplain had scrounged materials and the men went to work after hours. Soon a Quonset hut was up. Bob Chaudoin painted the murals for it, one for Protestants and one for Catholics. 72 men attended services on Easter Sunday, 1956. Eventually the chapel would sport a belfry and a picket fence. Some say Father Condit stole the bell from a Navy ship, and blessed it in the name of St. Dismas. Father Condit's parish was the world's most southerly. Lt. Cdr. Peter Bol conducted the Protestant services. Later in 1956 Our Lady of the Snows Shrine was erected about 330 yards NE of the Discovery Hut. It was a small rock cairn with a statue of the Virgin Mary, and honors the memory of Richard T. Williams. Leon S. Darkowski was Catholic chaplain during OpDF II (1956-57). The Chapel of the Snows burned down on Aug. 22, 1978. A temporary Quonset hut was dedicated on Easter Sunday, 1979, but that, too, became the victim of fire, and on Jan. 29, 1989, a new, white clapboard Chapel of the Snows, was dedicated, built by the National Science Foundation. It was 2016 square feet, with an organ, office space, and seated 63 persons.

Chapin Peak. 85°58' S, 131°40' W. A prominent rock peak, rising to 2170 m, on the W side of Reedy Glacier, 3 km SE of Stick Peak, in the Quartz Hills. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Capt. Howard Chapin, U.S. Marine pilot with VX-6, at McMurdo in 1962-63.

Chaplains Tableland. 78°01' S, 162°39' E. A high tableland, 6 km due N of Mount Lister, in the Royal Society Range. Named by US-ACAN in 1963, for the chaplains who have served at McMurdo and elsewhere in Antarctica. One can see the tableland from McMurdo Station. NZ-APC accepted the name on June 27, 1963.

Chaplin, James Harvey "J.H." Some (but not that many) called him "Jim." b. Dec. 16, 1924, Harrow, London, son of exporter Harvey Hopper Chaplin and his wife Evelyn Bessie Orchard. During World War II he was evacuated to Cornwall, near Truro. He served as an able seaman in the RN during the latter part of the war, spending time in Cape Town and Durban. In 1948 he joined FIDS, as a meteorologist, and wintered-over at Base G in 1949, and as base leader at Port Lockroy Station in 1950. He wrote *The Gravestones of Deception Island*, in 1951. After a year in England he went to Northern Rhodesia, and was there for years. He died in Africa, in a car crash.

Chaplin, John Miller. b. June 27, 1889. Merchant seaman who became a sub lieutenant in the RNR in 1912. In April 1914 he was transferred to the RN, on the supplementary list, and served in World War I on the light cruisers *Boadicea* and *Caledon*, and on the battleship *Lord Nelson*. He was promoted to lieutenant in 1915, and to lieutenant commander in 1923. He came back from New York on the *Aurania*, arriving in Liverpool on March 14, 1925, to become 2nd-in-command and navigating officer of the *Discovery* in 1925-27, under Captain J.R. Stenhouse, during that ship's cruise to Antarctica for the Discovery Investigations. He was in South Georgia in 1928-30, in command of the survey party there, off the *Alert*. In Feb. 1931 he was appointed naval assistant to the Hydrographer, and retired in 1934, as a commander. He died in Hampstead, London, his long-time home, in 1977.

Chaplin Peak. 78°42' S, 85°28' W. A small peak, rising to 1978 m, on the W side of Bender Glacier, 8 km SW of Mount Craddock, in the Sentinel Range. Named by US-ACAN in 2006, for Stephen Neville Chaplin, geologist, and member of the Omega Foundation High Antarctic GPS Expedition of 2005-06.

Lake Chapman. 77°01' S, 162°23' E. On The Flatiron, at Granite Harbor. Named by NZ-APC on Aug. 14, 2002, for limnologist Margaret Ann Chapman (b. 1937, Dunedin; known as Ann), reader in biological sciences at the University of Waikato, one of the first women

scientists to visit the Ross Sea region, and the first woman to lead a scientific expedition in Antarctica, from Nov. 24, 1970 to Feb. 19, 1971, when she led a team of Waikato limnologists to Antarctica. She was a founding member of the university's Antarctic program, and president of the NZ limnological society. US-ACAN accepted the name in 2004. Dr. Chapman retired in 1996, and died on May 23, 2009.

Mount Chapman. 82°35' S, 105°55' W. A triple-peaked mountain, rising to 2715 m, with very steep sides and a large rock cliff on its N side, at the W end of the Whitmore Mountains. Named by US-ACAN for William Hanell "Bill" Chapman (b. Oct. 21, 1927. d. Oct. 26, 2007, Fairfax, Va.; Hanell was his mother's name), USGS topographic engineer and cartographer here in 1957-58 (surveying in the Pensacola Mountains), and again in 1958-59 (the Horlick Mountains Traverse, during which, on Jan. 2, 1959, he made a survey of the Whitmore Mountains). He was part of the Executive Committee Range Traverse of 1959, and was back in 1961-62 (the Topo North-South Survey, leader of the party in the mountains bordering the W side of the Ross Sea and the Ross Ice Shelf), and several other times.

Rocas Chapman *see* **Chapman Rocks**

Chapman, Charles *see* **USEE 1838-42**

Chapman, Howard Edward. b. Aug. 15, 1937, Birmingham, son of Ernest Chapman and his wife Fanny Herbert. He joined FIDS in 1960, as a surveyor, and wintered-over at Base E in 1961. He married Lynn Briggs, in Birmingham, in 1967.

[1]**Chapman Glacier**. 70°17' S, 67°55' W. A glacier, 17.5 km long, 16 km wide at the center, and 5 km wide at the mouth, it flows SW from the Dyer Plateau of Palmer Land, to enter George VI Sound immediately SE of Carse Point. First surveyed in Oct. 1936 by BGLE 1934-37, and named by UK-APC on March 31, 1955, for the astonishing Frederick Spencer "Freddy" Chapman (1907-1971), mountain climber, linguist, author, ornithologist, and Arctic explorer who, in 1934, brought 64 dogs from Greenland to Britain, for use by BGLE. Mr. Chapman, who also taught at Gordonstoun (Prince Philip was a pupil of his), and who had the most amazing experiences in the jungles of Malaya as an officer during World War II, is worth many a biography (Brian Moynahan's 2009 book, *Jungle Soldier*, for example). Those lucky enough to have had Freddy as a headmaster in either Germany or South Africa, were irrevocably shaped by the experience. He shot himself. The glacier was re-surveyed by Fids from Base E in 1949. US-ACAN accepted the name in 1964.

[2]**Chapman Glacier**. 70°43' S, 166°24' E. Branching off Kirkby Glacier, it flows into the head of Yule Bay, in northern Victoria Land. Named by ANCA for Arthur Chapman, a member of the helicopter team here in 1962 on the *Thala Dan*. NZ-APC accepted the name on June 27, 1963, and US-ACAN followed suit in 1965.

Chapman Hump. 70°13' S, 67°30' W. A large, rounded nunatak, rising to about 1000 m, in the center of, and near the head of, Chapman Glacier, in Palmer Land, 16 km inland from George VI Sound. Surveyed from the ground by BAS personnel from Base E, between 1962 and 1972. Named by UK-APC on July 21, 1976, in association with the glacier. US-ACAN accepted the name later in 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Chapman Nunatak. 71°08' S, 64°45' E. About 3 km E of Mount Hicks, in the Prince Charles Mountains of Mac. Robertson Land. Plotted by Australian cartographers in 71°08' S, 64°51' E, from ANARE air photos taken in 1960, and named by ANCA for Peter Richard Chapman, who wintered-over as weather observer at Wilkes Station in 1963. US-ACAN accepted the name in 1967. The feature has since been re-plotted.

Chapman Peak. 78°11' S, 85°13' W. Rising to 2230 m, on the E side of Ellen Glacier, 8 km NE of Mount Jumper, in the central part of the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Capt. John H. Chapman, USAF, one of the men who helped build Pole Station in the 1956-57 season.

Chapman Point. 65°55' S, 61°20' W. A low, rounded point marking the SE entrance of Scar Inlet, on the N side of Jason Peninsula, on the Oscar II Coast of Graham Land. Surveyed by FIDS in 1955, and again in 1961 by Fids from Base D. Named by UK-APC on Feb. 12, 1964, for Sydney Chapman (1888-1970), British geophysicist, professor of natural philosophy at Oxford, 1946-53, and president of the Commission for IGY, 1957-58. US-ACAN accepted the name later in 1964. *See* **International Geophysical Year** for more about Professor Chapman.

Chapman Ridge. 67°28' S, 60°58' E. A long ridge, about 300 m above sea level, running SW from Byrd Head for 5 km, in Mac. Robertson Land. Discovered by BANZARE 1929-31. Mapped by Norwegian cartographers in 1946, from aerial photographs taken by LCE 1936-37. Named by ANCA on July 22, 1959, for Phillip Kenyon "Phil" Chapman (b. March 5, 1935), aurora physicist at Mawson Station in 1958. US-ACAN accepted the name in 1961.

Chapman Rocks. 62°30' S, 60°29' W. A group of rocks in Hero Bay, Livingston Island, 5.5 km SW of Desolation Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Aug. 31, 1962, for Thomas Chapman, a Bermondsey skinner and trunkmaker who, by discovering (actually, one of his employees did) in 1795 a method of processing fur seal skins for use in the hat trade (i.e., by separating the guard hairs from the fur), and patenting the process in 1799, helped propel the seal rushes from London in the early part of the 19th century. By a premature spilling of the beans about the process, Chapman's competitors stole a march on him, and he was ruined. US-ACAN accepted the name in 1965. The Argentines call them Rocas Chapman.

Chapman Snowfield. 81°30' S, 157°20' E. A large snowfield W of the central ridge in the Churchill Mountains, it is bounded to the N by Elder Peak and the massif surmounted by Mount Wharton, to the S by the Sosa Icefields and the head of Starshot Glacier, and to the W by Wallabies Nunataks and All-Blacks Nunataks. Named by US-ACAN in 2003, for Bill Chapman (*see* **Mount Chapman**). NZ-APC accepted the name on Feb. 27, 2003.

Chappel Island. 66°11' S, 110°25' E. The largest of the Donovan Islands, about 8 km NW of Clark Peninsula, in the E part of Vincennes Bay, about 11 km NW of Casey Station. There are several large Adélie penguin rookeries here. First mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1971, for CWO R.L. Chappel, U.S. Marine Corps motion picture officer during OpHJ. On Jan. 20, 1956, Phil Law led an ANARE party here on the *Kista Dan*, but they couldn't land due to the shallow water. However, low-level photos were taken from the expedition aircraft. ANCA accepted the name on Aug. 11, 1958 (an unlikely date, but, nevertheless, the one given by ANCA in their gazetteer).

Chappel Islets *see* **Donovan Islands**

Chappell, Richard Lee "Dick." b. March 9, 1938, Buffalo, NY, but raised partly in Eggertsville, NY, son of accountant and scoutmaster G. Howard "Howie" Chappell. Dick was the boy scout (46 merit badges) selected in a national competition to go south for OpDF II. He left San Diego on the *Curtiss*, and wintered-over in 1957 at Little America, as Bert Crary's assistant after Jim McCoy had to go home, and in 1959 his book, *Antarctic Scout*, was published. In 1962 he graduated from Princeton, became a naval lieutenant, and a representative of the Atomic Energy Commission in Groton, Conn. On Sept. 6, 1968, at Buffalo, NY, he married Alice Carol Merckens.

Chappell Nunataks. 82°18' S, 158°12' E. A group of nunataks, about 5.5 km W of the central part of the Cobham Range. Named by NZGSAE 1964-65, for John Michael Arthur Chappell, geologist on the expedition. NZ-APC accepted the name on July 15, 1965, and US-ACAN followed suit in 1966. ANCA accepted the name on Aug. 10, 1966.

Chappell Peak. 79°57' S, 82°54' W. Rising to 1860 m, 5 km S of Schoeck Peak, on the S side of the Enterprise Hills, overlooking the head of Horseshoe Valley, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Dick Chappell.

Cape Charbonneau *see* **Cape Sharbonneau**

Bahía Charcot *see* [1]**Charcot Bay**

Baie Charcot *see* [1]**Charcot Bay**

Cape Charcot. 66°26' S, 98°30' E. A rocky point at the NE end of Melba Peninsula, 5 km W of David Island, on the coast of Queen Mary Land. Discovered by the Western Base Party of AAE 1911-14, and named by Mawson for Jean-Baptiste Charcot (q.v.), the explorer. US-ACAN accepted the name, and ANCA followed suit.

Ensenada Charcot *see* **Port Charcot**

Île Charcot *see* **Charcot Island**

Isla Charcot *see* **Charcot Island**

Port Charcot. 65°04' S, 64°00' W. A bay, 2.5 km wide, indenting the N shore of Booth Island E of Point Hervéou, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. FrAE 1903-05 charted it and wintered-over here in 1904. Charcot named it first as Port Carthage, but later changed the name to honor his father, Jean-Martin Charcot (1825-1893), the famous French neourologist. US-ACAN accepted the name Port Charcot in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer, and on a British chart of 1958. Photographed aerially by FIDASE in 1957. It appears on a 1949 Argentine chart as Puerto Charcot, and on a 1953 Argentine chart as Ensenada Charcot. The 1970 Argentine gazetteer, and the Chilean 1974 gazetteer both accepted the name Puerto Charcot.

Puerto Charcot *see* **Port Charcot**

Récif du Charcot. 66°31' S, 139°54' E. A reef, N of Cap André Prud'homme, in the Géologie Archipelago, in the Dumont d'Urville Sea, along the coast of Adélie Land. Discovered from the *Commandant Charcot* during the first visit by the French to this area, in the late 1940s. Named by the French in 1957, for the ship.

Terre Charcot *see* [2]**Charcot Island**

Charcot, Jean-Baptiste-Étienne-Auguste. b. July 15, 1867, Neuilly-sur-Seine, France, son of the world famous neurologist, Jean-Martin Charcot by his wife Victoire-Augustine Durris (née Laurent). In Nov. 1896, in Paris, he married Léopoldine-Clémence-Adèle-Lucie-Jeanne Hugo (known as Jeanne), a granddaughter of novelist Victor Hugo (she had recently been married to Léon Daudet, Alphonse Daudet's son. In fact, soon after the marriage, the rather violent Charcot had an altercation in a theatre with his wife's ex-husband, and a duel was fought, in which the ex was slightly wounded. One of Daudet's seconds was Jeanne's brother). An oceanographer, Charcot led his first expedition to Antarctica, French Antarctic Expedition, 1903-05, but on his return, he found that his wife, on Feb. 15, 1905, had filed for divorce, on the grounds of desertion. He signed a prenuptial agreement with his 2nd wife, Meg Cléry, before going off on his 2nd voyage south, French Antarctic Expedition, 1908-10. In fact, she went with him, at least, as far as Punta Arenas, Chile. In 1912 he wrote *Autour du Pôle Sud*, and during World War I commanded a Q boat in the British Royal Navy, being awarded the DSC. In 1925-26 he pushed the French government to claim Adélie Land (q.v.). He died about Sept. 16, 1937, at sea, somewhere off Iceland.

Charcot Bank *see* **Charcot Ridge**

[1]**Charcot Bay**. 63°48' S, 59°32' W. An indentation into the Davis Coast, between 16 and 24 km wide, between (on the one hand) Whittle Peninsula and Cape Kater and (on the other) Cape Kjellman, along the W coast of Graham Land. Discovered and charted in 1902 by SwedAE 1901-04, and named by Nordenskjöld as Charcot Bucht, for Jean-Baptiste Charcot. For several years after its discovery this bay and Bone Bay were grouped collectively as Gvas Bay (a term no longer used, but q.v.). It appears on a 1921 British chart as Charcot Bay, and that was the name accepted by US-ACAN in 1947, and by UK-APC on Jan. 28, 1953. It appears as such in the British gazetteer of 1955. It appears on a 1937 French chart as Baie Charcot. It appears on a Chilean chart of 1947 as Bahía Charcot, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. However, it was seen on an ArgAE 1953 chart as Bahía de Charcot. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base D in 1959-60. Not to be confused with Charcot Cove.

[2]**Charcot Bay** *see* **Charcot Cove**

Charcot Bucht *see* [1]**Charcot Bay**

Charcot Canyon. 67°30' S, 80°00' W. An undersea feature, N of the coast of Queen Mary Land. Named for Charcot, the explorer.

Charcot Coast *see* [2]**Charcot Island**

Charcot Cove. 76°07' S, 162°24' E. A reentrant, about 1.5 km wide, between Cape Hickey and Bruce Point, it is the northernmost indentation into the Scott Coast, on the E coast of southern Victoria Land, on the N side of the Nordenskjöld Ice Tongue. Discovered by BNAE 1901-04, and named by them as Charcot Bay, for Jean-Baptiste Charcot. US-ACAN accepted that name, and it appears as such in the 1958 NZ gazetteer. However, it was later redefined, as Charcot Cove, and US-ACAN accepted that new name in 1965, as did NZ-APC on Feb. 1, 1965.

Charcot Fan. 65°50' S, 86°15' W. An undersea feature that seems to run between 65°10' S and 66°30' S, and between 82°30' W and 90°00' W, north of the coast of Queen Mary Land. Named by international agreement in 1988, for the great explorer.

[1]**Charcot Island** *see* **Casabianca Island**

[2]**Charcot Island**. 69°57' S, 75°25' W. About 50 km long and 40 km wide, and ice-covered except for some prominent mountain tops overlooking the N coast, 88 km NW of Alexander Island, and separated from that island by the Wilkins Sound and the Wilkins Ice Shelf, in the Bellingshausen Sea. The N coast of this island was discovered on Jan. 11, 1910, by FrAE 1908-10, and named by Charcot (at the suggestion of the crew and also of American Antarctic historian Edwin Swift Balch) as Terre Charcot. Charcot claimed he only acquiesced if it could be named for his father, the famous surgeon Jean-Martin Charcot (*see* **Port Charcot**). The explorer thought it to be part of the mainland, and it appears as such (with the name Terre Charcot) on his 1910 maps of the expedition. The name was translated into English as Charcot Land, and appears as such on a 1914 British chart. About this time it was also to be seen as Jean Charcot Land, and, on a Shackleton map of 1919, it is seen as Charcot Coast. It appears in a 1927 reference as Charcot's Land. Wilkins flew around it on Dec. 29, 1929, thus proving its insularity. It appears (unnamed) on his map of 1930. It first seems to appear as Charcot Island on a 1936 Norwegian map, and on a French map of 1937 (as Île Charcot). On a 1940 Argentine map it appears as Isla Charcot, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It appears on a 1940 British chart as Charcot Island, but with its coordinates in 70°10' S, 75°00' W, and that was the situation accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. On Dec. 22, 1940, USAS 1939-41 made a flight over the island, and parts of it were photographed aerially on Feb. 8, 1947, during OpHJ 1946-47, and also on Nov. 21, 1947, by RARE 1947-48. The first people to set foot on it were personnel from RARE, on Dec. 23, 1947, when a plane landed there. There is a 1948 South American reference to it as Tierra Charcot, but that concept was already hopelessly out of date. Searle, of the FIDS, using the RARE photos, re-plotted it in 1959-60, in 69°45' S, 75°00' W, and US-ACAN accepted new coordinates of 69°45' S, 75°15' W. However, U.S. Landsdat images of Feb. 1979, showed it to be in 69°57' S, 75°25' W, and those were the coordinates seen in the 1982 British gazetteer. A temporary scientific station and airstrip were established on the NE coast of the island in Nov. 1982, by ChilAE 1982-83, in 69°43' S, 75°00' W.

Charcot Land *see* **Charcot Island**

Charcot Ridge. 66°50' S, 165°30' E. Also called Charcot Bank. A submarine feature N of the East Antarctica coastline. Named by international agreement in 1995, for the great explorer.

Charcot Station. 69°22' S, 139°02' E. French scientific base built for IGY. Robert Guillard set out from the Adélie Coast on Oct. 1, 1956, with 3 Weasels and 2 Sno-cats, to build the base in the region of the South Magnetic Pole, 320 km from Dumont d'Urville Station, and 2403 m above sea level. Meteorologist Jacques Dubois was the first leader of the station, arriving in Jan. 1957, and the station was opened on Feb. 1, 1957. 4 men wintered-over that year (1957)—Dubois, Gilbert Goy (surgeon), Claude Lorius (glaciologist), and Roland Schlich (magnetician). It had one small building that first winter. René Garcia relieved Dubois in 1958, and led the wintering-over party that year. The two others that 1958 winter were Guy Ricou (glaciologist) and Henri

Larzillière (magnetician). The station was closed after the 1958 winter.

Charcot Strait *see* **The Gullet**

The *Charity*. New York sealing brig of 122 tons, 72 feet long, built at St. Michaels, Md., in 1817. Her captain was Charles H. Barnard, who bought her outright on June 2, 1820. She was in the South Shetlands for the 1820-21 season, allied with the New York Sealing Expedition. **Oct. 6, 1820**: The first entry from J.R. Davis, one of the officers of an unnamed vessel, which, although he tantalizingly never names her, does give enough clues in his journal to lead us to no other conclusion than that he was aboard the brig *Charity*. On this date she was in 38°23' S, 51°47' W. **Oct. 28, 1820**: They came into Whalemen's Harbor, New Island, in the Falkland Islands. **Jan. 11, 1821**: They were in the South Shetlands. **March 28, 1821**: In the South Shetlands. **March 30, 1821**: She spoke the *Huron*, out of New Haven. **March 31, 1821**: She left Antarctica, having taken 3000 seal skins. **April 7, 1821**: They sighted the Falkland Islands. **April 8, 1821**: They made their first anchor in the Falklands. **April 11, 1821**: They anchored at Shallop Cove, at New Island, in the Falklands, at 8 in the morning. **April 12, 1821**: She spoke the *Nancy*. **April 25, 1821**: She spoke the *Nancy* and the *Huron*, out of Salem, and the *Aurora*, out of New York. **Oct. 28, 1821**: She left the Falklands for the South Shetlands and the 1821-22 season, again allied with the New York Sealing Expedition. **Nov. 20, 1821**: At Penguin Point. **Nov. 21, 1820**: They found the first ever recorded ice fish (q.v.). **Nov. 27, 1821**: They found Capt. Andrew Macfarlane's message in a bottle. **Jan. 26, 1822**: She left Antarctica finally, with 9000 seal skins and 50 barrels of oil. **April 14, 1822**: She anchored at Pernambuco, Brazil. **April 22, 1822**: She left Pernambuco for home. **May 21, 1822**: She arrived back at Sandy Hook, NY. **May 27, 1822**: Barnard registered the vessel.

Glaciar Charity *see* **Charity Glacier**

Mount Charity. 69°54' S, 64°34' W. A massive mountain, rising to 2680 m (the British say 2650 m) from the S end of the Eternity Range (indeed, it is the southernmost peak in that range), 14 km S of Mount Hope, in the N part of Palmer Land. It was probably one of the 3 peaks discovered aerially by Lincoln Ellsworth on the flights of Nov. 21 and Nov. 23, 1935, and which were named by him as Faith, Hope, and Charity, "because we had to have faith, and we hoped for charity in the midst of cold hospitality." Surveyed in Nov. 1936 by BGLE 1934-37. Re-photographed aerially in Sept. 1940, by USAS 1939-41, and again in Dec. 1947, by RARE 1947-48. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit later that year. There is a 1943 reference to it as Monte Caridad (which means the same thing in Spanish).

Charity Glacier. 62°44' S, 60°18' W. Flows SW into False Bay, N of Barnard Point, on the S coast of Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for the *Charity*. US-ACAN accepted the name in 1960. The Argentines call it Glaciar Charity. The British were the latest to replot this feature, in late 2008.

Île Charlat *see* **Charlat Island**

Islote Charlat *see* **Charlat Island**

Charlat Island. 65°11' S, 64°10' W. A small island immediately W of the S end of Petermann Island, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of the Antarctic Peninsula. Discovered by FrAE 1908-10, and named by Charcot as Île Charlat, for Eugène Charlat, French vice-consul at Rio who assisted the expedition. It appears on a 1943 U.S. Hydrographic Office chart as Charlat Islet, and on a 1953 Argentine chart as Islote Charlat. Photographed aerially by FIDASE in 1956, and from an RN Hydrographic Survey helicopter off the *Protector*, in 1958. UK-APC accepted the name Charlat Island on July 7, 1959, and US-ACAN followed suit in 1971.

Charlat Islet *see* **Charlat Island**

Cabo Charles *see* **Charles Point**

Cap Charles *see* **Sherlac Point**

Cape Charles *see* **Cape Sterneck**, **Charles Point**

Mount Charles. 67°23' S, 50°00' E. Rising to 1110 m, 5 km S of Mount Cronus, in Enderby Land. In 1830-31 Biscoe charted and named 4 mountains in what are now the Scott Mountains — Charles, Henry, Gordon, and George, for the Enderby Brothers, owners of Biscoe's vessels. This may or not be the exact Mount Charles that Biscoe had in mind, but on Nov. 24, 1961 ANCA decided it might as well be. US-ACAN accepted the name in 1965.

Punta Charles *see* **Charles Point**

The *Charles Adams*. New London sealer which left port on Aug. 29, 1831, bound for the South Shetlands, in company with the *Courier*, and returning in 1832. Crew of the *Charles Adams*: Alex Palmer (captain), Henry Dickens (1st mate), William Beck (2nd mate), James Pentreth (3rd mate), Anthony Q. Breathe, William Wright, Thomas Dean, Jeremiah Seifson, Benjamin Holmes, James Thompson, John Smith, John L. Wolcott, Blemiah Simpson, William Church, John Williams, Peter Peters, Alfred Davis, Thomas Burtch, Thomas Burtch, Jr., Alexander Cheseborough, Joseph Bedford, William Clark, Joshua Stevens, Frederick Norris, and James Heart. She took 1000 fur seal skins and 2100 barrels of elephant seal oil.

The *Charles Colgate*. Known as the *Colgate*. New London sealer, sealing at Heard Island since before the Civil War. On her last expedition, she left New London on Aug. 1, 1877, bound for the South Shetlands and the 1877-78 sealing season, under the command of Capt. Simeon Church. The rest of the crew were: Erastus Church, Jr. (1st mate), Albert G. Glass (2nd mate), Antone Pedro Correia, Nathan M. Church, Josep de Pena, Peter Christiansen (from Norway), Joseph Ganno, Jacob M. Edwards, Manuel de Ross, Julio Gomes, Manuel Cross, Joseph Roderick, Felix Reid, George Santer, Louis Napoleon, amd Peter McGovern (aged 45; from Scotland; living in New York). She made one last foray into South Shetlands waters in Dec. 1878, returning to Port Stanley (in the Falklands) on Feb. 2, 1879. *See also* this date, under **Blacks in Antarctica**.

The *Charles Darwin*. A 2556-ton, 69.4-meter NERC-owned Royal research ship, launched on Feb. 2, 1984. Used as a BAS ship in 1988-89. Captains were P. Moore and S. Mayle. She was retired in June 2006, became the geophysical research vessel *Ocean Researcher*, and was replaced as RRS by the *James Cook*.

Charles Glacier. 72°34' S, 3°26' W. A small, steep glacier flowing from the S side of Borg Mountain, between that mountain and Høgsaetet Mountain, in the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Charlesbreen (i.e., "Charles glacier"), for Charles Swithinbank. US-ACAN accepted the name Charles Glacier in 1966.

Charles Gould Peak *see* **Gould Peak**

Cape Charles J. Adams *see* **Cape Adams**

Charles Nunataks. 73°19' S, 2°10' W. A small, isolated group of nunataks on Swithinbank Slope, 13 km S of the W end of Neumayer Cliffs, on the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Charlesrabbane, for Charles Swithinbank. US-ACAN accepted the translated name Charles Nunataks in 1966.

Charles Peak. 79°44' S, 83°11' W. A bare rock peak, rising to 990 m, it surmounts the SE end of the Collier Hills, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Charles E. Williams, meteorologist at Little America V in 1958.

Charles Point. 64°14' S, 61°00' W. Forms the N side of the entrance to Brialmont Cove, within Hughes Bay, on the Danco Coast, on the W coast of Graham Land. Charted by James Hoseason, 1st mate of the *Sprightly*, in 1824, and named Cape Charles (reason unknown). It appears thus on Powell's 1828 chart, and also on a British chart of 1838. That name was also sometimes used for what became Cape Sterneck, 16 km to the N. It appears on a Spanish chart of 1861, translated as Cabo Carlos. ChilAE 1946-47 named it Cabo Marinero Paredes, for Luis S. Paredes Uribe (*see* **Oluf Rocks**), who wintered-over at Soberanía Station in 1947. It appears as such on their chart of 1947. In 1947, US-ACAN accepted the name Cape Charles (after rejecting Cape von Sterneck), and UK-APC accepted that name on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears by error as Cabo

Spring (*see* **Spring Point**) on a 1955 Argentine chart. In the 1950s, Argentina used the names Cabo Charles and Cabo Clark (unknown reason). FIDASE photographed it aerially in 1956-57, and, working from these photos, FIDS cartographers deemed it a point rather than a cape, so, on Sept. 23, 1960, UK-APC changed the name to Charles Point. It appears as such on a British chart of 1961. US-ACAN went along with this change. It appears on a Chilean chart of 1962, as Punta Charles, and that was the name accepted by the 1974 Chilean gazetteer (after they had rejected Cabo Sterneck and Punta Paredes).

Charles Roux Island *see* **Roux Island**

The *Charles Shearer*. An 81-foot American sealing schooner out of Stonington, which was in the South Shetlands during the 1874-75 season, under the command (probably) of Walter Chesebro. She was under the command of Chesebro in 1875-76, and visited South Georgia. She arrived back in Stonington on May 8, 1876, with 2700 seal skins. She left Stonington on July 3, 1877, again for these islands, under the command of William Appelman. Also aboard was the captain's son, William, as well as his nephew, Frederick Appelman. In Nov. 1877 the ship left a gang of sealers at Islas de Diego Ramírez (not in Antarctica), left there bound for the South Shetlands, and then disappeared without a trace. The sealing gang was rescued 6 months later (by the *Jabez Howes*, which was bound for San Francisco). Other ships looked for her in the 1879-80 season, including the *Thomas Hunt*, the *Express*, and the *Essex* (although the *Essex* never got into Antarctic waters), but the *Shearer* (as she was more commonly known) was never found, at least, perhaps not. In the late 1990s, in a small cove on the SW coast of Elephant Island, in the South Shetlands, the British found the remains of a large wooden sailing vessel. This was unaccounted for. At first it was thought it may be the wreck of Nordenskjöld's *Antarctic*, or of Shackleton's *Endurance*, but testing of the wood revealed that it is of mid-18th century origin, 1860s even, and not Norwegian, perhaps Stonington, Conn. It is a possibility.

Charles V. Bob Range. A term no longer used. East of the Queen Maud Mountains. It was discovered by Byrd during his flight of Nov. 18, 1929, during ByrdAE 1928-30, and named for a major supporter, Charles Victor Bob (1888-1944), a Colorado mining engineer who took New York by storm in the Roaring 20s, and, only in 1930, when he disappeared, did the extent of his swindling become clear.

Charlesbreen *see* **Charles Glacier**

Charlesrabbane *see* **Charles Nunataks**

Charlesworth Cliffs. 80°14' S, 25°18' W. A series of steep cliffs, rising to about 1100 m near the N end of the central ridge of the Herbert Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for John Kaye Charlesworth (1889-1972), professor of geology at Queen's University, Belfast, 1921-54. US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Dome Charlie. 75°00' S, 125°00' E. An ice dome, rising to over 3200 m, in the otherwise featureless snow plateau of Wilkes Land, in East Antarctica. It happens to signify the exact center of Antarctica. It has an elevation of approximately 10,000 feet. An American summer camp was established here between Dec. 27, 1974 and Jan. 15, 1975, in order to collect information in anticipation of planned drilling at the site, which actually took place (by several different nations) in the 1970s. In those days it was named as both Dome C and Dome Charlie (communications code word for the letter C), the latter from VX-6, who flew in men and supplies. In Jan. and Nov. 1975, 3 Hercs were seriously damaged during attempted take off, and in Nov. 1975 and Nov. 1976, USN established field camps here to recover the aircraft. After repairs, the 3 aircraft were flown to McMurdo on Dec. 26, 1975, Jan. 14, 1976, and Dec. 25, 1976. In 1982, the SPRI airborne echo radio sounding team here suggested the name Dome Circe, after the character in Greek mythology. ANCA accepted that name on Dec. 3, 1982, but US-ACAN stayed with Dome Charlie. For Dome C Automatic Weather Station and Dome C Scientific station, *see under* **D** for Dome. Originally plotted in 74°39' S, 124°10' E, it has since been replotted.

Bahía Charlotte *see* **Charlotte Bay**

Baie Charlotte *see* **Charlotte Bay**

Roca Charlotte *see* **Rocas Charlotte**

Rocas Charlotte. 63°12' S, 58°02' W. A somewhat lonely group of rocks in water, due S of Montravel Rock, NW of Cape Legoupil, off the NW coast of Trinity Peninsula. Charted by ChilAE 1947-48, and named for Charlotte Gándara, daughter of the skipper of the *Covadonga* during that expedition (*see* **Gándara Island**). The Argentines have singularized the feature, as Roca Charlotte, i.e., thay have named the principal rock only.

Charlotte Bay. 64°30' S, 61°35' W. A bay indenting the W coast of Graham Land in a SE direction for about 20 km, between, on the one hand Eckener Point and Cape Murray, and Reclus Peninsula on the other, between Brabant Island and the Danco Coast, on the W coast of Graham Land. Discovered and roughly charted on Feb. 7, 1898, by BelgAE 1897-99, and named by de Gerlache as Baie Charlotte, or Baie de Charlotte, for Georges Lecointe's fiancée (at least history says it was his fiancée; it is more likely to be his sister). It appears as Charlotte Bay on Dr. Frederick Cook's 1900 English language version of the expedition maps, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956-57, and appears on a British chart of 1959. It appears on a 1949 Argentine chart as Bahía Charlotte, which is the name the Chilean gazetteer of 1974 went for. The Argentine gazetteer of 1970, however, accepted a name that had first appeared in 1903 — Bahía Carlota (which is Charlotte Bay translated into Spanish).

Charlton Island. 66°13' S, 110°09' E. The most westerly of the Frazier Islands, in Vincennes Bay, off the Budd Coast. Mapped from air photos taken during OpHJ 1946-47 and OpW 1947-48. Its position was fixed by an ANARE party on Jan. 26, 1956. Named by Carl Eklund for Frederick E. "Fred" Charlton (d. April 12, 2002, Bellingham, Wash), USN, chief electronics technician at Wilkes Station in 1957. US-ACAN accepted the name in 1960, and ANCA followed suit on July 4, 1961.

Poluostrov Charnokitovyj *see* **Booth Peninsula**

Charnokitovyj Peninsula *see* **Booth Peninsula**

Charpentier Pyramid. 80°16' S, 25°37' W. A pyramid-shaped peak rising to 1080 m, in the NW part of the Herbert Mountains, in the Shackleton Range. Roughly mapped by BCTAE in Oct. 1957. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station, 1968-71, and mapped by USGS from these efforts. Named by UK-APC on Jan. 5, 1972, for Jean de Charpentier (1786-1855), Swiss engineer and mineralogist who, in 1835, gave additional proof for the views of I. Venetz-Sitten (*see* **Venetz Peak**) on the former extension of glaciers. US-ACAN accepted the name. It appears in the 1974 British gazetteer.

The *Charrúa*. Built at Marietta Manufacturing during World War II, as U.S. Army tug LT-224, she was sold to the Argentine Navy in 1946 as a rescue and support tug, changing her name to *Charrúa*. Sister vessel to the *Guaraní*, she took part in ArgAE 1947-48. Capt. Raúl G. Kolbe commanded. In the mid-1960s she was sold, and for many years was used as a support vessel for other tugs.

Islotes Charrúa *see* **Malus Island**

Monte Charrúa *see* **Charrúa Ridge**

Sedlovina Charrúa *see* **Charrúa Gap**

Charrúa Gap. 62°39' S, 60°19' W. A flat, ice-covered saddle running E-W for 2.2 km between Castillo Nunatak and Charrúa Ridge, on Hurd Peninsula, 2.5 km SE of Sinemorets Hill, and 3.35 km ENE of Mount Reina Sofia, in the E part of Livingston Island, in the South Shetlands, and which, at an elevation of 275 m, separates the glacial catchments of Balkan Snowfield and Contell Glacier to the N, and to the S those of Huntress Glacier and the unnamed glacier flowing into Johnson's Dock. Roughly mapped by the British in 1968, and in more detail by the Spanish in 1991. The Bulgarians surveyed it in detail in 1995-96, and named it on Aug. 19, 1997, as Sedlovina Charrúa (i.e., "Charrúa gap"), in association with Charrúa Ridge. UK-APC accepted the name Charrúa Gap on April 23, 1998. The gap is much used by Bulgarian and Spanish expeditioners.

Charrúa Ridge. 62°39' S, 60°19' W. A

prominent landmark, trending E-W, and rising to 340 m, on the NE side of Johnsons Dock, Hurd Peninsula, on Livingston Island, in the South Shetlands. Named by the Argentines as Monte Charrúa, for the *Charrúa*, and it appears on one of their 1954 charts. A FIDS survey station was established here in 1958. On May 13, 1991, UK-APC accepted the name Charrúa Ridge, that definition being more appropriate than "mount." It appears in the 1993 British gazetteer. US-ACAN accepted the British naming. The British were the latest to replot this feature, in late 2008.

Charybdis *see* **Charybdis Cove**

Charybdis Cove. 62°29' S, 60°09' W. A broad cove, flanked on the E side by ice cliffs, and to the N and S by Organpipe Point and Slab Point, respectively, in the NE part of Livingston Island, in the South Shetlands. The broad, wave-cut platform of the foreshore is formed of conglomerate of the Williams Point Beds. Named by UK-APC on Dec. 12, 1997, as Charybdis, for the mythical sea monster. US-ACAN accepted the name in 1998. In late 2008 the British were the latest to replot this feature, and UK-APC changed the name from Charybdis to Charybdis Cove. US-ACAN went along with the name change.

Charybdis Glacier. 70°25' S, 67°30' E. A large glacier flowing NE between the Porthos Range and the Aramis Range, in the Prince Charles Mountains, it feeds the W side of the Amery Ice Shelf. Discovered by Bill Bewsher's ANARE Southern Party in Dec. 1956, and, due to the great difficulty in traversing this region because of the glacier, so named by them for the Greek mythological whirlpool. They plotted it in 70°25' S, 66°55' E. ANCA accepted the name on July 22, 1957, and US-ACAN followed suit in 1962 (but with considerably different longitudinal coordinates).

Charybdis Icefalls. 70°51' S, 161°10' E. Large, crevassed icefalls in the lower Harlin Glacier, where they descend notably to join the Rennick Glacier. The icefalls are nourished in part by Lovejoy Glacier, which flows eastward, parallel to, and on the N side of, Harlin Glacier, and coalesces with it before reaching the icefalls. Mapped by USGS in 1962-63, and also by the Northern Party of NZGSAE 1963-64, who named it for the Greek mythological whirlpool. NZ-APC accepted the name on July 16, 1964, and US-ACAN followed suit that year. Originally plotted in 70°42' S, 161°12' E, it has since been replotted.

Chasm. 80°20' S, 160°50' E. A chasm, 30 m deep, and 90 m wide, off Cape Selborne, on the W side of the Ross Ice Shelf. Discovered by Scott during his (unsuccessful) push to the Pole during BNAE 1901-04, and named by him. It appears in the 1958 NZ gazetteer.

Chasm Island *see* **Tiber Rocks**

Ostrov Chasovoj *see* **Chasovoj Island**

Chasovoj Island. 66°13' S, 100°49' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ostrov Chasovoj. ANCA translated the name on Jan. 19, 1989.

Chastain Peak. 85°10' S, 94°35' W. Rising to 2225 m, near the center of the Moulton Escarpment, at the W margin of the Thiel Mountains. Surveyed by the USGS Thiel Mountains party of 1960-61. Named by US-ACAN in 1962, for aviation metalsmith 1st class William W. "Bill" Chastain, of North Kingston, RI (*see* **Deaths**, 1961).

Roca Chata *see* **Chata Rock**

Chata Rock. 64°52' S, 63°44' W. A low, isolated rock, rising to 3 m above sea level, and with a radius of 15 m, over which the sea breaks constantly (regardless of the weather), about 0.8 km S of Cape Lancaster (the S end of Anvers Island), in the Palmer Archipelago. Named by the Argentines before 1950, as Roca Chata. In this case, a "chata" is an Argentine flat-bottomed boat. It appears as such on an Argentine chart of 1953. Re-charted in 1956-57, by an RN Hydrographic Survey unit on the *Protector*, which landed a party on the rock to erect a radar beacon as a navigational warning. On July 7, 1959, UK-APC named it (for themselves only) as Exposure Rock, and it appears as such on a 1960 British chart, named for its exposed position. US-ACAN accepted the name Chata Rock in 1965. The Chilean gazetteer of 1974 accepted the name Roca Expuesta, which was a translation of the British naming.

Islotes Chatos *see* **Chatos Islands**

Chatos Islands. 67°39' S, 69°10' W. A group of small islands and rocks, about 8 km SSW of Cape Adriasola (which is on Adelaide Island). Roughly charted by ArgAE 1952-53, and named by them descriptively as Islotes Chatos (i.e., "flat islets"). The feature appears as such on a 1957 Argentine chart, and was the name accepted by the Argentine gazetteer of 1970. Re-surveyed and charted by a 1963 RN Hydrographic Survey unit, and named by them as the Plain Islands. That name didn't fly, and on Feb. 12, 1964, UK-APC renamed them the Chatos Islands, and that was the name seen on a British chart of 1964. US-ACAN accepted that name later in 1964. The Chileans call them Islotes Opazo, for Gerardo Opazo A., a Chilean Navy seaman on the *Piloto Pardo*, who helped in repairing the alternators that enabled the vessel to continue its operations during ChilAE 1961-62.

The *Chattahoochee*. A 3346-ton, 302-foot USNS ice-strengthened tanker, built in 1956, specifically for polar work, in at McMurdo Sound in 1961-62 and 1962-63, both times under the command of Capt. Peter A. Gentile. In the latter season she made 4 fuel-carrying trips between NZ and McMurdo. She was back in 1963-64 (Capt. H. Jacobsen) and 1964-65 (Capt. Willy B. Nilsen). She was sold to a Japanese scrap yard in 2006.

Chattahoochee Glacier. 76°34' S, 160°42' E. Flows NE between Wyandot Ridge and Eastwind Ridge, in the Convoy Range. Mapped by USGS from ground surveys and USN air photos. Named by US-ACAN in 1965, for the *Chattahoochee*. NZ-APC accepted the name on Feb. 1, 1965.

Chaucer Island *see* **Sinclair Island**

Cap Chaucheprat *see* **Chaucheprat Point**

Chaucheprat Point. 63°32' S, 56°42' W. A low point at the NW corner of Jonassen Island, in Antarctic Sound, off Trinity Peninsula. In Jan. 1838, during FrAE 1837-40, Dumont d'Urville discovered a cape from the N entrance to Antarctic Sound, and named it Cap Chaucheprat. It appears on his 1838 and 1841 maps, and in Vincendon-Dumoulin's 1847 atlas. Fids from Base D surveyed this area in 1946-47, and could not nail down the cape named by the French. In order to maintain Dumont d'Urville's naming in this area, this point was named Chaucheprat Point by UK-APC on Feb. 12, 1964, and US-ACAN accepted that later in 1964. François-Charles Chaucheprat (1792-1853) was a French naval officer, private secretary to Vice Admiral Claude de Rosamel (*see* **Rosamel Island**), who retired from the Navy to become mayor of the town of Mage. One of the Argentine Antarctic expeditions named it (for themselves only) as Cabo Rodríguez, for José Rodríguez (q.v.).

Mount Chaudoin. 77°09' S, 162°01' E. An abrupt mountain rising to about 1400 m, it forms part of the divide between Bachtold Glacier and the head of Griffiths Glacier, at the W end of the Gonville and Caius Range, in Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Bob Chaudoin. NZ-APC accepted the name on April 7, 2008.

Chaudoin, Robert Lee "Bob." b. March 26, 1929, San Pedro, Calif., son of dairyman Earl Thornton Chaudoin and his wife Maxine Elda Jewett. He joined the Navy in 1948, was first stationed in Hawaii, and then at the Pentagon, as a yeoman, and a part of Admiral Byrd's staff (before it became Task Force 43). Hoping for a transfer to Paris, instead the Navy asked him if he would go to the South Pole. After training at Davisville, RI, he shipped out of Norfolk on the *Glacier*, to Christchurch, NZ, then to McMurdo Sound, where, despite being a yeoman 1st class, he helped build the base, often as part of Charlie Bevilacqua's team, and wintered-over. On Dec. 1, 1956 Gus Shinn flew him to the Pole in the *Que Sera Sera*, as one of the 3rd (and last) party of Seabees (he was actually only attached to the Seabees) who helped build Pole Station in Nov.-Dec. 1956. He was one of the first 42 men ever to stand at the South Pole. He wanted to stay on, as part of the 1957 wintering-over party, but after the job was done he was one of the first party to leave the Pole, on Dec. 24, 1956, and flew back to McMurdo, then shipped out to Christchurch, Auckland, Sydney, and then back to California. He spent 3 months writing out the reports of the expedition, then re-joined Task Force 43, and spent 3 years in Christchurch, NZ, helping to run the Navy's Antarctic office there, arranging weddings for the many men who wanted to marry NZ girls, as well as acting as Antarctic postmaster. He was on the *Glacier* again, with Capt. MacDonald, for the Bellingshausen Sea Expedition, 1959-60, then finally

made Paris, for 3 years. Following a tour in the Caribbean and Naples, Italy, on the *Tidewater*, he took his last job, at the Naval Personnel Bureau, before retiring in 1967. He lived in Lexington, Va., for 9 years, and then moved to Florida.

Pointe Chaumont *see* **Route Point**

Punta Chaura *see* **Punta Agradable**

Mont Chauve *see* **Mount Chauve**

Mount Chauve. 66°49' S, 141°23' E. A rocky hill rising to 33 m at the W end of the Port-Martin peninsula, at the NW extremity of Cape Margerie, and visible from all around. Charted by the French in 1950, and named by them as Mont Chauve. Chauve means "bald," and Liotard, the leader of the expedition, was notoriously bald. US-ACAN accepted the name Mount Chauve in 1962, but they say that the name evokes "the celebrated musical score Night on Bald Mountain," which is either true or a lot of balderdash.

Cap Chauveau *see* **Chauveau Point**

Punta Chauveau *see* **Chauveau Point**

Chauveau Point. 64°05' S, 62°02' W. Marks the SW point of Liège Island, in the Palmer Archipelago. The W point of Liège Island was charted in 1904 by FrAE 1903-05, and named by Charcot as Pointe Chauveau, for A. Benjamin Chauveau, an associate in the Bureau Central Météorologique in Paris, best remembered for his atmospheric recordings taken atop the Eiffel Tower and his 1925 book, *L'électricité atmosphérique*. FrAE 1908-10 charted it as Cap Chauveau. Later, however, it was found that there was no "point" or "cape" on the west-central coast of Liège Island that could be immediately and unambiguously identified as the one Charcot had charted as Chauveau, so the name was re-applied to the conspicuous SW point of the island, which Charcot had also seen. Chauveau Point appears on a 1943 U.S. Hydrographic Office chart, and that was the name accepted by UK-APC on Sept. 23, 1960, and by US-ACAN later that year. It appears as such on a 1961 British chart. It appears on an Argentine chart of 1949, as Punta Chauveau, and that was the name accepted by the 1970 Argentine gazetteer. It was photographed aerially by FIDASE in 1956-57.

Cabo Chavanne *see* **Cape Chavanne**

Cape Chavanne. 66°59' S, 64°45' W. A prominent, partly ice-free bluff rising to about 1250 m, with a conspicuous elongated dome-like reef in the shape of the letter T forming the S tip, E of the mouth of Breitfuss Glacier, at the head of (i.e., at the NW side of) Mill Inlet, on the Foyn Coast, on the E coast of Graham Land. In late 1947 it was photographed aerially by RARE 1947-48 and surveyed from the ground by Fids from Base D. Named by FIDS for Joseph Chavanne (1846-1902), Austrian polar bibliographer. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a British chart of 1952, and in the 1955 British gazetteer. It appears on an Argentine chart of 1957, as Cabo Chavanne, and that was the name accepted by the 1970 Argentine gazetteer. The Chileans also call it Cabo Chavanne.

Bahía Chavarría *see* **Bahía Balaresque**

Chavdar Peninsula. 64°05' S, 60°53' W. A peninsula, 10 km wide, projecting for 13 km in a NW direction from Graham Land, and bounded by Curtiss Bay to the NE, Hughes Bay to the SW, and Gerlache Strait to the NW. Its W extremity, Cape Sterneck, separates the Danco Coast to the SW from the Davis Coast to the NE. Named by the Bulgarians on Nov. 23, 2009, for their 16th-century rebel leader, Chavdar Voyvoda.

Île Chaves *see* **Chavez Island**

Isla Chaves *see* **Chavez Island**

Bahía Chávez *see* **Cangrejo Cove**

Île Chavez *see* **Chavez Island**

Isla Chavez *see* **Chavez Island**

Isla Chávez *see* **Chavez Island**

Nunatak Chavez. 66°17' S, 61°54' W. A somewhat isolated nunatak, SE of Medea Dome, near the base of Jason Peninsula, on the Oscar II Coast, on the E coast of Graham Land. Named by the Argentines. The SCAR gazetteer lists it this way, but "Chavez" really should have an accent mark over the "a."

Chavez Glacier. 73°55' S, 101°15' W. A glacier flowing S for about 16 km from Canisteo Peninsula into Cranton Bay, at the E extremity of the Amundsen Sea. Named by US-ACAN in 2003, for Pat Chavez, of Flagstaff, Ariz., co-leader of the USGS team that compiled the 1:5,000,000 scale advanced very high resolution radiometer maps of Antarctica in the 1990s.

Chavez Island. 65°38' S, 64°32' W. Rising to an elevation of 550 m above sea level, and 5 km long, it forms the W entrance of Leroux Bay, and lies immediately W of the peninsula between that bay and Bigo Bay, off the Graham Coast, on the W coast of Graham Land. Discovered by FrAE 1908-10, and named by Charcot as Île Chavez, for Portuguese meteorologist Commandant Francisco Alfonso Chaves [sic], (1857-1927), director of the zoology department at Ponta Delgada, in the Azores, who was of assistance to the expedition when they were in those islands. Incidentally, Comandante Chaves, who was actually an Army officer stationed in the Azores, had several species of various things named after him. The feature appears as such on the expedition's maps, but also appears on other maps of the same expedition as Île Chaves. It appears translated as Chavez Island on a 1914 British chart, and that was the name accepted by US-ACAN in 1951, and by UK-APC on Sept. 20, 1953, and which appears in the 1955 British gazetteer. It appears on a 1946 Argentine chart as Isla Chávez (the Argentines need an accent mark if they are to preserve the stress), but on a 1956 Argentine chart as Isla Chaves (no accent necessary here, as the word ends in an "s"), and that latter name was the one accepted by the 1970 Argentine gazetteer. The Chilean gazetteer of 1974 accepted Isla Chávez. It was photographed aerially by FIDASE in 1956-57. For no apparent reason, a U.S. Hydrographic Office chart of 1961 shows it pluralized, as Chavez Islands, and a 1964 American chart has it with the accent, viz Chávez Island.

Île du Chaylard *see* **Duchaylard Island**

Islote Chayter *see* **Mügge Island**

Islotes Chayter. 65°18' S, 64°12' W. A group of small islands, immediately S of Barros Rocks, between the Berthelot Islands and the Argentine Islands, 3 km SW of Cape Tuxen, off the Graham Coast, on the W coast of Graham Land. Named by ArgAE 1956-57, possibly for a member of the expedition. *See also* **Mügge Island**.

Punta Cheal *see* **Cheal Point**

Cheal, Joseph John "J.J." b. Nov. 1, 1922. He joined FIDS in 1949, as a general and meteorological assistant, and wintered-over at Signy Island Station in 1950, and was leader at the same station for the winter of 1951. In 1952, he was with the South Georgia survey, and in 1956-57 assisted FIDASE. In 1954, in Devon, he married Joan M. Roberts, and they raised a family in Watford, Herts. He developed Parkinsons Disease, and died in Dec. 1996, at Hatfield, Herts.

Cheal Point. 60°38' S, 45°59' W. A rocky point, 1.5 km ESE of Return Point (the SW extremity of Coronation Island), in the South Orkneys. Surveyed in 1933 by the personnel on the *Discovery II*, and re-surveyed by Fids from Signy Island Station in 1950-51. Named by UK-APC on March 31, 1955, for John Cheal (q.v.), who was on that FIDS survey. In fact, this point marks the W limit of his survey triangulation made in July-Sept. 1950. US-ACAN accepted the name in 1956. Re-surveyed by FIDS between 1956 and 1958. The Argentines call it Punta Cheal.

Gora Chebotarëva. 71°15' S, 67°09' E. A nunatak on the W side of Mount Lanyon, in the Prince Charles Mountains. Named by the Russians.

Gora Chebysheva. 73°04' S, 65°52' E. A nunatak just to the SE of Mount Rymill, in the southern Prince Charles Mountains. Named by the Russians.

Chedeville, Joseph. b. Aug. 7, 1813, Pont-Château, France. Apprentice seaman on the *Astrolabe* during FrAE 1837-40. On June 14, 1838 he was promoted to junior seaman.

Cheek, John Edward "Chico." b. Nov. 18, 1939, on a remote farm at Hill Cove, Falkland Islands, son of shepherd Frederick John "Fred" Cheek and his wife Dorothy Mary Gladys Johnson. In June 1954 he and his cousin Chris Lehen were apprenticed to FIDS as wireless operators and meteorological observers. At the end of the apprenticeship, Cheek wintered-over at Base D in 1959, as radio operator and dog driver. He returned to Stanley for the 1959-60 summer, being relieved at Hope Bay for that season by Chris Lehen. He was back at Hope Bay for the winters of 1960 and 1961. Then he went to the UK to gain additional radio qualifications, and was back in Antarctica in 1964, wintering-over at Base E that year. He paid his own way through technical college in Colwyn

Bay, in North Wales, to qualify as a ship's radio officer in the Merchant Navy, returning to the Falklands in 1966 to work for the Falkland Islands Civil Service as a senior wireless operator at the government radio station. In 1968 he married Janet Lynda "Jan" Biggs, who had grown up in South Georgia, daughter of a policeman there, and in 1974 he went to work for Cable & Wireless. He was for a long time (from 1981) on the legislative and executive councils of the islands, and stood for self-rule, especially in the face of Argentine claims on the Falklands in 1982. In the mid-1980s he left Cable & Wireless, and set up a fishing company — Fortuna Ltd. — with Stuart Wallace. He died of cancer on Sept. 3, 1996, in Stanley.

Cheeks Nunatak. 74°58' S, 72°49' W. Rising to about 1300 m, it is the largest and most southerly of 3 nunataks, about 20 km WNW of the Merrick Mountains. Surveyed on the USGS Antarctic Peninsula Traverse of 1961-62, and photographd aerially by USN between 1965 and 1967. Named on Jan. 9, 1962, as Mount Barnes, or Barnes Nunatak, for Steve Barnes. Renamed by US-ACAN in 1966, for Noble L. Cheeks (b. 1932), USN, aviation electronics technician, and a member of the R4D airborne party that set up Camp Sky-Hi (*see* **Eights Station**) in 1961. It appears as such on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Cheesman, Silas Alward "Al." b. May 31, 1900, St John, New Brunswick, son of teamster Thomas Walter Cheesman and his wife Jessie. Well-known bush pilot of the far north, he flew with Western Canada Airways, and was one of the two pilots on the 2nd half of Wilkins' Antarctic expedition of 1928-30, during which he flew the famous flight of 1929 (*see* **Wilkins-Hearst Expedition, 1928-30**). On July 3, 1930, while flying over forest in Ontario, his plane burst into flames, and he narrowly avoided death. In 1937 he flew with Wilkins in search of the 6 Russian aviators missing in the Arctic. An officer in the Royal Canadian Air Force during World War II, he was a submarine hunter, flying the Atlantic coast. He did salvage work in Goose Bay, Labrador, after the war, and wrote a pamphlet on northern survival. He died on April 4, 1958, at Fort William, Ont.

Cheesman Island. 69°44' S, 75°05' W. A small rocky island off the N coast of Charcot Island, 1.5 km N of Mount Martine. Discovered and photographed aerially by Wilkins on Dec. 29, 1929, and roughly positioned by him. In 1959-60, Searle of the FIDS, working from air photos taken during OpHJ 1946-47, plotted it in 69°31' S, 74°58' W. Named by UK-APC on March 2, 1961, for Al Cheesman. US-ACAN accepted the name later that year. The coordinates were corrected from U.S. Landsat images taken in Feb. 1975, and, with the new coordinates, the feature appears in the 1977 British gazetteer.

Cape Cheetham. 70°18' S, 162°42' E. An ice-covered cape, forming the NE extremity of Stuhlinger Ice Piedmont, in Oates Land. Originally plotted in 72°10' S, 162°15' E. The New Zealanders say it is an isolated pinnacle forming the E extremity of Rennick Bay, and this description appears in the 1930 *Antarctic Pilot*, and also in the 1943 U.S. *Sailing Directions for Antarctica*, with the qualifier "appears to be." First charted by the crew of the *Terra Nova*, under Harry Pennell, in Feb. 1911, and named by Pennell for Alf Cheetham. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ provisional gazetteer. The 1956 U.S. gazetteer has it in 70°08' S, and says it is a cape, marked by an isolated pinnacle, and forming the E side of the entrance to Rennick Bay.

Cheetham, Alfred Buchanan "Alf." His will spells his middle name Buchannan. b. May 6, 1867, Liverpool, son of railway book keeper John Foster Cheetham and his wife Annie Elizabeth Story. His family moved to Hull in 1877 and Alf ran away to sea, joining the North Sea fishing fleet. He was a merchant navy bosun working out of Hull and a Royal Navy reservist, when he became bosun on the *Morning* in 1902-03 and 1903-04 for the two relief parties of BNAE 1901-04. After the expedition, he was a mate on the *Montebello*, on the Christiania run. Shackleton invited him to join BAE 1907-09, and he went, as 3rd officer and bosun on the *Nimrod*. He was also bosun on the *Terra Nova* during BAE 1910-13. He volunteered to go and look for Scott in 1912, but was turned down because he was a family man (he had married Eliza Sawyer in Hull in 1890, and they had 13 children). He almost went on the aborted British Antarctic and Oceanograhical Expedition, but instead, was 3rd officer with Shackleton again on the *Endurance* during BITE 1914-17. Shackleton called him "the veteran of the Antarctic." His plans to open a pub in Hull after World War I never materialized. He was 2nd officer on the *Prunelle* when he was torpedoed and drowned in the North Sea on Aug. 22, 1918, during World War I.

Cheetham Glacier Tongue *see* **Cheetham Ice Tongue**

Cheetham Ice Barrier Tongue *see* **Cheetham Ice Tongue**

Cheetham Ice Tongue. 75°45' S, 162°55' E. Also called Cheetham Ice Barrier Tongue, and Cheetham Glacier Tongue. An ice tongue (really a small glacier tongue), about 3 km wide and about 12 m above sea level, on the E coast of Victoria Land, it projects eastward into the Ross Sea, and is partly fed by Davis Glacier and partly from ice draining from Lamplugh Island and Whitmer Peninsula, both of which it lies between. Charted by BAE 1907-09, and named by Shackleton for Alf Cheetham. US-ACAN accepted the name, and it appears in the 1958 NZ gazetteer.

Gora Chehova *see* **Blaiklockfjellet**

Treshchiny Chekanovskogo. 70°05' S, 17°25' E. A fissure in the ground, just SW of Verblyud Island, along the coast of Queen Maud Land. Named by the Russians.

Nunataki Cheljuskina. 70°33' S, 65°13' E. A group of nunataks close to, and due S of, Mount Mervyn, in the Porthos Range of the Prince Charles Mountains. Named by the Russians.

Ozero Chelnok *see* **Chelnok Lake**

Chelnok Falls. 68°39' S, 78°17' E. Falls in the Vestfold Hills, 5 m high, where the creek from Chelnok Lake runs over a dolerite dike. Named by ANCA on July 26, 1983, in association with the lake.

Chelnok Lake. 68°39' S, 78°20' E. A melt lake between Sørsdal Glacier and the rock of the S part of the Vestfold Hills. Photographed aerially during OpHJ 1946-47, and again by SovAE 1956, and ANARE in 1957 and 1958. The Russians named it Ozero Chelnok, and ANCA translated this on Nov. 27, 1973.

Chelopech Hill. 63°43' S, 58°42' W. An ice-covered hill rising to 946 m, in the N foothills of the Detroit Plateau, 1.63 km NNW of Mount Schuyler, 4.07 km E of Zlatolist Hill, 12.95 km S of Mount Ignatiev (in the Srednogorie Heights), and 1.9 km WSW of Sirius Knoll, it surmounts Russell West Glacier to the N, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Chelopech, in western Bulgaria.

Chelyuskintsy Ice Tongue. 66°20' S, 82°00' E. Also called Chelyuskintsy Peninsula. A massive northward-oriented ice tongue, forming the NW fringe of the West Ice Shelf, off the Leopold and Astrid Coast, and possibly extending as far N as Pingvin Island. Identified by GermAE 1901-03. Surveyed by SovAE 1957, who named it, for the Russian polar ship that sank in the Arctic in 1934. About 60 miles of the S and W coasts of the ice tongue were surveyed by radar by the Russians on March 11 and 12, 1965, but later that year the West Ice Shelf in this area started to break, and this ice tongue disappeared as surely and lamentably as it disappeared from the SCAR gazetteer, leaving in the latter a historical lacuna, and in the former (case) several stalled icebergs (which means that the ice tongue had probably been locally grounded at several points before it broke off).

Chelyuskintsy Peninsula *see* **Chelyuskintsy Ice Tongue**

Cheney Bluff. 79°39' S, 159°46' E. A steep rock bluff, rising to 810 m above sea level, at the S side of the mouth of Carlyon Glacier, 8 km SW of Cape Murray. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1959 and 1963. Named by NZ-APC on May 20, 1965, for Lt. Cdr. (later Capt.) Derek John Cheney (b. Sept. 24, 1926, Britain. d. Feb. 1993, Ashford, Kent), who joined the Royal Navy in 1944, the RNZN in 1951, and was commander of the *Rotoiti* during OpDF 64 (i.e., 1963-64). Captain Cheney was later deputy chief of naval staff. US-ACAN accepted the name later in 1965, and ANCA followed suit on Aug. 27, 1975.

Mount Cheops. 65°52' S, 64°38' W. A pyramid-shaped mountain, rising to about 620 m, 13 km SSE of Cape García, and NE of

Barilari Bay, on the Graham Coast, on the W coast of Graham Land. Mapped by FIDS cartographers in 1958-59, from FIDASE air photos taken in 1956-57, and from ground surveys conducted by Fids from Base J in 1957-58. Descriptively named by UK-APC on July 7, 1959, for the great pyramid of Cheops at Giza, just outside Cairo. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Vrah Chepelare *see* **Chepelare Peak**

Chepelare Peak. 62°43' S, 60°15' W. Rising to about 900 m, on Friesland Ridge, 640 m N of Shumen Peak, 870 m S of St. Methodius Peak, and 1.2 km SE of Tervel Peak, it surmounts Charity Glacier to the W, and Prespa Glacier to the SE, in the Tangra Mountains of Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, as Vrah Chepelare, after the Bulgarian town of that name.

Ostrova Cherakina. 73°35' S, 74°15' W. A group of islands NW of DeAtley Island, off the Eights Coast. Named by the Russians.

Cherepish Ridge. 62°28' S, 60°02' W. A narrow, rocky ridge, rising to 650 m, and extending in a S-N direction for 1 km, next N of Intuition Peak, 1.9 km NNW of Helmet Peak, 4.7 km SE of Atanasoff Nunatak, and 6.3 km E of Kuzman Knoll, in the Tangra Mountains of Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for Cherepish Monastery, in the Iskar Gorge of western Bulgaria.

Cherevichny, Ivan E. b. 1909, Russia. Hero of the Soviet Union, with much Arctic experience, who commanded the air fleet during the USSR IGY effort in the late 1950s. On Jan. 7, 1956 he landed on the continent from the *Ob,'* during the first SovAE. He died in Moscow in Feb. 1971.

Pik Chernenko. 71°56' S, 8°22' E. A peak on the N side of Holtanna Peak, in the E part of Fenriskjeften Mountain, in the Drygalski Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Named by the Russians.

Chernomen Glacier. 65°38' S, 64°03' W. A glacier, 5.6 km long and 2.2 km wide, on Barison Peninsula, SSW of Butamya Glacier and WSW of Talev Glacier, it flows northwestward into Leroux Bay SE of Eijkman Point, on the Graham Coast, on the W coast of Graham Land. Mapped by the British in 1971. Named by the Bulgarians on Sept. 14, 2010, for the settlement of Chernomen, in southern Bulgaria.

Chernopeev Peak. 63°39' S, 57°55' W. A rocky peak, rising to 543 m, on the SE side of the Cugnot Ice Piedmont, 2.5 km N of Church Point, 10.02 km ENE of Levassor Nunatak, 2.89 km SSW of Kribul Hill, and 8.5 km SW of McCalman Peak, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for Hristo Chernopeev (1868-1915), a leader of the Bulgarian liberation movement in Macedonia.

Gora Chernushka *see* **Chernushka Nunatak**

Chernushka Nunatak. 71°35' S, 12°01' E. Rising to 1640 m, 3 km SW of Sandseten Mountain, in the NE part of the Humboldt Graben, on the W side of the Westliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped again by SovAE 1960-61, and named by the USSR in 1966, as Gora Chernushka, after Chernushka, the black dog who orbited the earth in Sputnik-9 on March 9, 1961 (just as the Russians were surveying this nunatak). Her companions were some mice, a guinea pig, and Ivan Ivanovich, a dummy cosmonaut who bailed out on reentry. Chernushka survived her experience none the worse for wear. US-ACAN accepted the name Chernushka Nunatak in 1970. The Norwegians call it Chernushkaknatten (which means the same thing).

Chernushkaknatten *see* **Chernushka Nunatak**

Nunatak Chërnyj. 68°02' S, 62°45' E. Just E of Shark Peak, in the Framnes Mountains of Mac. Robertson Land. Named by the Russians ("black nunatak").

Ostrov Chërnyj *see* **Chërnyy Island**

Chërnyj Island *see* **Chërnyy Island**

Chërnyy Island. 66°08' S, 101°04' E. A small island, 0.8 km S of the E tip of Thomas Island, in the Highjump Archipelago. Mapped from air photos taken during OpHJ 1946-47. Rephotographed aerially by SovAE 1956, and named by the Russians in 1966, as Ostrov Chërnyj (i.e., "black island"). In 1966, US-ACAN accepted the name Chernyy Island (i.e., without the umlaut over the "e"). On Jan. 19, 1989, ANCA translated it as Chernyj Island.

Mount Cherry-Garrard. 71°18' S, 168°41' E. A conspicuous conical peak, rising to 987 m above Cape Barrow, at the seaward end of the divide between Simpson Glacier and Fendley Glacier, in the Admiralty Range, on the N coast of Victoria Land. Discovered by Ross in Jan. 1841, but not named. Charted by Campbell's Northern Party during BAE 1910-13, and named by Campbell for Apsley Cherry-Garrard (it had been called Conical Hill for a while before that). US-ACAN accepted the name in 1951, and NZ-APC followed suit. *See also* [2]**Conical Hill**.

Cherry-Garrard, Apsley George Benet. He was known simply as "Cherry." b. Jan. 2, 1886, Bedford, son of Maj. Gen. Apsley Cherry, by his wife Evelyn Edith Sharpin. In the 1890s an aunt died and left them a fortune, provided they changed their last name to Cherry-Garrard. After Winchester and Oxford (where he rowed), and after a trip around the world, he met Dr. Edward Wilson at a shooting party in Scotland, and Wilson introduced him to Scott. After an initial rejection, he bought his way into BAE 1910-13 with a donation of £1000 (see also Captain Oates), and went south on the *Terra Nova* as assistant zoologist, even though he had no scientific qualifications. He edited the *South Polar Times* (the expedition's newspaper), and, despite bad eyesight, took part in all the major sledge journeys, including "the worst journey in the world" (later, encouraged by his neighbor and friend, George Bernard Shaw, Cherry wrote a book with this title; in it, he was the first to say "all the world loves a penguin"). This was the trip to Cape Crozier and back, with Bowers and Wilson. Cherry tried and failed to relieve Scott's polar party on their return trip, and suffered great remorse and depression afterwards. During World War I he raised a squadron of armored cars and took them to Flanders, but his physical health gave way. He married Angela Turner in 1939, and died on May 18, 1959. In 2001 Sara Wheeler wrote the book *Cherry*.

[1]**Cherry Glacier** *see* **Cherry Icefall**

[2]**Cherry Glacier**. 84°30' S, 167°10' E. A deeply-entrenched and vigorous glacier which flows into the W side of the Beardmore Glacier from Mount Adams. Named by BAE 1910-13, for Apsley Cherry-Garrard. It appears in the 1958 provisional NZ gazetteer.

Cherry Icefall. 84°27' S, 167°40' E. A small, steep, deeply entrenched, and vigorous icefall on the S side of Barnes Peak, it descends from Mount Adams toward the Beardmore Glacier, in the Queen Alexandra Range. BAE 1910-13 discovered it, and Scott named it Cherry Glacier, for Apsley Cherry-Garrard, plotting it in 84°30' S, 167°10' E. However, the Southern Party of NZGSAE 1961-62, which was exploring the area to the SE, re-defined it as an icefall, and replotted it. NZ-APC accepted this new name on June 28, 1962, and US-ACAN followed suit in 1966.

Cherry Island. 73°45' S, 123°32' W. An ice-covered island, 5 km long, between Siple Island and Carney Island, and just within the Getz Ice Shelf, along the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for CWO J.M. Cherry, a member of the U.S. Army Aviation Detachment, in Antarctica during OpDF 66 (i.e., 1965-66). NZ-APC accepted the name on June 29, 1967.

Cherry Spur. 72°52' S, 162°00' E. A prominent rock spur that forms the SW portion of Sculpture Mountain, at the S end of Monument Nunataks. Studied geologically by Ohio State University field parties in 1981-82 and 1982-83. Named by US-ACAN for Eric M. Cherry (b. 1958), geologist with these parties.

Cherven Peak. 62°37' S, 61°13' W. A rocky peak rising to 220 m, 700 m SE of Ivan Vladislav Point, 860 m N of San Stefano Peak, 1.1 km W of Herring Point, and 3.8 km ESE of Cape Sheffield, on Rugged Island, off the W coast of Byers Peninsula (which is on Livingston Island), in the South Shetlands. Mapped

by the Spanish in 1993. Named by the Bulgarians on Dec. 15, 2006, for the settlement of Cherven, in northeastern Bulgaria.

Chervov Peak. 71°50' S, 10°33' E. Rising to 2550 m, 1.5 km N of Mørkenatten Peak, in the Shcherbakov Range, in the Orvin Mountains of Queen Maud Land. Roughly plotted from aerial photographs taken by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted by NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1960-61, and plotted by them in 71°52' S, 10°30' E. Named by the USSR in 1966 as Gora Chervova, for geologist Yevgeniy I. Chervov, who was on SovAE 1958-59. US-ACAN accepted the translated name Chervov Peak in 1970, and the feature has since been re-plotted.

Gora Chervova *see* **Chervov Peak**

Chesebro, Walter Scott. b. 1844, Groton, Conn., son of mariner Elihu Chesebro VI and his wife Mary Ann Wilbur. On Sept. 9, 1871, at Stonington, he married Prudence Ann Spicer. He was probably the captain of the *Charles Shearer* during her expedition to the South Shetlands in 1874-75. He was certainly her skipper in the 1875-76 voyage (not to Antarctica, but probably to South Georgia). He was not the skipper on her ill-fated voyage of 1877-78, having transferred to the *Golden West*, for a couple of years in South Georgia. In 1880-81 he took the *Wanderer* down to South Georgia, the South Sandwich Islands, the South Orkneys, and the South Shetlands. In 1881 he tried again, but was wrecked in the Falklands on Oct. 16, 1881. He and his crew were saved by the *Mary E. Higgins*, under the command of Capt. Ben Rogers. Apparently, he lived in Nouack, Conn.

Cheshire Rock. 62°22' S, 59°45' W. A rock awash in English Strait, about 1 m above mean high water, about 160 m SE of Passage Rock, W of Fort William (which is on Robert Island), in the South Shetlands. Charted in 1967 by an RN Hydrographic Survey unit on the *Protector*, led by Lt. Cdr. (later Capt.) Peter John Edward Cheshire (b. 1935), for whom UK-APC named this feature on Nov. 3, 1971. US-ACAN accepted the name in 1972. It appears in the 1974 and 1990 British gazetteers.

Cono Chester *see* **Chester Cone**

Chester, Captain. Captain of the Stonington sealer *Essex*, in the South Shetlands for the 1820-21 and 1821-22 seasons.

Chester, Charles W. b. 1824, Groton, Conn. He went to sea as a teenager, and worked his way up through the ship's ranks, plying the sealing trade in the South Atlantic in the 1840s and 1850s, becoming 2nd mate (on the *Julius Caesar*) in 1848, and 1st mate (on the *Columbus*) in 1850. He married Mary A. Williams. After the Civil War he was skippering his own whaling ships, and was commander of the *Franklin*, in the South Shetlands for the 1873-74 season.

Chester, James Arthur. Known as Arthur. b. Dec. 1878, Hull, Yorks. At 12 he began an apprenticeship on the *Southampton*, at the dockyard in Hull, and was an able seaman on the *Morning* during the 1902-03 relief of BNAE 1901-04. He married in Hull, in 1904, and died there in 1921.

Chester Cone. 62°38' S, 61°05' W. A cone-shaped elevation, rising to about 200 m, in the central part of Byers Peninsula, on Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1957-58. Named by UK-APC on July 7, 1959, for Capt. Chester (of the *Essex*). US-ACAN accepted the name in 1960. Name also seen as Cono Chester.

Chester Lake. 62°38' S, 61°06' W. A lake, meauring about 250 m long by about 300 m at its widest, 3900 m S of Midge Lake, and 700 m W of Chester Cone, on Byers Peninsula, Livingston Island, in the South Shetlands. Studied by Swedish and British paleolimnologists, it is a major location for the aquatic moss Drepanocladus. Named by UK-APC on Dec. 2, 1993, in association with the cone. The British were the latest to replot this feature, in late 2008.

Chester Mountains. 76°40' S, 145°35' W. A group of mountains just N of the mouth of Crevasse Valley Glacier, and 16 km N of Saunders Mountain, in the Ford Ranges of Marie Byrd Land. Mapped by ByrdAE 1933-35, and named by Byrd for Colby Mitchell Chester, Jr. (1877-1965), chairman of General Foods, 1935-43, and a supporter of Byrd's expedition. He was the son of Admiral Colby Chester. US-ACAN accepted the name in 1947, with the coordinates 76°41' S, 145°00' W. It has since been replotted.

Mount Chetwynd. 76°20' S, 162°02' E. A massif, capped by black rock, rising to over 1400 m (the New Zealanders say 1944 m), about 5 km SW of Mount Gauss, on the S side of Mawson Glacier, in the Kirkwood Range, in the Prince Albert Mountains of Victoria Land. Discovered by BNAE 1901-04, and named by Scott for his naval friend, Cdr. Louis Wentworth Pakington Chetwynd (1866-1914), younger brother of the 8th Viscount Chetwynd. US-ACAN accepted the name, as did NZ-APC. Chetwynd was, from 1904, superintendent of compasses at the Admiralty. Curiously, his son Philip, an ex-lawyer, jumped in front of a tube train at Piccadilly Circus in 1933. He was 27.

Nunatak Chetyrëhmetrovyj. 67°58' S, 63°25' E. Just S of the group of nunataks the Russians call Nunataki Kroshki, S by SW of McNair Nunatak, in the Central Masson Range, in Mac. Robertson Land. Named by the Russians.

Cheu Valley. 85°11' S, 173°54' W. A narrow valley, trending N-S for about 5 km in the Cumulus Hills, with its N end opening at the S side of McGregor Glacier, just W of the mouth of Gatlin Glacier. Named by the Texas Tech Shackleton Glacier Expedition of 1964-65, for specialist 5th class Daniel T. Cheu, a member of the U.S. Army Aviation Detachment which supported the expedition. NZ-APC accepted the name on Nov. 16, 1965, and US-ACAN followed suit in 1966.

Chevalier, George. b. 1870, Bluff, NZ. Taken on as a last minute replacement at Stewart Island, NZ, in late Nov. 1894, on Bull's *Antarctic* Expedition 1893-95. He was still sailing as an able seaman in the Antipodes in 1912.

Chevreul Cliffs. 80°32' S, 20°36' W. Rising to about 1500 m, to the E of Mount Dewar, at the E end of the Shottan Snowfield, in the Pioneers Escarpment, in the Shackleton Range. Photographed by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for Michel-Eugène Chevreul (1786-1889; he died aged 102), French chemist whose research on the nature of fats in 1823 led to the invention of stearine candles, used subsequently by polar explorers. US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Monte Chevreux *see* **Mount Chevreux**

Mount Chevreux. 65°46' S, 64°00' W. Rising to 1615 m, 8 km SE of Leroux Bay, on the Graham Coast, on the W coast of Graham Land. The name Mont Chevreux was applied by Charcot during FrAE 1908-10, to either (this is not clear) a feature mapped on the S side of Luke Glacier, or to the W extremity of the ridge N of Luke Glacier. Wilkins' map shows a feature in this area as Mount Chevreux. So, there was confusion. BGLE 1934-37 got rid of the confusion by settling on the point N of Luke Glacier, and it appears as such on Rymill's 1938 map of the expedition, and also on a 1948 British chart. US-ACAN accepted the name in 1951, and UK-APC followed suit on March 31, 1955. It was plotted, in those days, in 65°40' S, 64°00' W. It appears on a Chilean chart of 1947 as Monte Chevreux, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Photographed aerially by FIDASE in 1956-57. On July 7, 1959, UK-APC, feeling that confusion still existed, switched the name to the prominent mountain S of Luke Glacier, and US-ACAN followed suit with this in 1963. Édouard Chevreux (1846-1931) was a French zoologist.

Chevron Rocks. 84°07' S, 173°10' E. A distinctive rock outcrop at the N end of Retrospect Spur, near the head of Hood Glacier, in the Queen Maud Mountains. A NZ party climbed Retrospect Spur in 1959-60, and they named Chevron Rocks for their chevron-type appearance. Originally plotted in 84°07' S, 173°05' E, it has since been replotted. US-ACAN accepted the name in 1966.

Chi Bi. 62°14' S, 58°59' W. A bluff at the S end of Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Mount Chiang. 77°58' S, 162°39' E. A distinctive mountain, rising to 2900 m, having the appearance of a gable-like projection from the N part of Chaplains Tableland, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1992, for Erick Chiang, from 1991

manager of the polar operations section of the NSF's Division of Polar Programs.

Cima Chiavari. 79°52' S, 82°41' W. Rising to about 2000 m above sea level, 3.7 km NE of Schoeck Peak, it is the highest peak in the NW part of Horseshoe Valley, in the S part of the Heritage Range. Named by the Italians on Feb. 22, 2002, for Chiavari, the town in Italy that organized their expedition.

Bahía Chica. 63°21' S, 57°03' W. A little bay, immediately NW of Hope Bay, Trinity Peninsula. Named descriptively by the Argentines.

Baie Chica. 77°50' S, 41°30' W. An indentation in the Filchner Ice Shelf, not far from Ellsworth Station, in the S part of the Weddell Sea. Named by the French.

Baie Chica *see* **[2]Bahía Chica**

Isla Chica *see* **Challenger Island**, **Islote Chico**, **Guyou Islands**

Playa Chica. 62°27' S, 60°48' W. A small beach (hence the name) immediately NE of Punta Rapa Nui, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno who took part in ChilAE 1991-92, because it is much smaller than most beaches in the area.

Gora Chichagova. 70°37' S, 66°42' E. A nunatak, immediately W of Mount McGregor, at the SW end of the Thomson Massif, in the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Chick, Amos C. b. 1801, Maine. He married Elizabeth, and had a family in Portland. U.S. Navy carpenter on USEE 1838-42, joining the expedition at Callao. After the expedition, he lived in Maine for a while, then, in the 1850s, he and his family went to California for gold, returning to Maine in the 1860s. His wife died in the 1870s, and he went back out to California, to Mariposa County, with his son George, and the two of them mined out there.

Chick Island. 66°47' S, 121°00' E. An isolated rock island off the E end of the Sabrina Coast, about 16 km NE of the Henry Islands. Delineated from air photos taken by OpHJ 1946-47. In 1960 an ANARE expedition led by Phil Law visited it, and fixed its position. Named by ANCA on July 22, 1959, for Amos Chick. The Australians set up an AWS here, 20 m above sea level, in Feb. 1961, but closed it in August of that year. US-ACAN accepted the name in 1963.

Chickens. ByrdAE 1933-35 set out with 6 hens and 2 roosters on the *Jacob Ruppert*, but by the time they got to Easter Island on the way down to NZ, they had all mysteriously disappeared. The men averred that they must have been either eaten by the dogs (certainly not the men!), or had committed suicide by jumping overboard. However, one of the men picked up six replacement fowl on Easter Island, but only one, the rooster Kanaka Pete, survived beyond NZ. His toughness was ascribed to his Polynesian origins. However, on Jan. 7, 1934, while the ship circled about in the Antarctic fog, the cocky Kanaka Pete, long intrigued by the ventilators in the ship's engine room, finally could resist the temptation no longer, and made the jump, right into a stewpot. Mitchell and Lewisohn had no choice but to offer him the appropriate last rites. Finn Ronne took chickens with him on RARE 1947-48, one of whom was Petunia, who laid the first Antarctic egg, on July 18, 1947.

Cabo Chiclana *see* **Punta Barra**

Islote Chico. 65°03' S, 63°24' W. A little island, the smaller of the two Guyou Islands (two offlying rocks N of Lauzanne Cove), in Flandres Bay, off the Danco Coast of Graham Land. When ArgAE 1952-53 individualized these two islands, they called them Isla Grande (i.e., "big island") and Isla Chica (i.e., "tiny island"). Isla Chica was later renamed Islote Chico (i.e., "tiny, tiny island").

Monte Chico *see* **Monte Arellano**

Mount Chider. 72°06' S, 169°10' E. A notable mountain, rising to 3110 m, 3 km SE of Mount Hart, in the Admiralty Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Lt. Cdr. Thomas J. Chider, VX-6 helicopter pilot at McMurdo during OpDF 68 (i.e., 1967-68).

Chijire Glacier. 68°03' S, 43°23' E. Also called Tizire Glacier. Flows northward to the Prince Olav Coast, just E of the Chijire Rocks, and 27 km W of Carstensfjella, in Queen Maud Land. Mapped by Japanese cartographers from 1962 JARE air photos and also from ground surveys, 1957-62. Named by the Japanese on May 1, 1963, as Tizire-hyoga (i.e., "fold glacier"). US-ACAN accepted the translated name Chijire Glacier in 1964. The Norwegians call it Rukkebreen (which means the same thing).

Chijire Rocks. 68°02' S, 43°18' E. Also called Tizire Rocks. A group of small, exposed, craggy rocks on the Prince Olav Coast of Queen Maud Land, about 3 km W of the mouth of Chijire Glacier, and about 30 km W of Carstensfjella. Mapped by Japanese cartographers from 1962 JARE air photos, and also from ground surveys, 1957-62. Named by the Japanese on May 1, 1963, as Tizire-iwa (i.e., "fold rocks"). US-ACAN accepted the translated name Chijire Rocks in 1964. The Norwegians call this feature Rukkenutane (which means the same thing).

ChilAE *see* **Chilean Antarctic Expeditions**

Cape Child. 68°13' S, 72°20' E. A very isolated cape, due N of Nella Rim, on the Amery Ice Shelf. Reputedly named by the Russians.

Child, John Bonus. b. 1904, Croydon, Surrey, son of Major George Arthur Child. A merchant sailor with the P & O Line, he was 3rd officer on the *Discovery* during both halves of BANZARE 1929-31. After the expedition he was a marine superintendent in London, and during World War II was involved with security work for the Admiralty. He married, in 1932, in Sevenoaks, Kent, Margaret Mackinnon, daughter of Sir Percy Mackinnon (chairman of Lloyd's), and they lived at Tanglewood, Crockham Hill, Edenbridge, Kent, where he died on July 2, 1953, aged 49.

Child Rocks. 67°26' S, 63°16' E. A group of small islands and rocks at the W end of the Robinson Group, off the coast of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named them Vestskjera (i.e., "the west skerries"). Renamed by ANCA on Feb. 18, 1958, for J.B. Child. US-ACAN accepted the Australian naming in 1965. *See also* **Austskjera**.

Childs Glacier. 83°24' S, 58°40' W. Flows westward from Roderick Valley into the Foundation Ice Stream, in the Neptune Range of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS in 1965-66, during their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for John H. Childs, USN, builder who wintered-over at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Chile. Chile's first involvement in Antarctic was in 1820-21, when Andrew Macfarlane took down the *Dragon* from Valparaíso, with an at least partly Chilean crew (names unrecorded). In 1902 Messrs Braun and Blanchard, of Punta Arenas, sent down three sealing vessels to the South Shetlands — the *Archie*, the *Pichincha*, and the *Rippling Wave*. Adolf Amandus Andressen was the first to fly the Chilean flag in Antarctica, in 1906. That year plans to send a national expedition to Antarctica were wrecked by the great earthquake (*see* **Glaciar Huneeus** for more details). Cayetano Muñoz was a Chilean whaler on the *Tioga*, in 1912-13, who never made it home (see the entry under Muñoz, and also Whalers Bay Cemetery). On Nov. 6, 1940, Chile claimed the sector of Antarctica from 90°W to 53°W, most of which the UK had been claiming since 1908 (*see* **Falkland Islands Dependencies**). From 1947 on Chile established several bases on and around the Antarctic Peninsula. Their first expedition was ChilAE 1946-47 (*see* **Chilean Antarctic Expeditions**). The Presidential Antarctic Expedition (q.v.) came next, in 1947-48 (one ship — the *Presidente Pinto*), and there has been a ChilAE every year since. The first Chilean to winter-over in Antarctica may well have been Georges de Giorgio, on RARE 1947-48. In 1959 Chile was one of the 12 original signatories of the Antarctic Treaty. In 1985 they acquired Base T from the British, and renamed it Teniente Carvajal Station. The Chilean staff in Antarctica were for many years mostly uniformed. Other Chilean scientific stations in Antarctica have been Capitán Arturo Prat (the first to go up; it was originally called Soberanía), General Bernardo O'Higgins, Presidente Gabriel González Videla, Presidente Pedro Aguirre Cerda, Diego Ramírez, Presidente Frei, Chiloé, Teniente Rodolfo Marsh, and Yelcho.

Bahía Chile *see* **Discovery Bay**

Chile Bay *see* **Discovery Bay**

Chilean Antarctic Expeditions. These were the expeditions (ChilAE). **ChilAE 1946-47**. The first Chilean Antarctic expedition left Valparaíso in Jan. 1947, led by Capitán de navío Federico Guesalaga Toro. The *Iquique* (commanded by Capitán de fragata Ernesto González Navarrete, and with Don Federico Guesalaga aboard) left Valparaíso on Jan. 9, 1947, bound for Antarctica. 1st Lt. Sergio López Angulo (2nd in command), Capitán de corbeta Raúl del Canto M. (engineer). The transport *Angamos* (skipper: Capitán de fragata Gabriel Rojas Parker) left Valparaíso on Jan. 15, 1947, with 200 men aboard, also bound for Antarctica. Those on board the *Angamos* included: Capitán de corbeta Federico Bonnert Holzapfel (2nd-in-command); Lt. Fernando Ferrer Fougá (hydrographic officer), Óscar Pinochet de la Barra (who established his reputation on this trip, as representative of the Ministry of Foreign Relations), Dr. Arturo Larraín (from the Salvador Hospital, at Santiago), Dr. Graivy, Prof. Overard (meteorologist from Santiago University), Parmenio Yáñez Andrade and Juan Lengerich (marine biologists), Carlos Oliver Schneider (geologist), Guillermo Mann (whale expert), Louis Robin (French naturalist), two French journalists, and three Argentine observers — Capitán de corbeta Óscar H. Rousseau (*see* **Picacho Rousseau**), Teniente de navío Constantino Fraguío, and Teniente de fragata Federico Guillermo Aliaga García. Also on board was an Army delegation, led by Major Raúl Silva Maturana, and including Major Sebastián Carbonell Santander. There was also an Air Force delegation, which included Comandante de escuadrilla Enrique Byers del Campo (leader), Group Captain Eduardo Iensen Francke (2nd-in-command), 1st Lt. Humberto Tenorio, and 2nd Sgt. Juan Sayes Troncos, and Vought Sikorsky seaplane No. 308. Other members of the expedition included: 1st Lt. Fernando Serrano R. (surgeon), 2nd Lt. Humberto Tenorio Iturra (aviator), Ernesto de la Fuente Fuentes, 2nd Lt. Arturo Troncoso Daroch (later Chilean minister of education), writer Francisco Coloane (q.v.), Capitán de corbeta Ezequiel Rodríguez Salazar, Major Pablo Ihl (geodesist from the Instituto Geográfico Militar), Lt. Jorge González, Sargento 2° Pedro López, and glaciologist Humberto Barrera Valdebenito (*see* **Yalour Sound**). On Feb. 15, 1947 1st Lt. Arturo Parodi Alister (*see* **Teniente Arturo Parodi Station**) and Enrique Byers del Campo, Chilean Air Force (*see* **Byers Peninsula**), flew in the Sikorsky over parts of Antarctica. This was a first. Soberanía Station was established (*see* **Capitán Arturo Prat Station**). In early March the *Angamos* paid visits to certain FIDS stations. The expedition returned to Valparaíso in March 1947. **ChilAE 1947-48**. Led by Ernesto González Navarrete. His ships were *Covadonga* (Capt. Jorge Gándara Bofill) and *Rancagua*, which left Valparaíso on Dec. 18, 1947, heading south. Julio Ripamonti was back for a 2nd expedition. Roberto Gerstmann was the civilian photographer. Soberanía Station was relieved, and a new one — General Bernardo O'Higgins Station — was established as well. **ChilAE 1948-49**. This was a station relief expediton, led by Leopoldo Fontaine Nakin. The *Covadonga* (Capt. Jorge Gándara Bofill) and the *Maipo* (Capt. Raúl Koegel M.) sailed from Valparaíso on Jan. 2, 1949, and picked up the *Lautaro* (the third of the expedition ships; Capt. José Duarte V.) before they crossed the Drake Passage. The military delegation was headed by Lt. Col. Gregorio Rodríguez Tascón. The Air Force party was led by Lt. Humberto Tenorio, and also included Sub Lt. Rafael Vásquez. They brought with them a Vought-Sikorsky airplane. Arturo Parodi joined them in February. Óscar Pinochet de la Barra was on this expedition. Sergio Labarca J. was the representative of the Ministry of Foreign Relations. Julio Ripamonti was back for a third expedition. Leo Pucher de Kroll was an Austrian archeologist turned Bolivian, the first Bolivian national in Antarctica. Miguel Cadieux was the first Catholic chaplain in Antarctica. Lt. Ernesto Ibarra Carrasco was the first Chilean customs man in Antarctic waters. Others on the expedition included: Roberto Gerstmann (photographer), Clementino Arce (sargento), Víctor Sierra Acuña (cabo), Eleodoro Canales (soldier). The two stations were relieved in Jan. and Feb. 1949. It had been intended to establish a third base, in the western part of the Antarctic Peninsula, but weather foiled these plans. **ChilAE 1949-50**. Led by Alfredo Natho Davidson. The ships were: *Iquique*, *Maipo*, and *Lientur*. The expedition left Valparaíso on Feb. 2, 1949. Stations were relieved, and Coppermine Cove Refugio was built. **ChilAE 1950-51**. Led by Diego Munita Whittaker. The ships were: *Angamos*, *Lientur*, and *Lautaro*. It included an air force detachment. On March 12, 1951, Presidente Gabriel González Videla Station was inaugurated. **ChilAE 1951-52**. Led by Fernando Tisné Brousse. Ships were the transport *Angamos*, the oil tanker *Lientur* and the patrol ship *Leucotón*, all of which left Valparaíso on Jan. 7, 1952, and arrived at Punta Arenas ten days later. They took on further stores and equipment, and left for the South Shetlands, arriving at Discovery Bay on Jan. 27, 1952. The stations were relieved. **ChilAE 1952-53**. Led by Alberto Kahn Wiegand. Ships were: *Iquique*, *Maipo*, *Lientur*, and *Leucotón*. They left Valparaíso in mid-December 1952, bound for Punta Arenas, leaving there on Dec. 20, 1952, and arriving at Discovery Bay, in the South Shetlands, on Christmas Day, 1952. The provisioning and relief of the station there was completed by Dec. 31, 1952, and the party of 8 winterers were left. Yankee Bay Refugio was built. **ChilAE 1953-54**. Led by Alfredo López Costa. Ships were: *Rancagua*, *Lientur*, *Lautaro*, and *Covadonga*. The 3 scientific stations were relieved. **ChilAE 1954-55**. Led by Comodoro Jorge Gándara Bofill (*see under* **Gándara**). The ships were: *Covadonga*, *Maipo*, *Leucotón*, and *Lautaro*. A new station was established, Presidente Pedro Aguirre Cerda. **ChilAE 1955-56**. Led by Alfredo Martín Díaz. The ships were: *Baquedano*, *Rancagua*, *Lientur*, and *Leucotón*. Stations were relieved, and Cabo Gutiérrez Varas Refugio was built. **ChilAE 1956-57**. Led by Alejandro Navarrete Torres. The ships were: *Rancagua*, *Angamos*, *Lientur*, and *Lautaro*. On board the *Lautaro* was Tito Fígari Goma, sub director of the Observatory of the Catholic University of Chile. Prof. Humberto Barrera Valdebenito was on board the *Rancagua*, studying the geology and glaciology of the area (*see* **Yalour Sound**). The four stations were relieved. Luis Risopatrón Refugio was established. **ChilAE 1957-58**. Led by Gustavo Cruz Cáceres. Ships were: *Rancagua*, *Lientur*, *Lautaro*, and *Angamos*. **ChilAE 1958-59**. Led by Ramón Barros González. Ships were: *Maipo*, *Lientur*, and *Lautaro*. The four existing stations were relieved. **ChilAE 1959-60**. Led by Hugo Tirado Barros (*see* **Península Tirado**, under **T**). The ships were the *Piloto Pardo* and the *Leucotón*. The four stations were relieved. **ChilAE 1960-61**. Led by Pedro Jorquera Goicolea. Ships were: *Piloto Pardo*, *Lientur*, and *Yelcho*. **ChilAE 1961-62**. Led by Victor Wilson Amenábar. Ships were: *Piloto Pardo*, *Lautaro*, *Lientur*, and *Yelcho*. Piloto Pardo Refugio and Yelcho Refugio were built. **ChilAE 1962-63**. Led by Eugenio Court Echeverría. Ships were: *Piloto Pardo*, *Lientur*, *Yelcho*, and *Angamos*. Guesalaga Refugio was built. **ChilAE 1963-64**. Led by Federico Barraza Pizarro. Ships were: *Piloto Pardo*, *Angamos*, *Yelcho*, and *Lientur*. Stations were relieved. **ChilAE 1964-65**. Led by Augusto Geiger Stahr. Ships were: *Piloto Pardo*, *Covadonga*, and *Lientur*. **ChilAE 1965-66**. Led by Mario Poblete Garcés. Ships were: *Piloto Pardo*, *Yelcho*, and *Lientur*. **ChilAE 1966-67**. Led by Arturo Ricke-Schwerter. Ships were *Piloto Pardo* and *Lientur*. **ChilAE 1967-68**. Led by Boris Kopaitic O'Neill. Ships were: *Piloto Pardo*, *Lientur*, and *Yelcho*. **ChilAE 1968-69**. Led by Jorge Paredes Wetzer. Ships were: *Piloto Pardo*, *Yelcho*, and *Aquiles*. **ChilAE 1969-70**. Led by Ernesto Joubet Ojeda. Ships were *Piloto Pardo* and *Yelcho*. **ChilAE 1970-71**. Led by Carlos Borrowman Sanhueza. Ships were *Piloto Pardo* and *Yelcho*. **ChilAE 1971-72**. Led by Ladislao D'Hainaut Fuenzalida. Ships were the *Piloto Pardo* and the *Yelcho*. **ChilAE 1972-73**. Led by Jorge Le May Délano. Ships were: *Piloto Pardo*, *Yelcho*, and *Lientur*. Spring Refugio was built. **ChilAE 1973-74**. There was no (recorded) overall commander of this expedition, or for any of the subsequent ones. Ships were *Piloto Pardo* and *Yelcho*. **ChilAE 1974-75**. Ships were *Piloto Pardo* and *Yelcho*. **ChilAE 1975-76**. Shps were: *Piloto Pardo*, *Yelcho*, and *Beagle*. **ChilAE 1976-77**. Ships were: *Piloto Pardo*, *Yelcho*, *Lientur*, *Hemmerdinger*, and *Aquiles*. Much tourism on several of these ships. **ChilAE 1977-78**. Ships were: *Piloto Pardo*, *Yelcho*, and *Lientur*. **ChilAE 1978-79**. Ships were *Aquiles* and *Yelcho*. **ChilAE 1979-80**. Ships

were: *Piloto Pardo*, *Yelcho*, and the submarine *Simpson*. A new station, Teniente Rodolfo Marsh, was opened. **ChilAE 1980-81**. Ships were: *Piloto Pardo*, *Yelcho*, *Aquiles*, *Beagle*, *Itzumi*, and *Tocopilla*. Frei Station was administratively incorporated into Teniente Rodolfo Marsh Station. **ChilAE 1981-82**. Ships were: *Piloto Pardo*, *Capitán Luis Alcázar*, and *Yelcho*. **ChilAE 1982-83**. Ships were: *Piloto Pardo*, *Capitán Luis Alcázar*, and *Yelcho*. Ardley Refugio was built. Representatives from Peru, The People's Republic of China, and Uruguay, accompanied this expedition. **ChilAE 1983-84**. Ships were: *Piloto Pardo*, *Capitán Luis Alcázar*, *Maipo*, and *Lientur*. Representatives from Ecuador accompanied this expedition. **ChilAE 1984-85**. Ships were: *Piloto Pardo*, *Yelcho*, *Rancagua*, and *Capitán Luis Alcázar*. The British station on Adelaide Island was handed over to the Chileans, and renamed Teniente Carvajal Station. A bank opened [*see* [2]**Banks**]. Representatives from Spain accompanied this expedition. Much tourism. **ChilAE 1985-86**. The ships were: *Piloto Pardo*, *Yelcho*, *Rancagua*, and *Capitán Luis Alcázar*. **ChilAE 1986-87**. Ships were: *Piloto Pardo*, *Yelcho*, *Rancagua*, and *Capitán Luis Alcázar*. **ChilAE 1987-88**. This was the 42nd Chilean Antarctic Expedition. Ships were: *Piloto Pardo*, *Yelcho*, and *Capitán Luis Alcázar*. Much tourism. **ChilAE 1988-89**: Ships were *Piloto Pardo*, *Yelcho*, and *Capitán Luis Alcázar*. **ChilAE 1989-90**: Chief of naval operations was Enrique Casselli Ramos, and the ships were *Piloto Pardo*, *Yelcho*, and *Capitán Luis Alcázar*. **ChilAE 1990-91**: Jorge Vergara Dakic was chief of naval operations, and the ships were *Piloto Pardo*, *Yelcho*, *Capitán Luis Alcazar*, *Aquiles II*, and *Galvarino*. **ChilAE 1991-92**: The ships were *Piloto Pardo*, *Yelcho*, *Galvarino*, *Capitán Luis Alcázar*, *Aquiles II*, and *Lautaro*. Commanding officer of naval operations was Onofre Torres Colvin. **ChilAE 1992-93**: The ships were *Piloto Pardo*, *Yelcho*, *Galvarino*, *Lautaro*, *Aquiles II*, and *Quellón*. Commanding officer of naval operations was Jaime Urdangarín Romero. **ChilAE 1993-94**: The ships were *Piloto Pardo*, *Yelcho*, *Janequeo*, *Galvarino*, and *Capitán Luis Alcázar*. That season ChilAE, in cooperation with the Spanish, began the search for the *San Telmo* (q.v.). **ChilAE 1994-95**: The ships were *Piloto Pardo*, *Galvarino*, *Lautaro*, and *Contramaestre Micalvi* (*see as* **The *Micalvi***). **ChilAE 1995-96**: Ships were *Viel Toro*, *Galvarino*, *Vidal Gormaz*, and *Aspirante Isaza*. A Norwegian party accompanied the expedition, to survey the remains of the old whaling station at Deception Island. **ChilAE 1996-97**: The ships were *Viel Toro*, *Aspirante Isaza*, *Galvarino*, and *Lautaro*. **ChilAE 1997-98**: The ships were *Viel Toro*, *Aspirante Isaza*, *Galvarino*, and *Lautaro*. The old British Base V was transferred to the Chileans, becoming General Jorge Boonen Rivera, on Sept. 11, 1997. On Oct. 31, 1997, Presidente Eduardo Frei Ruiz-Tagle visited King George Island. **ChilAE 1998-99**: Ships were *Viel Toro*, *Lautaro*, *Galvarino*, *Micalvi*, and *Aspirante Isaza*. Prof. Eduardo García Soto died in a crevasse accident (*see* **Deaths**, 1999). The Chilean Air Force established a summer camp at the Patriot Hills. On Jan. 28, 1999, Fernando Rojas Vender stopped there en route from Punta Arenas to the South Pole, leading a helicopter flight. **ChilAE 1999-2000**: The ships were *Viel Toro*, *Lautaro*, and *Leucotón*. Presidente Ricardo Froilán Lagos Escobar visited King George Island, on April 1, 2000. Since then there has been an expedition every year, and the ships most frequently used have been *Viel Toro*, *Lautaro*, *Galvarino*, *Micalvi*, and *Aspirante Isaza*.

Ventana del Chileno *see* **Neptune's Window**

The Chiloé *see* **The Chloe**

Punta Chiloé *see* **Chiloé Point**

Chiloé Point. 65°31' S, 63°59' W. A distinctive point on the NE side of the peninsula that separates the S side of Beascochea Bay from Leroux Bay, on the Danco Coast, on the W side of Graham Land. Named by ChilAE 1946-47 as Punta Chiloé, after their province in Chile. It appears on their chart of 1947, and was the name accepted by the 1974 Chilean gazetteer. Photographed aerially by FIDASE in 1956-57. By 1978 the Argentines were calling it Punta Colastiné, after the naval battle of 1821. UK-APC accepted the name Chiloé Point on Dec. 8, 1977, and it appears as such in the 1980 British gazetteer. US-ACAN has made no comment (by July 2010) on this feature.

Chiloé Station. 66°00' S, 65°00' W. Chilean scientific station built in 1981 in the mountains along the Graham Coast, on the W coast of Graham Land. A 4000 meter-long aistrip was built here.

Laguna Chilota. 62°59' S, 60°43' W. A lagoon in the extreme SW of Port Foster, Deception Island, in the South Shetlands. Mapped by ChilAE 1946-47 on Jan. 22, 1947, and named by them on that date. The word "chilota" signifies someone from Chiloé, in Chile.

China. China sent scientists to work in Antarctica with Australian and NZ expeditions in 1982 and 1983, and on June 8, 1983 the country became ratified as the 27th signatory of the Antarctic Treaty. The China Institute on Polar Regions was formed in 1984, located in Shanghai, and Chinese scientists continued to work with other nations. In 1984-85 the first Chinese Antarctic Expedition was mounted, and the first Chinese scientific station in Antarctica, Great Wall Station, was built. China achieved consultative status within the Antarctic Treaty system on Oct. 7, 1985. The second Chinese station, Zhongshan, was opened in 1989. In 2009 the summer-only Kunlun Station was opened.

Chinese Antarctic Expeditions. These are the expeditions (ChinARE). **ChinARE 1984-85**. Also called ChinARE I, or CNARE 1. More than 500 persons participated in this expedition. The ships were the *Xiang Yang Hong 10* and the *J121*. Guo Kung was chief of land operations, and Cheng Dehong was head of sea operations. Great Wall Station (Changcheng Station, as it was called then) was built, and a post office opened there. The expedition received a tumultuous welcome when it returned to Shanghai in April 1985. 8 men wintered-over in 1985. **ChinARE 1985-86**. The personnel came in by air to Teniente Rodolfo Marsh Station. Changcheng Station became an all-year station. **ChinARE 1986-87**. Led by Qian Zhihong. The expedition came in by sea, on the *Ji Di*. **ChinARE 1987-88**. The station was relieved by air. **ChinARE 1988-89**. Chen Dehong led the expedition on the *Ji Di*. Zhongshan Station was opened on Feb. 26, 1989. **ChinARE 1989-90**. On Oct. 30, 1989, the expedition, led by Wan Guoming, left Qingdao on the *Ji Di*, bound for Antarctica. The ship called at Zhongshan Station, then at Changcheng Station. On April 10, 1990, the *Ji Di* returned to Qingdao. **ChinARE 1990-91**: Jang Zhidong led the expedition on the *Ji Di*. The *Hayang 4* assisted with the relief of the two stations. **ChinARE 1991-92**: Yan Qide led the expedition on the *Ji Di*. **ChinARE 1992-93**: Dong Zhaoqian led the expedition on the *Ji Di*. **ChinARE 1993-94**: The stations were relieved by air. **ChinARE 1994-95**: Chen Dehong led the expedition on the *Xue Long*. **ChinARE 1995-96**: Chen Liqi led the expedition on the *Xue Long*. **ChinARE 1996-97**: The ship was the *Xue Long*. **ChinARE 1997-98**: Jia Genzheng led the expedition on the *Xue Long*. **ChinARE 1998-99**: Wang Denzheng led the expedition on the *Xue Long*. **ChinARE 1999-2000**: Sheng Linhua and Wang Denzheng led the expedition on the *Xue Long*. **ChinARE 2000-01**: Great Wall Station was relieved by air, and Zhongshan by ANARE. **ChinARE 2001-02**: Great Wall Station was relieved by air, and Zhongshan by ANARE. **ChinARE 2002-03**: Great Wall Station was relieved by air, and Zhongshan by ANARE. **ChinARE 2003-04**: Great Wall Station was relieved by air, and Zhongshan by ANARE. **ChinARE 2004-05**: Great Wall Station was relieved by air, and Zhongshan by ANARE. **ChinARE 2005-06**: Great Wall Station was relieved by air, and Zhongshan by ANARE. **ChinARE 2006-07**: The ship was the *Xue Long*. Extensive building at Zhongshan was completed. **ChinARE 2007-08**: the largest ever Chinese Antarctic expedition left Shanghai in Nov. 2007, bound for Antarctica on the *Xue Long*. 91 members of the 1888-person team were aboard. The rest went down by air. **ChinARE 2008-09**: 204 personnel, led by Prof. Huigen Yang on the *Xue Long*. Jean de Pomereu was the first non-Chinese journalist allowed to take part in a Chinese Antarctic expedition. **ChinARE 2009-10**: this was the 26th expedition. The ship was the *Xue Long*, which left Shanghai on Oct. 11, 2009. The expedition left Zhongshan Station on March 5, 2010, for the return home via Australia.

Chinese Wall *see* **Great Wall Station**

Chinn, Eric James "Ricky." b. Aug. 31, 1934, Rochford, Essex, son of Alfred James H. Chinn and his wife Phyllis Margery E. Barnes. Legend has it he showed up one day at the BAS

office in London, in Sept. 1961, a rope salesman, and was taken on, as a member of BAS. Anyway, he became the first of the professional BAS base leaders, wintering-over at Base B in 1962, at Base F in 1963, at Halley Bay Station in 1967, and at South Georgia in 1970.

Chinn Glacier. 77°28' S, 162°15' E. A glacier descending the SW slopes of Mount Theseus, in Thomas Valley, in the E part of the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Named by NZ-APC on Jan. 30, 1998, for glaciologist Trevor J.H. Chinn (b. 1937), who worked with NZARP in Antarctica for many seasons. US-ACAN accepted the name later in 1998.

Chinook. b. Jan. 17, 1917. Arthur Walden's favorite dog and best friend, Chinook was a half-breed Eskimo husky, a famous lead dog with uncanny instincts, and the grandson of the lead dog used by Peary on his trip to the North Pole. He had won races, and climbed mountains in the USA and Canada, and obeyed traffic policemen's signals. He was lead dog in ByrdAE 1928-30, and two of his sons, Muskeag and Quimbo, were team leaders. It was on his 12th birthday, just outside Little America, that he was beaten in a fight for the first time, and he walked off, thoroughly disgusted with himself, into the Antarctic wasteland, and never came back.

Chinook Pass. 69°29' S, 68°33' W. Running N-S between Föhn Bastion and Wright Spires, at George VI Sound, on the Rymill Coast of Palmer Land, it is part of a convenient overland sledging route southward from Brindle Cliffs. Surveyed by BAS personnel from Base E, between 1970 and 1973. In keeping with the naming of several features in the area after famous winds of the world, UK-APC named this one on Dec. 8, 1977, for the warm, dry wind that descends from the E slopes of the Rockies, in North America. It appears in the 1980 British gazetteer. US-ACAN accepted the name.

Chinstrap Cove. 61°15' S, 54°11' W. A cove, 5 km NE of Escarpada Point, on the NW coast of Clarence Island, in the South Shetlands. Named by UK-APC on Nov. 3, 1971, for the large colony of chinstrap penguins observed here by the British Joint Services Expedition of 1970-71 (they surveyed it). US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer. The British were the latest to replot this feature, in late 2008.

Chinstrap penguins. *Pygoscelis antarctica*. One of the handful of penguin species available in Antarctica, they occur on and off the coasts of the northern Antarctic Peninsula, notably on Nelson Island, in the South Shetlands. They are also seen in the South Orkneys, and on Peter I Island. Also known as the ringed penguin, bearded penguin, and stonecracker, they were discovered by John R. Forster. They look like the Adélie penguin, but have a black "chinstrap." They grow to around 30 inches, and weigh about 8 pounds. They are pugnacious and have a very loud voice. They prefer rocky slopes and higher elevations, and lay 2 eggs. There is a rookery on Narebski Point, on King George Island.

Isla Chionis *see* **Chionis Island**

Islas Chionis *see* **Chionis Island**

Chionis Island. 63°53' S, 60°38' W. An island, about 850 m long, about 2 km S of Awl Point, off the SE coast of Trinity Island, in the Palmer Archipelago. In the 1920s whalers called it Snow Island (it appears as such on Capt. Johannessen's chart of 1919-20), but because a Snow Island already existed in the South Shetlands (just acrosss the Bransfield Strait, in fact), following FIDASE air photography in 1956-57, UK-APC renamed it on Sept. 23, 1960, for the sheathbill (*Chionis alba*). US-ACAN accepted this new name later in 1960. It appears on a British chart of 1961. It appears on Chilean charts of 1961 and 1966 as Isla Chionis, but the Chilean gazetteer chose to accept the name Islas Chionis in 1974. The Argentine call it Isla Chionis.

Chippantodd Creeks. This is an unofficial name at Halley Bay Station for some creeks about 5 km NNE along the coast from the station, named for Johnny Raymond (Chips — he was the carpenter) and Charlie Le Feuvre (Todd). Also known as Creeks of Chippantodd.

Chiprovtsi Islets. 62°37' S, 61°16' W. A group of small islands off the N coast of Rugged Island, in the South Shetlands. Named unofficially by the Bulgarians in association with nearby Chiprovtsi Point.

Chiprovtsi Point. 62°37' S, 61°16' W. Forming the E side of the entrance to Nishava Cove, this point projects 400 m from the N coast of Rugged Island, off the W coast of Byers Peninsula, 1.2 km W of Ivan Vladislav Point, and 1.7 km ESE of Cape Sheffield, in the South Shetlands. The point extends another 400 m northwestward by the Chiprovtsi Islets. Mapped by the British in 1968, and by the Spanish in 1993. Named by the Bulgarians on Dec. 15, 2006, for the town of Chiprovtsi, in northwestern Bulgaria.

Chiren Heights. 66°07' S, 64°49' W. Ice-covered heights, 16 km wide, at the base of Velingrad Peninsula, they extend for 21 km in a NE-SW direction between Barilari Bay and Holtedahl Bay, and are bounded by Caulfeild Glacier to the S, Simler Snowfield to the W, Hoek Glacier to the NW, Bilgeri Glacier to the N, and Weir Glacier to the E, on the Graham Coast, on the W coast of Graham Land. Coblentz Peak is at its W extremity, and Mount Zdarsky is in its north-central part. Mapped by the British in 1976. Named by the Bulgarians on Sept. 14, 2010, for the settlement of Chiren, in northwestern Bulgaria.

The *Chiriguano*. Argentine ocean-going tug in the South Shetlands and Antarctic Peninsula areas, which took part in the following expeditions: ArgAE 1948 (Capt. Pedro B. Cabello Moya); ArgAE 1948-49 (Capt. Enrique G.M. Grünwaldt); ArgAE 1949-50 (Capt. Benigno Ignacio M. Varela); ArgAE 1950-51 (Capt. Rodolfo Sáenz Valiente); ArgAE 1951-52 (Capt. Osvaldo E. Eguía); ArgAE 1952-53 (Capt. Carlos A. Brañas); ArgAE 1953-54 (Capt. Pablo F. Beláustegui); ArgAE 1954-55 (Capt. Adolfo V.R. Blüthgen); ArgAE 1955-56 (Capt. Juan Carlos Kelly); ArgAE 1956-57 (Capt. Ángel L. Bernasconi); ArgAE 1957-58 (Capt. Renato T. Celasso); ArgAE 1958-59 (Capt. Carlos Mayer); ArgAE 1959-60 (Capt. Eduardo P. Aratti); ArgAE 1960-61 (Capt. Armando Lambruschini); ArgAE 1961-62 (Capt. Benjamín H. Aguirre).

Bahía Chiriguano *see* **Chiriguano Bay**

Chiriguano Bay. 64°28' S, 62°31' W. A bay, NE of Strath Point, indenting the S end of Brabant Island for 6 km, in the Palmer Archipelago, off the W coast of Graham Land. Surveyed by ArgAE 1948-49, named by them, presumably as Bahía Chiriguano, for the *Chiriguano*, and, apparently it appears on their 1949 chart. Photographed aerially by FIDASE 1956-57. It appears as Bahía Chiriguano in the Argentine gazetteer of 1970. On Dec. 15, 1982, UK-APC accepted the name Chiriguano Bay, and US-ACAN followed suit. It appears as such in the British gazetteer of 1986. The Chileans call it Bahía Wilson, for Capitán de fragata Víctor Wilson Amenábar, skipper of the *Iquique* during ChilAE 1952-53. Don Víctor was director of the Naval Academy, Feb. 2, 1959-Feb. 8, 1960.

Nunatak Chirikova. 71°05' S, 66°10' E. A nunatak, N by NW of Mount Woinarski, in the Prince Charles Mountains. Named by the Russians.

Chirpan Peak. 62°37' S, 60°14' W. Rising to 535 m, it forms the W extremity of Bowles Ridge, 1.4 km W of the summit of Mount Bowles, 1.1 km SSW of Hemus Peak, and 2.9 km ENE of Rezen Knoll, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the town of Chirpan, in southern Bulgaria.

Chisel Peak. 67°40' S, 67°42' W. A prominent chisel-shaped peak, rising to about 1400 m on the SE side of Perplex Ridge, N of Dalgliesh Bay, on Pourquoi Pas Island, in Marguerite Bay, on the W coast of Graham Land. BAS geologists from Base E worked here from 1965 to 1970. Named descriptively by UK-APC on June 11, 1980, it appears in the 1982 British gazetteer. US-ACAN accepted the name.

Chisholm Hills. 73°26' S, 163°21' E. A group of steep-sided hills 10 km E of Gair Mesa, in the Southern Cross Mountains of Victoria Land. Named by the Southern Party of NZGSAE 1966-67, for Ross Chisholm, leader of the party. NZ-APC accepted the name on June 29, 1967, and US-ACAN followed suit in 1968.

Gora Chistaja. 72°42' S, 68°06' E. A nunatak just W of the Barkell Platform, on the N end of the Mawson Escarpment. Named by the Russians.

[1]**Ozero Chistoe**. 67°40' S, 45°53' E. One of several small lakes next to Lake Glubokoye, just E of Molodezhnaya Station, in the Thala Hills of Enderby Land. Named by the Russians.

[2]**Ozero Chistoe**. 70°23' S, 68°51' E. A lake just E of Else Platform, in Mac. Robertson Land. Named by the Russians.

Ozëra Chistye. 67°42' S, 62°27' E. A couple of lakes SW of Forbes Glacier, in the Framnes Mountains of Mac. Robertson Land. Named by the Russians.

Chitty, Walter Diego. Captain of the Argentine privateer *Trinidad*, in 1815, when that vessel and 3 others got blown off course to 65°S (*see* **Brown, Guillermo**).

Mount Chivers. 82°32' S, 161°26' E. Rising to 1755 m, between the mouths of Otago Glacier and Tranter Glacier, in the N part of the Queen Elizabeth Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Hugh J.H. Chivers, USARP upper atmosphere physicist at Byrd Station, Pole Station and Hallett Station, in 1962-63.

The *Chiyo Maru*. Japanese freezer ship in Antarctic waters in 1971-72, with the *Jinyo Maru*, both vessels acting as mother ships for Japanese Minke whaling. She was back alone in 1973-74.

The *Chiyoda Maru*. There were at least 5 ships with this name—with the numbers 1, 2, 3, 4, and 5, coming after the name *Chiyoda Maru*—all belonging to the Japan Marine Fishery Resources Research Center. One or more of them were in Antarctic waters in 1966-67 and 1972-73, investigating possibilities of whaling and krill. Capt. Kazayuki Kawashima was skipper of the *Chiyoda Maru 5* in 1966-67, and also of the *Chiyoda Maru* in 1972-73, investigating krill in the Scotia Sea. *See also* **The *Ohtsu Maru***.

Chkalov Bluff. 67°12' S, 56°24' E. The most southerly of the Turbulence Bluffs, on the E side of Robert Glacier, in Kemp Land. Photographed aerially by ANARE in 1956 and 1959, and again by SovAE 1962, the latter naming it Gora Chkalova (i.e., "Chkalov mountain"), after V.P. Chkalov, Soviet aviator. ANCA translated it.

Gora Chkalova *see* **Chkalov Bluff**

Chlamys Ledge. 62°09' S, 58°07' W. A ledge of Tertiary sandstone, about 65 m above sea level, showing bivalve Chlamys impressions, on Chopin Ridge, above Mazurek Point, King George Island, in the South Shetlands. Named by the Poles by 1988, they accepted the name officially on Sept. 1, 1999.

Chmyznikovnuten *see* **Mount Khmyznikov**

Chochoveni Nunatak. 63°40' S, 58°18' W. A rocky hill rising to 650 m in the SW part of the Cugnot Ice Piedmont, 3.87 km S by E of Smin Peak, 4.29 km NW of Kolobar Nunatak, 3.34 km NE of Coburg Peak, and 5.75 km E of Drenta Bluff, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlements of Golyamo (Great) Chochoveni and Malko (Little) Chochoveni, in southeastern Bulgaria.

Cape Chocolate. 77°56' S, 164°35' E. A small cape, made up of dark morainic material from the W edge of Koettlitz Glacier, it forms the S side of Salmon Bay, on the coast of southern Victoria Land. Discovered by BNAE 1901-04, and named descriptively by them. US-ACAN accepted the name, and it appears in the 1958 NZ gazetteer.

Chocolate Nunatak. 72°36' S, 166°03' E. An isolated nunatak, 5 km (the New Zealanders say 3.5 km) WSW of Mount McCarthy, at the E side of the head of Mariner Glacier, at the S end of the Barker Range, in Victoria Land. Named for the red-brown color of the rocks which comprise the nunatak, hence the name used in a geological paper by Bruce Riddolls and Graham Hancox (geologists with the Northern Party of NZGSAE 1966-67, to the upper Mariner Glacier), which appeared in the Nov. 1968 edition of the NZ *Journal of Geology and Geophysics*. NZ-APC and US-ACAN both accepted the name in 1972. There are sources that have the New Zealanders spelling it "Chocalate." This is perpetuated rubbish.

Chocolate Step. 71°50' S, 167°00' E. A shallow "step," or icefall, in the upper part of the Tucker Glacier. Named by the Southern Party of the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, in association with Biscuit Step and Pemmican Step on the same glacier. NZ-APC accepted the name on June 27, 1963.

Chokalskii Bay *see* **Schokalskiy Bay**

Punta Cholchol. 67°24' S, 67°58' W. A point forming the extreme NE of the peninsula which separates Ryder Bay from the bay next N, on the E coast of Adelaide Island. Named by ChilAE 1946-47, for the town in Chile (also spelled Chol Chol). Since at least 1978, the Argentines have called this feature Cabo Rosario. Sighing Peak is on this point.

Île Cholet *see* **Cholet Island**

Îlot Cholet *see* **Cholet Island**

Isla Cholet *see* **Cholet Island**

Cholet, Ernest. He was with Charcot at Jan Mayen Island in 1902, and was captain of the *Français* during FrAE 1903-05, and again with Charcot, captain of the *Pourquoi Pas?* during FrAE 1908-10.

Cholet Island. 65°04' S, 64°03' W. A small island immediately N of the narrow peninsula that constitutes the W extremity of Booth Island, it forms the W entrance point of Port Charcot, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Discovered and charted by FrAE 1903-05, and named by Charcot as Îlot Cholet, for Ernest Cholet. On a 1908 Charcot map it appears as Île Cholet. It appears as Cholet Island on a 1930 British chart, and that was the name accepted by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1958. However, it appears as Cholet Isle on a 1943 U.S. Hydrographic Office chart. It appears on a 1953 Argentine chart as Isla Cholet. The island was photographed aerially by FIDASE in 1956-57. US-ACAN accepted the name Cholet Island in 1963.

Cholet Isle *see* **Cholet Island**

Cholodnoevatnet *see* **Ozero Holodnoe** (under **H**)

Cerro Chonos. 62°28' S, 60°47' W. A hill to the NW of the marine channel the Chileans call Paso Largo, and SE of Cerro El Toqui, on Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91, for the Chonos, a native people of Chile.

Chopin Hill. 71°42' S, 73°50' W. A low, snow-covered hill, rising to about 600 m (the British say about 250 m), 3 km SW of Mount Schumann, on Beethoven Peninsula, in the SW part of Alexander Island. Mapped by Searle of the FIDS in 1959-60, using air photos taken by RARE 1947-48, and plotted by him in 71°36' S, 73°46' W. Named by UK-APC on March 2, 1961, for the Polish-French composer Frédéric Chopin (1810-49), who died too young. US-ACAN accepted the name later in 1961. The coordinates were corrected from U.S. Landsat imnages taken in Jan. 1973, and, with the new coordinates, the feature appears in the 1977 British gazetteer.

Chopin Ridge. 62°09' S, 58°08' W. A ridge running N-S at a maximum elevation of about 265 m above sea level, between Low Head and Lions Rump, on King George Island, on the Bransfield Strait, in the South Shetlands. Named by PolAE 1977-79, as Gran Chopina, for Chopin the composer (*see* **Chopin Hill**), the name was accepted by the Poles in 1980, and it appears on a Polish map of that year. UK-APC accepted the name Chopin Ridge, on April 3, 1984, and it appears in the 1986 British gazetteer. US-ACAN followed suit with the British naming. The British were the latest to replot this feature, in late 2008.

Gran Chopina *see* **Chopin Ridge**

Mount Choto. 69°12' S, 39°40' E. Also spelled Mount Tyoto. A mountain with 3 peaks that rise to between 340 m and 378 m above sea level, it surmounts the N end of the Langhovde Hills, on the Prince Olav Coast of Queen Maud Land. Photographed aerially by LCE 1936-37, and roughly mapped from these photos in 1946 by Norwegian cartographers, who seem not to have named it. Later mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on Oct. 1, 1962, as Tyoto-zan, Tyoto-san, or Choto-san (i.e., "mount long-head"), in connection with the Langhovde Hills (it is, in fact, a translation of the Norwegian "Langhovde," meaning "long head"). The Norwegians call it Langskallane (which is a translation of the Japanese name). US-ACAN accepted the name Mount Choto in 1968.

Choto-san *see* **Mount Choto**

Cabo Choyce *see* **Choyce Point**

Cape Choyce *see* **Choyce Point**

Choyce, Michael Antony "Mac." b. Nov. 17, 1919, Ashby-de-la-Zouch, Leicestershire, son of George William Newberry Choyce and his wife Ellen Matterson. He served as a met

man during World War II, and was a lieutenant in the RNVR when he joined FIDS in 1945, and became leader at Base C in the winter of 1946, and (just) meteorologist at Base D in 1947. He was one of the few married Fids. In 1948 he returned to Port Stanley, and from there took the *Lafonia* back to London, where he arrived on April 21, 1948. In the 1960s he worked in Nigeria, and died in Norwich in Nov. 1996.

Choyce Point. 67°42' S, 65°23' W. The N entrance point of Seligman Inlet, it projects into the Larsen Ice Shelf from the E coast of the Antarctic Peninsula, opposite Francis Island, at the Bowman Coast, on the E coast of the Antarctic Peninsula. A rocky bluff rises to 914 m behind the point as viewed from the ice shelf. Photographed aerially by USAS 1939-41. Surveyed by Fids from Base D in 1946-47, and the bluff was named by them as Cape Choyce, for M.A. Choyce. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. That was the name that appeared in the 1955 British gazetteer. It appears on a 1957 Argentine chart as Cabo Choyce, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It appears on an American Geographical Society map of 1970 erroneously as Cape Church. Following a survey by BAS personnel from Base E in 1963-64, this feature was renamed Williamson Point, after William Williamson (*see* **Williamson Bluff**), and the name Choyce Point (the name Cape Coyce was eliminated) was incorrectly applied to a geologically significant point rising to 230 m above the ice shelf 5 km SW of Tent Nunatak. That situation was accepted by UK-APC on Dec. 20, 1974, and by US-ACAN in 1975. The Argentines went along with it as well, calling it Punta Williamson. However, on July 21, 1976, UK-APC, having realized their mistake, re-applied the name Choyce Point to the present feature, and did away with the name Williamson Point (i.e., there is no Williamson Point any more). US-ACAN accepted this situation later in 1976. Choyce Point appears then, as it should, in the 1977 British gazetteer.

Caleta Choza *see* **Hut Cove**

Mount Christchurch. 82°28' S, 164°10' E. Rising to 1355 m (the New Zealanders say 1432 m), 11 km SW of Cape Lyttelton, on the S side of Shackleton Inlet, it is the most northerly of the peaks in the Queen Elizabeth Range, on the W side of the Ross Ice Shelf. Discovered during BNAE 1901-04, and named by Scott for the NZ town that supported the expedition (and which was to prove a loyal supporter of so many Antarctic expeditions from so many countries). US-ACAN accepted the name, as did NZ-APC. Nicknamed Chee-chee.

Mount Christen Christensen *see* **Christensen Nunatak**

Cape Christensen *see* **Christensen Nunatak**

Île Christensen *see* **Christensen Nunatak**

Isla Christensen *see* **Christensen Nunatak**

Monte Christensen *see* **Christensen Nunatak**

[1]**Mount Christensen** *see* **Mount Mervyn, Christensen Nunatak**

[2]**Mount Christensen**. 67°58' S, 47°52' E. Also spelled Mount Kristensen. A prominent, very high, ice-covered mountain, rising to 1475 m on the continental ice-cap, on the SW side of Rayner Glacier, it overlooks Casey Bay (which is 37 km to the N), in Enderby Land. Discovered on Jan. 13, 1930 by BANZARE, and named by Mawson for Lars Christensen. US-ACAN accepted the name in 1947, and ANCA followed suit. Originally plotted in 67°57' S, 48°00' E, it has since been replotted.

Nunatak Christensen *see* **Christensen Nunatak**

Volcán Christensen *see* **Christensen Nunatak**

Christensen, Andrew. b. 1888. Seaman on the *Bear of Oakland*, during both halves of ByrdAE 1933-35. He later became a steelman, and in 1937 was in Middletown, Conn., helping to build the bridge across the Connecticut River. In 1938 he left for New York.

Christensen, August Fredrik. Known as "Aug F." b. 1888, Framnaes, near Sandefjord, Norway, son of Christen Christensen and his wife Augusta Fredrikke. In 1905-06, he was on his father's whaler *Admiralen*, in the South Shetlands, and from 1907 to 1915 was head of his father's whaling operations in the South Shetlands and in Chile. He was manager (but not skipper; that was Capt. Englund) of the *Vesterlide*, 1908-09. In fact, that season he led the Christensen fleet (*Admiralen*, *Nor*, *Vesterlide*, and catchers). He then went back to Norway, going into the shipowning business, and being the Ecuadorian consul in Oslo. He married Signe Haller in 1930, and died in 1959.

Christensen, Bjarne. Skipper of the *Svend Foyn I*, in 1915-16.

Christensen, Christen Fredrik "Chris." b. Sept. 9, 1845, Østre Moland, Norway, son of Søren Lorentz Christensen and his wife Otilie Juliane Kruge. Naval architect, ship owner, shipyard owner (he built and owned Framnaes Mek., the great Norwegian shipyard), and whaling fleet manager, from Sandefjord who, in 1905, sent the first factory whaling ship, the *Admiralen*, to the South Shetlands. He died on Nov. 16, 1923. Father of Lars Christensen, Christen Christensen, and August Christensen.

Christensen, Christen Stugard. b. 1873, Tønsberg, Norway, son of Christen Christensen and his wife Jensine Anne Tollefsen. He went to sea, and by 1900 was a mate. He was manager of the factory whaling ship *Ronald*, 1911-12 and 1912-13. In fact, he led the 1912-13 expedition to Deception Island to build the whaling station there. The *Ronald* and the *Hektoria* were the two ships.

Christensen, Georg R. b. Feb. 1, 1897, Vestre Moland, Norway, son of fisherman Syvert Christensen and his wife Karoline Margrethe. One of the 4 employees of the Hektor Whaling Company who died immediately when the whale catcher *Bransfield* capsized in the Whalers Bay, Deception Island (or was it South Bay, Deception Island? Sources vary), in the South Shetlands, on March 11, 1924, and was buried in the Whalers Bay Cemetery.

Christensen, Ingrid. b. Oct. 22, 1891, Sandefjord, Norway, daughter of wholesale merchant and ship owner Thor Dahl, the richest man in Sandefjord, and his wife Dorthea Kristine. She and Lars Christensen were married in 1910. She was with her husband aboard the *Thorshavn*, during LCE 1936-37, and on Jan. 27, 1937, flew as a passenger over the Ingrid Christensen Coast, dropping a flag as she did so. At 2 A.M., on Jan. 30, 1937, she became the second woman on the Antarctic continent itself, when she accompanied a party there to establish a depot at Mount Caroline Mikkelsen (named after the first woman to step ashore on the actual continent).

Christensen, Lars. b. April 6, 1884, Framnaes, near Sandefjord, Norway, youngest son of Chris Christensen and his wife Augusta Fredrikke, and thus grew up in the Norwegian whaling and sealing business. Lars broke out on his own in 1907, with his company A/S Condor, operating fleets out of Chilean and southern waters, including South Georgia (54°S). In 1909-10 he was manager of the *Nor*, in South Georgia and Graham Land waters, and in 1910 he married Thor Dahl's daughter, Ingrid (*see* **Christensen, Ingrid**). When his father died in 1923, Lars took over the family business. Between 1927 and 1931 he sent the *Odd I* once (1926-27) and the *Norvegia* four times (1927-28, 1928-29, 1929-30, and 1930-31) to Antarctica. In order to direct personally the exploration of his whaling ships and seaplanes, Lars himself went down on the *Thorshavn* in 1931-32, 1932-33, 1933-34, and 1936-37. The last expedition is referred to in this book as LCE 1936-37 (*see* **Lars Christensen Expedition 1936-1937**). Ingrid and their youngest daughter also came on this 1936-37 expedition. Lars also financed the 1934-35 expedition of the *Thorshavn*, under Capt. Klarius Mikkelsen, and the 1935-36 expedition in the new *H.J. Bull*. Lars, who was also a consul, wrote *Such is the Antarctic*. In 1940, when Germany invaded Norway, Lars was in the USA, and remained there until 1945. He died in NYC, on Dec. 10, 1965.

Christensen, Leonard *see under* **Kristensen**

Christensen, Mervyn Valdemar *see* **Mount Mervyn**

Christensen Berg *see* **Christensen Nunatak**

Christensen Island *see* **Christensen Nunatak**

Christensen Nunatak. 65°06' S, 59°31' W. A reddish-brown bare rock nunatak, actually the crater of an extinct volcano, rising to about 300 m (the Chileans say about 220 m), about 3 km N of the extreme NE point of Robertson Island, in the Seal Nunataks, off the E coast of the Antarctic Peninsula. Discovered by Carl

Anton Larsen on Dec. 11, 1893, when it was incorrectly described as an active volcano and (correctly located, but with a wrong definition) as an island 1.5 km off the NE side of Robertson Island. He named it Christensens Ø, for Christen Christensen (q.v.), owner of Larsen's ship the *Jason*. It also appears on his charts variously as Christensen Volcano, Christensens Volcano, and Christensens Vulkan. Bruce, in 1894, knew that Larsen had found this feature, and incorrectly says that he (Larsen) named it Jason, and, as a consequence, it appears on an 1894 map as Jason Volcano. It appears translated as Christensen Island on a British chart of 1901. Surveyed in Oct. 1902 by SwedAE 1901-04 as a mountain on Robertson Island. It appears variously on their expedition charts as Christensen Berg, Christensens Berg, and even as Île Christensen. In the English language translations of these maps it appears as Mount Christensen. There are two 1908 Argentine references to it, one as Volcán Christensen, and the other as Monte Christensen. It appears on a 1921 British chart as Cape Christensen, but as Mount Christensen on a 1945 British chart. Wilkins' 1929 map shows it as Christensen Peak. It appears erroneously on a 1943 USAAF chart as Mount Robertson, and on a 1947 U.S. Hydrographic Office chart as Mount Christen Christensen. Surveyed in Aug. 1947 by Fids from Base D, and renamed by them as Christensen Nunatak. This name was accepted by UK-APC on Jan. 22, 1951, and by US-ACAN in 1952. Following FIDS resurveys in 1953 and 1955, it was mapped as being separate from Robertson Island, and that is how it was shown in the 1955 British gazetteer. USN air photos confirmed that it is not part of Robertson Island. The Argentines established their field station, Capitán Campbell Refugio (q.v.), on this nunatak on Nov. 30, 1961, for a flight to the South Pole on Jan. 6, 1962. It was evacuated on Jan. 21, 1962. The feature itself appears on a 1962 Chilean chart as Nunatak Christensen, and that was the name accepted by the 1974 Chilean gazetteer. It appears on an Argentine chart of 1963, as Isla Christensen, and that seems to be the name they use to this day. The Germans call it Christensenvulkan.

Christensen Peak *see* **Christensen Nunatak, Lars Christensen Peak**

Christensen Volcano *see* **Christensen Nunatak**

Christensenkollen. 74°35' S, 10°51' W. A hill between the ice corrie the Norwegians call Cappelenbotnen and the ridge they call Berggravrista, in the N part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Christian Arthur Richard Christensen (1906-1967), journalist and early Resistance leader during World War II.

Christensens Barriere *see* **Larsen Ice Front**

Christensens Berg *see* **Christensen Nunatak**

Christensens Ø *see* **Christensen Nunatak**

Christensens Volcano *see* **Christensen Nunatak**

Christensenvulkan *see* **Christensen Nunatak**

Mount Christi. 62°55' S, 62°24' W. Rising to about 1280 m, almost 5 km NE of Mount Pisgah, in the NE part of Smith Island, in the South Shetlands. In 1828-31 Foster named the N cape of the island as Cape Christi, but that cape had already been named Cape Smith. The mountain was surveyed and charted by an RN Hydrographic Survey unit in 1951-52, and named by them as Mount Smith. However, on March 31, 1955, in order to honor Foster's intentions, this mountain was named by UK-APC as Mount Christi. It appears as such in the 1961 British gazetteer. US-ACAN accepted the name in 1956. Christi should have read "Christie," Foster naming it for scientist and mathematician Samuel Hunter Christie (1784-1865), a fellow member of the Royal Society at the same time as Henry Foster, and with whom Foster not only conducted experiments on magnetism and pendulums, but even (in 1826) wrote a book with on the subject. The subject was one of the main reasons for Foster's *Chanticleer* Expedition to Antarctica. Christie was professor of mathematics at the Royal Military Academy, Woolwich, 1838-54; secretary of the Royal Society, 1837-53; and son of James Christie, the founder of the famous auction house.

Glacier Christiaensen *see* **Christiaensen Glacier**

Christiaensen Glacier. 71°32' S, 35°37' E. A glacier, 3.5 km long, flowing E-W between Mount Eyskens and Mount Derom, in the Queen Fabiola Mountains. Discovered on Oct. 7, 1960 by BelgAE 1959-61, and named by expedition leader Guido Derom as Glacier Christiaensen, for Leo Christiaensen, captain of the *Erika Dan*. US-ACAN accepted the name Christiaensen Glacier in 1966.

Christian, Robert E. b. ca. 1912, Auckland, NZ. This man was one of the 3 successful stowaways on the *Jacob Ruppert*, 1933-34, during ByrdAE 1933-35. Byrd's book *Discovery* gives him E.W. Christian, but the press all say Robert E. Christian.

Christian Islands *see* **Christiania Islands**

Baie de la Christiane *see under* **D**

Île(s) Christiania *see* **Christiania Islands**

Islas (or Islotes) Christiania *see* **Christiania Islands**

Christiania Islands. 63°57' S, 61°28' W. A group of islands and rocks in the Palmer Archipelago, ENE of Liège Island, between that island and Trinity Island, off the W coast of Graham Land. The largest is Intercurrence Island, and the others include Small Island, Gulch Island, Babel Rock, and Grinder Rock. Charted in Jan. 1898 by BelgAE 1897-99, and named by de Gerlache as Îles Christiania, for the Norwegian capital in which the *Belgica* was fitted out. The famous Norwegian city was originally called Oslo, then in 1624 Christian IV renamed it Christiania. In 1878 the spelling changed to Kristiania, and in 1924 the name changed back to Oslo. The name Christiania Islands appears on Frederick Cook's English language version map of de Gerlache's expedition, and again, as such on a 1901 British chart. SwedAE 1901-04 mapped it singularly as Île Christiania, or Île Kristiania, and that led to Christiania Island, Kristiania Island, and Isla Christiania. The Argentines were calling the group Islas Christiania as early as 1907. A chart of 1911 incorrectly reported the islands as nonexistent, but they appear on a 1916 British chart as Christiania Islets. Bagshawe noted in 1939, reflecting upon his British Imperial Antarctic Expedition of 1920-22, that "the whalers usually refer to the large one [i.e., Intercurrence Island] as Christiania Island, ignoring the two smaller ones [i.e., Small Island and Gulch Island]." The group appears on a 1942 USAAF chart as Christian Islands, on a Chilean chart of 1947 as Islas Cristiania, and on a 1948 Argentine chart as Islotes Christiania. US-ACAN accepted the name Christiania Islands in 1952, and UK-APC followed suit on Sept. 8, 1953. They appear as such in the 1955 British gazetteer, and also on a British chart of 1962. The feature was photographed aerially by FIDASE in 1956-57. The Argentine gazetteer of 1970 accepted the name Islotes Cristiania, while the Chilean gazetteer of 1974 accepted the name Islas Christiania.

Christiania Islets *see* **Christiania Islands**

Christiansen, H. *see* **Órcadas Station, 1910**

Christiansen Point. 68°22' S, 78°32' E. A rocky promontory at the NE extremity of the Vestfold Hills, about 0.8 km S of the Wyatt Earp Islands, it is lined with black basalt dikes stretching into the sea from the Polar Plateau. Named by ANCA on Sept. 26, 1978, for Colin "Col" Christiansen, who found Sir Hubert Wilkins' records in the Walkabout Rocks. Mr. Christiansen wintered-over at Mawson Station in 1971, Casey Station in 1975, and Davis Station in 1977.

Cape Christie. 72°18' S, 170°02' E. A cape, 8 km WNW (the New Zealanders say about 16 km N) of Cape Hallett, it marks the W side of the entrance to Edisto Inlet, and the S point of Moubray Bay, on the coast of Victoria Land. Discovered on Jan. 15, 1841, by RossAE 1839-43, and named by Ross for Samuel Hunter Christie (*see* **Mount Christi**) US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Christie, Alexander Fraser "Jock." b. 1924, Bothwell, Lanarkshire. During World War II he was in what would later be called special forces in the Balkans, as a radio man in the Army. Ray Berry says he thinks he worked for the intercept centre at GCHQ. He joined FIDS in 1951, as a radioman, and wintered-over at Base B in 1952. It was Jock who brought the piglet from Port Stanley. They fed it on scraps and chocolate. The pig wound up making the supreme contribution to Midwinter's dinner.

Christie, Robert. Able seaman on the *Terra Nova* during the 1903-04 relief of BNAE 1901-

04. When it came time to deliver his Polar Medal, he couldn't be found.

Christie Peaks. 71°15' S, 67°25' W. A conspicuous group of sharp peaks, rising to about 760 m, immediately S of the terminus of Ryder Glacier, in the N part of the Batterbee Mountains, on the W coast of Palmer Land, at George VI Sound. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for Timothy Julian Churchill Christie (b. 1934, Cheltenhham, Glos), BAS surveyor who wintered-over at Base E in 1970 and 1971. US-ACAN accepted the name later in 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Christine Island. 64°48' S, 64°02' W. A little island, 0.8 km long, 1.5 km off the S coast of Anvers Island, near Palmer Station, SE of Arthur Harbor, and 2.5 km SE of Bonaparte Point. There is a penguin colony here. Surveyed by Fids from Base N in 1956-57. Following the work done here by USARP personnel from Palmer, the name was proposed by Dietland Müller-Schwarze, for his wife Christine. US-ACAN accepted the name in 1974, and UK-APC followed suit on May 30, 1975.

Cabo Christmas *see* **Cape Christmas**

Cape Christmas. 72°20' S, 60°41' W. An abrupt rock cape rising to 320 m above sea level, and marking the N side of the entrance to Wüst Inlet, on the Black Coast, on the E coast of Palmer Land. Discovered and photographed aerially in Dec. 1940, by USAS 1939-41. In late 1947 it was photographed aerially again, by RARE 1947-48. In Dec. 1947, it was surveyed from the ground by a combined sledging team of RARE personnel and Fids from Base E. The team spent Christmas of 1947 here, and FIDS named it accordingly. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears on a British chart of 1954, in the 1955 British gazetteer, and on the 1979 USGS sketch map of the N part of Palmer Land. It appears on a 1957 Argentine chart as Cabo Christmas, but the name the Argentines chose to go for officially was Cabo Navidad (a complete translation). The Chileans, on the other hand, went for Cabo Christmas.

Mount Christmas. 81°54' S, 161°56' E. A uniform, sharp, cone-shaped peak, rising to 1745 m (the New Zealnders say 1889 m), and standing in a somewhat isolated position overlooking Cape May, which is 14 km to the ENE, in the Nash Range, nearer the W edge of the Ross Ice Shelf than the main range, between Mount Markham and Mount Albert Markham. Discovered by Scott's Polar Party on Dec. 25, 1902, during BNAE 1901-04, and so named by them because, on that day, it was the most salient feature in view when they were abeam of it. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Christmas Box Ice Rise *see* **Lyddan Ice Rise**

Christmas Cliffs. 73°33' S, 94°17' W. South-facing cliffs with 2 prominent rock outcrops, 3 km SSE of Pillsbury Tower, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61, and so named by them because the cliffs were visited on Dec. 25, 1960. US-ACAN accepted the name in 1963.

Christmas Island *see* **Rosamel Island**

Christmas Point. 67°23' S, 48°58' E. A prominent point, trending E-W, extending from the S margin of the Hydrographer Islands into Khmara Bay, in Enderby Land. The geologists Michael A. "Mike" Sandiford, Christopher J.L. Wilson, and Edward S. "Ed" Grew, spent Christmas Day of 1979 at this geologically unique feature. ANCA accepted the name on July 26, 1983.

Christmas Sound *see* **Bransfield Strait**

Christoff Cliff. 62°42' S, 60°03' W. A rocky cliff, rising to over 300 m, and with ice-free E and S slopes, which forms Aytos Point, at the S extremity of an offshoot of Serdica Peak (which stands 2 km to the N by W), 2.7 km SW by S of Radichkov Peak, and 2.4 km SE by E of Silistra Knoll, overlooking Boyana Glacier to the W and Srebarna Glacier to the NE, on the coast of the Bransfield Strait, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for the great Bulgarian operatic basso Boris Christoff (1914-1993).

Isla Christoffersen *see* **Christoffersen Island**

Christoffersen, Nils Henrik. b. 1869, Tjørnø, but grew up in Nøtterøy, foster son of Lars Larsen and his wife Maren Mathilde. He went to sea as a whaler, worked his way up through the mate ranks, and was manager of the Rethval Whaling Company's floating factory *Falkland*, in Antarctic waters in 1911-12 and 1912-13.

Christoffersen Heights. 73°36' S, 93°54' W. Broad, snow-covered heights that form the S central portion of the Jones Mountains, southward of Bonnabeau Dome and Anderson Dome. Mapped by the University of Minnesota Jones Mountains Party of 1960-61, and plotted by them in 73°36' S, 94°06' W. Named by US-ACAN in 1963, for Lt. Ernest H. Christoffersen, USNR, co-pilot of ski-equipped LC-47 Dakota aircraft on pioneering flights from Byrd Station to the Eights Coast area in Nov. 1961. The feature has since been replotted.

Christoffersen Island. 60°44' S, 45°03' W. A small island immediately W of the S end of Powell Island, in the South Orkneys. The name appears on Petter Sørlle's chart of 1912-13 as Christoffersens Ø (or, sometimes, on other versions of the chart, erroneously as Christoppersens Ø). Some sources say that it was named for Wilhelm Christoffer C. Christoffersen (1832-1913), Norwegian minister for external relations, 1912-13. However, as that gentleman's name was very definitely spelled Christophersen (*see* **Mount Wilhelm Christophersen**), that sort of rules that out. Actually, one need only go as far as Nils Christoffersen, skipper of the *Falkland*, who was in Antarctic waters the very season Sørlle was. On Sørlle and Borge's chart of 1913, it appears as Christoffersens Øya, but also as Christophersen Island, and that (latter) is how it was surveyed and charted by the Discovery Investigations in 1933 (it appears as such on their 1934 chart). There is also a 1916 British reference to it as Christoffersen's Island. It appears on a 1930 Argentine chart as Isla Christoffersen, on a 1945 Argentine chart as Isla Christofferson, and on one from 1954, as Isla Christopherson, but the name accepted by the 1970 Argentine gazetteer was the first one (Isla Christoffersen). On a 1930 British chart it appears as Disappointment Island, named in association with Cape Disappointment. It appears on the 1935 Discovery Investigations chart as Christoffersen Island, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears that way in the 1955 British gazetteer. It was made part of SPA #15 in 1967.

Christoffersens Ø *see* **Christoffersen Island**

Christoffersens Øya *see* **Christoffersen Island**

Christoph Nunatak. 74°49' S, 73°47' W. Rising to about 1300 m (the British say about 1250 m), 4 km ENE of Holtet Nunatak, in the Lyon Nunataks, where Ellsworth Land joins southern Palmer Land. Mapped by USGS from air photos taken by USN between 1965 and 1968, and from U.S. Landsat images taken in 1973-74. Named by US-ACAN in 1988, for Klaus Christoph, upper atmosphere physicist at Siple Station in 1970-71. UK-APC accepted the name on Feb. 15, 1988.

Mount Christophersen *see* **Mount Wilhelm Christophersen**

Christophersen Island *see* **Christoffersen Island**

Christophersens Ø *see* **Christoffersen Island**

Isla Christopherson *see* **Chrisoffersen Island**

Christy Glacier. 86°06' S, 161°30' W. A steep tributary glacier flowing SE along the SW side of Breyer Mesa into Amundsen Glacier, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Clarence O. Christy, maintenance shop supervisor at Williams Field during OpDF 67 (i.e., 1966-67). NZ-APC accepted the name on June 29, 1967.

Chromium. Or chromite. Has been found in Antarctica.

The *Chrysalide*. French yacht, skippered by Benoît Rouault, which visited the South Shetlands and the Antarctic Peninsula, in 1994-95.

Chuan Peak. 77°29' S, 168°21' E. Rising to about 2200 m, 1.5 km NE of Barker Peak, in the S part of Giggenbach Ridge, on Ross Island. Named by Phil Kyle for Raymond L. Chuan, a scientist with the Brunswick Corporation, in Costa Mesa, Calif., who undertook many airborne surveys of volcanic aerosols from Mount

Erebus, and also did sampling at the crater rim, 1983-84 and 1986-87. He and Julie Palais (*see* **Palais Bluff**) were investigators on a project which examined aerosols between Mount Erebus and the South Pole. Originally, Mr. Kyle had named another feature as Chuan Peak, one nearby. However, NZ-APC wanted to name that one Nash Peak, and they did. Mr. Chuan finally had this peak named after him by NZ-APC on June 19, 2000. US-ACAN accepted the name later in 2000.

Chubra Peak. 63°58' S, 59°55' W. Rising to 1422 m, E of Temple Glacier and S of Kasabova Glacier, 2.6 km SE of the head of Lanchester Bay, 6.9 km SE of Milkov Point, and 6.1 km SW of Sredorek Peak, on the Davis Coast, on the W coast of Graham Land. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the settlement of Chubra, in eastern Bulgaria.

Ostrov Chubuk *see* **Chubuk Island**

Chubuk Island. 68°55' S, 77°51' E. An island with a highest elevation of 41 m above sea level, immediately SE of Ranvik Island, and separated from it by about 150 m of water, in the Rauer Islands. Discovered and charted by SovAE 1956, who named it Ostrov Chubuk. ANCA translated the name on March 7, 1991.

Nunatak Chubut *see* **Nunatak Moder**

Chudomir Cove. 63°51' S, 58°26' W. A cove, 4.3 km wide, indenting the SE coast of Trinity Peninsula for 3.4 km, S of Pitt Point and N of Kiten Point. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the Bulgarian writer Chudomir (Dimitar Chorbadzhiyski; 1890-1967).

Chugunov Glacier. 70°43' S, 163°09' E. About 24 km long, just N of Astakhov Glacier, in the Bowers Mountains, in Oates Land, in Victoria Land. It is one of several glaciers that flow down from the E slopes of the Explorers Range into Ob' Bay. Discovered and photographed aerially by SovAE 1956, and plotted by them in 70°40' S, 163°12' E. Named by the USSR as Lednik Chugunova, for N.A. Chugunov (*see* **Deaths**, 1958). US-ACAN accepted the name Chugunov Glacier in 1964, and NZ-APC followed suit on July 16, 1964. It has since been replotted.

Chugunov Island. 65°54' S, 99°29' E. A small, ice-covered island with a dome (*see* **Kupol Chugunova**), at the seaward extremity of the Shackleton Ice Shelf, between the glacier tongues of Denman Glacier and Scott Glacier, in Queen Mary Land. Mapped from air photos taken during OpHJ 1946-47. Re-photographed aerially, by SovAE 1956, and named by the USSR as Ostrov Chugunova, for aerographer N.A. Chugunov (*see* **Deaths**, 1958, and also **Chugunov Glacier**). ANCA accepted the name Chugunov Island on Oct. 11, 1960, and US-ACAN followed suit in 1961.

Kupol Chugunova. 65°54' S, 99°29' E. The dome on Chugunov Island (see the entry above). Named by the Russians.

Lednik Chugunova *see* **Chugunov Glacier**

Ostrov Chugunova *see* **Chugunov Island**

Gora Chuhnovskogo *see* **Chukhnovskiy Nunatak**

Ostrov Chuk *see* **Chuk Island**

Chuk Island. 66°04' S, 101°10' E. An island in the Bunger Hills. Charted by SovAE 1956, who named it Ostrov Chuk, for the character Chuk in Gaidar's *Chuk I Gek* (*see* **Gek Island**). ANCA translated the name on April 29, 1984.

Chukhnovskiy Nunatak. 67°59' S, 49°00' E. About 28 km S of Mount Maslen, in Enderby Land. Photographed aerially by ANARE in 1957, and by SovAE 1962, the latter naming it Gora Chuhnovskogo (sic), for Boris Grigoryevich Chukhnovskiy (1898-1975), Soviet Army Arctic aviator. ANCA translated the name on July 31, 1972.

Chumerna Glacier. 64°08' S, 62°06' W. A glacier, 2.2. km long and 1.9 km wide, on the N coast of Albena Peninsula, on Brabant Island, in the Palmer Archipelago, it flows NE to enter the channel between Brabant Island and Liège Island, E of Mount Morgagni. Named by the Bulgarians on June 3, 2010, for Chumerna Peak, in the eastern Balkans.

Chun, Carl. b. Oct. 1, 1852, Höchst, Germany. Professor of zoology at the University of Leipzig, he became the leader of the German Navy Oceanographic Expedtion, 1898-99 (on the *Valdivia*). A specialist in cephalopods and plankton, he discovered and named the Vampire Squid from Hell. He died on April 11, 1914.

Cerro Chungungo. 62°28' S, 60°47' W. A hill, SSE of the beach the Chileans call Playa Chungungo, on the E side of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans in association with the beach.

Playa Chungungo. 62°27' S, 60°47' W. A beach, in the S part of Bahía Mansa, between Roca Granito to the N and Punta Cachorros to the E, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91, because on this beach there are rocks with a shape that resembles that of *Lontra felina*, the small, carnivorous otter-like marine mammal known by the Chileans as the chungungo, or chinchimen.

Chuprene Glacier. 62°58' S, 62°32' W. Flows SW for 6 km from the NE slopes of Imeon Ridge, SW of Drinov Peak and W of Varshets Saddle, along the NW slopes of Antim Peak, into the Drake Passage, S of Villagra Point, on Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for the settlement of Chuprene in northwestern Bulgaria.

Cabo Church *see* **Cape Church**

Cape Church. 67°51' S, 65°35' W. A rocky bluff projecting into the head of Seligman Inlet, immediately N of Ahlmann Glacier, on the Bowman Coast, on the E coast of Graham Land. Photographed aerially in 1940 by USAS 1939-41. It appears on a 1947 Chilean chart (presumably made up by ChilAE 1946-47) as Punta Zenteno, named after Gen. José Ignacio Zenteno del Pozo y Silva (1786-1847), secretary for war to Gen. Bernardo O'Higgins, in 1817. He was also one of the founders and the first editor of the famous Valparaíso newspaper, *El Mercurio*. Surveyed and charted in 1947 by Fids from Base E and Base D, who named it for American glaciologist Prof. James Edward Church (1896-1959), of the Agriculture Experiment Station, at the University of Nevada, who developed techniques of snow surveying and meltwater run-off forecasts now widely used. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a British chart of 1952, and in the 1955 British gazetteer. It appears on an Argentine chart of 1957 as Cabo Church, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Church, Erastus, Jr. Known as Rastus. b. 1833, Montville, Conn. He was sealing out of New London from the early 1850s, rising through the ranks of the ship's crews, until he was 2nd mate on the *Iris* in 1856. During the Civil War he was in Hudson's Bay, as 1st mate on the *Georgiana* and the *George Henry*. In 1872-73 he was 1st mate on the *Nile* when she went down to the South Shetlands under Capt. John L. Williams, and in 1873-74 on the *Golden West*, again with Williams at the South Shetlands. In the 1870s he moved to Waterford, Conn., and in 1877-78 he was 1st mate on the *Charles Colgate*, commanded by Simeon Church, in the South Shetlands. In 1880-81 and 1881-82 he was skipper of the *Adelia Chase* in the Falklands, the South Shetlands (where he took 57 fur seal skins), and the South Orkneys.

Church, James L. b. 1818, Montville, Conn., son of Prentice Church and his wife Prudence Fargo, and older brother of Simeon Church. A New London sealer, in 1873-74 he skippered the *Flying Fish* (which his brother had captained the season before) for a 2nd trip to the South Shetlands.

Church, Simeon. b. July 2, 1820, Montville, Conn., son of Prentice Church and his wife Prudence Fargo, and younger brother of James L. Church. A New London sealer since the time he was a teenager, he was skipper of the *Marcia*, in the Kerguélens, 1851-53, and in the same place on the *Alert*, 1853-56, and 1856-58. On July 12, 1858 he married Eliza Morgan O'Brien, and, after commanding several different ships, he retired for a while, coming back to take the sealing schooner *Flying Fish* out of New London on Aug. 9, 1872, bound for the South Shetlands. His brother James took over the ship for a 2nd voyage, 1873-74. In 1877-78 he took the *Charles Colgate* down to the South Shetlands. Simeon Church died on May 22, 1882.

Church Glacier. 71°51' S, 167°34' E. A tributary glacier, 16 km long, it flows southward along the W side of Church Ridge, and enters Leander Glacier to the NW of Shadow Bluff, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Brooks D. Church, lab

management technician at McMurdo, 1966-67 and 1967-68.

Church Mountain *see* **Mount Kjerka**

Church Nunataks. 66°48' S, 52°39' E. A line of small nunataks, 1.5. km E of Mount Smethurst, about 15 km S of Budd Peak, and 45 km SW of Stor Hånakken Mountain, in Enderby Land. Plotted by Australian cartographers from air photos taken by ANARE in 1957, and named by ANCA for Stanley W. "Stan" Church, radio officer at Wilkes Station in 1961. US-ACAN accepted the name in 1965.

Church Point. 63°41' S, 57°55' W. A point, 3 km W of Camp Hill, it forms the W entrance Point of Botany Bay, on the S coast of Trinity Peninsula. Discovered in 1903 by SwedAE 1901-04. Surveyed and charted by Fids from Base D in 1945-46, and named by them for its steeple-like appearance (a dark, distinctive rock peak of 355 m surmounts this point). UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. The Chileans call it Punta Iglesia, and the Argentines call it Punta Capilla.

Church Ridge. 71°49' S, 167°45' E. A ridge trending SW for 16 km, it has several peaks over 200 m high, and separates the flow of Church Glacier and Leander Glacier, in the Admiralty Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Cdr. Archer Edward Church, Jr. (b. April 23, 1929, Bradford, Pa. d. July 7, 2006, Annandale, Va.), USN, assistant chief of staff for civil engineering with the U.S. Naval Support Force, Antarctica, in 1967 and 1968.

Churches. In Jan. 1932, the Very Rev. Harold Ernest Lumsdale (1883-1948) took up his new post as dean of Stanley, in the Falkland Islands. In Dec. 1932 he became the first priest to set foot on South Georgia, and on the 17th of that month performed an official Anglican burial service for Shackleton. Peter Carey, skipper of the *Discovery II*, was at the service. The. Rev. Lumsdale's "parish" included not only the Falklands and South Georgia, but also the South Sandwich Islands, the South Shetlands, and the South Orkneys, and, in fact, all the way to the Pole. Until the 1950s there were no actual churches in Antarctica, although there had been Jared Elliott (q.v.), Father Menster (q.v.) and Padre Cadieux (q.v.). Father Menster baptized Bill Beye during OpHJ 1946-47, and received him into the Catholic faith. Father Condit was on OpDF I (1955-56), and wintered-over at McMurdo in 1956. He had special dispensation to conduct Protestant services as well as Catholic ones. He baptized Slats Slaton into the Catholic faith aboard the *Wyandot* during OpDF I, as that ship entered the pack-ice on her way to open up McMurdo. In early 1956 Chapel of the Snows (q.v.) was built — for Catholic services. Mike Baronick was baptized by Father Condit during the winter of 1956. During OpDF II (summer of 1956-57) Robert H. Wakeman was the lay leader of the Protestant services at McMurdo, and Donald C. Hauck played the organ. Pope Pius blessed OpDF (although the Pope never actuually made it to the ice), and religious medallions were designed in sterling silver by the men of OpDF III. The Catholic one said, "Our Lady of the Snows Protect Us," and had a picture of the Virgin in the middle. The Protestant one had a map of Antarctica, and the words, "In God We Trust, Psalm 39:9, 10." On the back of both were the words, "Operation Deep Freeze," and in the middle, "USN IGY," and space for the owner's name (see also **Medals**). Father Dan O'Gorman, came down from NZ on an icebreaker, and conducted the first mass peformed by a New Zealander, on Dec. 25, 1957. That season, Father Ted Brosnahan was the first priest to fly to the South Pole. Chapel of Our Faith opened in a specially constructed hut at Pole Station in 1958-59. On Jan. 8, 1960, Navy chaplain Edwin Weidler held the first Protestant communion service at the South Pole. Protestant chaplain at McMurdo for the winter of 1962 was Christopher B. Young, of Syracuse, NY, who had given up a parish in Winter Park, Fla., to join the Navy in June 1960. At McMurdo, he catered to all denominations, including Catholic, until the cigar-smoking Lt. (jg) Paul J. Antos arrived in 1962-63 to take over the Catholic side. Soon after his arrival at McMurdo, Father Antos flew to Hallett Station, but got stuck there for 5 days. Then, on Nov. 15, 1962, he flew to the Pole, and got stuck there for several days. The Rev. Young started the unofficial "University of Antarctica." The Chilean village of Villa Las Estrellas, in Frei Station, has a catholic church called Santa María Reina de la Paz. Trinity Church, on King George Island, in the South Shetlands, is the world's most southerly Eastern Orthodox church, opened in 2004. Esperanza Station has the church of San Francisco de Asís. St. Kliment Ohridski Station has a Bulgarian church, St. John of Rila.

Península Churchill *see* **Churchill Peninsula**

Churchill, David. Commander of the sealing brig *Catharina*, in the South Shetlands for the 1821-22 season.

Churchill Mountains. 81°30' S, 158°30' E. A major group of mountains and associated elevations, behind the Shackleton Coast, in the Transantarctic Mountains, and bordering the W side of the Ross Ice Shelf between the Nimrod Glacier and Byrd Glacier. They include Mount Egerton, Mount Field, Mount Wharton, Mount Nares, and Mount Albert Markham. Although individual features within this group were discovered and named by BNAE 1901-04, the group as a whole was not exactly identified as such until it was mapped in detail by USGS from USN air photos taken in 1960, and from USGS tellurometer surveys conducted in 1960-61. US-ACAN named the group as the Churchill Mountains in 1965, for Winston Churchill (1874-1965), who, at the time of BNAE 1901-04 was the recently elected Conservative MP for Oldham, and a South African War hero. NZ-APC accepted the name on May 20, 1965, and ANCA did so on July 29, 1965. *See also* **Churchill Peninsula**.

Churchill Peninsula. 66°30' S, 62°45' W. An ice-covered peninsula between Cabinet Inlet and Adie Inlet, it extends about 60 km in a SSE direction from the E coast of Graham Land into the Larsen Ice Shelf, and divides the Oscar II Coast from the Foyn Coast. Surveyed from the ground in late 1947 by Fids from Base D, who named it for Winston Churchill (*see also* **Churchill Mountains**), British prime minister, and leader of the war cabinet which in 1943 authorized Operation Tabarin, the forerunner of FIDS. On Dec. 22, 1947, it was photographed from the air by RARE 1947-48. Unaware that the British had already named it, Ronne named it Flint Peninsula, for Dr. Richard Foster Flint, of Yale University (*see* **Flint Glacier**). It appears as such on Ronne's map of 1949. UK-APC accepted the name Churchill Peninsula on May 23, 1951, and US-ACAN followed suit in 1952. It appears as such on a British chart of 1952, and in the 1955 British gazetteer. It appears on an Argentine chart of 1953, as Península Ameghino, after Florentino Ameghino (*see* **Ameghino Refugio**), but on a 1957 Argentine chart as Península Churchill, and on a 1963 Argentine chart as Península Suecia (i.e., "Sweden peninsula"), after SwedAE 1901-04. In Sept. 1963, the Argentines built Santa Teresita Refugio at the N end of the peninsula. It is unclear what the Argentines call the peninsula today. The Chilean gazetteer of 1974 accepted the name Península Churchill.

Churchill Point. 66°24' S, 110°23' E. The NW point of Holl Island, in the Windmill Islands, off the Budd Coast. First mapped from air photos taken in 1947 by OpHJ 1946-47, and in 1948 by OpW 1947-48. Named by US-ACAN in 1962, for Robert W. Churchill, USN, radioman who wintered-over at Wilkes Station in 1958. ANCA accepted the name on Oct. 23, 1962.

Chutian Shan. 73°05' S, 76°18' E. A hill in the area of Mawson Escarpment, on the E side of Lambert Glacier. Named by the Chinese.

Cicchetti, Valentín *see* **Órcadas Station**, 1948

The *Cicero*. A 429-ton Hull sealing ship, built in Sunderland in 1796, and owned by Messrs J. Gale & Sons. She was in the South Seas in 1818 and 1819 (but not in Antarctic waters, of course; it being just before the discovery of the South Shetlands). After her return to England, she left Gravesend in June 1820, under the command of Capt. Baxter. Whether or not she went to the South Shetlands for the 1820-21 season is not known, but it is unlikely. Likewise, her whereabouts in the 1821-22 season are also not known. She seems to have been in the South Shetlands for the 1822-23 season, but this time under the mysterious Capt. Clarke, who brought the ship back to Gravesend on Aug. 12, 1823, with 420 casks of oil. That no sealskins came back with her seems to

indicate that she was only in the South Shetlands for this last season, and not before, otherwise she would probably have scored (the 1820-21 and 1821-22 seasons being very generous, the 1822-23 season being fruitless for most expeditions). In the 1823 northern season, she was in Greenland, under the command of Capt. Lee. Capt. Baxter had taken command of the *Lively*, and had gone to the same fishing grounds.

Bahía Ciega *see* **Blind Bay**

Valle Ciego. 62°56' S, 60°42' W. A closed basin at Telefon Bay, Deception Island, in the South Shetlands. Named by the Spanish (name means "blind valley").

Caleta Cierva *see* **Cierva Cove**

Cierva Cove. 64°09' S, 60°53' W. A cove, 10 km SE of Cape Sterneck, E of Cierva Point, in Hughes Bay, on the Danco Coast, on the W coast of Graham Land. Sighted in Jan. 1898, by BelgAE 1897-99. On Capt. Johannessen's chart of 1919-20, it appears erroneously as Knoldebucht (i.e., Brialmont Cove), and appears (again in error) as Brialmont Cove, on a 1943 U.S. Hydrographic Office chart. It features on a 1949 Argentine chart as Caleta Brialmont, but on an Argentine government chart of 1950, as Caleta Cierva, named for Juan de la Cierva (1895-1936), Spanish designer of the autogiro, in 1923 (the first successful rotating wing aircraft). However, it was the name Caleta Brialmont that was accepted by the Argentine gazetteer of 1970. Photographed from the air by FIDASE 1956-57, and surveyed from the ground by Fids from Portal Point in 1957-58. On Sept. 23, 1960, UK-APC accepted the translated name Cierva Cove, and it appears as such on a British map of 1961. US-ACAN followed suit with the naming in 1965. It appears on a 1961 Chilean chart as Caleta Brialmont, but on another from the same year as Caleta Fontaine, named for Capitán de navío Leopoldo Fontaine Nakin (*see under* Fontaine). In 1962 the Hydrographic Institute of the Chilean Navy accepted the name Caleta Fontaine, and that name was also accepted by the 1974 Chilean gazetteer. The Argentines today call it Caleta Cierva.

Cierva Point. 64°09' S, 60°58' W. Forms the very end of a coastal salient that encloses Cierva Cove on the E, at the S entrance to that cove, near Brialmont Cove, 8.8. km SSE of Cape Sterneck, on the Danco Coast, on the W coast of Graham Land. The lower part of it is rock, and the terrain rises to a high hill. It is snow-free in winter, and there are large clumps of vegetation. SwedAE 1901-04 called it Kap. W. Spring, in error (Spring Point, as that feature became known, is farther to the SE), and as such it appears in their expedition report of 1904. ChilAE 1946-47 incorrectly named part of the point as an island, charting it in 1947 as Isla Guardián Gutiérrez, named after Agüedo Gutiérrez Z., a bosun on that expedition. In Jan. 1954 the Argentines built a refugio here, Base Primavera (from 1977, an actual scientific station), and, consequently, the point appears on an Argentine map of 1954 as Cabo Primavera. There is a 1956 translated reference to it as Spring Cape. It appears on a 1961 U.S. Hydrographic Office chart as Tisné Point, and on a 1962 Chilean chart as Cabo Tisné, which was the name accepted by the 1974 Chilean gazetteer (after they had rejected Islote Gutiérrez and Islote Gutierres). Capt. Fernando Tisné Brousse (*see* **Tisné Point**), was leader of ChilAE 1952. On Feb. 7, 1978 UK-APC re-named the feature Cierva Point, in association with the cove, and as such it appears in the British gazetteer of 1980. The Chileans call the point Cabo Tisné. It has sometimes been seen in English as Tisné Point. This point, and nearby islands, were made into SSSI #15 in 1986. In 2002 the SSSI was re-designated ASPA #134. For some reason, US-ACAN remains silent on the issue of this feature (as of time of writing, May 2010).

Cieslak Point. 62°01' S, 58°39' W. A rocky promontory immediately W of Usher Glacier, between that glacier and Stigant Point, on the Joannes Paulus II Coast, on the NW side of King George Island, in the South Shetlands. Named by the Poles in 1984, for Andrzej Cieslak, skipper of the little cutter used during PolAE 78-79 and PolAE 1980-81.

Ciliate Protozoans. Microfauna of Antarctica (*see* **Fauna**). There are 29 species, and they dominate soil and freshwater communities.

Cinder Hill. 77°17' S, 166°26' E. A prominent dissected volcano, rising to 305 m, and consisting of layers of red basalt scoria and cinders and abundant olivine nodules, between Harrison Stream and Wilson Stream, on the ice-free lower W slopes of Mount Bird, about 10 km S of Cape Bird, Ross Island. There is a small lake in the col separating it from Alexander Hill. Mapped and descriptively named by NZGSAE 1958-59. NZ-APC accepted the name on May 24, 1961, and US-ACAN followed suit in 1964.

Cinder Spur. 62°10' S, 58°11' W. A small spur made up mainly of volcanic cinders, and jutting out into Legru Bay, 2.5 km WSW of Low Head, on the S coast of King George Island, in the South Shetlands. FIDS did geological work here in 1949, FIDASE photographed the feature aerially in 1956-57, and FIDS did further geological work here in 1959-60. Named descriptively by UK-APC on Feb. 12, 1964. US-ACAN accepted the name later that year. It appears on a British map of 1968. The British were the latest to replot this spur, in late 2008.

Cinderella Hill. 61°56' S, 57°41' W. An ice-covered hill, rising to about 400 m above sea level, between Destruction Bay and Emerald Cove, on the E side of King George Island, in the South Shetlands. Named by the Poles in 1984 for the Cinderella of fairy tale.

Cinderella Nunatak. 81°39' S, 159°40' E. North of the Ugly Sisters Nunataks, in the area of Byrd Névé, at the head of Byrd Glacier. Discovered and named by NZGSAE 1960-61. NZ-APC accepted the name, and ANCA followed suit.

Kupol Ciolkovskogo. 70°30' S, 3°00' E. The ice field (or ice dome) on Tsiolkovskiy Island (Tsiolkovskogo being an alternative spelling), in the Fimbul Ice Shelf of Queen Maud Land. Named by the Russians in association with the island.

Lednik Ciolkovskogo. 73°05' S, 63°30' E. A glacier in the Prince Charles Mountains. Named by the Russians. The name Tsiolkovskogo is the adjective of the name Ciolkovskij (Tsiolkovskiy).

Dome Circe *see* **Dome Charlie**

Mount Circe. 77°28' S, 160°58' E. Rising to 2255 m above sea level, just N of Mount Dido, in the Olympus Range, near Wright Valley, in Victoria Land. Named by VUWAE 1958-59, for the Greek mythological figure. NZ-APC accepted the name, and US-ACAN folllowed suit in 1964.

Circle Icefall. 79°38' S, 156°30' E. An almost impenetrable icefall, 46 m high and 26 km long, near Tentacle Ridge, extending in an arc for almost the whole width across Darwin Glacier. Named by the Darwin Glacier Party of BCTAE 1957-58, for its resemblance to the circle of an opera house. ANCA accepted the name on Nov. 24, 1961, and US-ACAN followed suit in 1965.

Port Circoncision *see* **Port Circumcision**

Cabo Circular *see* **Bald Head**, **Corry Island**, **Jade Point**

Port Circumcision. 65°11' S, 64°09' W. A cove indenting the SE side of Petermann Island, in the Wilhelm Archipelago, off the W coast of Graham Land. Discovered on Jan. 1, 1909 by FrAE 1908-10, charted by them, and named by Charcot as Port Circoncision, to commemorate Bouvet de Lozier's discovery of Cape Circumcision on Bouevtøya (not in Antarctica) on Jan. 1, 1739, the traditional day of the circumcision of Christ. The *Pourquoi Pas?* wintered-over here from Jan. to Nov. 1909. First plotted in 65°10' S, 64°08' W, it appears as such on a French map of 1910. The British began calling it Port Circumcision soon after Charcot's naming, even though the first time it appears in a British text does not seem to have been until 1948; this may be explained by pre-war British sensibilities, and if so, those sensibilities had become sufficiently dulled by Sept. 8, 1953, when UK-APC named this feature thus (i.e., in English). It appears in the British gazetteer of 1955. US-ACAN was not emboldened to accept the name until 1960. The feature was later re-plotted. It appears on a 1953 Argentine chart as Puerto Circuncisión, and on a 1957 Argentine chart as Caleta Circuncisión (i.e., "Circumcision cove"), but the name accepted by the 1970 Argentine gazetteer (and by the 1974 Chilean gazetteer) was Puerto Circuncisión. The Argentine refugio Groussac was established here in 1955.

Circumnavigations of Antarctica. The first dozen circumnavigations of Antarctica at high latitudes were: (**1**) Cook, 1773-75, (**2**) von Bellingshausen, Dec. 1819-Feb. 1821, (**3**) Biscoe, 1831-32, (**4**) the *Carnegie*, 1915-16 — the first ever done in a single season, (**5**) the *Norvegia*,

1930-31, (**6**) the *Discovery II*— the first ever done in winter (1932), (7) the *Thorshavn*, 1933-34, (**8**) the *Discovery II*, 1937-38, (**9**) the *Burton Island* and the *Edisto*, 1947-48, (**10**) the *Discovery II*, 1951, (**11**) in 1952-53 the *Southern Venturer* circumnavigated Antarctica in one whaling season, the only ship to have done that, (**12**) between Dec. 29, 1982 and March 7, 1983, the *Polar Star* circumnavigated Antarctica. Although this seems unlikely, this last-named voyage may well have been only the 12th such circumnavigation of Antarctica. In 1996-97 the *Kapitan Khlebnikov* was the first tourist vessel to circumnavigate Antarctica. One unusual circumnavigation attempt was the Antarctic Circumpolar Expedition. On Jan. 2, 2006, after 4 years of planning, Colin Yeates, a 47-year-old landscape gardener from Chandlers Ford, Hants, set out from Port Stanley, in the Falklands, in what he described as "one of the last major challenges," to become the first man to row solo (in a £30,000, 22-foot-long row-boat called the *Charlie Rossiter*) around Antarctica, a total of 1,300 miles in 10 months, "to push the boundaries of what is possible." A noble aim that ran aground on the Falkland Islands rocks after only 50 miles and 32 hours.

Puerto Circuncisión *see* **Port Circumcision**

Circus Island *see* **Racovitza Islands**

Islote Cirilo. 63°24' S, 54°40' W. The most northeasterly of the Danger Islands, it lies 20 km ESE of Moody Point (the extreme E point of Joinville Island), in the Weddell Sea. Named by the Chileans for Cirilo Téllez Almonacid, stoker on the *Yelcho* in 1916.

CIROS. Cenozoic Investigations in the Western Ross Sea. A 3-year offshore drilling project by NZ, off Butter Point, in McMurdo Sound, begun in 1985, in order to obtain a record of the Antarctic Ice Sheet and the rise of the Transantarctic Mountains. The strata beneath the floor of McMurdo Sound were cored to record the major glaciological advances and retreats, and to find out when they began. A major storm destroyed the camp early on, but it was repaired. Two cores were obtained — CIROS 1 and CIROS 2, CIROS 2 being drilled first, in 1984-85, due to the difficulties of the sea ice at the time. The drill site was 3 km from the north wall of Ferrar Valley. The CIROS 1 drill site was 12 km off Butter Point, and was drilled in 1986-87, to 702 m below the sea floor. Jack Hoffman led the drilling team.

Cirque Fjord. 67°18' S, 58°39' E. An ice-filled inlet on the S side of Law Promontory, opening into Stefansson Bay, in Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Botnfjorden (i.e., "the cirque fjord"). Seen by Peter Crohn's ANARE party in 1956. The name was translated by ANCA on Feb. 18, 1958. US-ACAN accepted the Australian naming in 1966.

Cirque Peak. 72°11' S, 165°58' E. Rising to 3048 m, 1.5 km S of Le Couteur Peak, in the N arm of the Millen Range, bordering the Polar Plateau. So named by the Northern Party of the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, because it is at the head of a large cirque containing a section of the Pearl Harbor Glacier névé. NZ-APC accepted the name, and US-ACAN followed suit in 1970.

Cirques. Amphitheatre- or bowl-shaped basins, with precipitous walls cut into the sides of mountains, at the heads of glacier valleys. A cirque usually develops due to erosion beneath the bergschrund of a glacier.

Punta Cirujano Serrano *see* **Punta Serrano**

Mount Cis. 77°34' S, 166°19' E. A hill, rising to 184 m, about 1.6 km NE of Cape Barne, in the W part of Ross Island. Named by Ray Priestley, during BAE 1907-09, for one of the dogs. NZ-APC accepted the name on Nov. 4, 1999, and US-ACAN followed suit in 2000.

Cisak Islet. 62°08' S, 58°07' W. A small islet (it is a basaltic plug) below Battke Point, S of Lions Rump and Lions Cove, King George Island, in the South Shetlands. Named by the Poles on Sept. 1, 1999, for cartographer Jan Cisak, who, with Zbigniew Battke, drew up the map of Lions Rump during PolAE 1987-89.

Cisterna Refugio *see* **Sargento Ayudante Roque C. Cisterna Refugio**

Citadel Bastion. 72°00' S, 68°32' W. A flat-topped, rocky elevation rising to 645 m, at the S side of the terminus of Saturn Glacier, on the SE side of Alexander Island. Mapped from trimetrogon air photos taken by RARE 1947-48, and from ground surveys conducted by FIDS, 1948-50. It was re-surveyed by FIDS/BAS between 1961 and 1973. Named descriptively (it looks like a fortified structure with a watchtower at the end of a wall) by UK-APC on Dec. 31, 1964, and US-ACAN accepted the name in 1975. It appears in the British gazetteer of 1975, and on a U.S. map of 1979.

Citadel Peak. 85°57' S, 154°27' W. A peak of volcanic rock along the S side of Vaughan Glacier, 10 km E of Mount Vaughan, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named descriptively by NZGSAE 1969-70. The summit is composed of vertical rock slabs, making it look eerily like a citadel. NZ-APC accepted the name, and US-ACAN followed suit in 1970.

Citröen. French auto company which financed several expeditions throughout the world. The company furnished 3 light trucks with Caterpillar tracks for ByrdAE 1933-35. One of these, in the party led by Poulter, rescued Admiral Byrd from Bolling Adavance Weather Station at the end of his "alone" stay there in the winter of 1934.

The *City of Auckland*. Beaver aircraft built in 1956, and shipped out from NZ to Antarctica in Dec. 1956, for use on BCTAE 1955-58. After the expedition, it was brought back to NZ in 1958, handed over to the Royal NZ Air Force, and went south again in 1959. On Jan. 15, 1960, it crashed on the Beardmore Glacier, in the area of the Beaver Glacier (this glacier being named for the plane), in the Queen Alexandra Range, was written off, and not recovered.

The *City of Invercargill*. 12441. An R4D Dakota airplane built in 1943, for the use of the U.S. Navy during World War II. On Dec. 15, 1964 it was assigned to VX-6, went to Antarctica, and on Jan. 17, 1966 was returned to the USA, and used as a station aircraft at NAS Jacksonville. On Oct. 30, 1974 it was sold, without its engines, to Basler Turbo Conversions, and sold again in 2002 to DMI Aviation. It was up for sale again in 2008.

The *City of New York*. Byrd's flagship on his 1928-30 expedition. Formerly called the *Samson*, she was a Norwegian whaler built in 1882, with a 512-ton displacement. She was 162 feet long, and had a 31-foot beam. The thick hull was made of spruce and oak, and she had oak ribs. Her sides were 34 inches thick, and she carried auxiliary steam power. Byrd bought this barkentine on Amundsen's advice, and converted her into a bark by putting yards on the mainmast. She cost $165,000 to buy and outfit. Captain during ByrdAE 1928-30 was Frederick C. Melville. After the expedition the *City of New York* was converted into a museum.

Monte Cjavals. 60°52' S, 56°19' W. A submarine mountain, rising to about 210 m from the ocean floor, about 1615 m below the sea, W of Elephant Island, in the South Shetlands. Discovered by Project BSR (bottom-simulating reflectors), an expedition on the *Explora*, led by Umberta Tinivella, in Feb.-March 2004. Miss Tinivella suggested the name, for a mountain of that name near Mount Sernio, in the Aupa Valley of the Carnic Alps (which is where Miss Tinivella comes from) and it was accepted by the Italians on Dec. 6, 2007.

Claess, Laurens. b. ca. 1565, Antwerp. Bosun on the *Blyde Bootschap*, in March 1603 (so he claimed), when that ship was reported to have reached 64°S under Capt. Dirck Gerritsz. He reported the adventure in writing. However, for the controversy, *see* **The *Blyde Bootschap***, and **Gerritsz, Dirck**.

Clague Ridge. 71°14' S, 65°40' E. A partially snow-covered rock ridge, about 8 km SW of Armonini Nunatak, and about 37 km ESE of Mount Hicks, in the Prince Charles Mountains of Mac. Robertson Land. Plotted in 71°13' S, 65°41' E, from ANARE air photos taken in 1960, it was named by ANCA for Eric L. Clague, weather observer at Wilkes Station in 1962. US-ACAN accepted the name in 1967. This feature has since been re-plotted.

Claiborne, Micajah Green Lewis. b. 1808, Windsor, Bertie County, NC, son of naval physician Thomas Augustine Claiborne and his 2nd wife Mary Tennessee Lewis. After his father died in 1816, young Micajah became a ward of Gen. Andrew Jackson (later president of the USA). He joined the *Porpoise* at Callao, as a lieutenant on USEE 1838-42, and also served on the *Relief*, during the same expedi-

tion. He served on the *Somers* during the Mexican War of 1846-48. On Oct. 19, 1848, in Williamson Co., Tenn., he married Lavinia T.C. Cannon, and they lived in Nashville. He died in 1878.

Clapp, Edward Christopher John "Ted." b. 1930, Salisbury, Wilts, son of Christopher John Clapp and his wife Amy G. Parker. In 1952, in Portsmouth, he married Joan M. Harris. A former Navy man, he joined FIDS in 1957, as radio man and mechanic, left Southampton that October on the *John Biscoe* (*see* **Shaw, John Barrie**, for details of the trip), and wintered over at Base F in 1958, at Base D in 1959, and at Wordie House in 1960, being the leader during that last winter. He was FIDS/BAS communications supervisor at Stanley, in the Falkland Islands, from 1961 to 1963, and officer-in-charge there 1963-76. His second wife was a lady who worked in the Post Office in Stanley. He later lived in Needingworth, Cambridgeshire (formerly Hunts).

Clapp Point. 65°21' S, 64°01' W. At the head of Collins Bay, it projects to the W immediately S of Trooz Glacier, about 6 km NE of Cape Pérez, on the Graham Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Dec. 8, 1977, for Ted Clapp. It appears in the 1980 British gazetteer, and on a British chart of 1984. In 1978 the Argentines officially accepted the name Punta Azurduy, for Juana Azurduy de Padilla (1780-1862), a Bolivian-born former mestizo nun who, with her husband (and then alone, after he was killed), led an Argentine army of as many as 6000 men against the Spanish in the first part of the 19th century, during the South American wars for independence. One of the few women colonels of her day anywhere in the world, she died in poverty and obscurity, but in 2009 was (posthumously) elevated by the Argentine government to the rank of general. The Chileans call it Punta Téllez, for Guardián de primera clase Cirilo Téllez Almonacid, one of the stokers on the *Yelcho* during the Shackleton rescue of 1916.

Clapp Ridge. 72°54' S, 167°54' E. A narrow, steep-sided ridge, about 14 km long, forming the N wall of Hand Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for James Leslie "Jim" Clapp (b. March 14, 1933, Madison, Wisc. d. March 31, 2007, Reedsburg, Wisc.), USARP glaciologist at Roosevelt Island in 1967-68.

Île de Claquebue *see* **Claquebue Island**

Claquebue Island. 66°46' S, 14°35' E. A rocky island, 0.4 km long, 90 m E of Dru Rock, near Cape Découverte, SE of Retour Island, in the Curzon Islands. Charted in 1951 by the French, and named by them as Île de Claquebue, for the village in the novel *La Jument Verte*, by Marcel Aymé, a book much read in Antarctica. US-ACAN accepted the name Claquebue Island in 1962.

Clare Range. 77°10' S, 161°10' E. Extends WSW from Sperm Bluff to the Willett Range, on the S side of Mackay Glacier, in Victoria Land. Circumnavigated between October and December 1957 by the NZ Northern Survey Party of BCTAE, plotted by them in 77°10' S, 161°05' E, and named by them for Clare College, Cambridge, in association with some other features in the area named after Cambridge colleges. US-ACAN accepted the name in 1962. It has since been replotted. Sperm Bluff, Skew Peak, Parker Mesa, Molnia Bluff, and Dykes Peak are in this range.

Isla Clarence *see* **Clarence Island**

Clarence Island. 61°13' S, 54°07' W. An island, 20 km long and 8 km wide, it is the most easterly of the group of islands the Chileans call Islas Piloto Pardo, and therefore also of the South Shetlands. It was discovered and roughly charted by Bransfield, who landed at Cape Bowles on Feb. 4, 1820. He named it Clarence's Island, after Prince William, Duke of Clarence (1765-1837), Lord High Admiral of England, 1827-28, and future king (as William IV, 1830-37). It appears as such on Bransfield's chart of 1820. It was further charted on Jan. 29, 1821, by von Bellingshausen's expedition, who named it Ostrov Shishkova (i.e., Shishkoff's Island, as it sometimes appeared in English, or Schischkow Insel as it appeared occasionally in German, or as Vice-Admiral Shishkov Island, as Frank Debenham referred to it in 1945), after Vice Admiral Alexander Semyonovich Shishkov (1754-1841) of the Imperial Russian Navy. It appears as such on von Bellingshausen's 1831 map, as also does the name Ostrov Vitse-Admirala Shishkova. It appears on a British chart of 1822 as Clarence Island, and on Weddell's 1825 chart as Clarences Isle. In 1894 Larsen charted it as Clarents Island, and it was used by Norwegian whalers as an anchorage. It was re-charted by the Discovery Investigations between 1933 and 1937, and appears as Clarence Island on a British chart of 1949, and that was the name accepted by US-ACAN in 1947 (after they had rejected Shishkoff's Island), and by UK-APC on Sept. 8, 1953. It appears that way in the 1955 British gazetteer. It appears on a 1945 Chilean chart as Isla Shackleton, named after Sir Ernest Shackleton, and there are also two 1948 references to it as Isla Pardo (named after Luis Pardo) and Isla Presidente Aguirre Cerda (named for the president of Chile). However, the name Clarence has been so widely used for so long, these other names were ephemeral at best, and, besides, the Argentines have been calling it Isla Clarence as early as 1908, and that was the name accepted by the Argentine gazetteer in 1970 and by the Chilean gazetteer of 1974. Photographed aerially by FIDASE in 1956-57, the island was further surveyed by the British Joint Services Expedition of 1970-71, and visited by a similar expedition in 1976-77. It appears pluralized as the Clarence Islands on a 1970 USAF chart. Originally plotted in 61°12' W, 54°05' W, it was replotted by the British in late 2008.

Clarence Islands *see* **Clarence Island**

Mount Clarence MacKay *see* **MacKay Mountains**

Claridge, Graeme Geoffrey Carré. b. 1931, Wellington, NZ. Soil specialist in Antarctica ten times from 1959-60, when, with J.D. McGraw, he conducted NZARP's first soil studies. One of his return trips, in 1964, with the NZ Soil Bureau, marked the first of many times south with Iain B. Campbell.

Claridge Terrace. 77°42' S, 162°20' E. A terrace in Taylor Valley, Victoria Land. Named by NZ-APC for Graeme Claridge. US-ACAN accepted the name in 1998.

Côte Clarie *see* **Clarie Coast**, **Wilkes Coast**

Clarie Coast. 66°30' S, 133°00' E. Between Cape Morse (130°10' E) and Pourquoi Pas Point (136°11' E), or between the Banzare Coast and Adélie Land, at the extreme E edge of Wilkes Land. Discovered in Jan. 1840 by FrAE 1837-40, and named by Dumont d'Urville as Terre Clarie (i.e., "Clarie land") for Honoré Jacquinot's wife, Clarie. This name changed to Côte Clarie, which, in 1947, US-ACAN accepted as Clarie Coast. Meanwhile, during AAE 1911-14, it was re-discovered by John King Davis, on the *Aurora*, and named by Mawson as Wilkes Coast, for Charles Wilkes. The Australians still call it the Wilkes Coast.

Clarizza, Francisco Jorge. b. June 26, 1894, Buenos Aires, son of Juan Clarizza and his wife Lina Vatta. After the Naval School, 1910-13, he became an officer, and married María Angélica Buich Galiano. In 1918 he became a lieutenant (jg), a lieutenant in 1921, and a lieutenant commander in 1927. He was in Antarctic waters as skipper of the *Primero de Mayo*, 1928-29, and was promoted to commander in 1933, and to captain in 1938. In 1944 he became an admiral, and was head of studies at the Naval School. He retired in 1946.

Cabo Clark *see* **Charles Point**

Clark, Alexander Bunker. b. Sept. 17, 1793, Mass., son of Isaiah Clark and his wife Love Bunker. In 1800 his father was lost at sea, and his mother married again, to David Giles. Alex became a Nantucket sealing captain, and led the second sealing expedition (sometimes called the Clark fleet) out of Stonington, Conn., to the South Shetlands, in 1820-21 (the first had been the *Hersilia*, the year before). Clark himself commanded the *Clothier*, which, with her tender, the *Spark*, left Stonington on Aug. 9, 1820. The brigs *Catharina* and *Emmeline* had sailed on July 30 and July 31, 1820, respectively. They all met up at the Falkland Islands, and sailed together to the South Shetlands, arriving there on Dec. 1, 1820. On Dec. 7, 1820 the *Clothier*, the flagship of the fleet, was wrecked. The seal catch was successful, and the 2 remaining brigs left the South Shetlands on March 9, 1821. Crew members of the wrecked *Clothier* sailed back to the USA on the *O'Cain*. The sailing date of the *Spark* is unknown. Capt. Clark did very well for himself. On June 30, 1821, in Nantucket, he married Mary Raymond, a Connecticut girl living in Brooklyn, NY, and that

is where the Clarks lived for years. His wife died on May 8, 1863, and the captain retired in Nantucket, where he died on May 26, 1876.

Clark, Arnold Hanson "Arnie." b. Sept. 5, 1904, Greenfield, Mass., son of railroad inspector Reuben V. Clark and his German wife Albertina Hanson. Tree expert, and electrician with Bell Telephone Company, he was also a physical instructor at Culver. He was taken on late, as a marine engineer, electrician, and volunteer fireman on the *Eleanor Bolling* in 1928 as part of ByrdAE 1928-30, and became assistant physicist on the shore party in Antarctica for the winter-over of 1929. After the expedition, he went back to Greenfield, and became an oceanographer with the Woods Hole Institute in Massachusetts. He died on March 12, 1976, in NY.

Clark, Captain. Commander of the *Lion* on that vessel's first trip to the South Shetlands, 1852-53. Bob Headland, in his *Chronology*, says this was Samuel Clark, and that may be.

Clark, Charles "Charlie." b. 1877, Dyce, Aberdeenshire, but raised in Nigg (same county), son of farm servant James Clark and his wife Elizabeth. For a while, Charlie added an "e" to Clark. From 1891 to 1898 he trained as a baker's apprentice in Stonehaven, Kincardineshire, and in 1901 was working for a baker and miller near Fort William, in the Highlands, when he was asked to deliver a large bag of meal to the Ben Nevis Observatory (*see* **Órcadas Station** for more information about this observatory). Capt. Scott just happened to be there, and signed for the bag. He was impressed with Clark's strength, and offered him the job of assistant cook and part-time meteorologist on BNAE 1901-04. Considering it was 2 shillings a week more than he was getting in his current job, Charlie seized the opportunity. He left England on the *Discovery*, on Aug. 6, 1901. In Jan. 1902, when Henry Brett, the cook, was placed in irons for insubordination, Charlie took over as cook. Soon after the return of the expedition to London, in 1904, he married Helen "Nellie" Bremner. Scott agreed that his eldest child could be called Charles Falcon Scott Clark. In 1910 the family moved to Cape Town. Charlie joined the British South Africa Police, retiring from headquarters in Pretoria in 1944. He died in 1952.

Clark, Colin Maxwell. b. Wellington, NZ. Leader of Scott Base, 1966-67.

Clark, Daniel W. First mate on the *Hersilia*, 1820-21. He was in charge of a sealing gang on the South Beaches of Livingston Island, in the South Shetlands. He described the activities in writing.

Clark, George W. *see* **USEE 1838-42**

Clark, John. British sealing captain who commanded the *Lord Melville* in 1819-20. He and his 10 sealers were the first known men to winter-over, albeit involuntarily, in Antarctica, when they spent 1820 on King George Island, in the South Shetlands.

[1]**Clark, Joseph** *see* **USEE 1838-42**

[2]**Clark, Joseph** *see* **USEE 1838-42**

Clark, Leroy. b. 1895. Of Cambridge, Mass. He was a yeoman in the U.S. Navy. Chief commissary officer on ByrdAE 1933-35, he went south on the *Jacob Ruppert*, and was one of the shore party who wintered-over in 1934. He was also the postmaster. In Dec. 1936 he accompanied explorer Theodore Waldeck to British Guiana to look for the missing Paul Redfern (quite a celebrated case in its day).

Clark, Levin *see* **USEE 1838-42**

Clark, Richard Peter Kelvin "Dick." b. 1927, Huddersfield, son of James R. Clark and his wife Ethel Gertrude Hickman. He joined FIDS in 1954, as a meteorologist, and wintered-over at Base B in 1955. In 1963, in Durham, he married Elizabeth Thompson, and later lived in the Lake District, involved with Outward Bound.

Clark, Robert Selbie "Bob." b. Sept. 11, 1882, Aberdeen, Scotland, son of William Clark. A zoologist, he worked with Bruce on the biological results of ScotNAE 1902-04. Zoologist to the Scottish Oceanographical Laboratory, in Edinburgh, he played cricket for Scotland, and in 1913 was appointed naturalist to the Marine Biological Association Laboratory, in Plymouth. He was biologist on BITE 1914-17, but the enormous volume of records he amassed were lost on the *Endurance*. On Nov. 23, 1916, at Brighton, he married Christine Ferguson Macdonald. He served on minesweepers with the Navy during World War I, then back to marine biological research in Plymouth. On the Scottish national cricket team again in 1924, at the age of 46, he worked for the Torry Marine Research Laboratory in Abderdeen. He died on Sept. 29, 1950, in Murtle, Aberdeenshire.

Clark, Samuel. Of Stonington. Captain of the Boston sealing schooner *Thomas Hunt*, in the South Shetlands in the 1872-73 season.

Clark, William *see under* **Clarke**

Clark, William Oliver. Fireman on the *William Scoresby*, 1926-30, spending 3 summer seasons in Antarctica.

Clark Glacier. 77°25' S, 162°25' E. It occupies a low pass, between Mount Theseus and Mount Allen, in the E part of the Olympus Range, in the vicinity of Wright Valley, in Victoria Land. Named by VUWAE 1958-59 for Prof. Robin Hamley "Bob" Clark (b. June 10, 1921, Otahuhu. d. Oct. 8, 1987, Wellington), head of the geology department at Victoria University of Wellington, NZ, 1954-84, who was immediately responsible not only for the sponsoring of this expedition, but who was the "father of VUWAE." He was in Antarctica in 1967 and 1982. US-ACAN accepted the name in 1962.

Clark Hills. 70°43' S, 63°25' W. A cluster of low, mainly snow-covered hills, about 6 km in extent, and rising to an elevation of about 1700 m, S of Clifford Glacier, and 8 km SW of the Eland Mountains, in central Palmer Land. Mapped by USGS in 1974 from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for Kerry Bruce Clark (b. Aug. 22, 1945, Woodbury, NJ), USARP biologist on the International Weddell Sea Oceanographic Expeditions of 1968 and 1969. Dr. Clark was later a professor at Florida Tech. UK-APC accepted the name on July 21, 1976. The feature appears on the 1979 USGS sketch map of the N part of Palmer Land.

[1]**Clark Island** *see* **Clark Peninsula**

[2]**Clark Island**. 74°05' S, 105°17' W. An island, 3 km long, it is the largest of a small group about 63 km WSW of Canisteo Peninsula, in the eastern part of the Amundsen Sea. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for F. Jerry Clark, USARP glaciologist and geologist at Roosevelt Island in 1961-62, and who was on traverses from Byrd Station in 1963-64.

Clark Knoll. 76°53' S, 146°59' W. An ice-covered knoll, 6 km SW of Mount Dane, in the W part of Radford Island, in the Marshall Archipelago. Mapped by USAS 1939-41, and again by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Elton George Clark (b. 1945), USN, utilitiesman at Byrd Station in 1967.

Clark Mountains. 77°16' S, 142°00' W. A group of low mountains, rising to an elevation of over 1200 m above sea level, 16 km E of the Allegheny Mountains, in the Ford Ranges of Marie Byrd Land. Discovered aerially in 1940 by USAS 1939-41, and named by them for Clark University, Worcester, Mass. US-ACAN accepted the name in 1947.

Clark Nunatak. 62°40' S, 60°55' W. Rising to about 50 m, on the S side of Rotch Dome, at the E end of Southern Beaches, in the W part of Livingston Island, in the South Shetlands. Probably first charted in 1929-31, by the Discovery Investigations, it was named descriptively by them as Black Hill, and appears as such on their 1933 chart. It appears as Cerro Negro (which means the same thing) on a 1947 Chilean chart, and that is what the Chileans call it today. It appears on a 1948 Argentine chart as Morro Black (again, meaning the same thing), but as Morro Negro on a 1953 Argentine chart, and that is the name the Argentines use today. Photographed aerially by FIDASE in 1956-57, and named by UK-APC on July 7, 1959, as Clark Nunatak, for Daniel W. Clark. US-ACAN accepted that name in 1960.

Clark Peak. 77°31' S, 154°12' W. A rock peak, rising to 645 m, on the W side of Larson Glacier, in the N part of Edward VII Peninsula. Mapped by USGS from ground surveys, and USN air photos taken between 1964 and 1967. Named by US-ACAN in 1966, for Leroy Clark.

Clark Peninsula. 66°15' S, 110°33' E. A rocky outcrop in the form of a peninsula, 3 km long and 3 km wide, on the N side of Newcomb Bay, in the Windmill Islands, it is frozen to the side of Vincennes Bay. Photographed aerially in Feb. 1947, by OpHJ 1946-47, and from these photos it was thought to be an island connected by a steep snow ramp to the conti-

nental ice overlying the Budd Coast. Named by US-ACAN in 1947, as Clark Island, for John E. Clark, USN, of Leavenworth, Kans., captain of the *Currituck* during OpHJ (he was actually skipper between Nov. 19, 1945 and June 5, 1947). It was photographed aerially again, by ANARE in 1956, and by SovAE 1956. In 1957, when the Americans set up Wilkes Station here, it was re-defined. ANCA accepted the new name on July 4, 1961. It was later designated SSSI #17.

Clark Point. 66°33' S, 123°55' E. An ice-covered point on the headland at the E side of the entrance to Paulding Bay, on the Banzare Coast of Wilkes Land. First delineated by U.S. cartographer Gard Blodgett in 1955, from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for George W. Clark. ANCA accepted the name on May 18, 1971.

Clark Ridge. 84°32' S, 64°50' W. A prominent rock ridge, 6 km long, and rising to 1075 m, 6 km W of Mount Lowry, in the Anderson Hills, in the N part of the Patuxent Range, in the Pensacola Mountains. Surveyed by USGS during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Larry Clark, USN, cook who wintered-over at Plateau Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Clark Spur. 84°47' S, 169°12' W. A low, narrow, rocky spur, 5 km long, it extends from the foothills of the Prince Olav Mountains to the edge of the Ross Ice Shelf, and forms the E side of the mouth of Morris Glacier, about 11 km WNW of Mount Henson. The New Zealanders say it actually extends into the ice shelf for about 5 km. Discovered and photographed aerially during ByrdAE 1928-30, and named by Byrd for Arnold H. Clark. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Glaciar Clarke *see* [1]**Clarke Glacier**

[1]**Mount Clarke**. 68°07' S, 55°28' E. Two main peaks in Enderby Land about 100 m apart, but connected at the base. From the W peak a mostly snow-covered ridge extends W for about 500 m, with minor peaks on it. Another ridge extends N for about 1000 m. Named by ANCA on July 26, 1983, for Andrew Clarke, of the Division of National Mapping, who, during 2 summer expeditions to Enderby Land, established a survey station on this mountain in Jan. 1982.

[2]**Mount Clarke**. 85°05' S, 172°15' E. Rising to 3210 m, 22 km due E of Mount Iveagh, it rises along the E margin of Snakeskin Glacier, just to the S of Keltie Glacier, between that glacier and Mill Glacier, near the edge of the interior ice plateau, in the Queen Maud Mountains. Discovered in Dec. 1908, by Shackleton's Pole Party, during BAE 1907-09, and named by Shackleton for Sir Rupert Clarke [*see* [3]**Clarke Glacier**]. US-ACAN accepted the name in 1956, and NZ-APC followed suit.

Clarke, Arnold H. *see* **Clark, Arnold H.**

Clarke, Captain. He replaced Capt. Baxter as captain of the London sealer *Cicero*, during the 1822-23 season in the South Shetlands.

Clarke, Derek Albert. b. Dec. 17, 1931, New Malden, Surrey, son of carpenter Albert Clarke and his wife Doris Green. He did an electrical engineering apprenticeship with the Electricity Board, and his national service in the RAF in Egypt, 1949-51. He replied to a *Daily Telegraph* ad for FIDS, and, taking the place of a Fid who had broken a body part, he was flown out to Montevideo, where he caught the *John Biscoe*, which took him down to Port Stanley and then on to Base F, where he wintered-over as diesel electric mechanic in 1953. Back to the UK in 1954, via Base B, Port Stanley, South Georgia, and Montevideo, and later that year he took the *John Biscoe* out of Southampton, bound for Base D, where he wintered-over in 1955 and 1956. Back to the UK in 1957, he and Wink Mander then went out surveying in Kurdistan, and then he again headed south, to winter-over at Signy Island Station in 1960 and 1961. In 1963, in Pontypool, Wales, he married Roger Filer's sister, Ann. He went in a completely different direction now — animal husbandry, and after a 5-year course he joined the department of physiology at Cambridge, retiring as chief technician in 1992, to Kendal, Westmoreland.

Clarke, Eric Thacher "Pride." b. Nov. 27, 1916, Rochester, NY, son of English-born Hans Thacher Clarke, one of the world's leading biochemists, and his wife German-born Frieda. When Eric was born, his father was working for Eastman Kodak. He was a physicist with the Bartol Foundation in Pennsylvania, when he conducted observations on the *North Star*, and set up the cosmic ray recording equipment at West Base during the first half of USAS 1939-41. He was succeeded on the 2nd half of the expedition by Dana K. Bailey. On Oct. 8, 1944, in Cambridge, Mass., he married Elizabeth Hewitt. He died on Sept. 18, 1993, in Lexington, Mass.

Clarke, Ian William Noel. b. Jan. 2, 1926, Timiskaming, Ontario, son of English cabinet maker Noel Frederick Clarke and his Scottish wife Dorothy Margaret Johnston. When he was one, the family moved to Brisbane, and that has been Ian Clarke's home ever since (the old family house dating from the 1800s). After Brisbane Boys' College, he was a pilot in the RAAF for 2½ years, during and after World War II, and then worked for a government tribunal, going to England in 1951, and working in London for 5 months. Johnny Green interviewed him for FIDS, and he shipped out of Southampton in Oct. 1952 as meteorologist on the *John Biscoe*. He had been appointed by Green as leader of the expedition on the way out, and at the Falkland Islands the secretary of FIDS Frank Elliott, and Miles Clifford (the governor), made him base leader for Base B for the winter of 1953. He arrived at Base B in late 1952. He stayed on in Antarctica as meteorologist, was going to go to Base F for his second year, but wound up as deputy base leader for the 1954 winter at Base D. At the end of his tour he returned to Port Stanley, and then on to Montevideo, where he caught the *Andes* back to Southampton, arriving there on Feb. 24, 1955. He lived in Bournemouth for a short while, then on to Australia. From 1955 to 1957 he was in New Guinea, and then worked for the Chandler Organization for 32 years, as their chief computer expert. In 1977 he was on the Dick Smith Antarctic Expedition 13-hour flight over Antarctica (with David Lewis. Bill Taylor, chief pilot for Qantas, flew the 707), flying over the Admiralty Mountains.

Clarke, James. Able seaman on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04.

Clarke, William. Assistant cook on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04.

Clarke Barrier *see* **Clarke Glacier**

Clarke Bay. 74°22' S, 61°00' W. A bay, about 10 km wide, S of Cape Fiske, on the E side of Smith Peninsula, on the Lassiter Coast. It is bordered on its W side by an unnamed glacier, and usually occupied by semi-permanent fast ice. In 2008 a colony of emperor penguins was found here. Named by UK-APC on March 17, 2009, for Prof. Andrew C. Clarke, head of the Marine Life Sciences Division of BAS, 1988-1999, and BAS senior research ecologist from 2000.

Clarke Bluff. 69°38' S, 159°13' E. A steep bluff, rising to 840 m, at the E end of Feeney Ridge, in the Wilson Hills, abour 13 km SE of Parkinson Peak, in Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. (jg) Jon B. Clarke, USN, navigator on aerial photographic missions in Antarctica in LC-130F Hercules aircraft during OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1967-68). ANCA accepted the name on July 31, 1972.

[1]**Clarke Glacier**. 68°48' S, 66°56' W. A glacier, 30 km long and 3 km wide, it flows NW into Mikkelsen Bay, along the N side of Sickle Mountain and Baudin Peaks, on the Fallières Coast, on the W coast of Graham Land. First roughly mapped in 1936 by BGLE 1934-37. In Jan. 1941 a sledge party traversed this glacier near its head, during USAS 1939-41. It appears in error on a 1943 U.S. Hydrographic Office photo as Windy Valley. Its lower reaches were surveyed in 1948-49 by Fids from Base E, and they named it for archeologist and anthropologist Louis Colville Gray Clarke (1881-1960), director of the Fitzwilliam Museum, Cambridge, 1937-46, who had helped BGLE. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears as such on a British chart of 1961. The Argentines call it Glaciar Clarke.

[2]**Clarke Glacier**. 75°11' S, 139°06' W. About 13 km long, it flows from Coulter Heights to Hull Bay. Named by US-ACAN in 2003, for Theodore S. Clarke, geophysicist with the University of Wisconsin, from the 1990s onwards

working on theoretical and field analysis of ice streams in West Antarctica.

[3]**Clarke Glacier.** 75°34' S, 162°05' E. Also called Clarke Barrier. A northern tributary of the Davis Glacier, it is about 1.5 km wide, and flows in a NNE direction for 8 km to Geikie Inlet, on the coast of Victoria Land, immediately N of Lewandowski Point. The seaward extremity of this glacier merges with the flow of the Davis and other glaciers from the S, and contributes to the floating tongue of ice between Cape Reynolds (on the mainland) and Lamplugh Island. Discovered by BAE 1907-09, and named by Shackleton for Australian politician, explorer and mountain climber Sir Rupert Turner Havelock Clarke (b. 1865), who had succeeded his father as 2nd Baronet Clarke of Rupertswood, Victoria, in 1897. Sir Rupert had been one of Shackleton's early sponsors for this expedition (£2000). He would die at his Monte Carlo villa on Christmas Day, 1926. US-ACAN accepted the name, and NZ-APC followed suit. *See also* [2]**Mount Clarke**.

Cabo Clarkson *see* **Joerg Peninsula**

Punta Clarkson. 68°07' S, 64°46' W. A point at the extreme E of Joerg Peninsula, which projects into the Larsen Ice Shelf from the Bowman Coast, on the E coast of the Antarctic Peninsula. In Dec. 1940, the E point of Joerg Peninsula was surveyed by a sledging party of USAS 1939-41, and named by them as Clarkson Point. It appears as Punta Clarkson on an Argentine chart of 1946, and on Chilean charts from 1947, and that was the name accepted by the Chilean gazetteer of 1974. *See* **Joerg Peninsula** for a detailed history of this naming.

Clarkson, Peter David "Rocky." b. June 19, 1945. BAS geologist who wintered-over at Halley Bay Station in 1968 and 1969, the latter year as base commander. He also summered there in 1970-71. In 1977-78 he was working in the Shackleton Range. From 1976 to 1989 he was head of the BAS mineralogy, geology, and geochemistry section, and from 1989 was with SPRI. In 1994 he became executive secretary of SCAR, and in 1998 was appointed secretary of the Antarctic Club.

Clarkson Cliffs. 80°28' S, 27°04' W. Ice-covered cliffs marked by rock exposures, rising to about 1400 m (the British say about 1200 m), at the NE edge of Fuchs Dome, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed from the ground by BAS pesonnel from Halley Bay Station, 1968-71. Named by UK-APC on Jan. 5, 1972, for Peter Clarkson. US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Clarkson Peak. 83°19' S, 164°34' E. A prominent conical peak, rising to 2825 m on the spur running westward from Mount Miller, at the head of Robb Glacier, between Claydon Peak and Mount Allen Young, and between the Holland Range and the Queen Elizabeth Range. Discovered on Jan. 4, 1958, by the NZ Southern Survey Party of BCTAE 1955-58, and named by them for radio engineer Thomas Reynolds "Tom" Clarkson (1906-1991), a member of the Ross Sea Committee for that expedition, and chairman of its communications sub-committee that made sure that Scott Base and its field parties had first-class radio equipment. US-ACAN accepted the name in 1966.

Clarkson Point *see* **Punta Clarkson**, **Pylon Point**

Clarkson Point Peninsula *see* **Joerg Peninsula**

Punta Claro. 64°15' S, 63°23' W. A point to the immediate W of Cape Grönland (which forms the N extremity of Anvers Island), in the Palmer Archipelago. Named by the Argentines.

Clarsach Glacier. 69°57' S, 70°17' W. A glacier flowing S between Prague Spur and the Finlandia Foothills, into Haydn Inlet, on the N coast of Alexander Island. Photographed aerially by RARE 1947-48, and mapped from these photos in 1959-60 by Searle of the FIDS. Further mapped from USN air photos taken in 1966-67, BAS ground surveys from 1973 to 1977, and U.S. Landsat images taken in Jan. 1974. So named by UK-APC on Dec. 8, 1977, because, seen from the air, its shape resembles that of a clarsach, or Gaelic harp. It appears in the 1980 British gazetteer.

Cap Claude *see* **Claude Point**

Cape Claude *see* **Claude Point**

Pointe Claude *see* **Claude Point**

Punta Claude *see* **Claude Point**

Île Claude Bernard *see* **Bernard Island**

Claude Bernard Island *see* **Bernard Island**

Claude Point. 64°07' S, 62°36' W. Forms the S entrance point of Guyou Bay, on the W side of Brabant Island, in the Palmer Archipelago. Discovered and charted by FrAE 1903-05, and named by Charcot as Pointe Claude, for Auguste Claude (d. 1938), an associate member of the Bureau des Longitudes. It is also seen as Cap Claude on some of Charcot's later charts. It appears on a British chart of 1909, as Claude Point, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. On a 1943 U.S. Hydrographic Office chart it appears as Cape Claude. It appears on a 1947 Chilean chart as Punta Claudio, which, if the name Claude were simply a boy's first name, might be a valid translation, but it's not. It appears on a 1949 Argentine chart as Punta Claude, but on one of their 1954 charts as Cabo Claudio. The Argentine gazetteer of 1970 accepted the name Punta Claudio, but today the Argentines call it Punta Claude, which was also the name accepted by the 1974 Chilean gazetteer. The feature was photographed aerially by FIDASE in 1956-57.

Claude Swanson Mountains *see* **Swanson Mountains**

Cabo Claudio *see* **Claude Point**

Punta Claudio *see* **Claude Point**

Clausen Glacier. 76°10' S, 112°03' W. A narrow glacier flowing northward from the summit of Mount Takahe, to just W of Knezevich Rock, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1975, for Henrik B. Clausen, of the University of Bern (Switzerland), USARP glaciologist at Byrd Station in 1969-70.

Clausnitzer Glacier. 74°02' S, 164°41' E. A tributary glacier flowing E from the Random Hills to enter Tinker Glacier just N of Harrow Peaks, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Frazer Warren Clausnitzer (b. Sept. 29, 1930, Sacramento, Calif. d. Feb. 17, 2005, Orlando, Fla.; known as Warren), electrical engineer and ionosphere physicist who wintered-over at McMurdo in 1966.

Islote Clavo *see* **Huemul Island**

Clay, Michael M. "Mike." The "M" is self-contained, it did not stand for anything. b. Jan. 6, 1935, Platte Co., Mo., son of World War I veteran Wesley R. Clay and his wife Margaret Louise Maloy. Raised on a farm in Tiffany Springs, Mo., he joined the Navy in 1954, became a Seabee, and was building a runway in the Philippines when he answered the notice for "volunteers for Antarctica." He went south on *YOG-34*, helped build McMurdo, and wintered-over there in 1956. On Feb. 10, 1957 he left McMurdo on the *Curtiss* (q.v. for itinerary). Back in the States, now discharged from the Navy, he married Martha Marilyn Hoskins, and went into the postal transportation service in Missouri. He retired as a rural mail carrier in 1988, to manage his 360 acres of farmland. He died on Sept. 15, 2007, in Easton, Mo.

Claydon, John Richard. b. Feb. 12, 1917, Christchurch, NZ, son of C.E. Claydon. He joined the RNZAF as an airman in 1936, before it was the RNZAF (it changed its name from the NZ Permanent Air Force on April 1, 1937), and was based at Wigram Field. He didn't fly until 1942, when he proved he had an extraordinary aptitude, and became a pilot officer. He was with the famous 14th Fighter Squadron during World War II, and then became an instructor. In 1946 he married Noela Borrow. He left London on the *Theron* on Nov. 14, 1955, bound for Montevideo and South Georgia, as the squadron leader who was to lead the aircraft support team on Hillary's trip to the Pole during BCTAE 1957-58. He retired from the Air Force in 1973, to Christchurch. In 1999 he was in the news; in the 1950s he had taken various artifacts from Scott's huts, and was now selling them off via Christie's. Protests from polar experts made him cancel the sale. He, Wally Tarr, and Bill Cranfield all met up at Scott Base in Jan. 2000 for a reunion.

Claydon Peak. 83°25' S, 162°03' E. A peak, rising to 3040 m, and presenting a rocky face of about 1200 m to the NE, just S of January Col, in the SE sector of the Queen Elizabeth Range. Visited by the NZ Southern Survey Party of BCTAE in Jan. 1958, and named by them for John R. Claydon (q.v.), whose RNZAF Antarctic Flight was of great assistance to this party. US-ACAN accepted the name in 1966.

Claydonspitze. 70°48' S, 163°20' E. A peak,

SE of Chagunov Glacier, in the Bowers Mountains of Oates Land, in Victoria Land. Named by the Germans, presumablty for John Claydon.

Claymore Peak *see* **Mount Ulla**
Cerro Clayton *see* **Clayton Hill**
Colline Clayton *see* **Clayton Hill**
Monte Clayton *see* **Clayton Hill**

Clayton Hill. 65°11' S, 64°10' W. Rising to 125 m (the British say 135 m, and the Chileans say 133 m), in the N central part of Petermann Island, indeed, it is the highest point on the island, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Charted by FrAE 1908-10, and named by Charcot as Sommet Clayton, presumably for Thomas Adam Clayton (1852-1925), Scottish-American managing director of the New York-based Sulphur Dioxide Fire Extinguishing Company, which had a branch in Paris, and which, presumably donated some of their product to Charcot's expedition. It appears on a 1930 British chart as Clayton Hill, and that was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the 1955 British gazetteer. It appears on a 1937 French chart, translated as Colline Clayton. It appears on a 1949 Argentine chart as Cerro Clayton (which means the same thing), but on one of their 1957 charts as Monte Clayton (which doesn't). The Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 both accepted the name Cerro Clayton. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base J in 1957-58.

Clayton Ramparts. 80°44' S, 27°25' W. A line of cliffs trending E-W, rising to over 1600 m (the British say about 1730 m), S of Fuchs Dome, and forming part of Stephenson Bastion, in the Shackleton Range. Surveyed in Oct. 1957 by BCTAE, photographed aerially by USN in 1967, and further surveyed from the ground by BAS personnel from Halley Bay Station, 1968-71. Named by UK-APC on Jan. 5, 1972, for Charles Allen Clayton (b. 1936. known as "Flowerpot"), BAS surveyor who wintered-over at Halley Bay Station in 1969 and 1970, and who worked in this area. US-ACAN accepted the name. It appears in the 1974 British gazetteer. The Russians call this feature Gora Markova.

Clean Air Automatic Weather Station. 90°S. An American AWS in the tower in the Clean Air sector at the South Pole. It began operating on Jan. 29, 1986. On Aug. 8, 1987 it stopped tramsitting, due to low batteries, but this problem was fixed on Oct. 31, 1987. It stopped again on Oct. 25, 1993. It was moved and repaired on Jan. 24, 1994, but it was having problems, and continued to have problems, until it was finally removed on Jan. 24, 2005.

Clear Island. 64°55' S, 63°44' W. A small, snow-capped island, immediately N of Wednesday Island, it is the most northeasterly of the Wauwermans Islands, in the Bismarck Strait, in the Wilhelm Archipelago. ArgAE 1952-53 named it Isla Coy, for its shape (the word "coy" in Spanish specifically signifies a ship's hammock, i.e., a square of canvas strung up by its four sides to form a bed; the word "hamaca" is used to mean any form of hammock, whether at sea or on land). Surveyed by an RN Hydrographic Survey unit on the *Protector*, in 1956-57. So named by UK-APC on July 7, 1959, because one can see its ice-cap from every direction except the SW, and because it is a great reference point for sailors. It appears on a British chart of 1960. US-ACAN accepted the name in 1965.

[1]**Clear Lake**. 68°38' S, 77°59' E. A lake, about 1 km in diameter, at the W end of Mule Peninsula, in the Vestfold Hills. Discovered and photographed aerially by LCE 1936-37. Photographed aerially again by OpHJ 1946-47, and by ANARE in 1956, 1957, and 1958. First visited by an ANARE party from Davis Station in 1958. So named by ANCA on Aug. 11, 1958, because of the clarity of the water.

[2]**Clear Lake**. 77°32' S, 166°09' E. A small lake just WNW of Blue Lake, at Cape Royds, Ross Island. It is the deepest lake in the area. Named descriptively by Shackleton in 1907-09. US-ACAN accepted the name in 1968, and NZ-APC followed suit.

Clearwater Mesa. 64°01' S, 57°43' W. A flat-topped hill, about 250 m E of Stark Point, James Ross Island. The mesa contains clearwater lakes in rock basins. Named by UK-APC on Dec. 2, 1993.

Mount Cleary. 76°27' S, 161°58' E. A summit overlooking Pa Tio Tio Gap from the S, it rises to over 1400 m at the N extremity of the Endeavour Massif, in the Kirkwood Range. Named by NZ-APC on Nov. 4, 1999, for Peter James "Pete" Cleary, who worked for the NZ Antarctic Division in Antarctica as a dog handler in 1978-79, and for the winter of 1979. He wintered-over at Rothera Station (i.e., the BAS base) in 1983 and 1984, as a general assistant. US-ACAN accepted the name in 2000.

Cleaves Glacier. 82°57' S, 165°00' E. Flows NW from Mount Reid into the E side of Robb Glacier, in the Holland Range. Mapped by USGS from USN air photos taken in 1960, and from tellurometer surveys conducted in 1961-62. Named by US-ACAN in 1966, for Harold H. Cleaves, captain of the *Private Joseph F. Merrell* during OpDF 65 (i.e., 1964-65).

Cleft Island. 69°21' S, 75°38' E. A small island N of the Bølingen Islands, 4.5 km ESE of Lichen Island, in the S part of Prydz Bay. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Lorten (i.e., "the turd"). First visited by personnel from the *Nella Dan* on Feb. 18, 1966, and, because the original naming was unacceptable to Australian (and American and British) ears, it was so renamed by this ANARE party because a deep channel about 6 m wide splits this island. ANCA accepted the new name on Aug. 10, 1966, and US-ACAN followed suit in 1970. *See also* **Lichen Island**.

Cleft Ledge. 77°32' S, 160°51' E. A flat-topped ridge about 1.5 km long, and 0.5 km wide, running at an elevation of about 920 m between Shaw Trough and Healy Trough, 0.5 km NW of Hoffman Ledge, in the feature called Labyrinth, in Wright Valley, in the McMurdo Dry Valleys of Victoria Land. So named by US-ACAN in 2004, because a central N-S hanging valley almost cleaves the ledge in twain. NZ-APC accepted the name on Nov. 30, 2004.

Cleft Peak. 83°55' S, 173°34' E. A prominent peak (the New Zealanders call it a massif) rising to 1245 m (the New Zealanders say about 1100 m), in the W part of the Separation Range, overlooking the terminus of Hood Glacier, and which can be seen from the Beardmore Glacier. Named by the NZ Alpine Club Antarctic Expedition of 1959-60, whose 4 members were landed 50 km from this peak by VX-6 aircraft. They then man-hauled their sledges toward the peak, which is the most prominent of the coastal peaks near the Hood Glacier, and therefore an obvious beacon for navigation. When they got to it, they climbed it, on Dec. 20, 1959, and when they got to the top they found that the E side of the peak is cleft from summit to base by a huge fissure, hence the name they gave it. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Cleft Point. 60°37' S, 45°46' W. On the E side of Norway Bight, on the S coast of Coronation Island, in the South Orkneys. When the personnel on the *Discovery II* mapped it in 1933, they thought it was actually on (i.e., formed a part of) Coronation Island, but in 1950 Fids from Signy Island Station found that it was, in fact, the W extremity of an island separated (or cleft) from the big island by a narrow channel. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Clegg, William *see* **USEE 1838-42**

Clegg Nunataks. 77°23' S, 160°38' E. A group of nunataks about 2.2 km long, above (i.e., to the SW of) Haselton Icefall, in the upper part of Haselton Glacier, in the Willett Range of Victoria Land. Named by NZ-APC on Sept. 12, 2005, for Keith Clegg, information officer for NZ's Antarctic Division, 1979-88. He died in Dec. 2004. US-ACAN accepted the name in 2006.

The *Clelia II*. A 4077-ton, 290-foot private yacht-like ship, launched in 2009 for Arctic and Antarctic travel, and run by Travel Dynamics International. She could take 100 guests in 50 suites. On Dec. 6, 2009, she arrived at Petermann Island, with the intention of unloading tourists for a ramble on the island. The ship ran aground, her starboard propeller being damaged on the rocks. The captain radioed their sister ship, the *Coronthian II*, which arrived within the hour (she had been at Pléneau Island). Both ships headed for Ushuaia, where the *Clelia II* was repaired. Further trips during that season were canceled.

Clem, Willis Ray. Known as Ray. b. Aug. 25, 1935, Georgetown, Ky., son of George

Clem and his wife Alma Duncan. He joined the U.S. Navy on Oct. 14, 1953, became a Seabee, and was construction mechanic at Little America V, arriving in Feb. 1956. He wintered-over there in 1956; was back at McMurdo in Oct. 1958, summered there in 1958-59, wintered-over there in 1959, and was again at McMurdo for the summer of 1960-61. He did a tour in Vietnam, 1968-70, and was then attached to the U.S. Naval Security Group, based out of Homestead Air Force Base, in Florida. On July 1, 1972, at Homestead, he married Betty Shoesmith, and retired as senior chief mechanic on Dec. 1, 1972, going to work for Ryder Truck Company, as service manager in Monette, Mo., where he finally retired in 1994. He died on Sept. 27, 2010, at the Missouri Veterans Home, in Mount Vernon.

Clem Nunatak. 78°31' S, 160°40' E. An isolated rock nunatak, rising to 1260 m, at the W side of, and near the head of, Skelton Glacier, 11 km SW of Halfway Nunatak. Named by US-ACAN in 1965, for Ray Clem. NZ-APC accepted the name.

Clemence Fjord. 69°23' S, 76°17' E. Extends NW-SE between Fisher Island and Lied Promontory, in the Larsemann Hills. Mapped by Norwegian cartographers in 1946 from aerial photographs taken by LCE 1936-37, and named by them as Broknesdalen (i.e., "the broken cape valley"). The feature was re-mapped by Australian cartographers, and re-named by ANCA on Sept. 29, 1988, for Peter Clemence (*see* **Clemence Massif**).

Clemence Massif. 72°10' S, 68°43' E. A mostly ice free rock outcrop (designated a massif), 7 km wide and between 24 and 28 km long, rising to 1500 m (the Australians say 1325 m above sea level), and elongated in a N-S direction, it stands 50 km SE of the Shaw Massif, on the E side of the Lambert Glacier, at the N end of the Mawson Escarpment, in the Prince Charles Mountains. Discovered aerially in 1957 by ANARE flying officer Douglas Malcolm "Doug" Johnston, RAAF, and named by ANCA on April 29, 1958, for Squadron Leader Peter Hugh Clemence (b. March 18, 1925, Melbourne), who came to Mawson Station in Dec. 1955, and left in March 1956. He came to Mawson again, in Dec. 1956, and wintered there in 1957, being commander of the RAAF Antarctic Flight. In Sept. 1957 he, Mawson officer-in-charge Keith Mather, and geophysicist Jim Goodspeed, flew 1000 miles to Mirnyy Station. In March 1958 he returned to Melbourne. He retired in 1967, after 24 years in the RAAF, and in 1969-70 was back on the *Nella Dan*, and worked in the northern Prince Charles Mountains. In 1971-72 same thing, but this time in the southern part of the mountains. In Jan. 1973 he came down on the *Thala Dan*, and was at Casey Station for a month. He was back on the *Nella Dan*, working in Enderby Land in 1974-75. US-ACAN accepted the name in 1961.

Clement, Colin Cowan "Clem." b. Dec. 2, 1929, Scarborough, Yorks, son of Andrew M. Clement and his wife Vivian A. Phillips. He joined FIDS in 1955, and in October that year sailed from Southampton on the *John Biscoe*, bound for Port Stanley. He was diesel mechanic and base leader at Base G in the winter of 1956, and was transferred to Port Lockroy Station for the winter of 1957, with the full intention of not being base leader but being able to work full-time on the power generation system. But, on his arrival there he found that he had, indeed, been designated base leader for the winter of 1957. In 1963, in Scarborough, he married Judith F. Stainton, and they had two children there. That is where he died in 1981.

Clement, Gastón Carlos. b. Nov. 15, 1903, Salta, Argentina. He led the 1950 Argentine patrol expedition to the Melchior Islands. Ships were the *Trinidad* and the *Hércules*. He later made rear admiral, and from July 27, 1959, was secretary of state for the Navy.

Clement, W.H. Crewman on the *Jacob Ruppert*, 1934-35, during ByrdAE 1933-35.

Clement Hill. 62°13' S, 58°58' W. Rising to 135 m, just to the SW of Suffield Point, and 1.5 km NW of Halfthree Point, it is the highest point in the S part of Fildes Peninsula, on King George Island, in the South Shetlands. BAS did geological work here in 1975-76. Named by UK-APC on Feb. 7, 1978, for Colin Clement. It appears in the British gazetteer of 1980. US-ACAN accepted the name. It appears on the 1984 Brazilian map of Fildes Peninsula, as Morro Duque de Caxias, named for the city in Brazil. The Chinese call it Shanhaiguan Feng, it appearing as such on their 1990 map.

Clements, Raymond David "Clem." Only his family ever knew him as Ray. b. Jan. 15, 1930, Southend-on-Sea, Essex, but raised in the little village of Great Wakering, son of engineer Edmund David Clements and his wife Elsie Louisa Trusler. An apprentice carpenter, he went into brick-making for 18 months while he waited to become old enough to join the Navy, which he did in 1948, learning to be an electronics mechanic. After 7 years he got out, and was working for a government experimental establishment when he and a friend saw an ad for FIDS meteorologists in the *Chronicle* (or the *Despatch*, perhaps; one of the two). He applied. The friend didn't. Bill Sloman interviewed him, and he left Southampton on the *Shackleton* at the end of 1956, bound for Montevideo, Port Stanley, and Deception Island. At New Year's 1957 the Duke of Edinburgh was touring the bases, so Clem had to travel to various other bases to help make everything shipshape. He cooked the baked stuffed potatoes for the Duke's lunch at Base B, which is where he wintered-over as diesel electric mechanic in 1957 and 1958. In early 1959 the *Protector* came to pick him up from Base B, but couldn't get in because of the ice, so he was flown by helo to the ship, then back to Stanley, where he spent 6 weeks, in that time meeting a Scottish girl, Sadie Miller, who was working there. Then he returned to England on the *Shackleton*, via Tristan da Cunha. In 1960 he returned to the Falklands, married Sadie that year, took over Len Tyson's job for a year as wireless operator at the BAS radio station, then, in 1961, took over Murdo Finlayson Tait's job as FIDS stores officer. This job, and his succeeding job, as BAS logistics officer in Stanley, lasted until 1976, when he returned to England, to work for 11 years under Derek Gipps in the BAS supply office in Swindon. In 1987 he moved to Portsoy, Banff, in Scotland, and, being a first-class carpenter, went into the furniture business, cabinet-making and chair-making, never advertising, but working continually and becoming very well-known for his work. He retired when he was 75.

Clements building. An easily assembled kit building with 4-by-8-foot panels for top and sides. Invented by the Clements Company, and developed by the U.S. Navy for Antarctica.

Clements Island. 65°56' S, 66°00' W. An island, 1.5 km long, immediately S of Rabot Island, and marking the NE end of Extension Reef, in the Biscoe Islands. During FrAE 1903-05 Charcot named an island NE of Renaud Island (in what are now the Pitt Islands) as Île Clements Markham, for Sir Clements Markham (*see* all the Clements Markham entries under **C** and **M**, and also **British National Antarctic Expedition, 1901-04**). However, as Charcot's chart was very rough, and the island ill-defined, it is far from certain whether the present-day feature is his island, as such. Probably not. The actual two spellings used by Charcot on his maps are "Île Clément-Markham" and "Île Cl. Markham." Charcot's island appears on a 1908 British chart as Clements Markham Island, but that was a name simply lifted and translated from the French. It also appears as Markham Island on Wilkins' chart of 1929. BGLE surveyed and charted the area in much more detail, and based upon their maps the present-day feature appears on a 1947 Chilean chart as Isla Markham, and on a 1948 British chart as Markham Island, and that latter name was the one accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It was photographed aerially by FIDASE in 1956-57. On Feb. 2, 1961, UK-APC, wary of the several Antarctic names beginning with "Markham," especially the Markham Island in Terra Nova Bay (in Victoria Land), renamed it Clements Island, and US-ACAN followed suit in 1963. It appears as such on a British chart of 1984. It appears on a 1962 Chilean chart as Isla Clements Markham, and that was the name accepted by the 1974 Chilean gazetteer, the Chileans also being concerned about duplication, but less concerned, it seems, about the compound names they had been trying to avoid since 1951. The 1970 Argentine gazetteer accepted the name Isla Markham.

Île Clements Markham *see* **Clements Island**

Isla Clements Markham *see* **Clements Island**

Clements Markham Bay *see* **Markham Bay**

Clements Markham Bukt *see* **Markham Bay**

Clements Markham Island *see* **Clements Island**

Clemons Spur. 82°31' S, 51°13' W. A bare rock spur, next SW of Forlidas Ridge, in the Dufek Massif, in the Pensacola Mountains. Mapped by USGS from 1964 aerial photos taken in 1964, and from ground surveys conducted in 1965-66, by USGS themselves, during their Pensacola Mountains Survey. Named by Art Ford for Samuel D. Clemons, USN, VX-6 steward attached to that USGS expedition. US-ACAN accepted the name, and UK-APC followed suit on May 21, 1979.

Clemson, H.A. *see* **USEE 1838-42**

Clennell, Jonathan James Ossory "Jon." b. Oct. 22, 1935, Oxford, son of RAF officer Geoffrey James Ian Clennell and his wife Joan Ossory Dunlop. He was an officer in the Army, and (it is said) lost an eye in an EOKA ambush in Cyprus in the mid-1950s. He joined FIDS in 1961, as a general assistant, and wintered-over at Base E in 1962 and 1963, the second year as base leader. He married Susan Owen Hughes, who had previously been married to Andrew Borwick, and they live in Sheffield. Mr. Clennell did not wish to be interviewed for this book.

Clerke, Charles. b. Aug. 22, 1741, at Brook Farm, Wethersfield, Essex, son of magistrate Joseph Clerke and his wife Anne. Joseph Clerke (the father) had five sons, all of whom died before he did. He also had seven daughters, the last killing Anne (the wife) in a horrendous childbirth. Charles entered the Naval Academy, in Portsmouth, when still only 12, sailed with Byron to the Pacific, was master's mate on the *Endeavour* during Cook's 1st voyage, 1768-71, and 2nd lieutenant on the *Resolution* during Cook's 2nd voyage, 1772-75. He was captain of the *Discovery* during Cook's 3rd voyage, but was late joining his ship in Plymouth, as he was in debtor's prison in London for having co-signed a bad note for his brother Captain Sir John Clerke, RN. After Cook was eaten in Hawaii, Clerke transferred to the *Resolution*, became leader of the expedition, and took the two ships north to try to find the Northwest Passage. He kept a diary on all 3 voyages. He later commanded the *Favourite*, and died on his 38th birthday, Aug. 22, 1779, of tuberculosis, off Kamchatka, on the *Discovery*. There is a book, *In the Wake of Captain Cook—The Life and Times of Capt. Charles Clerke, R.N., 1741-1799*, written by Gordon Cowley and Les Deacon, and published by Kay Publications, in Boston, Lincs.

Pic Cléry *see* **Cléry Peak**

Pico Clery *see* **Cléry Peak**

Cléry Peak. 65°03' S, 63°58' W. Rising to 640 m (the British say 635 m, and the Chileans say 632 m), and forming the N peak of the conspicuous massif Mount Lacroix, at the N end of Booth Island, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Photographed and charted by FrAE 1903-05, and named by Charcot as Pic Cléry, for his second father-in-law, Léon Cléry (1831-1904), a French lawyer of note and son-in-law of Victor Hugo. It appears as Cléry Peak on a U.S. Hydrographic Office chart of 1943, and that was the name accepted by US-ACAN in 1952, and by UK-APC on July 7, 1959. It appears as such on a 1960 British chart (but sans accent) and also in the 1977 British gazetteer (with the accent). It appears on a 1949 Argentine chart as Pico Cléry, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57.

Cletrac Peak. 64°20' S, 59°38' W. A conspicuous steep-sided peak, rising to 745 m, immediately N of Muskeg Gap (at the N end of Sobral Peninsula), at the NW corner of Larsen Inlet, on the Nordenskjöld Coast of Graham Land. Mapped by FIDS cartographers from ground surveys conducted by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, for the cletracs. US-ACAN accepted the name later that year.

Cletracs. Heavy tractors built by King White's Cleveland Tractor Company (hence the name), in Ohio. They weighed 6 tons and could tow a 10-ton load. ByrdAE 1933-35 had one (this was the first Antarctic expedition to use one); it was used only around Little America II because it was too heavy for the crevasses. They were also used on OpHJ 1946-47.

Cleveland Glacier. 76°55' S, 162°01' E. About 3 km wide, it flows ESE at a steep gradient from Mount Morrison and Mount Brøgger, in the interior heights W of Granite Harbor, to enter Mackay Glacier (which it is just N of), just W of Mount Marston, in Victoria Land. Discovered by Grif Taylor's Western Geological Party during BAE 1910-13, and named by Frank Debenham of that party. Edith Cleveland was his mother's original name. US-ACAN accepted the name, and NZ-APC followed suit. Originally plotted in 76°55' S, 162°14' E, it has since been replotted. Edith Cleveland (b. Sept. 25, 1851, Hawley Road, London. d. 1960, London), the daughter of merchant William Cleveland and his wife Charlotte Barry, married the Rev. John Willmott Debenham (d. 1898) in Launceston, Tasmania, on April 19, 1880.

Cleveland Mesa. 86°19' S, 130°00' W. A high, ice-covered mesa, 8 km long and 5 km wide, standing at the SE end of the Michigan Plateau. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Harlan Cleveland (1918-2008), assistant secretary of state for international organization affairs, 1961-65, and chairman of the Antarctic Policy Group, 1965. From 1965 to 1969 he was Lyndon Johnson's ambassador to NATO, and from 1969 to 1974 was president of the University of Hawaii.

Cleveley, James. Carpenter on the *Resolution* during Cook's voyage of 1772-75.

Islote Cliff *see* **Cliff Island**

Cliff Island. 66°00' S, 65°39' W. A narrow, rocky, and cliffed islet, about 350 m long in an E-W direction, and about 85 m wide, at the SE end of Mutton Cove, immediately S of Upper Island, and 12 km W of Prospect Point, off Holtedahl Bay, in the Biscoe Islands, off the Graham Coast, on the W coast of Graham Land. Charted in Feb. 1936 by BGLE 1934-37, and named descriptively by them. It appeared as such on a U.S. Hydrographic Office chart of 1947. However, it appears on a British chart of 1950, as Cliff Islet, and that was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. Photographed from the air by FIDASE 1955-57. The feature was redefined by UK-APC on July 7, 1959, as Cliff Island (which is what Rymill had called it originally), and this new name appears on a 1960 British chart, and was the name accepted by US-ACAN in 1963. It appears on a 1957 Argentine chart with the name "Cliff," on another of their charts (of 1958) as Islote Cliff, and on a 1962 chart fully translated as Islote Acantilado, that last name being the one officially accepted by the Argentines on Aug. 14, 1964, and which appears in the Argentine gazetteer of 1970. It appears in the 1974 Chilean gazetteer as Islote Cliff.

Cliff Islet *see* **Cliff Island**

Glaciar Clifford *see* **Clifford Glacier**

Pico Clifford *see* **Clifford Peak**

Clifford, Brian Francis. b. May 5, 1941. Ionosphere physicist at Mawson Station in 1972. He died on Jan. 21, 1987.

Clifford, Charles *see* **USEE 1838-42**

Clifford, Geoffrey Miles. Known to posterity as Sir Miles Clifford. b. Feb. 16, 1897, London. He served in the Army during World War I, and in 1920 married Ivy Dorothy Eland. In 1921 he entered the Colonial Service, in Nigeria, by 1938 having risen to principal assistant secretary. He was colonial secretary, Gibraltar, 1942-44, and was in Nigeria again, as senior resident. He was in Cyprus in 1945, as chairman of the Salaries Commission, and in 1946 succeeded Sir Allan Cardinall as governor of the Falkland Islands. As such, he was a major figure in Antarctic history, going to the ice on several occasions, and was knighted in 1949. He left office in 1954 (Sir Oswald Arthur replaced him), and died on Feb. 21, 1986, in Tunbridge Wells. His second wife was Mary Turner.

Clifford Glacier. 70°28' S, 63°10' W. A broad glacier, about 60 km long, it flows in an ENE direction to the gap between Mount Tenniel and the Eland Mountains, and then E to Smith Inlet, on the Wilkins Coast, on the E coast of Palmer Land. The upper part of this glacier was charted in Dec. 1936 by BGLE 1934-37, and it appears on Stephenson's 1940 map of the expedition. The seaward side (i.e., near the glacier's terminus) was discovered and charted by the survey party of 1940 which explored along this coast during USAS 1939-41. In late 1947 it was photographed aerially by RARE 1947-48, and surveyed from the ground by a combined sledging party of RARE person-

nel and Fids from Base E. It appears on a 1947 Chilean map as Glaciar Stefansson, presumably named in association with Stefansson Sound. This name appears translated in a 1954 reference as Stefansson Glacier. Named by FIDS in 1952 for Miles Clifford. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer. In those days it was plotted in 70°25' S, 62°30' W, but after USN air photos taken in 1966, it was replotted in 70°23' S, 62°30' W. It has since been replotted again. The Argentines call it Glaciar Clifford.

Clifford House. The base hut at Signy Island Station. By 1954 it had deteriorated, and a new hut was built in 1955 — Tønsberg House. Clifford was demolished.

Clifford Peak. 64°34' S, 62°51' W. Rising to 1160 m, at the NE end of the Osterrieth Range, 3 km W of Ryswyck Point (the E extremity of Anvers Island), in the Palmer Archipelago. Discovered in Feb. 1898, by BelgAE 1897-99. It was surveyed by the Discovery Investigations in 1927, and charted by them as Green Peak, a name that may not have been given by them, but which may have been named thus at an earlier date. Re-named in 1948 for Miles Clifford, by personnel on the *Snipe*, following a cruise there in Jan. 1948. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1953. It was photographed aerially by FIDASE in 1956. It appears on a U.S. Hydrographic office chart of 1962. The Argentines call it Pico Clifford, and the Chileans call it Pico Green.

Clilverd, Mark Andrew. b. Jan. 13, 1963, near London, son of Denis R.A. Clilverd and his wife Beryl E. Watson. After graduating from the University of Southampton in 1984, he joined BAS as an upper atmosphere physicist specializing in VLF waves, and wintered-over at Faraday Station in 1985 and 1986. He got his PhD in 1990, from the University of Sheffield, and was in Antarctica again in July and August of 1990. From Nov. 1991 to Oct. 1995 he worked for BAS, as a higher scientific officer, with the department of upper atmospheric physics, and from 2000 has been principal scientific officer there. He was at Faraday again in Jan. 2006.

Climate. The Antarctic is cold (*see* **Temperatures**). Its great elevation (of the Polar Plateau, at least) and perpetually reflective snow cover intensify the Polar climate.

Climbing Range *see* **Blackwall Mountains**

Climbing Wall. 69°23' S, 76°31' E. A sheer, vertical, steep-stepped rock face that forms the E side of Dålk Island, the island in the SE part of Prydz Bay, at the E end of the Larsemann Hills. So named by ANCA on Nov. 24, 1987, because it is ideal for climbing practice, containing, as it does, all grades of difficulty.

Clinch Peak. 78°32' S, 85°31' W. A high, elongated peak rising to 4841 m, about 2.3 km SE of Mount Vinson, on the summit plateau of the Vinson Massif, in the Sentinel Range. Named by US-ACAN in 2006, for Nicholas Bayard Clinch, leader of the American Antarctic Mountaineering Expedition of 1966-67 that made the first ascent of several of the peaks on the Vinson Massif (*see* **Mount Vinson** for that expedition).

Cline Glacier. 71°40' S, 62°00' W. A large glacier that drains the vicinity at the E side of Mount Jackson, and which flows generally SSE between the Schirmacher Massif and the Rowley Massif, into the head of Odom Inlet, on the Black Coast, on the E coast of Palmer Land. Mapped by USGS from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for David R. Cline, USARP biologist on the International Weddell Sea Oceanographic Expedition of 1968 and 1969. UK-APC accepted the name on July 21, 1976.

Clingman Peak. 73°50' S, 161°12' E. Rising to 2150 m, it is the last peak along the S wall at the head of Priestley Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Otis Clingman, Jr. (b. Oct. 6, 1928, Dallam, Tex.), biologist at McMurdo, 1965-66.

Clinker Bluff. 78°31' S, 161°35' E. A detached bluff within, but on the W side of, Skelton Glacier, due W of Mount Tricouni. Surveyed in Feb. 1957 by the NZ party of BCTAE, and named descriptively by them. A clinker is a rectangular nail used in alpine boots, and a tricouni is a saw-toothed nail used on the soles. US-ACAN accepted the name in 1962.

Clinton Spur. 82°39' S, 52°45' W. A rock spur in the southernmost part of the Dufek Massif, 2.5 km SE of Neuburg Peak, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS in 1965-66, as part of their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Lt. Clinton R. "Clint" Smith, USN, medical officer who wintered-over at Ellsworth Station in 1957 (it was his first naval assignment). UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Clio Glacier. 77°26' S, 162°00' E. In the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 1998, for the Greek muse. NZ-APC accepted the name.

The *Clipper Adventurer*. Tourist vessel, formerly the *Alla Tarasova* (q.v.), and registered in the Bahamas. She could carry 120 passengers. She was in Antarctic waters in 1998-99 (Capt. Torsten Olbrich), 1999-2000 (Capt. Olbrich), 2000-01 (captains Aleksandr Golubev and Olaf Hartmann), and again in 2005-06. In Feb. 2009, she helped her sister ship, the *Ocean Nova*, in distress at Marguerite Bay.

Clissold, Thomas Charles. b. Nov. 9, 1881, Chatham, Kent, son of blacksmith John Walter Clissold and his wife Mary Ann Hoare. He joined the Royal Navy, and was an artificer on the *Harrier*, when he transferred to the *Terra Nova* as cook for BAE 1910-13, the youngest man on the expedition. He served in France during World War I as a dispatch rider, was wounded at Loos, and transferred to the Flying Corps. He was released from the Army in 1919, and in 1921 moved to NZ, where he became a vehicle inspector at Napier. He died on Oct. 20, 1963, in NZ.

Clo, Louis. b. Nov. 20, 1814, Bordeaux. Junior seaman on the *Astrolabe* during FrAE 1837-40. He became a sailmaker on Jan. 1, 1840.

Cabo Cloos *see* **Cape Cloos**

Cap Cloos *see* **Cape Cloos**

Cape Cloos. 65°07' S, 64°00' W. A high rock cape crowned by a pointed cone rising to some 975 m, fronting, and on the SE coast of, Lemaire Channel, it marks the N side of the entrance to Girard Bay, on the Graham Coast, on the W coast of Graham Land. Discovered and charted on Feb. 12, 1898, by BelgAE 1897-99, and named by de Gerlache as Cap Cloos, for Christian Cloos (1863-1941), Danish merchant and sometime Belgian honorary consul in Frederikshavn, Denmark. It appears as such on the 1899 map of that expedition, and as Cape Cloos on Frederick Cook's 1900 English language version of that map. US-ACAN accepted the name Cape Cloos in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955, and on a British chart of 1960. It was photographed from the air by FIDASE 1956-57. It appears on a 1949 Argentine chart as Cabo Cloos, and that was the name accepted by the 1970 Argentine gazetteer, and also by the Chilean gazetteer of 1974.

Macizo Cloos *see* **Mount Cloos**

Massif Cloos *see* **Mount Cloos**

Mont Cloos *see* **Mount Cloos**

Monte Cloos *see* **Mount Cloos**

Mount Cloos. 65°07' S, 63°57' W. A semicircular, dome-shaped mountain rising to over 915 m (the British say it is more like 1100 m), at the N side of Girard Bay, between that bay and Deloncle Bay, 2.7 km ENE of Cape Cloos, on the W coast of Graham Land. Sighted in Feb. 1898 by BelgAE 1897-99. Roughly mapped by FrAE 1908-10, and named by Charcot as Mont Cloos, in association with the cape. As such, it appears on the French expedition map of 1910. However, it also appears as Massif Cloos on the expedition map made up in 1912. By 1943 the Americans were calling it Mount Cloos (it appears as such on a 1943 U.S. Hydrographic Office chart), and US-ACAN accepted that name in 1951. The feature was photographed by FIDASE in 1956-57. UK-APC accepted the name Mount Cloos on July 7, 1959, and it appears on a British chart of 1960. It appears on a Chilean chart of 1962 as Monte Cloos, and that was the name accepted by the 1974 Chilean gazetteer. It appears on a 1946 Argentine chart as Macizo Cloos (i.e., "Cloos massif").

Cloosberg. 73°51' S, 165°21' E. A peak, close N by NW of Cape Sibbald, at the S margin of the Lady Newnes Ice Shelf, on the coast of Victoria Land. Named by the Germans.

Cape Close. 65°55' S, 52°29' E. Between Cape Ann and Cape Borley, about 50 km W of Cape Batterbee, in Enderby Land, at the foot of the Napier Mountains, and about 57 km W of Proclamation Island. Discovered on Jan. 13, 1930, by BANZARE 1929-31, and named by Mawson for Sir Charles Arden Close (1865-1952; knighted in 1918), director general of the Ordnance Survey, 1911-22, and president of the Royal Geographical Society, 1927-30. In 1932 he assumed the surname Arden-Close. US-ACAN accepted the name in 1947, and ANCA followed suit.

Close, John Henry Collinson. b. 1871, St. Leonards, Sydney, son of George Thomas Palmer Close and his wife Amy Leonora James. Collinson was his great grandmother's original surname. He fought in the Matabele War and the South African War, serving in Rhodesia, and in 1909, in Sydney, married Alice Bell, and they lived in Burwood, NSW. He was a teacher of physical culture when he became assistant collector on the first part of AAE 1911-14. He died in 1949, in Chatswood, Sydney.

Close Islands. 67°01' S, 144°27' E. A cluster of about 3 small, almost entirely ice-capped islands in the W part of the entrance to Buchanan Bay, off the coast of George V Land. Discovered by AAE 1911-14, and named by Mawson for John H. Close. ANCA accepted the name, and US-ACAN followed suit in 1963.

Clossbucht. 74°36' S, 164°56' E. A bay indenting the E side of Markham Island, S of Oscar Island, about 30 km W of Cape Washington, in the N part of Terra Nova Bay, along the coast of Victoria Land. Named by the Germans.

The *Clothier*. A 94-foot, 285-ton Stonington, Conn., sealer, built in Philadelphia in 1810, and registered in New London on Aug. 2, 1820. She was commanded by Capt. Alexander B. Clark as the flagship of his fleet going down to the South Shetlands for the 1820-21 season. On Dec. 7, 1820 she was wrecked on the NW coast of Robert Island, in the South Shetlands, and on Feb. 1 of that year was salvage-auctioned in Clothier Harbor where she had gone down.

Caleta Clothier *see* **Clothier Harbor**

Détroit de Clothier *see* **Nelson Strait**

Puerto Clothier *see* **Clothier Harbor**

Punta Clothier *see* **Hammer Point**

Clothier Harbor. 62°21' S, 59°41' W. A small indentation in the NW coast of Robert Island, 2.5 km NE of the W end of the island, SW of Hammer Point, in the South Shetlands. Named by Alexander B. Clark, commander of the *Clothier*, which was wrecked here on Dec. 7, 1820. Fildes, in 1821, described "Clothier Harbour" as "the safest harbour on the North side of the Shetland that is clear of ice." On Feb. 2, 1821, Capt. Burdick referred to it as Clothier Harbor, and on Sherrat's map of 1821 it appears as Clothier Harbour. On Nov. 15, 1821, Capt. John Davis referred to it as Clothier Harbour. On Powell's map of 1822, it appears as Clothier's Harbour. Balch's map of 1904 has it as Clothier Harbor, but incorrectly on the N side of Nelson Island. Balch, whom one needs to approach somewhat cautiously, has Alex Palmer, in a supposed 1830 reference, calling it Ship Harbor. It appears correctly on a 1943 U.S. Hydrographic Office chart. On a British chart of 1948 Clothier Harbour is shown incorrectly immediately SW of Catharina Point, and the Argentines, using this chart, perpetuated the error, calling it Puerto Clothier on one of their 1949 charts. US-ACAN accepted the name Clothier Harbor in 1952. UK-APC accepted the name on Sept. 8, 1953, but with the "u" in "harbor." It appears in both the 1955 British gazetteer and the 1956 American gazetteer. The Argentines accepted the name Puerto Clothier. It was photographed aerially by FIDASE in 1956. It appears on a Chilean chart of 1962 as Caleta Clothier (i.e., "Clothier cove"), and that was the name accepted by the 1974 Chilean gazetteer. The British were the latest to replot this feature, in late 2008.

Clothier's Harbor *see* **Clothier Harbor**

Clothing. The best way to keep warm (in Antarctica) is to layer the clothing, and to avoid tight clothing. Wool is better than cotton. *See also* **Boots**, **Finneskoes**, **Mukluks**, **Socks**, **Sunglasses**, **Sweaters**, **Trousers**, **Underwear**.

The *Cloud Nine*. American yacht, skippered by Roger Swanson, which visited the South Shetlands and the Antarctic Peninsula in 1987-88, 1988-89, and 1991-92.

The Cloudmaker. 84°17' S, 169°25' E. A massive mountain, rising to 2681 m (the New Zealanders say 3040 m), just S of Hewson Glacier, and E of Mount Kirkpatrick, in the Queen Alexandra Range, it overlooks the Beardmore Glacier, halfway to the South Pole, and forms the most conspicuous landmark along the W side of the Beardmore. It has a high, ice-free slope, and a cloud is usually at its summit, the cloud being even more of an identifying landmark than the mountain itself. Discovered by Shackleton in Dec. 1908, while he was on his way up the Beardmore, on his way to the Pole, during BAE 1907-09, and named descriptively. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Clouds. There is hardly any rain in Antarctica, so clouds, as such, are not seen. Practically all of the "clouds" in Antarctica are composed of ice crystals, and this can lead to phenomena (q.v.).

Mount Clough. 85°54' S, 158°26' W. An ice-free mountain, rising to 2230 m, 3 km E of Mount Dort, at the S side of Cappellari Glacier, in the Queen Maud Mountains. Discovered and first mapped by ByrdAE 1928-30. Named by US-ACAN in 1967, for John Wendell Clough (b. Jan. 3, 1942, Oak Bluffs, Mass.), geophysicist on South Pole-Queen Maud Land Traverse II, in 1965-66.

Clow Island. 77°37'S, 163°10' E. About 1 km long, in the E part of Lake Fryxell, in Taylor Valley, in Victoria Land. This feature was a peninsula as late as the 1980s, when the rising level of the lake submerged the E part of the peninsula, thus creating an island. Named by US-ACAN in 2000, for Gary D. Clow, USGS, who studied sand/ice interactions and sediment deposition in perennially ice-covered lakes in the Taylor Valley, in 1985-86; and who worked in glacier geophysicis at Taylor Dome in 1993-94, 1994-95, and 1995-96. NZ-APC accepted the name on Feb. 20, 2001.

Bahía Clowes *see* **Clowes Bay**

Clowes, Archibald John. b. 1900, Dulwich, but raised in Camberwell, London, son of engine fitter William John Clowes and his wife Amy Burgess. He left Liverpool in 1924 for the Falklands, to work for the Discovery Investigations. He was senior hydrologist on the *Discovery II*'s cruises of 1929-31, 1933-35, and 1937-39, and studied the composition of sea water. He remained with the DI until 1946, then moved to South Africa, and died on Jan. 4, 1960, in Cape Town.

Clowes Bay. 60°44' S, 45°38' W. A bay, 1.5 km wide, between Confusion Point and the Oliphant Islands, N of Dove Channel, along the S side of Signy Islands, in the South Orkneys. Charted in 1933 by personnel on the *Discovery II*, and named by them for Archibald Clowes. Re-surveyed by FIDS in 1947. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1953 Argentine chart as Bahía Clowes, and that was the name accepted by the 1970 Argentine gazetteer.

Clowes Glacier. 72°56' S, 60°41' W. A glacier, 3 km wide, flowing NE into Mason Inlet, on the Black Coast, on the E coast of Palmer Land. Discovered and photographed aerially on Dec. 30, 1940, by USAS 1939-41. In late 1947 it was re-photographed aerially by RARE 1947-48, and that same season was surveyed from the ground by a combined team of RARE personnel and Fids from Base E, the Fids naming it for Archibald Clowes. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the British gazetteer of 1955, on a U.S. Hydrographic Office chart of the same year, and also on the 1979 USGS sketch map of the N part of Palmer Land. The British plot it in 73°00' S, 60°37' W. It appears on a 1966 Chilean map, as Glaciar Clowes.

Cloyd Island. 66°25' S, 110°33' E. Also spelled Kloyd Island. A rocky island, about 0.9 km long, between Ford Island and Herring Island, in the southern Windmill Islands, off the Budd Coast. Plotted from air photos taken in 1947, during OpHJ 1946-47, and in 1948, during OpW 1947-48. Named by US-ACAN in 1956, for J.R. Cloyd, Army Transport Service observer on OpW 1947-48. ANCA accepted the name on July 4, 1961.

Mount Club *see* **Mount Touring Club**

Club Lake. 68°33' S, 78°14' E. An irregular-shaped saltwater lake, 2.5 km long (the Australians say about 3.4 km long, and with a maximum width of 0.5 km), and resembling a club which is elongated NE to SW, in the cen-

tral part of Breidnes Peninsula, in the Vestfold Hills, about 11 km NNE of Davis Station. First photographed aerially during OpHJ 1946-47, and visited in 1955 by an ANARE party led by Phil Law. Re-mapped by ANARE in 1957-58, and named descriptively by them. ANCA accepted the name on April 29, 1958, and US-ACAN followed suit in 1965.

Clute, Daniel *see* **USEE 1838-42**

Tenedero Cmdte. González Navarrete *see* **Tenedero González**

CO = Commanding officer

Coal. In 1908, during BAE 1907-09, Frank Wild discovered coal on what became known as Buckley Island, and it has been found ever since (for example, in the Prince Charles Mountains in 1956-57). The coal in Antarctica — semi-anthracite, anthracite, and coke — is generally high in ash, fixed carbon, and oxygen, and low in hydrogen and sulfur. The coals are not as good as foreign coals (*see also* **Fuel**).

Nunatak Coal *see* **Coal Nunatak**

Coal Nunatak. 72°07' S, 68°32' W. A flat-topped rock mass in the form of a nunatak, with steep cliffs facing S, it rises to about 460 m NNE of Kirwan Inlet, 3 km SW of Corner Cliffs, on the SE coast of Alexander Island. Discovered and photographed aerially by Ellsworth on Nov. 23, 1935. When U.S. cartographer W.L.G. Joerg was making up his map based on Ellsworth's photos, it was not clear whether this was a peak on Alexander Island or an island in George VI Sound, because, when viewed from the NW (the direction from which Ellsworth photographed it), only the summit protrudes above the coastal ice. This problem was finally solved by Fids from Base E who visited and surveyed it in Dec. 1949. They named it for the thin lenses of coal here. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. The Argentines call it Nunatak Coal.

Coal Point Island. A term no longer used. It was off the Danco Coast, just N of Paradise Bay.

Coal Rock. 83°29' S, 50°38' W. A prominent nunatak rising to 1390 m, 6 km SE of Fierle Peak, at the S end of the Forrestal Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS in 1965-66, as part of their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by USGS geologist here, Dwight L. Schmidt (*see* **Schmidt Hills**) for the Permian coal well exposed on this nunatak. US-ACAN accepted the name in 1968, and UK-APC followed suit on Nov. 3, 1971. It appears in the 1974 British gazetteer.

Coalbed Mountain. 77°12' S, 160°16' E. An ice-free mountain, rising to 2230 m, at Robison Peak, between Cycle Glacier and Rim Glacier, in the E part of the Head Mountains, in Victoria Land. Named by US-ACAN on Jan. 15, 2008, in association with coal beds discovered in the rock strata of this mountain. NZ-APC accepted the name on April 7, 2008.

Coalsack Bluff. 84°14' S, 162°25' E. A small but prominent dolerite rock bluff at the N limits of Walcott Névé, near the baseline in the névé above Bowden Névé, at the S end of the Queen Alexandra Range, 10 km WSW of Bauhs Nunatak. A great fossil source. Named by the Northern Party of NZGSAE 1961-62, for the coal seams running through the bluff. The Coalsack is also the name for the dark patch in the sky beside the Southern Cross. US-ACAN accepted the name in 1966.

Coalseam Cliffs. 79°10' S, 28°50' W. Rock cliffs rising to about 2500 m, and forming the NW part of Mount Faraway, in the Theron Mountains. Surveyed and mapped by BCTAE 1956-57, and named by them for the coal seam found here after a landing from an Otter aircraft in Jan. 1957. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Coast Lake. 77°32' S, 166°08' E. A tiny lake, about 1.2 km N of Flagstaff Point, near Black Beach, about 1.5 km N of Cape Royds, Ross Island. So named by BAE 1907-09 because of its position close to the coast. US-ACAN accepted the name in 1968, and NZ-APC followed suit.

Coasts. The major ones (although *see also* **Lands**) are: Adélie, Amundsen, Bakutis, Banzare, Black, Borchgrevink, Bowman, Bruce, Bryan, Budd, Caird, Caupolicán, Danco, Davis, Dufek, Eights, English, Fallières, Foyn, George V, Gould, Graham, Hillary, Hobbs, Inaccessible, Ingrid Christensen, Joannes Paulus II, Kemp, Knox, Lars Christensen, Lassiter, Lazarev, Leopold and Astrid, Loubet, Luitpold, Mawson, Mirnyy, Nordenskjöld, Oates, Orville, Oscar II, Pennell, Prince Harald, Prince Olav, Princess Astrid, Princess Martha, Princess Ragnhild, Queen Mary, Ruppert, Rymill, Sabrina, Saunders, Scott, Shackleton, Shirase, Siple, Soya, Trathan, Von Bellingshausen, Vostok, Walgreen, Wilhelm II, Wilkes, Wilkins, Zumberge.

[1]**Mount Coates**. 67°52' S, 62°31' E. Rising to 1280 m, just S of Mount Lawrence, at the S end of the N massif of the David Range, in the Framnes Mountains. Discovered on Feb. 13-14, 1931 by BANZARE, and named by Mawson, for Joseph Gordon Coates (known as Gordon Coates) (1878-1943), prime minister of NZ from 1925 to 1928. US-ACAN accepted the name in 1947, and ANCA followed suit on July 22, 1959.

[2]**Mount Coates**. 77°48' S, 162°05' E. A small peak, rising to 2060 m, just E of Borns Glacier, between Sollas Glacier and Mount Brearley, in the Kukri Hills of Victoria Land. Named by Grif Taylor and his Western Journey Party during BAE 1910-13. One does not know why it was so named.

Coates Rocks. 72°32' S, 164°20' E. A small group of rocks in the NW part of Evans Névé, at the S side of the Freyberg Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Donald A. Coates, USARP geologist at Hallett Station in 1964-65, and at McMurdo in 1966-67.

Coats, Joseph Hicks. b. Feb. 11, 1913, Alabama, son of shoe salesman Lester Coats and his wife Mae. The family moved to Burkburnett, Texas (near Wichita Falls) in 1915, and on leaving school Joe tried his father's business, but then went into the Merchant Marine. He was a crew member on the *Bear of Oakland*, during ByrdAE 1933-35. During World War II he was an electrical mechanic in the U.S. Navy. He married Helen Grace Mattuix, and they lived in Burkburnett, where he died on Nov. 2, 1986.

Coats Land. 77°00' S, 30°00' W. That part of Antarctica that lies W of Queen Maud Land, extending in a generally NE-SW direction for almost 500 km between 20°W and 36°W to the Filchner Ice Shelf in the W, and which forms the E shore of the Weddell Sea. It includes the Luitpold Coast and the Caird Coast, extending inland S and SE from those 2 coasts as far as 82°S, and dividing the British Antarctic Territory from Queen Maud Land. Also within this feature are the Touchdown Hills, the Theron Mountains, Omega Nunatak, the Whichaway Nunataks, and the greater part of the Shackleton Range. On March 3, 1904, ScotNAE 1902-04, from a position in 72°18' S, 17°59' W, sighted this feature, and coasted it SW to 74°01' S, 22°00' W, with Bruce naming it for the principal backers of his ScotNAE 1902-03, the Coats family of Scotland. James Coats (1841-1912) and his brother Maj. Andrew Coats (1862-1930) owned Messrs J & P Coats Ltd., of Paisley, the major having been Bruce's companion on the Blencathra Arctic expedition of 1898. The S boundary was, of course, left undefined. It appears as such on the expedition's charts, and on a British chart of 1914. UK-APC accepted the name on Aug. 31, 1951, and US-ACAN followed suit in 1952. The Argentines have been calling it Tierra de Coats from as early as 1908, and that was the name accepted by the Argentine gazetteer of 1970. Over the years, although the name Coats Land has remained the same, the boundaries have constantly been revised by explorers such as Shackleton and Filchner, and by cartographers of several nations, until, finally, in 1982, UK-APC accepted the boundaries that we know today. The E sector is claimed by Norway, the central sector by the UK, and the W sector by Argentina.

Coats Station. 77°54' S, 24°08' W. British field station built on Nov. 30, 1964, in Coats Land, 280 km S of Halley Bay Station, by personnel from that station,. It was positioned to allow the triangulation of ionospheric measurements to be taken in conjunction with Halley and General Belgrano Station. It was manned until March 18, 1965, and then removed.

Île Cobalescou *see* **Cobalescou Island**

Isla Cobalescou *see* **Cobalescou Island**

Islote Cobalescou *see* **Cobalescou Island**

Cobalescou Island. 64°11' S, 61°39' W. A small, rounded, generally snow-free island,

about 350 m long, with 2 rounded summits rising to 26 m above sea level, about 1.5 km SE of the extreme SE point of Two Hummock Island, in the Gerlache Strait, in the Palmer Archipelago. Discovered and charted on Jan. 27, 1898, by BelgAE 1897-99, and named by de Gerlache on the suggestion of Emil Racovitza (q.v.), as Île Cobalescou, for his old teacher Grigore Cobalcescu [sic] (1831-92), the first professor of geology at the University of Iasi, in Rumania. It appears as Cobalescou Island on Frederick Cook's 1900 English language map of the expedition, but as Cobalescou Islet on a 1943 U.S. Hydrographic Office chart, and that latter name was the one accepted by US-ACAN, and also by UK-APC (on Sept. 4, 1957). It appears on a 1954 Argentine chart as Isla Cobalescu. It was re-surveyed by Fids on the *Norsel*, in April 1955, and was photographed aerially by FIDASE in 1956, and based on these efforts it was redefined by UK-APC on July 7, 1959, as Cobalescou Island, appearing as such on a 1961 British chart. US-ACAN accepted the new name in 1963. It appears on a 1956 Argentine chart as Isla Cobalescou, and that was the name accepted by the 1970 Argentine gazetteer. In 1959 FIDASE surveyor Tony Bancroft referred to it as Jim's Island, a casual name given during FIDASE, for Jim Greenshields, the pilot. The Chileans call it Islote Cobalescou.

Cobalescou Islet *see* **Cobalescou Island**

Isla Cobalescu *see* **Cobalescou Island**

Cobans, William. b. Sept. 8, 1798, at sea. On Dec. 25, 1839, at Hobart, he joined the *Astrolabe* as an élèves' steward, went to Antarctica, and left the expedition at NZ on May 3, 1840.

Cobbett Refugio *see* **Primavera Station**

Cobbett, Norman Frank. b. July 6, 1915, Guildford, Surrey. He joined the Merchant Navy at 16, and was an ordinary seaman on the *Discovery II*, 1931-35, and an able seaman on the same ship, 1935-39. In early 1940, in Plymouth, he married Susanah R. Sefton, and they had several children in Plymouth. During World War II he served on the *San Adolfo*, the *Bonita*, and the *Fresno Star*, plying between Cardiff, Plymouth, the West Indies, and New York. He died in Weymouth, Dorset in May 2005.

Cobham Range. 82°18' S, 159°00' E. An isolated range, extending for about 30 km (the Australians say about 46 km) in a NW-SE direction, W of Prince Philip Glacier, in the S part of the Churchill Mountains, on the N side of the Nimrod Glacier. Discovered and mapped by the Northern Party of NZGSAE 1961-62. Named by NZ-APC for Sir Charles John Lyttelton (1909-1977), 10th Viscount Cobham, cricket player of note, and governor general of that country, 1957-62. ANCA accepted the name, and US-ACAN followed suit in 1966. Originally plotted in 82°23' S, 159°00' E, it has since been replotted.

Coblentz Peak. 66°07' S, 65°08' W. A peak rising to about 1200 m, on the N side of the head of Holtedahl Bay, on the Graham Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and mapped by FIDS cartographers in 1958-59, from these photos. Named by UK-APC on July 7, 1959, for physicist William Weber Coblentz (1873-1962) of the U.S. National Bureau of Standards, 1905-45, a snow goggles pioneer. US-ACAN accepted the name in 1971.

Cerro Cobre *see* **Copper Peak**

Glaciar (del) Cobre *see* **Copper Col**

Monte del Cobre *see* **Copper Peak**

Pico Cobre *see* **Copper Peak**

Coburg Peak. 63°42' S, 58°21' W. A rocky peak rising to 783 m in Erul Heights, 1.25 km WNW of Obidim Peak, 2.49 km N of Huma Nunatak, 3.32 km ESE of Gigen Peak, and 3.34 km SW of Chochoveni Nunatak, it surmounts the Cugnot Ice Piedmont to the NE, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the Bulgarian royal house of Coburg, 1887-1946.

Bajo Cochecho *see* **Chaos Reef**

Banco Cochecho *see* **Chaos Reef**

Cochran Peak. 79°39' S, 84°39' W. A sharp peak, in the S part of the Gifford Peaks, in the Heritage Range of the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Henry B. "Hank" Cochran (b. March 6, 1931, New Kensington, Pa.), Weather Central (q.v.) meteorologist at Little America V in 1958.

Punta Cocina *see* **Kitchen Point**

Isla Cocinero Honores *see* **Honores Rock**

Cabo Cockburn *see* **Cape Cockburn**

Cape Cockburn. 64°01' S, 62°18' W. A cape marking the NE extremity of Pasteur Peninsula, on Brabant Island, in the Palmer Archipelago. Probably named by Foster in 1828-31, for George Cockburn (1772-1853), admiral of the fleet in 1851, and in Foster's time an RN officer. In the 1830s he was senior naval lord of the Admiralty. It appears as such on Foster's chart of 1829, and also on an 1839 British chart. It was re-charted by FrAE 1903-05. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956-57. The Argentines have been calling it Cabo Cockburn since as early as 1908, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Isla Cockburn *see* **Cockburn Island**

Cockburn Island. 64°12' S, 56°51' W. A tiny, nearly circular island with a cone-shaped profile, about 1.5 km in diameter, consisting of a high, flat, broad plateau with extremely steep slopes surmounted on the NW side by a pyramidal peak rising to about 450 above sea level, off the E coast of James Ross Island, and N of Seymour Island, in the NE entrance to Admiralty Sound, S of the NE end of the Antarctic Peninsula. Discovered and charted by Ross on Jan. 1, 1843, during RossAE 1839-43, and named by him for George Cockburn (*see* **Cape Cockburn**). Ross landed on the island on Jan. 6, and took possession of it for Queen Victoria. It was surveyed by SwedAE 1901-04, and re-surveyed by Fids from Base D between 1945 and 1947. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. The Argentines have been calling it Isla Cockburn since at least 1904, and that was the name accepted by both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974.

Cockburn Peak. 64°12' S, 56°51' W. Rising to 450 m, it is the most conspicuous landform on Cockburn Island, off the E coast of James Ross Island, and N of Seymour Island. Discovered by Ross on Jan. 1, 1843, during RossAE 1839-43, and described by him as a volcanic, crater-like peak. Surveyed in 1903, by SwedAE 1901-04, and again in 1947 by FIDS. Following geological work by BAS on the island in 1995-96, it was named by UK-APC on June 15, 1999, in association with the island.

The Cocked Hat. 77°15' S, 162°45' E. A bluff-type mountain rising to 900 m (the New Zealanders say 3700 feet), 5.5. km SW of Lizards Foot, between Debenham Glacier and Wright Glacier, in the Saint Johns Range, on the W side of McMurdo Sound, on the coast of Victoria Land. It was observed from eastward on the Wilson Piedmont Glacier, by Taylor, Debenham, Gran, and Forde, during BAE 1910-13, and named descriptively by them as Cocked Hat. US-ACAN accepted the name The Cocked Hat (i.e., with the definite article), on Jan. 15, 2008, and NZ-APC followed suit, but with the original form of the name.

Cockerell Peninsula. 63°24' S, 58°08' W. A narrow, ice-covered, bulb-shaped peninsula (formerly thought to be an isthmus), between Lafond Bay and Huon Bay, 11 km SW of Cape Legoupil, on the N coast of Trinity Peninsula. Cape Ducorps forms its extremity. Discovered by FrAE 1837-40. Photographed aerially by FIDASE in 1956-57, and surveyed by Fids from Base D in 1960-61. Named by UK-APC on Feb. 7, 1978, for Christopher Sydney Cockerell (1910-1999; knighted in 1969), British inventor of the hovercraft. It appears in the 1980 British gazetteer. US-ACAN accepted the name.

Mount Cocks. 78°31' S, 162°30' E. Rising to 2440 m (the New Zealanders say 2088 m), SW of Mount Morning, and near the E entrance to Skelton Inlet, in the S part of the Royal Society Range, at the head of Koettlitz Glacier, forming, as it does, part of the divide between that glacier and the lower Skelton Glacier. Discovered by BNAE 1901-04, and named by them for banker Edward Lygon Somers Cocks (1858-1923), honorary treasurer of the Royal Geographical Society. US-ACAN accepted the name, as did NZ-APC.

Cocks Glacier. 78°41' S, 162°00' E. Flows from the SW face of Mount Cocks and a considerable area S of the mountain, to enter Skelton Glacier opposite Delta Glacier, in southern Victoria Land. Surveyed in Feb. 1957 by the NZ reconnaissance party of BCTAE 1956-58,

and named by them in association with the mountain. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Cockscomb Buttress. 60°37' S, 45°42' W. A prominent, isolated rock buttress, rising to 465 m (the British say 1525 m; the 1956 American gazetteer says more than 1000 feet in elevation; one has to favor the Americans here), 1.5 km NW of Echo Mountain, overlooking the E side of Norway Bight, on the S coast of Coronation Island, in the South Orkneys. Named descriptively by Fids from Signy Island Station following their 1950 survey. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Cockscomb Hill. 62°04' S, 58°28' W. A conspicuous cockscomb-shaped hill, made up of black rock, ice-free in the summer, and rising to 141 m through the glacier at the head of (i.e., NW of) Mackellar Inlet, in Admiralty Bay, King George Island, about 1.5 km N of Crépin Point, in the South Shetlands. First surveyed by FrAE 1908-10. Named descriptively as Coxcomb Hill by Frank Hunt, who named it following his RN Hydrographic survey in 1951-52. UK-APC accepted the name Cockscomb Hill on Sept. 22, 1954, and US-ACAN followed suit in 1956. It appears as such in the 1955 British gazetteer, and also on a British chart of 1962. However, it appears as Cockscombe Hill in the British gazetteer of 1974. It appears as Cerro Cono (i.e., "cone hill") on a Chilean chart of 1961, and that was the name accepted by the Chilean gazetteer of 1974. The British were the latest to replot this hill, in late 2008.

Cockscombe Hill *see* **Cockscomb Hill**

The *Cocorli*. French yacht, skippered by Olivier Troalen and Ketty Cavrois, which visited the South Shetlands and the Antarctic Peninsula in 1985-86.

Mount Codrington. 66°18' S, 52°52' E. Rising to 1520 m, 46 km SSE of Cape Close, and 28 km E of Johnston Peak, in Enderby Land. Charted in Jan. 1930 by BANZARE 1929-31, as being the prominent peak thus named by Biscoe in March 1831. US-ACAN accepted the name in 1947, and ANCA followed suit.

Cody, Fremont Roy. b. May 9, 1918, Seattle, son of machinist Harold Dudley Cody and his wife Dora Rhoda Craner. He was on the *North Star* for the 2nd half of USAS 1939-41. He died on Aug. 16, 1966, in Tacoma.

Cody, John Joseph. Known as "Yon." b. Nov. 17, 1901, Staten Island, NY, son of William Cody and his wife Catherine. He went to sea at 18, as a ship's plumber's apprentice, working his way up to plumber and junior engineer on a variety of ships plying mostly between New York, Cuba, and the Canal, as well as being a machinist's mate in the naval militia. He spent all of 1927 and 1928 as 3rd assistant engineer on the *Orizaba* on its New York to Havana run, and went from there to 1st assistant engineer on the *Eleanor Bolling* during the first half of ByrdAE 1928-30. He left the expedition at Wellington, was replaced by Elbert Thawley, and on June 18, 1929 took the *Maunganui* to San Francisco, arriving there on July 5. He went back to the *Orizaba* for a while, had a stroke of bad luck during the Depression in New York (*see* **Erickson, Sverre**), then served on a succession of steamships, in 1943 and 1944, during World War II, being on the *Robert Toombs*. After the war he took berths on a succession of ships, and on July 13, 1953, signed on to the *Joel Chandler Harris* as 2nd assistant engineer, for the run up to Alaska. He re-signed, on the same ship, on Aug. 21, 1953. It was his final voyage. He died on board on Oct. 30, 1953.

Isla Coffer *see* **Fredriksen Island**

Coffer Island. 60°45' S, 45°08' W. A small island in the entrance to the bay on the E side of Matthews Island, in the Robertson Islands, in the South Orkneys. It appears variously as Koffer Island, Kolter Island, and Kotter Island on two manuscript charts drawn up by Petter Sørlle, based on his running survey in this area in 1912-13. The personnel on the *Discovery II* who surveyed it in 1933, were the first to name it Coffer Island, "Coffer" supposedly being a translation of "Koffer." However, there is no such word as "koffer" in Norwegian, nor is there "kotter" or "kolter," or anything like it that could have relevance. There is a type of 2-masted vessel of the Dutch type called "koff" by the Norwegians. The form "koffen" means "the koff." That is a possibility. But one is guessing here, and, at this remove, it is difficult to determine what word Sørlle intended, let alone its meaning. It appears as Coffer Island on the DI's 1934 chart. However, the name accepted by UK-APC on March 31, 1955, and by US-ACAN later that year, was Coffer Islet. It appears on a 1952 Argentine chart, translated from the English, as Isla Cofre, and that was the name accepted by the 1970 Argentine gazetteer. On July 7, 1959, UK-APC redfined it as Coffer Island (which is what it had been originally), and US-ACAN acepted this change in 1963. *See also* **Fredriksen Island**.

Coffer Islet *see* **Coffer Island**

Isla Cofre *see* **Coffer Island**

Coghill, William. b. 1867, Dundee. Fireman on the *Polar Star* during DWE 1892-93.

Islote Cogollo. 64°00' S, 62°02' W. A little island, very close to the W coast of Liège Island, in the Palmer Archipelago. Named by ChilAE 1947.

Mount Cohen. 85°16' S, 164°27' W. A peak, rising to 1762 m, 10 km SW of Mount Betty, in the Herbert Range, in the foothills of the Queen Maud Mountains, just W of the terminus of the Axel Heiberg Glacier, at the head of the Ross Ice Shelf. Discovered aerially by Byrd in Nov. 1929, during ByrdAE 1928-30, and named by him for Emanuel "Manny" Cohen (1892-1977) of Paramount Pictures, who helped assemble Byrd's movie footage. US-ACAN and NZ-APC both accepted the name.

Cohen Glacier. 85°12' S, 164°15' W. A small glacier that flows N from Mount Cohen into Strom Glacier, in the Herbert Range, near the head of the Ross Ice Shelf. Named by the Southern Party of NZGSAE 1963-64, in association with the mountain. NZ-APC accepted the name, and US-ACAN followed suit.

Cohen Islands. 63°18' S, 57°52' W. A cluster of small islands between Ponce Island and Pebbly Mudstone Island, in the SE part of the Duroch Islands. Named by US-ACAN in 1964, for Theodore Jerome Cohen, USARP geologist here in 1961-62, as a field assistant with the University of Wisconsin geological mapping field party.

Cohen Nunatak. 85°24' S, 136°12' W. A nunatak, 1.5 km W of the lower part of Reedy Glacier, 11 km E of Berry Peaks. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Lt. (jg) Harvey A. Cohen, USNR, public affairs officer on the staff of the commander, U.S. Naval Support Force, Antarctica, during OpDF 66 and OpDF 67.

Cohn Bluff. 80°15' S, 158°30' E. A rock bluff, about 400 m high, it marks the S side of the terminus of Yancey Glacier at the junction with Byrd Glacier, in the S part of the Britannia Range. Named by US-ACAN in 2000, in association with Byrd Glacier and Yancey Glacier, Capt. James Edward Cohn (b. Jan. 1, 1904, Columbia, NC, but raised partly in South Mills, NC, and Norfolk, Va.; he was known as Edward) being skipper of the *Yancey* during OpHJ 1946-47. NZ-APC accepted the name on Feb. 20, 2000. Capt. Cohn, son of a physician, joined the U.S. Navy in Aug. 1923, and retired as a rear admiral in Sept. 1957. He died in Arizona on Aug. 31, 1997.

Coker Ice Rise. 69°04' S, 67°08' W. A small ice rise in the Wordie Ice Shelf, 10 km WNW of Triune Peaks, on the Fallières Coast, on the W coast of Graham Land. Photographed aerially by RARE 1947-48, and surveyed from the ground by Fids from Base E in 1958. Named by US-ACAN for Walter B. Coker, USN, radio mechanic who wintered-over at Palmer Station in 1969. UK-APC accepted the name on May 21, 1979. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Isla Cola *see* **Tail Island**

Punta Colastiné *see* **Chiloé Point**

Cape Colbeck. 77°07' S, 158°01' W. A prominent ice-covered cape forming the NW extremity of Edward VII Peninsula, and also of Marie Byrd Land. Discovered toward the end of Jan. 1902, by BNAE 1901-04, and named by Scott for William Colbeck. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer. Originally plotted in 77°06' S, 157°54' W, it has since been replotted.

Colbeck, William. b. Aug. 8, 1871, Hull, Yorks, son of master mariner Christopher Colbeck and his wife Martha Haggitt. Apprenticed into the Merchant Navy at 15, he was chief officer on the Wilson Line ship *Montebello* when he volunteered to be magnetic observer and cartographer on BAE 1898-1900, under Borchgrevink. He wintered-over in Victoria Land in 1899, and took part in the southing

record set by Borchgrevink on Feb. 16, 1900. He became a lieutenant in the RNR, and was captain of the *Morning*, the ship sent to relieve Scott in 1903 and 1904. After some more time at sea, mostly skippering a Wilson Line ship between Hull and Christiania, he became Marine Superintendent of the United Shipping Company in London, and was later a marine surveyor and bailiff in Liverpool. He died of heart failure on Oct. 19, 1930, at his home in Catford, Kent. One of his sons was W.R. Colbeck (*see* below).

Colbeck, William Robinson. b. Jan. 18, 1906, Hull, Yorks, son of William Colbeck (*see* above). He, like his father, was apprenticed into the Merchant Navy, and was in the RNR. He was 2nd officer and special navigator on the *Discovery* during both halves of BANZARE 1929-31. He was promoted to 1st officer for the trip back to Britain, and became a ship's captain, finally becoming marine surveyor to the Liverpool Docks and Harbour Board. He died in 1986, in Birkenhead.

Colbeck Archipelago. 67°26' S, 60°58' E. Numerous small, rocky islands, mostly unnamed, 1.5 km NW of Byrd Head, just E of Taylor Glacier, near the coast of Mac. Robertson Land, it is sometimes confused with the Thorfinn Islands, 6 km to the N (which were named by the Norwegians in Jan. 1931). Discovered in Jan. 1930 by BANZARE 1929-31, and re-visited by them on Feb. 18, 1931, when they charted it, and named by Mawson for W.R. Colbeck. US-ACAN accepted the name in 1947, and ANCA followed suit on Nov. 28, 1955. Teksla Island (which the Australians call Norris Island) is the largest of this group. The Australians established a refugio here (*see* **Colbeck Archipelago Hut**).

Colbeck Archipelago Hut. 67°26' S, 60°58' E. An Australian refuge hut, built by ANARE in 1988, 100 km W of Mawson Station, and 5 km NE of Taylor Glacier, on an island in the Colbeck Archipelago. It was built to shelter visitors to Taylor Glacier, including those visiting the emperor penguin colony there. It can accommodate 4 persons, and can only be reached over fast ice, or by helicopter.

Colbeck Basin. 77°00' S, 159°30' W. A deep undersea basin in the Ross Sea, named by international agreement, in association with Cape Colbeck. US-ACAN accepted the name in June 1988.

Colbeck Bay. 71°38' S, 170°05' E. Actually a cove, 1.5 km wide, formerly a deep valley but now occupied by an arm of the sea, between the S end of Duke of York Island and Cape Klövstad, in the S part of Robertson Bay, on the N coast of Victoria Land. Charted by BAE 1898-1900, and named by Borchgrevink for William Colbeck. US-ACAN and NZ-APC both accepted the name.

Montañas Colbert *see* **Colbert Mountains**

[1]**Mount Colbert** *see* **Colbert Mountains**

[2]**Mount Colbert**. 86°12' S, 153°13' W. Rising to 2580 m, 2.5 km E of Mount Borcik, and 1.5 km SSW of Mount Stump, in the SE part of the Hays Mountains, in the Queen Maud Mountains. Named by US-ACAN in association with Mount Stump. Arizona State University geologist Philip V. Colbert was the logistics coordinator and field associate here with Ed Stump on 6 USARP field expeditions to the Transantarctic Mountains, between 1970-71 and 1981-82, including this area. Originally plotted in 86°12' S, 153°05' W, it has since been replotted.

Colbert Hills. 84°12' S, 162°35' E. A line of hills and bluffs, including Coalsack Bluff, lying E of Lewis Cliffs, and trending SW for 26 km from Mount Sirius, between Law Glacier and Walcott Névé. Named by US-ACAN in 1972, for Edwin Harris Colbert (b. Sept. 28, 1905, Clarinda, Iowa. d. Nov. 15, 2001, Flagstaff, Ariz.), curator of invertebrate paleontology at the American Museum of Natural History, who led the paleontology team during the Ohio State University Geological Expedition of 1969-70. They discovered Lystrosaurus fossils in these hills, a discovery which greatly enhanced the credibility of the Gondwanaland theory.

Colbert Mountains. 70°39' S, 70°11' W. An isolated mountain mass with several rounded, snow-covered summits, the highest being 1500 m (the British say about 1600 m), between (and overlooking) Handel Ice Piedmont to the E and Purcell Snowfield and Vivaldi Glacier to the E, between Haydn Inlet and Schubert Inlet, in the W central part of Alexander Island. They were probably seen from a distance in Jan. 1910, by FrAE 1908-10, as Charcot's maps of the expedition erroneously have Sommet Martine (*see* **Mount Martine**) in this area. First seen for sure, but from a distance, aerially, by Lincoln Ellsworth, on Nov. 23, 1935, and he photographed them. U.S. cartographer W.L.G. Joerg made the first rough map of them, from these photos, in 1936. Photographed aerially again, by USAS 1939-41. Photographed aerially on Nov. 27, 1947, by RARE 1947-48, and named by Ronne as the United States Navy Range. It appears as such on the American Geographical Society's map of 1948. In 1948 Ronne changed the name to the Colbert Range, and it appears as such on his 1948 map, named for Rear Admiral Leo Otis Colbert (1883-1968), USN, head of the U.S. Coast and Geodetic Survey, which furnished equipment for RARE 1947-48. However, on another of Ronne's maps of that year it appears as Mount Colbert. On his 1949 maps it appears variously as the Colbert Range and the Colbert Mountain Range. US-ACAN accepted the name Colbert Mountains in 1949 (after rejecting Navy Range), and it appears as the Colbert Mountains on *National Geographic*'s map of 1957. UK-APC accepted the name Colbert Mountains on March 2, 1961, but with the coordinates 70°35' S, 70°35' W, which had been provided by Searle of the FIDS in 1960, working from the RARE air photos. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and, with the new coordinates, the feature appears in the 1977 British gazetteer. On a 1960 U.S. Hydrographic Office chart of 1960 it appears, erroneously, as Mount Martine. The Argentines call them Montañas Colbert.

Colbert Range *see* **Colbert Mountains**

Mount Colburn. 74°25' S, 132°33' W. Rising to 520 m, above the east-central part of Shepard Island, off the coast of Marie Byrd Land. Named by US-ACAN in 1963, for Lt. (jg) Richard E. Colburn, USN, communications officer on the *Glacier*, which mapped this mountain on Feb. 4, 1962.

Cold Point. 62°10' S, 58°50' W. A rocky promontory, built of lava, in the innermost, cold part (hence the name given by the Poles in 1984) of Collins Harbor, on the S coast of King George Island, just E of Fildes Peninsula, in the South Shetlands.

Coldblow Col. 60°37' S, 45°41' W. A snow-covered col, about 330 m above sea level, between Echo Mountain and Cragsman Peaks, on Coronation Island, in the South Orkneys. In Sept. 1948 a FIDS party from Signy Island Station had their tent blown down in a gale when camped here (hence the name). Surveyed by Fids from Signy in 1950. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. Re-surveyed by FIDS between 1956 and 1958.

Colds *see* **Disease**

Lake Cole. 78°09' S, 166°13' E. An ice-covered lake, 2.5 km long, S of Mount Ewart and Mount Melania, on Black Island, in the Ross Archipelago. Named by US-ACAN in 1999, for James William "Jim" Cole, of the department of geology at Victoria University at Wellington (NZ), who, with Tony Ewart (*see* **Mount Ewart**), investigated the geology of Brown Peninsula, Black Island, and Cape Bird, during the 1964-65 summer season. NZ-APC accepted the name on Nov. 4, 1999.

Mount Cole. 84°40' S, 177°08' W. Rising to over 1400 m (the New Zealanders say about 1700 m), with only minor rock exposures, on the W side of Shackleton Glacier, between the mouths of Forman Glacier and Gerasimou Glacier, about 16 km S of Mount Speed, in the Bush Mountains, in the Queen Maud Mountains. Discovered and photographed aerially during OpHJ 1946-47, on the flights of Feb. 16, 1947, and named by US-ACAN in 1962, for Nelson R. Cole. (b. April 24, 1934, Todd Co., Ky.), who joined the U.S. Navy, and was an aviation machinist's mate 2nd class with VX-6 at McMurdo in 1957. The ninth victim of OpDF, he died in a helicopter crash, while attempting to land at McMurdo, July 12, 1957. NZ-APC accepted the name.

Península Cole *see* **Cole Peninsula**

Cole, Cecil W. Jr. Known as "Moe." b. Feb. 21, 1921, Seattle, son of office clerk Cecil W. Cole and his wife Lillian. On his own from the age of 15, he had a tough career on the Seattle waterfront, and by 1937 was a dishwasher on the *Boxer*, out of that port. He transferred to the *North Star* in time to go to Antarctica as cabin boy during USAS 1939-41. A friend of

the Eskimos, he worked his way up through the ranks until he became 1st mate and then skipper of the *North Star II*, and then captain of the *North Star III* from 1971, and was still plying Alaskan seas until 1984. He died on Feb. 21, 1989, in Seattle.

Cole, Garrett *see* **USEE 1838-42**

Cole, John H. *see* **USEE 1838-42**

Cole, Maurice John. Known as John Cole. b. April 12, 1935. He joined the crew of the *John Biscoe* in 1960, as 3rd mate, and was promoted through the mate ranks, working on both the *Biscoe* and the *Shackleton*, until 1969, when he took over command of the *Biscoe* from Thomas Woodfield. He retired in 1972, and went to work for the Scottish Marine Biological Association, but returned to skipper the *Bransfield* with Stuart Lawrence, from 1976 for many years.

Cole Channel. 67°22' S, 67°50' W. A marine channel running N-S between Wright Peninsula (on Adelaide Island) and Wyatt Island (in Laubeuf Fjord), off the Loubet Coast, on the W coast of Graham Land. Named by UK-APC on Nov. 13, 1985, for Maurice Cole. US-ACAN accepted the name.

Cole Glacier. 68°42' S, 66°06' W. A glacier, 17.5 km long, on the E side of Godfrey Upland, it flows NNE into Mercator Ice Piedmont, at the Traffic Circle, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Discovered in 1940, by USAS 1939-41, as one of the glaciers radiating from the Traffic Circle. Surveyed by Fids from Base E in 1958 and 1960. Named by UK-APC on Aug. 31, 1962, for Humphrey Cole (ca. 1530-1591), English instrument maker, goldsmith, and engraver who pioneered the design of portable navigation instruments, and who equipped Martin Frobisher's expeditions in 1576-78. US-ACAN accepted the name later in 1962. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Cole Peak. 85°45' S, 136°38' W. Rising to 2140 m, 10 km NE of Mount Doumani, on the N side of the Watson Escarpment. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Jerry D. Cole, VX-6 airman at McMurdo in 1957 and 1960.

Cole Peninsula. 66°53' S, 63°53' W. About 24 km long in an E-W direction, 13 km wide, and ice-covered except for several rocky spurs which radiate from Mount Hayes, it projects from the Foyn Coast, on the E coast of the Antarctic Peninsula, into the Larsen Ice Shelf, just S of Cape Alexander, between Cabinet Inlet and Mill Inlet. Discovered and photographed aerially in Dec. 1940 by East Base members during USAS 1939-41. In 1947-48 it was photographed aerially by RARE and surveyed from the ground by FIDS. Named by Finn Ronne for William Sterling Cole (1904-1987; known as Sterling Cole), Republican congressman from New York from 1935, a member of the House Naval Affairs Committee, who helped get Ronne a ship for RARE. Cole resigned in 1957 to become the first director of the International Atomic Energy Agency (until 1961). It appears as such on Ronne's 1949 map, and was the name accepted by US-ACAN in 1953, and by UK-APC on May 30, 1975. It appears on a 1955 U.S. Hydrographic Office chart, and on a British chart of 1984. It was resurveyed by BAS personnel from Base E in 1963-64. It appears on a 1952 Argentine chart as Península Cole, and that is what the Argentines call it today.

Cole Point. 74°39' S, 127°30' W. At the S end of Dean Island, inside the Getz Ice Shelf, just off the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Lawrence M. Cole, USN, builder at Byrd Station in 1969.

Mount Coleman. 77°32' S, 163°24' E. A rounded mountain, rising to 1110 m (the New Zealanders say 893 m), immediately E of Commonwealth Glacier, at the head of New Harbor, in Victoria Land. Mapped by Grif Taylor's Western Geological Party, during BAE 1910-13, and named by Charles S. Wright for geologist Frank Philemon Coleman (1852-1939), of the University of Toronto. US-ACAN accepted the name in 1952, and NZ-APC has followed suit.

Coleman, William. 1st mate on the *Huntress*, 1820-21.

Coleman Bluffs. 72°28' S, 160°37' E. A loose chain of rock and ice bluffs, trending generally N-S for about 8 km, near the center of the Outback Nunataks, about 16 km NW of Mount Weihaupt. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for Harold L. Coleman, meteorologist at Pole Station in 1968.

Coleman-Cooke, John "Jack." b. July 22, 1913, Burton-on-Trent, Staffs, son of Capt. William H.C. Cooke and his wife Ethel Maud Haynes. Jack seems to have hyphenated his name after World War II. Fireman on the *Discovery*, 1925-27, and leading fireman on the *Discovery II*, 1929-39. In World War II he served with the South African Navy, was a major in the Sherwood Foresters, and in 1945, in London, he married Jean Hamilton. He became well-known as a naturalist, founded the Exmoor Society in 1958, and in the 1960s lived in Taunton, Somerset. He wrote books, notably *Discovery II in the Antarctic* (1963). Odd, but Frank Ommanney, in his book *South Latitude*, says "Jack Cook" was the winchman, and was a Geordie, the oldest man on the ship. He died on Feb. 16, 1978, at St Charles's Hospital, in London. His ashes were scattered over Exmoor.

Coleman Glacier. 75°47' S, 132°33' W. A steep, heavily crevassed glacier flowing westward from Mount Andrus, in the S part of the Ames Range, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Master Sgt. Clarence N. Coleman, U.S. Army, member of the Army-Navy Trail Party that traversed Marie Byrd Land to establish Byrd Station in 1956-57 (*see* **Byrd Station**).

Coleman Nunatak. 75°19' S, 133°39' W. Near the head of Berry Glacier, 3 km S of Patton Bluff, in Marie Byrd Land. Lichens are found here. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Richard I. Coleman, USARP meteorologist at Byrd Station in 1962.

Coleman Peak. 77°29' S, 167°29' E. Rising to about 1600 m on the NE slope of Mount Erebus, about 6 km E of the summit of Fang Ridge, on Ross Island. Named by NZ-APC in 2000, for John Coleman, NZ priest in Antarctica several times with the Americans. US-ACAN accepted the name.

Mount Coley. 81°15' S, 158°13' E. A prominent mountain, rising to 2570 m, 5 km S of Mount Frost, about midway between that mountain and Pyramid Mountain, at the head of Jorda Glacier, in the Churchill Mountains. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Cdr. Vernon Jack Coley, of Oakland, Calif., commander of VX-6, 1957-58. Cdr. Coley was the pilot of the plane that landed at the Pole on Oct. 26, 1957, and then could not get off (*see* **South Pole**, that date). ANCA accepted the name on Aug. 27, 1975.

Coley, John Alan. Known as Alan. b. Oct. 12, 1929, Sowerby, near Halifax, son of shopkeeper (later postmaster) John Coley and his wife Gwendoline Sharp. In 1947 he went to Manchester University, to study geology. After a week in London touring the Festival of Britain, he returned to the north, picked up a two-week old copy of the *Guardian,* and saw an ad for FIDS met men. On the Friday he sent a letter, on the Monday he got a phone call asking him to London for an interview on the Wednesday, and was given two weeks notice, sailing on the *John Biscoe* from Southampton on Oct. 21, 1953, arriving in Port Stanley in November of that year, by way of Punta Arenas, where they picked up the shell of a motor boat to be used in Antarctica. He left Port Stanley on the 2nd trip of the *John Biscoe* that season, arriving at Hope Bay in Feb. 1952 (after first calling at Base G), where he was meterological assistant who wintered-over at Base D in 1952 and 1953. He stayed the full time in Antarctica (i.e., he did not summer over in the Falklands), and in 1954, the *John Biscoe*, on her last call at Hope Bay, picked him up and took him south to help establish Base F. At the end of the 1953-54 summer, the *John Biscoe* took him back to the Falklands. He taught at the secondary school in Port Stanley for 9 months, then took the *Fitzroy* to Montevideo, and sailed from there to England, where he was promptly conscripted for 2 years national service, as a pilot officer in the RAF, based for a while in Kinloss, Scotland. In 1957 (the year he married Dorothy Wood) he became a mathematics teacher at Gordonstoun's prep school. In 1959 he moved

to Somerset to begin a life's career of teaching and lecturing in geography, in 1963 going to Bingley, Yorks, and in 1967 on to Bradford. He retired in 1983, to Eldwick, near Bingley.

Coley Glacier. 64°09' S, 57°14' W. About 8 km long, on the E side of James Ross Island, it flows E into Erebus and Terror Gulf, just N of Cape Gage. Roughly surveyed by FIDS in 1945, and again by FIDS, more accurately, in 1953. Named by UK-APC on Sept. 4, 1957, for Alan Coley. US-ACAN accepted the name in 1963.

Coley North Glacier. 64°07' S, 57°15' W. A short glacier, trending ESE, and flowing from a cliff-backed cirque N of Coley Glacier, confluent with the N margin of Coley Glacier as it flows to the sea, on the E side of Ross Island. Named by UK-APC on Nov. 15, 2006, in association with Coley Glacier.

Coley South Glacier. 64°10' S, 57°16' W. A short glacier, trending ENE, and flowing from the cliff-backed cirque between Rhino Corner and Eugenie Spur, and confluent with the S margin of Coley Glacier as that glacier flows ENE to the sea, on the E side of Ross Island. Named by UK-APC on Nov. 15, 2006, in association with Coley Glacier.

Islote Colin *see* **Islote Atalaya**

Isla de la Colina *see* **Heywood Island**

Punta de la Colina *see under* **D**

Colins Nunatak *see* **Tern Nunatak**

Mont Collard *see* **Mount Collard**

Mount Collard. 72°38' S, 31°07' E. Rising to 2350 m, 5.5 km S of Mount Perov, at the S end of the Belgica Mountains. Discovered by BelgAE 1957-58, led by Gaston de Gerlache, and named by him as Mont Collard, for Léo Collard (1902-1981), Belgian minister of public instruction. US-ACAN accepted the name Mount Collard in 1965.

Collasius, Bruno. b. 1893, Germany. A geophysicist, he wintered-over at Órcadas Station in 1920, as 2nd-in-command to Wilhelm Kopelmann, and led the wintering-over party there in 1922, and again in 1933, 1935, and 1937. He died on Oct. 19, 1951.

Lake Colleen *see* **Colleen Lake**

Colleen Lake. 78°02' S, 163°52' E. A small (or large, depending on which sentence in the US-ACAN descriptor one feels more comfortable with) elliptically-shaped meltwater lake, about 1.2 km long and 0.8 km wide, 3 km E of Péwé Peak, between the lower parts of Joyce Glacier and Garwood Glacier, in the upper Garwood Valley, in Victoria Land. First seen on the ground by U.S. geologist Troy L. Péwé on Jan. 14, 1958, and named by him for its similarity to the clear, reflecting lakes in Ireland. NZ-APC accepted the name on May 31, 1999, and US-ACAN followed suit in 2000.

Collerson Lake. 68°35' S, 78°11' E. A small, kidney-shaped lake, 2.5 km SW of Club Lake, in the Vestfold Hills. Kenneth D. "Ken" Collerson, a geologist at Davis Station in 1969-70, established a camp on the shores of this lake, and ANCA named the lake for him on May 18, 1971. US-ACAN accepted the name in 1973.

Cabo Collier *see* **Cape Collier**

Cape Collier. 70°13' S, 61°53' W. A broad, ice-covered cape forming the N entrance point of Smith Inlet, it projects from the Wilkins Coast into the Larsen Ice Shelf, about midway between Cape Boggs and the S end of Hearst Island, on the E coast of the Antarctic Peninsula. Discovered in Dec. 1940 by USAS 1939-41, who photographed it aerially and surveyed it from the ground. Named by them for Zadik Collier, it appears on a 1942 USAAF chart. Resurveyed by Fids from Base E in Nov. 1947. US-ACAN accepted the name in 1947, and UK-APC followed suit on Jan. 28, 1953. It appears on a 1954 British chart, and in the 1955 British gazetteer. It appears on an Argentine chart of 1953, as Cabo Collier, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Collier, Zadik. b. Jan. 7, 1898, San Pedro Sula, Honduras, but raised partly in Guatemala, son of Irish immigrant Richard (Ricardo) Collier and his Honduran wife Carolina Fillín. A brilliant scholar, he was awarded a prestigious academic prize on Nov. 27, 1914, by Guatemalan president Cabrera. He became a mechanic, and came to Brooklyn (147 Union Street) in 1918, with his brother Milton and his sister Caroline. Unable to get a job, he joined the Army, and was sent to the Philippines. In 1919, apparently, he was in Siberia. Upon becoming naturalized, he joined the U.S. Marine Corps as a private on Jan. 16, 1926, in New York, going straight to Parris Island, SC, for boot camp. He was in a U.S. Naval hospital from Feb. 2 to Feb. 26, 1926, and on May 26, 1926, was transferred to Quantico, Va. On May 31, 1926, he was detailed as a mechanic, and was transferred to the aircraft motor shop (at Quantico). On June 27, 1927, he went to the Aviation Mechanics School, at Great Lakes, and, upon graduating near the top of his class, on Dec. 27, 1927, he was promoted to corporal. After a week of special aviation duty with Pratt & Whitney, at Hartford, Conn., he was back at the mechanical motor shop in Quantico for two days, then, on April 12, 1928, he was posted to San Diego as an aircraft mechanic, flying out on a special cross country trip, arriving in California on April 20. At this point in time, he was trying to become an aviator, but it did not work out. On June 30, 1928, he embarked on the *Henderson*, sailing on July 1, bound for Guam, as an electrician and a motor mechanic in the machine shop there. He was promoted again, to sergeant, on Jan. 24, 1929, an engine overhaul mechanic. He was still on Guam on Jan. 16, 1930, when his enlistment was extended. On March 13, 1931, he shipped out of Guam on the *Chaumont*, bound for Quantico, being promoted to staff sergeant the next day, and to gunnery sergeant on June 4, 1931, working as a machinist, and being awarded a good conduct medal on Jan. 15, 1932. On July 1, 1933, in Howard Co., Md., he married New Orleans insurance stenographer Opal W. Wells (actually born in Oklahoma). Between Aug. 14, 1934 and Feb. 24, 1935, he was on special aviation duty detachment at Parris Island, then back to Quantico, but not for long. He was soon out in Oahu, as NCO in charge at the aviation field there. In July 1935, he did a short stint at the Naval Prison (not as a prisoner) at Portsmouth, NH, but by Aug. 1935 was back in Hawaii. On Nov. 13, 1935, his rank was changed to technical sergeant (aviation), and on Jan. 16, 1936, he re-enlisted, as a technical sergeant. After a long furlough, he transferred back to Quantico on April 27, 1936 (he was there at the same time as Vic Czegka), with occasional temporary detachments to Parris Island. On June 18, 1938, he sailed out of Baltimore on the *Catherine*, for St. Thomas, in the Virgin Islands, where he worked at Bourne Field as the NCO in charge of the machine shop. On Sept. 8, 1939, he flew from Charlotte Amalie to Quantico, then on to Philadelphia, and from there to San Juan, Puerto Rico. Then back to Philadelphia, with Ted Petras, to work on the planes for USAS 1939-41. He, Petras, and Walter Giles left on the *North Star*, as part of USAS, and in Antarctica, Collier was machinist at East Base. On Jan. 16, 1940, his enlistment was extended again, and on Sept. 19, 1940 he was promoted to master sergeant. After the expedition, he was a quartermaster in the Pacific for 2 years, was commissioned as a 2nd lieutenant on May 13, 1942, and was promoted to 1st lieutenant in 1943. On Sept. 15, 1943, he left San Francisco on the *Essex*, again bound for the Pacific. In 1944 he (and his wife and daughter) transferred to Peru, and after the war, with tours at El Toro, Calif., and Cherry Point, NC, Major Collier was (until Sept. 1, 1952) commanding officer of Marine Aircraft Maintenance Squadron #33, serving in Korea, was promoted to lieutenant colonel on Nov. 25, 1953, and retired from the Marines in 1955. He died on Sept. 15, 1987, in Sonoma County, California. His wife had predeceased him by ten years, and he had married again, in 1980.

Collier Hills. 79°42' S, 83°24' W. A group of mainly ice-free hills, between the mouths of Schanz Glacier and Driscoll Glacier, where the two glaciers meet Union Glacier, in the Heritage Range of the Ellsworth Mountains. Named by the University of Minnesota Ellsworth Mountains Party of 1962-63, for Robert M. Collier, USGS topographic engineer with the party. US-ACAN accepted the name in 1964.

Collinge, Ian Bruce. b. Feb. 4, 1948, Littlebro', Lancs. BAS biological technician who arrived at Signy Island Station in Nov. 1971, wintered-over there in 1972 and 1973, and returned to Britain in April 1974. He went back south many times over the next 20 years. In 1979, in Huntingdon, he married Sandra Jones.

Collings, Owen John. Known as John. b. 1928, Totnes, Devon, son of Owen Godfrey Collings and his wife Ada Sarah Stear. He joined FIDS in 1960, as a carpenter, and wintered-over at Base D in 1961. After FIDS had become BAS, he wintered-over at Base E in 1967, and at Base T in 1968.

Bahía Collins *see* **Collins Bay, Collins Harbor**

Caleta Collins *see* **Collins Harbor**

Glaciar Collins *see* **Bellingshausen Dome**

Lednik Collins *see* **Polar Friendship Glacier**

Mount Collins. 71°30' S, 66°41' E. A flattish, dark-colored rock exposure, 22 km W of the Fisher Massif, in the Prince Charles Mountains of Mac. Robertson Land. Discovered in Nov. 1956 by Flying Officer John Seaton (*see* **Mount Seaton**), RAAF, and named by ANCA for Nev Collins. US-ACAN accepted the name in 1961.

Pointe Collins *see* **Collins Point**

Puerto Collins *see* **Collins Harbor**

Punta Collins *see* **Collins Point**

Collins, Neville Joseph "Nev." Also called "Gringo." b. June 19, 1925. Senior diesel mechanic who wintered-over at Mawson Station in 1957 and 1960, and at Wilkes Station in 1962. In 1962 he took part in the tractor traverse from Wilkes to Vostok Station, and won the BEM for it. He was with the ANARE Amery Ice Shelf party in the winter of 1968.

Collins Bay. 65°21' S, 64°04' W. Between Deliverance Point and Cape Pérez, on the Graham Coast, on the W coast of Graham Land. First charted by BelgAE 1897-99. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Admiral Kenneth Collins (*see* **Collins Point**). It appears on a British chart of 1960, and US-ACAN accepted the name in 1971. The Argentines call it Bahía Collins.

[1]**Collins Glacier** *see* **Bellingshausen Dome**

[2]**Collins Glacier**. 73°41' S, 65°55' E. A glacier, 17.5 km wide at its confluence with Mellor Glacier, which it feeds from the SW between Mount Newton (to the S) and Mount Burton, in the Prince Charles Mountains, in Mac. Robertson Land. Mapped from ANARE air photos taken in 1956 and 1960, and named by ANCA on July 4, 1961, for Neville Collins. They plotted it in 73°50' S, 65°18' E. US-ACAN accepted the name in 1967, but with quite different coordinates.

Collins Harbor. 62°10' S, 58°50' W. A bay that indents the S coast of King George Island, immediately E of Fildes Peninsula, and NNW of Marian Cove, at the head of Maxwell Bay, in the South Shetlands. One of the very early sealers called it Collin's Harbour (reason unknown), and it appears that way on Fildes' chart of 1821. On Weddell's maps of 1825 and 1827 a feature with the name Nebles Harbour (or Nebles Hafen) appears, signifying either this feature or an anchorage to the N of Ardley Island (it is not clear). The name Collins Harbour appears on a chart drawn up by Scottish geologist David Ferguson, who made a survey of the area in 1913-14. It also appears on the Discovery Investigations chart of 1935, and on a British chart of 1937. It appears as Collins Harbor on a U.S. Hydrographic Office chart of 1943. On Sept. 8, 1953, UK-APC accepted the name Collins Harbour, and later that year US-ACAN accepted Collins Harbor (i.e., without the "u'"). It appears in the American gazetteer of 1956. It appears on a Chilean chart of 1947, as Bahía Collins, and that was the name accepted by the 1974 Chilean gazetteer. It appears on a 1949 Argentine chart as Puerto Collins, but on a 1954 Argentine chart as Caleta Collins (i.e., "Collins cove"), but the first one was the one accepted by the Argentine gazetteer of 1970. The British were the latest to replot this feature, in late 2008.

Collins Ice Cap *see* **Bellingshausen Dome**

Collins Nunatak. 69°49' S, 73°35' E. A small, isolated rock feature, about midway between Landing Bluff and the Statler Hills. Mapped by Norwegian cartographers in 1946 from aerial photographs taken by LCE 1936-37, and named by them as Ovreknatten (i.e., "the upper crag"). Plotted by ANARE during the 1968 tellurometer traverse from the Larsemann Hills to the Reinbolt Hills. Named by ANCA on Oct. 22, 1968, for Neville Collins. Visited in Jan. 1969 by geologist Ian McLeod (q.v.).

Collins Peak. 72°58' S, 167°49' E. A small but noteworthy peak, rising to 1810 m, on the E side of the Malta Plateau, on the end of the ridge overlooking the confluence of Hand Glacier and Line Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Eric J. Collins, biologist at Hallett Station in 1965-66.

Collins Point. 63°00' S, 60°35' W. As you pass W through Neptune's Bellows into Port Foster, Deception Island, South Shetlands, this small, but prominent point is the first one on your left (i.e., south), about 1.2 km WSW of Fildes Point. It was roughly charted by Foster in 1829, during the *Chanticleer* Expedition of 1828-31. Cdr. David Penfold re-charted the feature while leading the RN Hydrographic Survey unit in 1948-49, and he named it for Capt. (later Rear Adm., and, from 1955 to 1960, Hydrographer of the Navy) Kenneth St Barbe Collins (1904-1982), RN, superintendant of charts in the Hydrographic Department of the Admiralty. UK-APC accepted the name on Nov. 15, 1951, and US-ACAN followed suit in 1953. It appears in the 1955 British gazetteer. It appears on a 1953 Argentine chart as Punta Fontana (although this does mean "fountain point," it is hardly likely to be the origin of this name), and on a 1954 French chart as Pointe Collins. It appears on a 1953 Chilean chart as Punta Collins, and that was the name accepted by the Chilean gazetteer of 1974. *See also* **Collins Bay**.

Collins Ridge. 85°35' S, 160°48' W. A rugged, ice-covered ridge, extending N from Mount Behling to Bowman Glacier, where it trends NE between the confluence of Bowman Glacier and Amundsen Glacier. Mapped from ground surveys and air photos taken during ByrdAE 1928-30. Named by US-ACAN in 1967, for Henry C. Collins, assistant chief of USGS's special maps branch.

Collins Rock. 66°17' S, 110°33' E. A small, low island (really a rock) at the S side of the entrance to McGrady Cove, in the SE part of Newcomb Bay, in the Windmill Islands, off the Budd Coast. First mapped from air photos taken in Feb. 1947, during OpHJ 1946-47. Named by Lt. Robert C. Newcomb, USN, navigator of the *Glacier* in 1956-57 (*see* **Newcomb Bay**), for Engineman 3rd Class Frederick A. Collins, USN, a member of the *Glacier* party that surveyed this feature in Feb. 1957. US-ACAN accepted the name in 1958, and ANCA followed suit.

Collinseiskappe *see* **Bellingshausen Dome**

Collinseisspitze *see* **Bellingshausen Dome**

Collinson Ridge. 85°13' S, 175°21' W. A bare rock spur, next N of Halfmoon Bluff, just to the E of the Shackleton Glacier, in the NW part of the Cumulus Hills, in the Queen Maud Mountains. Named by US-ACAN in 1971, for Prof. James W. Collinson of Ohio State University, a member of the Institute of Polar Studies geological expedition who worked at this spur in 1970-71.

Collom's Harbour *see* **Harmony Cove**

Collop, Cyril Geoffrey "Geoff." b. Sept. 1, 1924, Rochford, Essex, son of John William Collop and his wife Cissie A.M. Hawkins. He interviewed for FIDS in 1951, along with Bill Meehan, and was accepted as a radioman, wintering-over at Port Lockroy Station in 1952. He died in Feb. 2002, in Somerset.

Collyer, Geoffrey Robert "Geoff." b. May 5, 1924, Gray's, Essex, son of Maurice Collyer and his wife Ruby Annie Saunders. From 1942 to 1946 he was a pilot sub lieutenant with the Fleet Air Arm, and then, with the RNVR, was flight captain and photographic officer on the *Balaena* in 1946-47. He later lived in the Caribbean as managing director of Saguenay Shipping (UK). He became chairman in 1977.

Collyer Island. 65°59' S, 109°57' E. One of the Balaena Islands, it lies about 1.4 km W of Thompson Island, off the Budd Coast of Wilkes Land. Named by ANCA for Geoff Collyer.

Colman Island *see* **Coulman Island**

Colnett, James. Baptized on Oct. 18, 1753, at Stoke Damerel, Devon, son of Royal Navy man James Colnett, master of the *Salisbury*, and his wife Sarah Lang. He joined the Navy in 1770, and was with Cook on the *Scorpion*, in 1771, and on Dec. 17 of that year became a midshipman on the *Resolution* for Cook's 2nd voyage, 1772-75. He was the man on board who first saw New Caledonia. After the expedition he sailed on the *Juno*, then on the *Adventure* during the Revolutionary War in America. He became a lieutenant in 1779, served on several ships, and from 1786 to 1794 was detached to the Merchant Navy, engaged on sealing expeditions. In 1794 he was promoted to commander, skippered several ships, and in 1796 made captain. Soon thereafter his ship was wrecked and he was taken prisoner by the French for 6 months. He retired in 1805, and died in London, on Sept. 1, 1806, leaving 2 daughters by a woman named Catherine Ault.

Islas Colo Colo *see* **Quintana Island**

Coloane Cárdenas, Francisco. b. July 19, 1910, Quimche, Chiloé, Chile, son of a whaling skipper who died in 1919, whereupon the family moved to Punta Arenas. After a spell on a whaler, he joined the Chilean Navy in 1931, as a yeoman. He was subsequently a shepherd, overseer, explorer for petroleum, a legal writer, a stage actor, and finally a writer. He took part in ChilAE 1946-47, and wrote the book *Los conquistadores de la Antártica*. In 2002 he wrote his autobiography, *Los pasos del hombre*. He died in France, on Aug. 5, 2002.

Laguna Colocolo *see* **Relict Lake**

Isla Coloma *see* **Coloma Island**

Coloma Island. 62°29' S, 59°40' W. An island, SW of González Island, in Discovery Bay, Greenwich Island, in the South Shetlands. Named by the Chileans as Isla Coloma, for Luis Coloma Rojas, who was part of the 1947 wintering-over party at Soberanía Station (*see* **Capitán Arturo Prat Station**). It appears on a Chilean chart of 1998. UK-APC accepted the translated name Coloma Island, in 2003. The British were the latest to replot this feature, in late 2008.

Colombia. Ratified in Jan. 1989, as the 39th signatory of the Antarctic Treaty. This country's actual involvement has not been noticeable.

Mount Colombo. 76°31' S, 144°44' W. A mountainous projection in the NE part of the main massif of the Fosdick Mountains, 5 km N of Mount Richardson, in the Ford Ranges of Marie Byrd Land. Discovered on the eastern flight of Dec. 5, 1929, during ByrdAE 1928-30. Named later by Byrd for Tony Colombo (see the entry below), a member of the biological party that visited this area in Dec. 1940, during USAS 1939-41. US-ACAN accepted the name in 1947.

Colombo, Louis P. "Tony." b. Dec. 17, 1910 (his USAS record says Jan. 17, 1911), Novara, Italy. He came to the USA at 6 months old, his parents both died soon thereafter, and he grew up in a Catholic orphanage in NYC. After a spell living with his policeman brother Joe in Queens, and helping out in a plumbing shop, he became a merchant seaman, and was fireman on the *Jacob Ruppert*, 1933-34, during ByrdAE 1933-35, being assistant mechanic on the shore party of that expedition. Later, as a naval reservist, he trained in dog-handling at Wonalancet, NH, and became dog driver and biologist at West Base during USAS 1939-41. On June 17, 1941, in NY, he joined the Army, became a master sergeant, and spent a lot of time in the Arctic. He was with the 350th Infantry Regiment in Austria from 1945 to 1950, marrying Katharina Aschenbrenner, and retiring from the Army in 1962 to lead the cadet program at North Georgia College and State University. He died on Nov. 10, 1995, in Dahlonega, Georgia.

Caleta Colón. 62°14' S, 58°56' W. A cove at the back of Edgell Bay, which indents Ardley Peninsula, Maxwell Bay, King George Island, in the South Shetlands. Named by the Argentines by 1978, for Pedro Colón, a sailor on the *Uruguay* in 1904-05. Ballvé Station was here.

Colony Cirque. 77°33' S, 163°18' E. A cirque immediately E of Mount Knox, on the E side of Harp Glacier, in the MacDonald Hills, in the Taylor Valley, in the Asgard Range of Victoria Land. Named by NZ-APC in association with Commonwealth Glacier. US-ACAN accepted the name in 1998.

Colorado Glacier. 85°53' S, 133°05' W. A tributary glacier, 16 km long, it flows NE from the Michigan Plateau to enter Reedy Glacier between the Quartz Hills and the Eblen Hills. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for the University of Colorado, at Boulder, which has sent many researchers here.

The Colosseum. 79°47' S, 156°25' E. A steep-sided moraine-floored cirque cut in Beacon sandstone, it is, in effect, a large, well-formed amphitheatre on the E side of Colosseum Ridge, near the head of the glacier-filled enclave, W of Richardson Hill, on the N side of the Darwin Mountains. So named descriptively, because this amphitheatre and 4 others on the ridge bear a striking resemblance to the Colosseum in Rome. US-ACAN accepted the name in 2001.

Colosseum Cliff. 77°36' S, 161°27' E. An impressive banded cliff between Sykes Glacier and the doleritic rock of Plane Table, in the Asgard Range of Victoria Land. Named descriptively by NZ-APC. US-ACAN accepted the name in 1976.

Colosseum Ridge. 79°47' S, 156°20' E. Between Haskell Ridge on the one hand, and Richardson Hill and Island Ridge on the other, in the Darwin Mountains, this feature contains pyramidal peaks and 5 large cirques which have been carved out of the horizontally bedded rocks of the ridge; the cirques bear a striking resemblance the Roman Colosseum. Discovered and mapped by VUWAE 1962-63, and named descriptively by them. NZ-APC accepted the name, and ANCA followed suit, as did US-ACAN in 1965.

Coloured Peak. 85°30' S, 156°20' W. Rising to 660 m, near the head of the Ross Ice Shelf, in the coastal foothills of the Queen Maud Mountains, about 3 km SE of O'Brien Peak. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. This feature was examined by NZGSAE 1969-70, and named by them for the banded strata of yellow, pink, and brown that mark the peak. NZ-APC accepted the name, and US-ACAN followed suit in 1970.

Nunatak Colqui. 66°20' S, 61°40' W. One of the many nunataks on Jason Peninsula named by the Argentines.

Colson, Carlos *see* **Órcadas Station**, 1949

Colson, Charles J. *see* **USEE 1838-42**

The *Columbia Land* *see* **The *Stena Arctica***

Columbia Mountains. 70°14' S, 63°51' W. A striking group of largely bare rock peaks, ridges, and nunataks, rising to an elevation of about 2200 m, near the E margin of the Dyer Plateau, 30 km SE of the Eternity Range, in the north-central part of Palmer Land. Features in this goup include Mount Brocoum, Dalziel Ridge, and Bardsdell Nunatak (sic). Mapped by USGS in 1974 from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for Columbia University, in NYC, which, for several seasons in the 1960s and 1970s, sent geologists to study the structure of the Scotia Ridge area. UK-APC accepted the name on July 21, 1976, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

The *Columbus Caravelle*. Small (7560 tons; 116.41 meters) tourist ship built in 1990 at the Rauma Yards, as the *Delfin Caravelle*, for the Finnish-owned Delfin Cruises. After a few cruises, Delfin went bust in the fall of 1990, and the *Caravelle* went back to her builders, becoming, for a brief while, the *Sally Caravelle*. In Jan. 1992 she was chartered by Transocean Tours, became the *Columbus Caravelle*, and was in Antarctic waters that austral season (1991-92). She was back, in the Ross Sea, in 1992-93 and 1993-94, both times under the command of Captain Yevgeniy K. Balashov. In 1994 the charter ended, and the vessel became a Hong Kong gambling ship. In 2004, she became the super yacht *Turama*.

Columbus High. 75°45' S, 175°30' W. An asymmetrical horst (actually an undersea ridge), what the Italians call an "alto strutturale" (hence the name "high"), running N-S between 75°00' S and 76°30' S, and between 175°00' S and 176°S, about 140 km long and about 10 km wide, in the western basin of the Ross Sea, E of Central High. Discovered by A. Del Ben, I. Finetti, and M. Pipan, and named by the Italians in 1993, for Christopher Columbus. Incidentally, and remarkably, this is the only Antarctic feature named for the great explorer. *See also* **Coulman High**.

Column Rock. 63°11' S, 57°19' W. A conspicuous off-shore rock pinnacle, 1.5 km N of Gourdin Island, and N of Prime Head, off the coast of Trinity Peninsula. ArgAE 1952-53 named it for its shape, as Roca Faro (i.e., "lighthouse rock"), and that was the name accepted by the Argentine gazetteer of 1970. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base D in 1960-61. On Feb. 12, 1964, UK-APC named it Column Rock, and US-ACAN accepted that name later that year.

Columnar Valley. 77°58' S, 161°57' E. Trending NW between The Handle and Table Mountain, in the NW part of the Royal Society Range of Victoria Land. Named descriptively by Alan Sherwood, NZ field party leader in this area in 1987-88, after the columnar-jointed dolerite that forms the valley walls. NZ-APC accepted the name, and US-ACAN followed suit in 1993.

Colvocoresses, George Musalas. Known as "Colvos." b. Oct. 22, 1816, Chios, Greece, into

a prominent family. He was captured and enslaved by the Turks as a child, ransomed, and sent to America following the 1822 massacres on Chios. He became the adopted son of Alden Partridge, the founder of Norwich University, in Vermont, from where Colvos graduated in 1831. He joined the U.S. Navy, and was a passed midshipman on USEE 1838-42, during which expedition he joined the *Peacock* at Rio, and the *Vincennes* at Fiji, and also served on the *Porpoise*. He wrote the book *Four Years in a Government Exploring Expedition,* in 1852-55, and was later promoted to captain, and commanded the *Saratoga* during the Civil War. He was murdered under mysterious circumstances in Bridgeport, Conn., on June 3, 1872. Shot, and seemingly robbed, he was insured for a huge amount of money, and the insurance company, after failing to prove assisted suicide, settled with his heirs for half the amount. His son, George, served as an admiral under Dewey, and, in turn, Admiral Colvocoresses's grandson, Alden P. Colvocoresses, was a highly decorated officer during World War Two.

Colvocoresses Bay. 66°21' S, 114°38' E. A bay formed by the right angle of the Budd Coast at Williamson Glacier. It is about 50 km wide at the entrance, and is occupied by glacier tongues and icebergs from Williamson Glacier and Whittle Glacier. Delineated by U.S. cartographer Gard Blodgett in 1955, from air photos taken by OpHJ 1946-47. Named by US-ACAN in 1955, for George M. Colvocoresses.

Colwell Massif. 78°02' S, 161°33' E. A rugged rock massif, about 6 km long, rising to 2635 m between Palais Glacier, Ferrar Glacier, and Rotunda Glacier, in Victoria Land. Named by US-ACAN in 1995, for Rita Rossi (b. Nov. 23, 1934, Massachusetts; she married Jack H. Colwell in 1956), marine microbiologist who conducted field research in Antarctica. She was a member of the National Science Board from 1983 to 1990, and from 1991 was president of the Maryland Biotechnology Institute, at the University of Maryland.

Monte Coman *see* **Mount Coman**

Mount Coman. 73°49' S, 64°18' W. A prominent, isolated mountain, rising to 3655 m (the Chileans say 3660 m and the British say about 1550 m) above the ice-covered plateau of Palmer Land, just westward of the Playfair Mountains, near the head of Swann Glacier, between the English Coast and the Lassiter Coast. Discovered aerially on Nov. 21, 1947, by RARE 1947-48, and named by Finn Ronne as Mount Dana Coman for F. Dana Coman. They plotted it in 74°03' S, 65°20' W, and as such it appears on a 1948 American Geographical Society map. In 1948 Ronne himself shortened the name to Mount Coman, and that is how it appears on a 1954 U.S. Hydrographic Office chart. US-ACAN accepted the shortened name in 1949, after rejecting the name Mount Haag, for Joseph Haag (*see* **Haag Nunataks**). It appears on a 1952 Argentine chart as Monte Coman, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. The feature was mapped by USGS in 1974, from USN air photos taken between 1965 and 1967, and its coordinates corrected. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land, and the name was accepted by UK-APC on Dec. 20, 1974.

Coman, Francis Dana. Known as "Doc." b. Oct. 31, 1895, Wellsville, NY, son of Methodist minister Frederick H. Coman and his wife Evelyn Dana. Dietician, bacteriologist, biologist, and staff surgeon at Johns Hopkins University, he had served with the French 22nd Infantry Division during World War I. He was with Grenfell in Labrador in 1922-23, and in the Antarctic was physician on ByrdAE 1928-30, and medical officer on Ellsworth's 1933-35 expedition. He died in his sleep on Jan. 28, 1952, at Fort Churchill, Manitoba, Canada.

Paso Comandante Cordovez *see* **Croker Passage**

Comandante Ferraz Station. 62°05' S, 58°23' W. Brazil's first scientific station in Antarctica, built in 1983-84 on Martel Inlet, Keller Peninsula, Admiralty Bay, King George Island, in the South Shetlands, by the 2nd Brazilian Antarctic Expedition, and opened on Feb. 6, 1984. 8 m above sea level, and 150 m from the coast, it specializes in marine biology, geology and geophysics. It can house 12 persons. Known as Ferraz, it went from a summer-only station to a year-round station, and consists of more than 60 modules which can accommodate 46 people. In emergencies it can accommodate up to 20 extra people in the summer and up to 6 in the winter. It has a surgery room, an infirmary, and X-ray equipment, all operating year-round, and the infirmary has two intensive-care beds. Dental emergency services and lab analysis are also available. There are four refugios associated with this station — Astrónomo Cruls, Padre Balduíno Rambo, Engenheiro Wiltgen, and Emilio Goeldi. **1983-84 summer**: Edison Nascimento Martins (leader). **1984-85 summer**: Fernando Ermel (leader). **1986 winter**: Antonio José Salvi Elkfury (leader). **1986-87 summer**: José Augusto de Alencar Moreira (leader). **1987 winter**: Antonio José Teixeira (leader). **1987-88 summer**: Antonio José Gomes Queiroz (leader). **1988 winter**: José Augusto de Alencar Moreira (leader). **1988-89 summer**: Paolo Cesar Lisboa Soares (leader). **1989 winter**: Fausto Colazens de Toledo Ribas (leader). **1989-90 summer**: Ricardo de Lima Vallim (leader). **1990 winter**: Paolo Cesar Lisboa Soares (leader). **1990-91 summer**: Arnaldo Sonato Martins Caiado (leader). **1991 winter**: Ricardo de Lima Vallim (leader). **1991-92 summer**: Francisco de Paolo Costa Filho (leader). **1992 winter**: Arnaldo Sonato Martins Caiado (leader). **1992-93 summer**: Jose Francisco Vasconcelos Gomes (leader). **1993 winter**: Francisco de Paolo Costa Filho (leader). **1993-94 summer**: Antonio Galvão Almeida Simõens (leader). **1994 winter**: Jose Francisco Vasconcelos Gomes (leader). **1994-95 summer**: Ewerton Monteiro da Silva (leader). **1995 winter**: Haroldo de Oliveira Amaral (leader). **1995-96 summer**: Moacir de Jesus Franco (leader). **1996 winter**: Francisco de Paolo Costa Filho (leader). **1996-97 summer**: Francisco de Paolo Costa Filho (leader). **1997 winter**: Haroldo de Oliveira Amaral (leader). **1997-98 summer**: Haroldo de Oliveira Amaral (leader). **1998 winter**: Altevir Costa Machado (leader). **1998-99 summer and 1999 winter**: Altevira Costa Machado and Jose Iran Cardoso (leaders). **2000 winter**: leader unknown. **2001 winter**: leader unknown. **2002 winter**: leader unknown. **2003 winter**: Capt. Antonio da Costa Guilherme (leader), Lt. Cdr. Zaldir Ramos Davilla (2nd-in-command), Lt. Cdr. Luciano Castelo Branco Cunha (doctor; March-Sept. 2003). **2004 winter**: Capt. Luizandro Périco Souza (leader), Cdr. Miguel Barbosa Rocha da Cruz (2nd-in-command), Lt. Gulherme Guimarães Wimmer (doctor). **2005 winter**: Cdr. Carlos Roberto de Almeida Bastos (leader), Cdr. Marcello Rodrigues Camarinho (2nd-in-command), Lt. Cdr. Nestor Francisco Miranda Junior (doctor). **2006 winter**: 10 men. Cdr. Áthila de Faria Oliveira (leader), Lt. Cdr. Marcelo Conde dos Santos (2nd-in-command), Lt. Marcelo Leal Gregório (doctor). It continues as a winter station.

Ensenada Comandante Rojas *see* **Rojas Cove**

Comandante Zapiola Refugio. 77°51' S, 34°33' W. Argentine refugio built by the Army on Jan. 27, 1976, and inaugurated as Refugio Aviso ARA Comandante Zapiola, but known informally as Zapiola. Eventually it was integrated into General Belgrano II Station. Named for José Matías Zapiola (1780-1874), Argentine patriot.

Comb Island *see* **Peine Island**

Comb Ridge. 63°55' S, 57°28' W. Rising to 105 m (the British say about 120 m), it forms the E (and major) part of the hill at the extremity of The Naze (a peninsula in the N part of James Ross Island), S of the NE end of the Antarctic Peninsula. Probably discovered (although certainly not named) in 1902 by SwedAE 1901-04. Charted and named descriptively by Fids from Base D in 1946. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952.

Comberiate Glacier. 78°21' S, 162°14' E. A

glacier, flowing immediately to the NE of Potter Glacier, between Mount Huggins and Mount Kempe, in the Royal Society Range of Victoria Land. Mapped by USGS from ground surveys and USN air photos. Named by US-ACAN in 1995, for Michael Anthony "Mike" Comberiate (b. 1948), systems manager for NASA, working at the Goddard Space Flight Center since 1969. He was instrumental in developing a system for satellite communications to and within Antarctica, the South Pole Satellite Data Link (SPSDL). He has been to the South Pole seven times, and while there in Dec. 1984, he picked up the nickname "Nasamike." However, one should perhaps call him Mister Comberiate, as he is a 5th dan martial arts teacher. His father was aeronautical engineer Michael Bruno Comberiate, and his mother was the poet and songwriter Josephine Bertolini Comberiate (known as Jo B. Comberiate).

Monte Combs *see* **Mount Combs**

Mount Combs. 73°29' S, 79°09' W. An isolated mountain rising to about 1000 m above the surface of the ice at the base of Rydberg Peninsula, between the Bryan Coast and the English Coast, in Ellsworth Land. Discovered aerially on Dec. 23, 1947, during RARE 1947-48, and named by Finn Ronne for Jesse Martin "J.M." Combs (1889-1953), lawyer, judge, and Democratic congressman (1945-53) from Beaumont, Tex., a supporter of the expedition. It appears on Ronne's 1948 map, plotted in 73°00' S, 81°30' W. US-ACAN accepted the name. Re-mapped by USGS from USN air photos taken in 1965-66, it appears (with corrected coordinates) on the 1968 USGS sketch map of Bryan Coast-Ellsworth Land. UK-APC accepted the name on Dec. 20, 1974, with the new coordinates. It appears on a 1966 Chilean map as Monte Combs.

Isla Comdte. González *see* **González Island**

Comer Range. 64°48' S, 63°26' W. A mountain range, also described as a serrate ridge, rising to an elevation of about 600 m above sea level, and running in a SW-NE direction for 5 km, to the W of Harbour Glacier, on Wiencke Island, in the Palmer Archipelago. The range includes Jabet Peak in the S, and Noble Peak in the N. Named by US-ACAN on July 17, 2007, for philanthropist Gary Campbell Comer (1927-2006), founder in the 1960s of the Lands' End (sic) clothing catalogue company (bought by Sears in 2002), and a great benefactor to the children of Chicago's South Side. This feature was named for him because of his efforts to convince the world of global warming.

Commanda Glacier. 77°30' S, 162°48' E. A glacier, next W of Newall Glacier, and next S of Decker Glacier, immediately S of Mount Newall, in the Asgard Range of Victoria Land. Named by NZ-APC on Oct. 7, 1998. US-ACAN accepted the name later that year. Originally plotted in 77°30' S, 162°56' E, it has since been replotted. Commanda was the model name for an HF radio used by early NZ field parties.

The *Commandant Charcot*. Built in 1942-43 as the yard net tender *Ironwood* (YN-67), of the Ailanthus class, at Pollack Stockton Shipbuilding Co., of Stockton, Calif., renamed on April 3, 1943 as the *Lancewood*, launched on May 2, 1943, and commissioned on Oct. 18, 1943. 1190-tons, 194 feet 7 inches long, with a 37-foot beam, and a draft of 13 feet 6 inches, her 2500 hp diesel electric engines could propel her at 17 knots maximum, with a cruising speed of 12 knots, and she could take 56 men. Lt. Tyler Kaune was her first skipper. On Jan. 20, 1944 she was re-classified as a net laying ship (AN-48), saw service in the Pacific during World War II, and was decommissioned on Feb. 11, 1946. On April 28, 1947 she was sold to Robert A. Martinolich, of San Francisco, and on May 3, 1947 was transferred to the Maritime Commission, for delivery to France, on Aug. 28, 1947, at Gaudeloupe, as a polar dispatch boat. She was renamed by the French Polar Expeditions, first as the *Atiette*, then as the *Commandant Charcot*, after Jean-Baptiste Charcot, the great explorer. She was fitted by the French Navy, and commanded by Max Douguet. She tried unsuccessfully to get into Adélie Land for the aborted expedition of 1948-49, and succeeded in 1949-50, during the expedition led by Liotard, and landed the first French party on Adélie Land, on Jan. 20, 1950. She also took down the expedition of 1950-51, still commanded by Capitaine Max, but later in 1951 was taken out of service as too old, decommissioned in 1963, and scrapped.

Glacier du Commandant Charcot *see* **Commandant Charcot Glacier**

Langue Glaciaire du Commandant Charcot *see* **Commandant Charcot Glacier Tongue**

Commandant Charcot Glacier. 66°25' S, 136°35' E. Also seen mis-spelled as Commandant Drovcot Glacier. A prominent glacier, about 20 km long and 5 km wide, it flows NNW from the continental ice into the head of Victor Bay, terminating in Commandant Charcot Glacier Tongue, toward the W end of Adélie Land, between Pourquoi Pas Point and Rock X. Charted by the French expeditioners, who, in Dec. 1952, sledged W along the coast, to Victor Bay, close to this glacier, and they named it Glacier du Commandant-Charcot, for the *Commandant Charcot*. Plotted by U.S. cartographer Gard Blodgett in 1955, in 66°25' S, 136°50' E, from air photos taken during OpHJ 1946-47. US-ACAN accepted the translated name in 1955. It has since been replotted.

Commandant Charcot Glacier Tongue. 66°22' S, 136°35' E. A broad glacier tongue, about 3 km long, extending seaward from the Commandant Charcot Glacier, toward the W extremity of Adélie Land. Charted by the French in 1950-52, and named by them as Langue Glaciare du Commandant-Charcot. US-ACAN accepted the name Commandant Charcot Glacier Tongue in 1962. The Americans still use this name, but the French have given it up, incorporating the feature into the Commandant Charcot Glacier.

Commandant Drovcot Glacier *see* **Commandant Charcot Glacier**

Commando Ridge *see* **Dunikowski Ridge**

Commerson's dolphin. Order: Cetacea (whales); sub-order: Odontoceti (toothed whales); family: Delphinidae. *Cephalorhyncus commersoni* goes as far south as the Antarctic Convergence. It is black and white and has a very short beak. It grows to 4 feet and 110 pounds.

Committee on Polar Research. Committee created in early 1958 by the American Academy of National Sciences to study the Arctic and Antarctic after IGY (1957-58). It developed recommendations that it gave to the National Science Foundation. It also served as the U.S. national committee for SCAR. In 1975 it was reorganized as the Polar Research Board under the National Research Council's Assembly of Mathematical and Physical Sciences.

Committee Range *see* **Executive Committee Range**

Commonwealth Bay. 66°54' S, 142°40' E. An open embayment, 50 km wide at its entrance, between Point Alden and Cape Gray, or between Cape Denison and Cape Hunter, on the coast of George V Land, it is the windiest place on Earth, with gusts up to 200 mph. Discovered in 1912 by AAE 1911-14, and named by Mawson for the Commonwealth of Australia. Mawson established his Main Base at Cape Denison, at the head of this bay. US-ACAN accepted the name in 1947, and ANCA followed suit. The Australians opened a summer field station here in 1985-86.

Commonwealth Creek *see* **Commonwealth Stream**

Commonwealth Glacier. 77°35' S, 163°19' E. Flows in a SE direction and enters the N side of Taylor Glacier, immediately W of Mount Coleman, in Victoria Land, in the area of McMurdo Sound. Charted by BAE 1910-13, and named by them for the relatively new Commonwealth of Australia, which had made a financial grant to the expedition, and contributed 2 members to the Western Geological Party that explored this area. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Commonwealth Range. 84°15' S, 172°20' E. A rugged range of mountains, trending N-S for about 100 km, between the Hughes Range and the Beardmore Glacier, bordering the E side of the Beardmore from Keltie Glacier to the Ross Ice Shelf, between that ice shelf and the South Pole. It contains Mount Kathleen, Mount Usher, Mount Robert Scott, Mount Deakin, Mount Cyril, Mount Kyffin, Mount Patrick, Mount Harcourt, and Flat Top (at abut 4000 m, the highest point in the range). Discovered in Dec. 1908 by the Southern Polar Party during BAE 1907-09, and named by Shackleton for the Commonwealth of Australia, which helped the expedition greatly. US-

ACAN accepted the name in 1947, and NZ-APC followed suit.

Commonwealth Stream. 77°35' S, 163°30' E. Also seen as Commonwealth Creek. A small, intermittent meltwater stream, 4 km long, flowing eastward from Commonwealth Glacier into New Harbor, at McMurdo Sound, in Victoria Land. Studied on the ground in Dec. 1957, by geologist Troy L. Péwé, and named by him in association with the glacier. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Communication Heights. 79°58' S, 156°15' E. A group of highly eroded, ice-free elevations, rising to about 1800 m between Conant Valley and Grant Valley, to the S of the Midnight Plateau, in the Darwin Mountains. Named by US-ACAN in 2001, in keeping with the practice of naming certain features in this area after communications workers.

Isla Comodor de Quito *see* **Nupkins Island**

Comodoro Federico Guesalaga Toro Refugio *see* **Guesalaga Refugio**

Península Comodoro Guesalaga *see* **Guesalaga Peninsula**

Compañía Argentina de Pesca. Started in Buenos Aires on Nov. 16, 1904, by Carl Anton Larsen, it was the first whaling company to operate out of South Georgia (*see* Larsen for details). The lease on Grytviken (the South Georgia site where the station was built) was dated from Jan. 1, 1906. The company ran the *Ernesto Tornquist* in Antarctic waters, and lasted until 1960.

Montañas Compañía Blanca *see* **The White Company**

Islote Compás *see* **Compass Island**

Islote Compass *see* **Compass Island**

Compass Island. 68°38' S, 67°48' W. A small rocky island, 15 m high (the Chileans say about 30 m), in the S part of Marguerite Bay, 11 km NW of the Terra Firma Islands, off the Fallières Coast, about 21 km NW of Cape Berteaux, on the W coast of Graham Land. Discovered and photographed aerially on Feb. 1, 1937, by BGLE 1934-37. First visited by Fids from Base E in 1948, surveyed by them in 1949, and so named by them because of difficulties here with compass bearings, at first thought to be due to local variation, but eventually proved to be due to iron wiring being used in an anorak hood, instead of the normal copper. UK-APC accepted that name on March 31, 1955, and US-ACAN followed suit in 1956. It appears (erroneously) in the 1956 British gazetteer as Compass Islets. However, on July 7, 1959, UK-APC redefined the feature as Compass Island, and it appears as such on a British chart of 1961. US-ACAN accepted that new name in 1963. It appears on a 1962 Chilean chart as Islote Compás, but the name accepted by the 1974 Chilean gazetteer was Islote Compass. The Argentines call it Islote Compás.

Compass Islet *see* **Compass Island**

Compass Islets *see* **Compass Island**

Composite Gazetteer of Antarctica *see* **the Bibliography**

Compton Valley. 85°01' S, 91°20' W. An ice-filled valley indenting the N side of the Ford Massif, between Reed Ridge and Walker Spur, in the Thiel Mountains. Surveyed by the USGS Thiel Mountains Party in 1960-61. Named by US-ACAN in 1962, for Lt. (jg) Romuald P. Compton, USN, of Denver, Colo. (*see* Deaths, 1961).

Glaciar Comrie *see* **Comrie Glacier**

Comrie Glacier. 65°48' S, 64°07' W. About 21 km long (the Chileans say 10 km), it flows NW into the head (i.e., the SE corner) of Bigo Bay, on the Graham Coast, on the W coast of Graham Land. Discovered and roughly surveyed in 1909 by FrAE 1908-10, it appears (unnamed) on their 1912 map of that expedition. Re-surveyed in 1935-36 by BGLE 1934-37, it appears (again unnamed) on Rymill's 1938 map of that expedition. Named by UK-APC on Sept. 22, 1954, for Leslie John Comrie (1893-1950), superintendent of the Nautical Almanac Office, 1930-36, who provided BGLE with advance copies of the almanac up to 1937. US-ACAN accepted the name in 1955, and it appears on a 1955 U.S. Hydrographic Office chart. It was photographed aerially by FIDASE in 1956-57. It appears on a Chilean chart of 1962 as Glaciar Comrie, and that was the name accepted by the 1974 Chilean gazetteer. Originally plotted in 65°48' S, 64°20' W, it has since been replotted.

Conaglenberg. 70°42' S, 162°35' E. A peak, just W of Stanwix Peak, in the Bowers Mountains. Named by the Germans for Kevin Conaglen, of Greenpeace (q.v.).

Conant Valley. 79°57' S, 156°03' E. Between Duncan Bluff and Communication Heights, in the S part of the Darwin Mountains. Its mouth opens toward Hatherton Glacier. Named by US-ACAN in 2001, for Neil Conant, communications operator in support of USAP, in 15 austral summers, 1984-2001. Three summers were at Siple Station in the 1980s; the rest were at Pole Station.

Conard Peak. 72°22' S, 167°26' E. Rising to 2230 m, along the N side of Hearfield Glacier, about 8 km N of Aldridge Peak, in the Cartographers Range, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Ralph W. Conard, VX-6 ground handler at Williams Field during OpDF 68 (i.e., 1967-68).

Conca Italia *see* **Italia Valley**

Punta Concepción *see* **Conception Point**

Conception Point. 60°31' S, 45°41' W. On the north-central side of Coronation Island, in the South Orkneys, it is, in fact, the northernmost point on the island. Discovered and roughly mapped on Dec. 8, 1821 (the Feast of the Immaculate Conception), by Powell and Palmer, and named by Powell. It on Powell's chart of 1822, and on a British chart of 1839. It was re-charted by Discovery Investigations personnel in 1933. US-ACAN accepted the name in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955. The Argentine gazetteer of 1970 accepted the name Punta Concepción.

The *Concerto*. British yacht, skippered by Ross MacDonald, which visited the Antarctic Peninsula in 1997-98.

La Conchée *see under* **L**

Conchie Glacier. 71°36' S, 67°12' W. A glacier flowing WSW into George VI Sound between the Batterbee Mountains and Steeple Peaks, on the W coast of Palmer Land. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for Flight Lt. Bertie John Conchie (b. 1930, Dartford, Kent), RAF, BAS Twin Otter pilot, 1969-75. US-ACAN accepted the name later in 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Conchiglia, José *see* **Órcadas Station**, 1940

Concord Mountains. 71°35' S, 165°10' E. A complex system of mountain ranges in the NW part of Victoria Land, this feature contains the Everett Range, the Mirabito Range, the King Range, Leitch Massif, the West Quartzite Range, and the East Quartzite Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by the Northern Party of NZGSAE 1963-64, for the international harmony in Antarctica, and in particular for the fact that 5 nations participated in the exploration of this region. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

Concordia Automatic Weather Station. 75°06' S, 123°24' E. An Italian AWS, installed at Concordia Station (*see* **Dome C Scientific Station**) in Jan. 2005, at an elevation of 3233 m.

Concordia Scientific Station *see* **Dome C Scientific Station**

Concordia Subglacial Lake. 74°06' S, 125°09' E. Located beneath an ice sheet 4000 to 4100 m deep. It has an area of 900 sq km and is 250 m deep. The surface of the water has an elevation of between 800 and 950 m below sea level. Its presence was guessed at in 1970, and in Dec. 1999 was finally located. Named by the Italians on Sept. 16, 2002, in association with nearby Dome C (Concordia Station). US-ACAN accepted the name in 2003.

Isla Condell. 69°11' S, 68°01' W. This ice rise was reported on the Wordie Ice Shelf, off the Fallières Coast, on the W coast of Graham Land, by ChilAE 1946-47, and named by them as Isla Condell, for Capitán de corbeta Carlos Condell (*see also* **Pauling Islands**) (1843-87), Chilean naval officer and hero of the battle of Punta Gruesa (May 21, 1879), at the beginning of the War of the Pacific between on the one hand, Chile supported by the UK, and on the other Peru and Bolivia. The ice rise was later declared non-existent, but the Chileans did see something, and it may have been what the British named Napier Ice Rise, which lay to the SE (Napier Ice Rise later became Napier Island, q.v.).

Islotes Condell *see* **Pauling Islands**

Punta Cóndilo *see* **Condyle Point**

Condit, John Carroll. b. May 24, 1920, Jefferson City, Mo., son of dry goods merchant Wade Wallace Condit and his wife Dora M. Overman. He attended seminary in St. Louis, was ordained by Cardinal Glennon on June 2, 1945, and from 1945 to 1946 was assistant pastor at St Boniface's, in St. Louis. From 1949 to 1953 he was assistant pastor at St. Gregory's, in Overland, Mo., joining the U.S. Navy as a chaplain lieutenant and serving in Korea. He became the first Catholic priest at AirOpFac McMurdo (which later became McMurdo Station). His tour of duty was 1955-56, during the summer season of OpDF I. In the pack-ice, on the way down to McMurdo Sound on the *Wyandot*, he baptized Slats Slaton into the Catholic faith, one of the first baptisms south of 60°S. Then he wintered-over at McMurdo (cf. Peter Bol, the Protestant chaplain). A hard-drinking and hard-swearing priest, Father Condit played the accordion and arranged theatrical presentations (*see* **Theatre**). He built Chapel of the Snows, the first church in Antarctica. He had special dispensation to conduct Protestant services as well as Catholic ones. He was succeeded at the end of Deep Freeze I by Leon Darkowski. He retired from the Navy as a captain, and died on June 7, 1994, at Jefferson City.

Condit Glacier. 77°52' S, 162°48' E. On the E side of Cathedral Rocks, it flows N into Ferrar Glacier, in Victoria Land. Charted by BAE 1910-13. Named by US-ACAN in 1964, for Father Condit. NZ-APC accepted the name.

Condon Hills. 67°53' S, 48°38' E. A group of hills rising to 840 m at the highest point, along the E side of Rayner Glacier, between that glacier and Thyer Glacier, in Enderby Land. Mapped by Australian cartographers from ANARE air photos taken in 1956 and 1957. Named by ANCA on Nov. 24, 1961, for Maurice Alan Condon (b. 1915), assistant director of the Bureau of Mineral Resources, in Australia. US-ACAN accepted the name in 1965.

Cerro El Cóndor *see under* **E**

Punta Cóndor *see* **Cape Wollaston**

Condor Company. Norwegian whaling company, managed by Lars Christensen at Grytviken, in South Georgia.

Condor Peninsula. 71°46' S, 61°30' W. A mountainous and ice-covered peninsula, 50 km long, and between 16 and 24 km wide, it lies between Odom Inlet and Hilton Inlet, on the Black Coast, on the E coast of Palmer Land. Discovered and photographed aerially on Dec. 30, 1940, from the Condor biplane flight from USAS's East Base, with Black, Snow, Perce, Carroll, and Dyer aboard. The feature was mapped in detail by USGS in 1974, from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for the Condor plane. UK-APC accepted the name on July 21, 1976.

Condyle Point. 63°35' S, 59°48' W. The SE point on Tower Island, 30 km N of Charcot Bay, in the Palmer Archipelago, near the Antarctic Peninsula. Photographed aerially by FIDASE in 1956-57. Named descriptively by UK-APC on Sept. 23, 1960. A condyle is the rounded prominence at the end of a bone. US-ACAN accepted the name later in 1960. It appears on a British chart of 1962. The Argentines translated the name as Punta Cóndilo.

Roca Cone *see* **Cone Rock**

Cone Hill. 77°47' S, 166°51' E. A hill, 3 km NE of Castle Rock, on Hut Point Peninsula, Ross Island. Named descriptively as Cone Hill I by BAE 1910-13, but the name was gradually shortened, and, as Cone Hill was accepted by US-ACAN in 1964. NZ-APC also accepted the name. *See also* **Cone Hill II**, or rather, **Ford Rock**).

Cone Hill I *see* **Cone Hill**

Cone Hill II *see* **Ford Rock**

Cone Island *see* **Cono Island**

Cone Nunatak. 63°36' S, 57°02' W. Rising to 350 m (the British say 310 m), it appears conical on its N side, but has brown rock cliffs on its S face, and stands 5 km SSE of Buttress Hill, on Tabarin Peninsula, on Trinity Peninsula, at the NE end of the Antarctic Peninsula. Named descriptively by Fids from Base D following their survey of the area in April 1946. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer. There is a 1978 Argentine reference to it as Cerro Dos Patrullas (i.e., "two patrols hill"), the Argentines having made two sledge patrols here.

[1]**Cone Rock** *see* [2]**Cove Rock**

[2]**Cone Rock**. 62°26' S, 60°06' W. A small rock, rising to about 6 m above sea level, 2.5 km NE of Williams Point (on Livingston Island), and 1.3 km S of Pyramid Island, between that island and the Meade Islands, in the South Shetlands. Charted by the personnel on the *Discovery II* in 1935, and named descriptively by them as Conical Rock. It appears as such on a 1942 British chart. It appears erroneously as Roca Channel (*see* **Channel Rock**) on a 1948 Argentine chart, but correctly on another of their charts of that year as Roca Cónica. On a third Argentine chart from 1948 it appears as Roca Conical, but is located erroneously N of Pyramid Island. It appears on a 1948 British chart as Cone Rock, and that was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the 1955 British gazetteer. It is shown on a 1953 Argentine chart as Roca Cono, and on a 1957 one as Rocas Cono (i.e., in the plural), the name Roca Cono being the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer (the Chileans rejecting the name Roca Cone). The British were the latest to replot this feature, in late 2008.

Cones. *See* the following: Alcyone, Alexander, Boulder Cones, Breached, Chester, Confluence, Downs, Eliza, Ellis, Gamble, Kirby, Kyle, Lyons, Parasite, Parawera, Perchuc, Scott, Shipp, Taygete, Three Sisters, Topping, Turret, Twickler.

The Cones. 68°38' S, 78°21' E. Two hills, rising to about 60 m, in the Vestfold Hills, on the S side of Krok Lake. They are conical in shape, no matter which direction one views them from, but especially from the NW, W, and SW. Named descriptively by the Australians.

Punta Conesa *see* **Conesa Point**

Conesa Point. 64°52' S, 62°51' W. The S entrance point of Leith Cove, in the NE part of Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. ChilAE 1950-51 named it Punta María Pilar, probably after a relative of one of the expedition members (no other, more obvious, reason appears on the horizon). It appears as such on their 1951 chart, but appears on a 1962 Chilean chart as Punta María del Pilar. The Chilean gazetteer of 1974 seems to have accepted the name Punta María Pilar, but since then the Chileans have called it Punta María. It appears on an Argentine chart of 1953 as Punta Nelly, and on a 1956 U.S. Hydrographic Office chart as Nelly Point. No obvious reason for this naming appears at all. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base O between 1956 and 1958. It appears on a 1957 Argentine chart as Punta Conesa, named after Gen. Emilio Conesa (1824-1882), Argentine soldier and administrator, and that was the name accepted by the 1970 Argentine gazetteer. UK-APC accepted the name Conesa Point on Feb. 7, 1978, and it appears as such in the British gazetteer of 1980, and also on a British chart of 1988.

Costa Confín *see* **Luitpold Coast**

Confluence Cone. 68°56' S, 66°40' W. A small but conspicuous nunatak, rising to about 500 m N of the Wordie Ice Shelf, 6 km SE of Sickle Mountain, near the Fallières Coast, on the W coast of the Antarctic Peninsula. Photographed aerially on Nov. 27, 1947, by RARE 1947-48, and surveyed from the ground by Fids from Base E in Nov. 1958. So named by FIDS because it is at the confluence of several glaciers which merge with Hariot Glacier to flow into the Wordie Ice Shelf. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Cadena Confusión *see* **Perplex Ridge**

Cape Confusion. 74°50' S, 163°50' E. A rocky point projecting from the SW part of the Northern Foothills, 6 km NW of Cape Russell, about 4.5 km E of the N tip of Inexpressible Island, on the coast of Victoria Land. Named descriptively by the Southern Party of NZGSAE 1962-63, for the complex geological structure of the area. NZ-APC accepted the name on June 27, 1963, and US-ACAN followed suit in 1967.

Roca Confusión *see* **Baffle Rock**

Confusion Island. 60°44' S, 45°38' W. About 330 m long, forming the W entrance point of Clowes Bay, off the S side of Signy Island, in the South Orkneys. The S point on this island was charted by personnel on the *Discovery II* in 1933, and named by them as Con-

fusion Point. It appears on their 1934 chart, and that was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. However, following biological work done here by BAS from Signy Island Station up to 1973, on Dec. 20, 1974, UK-APC extended the name to the whole island, and US-ACAN followed suit in 1975.

Confusion Point *see* **Confusion Island**

Islote Confuso *see* **Query Island**

Conger, Richard Russell. b. April 15, 1921, Detroit, son of electrician Richard Oscar Conger and his wife Ruth Russell, but his parents divorced when he was a little lad. He joined the Navy in 1938, and was one of 5 Navy men picked to be taught cinematography by the staff who made the *March of Time* newsreels. He also learned still photography while working part-time for *Life* magazine. He married Eleanor in 1943. He was chief photographer's mate on OpW 1947-48, during which he specialized in underwater and cold weather photography. In 1947 he was one of the two men who found Shackleton's old 1910 Mount Erebus hut. He worked in the Arctic, in Vietnam, and on Hollywood motion pictures such as *The Frogmen*, with Richard Widmark (1951). He was at the South Pole in 1957-58. He moved to Maryland in 1967, retired from the Navy in 1969, as a lieutenant, and died on Oct. 9, 2003, at Ijamsville, Md.

Conger Glacier. 66°02' S, 103°33' E. About 8 km E of Glenzer Glacier, it flows N into the E part of the Shackleton Ice Shelf. Mapped by U.S. cartographer Gard Blodgett in 1955, from air photos taken by OpHJ 1946-47. Named by US-ACAN in 1955, for Richard Conger.

Conglomerate Bluff. 62°08' S, 58°09' W. Rising to about 140 m above sea level, and built of Tertiary basaltic conglomerate (hence the name), at the N margin of White Eagle Glacier, King George Island, in the South Shetlands. Mapped and named in 1988 by the Poles, who accepted the name officially on Sept. 1, 1999.

Conglomerate Nunatak. 62°08' S, 58°13' W. A small nunatak W of Lions Rump, King George Bay, King George Island, in the South Shetlands. It is built of coarse conglomerate, hence the name given by the Poles in 1981.

Conglomerate Ridge. 79°45' S, 84°06' W. A ridge, trending NW-SE for 1.5 km at an elevation of about 1650 m, 6 km ESE of Mount Bursik, in the Soholt Peaks of the Heritage Range, in the Ellsworth Mountains. Gerald F. Webers, leader of the USARP Ellsworth Mountains Expedition of 1979-80, named it for the conglomerate composition of the ridge. US-ACAN accepted the name.

The *Congo*. Norwegian whaling factory ship, owned by S.L. Christensen's Congo Company. Before she was the *Congo*, she had been the *Whale*, and before that she was the first *Orwell* (q.v.). As the *Congo*, she conducted pelagic whaling in Antarctic waters in 1929-30 and 1930-31, and was sold for scrap in 1935.

The *Congress*. New Bedford whaler, in the South Shetlands in 1852-53, under the command of Capt. Hathaway, and in company with the *Fanny*, also out of New Bedford. In the Falklands, they teamed up with the *Silas Richards*, also a whaler, under Capt. Wilcox, and they all went to the South Shetlands together.

Roca Cónica *see* **[2]Cone Rock**, **[2]Conical Rock**

Rocas Cónica *see* **[2]Conical Rock**

Roca Conical *see* **[2]Cone Rock**

Rocas Conical *see* **[2]Conical Rock**

[1]Conical Hill *see* **Mount Cherry-Garrard**

[2]Conical Hill. 77°39' S, 168°34' E. A small but distinctive rock hill rising to 655 m on the S side of Mount Terror, in the S slopes of Ross Island, above Cape MacKay, on Ross Island. Named descriptively by BAE 1910-13. US-ACAN accepted the name in 1972. If one is consulting gazetteers, one may find this feature confused with Mount Cherry-Garrard.

[1]Conical Rock *see* **Cone Rock**

[2]Conical Rock. 62°43' S, 61°11' W. A rock in the SE entrance of Morton Strait, 3 km S of the SW tip of Livingston Island, in the South Shetlands. Surveyed by the personnel on the *Discovery II* in 1930-31, who named it descriptively. It appears on their chart of 1933. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit that year. It appears on a 1947 Chilean chart as Roca Cónica (which means the same thing), and that was the name accepted by the 1974 Chilean gazetteer (after they had rejected the rather odd semi-pluralized form Rocas Cónica). It appears on a 1948 Argentine chart as Rocas Conical (sic), but on one of their 1953 charts as Rocas Cónicas, and that (pluralized) name was the one accepted by the 1970 Argentine gazetteer. It appears on a 1951 French chart as Rocher Conique.

Rocas Cónicas *see* **Conical Rock**

Cerro Cónico. 62°27' S, 60°48' W. A hill about 150 m E of the beach the Chileans call Playa Lobería, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno, during ChilAE 1990-91, for its conical shape.

Rocher Conique *see* **[2]Conical Rock**

Connell Canyon. 79°51' S, 83°01' W. An ice-filled, scenic canyon in the NW part of the Enterprise Hills, extending from Linder Peak to Union Glacier, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Lt. Davis B. Connell, USN, supply oficer at McMurdo during OpDF 65 and OpDF 66.

Connell Pond. 77°33' S, 160°49' E. A freshwater frozen pond in the feature called Labyrinth, 0.8 km S of Rodriguez Pond, in Healy Trough, in the Wright Valley, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, for Laurie Connell, of the University of Maine, at Orono, leader of a USAP field party that sampled the pond in 2003-04.

Connochie, Osmond Stanislaus "Ozzy." b. April 30, 1920, Glasgow, but raised in Anstruther, Fife, by his mother, a district nurse from that town (she was divorced from Ozzy's father). The Osmond part of his name came from his uncle Osmond (first name), and the Stanislaus part because his mother liked the exoticism of the name. But he was a Scotsman through and through. After college in Anstruther, he joined the Merchant Navy, and spent a lot of time in the Far East, China, Malaya, etc. He even went up the Yangtse in a ship skippered by a drunk captain. During World War II he was chief officer for the Bibby Line, on their ship *Empire Pride*. In 1947 he saved the lives of 2 American seamen in the China Sea. While at Leith he met Margaret Smith, the assistant manager of the cafeteria he used at Leith, and they kept in touch. He joined FIDS in 1955, as radioman, and wintered-over at Base F in 1956, and at Base W in 1957. He got lost in the Antarctic, and injured his arm. He went back into the Merchant Navy, as a radioman on liners, going to South America, and in 1958, in Edinburgh, he married Miss Smith. He got his captain's ticket, but then had an accident in which his eyesight was slightly damaged, and was in hospital in England for a while. He got a job with English Electric in Stevenage, Herts. In the 1980s he and Margaret were divorced, and he died in Stevenage on Aug. 25, 1988.

Connolly, John Richard. Ordinary seaman on the *Discovery II*, 1933-35.

Connors Point. 66°18' S, 110°29' E. The NW point of Beall Island, in the Windmill Islands. First mapped from air photos taken during OpHJ 1946-47 and OpW 1947-48. Named by US-ACAN in 1963, for William J. Connors, USN, aerographer's mate at Wilkes Station in 1958.

Cerro Cono *see* **Cockscomb Hill**

Islote Cono *see* **Cono Island**

Islotes Cono *see* **Cono Island**

Roca Cono *see* **[2]Cone Rock, Cono Island**

Rocas Cono *see* **[2]Cone Rock**

Cono Island. 67°41' S, 69°10' W. A conspicuous conical island, rising to 60 m above sea level, S of the Chatos Islands and Cape Adriasola, off the SW part of Adelaide Island. Roughly charted by ArgAE 1952-53, and descriptively named by them as Islote Cono (i.e., "Cono islet"), it appears as such on a 1957 Argentine chart. However, it appears on another 1957 Argentine chart as Roca Cono (i.e., "cone rock"). On a 1958 Argentine chart the name Islotes Cono appears, which include this island and its offlying rock. Re-surveyed by an RN Hydrographic Survey unit on the *Protector*, in 1963. On Feb. 12, 1964, UK-APC accepted the name Cone Island, and it appears as such on a British chart of that year. Later in 1964, US-ACAN accepted the name Cono Island.

The *Conrad* *see* **The *Robert D. Conrad***

Mount Conrad. 69°25' S, 158°46' E. A somewhat subdued peak that rises to about 600 m, 10 km (the Australians say about 13 km) S of Cape Kinsey, in the central part of the Goodman Hills, in the Wilson Hills, in Oates Land,

in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Max Conrad. ANCA accepted the name on July 31, 1972.

Conrad, Max Arthur, Jr. "The Flying Grandfather," as he was called. b. Jan. 21, 1903, Winona, Minn., son of German immigrant furrier Max Arthur Conrad, and his wife Elizabeth. A musician, he decided to become a pilot after Lindbergh's 1927 flight, feeling it would be more convenient to fly from gig to gig. In 1929, as an instructor, he got seriously beaned by an airplane propeller while trying to save a man who was walking into that very prop. The other man died. Max didn't. And it didn't stop him setting the world's high jump record of 6 foot 8½ inches, in 1931, the year he married Betty Biesanz. After an astonishing series of adventures in and out of the air, Max was hired as charter pilot in 1966 for a team planning to be the first to ascend Mount Vinson, in Antarctica. The climb never happened (they were beaten to it by USARP climbers), but Max did get to fly to Antarctica that season in his newly acquired Piper Aztec, *St. Louis Woman* (named after his daughter, Jana, who lived in St. Louis). On Dec. 21, 1968, as part of his round-the-world trip via both poles, he landed at Palmer Station, spent two days there, and headed off for Adelaide Island, where he got stuck for 3 weeks. On Jan. 15, 1969 he headed back to South America. He was back in Antarctica on Jan. 13, 1970, landing at McMurdo. On Jan. 19, 1970 he flew to the South Pole, the first solo flight to reach 90°S. On Jan. 23, 1970, his plane (which had been re-named *White Penguin*), crashed on takeoff, but Max was uninjured. He died in his sleep while staying with friends in Summit, NJ (he had moved to Prescott, Ariz. in 1964). Max Conrad Field, in Winona, was named for him.

Conrad Gebirge *see* **Conrad Mountains**

Conrad Ledge. 77°18' S, 160°53' E. A flat-topped ridge, 1.5 km long, between Hilt Cirque and Dana Cirque, in The Fortress, in the Cruzen Range of Victoria Land. Named by US-ACAN in 2005, for Lt. Cdr. Lawrence J. Conrad, USN, VXE-6 helo pilot at McMurdo between 1982 and 1985. He was a member of the USAP project to photograph named geographic features in the McMurdo Sound area in 2003-04. NZ-APC accepted the name on Sept. 12, 2005.

Conrad Mountains. 71°50' S, 9°40' E. A narrow chain of mountains, 30 km long, between the Gagarin Mountains and Mount Dallmann, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Conrad Gebirge, for Rear Adm. Fritz Conrad (1883-1944), oceanographer, founder and director of the Naval Meteorology Service within the German Admiralty. He had been responsible for the *Meteor* (q.v.) in 1927. US-ACAN accepted the translated name. Surveyed by NorAE 1956-60, and called Conradfjella by the Norwegians.

Conradfjella *see* **Conrad Mountains**

Conradgebirge *see* **Conrad Mountains**

Conradi Peak. 66°08' S, 54°34' E. An isolated peak, rising to 1040 m above sea level, northward of the Napier Mountains, and inland from the coast, about 30 km SW of Cape Borley. Discovered in Jan. 1930 by BANZARE 1929-31, and named by Mawson for "a prominent member of the South African government who, in 1929, rendered much help to BANZARE during the stay of the *Discovery* at Cape Town." US-ACAN accepted the name in 1947, and ANCA followed suit. The "prominent member" is not named exactly. One feels it may well be David Gideon Conradie (sic) (1879-1966), at that time recently elected National Party MP for Lindley (which is nowhere near Cape Town, unfortunately; however, he was an MP, in the national house).

Conrow Glacier. 77°34' S, 162°07' E. A small glacier, next westward of Bartley Glacier, between that glacier and Heimdall Glacier, it flows N from the Asgard Range part way down the S wall of Wright Valley, in the McMurdo Dry Valleys of Victoria Land. Named by Roy E. Cameron (*see* **Cameron Nunataks**), leader of a USARP biological party to this area in 1966-67, for Howard Paxson Conrow (b. April 30, 1915, Larchmont, NY. d. Feb. 6, 1972, San Bernardino, Calif.), a member of that team, a technician in the JPL Soil Science Laboratory. US-ACAN accepted the name in 1969.

Conrow Valley. A dry valley in the Asgard Range of Victoria Land. The term is not official, but it was named for Howard Conrow (*see* **Conrow Glacier**).

Conroy Point. 60°44' S, 45°41°W. Midway along the NW side of Moe Island (the British say it is the NW point of the island), off Signy Island, in the South Orkneys. Following BAS work here up to 1973, it was named by UK-APC on Dec. 20, 1974, for James William Henry "Jim" Conroy (b. 1943), BAS ornithologist between 1966 and 1973, who wintered-over at Signy Island Station in 1968. US-ACAN accepted the name in 1975.

Conscripto Ortiz Refugio. 64°55' S, 62°48' W. Argentine refuge hut, built by the Navy on rock, on the E side of Mascías Cove, at Paradise Harbor, on the Danco Coast, on the W coast of Graham Land, and opened on Jan. 29, 1956, as Refugio Naval Conscripto Ortiz, but known generally as Ortiz Refugio, or just as Ortiz. It was destroyed by ice in 1958. Mario I. Ortiz was a sailor on the *Bahía Aguirre*, who died in an accident on board ship in 1954-55 (*see* **Deaths**, 1955).

Cabo Consecuencia. 63°43' S, 60°47' W. A cape, close W of Tower Hill, and due S of Cape Wollaston, at the NW end of Trinity Island, in the Palmer Archipelago. Named by the Argentines (name means "cape consequence").

Monte Conseil *see* **Conseil Hill**

Conseil Hill. 67°36' S, 67°28' W. A hill, rising to about 500 m, midway along the N coast of Pourquoi Pas Island. Partly surveyed from the ground by Fids from Base E in 1948, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for the Jules Verne character. US-ACAN accepted the name in 1965. The Argentines call it Monte Conseil.

Conservation. Even as far back as the 1820s voices of protest were being heard, including newspapers, against the wholesale slaughter of whales and seals, a slaughter that provided oil for the lamps of civilized man. In the 3-year period 1820-23 no less than 20,000 tons of sea elephant oil had been procured — for the London market alone. The Antarctic Conservation Act was signed into effect by the president of the USA on Oct. 28, 1978. Aside from these measures, the Antarctic Treaty itself designates the Antarctic continent as a Special Conservation Area, and whaling and sealing, etc., are all but prohibited (see **CCALMR**).

Consort Island *see* **Consort Islands**

Consort Islands. 67°52' S, 68°42' W. Two small islands in Marguerite Bay, 0.8 km NE of Emperor Island, in the Dion Islands. Discovered and roughly charted in 1909 by FrAE 1908-10. Surveyed in Oct. 1948 by Fids from Base E, and named by UK-APC on March 31, 1955, as the Consort Islets, in association with Emperor Island, in a continuation of the courtly theme predominant among features in this area. US-ACAN followed suit with the naming in 1956. On July 7, 1959, UK-APC redefined them as the Consort Islands, and US-ACAN accepted that new name in 1963. In the 1963 British gazetteer, the feature appears by error singularized as Consort Island, but it appears correctly on a 1964 British chart.

Consort Islets *see* **Consort Islands**

Conspicuous Rock. 77°38' S, 166°27' E. In South Bay, Ross Island. Descriptively named by BAE 1910-13. It appears in the 1958 NZ provisional gazetteer.

Constable, Love. Midshipman on the *Adventure*, under Cook, 1772-75. He joined the expedition on Dec. 7, 1771, and on Jan. 1, 1773 became an able seaman, reverting to midshipman on Dec. 19, 1773. He kept a diary. He served on various ships after the expedition, becoming a lieutenant in 1781, and a commander in 1793. He died in Dec. 1794.

Cape Constance *see* **Cape Jones**

Constantine, Leonard "Len." b. Dec. 31, 1929, Jersey City, NJ. His father, Thomas Joseph Constantine, a Liverpool hairdresser, son of a chimney sweep, had left his home town in 1926, on the *Samaria*, bound for Bayonne, NJ, where his aunt Emma Albright lived. He also left behind his fiancée, Rebecca Calland, a baker's daughter from Old Swan, in Stoneycroft, Liverpool. Tom worked for a while in Bayonne, while he stayed with Aunt Emma, and then Rebecca come over in 1927, on the *Aurania*, and they were married. Tom got a job as a machinist in a factory in Jersey City, and Len was born there. It was the time of the Great Depression, and by Aug. 1931 they had had enough, and took the *Laconia* back to Liverpool, where Len was raised. He was an archi-

tect's assistant when he went as assistant cook on the 2nd and 3rd parts (i.e., 1956-58 and 1957-59) of the British Royal Society Expedition of 1957-58, and as such, wintered-over at Halley Bay in 1957 and 1958. After the expedition, he left Cape Town on the *Carnarvon Castle*, and arrived back in London on Feb. 27, 1959. Later that year he married Muriel Josephine Walker, in Liverpool. Muriel died in 2004.

Constellation Dome. 81°06' S, 160°13' E. An ice-covered prominence, rising to 1330 m, it is the highest feature in the Darley Hills, 8 km W of Gentile Point, between Beaumont Bay and Cape Selborne, W of Cape Parr, between the Ross Ice Shelf and Nursery Glacier. So named by the Northern Party of NZGSAE 1960-61 because the first astrofix of the journey was made here. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

Constellation Inlet. 78°30' S, 80°30' W. An ice-filled inlet, 50 km long and 16 km wide, between Dott Ice Rise and Skytrain Ice Rise, at the SW margin of the Ronne Ice Shelf. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1967, for the Lockheed Super Constellation aircraft C-121J (popularly known as the "Connie"), which did so much sterling work in Antarctica for so many years.

The *Constitución*. Argentinian privateer, commanded by Capt. Oliver Russell, which, in 1815, got blown off course to 65°S. *See* **Brown, Guillermo**, for further details.

Punta Constitución. 63°34' S, 59°46' W. The NE point of Cape Dumoutier, which itself is the E point of Tower Island, in the Palmer Archipelago. Named by the Argentines ("constitution point").

Construction Point. 72°19' S, 170°13' E. Marks the W side of the entrance to Willett Cove, and the S end of Seabee Hook, in the area of Cape Hallett, Victoria Land. Surveyed by personnel aboard the *Edisto* in Jan. 1956. Named by US-ACAN in 1956, in association with Seabee Hook (q.v.). NZ-APC accepted the name.

Consul Reef. 67°54' S, 68°42' W. A line of drying and submerged rocks forming the S end of the Dion Islands, in Marguerite Bay, off the S end of Adelaide Island. Charted by an RN Hydrographic Survey unit on the *Protector*, in 1963. Named by UK-APC on Feb. 12, 1964, in association with nearby Emperor Island and the Consort Islands. US-ACAN accepted the name later in 1964. It appears on a British chart of 1964.

Consulens Hat *see* **Whalers Bluff**

Contact Peak. 67°46' S, 67°29' W. A prominent rock peak, rising to 1005 m (the British say about 920 m), it is the SE peak of Pourquoi Pas Island, off the W coast of Graham Land. Discovered and roughly charted in 1909 by FrAE 1908-10. Surveyed in 1936 by BGLE 1934-37, and again by Fids from Base E in 1948, the latter so naming it because the peak marks the granite-volcanic contact in the cliffs, the contact being visible from a considerable distance. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. *See also* **Hoskins Peak**.

Contact Point. 63°23' S, 56°59' W. A small rock point close W of Sheppard Point, on the N side of Hope Bay, Trinity Peninsula. First charted as an island by SwedAE 1901-04. Roughly surveyed by FIDS in 1945, and still reported to be an island. It seems impossible that 2 separate expeditions would survey it as an island, but that is what we are told. When FIDS resurveyed it in 1955 they proved it to be a point, and named it Contact Point, because greywacke, tuff, and diorite were found to be exposed on, or very close to, this point. Such contacts had not previously been recorded, and were important for the interpretation of the geology of nearby Tabarin Peninsula. UK-APC accepted the name on Sept. 4, 1957, and US-ACAN followed suit in 1963.

Cerro Contador *see* **Scree Peak**

Contell Glacier. 62°39' S, 60°21' W. A glacier flowing W into South Bay, on the N side of Johnsons Dock, Livingston Island, in the South Shetlands. The Spanish named it Glaciar Contell, and it appears as such on one of their 1988 charts. In 1994 the Bulgarians, unware of this, named it Lednik Atlantic Club (i.e., "Atlantic Club glacier"), but in 1995 re-applied that name to a nearby ridge. *See* **Atlantic Club Ridge** for more details. Meanwhile, on Dec. 7, 1994, UK-APC had accepted the name Contell Glacier, and US-ACAN had followed suit in 1995. The British were the latest to replot this feature, in late 2008.

Continental Polar Air Mass. A shallow dome of very cold air, which usually forms in winter around the South Pole and surrounding areas. It causes cold weather throughout the world.

Contortion Spur. 80°25' S, 160°09' E. The largest and most easterly of 3 spurs which descend N from Mount Madison near the mouth of Byrd Glacier. The spur exposes a spectacular syncline of white marble and black schist. It was geologically mapped on Dec. 10, 2000, by Ed Stump of USAP, and he suggested the name because of the skewed form of the spur. US-ACAN accepted the name in 2003, and NZ-APC followed suit on Feb. 27, 2003.

The *Contralmirante Óscar Viel Toro*. An 89.91-meter Chilean icebreaker, built in Montreal in 1969, formerly the Canadian Coast guard vessel *Norman McLeod Rogers*, acquired in 1995, and used on ChilAE 1995-96 (Captain Germán Vera Medrano); ChilAE 1996-97 (Captain Jorge Huerta Dunsmore); ChilAE 1997-98 (Captain Carlos Mackenney Schmauk); ChilAE 1998-99 (Captain Mackenney again); ChilAE 1999-2000 (Captain José Valdivia Soto). It has continued to go to Antarctica over the years.

Bajo Contramaestre Agurto *see* **Bajo Agurto**

Isla Contramaestre González *see* **Slumkey Island**

The *Contramaestre Micalvi* *see* **The *Micalvi***

Isla Contramaestre Rivera *see* **Sawyer Island**

Ensenada Contramaestre Vinett *see* **Ensenada Vinett**

Islote Contreras *see* **Pfaff Island**

Monte Contreras *see* **Mount Banck**

Punta Contreras. 64°25' S, 63°42' W. A point marking the extreme NE of the entrance to Perrier Bay, on the W coast of Anvers Island, in the Palmer Archipelago. On some Chilean charts of 1952 and 1957, this point appears erroneously as Punta Quinton (*see* **Quinton Point**). Named by the Hydrographic Institute of the Chilean Navy in 1962, for Suboficial Julio Contreras Aravena, one of the party that built Soberanía Station (later called Capitán Arturo Prat) in 48 hours in 1947-48.

Contursi, Nicolás *see* **Órcadas Station**, 1935, 1937, 1939

The Convent *see* **Cathedral Crags**

Convoy Range. 76°47' S, 160°45' E. A broad range extending S from Fry Saddle to Mackay Glacier, about 150 km N of Taylor Valley, and about 50 km inland from the Ross Sea, in Victoria Land. Much of the range has a flat, almost plateau-like summit, and it is really a series of small mountains and valleys made up of dense igneous rock which is red on the exposed surfaces and gray underneath. The range is steeply cliffed along almost the whole of its E side, but on the W, for the most part, it slopes gently into Cambridge Glacier, except at the N end, where steep slopes descend to ice of the Mawson drainage. The New Zealanders say it forms the W boundary of Fry drainage. The NZ Northern Survey Party of BCTAE worked here between Oct. and Dec. 1957, and they named it for the main convoy into McMurdo Sound in the 1956-57 season. The names of the vessels in this convoy are used for the features at the foot of this range. US-ACAN accepted the name in 1962.

Cabo Conway *see* **Cape Conway**

Cap Conway *see* **Cape Conway**

Cape Conway. 62°51' S, 61°25' W. A cape forming the S extremity of Snow Island, in the South Shetlands. Roughly charted by Foster in 1829, during his *Chanticleer* Expedition 1828-31, and named by him for the *Conway*, one of his old ships (not in Antarctica). It appears as Cape Conway on a British chart of 1901. It appears in error as Cabo Wallace (*see* **Cape Wallace**) on a 1908 Argentine map, and as Cap Conway on Charcot's chart of 1912 (reflecting FrAE 1908-10). It was re-surveyed by the Discovery Investigations in 1933, and charted by them as Cape Conway. It appears on a 1946 Argentine chart as Cabo Conway, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Cape Conway was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953, and it appears as such in the 1955 British gazetteer. The British were the latest to replot this feature, in late 2008.

Conway Ice Ridge. 84°25' S, 140°00' W. Between Whillans Ice Stream and Mercer Ice Stream, on the Gould Coast of Marie Byrd Land. Named by US-ACAN in 2003, for Howard B. Conway, of the department of geophysics at the University of Washington, in Seattle, a USAP geophysicist at Siple Dome in 1994-95; at the Meserve Glacier in 1995-96; and the team leader in a glacial history study of this ice ridge in 2001-02.

Conway Island. 66°08' S, 65°28' W. An island on the S side of Holtedahl Bay, to the W of Lens Peak, off the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, surveyed from the ground by Fids from Base J that same season, and mapped by FIDS cartographers from these efforts. Named by UK-APC on July 7, 1959, for William M. Conway (1856-1937), 1st Baron Conway of Allington, Arctic pioneer skier. US-ACAN accepted the name in 1971.

Conway Peak. 77°22' S, 160°54' E. An ice-free peak rising to 1800 m between Albert Valley and the foot of Wreath Valley, in the Apocalypse Peaks of Victoria Land. Named by US-ACAN in 2005, for Maurice Conway, of Thames, NZ, field guide in 8 summer seasons for German expeditions to Victoria Land, Marie Byrd Land, and Queen Maud Land, between 1979 and 2000. He was also field guide and technician in 6 seasons for USAP at Roosevelt Island and the Marie Byrd Land ice streams, between 1997 and 2004. NZ-APC accepted the name on Sept. 12, 2005.

Conway Range. 79°18' S, 159°30' E. A mountain range in the Cook Mountains, between Carlyon Glacier and Mulock Glacier, S of Mulock Inlet, on the W side of the Ross Ice Shelf. Discovered during BNAE 1901-04, and apparently named by BAE 1907-09 (the name seems to have first been used in Shackleton's report of this expedition). US-ACAN accepted the name, and ANCA followed suit.

Conwayhügel. 71°37' S, 160°34' E. A hill on the NW side of Edwards Glacier, in the Usarp Mountains. Named by the Germans for Maurice Conway (*see* **Conway Peak**).

Mount Cook. 67°55' S, 56°28' E. Rising to 1900 m, it is the highest point of the main massif of the Leckie Range. Approximately mapped by Norwegian cartographers on Norwegian whalers chart #3. Plotted in 67°55' S, 56°32' E, from air photos taken by ANARE in 1956, and first visited by an ANARE sledging party led by Graham Knuckey in Dec. 1956, when its position was fixed. Named by ANCA on July 22, 1959, for Bruce Graydon Cook (b. July 12, 1932), geophysicist at Macquarie Island in 1956, and at Mawson Station in 1958, who assisted surveyor Knuckey with the astrofix on Knuckey Island that winter (1958). US-ACAN accepted the name in 1965.

Cook, Frederick Albert. b. June 10, 1865, Callicoon Depot, near Hortonville, NY, son of German immigrant Dr. Theodore A. Cook and his wife Magdalena Long. Only in 1860 had his father changed the name from Koch to Cook. In 1889 the younger Cook married Libby Forbes, but she died in childbirth in 1890, the year Cook graduated from the medical school of New York. He was medical officer on the Peary Arctic expedition of 1891-92, and, on June 10, 1892 (his 37th birthday), he married a Brooklyn girl, Mary Fidele Hunt, but despite this technicality was also (very publicly) engaged to schoolteacher Anna Forbes. He was medical officer on the *Belgica* during BelgAE 1897-99, which he joined at Rio on Oct. 22, 1897, Miss Forbes dying in NY just after he had left. While wintering-over in Antarctica, he invented a new type of tent which weighed 12 pounds and held 3 men. Amundsen wrote of him, "He, of all the ship's company, was the one man of unfaltering courage, unfailing hope, endless cheerfulness, and unwearied kindness." Later Cook claimed to have reached the North Pole with two Esmimos on April 21, 1908, the first man to do so. However, after a short burst of being fêted by kings, Cook was exposed as a fraud by Peary and others (just as some would try to do with Peary much later). Doc Cook was a genuine old-time con man (he also faked his celebrated climb to the top of Mount McKinley in 1906), but, now exposed, life became very difficult, he became totally ostracized, and in 1911 he disappeared, never seen again until 1922, when he showed up in Texas, "promoting" oil stocks. In 1923 Mary Fidele divorced him, and in 1925 he went to live at Leavenworth, Kansas, with a new name, #23,118. He was paroled in 1930, and went to work in Chicago, helping under-privileged children. In 1940 he was staying as a guest of Ralph Shainwald von Ahlefeldt, when the host's wife, Ilse Bauer, was stricken. For 3 weeks Dr. Cook maintained a day and night vigil, but his hostess died on May 1. On May 3 Cook suffered a cerebral hemorrhage. While in the hospital at Port Chester, in late May, he received word that he had received a presidential pardon for his 1923 mail fraud crime. On June 4 he was able to go to the Shainwald von Ahlefeld home at Scarsdale to recuperate, but had a relapse, and on July 24 was admitted to the hospital in New Rochelle, NY, where he died on Aug. 5, 1940.

Cook, Isaac *see* **USEE 1838-42**

Cook, Jack *see* **Coleman-Cooke, John**

Cook, James. b. Oct. 27, 1728, Marton, Yorks, son of Scottish farm laborer and Jacobite refugee James Cook and his wife Grace Pace. In 1747 he apprenticed on the collier *Freelove*, and in 1750 became a seaman. He joined the RN as an able seaman in 1755, on the *Eagle*, and within a month was master's mate. He qualified as a master in 1757, and was on the *Solebay* and the *Pembroke* that year. On Dec. 21, 1762, he married Elizabeth Batts, in Barking. In 1768 he made 1st lieutenant, and skippered the *Endeavour* in his first voyage, 1768-71, during which he discovered Botany Bay. Promoted to commander, he next undertook the 2nd voyage. This is the one that concerns Antarctica (*see* **Cook's Expedition, 1772-75**). He was promoted to captain at the end of it. His 3rd voyage began in 1776, when he took the *Resolution* and *Discovery* around the world. For the captain, the expedition came to an end on Feb. 14, 1779, when he was eaten by Hawaiians hungry for a good cook. The greatest navigator of all time, he discovered more than any other human being in history, and circumnavigated the world 3 times.

[2]**Cook, John** *see* **USEE 1838-42**

Cook, John Colman *see* **Coleman-Cooke, John**

Cook Bay *see* **Cook Ice Shelf**

Cook Ice Shelf. 68°40' S, 152°30' E. An ice shelf, about 88 km wide, occupying a deep recession of the coastline of East Antarctica between Cape Freshfield and Cape Hudson, or between George V Land and Oates Land. Defined as a bay by Mawson during AAE 1911-14, and named by him as Joseph Cook Bay, for Joseph Cook (1860-1947; he was born Joseph Cooke, in England; knighted in 1918), prime minister of Australia in 1914. This name was shortened to Cook Bay. It is actually a bay, but, because it is filled by shelf ice, the term "ice shelf" is deemed better. ANCA accepted the name Cook Ice Shelf on June 19, 1964, and US-ACAN followed suit in 1966.

Cook Island. 69°24' S, 76°01' E. The largest of a group of small islands W of Stornes Peninsula, in the Larsemann Hills. Mapped by Norwegian cartographers in 1946, from aerial photographs taken by LCE 1936-37, and named by them as Oksøy. Re-named by ANCA on Sept. 29, 1988, for Bruce Graydon Cook (*see* **Mount Cook**).

Cook Mountains. 79°25' S, 158°00' E. At the S of the Hillary Coast, they are bounded by Mulock Glacier in the N, and Darwin Glacier in the S, in the Transantarctic Mountains. Parts of the group were first seen from the Ross Ice Shelf by BNAE 1901-04. Further portions of the group were mapped by the NZ party of BCTAE in 1956-58, and the entire group was completely mapped by USGS from tellurometer surveys, and USN air photos taken during the period 1959-63. Explored by NZGSAE 1964-65, and named by them for Captain Cook. US-ACAN accepted the name in 1965, and ANCA followed suit on Aug. 10, 1966.

Cook Nunataks. 67°05' S, 55°50' E. A group of 4 nunataks at the NE end of the Schwartz Range, in Kemp Land, in Enderby Land. Mapped by Australian cartographers from ANARE ground surveys and air photos, 1954-66. Named by ANCA on July 29, 1965, for P.J. Cook, ANARE geologist here on the *Nella Dan*, who, with George Treatt (*see* **Mount Treatt**) was the first to visit this feature, on Feb. 21, 1965. US-ACAN accepted the name in 1970.

Cook Peak. 85°36' S, 156°50' W. A rock peak, 7 km W of Feeney Peak, surmounting the W wall of Goodale Glacier, in the foothills of the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by

US-ACAN in 1967, for David L. Cook, logistics assistant who wintered-over at McMurdo in 1965.

Cook Peninsula *see* **Riiser-Larsen Peninsula**

Cook Ridge. 69°24' S, 158°35' E. A ridge, mostly ice-covered, with 3 prominent peaks, its trends NE-SW parallel to the W side of Paternostro Glacier, and extends into the SE corner of Davies Bay, in Oates Land, in Victoria Land. Named by ANCA on Nov. 24, 1961, for surveyor David P. "Dave" Cook of ANARE, here in March 1961, with an airborne party led by Phil Law (this was the first party to visit this feature). US-ACAN accepted the name in 1967.

Cook Summit. 64°24' S, 62°24' W. Rising to 1590 m between Celsus Peak and Galen Peak, it is the highest peak in the Solvay Mountains of Brabant Island. On Dec. 4, 1984, it was climbed for the first time by the British Joint Services Expedition. Named by UK-APC on Nov. 13, 1985, for Dr. Frederick Cook. US-ACAN accepted the name.

Cooke Bluff. 78°13' S, 161°45' E. A bold, ice-covered bluff between Ruecroft Glacier and Rutgers Glacier, to the S of Rampart Ridge, in Victoria Land. Named by US-ACAN in 1995, for William B. Cooke, USGS cartographer in the Branch of Special Maps, 1951-87, who worked much on Antarctic mapping.

Cooke Crags. 83°10' S, 50°43' W. Rock crags rising to about 1500 m on the ice slope between Henderson Bluff and Mount Lechner, on the W side of the Lexington Table, in the Forrestal Range of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1979, for James E. Cooke, USGS geophysicist who worked in the Forrestals and the Dufek Massif in 1978-79. UK-APC accepted the name on May 21, 1979.

Cooke Glacier. 72°44' S, 88°34' W. About 10 km long, it flows N from the N end of Fletcher Peninsula, in the Bellingshausen Sea. Named by US-ACAN in 2003, for Kirsten Cooke Healey, at Woods Hole, Mass., computer graphics specialist from the mid 1990s onwards, for the USGS project that is compiling the *Satellite Image Atlas of Glaciers*, and *25 Glaciological and Coastal-Change Maps of Antarctica*.

Cooke Peak. 72°27' S, 74°46' E. A somewhat elongated mountain surmounted by a central peak, standing 10 km NW of Bode Nunataks, and about 46 km NNW of Mount Harding, in the Grove Mountains of Princess Elizabeth Land. Mapped by Australian cartographers from ANARE air photos taken between 1956 and 1960, and named by ANCA on July 29, 1965, for David J. Cooke, of Balwyn, Vic., cosmic ray physicist at Mawson Station in 1963. US-ACAN accepted the name in 1967.

Cook's Expedition, 1772-75. **Sept. 1771**: Cook was considering a 2nd voyage, with one of the missions being to discover Terra Australis Incognita (the unknown southern land). **Sept. 25, 1771**: The Admiralty authorized the purchase of 2 ships, the *Marquis of Granby* and the *Marquis of Rockingham*. **Nov. 27, 1771**: The *Granby* became the *Drake* and the *Rockingham* became the *Raleigh*. **Nov. 28, 1771**: Cook was named commander of the *Drake*, and Tobias Furneaux of the *Raleigh*. **Dec. 22, 1771**: At Deptford, James Doyle ran (deserted) from Cook's ship. **Dec. 25, 1771**: The Admiralty had by now changed the names of the ships, the *Drake* to *Resolution* and the *Raleigh* to *Adventure*. **Jan. 12, 1772**: At Deptford, the following men ran from the *Resolution*: Edward Young, Thomas Pigg, George McNeal, and Thomas Gout. **Jan. 19, 1772**: At Deptford, Williams Harvey and Samuel Letson ran from the *Resolution*. **Jan. 24, 1772**: At Deptford, Ralph Barthrop ran from the *Resolution*. **Jan. 26, 1772**: At Deptford, the following men ran from the *Resolution*: Evan Anderson, John Thomas, Richard Gilbert, and Robert Sherman. **Jan. 27, 1772**: At Deptford, Richard Birkin was discharged from the *Resolution*. **Feb. 2, 1772**: At Deptford, the following men ran from the *Resolution*: Minute Boncroft, John Pinchers, Thomas Holmes, Thomas Beal, John Dixon, John Collins, and John Davidson. **Feb. 5, 1772**: At Deptford, John Cavannah and Daniel Wolfe were discharged from the *Resolution*. **Feb. 6, 1772**: Work finished on the *Resolution* at Deptford. **Feb. 12, 1772**: At Deptford, John Mann was discharged from the *Resolution*. **Feb. 16, 1772**: At Deptford, John Wright and John Henry ran from the *Resolution*. **Feb. 21, 1772**: At Deptford, John Moore, Edward Cunningham, and Edward Haywood ran from the *Resolution*. **Feb. 24, 1772**: At Deptford, James McDonald ran from the *Resolution*. **Feb. 26, 1772**: At Deptford, David Farmer ran from the *Resolution*. **Feb. 28, 1772**: At Deptford, the following men ran from the *Resolution*: James Batt, Jean Joachim, Elick Folgstrom, David Jones, John Haynes, Jonathan Constable, and Thomas Stone. **March 3, 1772**: At Deptford, the following men ran from the *Resolution*: William Hickman, John Williams, John Willson, William Bolton, and Charles Hay. **March 8, 1772**: At Deptford, John Curry, Richard Heirs, and John Elson ran from the *Resolution*. **March 13, 1772**: At Deptford, James Mills was discharged from the *Resolution*. **March 27, 1772**: At Deptford, John White ran from the *Resolution*. **March 31, 1772**: At Deptford, John Nowland was discharged from the *Resolution*. **April 1, 1772**: At Deptford, James Hardy, George Gill, and John Warwick ran from the *Resolution*. **April 8, 1772**: At Deptford, Isaac George Manley was discharged from the *Resolution*. **April 10, 1772**: At Woolwich, the following men ran from the *Resolution*: John Morris, John Mahoney, James Sullivan, and Thomas Lindsey. **April 11, 1772**: At Woolwich, Timothy Manning and John Halker were discharged form the *Resolution*. **April 12, 1772**: Anders Sparrman, who had trained under the great Linnaeus, arrived at Cape Town as Forster's assistant (for Forster, see below). **April 16, 1772**: At Woolwich, Matthew Elwood was discharged form the *Resolution*. **April 22, 1772**: At Woolwich, George Bayne and John Wyatt ran from the *Resolution*. **April 28, 1772**: At Long Reach, the following men were discharged form the *Resolution*: James Strong, William Maffin, William Taylor, John Carr. 8 men were also discharged here but later taken back: William Nash, Michael Flinn, John Davis, John Leverick, Thomas Shaw, John Bernard, Richard Lee, and John Kepplin. **May 5, 1772**: At Long Reach, William Bilby was discharged from the *Resolution*. **May 7, 1772**: At Woolwich, William Sandford drowned off the *Resolution*. **May 8, 1772**: At Woolwich, Joseph Joseck ran from the *Resolution*, and George Cope and Blacket Mears were discharged from the same ship at Long Reach. **May 14, 1772**: At The Nore, John Heaton ran from the *Resolution*. Another man, John Davis, previously discharged, but re-hired, ran, but there is no date. This may seem like a lot of desertions, but it was typical. **May 18, 1772**: The ships anchored at Sheerness. **May 29, 1772**: The following Marines joined the *Resolution*: 2nd Lt. John Edgecumbe (commander), Sgt. John Hamilton, Corp. Robert Beard, Drummer Philip Brotherson (name also seen as Brotherton) and the following privates: Richard Baldy, John Buttall (name also seen as Duttall), Richard Carpenter, John Commance, John Harper, Archibald McVicar, William Monk (name also seen as D. Monk), John Phillips, Francis Taylor (name also seen as T. Taylor), William Tow, Charles Twitty, Richard Waterfield, William Wedgeborough (name also seen as Widgeborough), and George Woodward. Samuel Coulson is also reported to have served as a Marine on the *Resolution*, but it is not certain if he made the trip or not. The following Marines joined the *Adventure*, also at Sheerness: 2nd Lt. James Scott (commander, and at that rank as from June 11, 1772), Sgt. John Mollonex, Corp. Alexander Mills, Drummer John Lane, and the following privates: William Alden, William Kearney, Daniel Lear, Richard Reid, Alexander Ross, Donald Stewart, John Thomas, and Bernhard Tannenfried (name also seen as Bonaventure Sommerfield). John Hall was also taken on at some stage as a Marine, but it is not certain if he sailed on the voyage. **June 4, 1772**: At Sheerness, Thomas Connell was discharged from the *Resolution*. **June 5, 1772**: At Sheerness, Anthony Douez, John Marchant, and Robert Holebrook were discharged from the *Resolution*. **June 7, 1772**: At Sheerness, George Hearsey was discharged from the *Resolution*. **June 11, 1772**: At Sheerness, Robert Riddle was dismissed from the *Resolution*. **June 15, 1772**: Cook inspected the *Resolution*. **June 22, 1772**: The *Resolution* left Sheerness. **June 30, 1772**: At Spithead, the following men were discharged from the *Resolution*: John Pierce, Nathaniel Morris, John Onwin, Michael Underwood, and Edmund Bailie. **July 3, 1772**: The *Resolution* arrived at Plymouth. **July 9, 1772**: At Plymouth, Corp. Samuel Gibson and

Pvt. Isaac Taylor of the Marines joined the *Resolution*, and Simon Belton and John Sandon were discharged from the same ship. **July 10, 1772**: At Plymouth, Francis Scarnell joined the *Resolution* as an able seaman. **July 13, 1772**: The 2 ships left Plymouth. These, then, were the men who left Plymouth: On the *Resolution*: James Cook (commander, and leader of the expedition); Robert Palliser Cooper (1st Lt.); Charles Clerke (2nd Lt.); Richard Pickersgill (3rd Lt.); Joseph Gilbert (master); Robert Anderson (gunner); James Wallis (carpenter); James Patten (surgeon); James Gray (boatswain); Matthew Brown (armorer); John Davall Burr, John Whitehouse, Alexander Hood and Isaac Smith (master's mates); James Colnett, William Harvey, Bowles Mitchell, Joseph Price, Henry Roberts, Thomas Willis, Isaac Manley (midshipmen); William Peckover and John Marra (gunner's mates); William Dawson (clerk); William Bevans (name also seen as Bevan), Robert Goulding, George Jackson, James Seamer (name also seen as Seymour), and Henry Smock (name also seen as Smook) (carpenter's mates); David Anderson, William Ewin, and Solomon Reading (name also seen as Reardon) (boatswain's mates); William Anderson and Benjamin Drawwater (surgeon's mates); William Drew (armorer's mate); William Bee (quartermaster's mate); Richard Rollett (sailmaker); Daniel Clark (master-at-arms); John Ramsay (cook); Aeneas Aitken, William Bell, Samuel Bordall, John Ellwell, John Lockton, Patrick Wheilan (name also seen as Whelan) (quartermasters); John Frazier (ship's corporal); Edward Barrett and Peter Reynolds (cook's mates); William Atkinson, John Bernard, John Blackburn, William Briscoe, James Burney, John Cave, William Chapman, John Coghlan, Richard Collett, William Collett, Thomas Connell, Richard Corbett, James Davies, Edward Dawson, James Day, Thomas Driver, John Elliott, Thomas Fenton, Michael Flinn, Samuel Freesland (name also seen as Freezland), Richard Grindall, John Harrison, James Hayes, Andrew Horn, John Innel, John Kepplin, William Lanyon, Richard Lee, John Leverick, Charles Loggie, John Marchant, James Maxwell, John Mills, Simon Monk, William Nash, James Onwin, Thomas Perry, Samuel Peterson (name also seen as Emmanuel Peterson), John Pierce, Thomas Shaw, James Simms, John Smally, Thomas Snowden, Edward Terrill (name also seen as Terrell), George Vancouver, William Whatman, Stephen White, Thomas White, Charles Williams, and John Wybrow (able seamen). Marines (see above, May 29, 1772 and July 9, 1772). Supernumeraries: John Reinhold Forster (naturalist); George Forster and Ernest Scholient (naturalist's assistants); William Wales (astronomer); George Gilpin (servant); William Hodges (painter); and Francis Masson (gardener sent by the King to the Cape of Good Hope). The following names are also associated with the *Resolution*, but it is not certain if they sailed or not: Richard Birkin, James Carrick, Abraham Edes, James Elmes, John Hendrick, James Leonard, Frederick Lundburg, James Mead, John Stalker, and Alexander Willson. On the *Adventure*: Tobias Furneaux (commander), Joseph Shank (1st Lt.), Arthur Kempe (2nd Lt.), Peter Fannin (master); Andrew Gloag (gunner); Edward Johns (bosun); Thomas Andrews (surgeon); William Orford (carpenter); William Hawkey and John Rowe (master's mates); Love Constable, Samuel Kempe, John James Lambrecht, Henry Lightfoot (name also seen as D. Lightfoot), and John Woodhouse (midshipmen); Andrew Hill (sail maker); Alexander Dewar (clerk); James Jamieson (name also seens as Gameson) (armorer); William Sanderson and Francis Upton (gunner's mates); John Haley and James Gibbs (boatswain's mates); Mortimer Mahoney (cook); William Crispin, John Fagan, David Lewis, William Medberry, and Nathaniel Willard (carpenter's mates); John Kent and John Young (surgeon's mates); William Carr (master-at-arms); William Roberts (sailmaker's mate); Robert Barber, Robert Moody, Francis Murphy, Francis Spencer, and James Upton (quartermasters); Noble Arrowsmith, Michael Bell, Anthony Bazil, Robert Brown, Thomas Carlo, James Cavan, John Cavanagh, John Croneen, Thomas Dyke, William Facey, John Richard Falconar, John Finley, John Fish, Thomas Fitzgerald, Thomas Freeman, William Hamilton Gibbons, Robert Harrison, Edward Hart, Richard Hergest, Thomas Hill, James Jones, John Longford, Boyd McAlister (also seen as Dugal McAllister), William Milton, Richard Molloy, George Moorey (name also seen as Morey), Henry Pryor, John Rayside, William Thomas, Robert Weaver, John Wilby, and Henry Wright (able seamen); Marines (see above, May 29, 1772); Supernumeraries: William Bayly (astronomer), and James Tobias Swilley, the captains' black servant. There are several other names associated with the *Adventure*, but as there are no detailed rosters of who ran from this ship or was discharged, as there are for the *Resolution*, it is difficult to say who actually sailed on the voyage: James Adcock, Jonathan Bliss, Daniel Bowles, John Bradshaw, Joseph Bryant, Cornelius Burke, Cornelius Callahan, Charles Cannon, Peter Cavanaugh, Peter Champion, Jehosiahim Clocker, James Craven, John Crawford, William Duncan, Charles Ebbett, John Evans, William Everill, Patrick Fling, Henry Frazier, James Gardner, Abraham Garrett, Thomas Hartley, John Hayes, Thomas Herrigan, Ambrose Hill, John Hill, James Howard, John Hughes, Alexander Hutchinson, Abraham Isaac, William Lee, Robert Mackie, Thomas Magson, William Meadow, Charles Murray, John Murray, Cuthbert Nattrass, Thomas Newman, John Nightingale, Thomas Partridge, John Perry, Owen Reily, John Rogers, William Ryan, John Shannon, William Shields, John Simpson, Neil Sinclair, James Smithurst, Robert Stuart, Francis Treneer, James Triplett, Cornelius Vowell, Robert Weaver, George White, John Wilkie, Thomas Wilson, Robert Yates, and Robert Yelloby. **July 29, 1772**: The 2 ships arrived at Madeira. **Aug. 1, 1772**: They left Madeira. **Aug. 4, 1772**: They passed the Canary Islands. **Aug. 12, 1772**: They arrived at Cape Verde. **Aug. 14, 1772**: They left Cape Verde. **Aug. 19, 1772**: Smock fell overboard from the *Resolution*, and drowned. **Aug. 27, 1772**: Lambrecht died of fever on the *Adventure* (bad water drunk at Cape Verde). **Sept. 8, 1772**: The 2 ships crossed the Equator, heading south. Samuel Kempe died of fever on the *Adventure*, replaced by William Lanyon. **Oct. 30, 1772**: They arrived at Cape Town. **Nov. 19, 1772**: At Cape Town, Shank was sent home, sick, and replaced by Arthur Kempe on the *Adventure*. Jem Burney replaced Kempe as 2nd Lt. Anders Sparrman joined as a "servant," but really to assist the Forsters. **Nov. 22, 1772**: The 2 ships left Cape Town, heading south. **Dec. 10, 1772**: They encountered their first ice, in 50°40' S. **Dec. 26, 1772**: They were in 50°31' S, 26°57' E. **Dec. 31, 1772**: Quartermaster Barber became an able seaman, and was replaced by William Sowrey on the *Adventure*. **Jan. 1, 1773**: The ships were in 60°21' S. Love Constable became an able seaman. **Jan. 2, 1773**: Richard Hergest and George Moorey made midshipmen on the *Adventure*. **Jan. 9, 1773**: The ships were in 61°36' S. **Jan. 12, 1773**: Forster shot an albatross. **Jan. 17, 1773**: Cook became the first navigator to cross the Antarctic Circle, which he did in 39°35' E, after making 25 tons of fresh water from the icebergs. **Feb. 8, 1773**: The two ships got separated. **Feb. 11, 1773**: After 3 days of failing to find the *Resolution*, Furneaux made the decision to take the *Adventure* to NZ, as arranged. **Feb. 17, 1773**: Cook saw a stunning aurora australis. **Feb. 20, 1773**: Another aurora, and more fresh water taken on, despite a near accident when one of the bergs turned over. **Feb. 24, 1773**: The *Resolution* was in 61°52' S. **March 8, 1773**: The *Resolution* was in 59°44' S, 121°09' E, and the temperature was 40°F. **March 9, 1773**: The *Adventure* sighted Van Diemen's Land. **March 25, 1773**: The *Resolution* sighted NZ. **March 26, 1773**: The *Resolution* docked, after 117 days at sea, not having sighted land in all that time, and only one man with scurvy. **March 30, 1773**: The *Adventure* sighted NZ. **April 1, 1773**: John R. Falconar became a master's mate on the *Adventure*. **April 7, 1773**: The *Adventure* pulled into Queen Charlotte's Sound. **May 11, 1773**: The *Adventure* experienced an earthquake at Queen Charlotte's Sound. **May 18, 1773**: When the *Resolution* pulled into Queen Charlotte's Sound, they found the *Adventure* there. **June 7, 1773**: The 2 ships left NZ for Tahiti. **July 1, 1773**: Bowles Mitchell was made an able seaman. **July 23, 1773**: Mahoney, the cook on the *Adventure*, died of scurvy, and was replaced by William Chapman, assistant cook of the *Resolution*. **July 29, 1773**: 20 men down with scurvy on the *Adventure*. **Aug. 16, 1773**: They arrived at Tahiti. **Aug. 20, 1773**: Marine Isaac Taylor died. **Sept. 18, 1773**: They left Tahiti, with two Raiatean natives aboard: Odiddy (or Odidie,

or Hiti-Hiti) on the *Resolution*, and Omai (or Mai, or Omiah, or Omy) on the *Adventure*. These native lads actually became crew members. **Oct. 7, 1773**: The ships left Tahiti. **Oct. 30, 1773**: The ships lost each other, never to see each other again until 1775. **Nov. 1, 1773**: Rowe became an able seaman on the *Adventure*. **Nov. 3, 1773**: The *Resolution* back at Queen Charlotte's Sound. **Nov. 25, 1773**: The *Resolution* left NZ, heading south. **Nov. 30, 1773**: The *Adventure* finally put into Queen Charlotte's Sound, after a month of horrendous gales. They had missed the *Resolution* by 6 days. Dyke became an able seaman, and was temporarily replaced by Rowe on the *Adventure*. **Dec. 12, 1773**: The *Resolution* saw its first ice of the season, in 62°10' S. **Dec. 15, 1773**: The *Resolution* was in 66°S. **Dec. 17, 1773**: Grass Cove, NZ. With the *Adventure* ready to sail, a small boat, under Rowe, and with Woodhouse, Thomas Hill, Facey, Bell, Jones, Cavanagh, Murphy, Milton, and Swilley, left the ship to look for fresh vegetables. They never came back. Burney led a party out, complete with Fannin, some crew and 10 Marines, to look for them, but the missing tars were now causing spasms in the intestines of some local cannibal lads. From the remains of the cook-out on the beach they were able to identify Hill's hand from the tattoo ("T.H.") he had had done at Tahiti, Rowe's hand from an old injury, the head of Captain Furneaux's black servant, and Woodhouse's shoes. Dogs were gnawing at entrails. However, it is just possible that Woodhouse escaped the cooking-pot (see Woodhouse, for further details). **Dec. 19, 1773**: On the *Adventure*, Lanyon replaced Rowe as master's mate, John Finley replaced Murphy, and Constable replaced Woodhouse. **Dec. 20, 1773**: The *Resolution* crossed the Antarctic Circle. **Dec. 23, 1773**: The *Adventure* left Queen Charlotte's Sound, heading for Cape Horn. During the trip they reached 61°S. **Dec. 31, 1773**: Hawkey became an able seaman. **Jan. 26, 1774**: Cook crossed the Antarctic Circle again. **Jan. 30, 1774**: The *Resolution* reached 71°10' S. **Feb. 1, 1774**: John Wilby replaced Lanyon. **Feb. 3, 1774**: Cook crossed the Antarctic Circle again. **Feb. 6, 1774**: Cook crossed the Antarctic Circle again. **Feb. 23, 1774**: Cook was very sick. **March 4, 1774**: Cook recovered. **March 11, 1774**: The *Resolution* arrived at Easter Island. **March 16, 1774**: The *Resolution* left Easter Island, in search of the Marquesas Islands. **March 19, 1774**: The *Adventure* reached Cape Town. **April 7, 1774**: The *Resolution* arrived at the Marquesas. **April 16, 1774**: The *Adventure* left Cape Town. **April 22, 1774**: The *Resolution* arrived at Tahiti. **May 1774**: Odiddy left the expedition. **May 14, 1774**: The *Resolution* left Tahiti, and Marra tried to desert. He was clapped in irons. **June 5, 1774**: Marra was released. **June 6, 1774**: The *Resolution* reached Lord Howe Island. **June 21, 1774**: Cook sighted Niue, which he called Savage Island. **June 27, 1774**: The *Resolution* anchored at Nomuka (Rotterdam). **July 2, 1774**: The *Resolution* sighted Fiji. **July 14, 1774**: The *Adventure* arrived back in England. **July 16, 1774**: Aurora Island sighted by the *Resolution*. **Aug. 6, 1774**: The *Resolution* at Futuna. **Aug. 1774**: Lanyon became a lieutenant. **Aug. 19, 1774**: Wedgeborough shot a native, and was later punished. **Sept. 4, 1774**: Colnett became the first European to see New Caledonia. **Sept. 6, 1774**: Simon Monk, the much-esteemed butcher on the *Resolution*, fell down the forehatch, and died the next day. **Oct. 10, 1774**: Norfolk Island discovered by the *Resolution*. **Oct. 17, 1774**: The *Resolution* back at Queen Charlotte's Sound. **Nov. 11, 1774**: The *Resolution* left NZ, bound for Cape Horn. **Nov. 27, 1774**: The *Resolution* sailed 183 miles in 24 hours, a record. **Dec. 22, 1774**: Wedgeborough, drunk, on the *Resolution,* disappeared off Tierra del Fuego, presumed drowned during the night. **Dec. 28, 1774**: The *Resolution* rounded Cape Horn. **Jan. 6, 1775**: The *Resolution* was in 58°09' S, 53°14' W, very close to Antarctic waters. **Jan. 17, 1775**: Cook discovered and took possession of South Georgia Island, in the king's name. **Jan. 18, 1775**: Cook back in Antarctic waters. **Jan. 31, 1775**: Cook discovered the South Sandwich Islands. **Feb. 6, 1775**: Cook named the South Sandwich Islands. **Feb. 23, 1775**: The *Resolution* in 58°S and 59°S, and then left, bound north for Cape Town. **March 22, 1775**: The *Resolution* arrived at Cape Town. **March 23, 1775**: Sparrman left the expedition. **April 27, 1775**: Cook left Cape Town. **May 16, 1775**: Cook arrived at St. Helena. **May 21, 1775**: Cook left St. Helena. **May 28, 1775**: Cook arrived at Ascension. **May 31, 1775**: Cook left Ascension. **June 9, 1775**: Cook at Fernando de Noronha. **June 11, 1775**: The *Resolution* crossed the Equator. **July 14, 1775**: The *Resolution* arrived at the Azores. **July 19, 1775**: Cook left the Azores. **July 29, 1775**: Cook sighted Plymouth. **July 30, 1775**: The *Resolution* docked in England. She had been away 3 years and 18 days, and had lost only 4 men, a considerable record. Cook circumnavigated Antarctica at high latitudes (the first to do so), and concluded that if Antarctica existed it must be very cold indeed, and completely barren. He did discover the South Sandwich Islands, however, and South Georgia (54°S), and it was his publication of this fact that would ultimately lead to the seal rush of the late 18th-early 19th centuries, and thus to real exploration of Antarctica.

Coombe, Harry. b. 1881, Medway, Kent, as Henry Combe. He joined the Merchant Navy at 14, signed on to the *Port of Melbourne*, in London, as an officers' steward, and via Perth, arrived in Sydney on Oct. 15, 1895. He moved to Tasmania, and at Hobart, on Jan. 30, 1911, signed on to the *Beckenham* as a fireman and trimmer, making the run to Redondo Beach, Calif., then on to Astoria, Oreg., then back to Timaru, NZ, and on from there to Sydney. Then he made his way back to Hobart, where, on Nov. 23, 1911, he signed on to the *Aurora* as a fireman, at £5 per month, for the first voyage south during AAE 1911-14. He left the expedition at Hobart, on March 13, 1912.

Coombes Ridge. 69°09' S, 157°03' E. A rocky ridge running roughly N-S, 3 km (the Australians say 5 km) W of Magga Peak, it forms the E extremity of Lauritzen Bay, on the coast of Oates Land, in Victoria Land. Photographed aerially by OpHJ 1946-47. Mapped on Feb. 20, 1959, by an ANARE party on the *Magga Dan*, led by Phil Law, and named by ANCA on July 22, 1959, for Bruce B. Coombes, airport engineer with the Australian Department of Civil Aviation, here with Law's party to investigate potential airfield sites at Wilkes Station and elsewhere. US-ACAN accepted the name in 1961.

Coombs Hills. 76°47' S, 160°00' E. An area of broken and largely snow-free hills and valleys, about 90 sq km in area, SE of Allen Nunatak, and separated from that nunatak by the Odell Glacier, or, to put it another way, between Odell Glacier and Cambridge Glacier, just to the N of Mackay Glacier, in Victoria Land. At the S end of the hills stands Mount Brooke (2590 m), from the base of which narrow ridges run S and SE into the upper McKay névé. Discovered in Dec. 1957 by the NZ Northern Survey Party of BCTAE, and named by them for Douglas Saxon Coombs, professor of geology at the University of Otago, 1956-90, who helped the expedition obtain essential petrological equipment. NZ-APC accepted the name, and US-ACAN followed suit in 1962. ANCA also accepted the name. Originally plotted in 76°52' S, 160°04' E, it has since been replotted.

[1]**Mount Cooper**. 70°32' S, 67°18' E. A small, conical peak rising to 1524 m on the E end of White Massif, on the N side of Nemesis Glacier, in the Prince Charles Mountains. First visited in Dec. 1956 by Bill Bewsher's ANARE Southern Party, and named by ANCA on July 22, 1957, for Corp. Noel Munro "Toby" Cooper (*see under* **Cooper, Noel**).

[2]**Mount Cooper**. 77°08' S, 145°22' E. A large mountain on The Billboard, 6 km W of Asman Ridge, on the S side of Arthur Glacier, in the Ford Ranges of Marie Byrd Land. Discovered aerially in 1934 by ByrdAE 1933-35, and named by Byrd for Merian C. Cooper (1893-1973), producer of the movie *King Kong*. US-ACAN accepted the name in 1947.

Cooper, James *see* **Coupar**

Cooper, John *see* **USEE 1838-42**

Cooper, Mercator. b. Sept. 29, 1803, Sag Harbor, NY, son of Nathan Cooper and his wife Olive "Olly" Howell. In the 1820s he married Maria Jane Green. In 1845, while skipper of the *Manhattan* during a whaling voyage (1843-46), Cooper picked up 22 stranded Japanese sailors and returned them to Tokyo. The Emperor's men treated the Americans well, provisioned them free of charge, but, being an isolationist country, told them never to return. Cooper handed the charts he made to the U.S. government, and 8 years later, Matthew Perry is said to have used them on his famous trip to Japan. His wife having died, he married again, on March 5, 1848, in Southampton, NY, to

Sophia Jessup Foster. It seems that in 1852 Cooper sailed the *Levant* out of Sag Harbor, NY, heading for Antarctic waters. This purported trip is outlined under **The *Levant***. He died at Barranquillo, Colombia, in 1872, either on March 23 or April 24. The Old Dartmouth Historical Society Museum has a collection of material on Cooper.

Cooper, Noel Munro "Toby." b. Dec. 28, 1933. A corporal in the Royal Australian Mechanical and Electrical Engineers who went to Mawson Station on the *Kista Dan*, for the summer of 1955-56, as engineer with the DUKW team, and wound up volunteering to winter-over as diesel mechanic and to help with the flying program for the winter of 1956.

Cooper, Patrick John. b. Nov. 6, 1952. REME man who joined BAS and wintered-over as ionosphere physicist and electronics engineer at Halley Bay Station in 1979 and 1980. He was back in BAS in 1984, installing a computer network at the bases. He was also at Rothera Station, and was back at Halley Bay in 1991.

Cooper, Raymund Edward "Ray." b. 1928, Stockport, Lancs, son of John A. Cooper and his wife Honora Curry. He joined the Royal Navy, as an ordinary seaman, and gradually worked his way up to petty officer. Being a huge fellow, and very tough, he had the habit of striking officers and being reduced to the rank of ordinary seaman. Legend has it that this happened to him three times. Despite this, he was accepted by FIDS in 1954, as a diesel eletric mechanic, and wintered-over at Base B in 1955, and at Base W in 1956. He was at Port Lockroy in the summer of 1956-57, and in 1957 returned to the UK. Almost immediately after arriving back in the UK, in 1957, he left for Quebec, eventually moving to Labrador, where he worked on holiday homes, and married an Eskimo. Now deceased.

Cooper, Robert Palliser. b. 1743, Lincoln, son of Robert Cooper and his wife Alice Palliser. He joined the Royal Navy, and became a 2nd lieutenant on Dec. 1, 1766, joining the *Niger* on the Newfoundland and West Indies stations. On July 19, 1767 he was appointed an officer of the Customs, and on Sept. 20, 1770 returned to naval service when he was appointed to the *Weasel*. On Dec. 7, 1770, he was appointed 4th Lieutenant on the *Resolution* (this was not Cook's ship of the same name), and on Dec. 25, 1771 to the *Drake* (the same day the *Drake*'s name was changed to the *Resolution*, which was Cook's ship), as 1st lieutenant. As such he took part in Cook's voyage of 1772-75, during which he kept a log. John Elliott described him as "a steady, good officer." After the expedition he was commander (appointed to that rank on Aug. 10, 1775) of the *Hawke*. In Jan. 1778 he became a captain, and in 1796 retired as an admiral. His first wife, Susanne Moulden, died, and on July 27, 1805, at the age of 62, he married 21-year-old Harriet Harden, at Portsea, Hants, and died in Portsmouth less than three months later, on Oct. 27, 1805.

Cooper, W. b. 1889, London. He joined the Merchant Navy at 18, as a steward's boy on the *Orotava*, plying the Antipodean waters, and on Nov. 26, 1911, at Hobart, he signed on to the *Aurora*, in that same capacity, at £2 per month, for the first voyage south during AAE 1911-14. He was not part of the crew when it pulled into Sydney on March 30, 1912, so he must have left at Hobart, just before the *Aurora* left that port for Sydney. He remained at sea, being induced to go for the much more romatic job of ship's stoker.

Cooper Bluffs. 70°39' S, 164°56' E. Also called Cooper Ridge. Prominent, high, ice-covered coastal bluffs, about 10 km long, on the E side, and near the mouth, of Zykov Glacier, in the Anare Mountains. Named by ANARE for Flying Officer Garry C. Cooper, RAAF, who explored the area from the *Thala Dan* in 1962. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Cooper Glacier. 85°30' S, 164°30' W. A tributary glacier, about 24 km (the New Zealanders say about 30 km) long, and between 5 and 13 km wide, it descends from the Polar Plateau and flows NE between Butchers Spur and the Quarles Range, or, to put it another way, between Mount Ruth Gade and Mount Don Pedro Chrisophersen, to merge with the head of the Ross Ice Shelf at the S side of the Axel Heiberg Glacier, in the Queen Maud Mountains. Discovered aerially by Byrd in Nov. 1929, and named by him as Kent Cooper Glacier, for Kent Cooper (1880-1965), general manager of Associated Press (AP). The name was later shortened, and accepted by US-ACAN in 1947. NZ-APC also accepted the name.

Cooper Icefalls. 82°31' S, 160°00' E. The main icefalls of the Nimrod Glacier, about 50 sq miles in extent, in the vicinity of Kon-Tiki Nunatak. Named by the Southern Party of NZGSAE 1960-61 for Christopher Neville Cooper, a member of the expedition, and a member of the NZ Alpine Club Antarctic Expedition of 1959-60. NZ-APC accepted the name, and US-ACAN followed suit in 1966, with ANCA doing the same on Sept. 26, 1978.

Cooper Nunatak. 79°45' S, 159°11' E. A large, rocky nunatak, rising to about 1500 m, 9.5 km N of Diamond Hill, protruding through the ice at the very E end of the Brown Hills. Discovered and mapped by VUWAE 1962-63, and named by them for Roger A. Cooper, geologist with VUWAE 1960-61. He was back in Victoria Land in 1974-75, and again in 1981-82. NZ-ACAN accepted the name, and US-ACAN followed suit in 1965. ANCA also accepted the name.

Cooper Ridge *see* **Cooper Bluffs**

Cooper Snowfield. 80°56' S, 158°40' E. A snowfield with an area of about 65 sq km, and rising to an elevation of over 1200 m, it is nearly encircled by ridges connecting Mount Bevin, Mount Field, Mount Durnford, and Mount Liard, in the Churchill Mountains. Named by US-ACAN in 2003, for Alan K. Cooper, USGS marine geophysicist at Menlo Park, Calif., involved between 1984 and 2002 in drilling and seismic studies of the Antarctic continental margin for deriving paleoenvironments and ice-sheet history. NZ-APC accepted the name on Feb. 27, 2003.

Cooper Spur. 70°38' S, 165°03' E. A narrow spur extending N from the E end of Cooper Bluffs, on the N coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, surprisingly not in association with the bluffs, but for Ronald R. Cooper, USN, who wintered-over as chief builder at McMurdo in 1967.

Coor Crags. 74°59' S, 136°36' W. Several rock crags 5.5 km SE of Cox Point, in the N part of Erickson Bluffs, near the coast of Marie Byrd Land. Discovered and photographed aerially during USAS 1939-41. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Lt. Cdr. Lawrence W. Coor, USN, pilot of LC-130 Hercules aircraft during OpDF 70 (i.e., 1969-70) and OpDF 71 (i.e., 1970-71).

Copacabana Field Camp *see* **Pieter J. Lenie Field Station**

Mount Cope. 84°01' S, 174°33' E. A bluff-type mountain on the E side of the Separation Range, in the Queen Maud Mountains, it overlooks the W side of Canyon Glacier, 6 km NW of Nadeau Bluff. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1963. Named by US-ACAN in 1966, for Lt. Ronald P. Cope, USN, officer-in-charge of the nuclear power plant at McMurdo in 1963.

Cope, John Lachlan. b. March 31, 1893, Hammersmith, London, son of bank clerk William Thomas "Tom" Cope and his wife Marie Louise Bogue. His father died, and in 1909 his mother married again, to John William Gardiner. After Tonbridge public school, he studied botany and medicine at Christ's, Cambridge, 1910-14, and graduated in the latter year in natural sciences. Sir Arthur Shipley, master at Christ's, recommended him as biologist for Shackleton's BITE 1914-17, and he was taken on. The Sydney newspapers declared him to be a physician and surgeon, and so that's what he became, on the Ross Sea party of the expedition. He was one of the 9 left on the Great Ice Barrier to lay depots after the *Aurora* had broken away from her moorings. Simon Nasht, perpetuating the generally received (but hopelessly uninformed) historical impression of Cope, in his book, *The Last Explorer* (about Wilkins), describes Cope as a young doctor "not much burdened by either talent or scruples." Despite this Monday morning quarterback condemnation he showed real medical talent while under great pressure on the ice. Immediately upon his return to Britain he joined the Royal Naval Air Service (with which he was to serve for the rest of World War I), and on Aug. 1, 1917, at Datchet, Berks, he mar-

ried the Hon. Edith Nora Florence Robinson (known as Norah), eldest daughter of the 2nd Baron Rosmead. She was on short leave from working in a French hospital. He and Norah would have 4 children, Peter, Anne, Tony, and Michael. Cope also changed his name (although never officially) to John Renney Lachlan-Cope, and began the serious study of medicine. After the war, as a lieutenant surgeon [sic — it's amazing what propaganda can do], RNVR, he was burning with the idea of getting his own expedition together, and, after a failed attempt in 1918, in 1920-22 he led the ill-starred British Imperial Antarctic Expedition. He resumed his medical studies in 1929, at Durham, and qualified in July 1933. He set up a general practice in London, and from 1939 to 1941 was medical officer of health in Colchester, Essex. He moved to Milcote House, Bearwood, Smethwick, Birmingham, and practiced in that city. His wife died on March 31, 1947, and Dr. Cope died at Milcote House in Nov. 1947. What is absolutely despicable is that there is not a feature in Antarctica named after Dr. Cope.

Cope Hill. 75°07' S, 114°47' W. A hill, 1.5 km W of Manfull Ridge, on the N side of the Kohler Range, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1976, for Lt. Winston Cope, USNR, medical officer at Pole Station in 1974.

Cerro Copihue. 62°28' S, 60°46' W. A hill, S of the beach the Chileans call Playa Copihue, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno, during ChilAE 1990-91, in association with the beach.

Playa Copihue. 62°27' S, 60°46' W. A beach, immediately E of the point the Chileans call Punta Odontoceto, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno, during ChilAE 1990-91, for the Chilean national flower.

Punta Copihue *see* **Beneden Head**

Co-pilot Glacier. 73°11' S, 164°22' E. A very short and very steep tributary glacier, 6 km long, flowing from the W and S slopes of Mount Overlord (the New Zealanders say from Paramount Volcano — q.v.), into the upper part of Aviator Glacier, in Victoria Land. Named by the Northern Party of NZGSAE 1962-63, in recognition of pilots and co-pilots of VX-6, and in association with nearby Pilot Glacier. US-ACAN accepted the name in 1967.

Copland Pass. 78°06' S, 162°57' E. A pass, at an elevation of about 1600 m above sea level, over Frostbite Spine (the ridge between Hooker Glacier and Salient Glacier), in the Royal Society Range of Victoria Land. Named by Rob Findlay, leader of an NZARP geological party to the area in 1981-82, after a feature of the same name in NZ, i.e., Copland Pass, which lies between Hooker Valley and Copland Valley (i.e., in NZ). NZ-APC accepted the name in 1982, and US-ACAN followed suit.

Copland Peak. 71°27' S, 73°16' W. Rising to about 500 m, 5 km NE of the Mussorgsky Peaks, on the Derocher Peninsula, on Beethoven Peninsula, in the SW part of Alexander Island. Mapped by USGS from USN air photos taken in 1967-68, and from U.S. Landsat images taken in Jan. and Feb. 1973. Named by US-ACAN in 1988, for Aaron Copland (1900-1990), the American composer. It appears on an American map of 1988. UK-APC accepted the name on Feb. 15, 1988, and it appears in the British gazetteer of that year.

Copper. Scott and Mawson both found copper in Antarctica. Both chalcocite and chalcopyrite have been found. The largest deposits are in the Copper Nunataks, in Palmer Land (*see also* **Coppermine Cove**).

Mount Copper *see* **Copper Peak**

Pico Copper *see* **Copper Peak**

Ventisquero Copper *see* **Copper Col**

Copper Col. 64°44' S, 63°23' W. A col, 305 m (the British say about 500 m) above sea level, between Copper Peak to the N and Billie Peak to the S, and running in a SE direction on the S side of (and somewhat parallel to) Green Spur, E of Börgen Bay, in the Osterrieth Range of Anvers Island, in the Palmer Archipelago. Probably discovered (but certainly not named) by BelgAE 1897-99. In 1927, the Discovery Investigations saw it from a distance, and it appears on their 1929 chart as Copper Glacier, a name that may well have been in use before they charted it, but which was certainly in association with the peak. It appears on a Chilean chart of 1947, as Ventisquero Copper, and that was the name accepted by the Chilean gazetteer of 1974. It appears on Argentine charts of 1949 and 1957 as Glaciar Copper (although misspelled Cooper in the latter), but on a 1953 Argentine chart of 1953 as Glaciar Cobre, and another one of 1957 as Glaciar del Cobre. It was Glaciar del Cobre that was accepted by the Argentine gazetteer of 1970. Following a survey by Fids from Base N, it was determined that "col" would be a better term than "glacier, and on Sept. 4, 1957, UK-APC changed the name to Copper Col, and US-ACAN followed suit in 1960.

Copper Cove. 72°09' S, 170°00' E. A very small bay, 3 km N of Helm Point, indenting the E side of Honeycomb Ridge, at the W margin of Moubray Bay. So named by NZGSAE 1957-58 because its cliffs are stained green in places by the action of weather on the copper ores. US-ACAN accepted the name in 1962.

Copper Glacier *see* **Copper Col**

Caleta Copper Mine *see* **Coppermine Cove**

Península (de) Copper Mine *see* **Coppermine Peninsula**

Copper Mine Cove *see* **Coppermine Cove, Mitchell Cove**

Copper Mountain *see* **Copper Peak**

Copper Nunataks. 74°22' S, 64°55' W. A cluster of nunataks, 6 km in diameter, and rising to about 1500 m, at the head of Wetmore Glacier, 17.5 km WSW of Mount Crowell, on the Orville Coast of southern Palmer Land. Mapped by USGS from ground surveys conducted by the Antarctic Peninsula Traverse of 1961-62, and from USN air photos taken between 1965 and 1967. Named by Peter D. Rowley (*see* **Rowley Massif**), USGS geologist in this area in 1970-71 and 1972-73, who discovered the largest Antarctican deposits of copper minerals (chalcopyrite and malachite) here. US-ACAN accepted the name in 1974, and UK-APC followed suit on Dec. 20, 1974.

Copper Peak. 64°43' S, 63°21' W. A peak with vividly green patches on it, rising to 1125 m, 3 km NNE of Billie Peak, NE of Börgen Bay, and 5 km N of Cabo Laure, in the Osterrieth Range, on the SE side of Anvers Island, in the Palmer Archipelago. Discovered in Feb. 1898, by BelgAE 1897-99. Surveyed by personnel on the *Discovery* in 1927, and it appears on their chart of 1929, although the descriptive name may well have been given some years before, following the collection in about 1918 of a rich sample of copper ore nearby. Wilkins referred to it in 1930 as Copper Mountain. It appears on a Chilean chart of 1947 as Pico Copper, and that was the name accepted by the 1974 Chilean gazetteer. US-ACAN accepted the name Copper Peak in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears on a 1953 Argentine chart as both Cerro Cobre (i.e., "copper hill") and Pico Cobre (i.e., "copper peak"), and the name was also seen around this time as Monte del Cobre, Cerro del Cobre, and Mount Copper. It was re-surveyed by Fids from Base N in 1955. It appears on a 1957 Argentine chart as Pico Verde, and that is the name the 1970 Argentine gazetteer settled on. The name Copper Peak appears incorrectly on a 1960 U.S. Hydrographic Office chart as the N end of the Wall Range (on Wiencke Island).

Copper Ridge. 62°02' S, 58°09' W. The W ridge of Mount Hopeful, in the Arctowski Mountains, N of the head of King George Bay, King George Island, in the South Shetlands. Named by the Poles in 1981, as Miedziana Gran, for the abundant copper mineralization here. It appears as such on Tokarski's map of 1981. The name was translated into English.

Península Coppermine *see* **Coppermine Peninsula**

Coppermine Cove. 62°23' S, 59°42' W. Immediately SE of Fort William (the NW tip of Robert Island), in the South Shetlands. The early sealers, who roughly charted it in 1820-21, applied the name Copper Mine Cove to a much larger cove (now called Mitchell Cove; or, by the Chileans, Caleta Nailon) farther SE along the W side of Robert Island, so naming it because of the copper-colored superficial staining of the lavas and tuffs in the area. It appears as such on Powell's chart of 1822. There are 1921 and 1930 British references to it as such, but the area was re-surveyed in 1934-35 by the Discovery Investigations, and the smaller cove appears on their 1935 chart as Copper Mine Cove. It appears on a 1948 Argentine chart as Caleta Copper Mine. Coppermine

Cove Refugio was built here in Jan. 1950. The cove appears on a 1953 Argentine chart translated as Caleta Mina de Cobre, and that was the name accepted by the 1970 Argentine gazetteer. US-ACAN accepted the name Coppermine Cove in 1953, and UK-APC followed suit on Sept. 22, 1954. It appears as such on British charts of 1956 and 1968. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. The 1974 Chilean gazetteer accepted the name Caleta Copper Mine. The Chileans had established Refugio Piloto Pardo here in Feb. 1962. Originally plotted in 62°22' S, 59°45' W, it was replotted in late 2008, by the British. *See also* **Mitchell Cove**.

Coppermine Cove Refugio. 62°23' S, 59°41' W. The Chilean name was Refugio Caleta Mina de Cobre. Chilean refugee hut, built in Jan. 1950, on rock, at Coppermine Cove, Robert Island, in the South Shetlands. In 1954, it became Luis Risopatrón Refugio. During the 1990-91 season, Luis Risopatrón Refugio II was built here.

Coppermine Peninsula. 62°22' S, 59°43' W. A rugged peninsula, 1.7 km long and 500 m wide, between Carlota Cove and Coppermine Cove, and terminating in Fort William, at the NW end of Robert Island, in the South Shetlands. It appears on a 1970 sketch map as Península Copper Mine, named in association with the cove. There are 1975 references to it as Península Copper Mine, Península de Copper Mine, and Península Coppermine. US-ACAN accepted the name Coppermine Peninsula in 1971, and US-ACAN followed suit on Nov. 3, 1971. It appears as such in the 1974 British gazetteer, and on a 1990 British Admiralty chart. In 1971, it became SPA #16, and in 2002 was re-designated ASPA #112.

Coppermine Refugio *see* **Coppermine Cove Refugio**

Copperstain Ridge. 71°27' S, 164°22' E. About 5 km long, it descends NNE from Mount Freed, in the Bowers Mountains of Oates Land, in Victoria Land. So named by NZGSAE 1967-68 because of the extensive copper staining here. NZ-APC accepted the name, and US-ACAN followed suit in 1969.

Coppnunatak. 71°06' S, 161°35' E. A nunatak NW of Alga Lakes, in the vicinity of the Morozumi Range, in Oates Land. Named by the Germans.

The *Cora*. Liverpool sealing brig of 267 tons. On Sept. 27, 1820 Capt. Robert Fildes took command and sailed her down to the South Shetlands for the 1820-21 season. Joseph Kitchen was probably the first mate. While Fildes was away in his tender, the *Cora* struck a reef and was wrecked in Blythe Bay, off Desolation Island, on Jan. 6, 1821. Fildes returned on Jan. 13, 1821. *See* **Fildes, Robert**, for more details of this trip, and for his adventures after that expedition.

Caleta Cora *see* **Cora Cove**

Cora Cove. 62°28' S, 60°20' W. A small cove in the NW part of Blythe Bay, indenting the SE side of Desolation Island, off Livingston Island, in the South Shetlands. The *Cora*, under Capt. Robert Fildes, was lost near here on Jan. 6, 1821. It appears as Cora's Cove on Fildes's chart of 1821. George Powell, here at the end of 1821, charted the cove, and reported the loss of the *Cora* earlier that year at this cove. It appears on a British chart of 1916, and was re-charted by the Discovery Investigations in 1934-35. UK-APC accepted the name Cora Cove on on Sept. 8, 1953, and US-ACAN followed suit that year. It appears as such in the British gazetteer of 1955, and also on a British chart of 1962. It appears on a 1953 Argentine chart as Caleta Cora, and that was the name accepted by the Argentine gazetteer of 1970, and also by the Chilean gazetteer of 1974. The British were the latest to replot this cove, in late 2008.

Cora Island *see* **Desolation Island**

Coral. Common name for a variety of invertebrate marine organisms of the class Anthozoa (*see also* **Fauna**). They live on the sea bed, near shore.

Coral Hill. 78°00' S, 164°18' E. Rising to about 1000 m, it is the most easterly summit of a small complex of hills in the Keble Hills, on the coast of southern Victoria Land. Years of wind erosion have created delicate rock shapes resembling filmy reef corals, hence the name given by NZ-APC on Dec. 1, 1994. US-ACAN accepted the name in 1995.

Coral Ridge. 77°35' S, 163°25' E. A ridge trending N-S, transverse to the axis of Taylor Valley, forming a divide 100 m above sea level between Lake Fryxell and Explorers Cove, at McMurdo Sound, in Victoria Land. A large number of solitary fossil corals have been found here by NZARP and USARP teams in the course of joint geological studies of the area. Donald P. Elston, USGS, suggested the name. He was a research team member who worked at the ridge in the 1979-80 and 1980-81 seasons. US-ACAN accepted the name.

Coral Sea Glacier. 72°33' S, 168°27' E. An important S tributary of the Trafalgar Glacier, which, in turn, is a tributary of the Tucker Glacier, in Victoria Land. Named by NZGSAE 1957-58 for the Battle of the Coral Sea (1943), the name being brought to their minds by the coralline appearance of the glacier due to an extremely broken icefall in its lower part. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Cora's Cove *see* **Cora Cove**

Cora's Island. A tiny island in the South Shetlands. Named by Fildes in 1820-21. It does not seem to be there anymore, but it could be Cornwall Island, or one of several others.

Mount Corbató. 85°04' S, 165°42' W. Rising to 1730 m, 7 km E of Mount Fairweather, in the Duncan Mountains. Mapped geologically on Jan. 13, 1975 by the USARP Ohio State University field party, and named by US-ACAN for Charles E. Corbató, geologist with the party.

Corbet Peak. 78°32' S, 85°33' W. A high peak, rising to 4822 m, 1.4 km E of Mount Vinson, on the summit plateau of the Vinson Massif, in the Sentinel Range. Named by US-ACAN in 2006, for Barry Corbet (1936-2004), member of the 1966-67 American Antarctic Mountaineering Expedition that made the first ascent of the Vinson Massif and other high mountains in this range.

Islas Corbeta *see* **Bruce Islands**

Islotes Corbeta *see* **Bruce Islands**

Bahía Corbeta Uruguay *see* **Uruguay Cove**

Base Corbeta Uruguay *see* **Corbeta Uruguay Station**

Corbeta Uruguay Station. 59°28' S, 27°20' W. Known officially as Estación Científica Corbeta Uruguay, but more commonly referred to as Base Corbeta Uruguay. Inaugurated on March 18, 1977, by ArgAE 1977-78, on the site of the old Teniente Esquivel Refugio, it was captured and dismantled by the British on June 20, 1982, and destroyed by them in Dec. 1982. However, as it is on Morrell Island, in the South Sandwich Islands, it falls outside the scope of this book.

Corbett, Arthur Charles, Jr. b. Aug. 27, 1918, Arriola, Colo., the 2nd to youngest of 8 children of farmer Arthur Charles Corbett and his wife Maud E. Perrault. His father died in the 1920s, and his mother took the family to Colorado Springs, where she did dress making. He joined the Merchant Marine, and was on the *North Star* for the 2nd half of USAS 1939-41. After the expedition, on Oct. 19, 1942, in the Springs, he enlisted as a private in the U.S. Army. He died on June 24, 1985, in Stayton, Oreg.

Corbett, Gerald. b. Jan. 18, 1959. Leading airman in the RN, who became photographer with the British Joint Services Expedition to Brabant Island in 1984.

Corbett, Richard. b. 1746, Limehouse, London. On April 20, 1772, he joined the *Resolution* for Cook's 2nd voyage, 1772-75, and acted as barber on the trip. He later served on the *Mohawk*, married Susannah, worked at the King's Yard, in Deptford, as a naval carpenter, and died in 1795.

Punta Corbetta. 64°26' S, 58°25' W. A point on the Nordenskjöld Coast of the Antarctic Peninsula. Named by the Argentines, for Ricardo Guillermo Corbetta, leader of ArgAE 1993-94.

Punta Corcho *see* **Gaudin Point**

Cordall, Peter Ainsworth "Pete." b. Sept. 13, 1930, Bury, Lancs, son of printer Tom Cordall and his wife Nellie Ainsworth. He finished school in 1946 and went to work as a clerk in the Borough Treasurer's Office, getting into accountancy. He applied for FIDS in 1953, was interviewed in London by Frank Elliott, and left Southampton on the *John Biscoe* later that year, bound for Montevideo and the Falkland Islands. The *Biscoe* then took him as meteorologist who wintered-over at Signy Island Station in 1954 and 1955. He was in Port Stanley in between those two winters. Back in Britain he did various jobs, then went down to

South Georgia with Lance Tickell for the 1958-59 summer (just the two of them and a hut, on Bird Island). He married Edith M. Speakman, in 1964, in Chorley, Lancs, and became a teacher of science and mathematics, retiring in 1988 after 15 years as head of the science department at a comprehensive school. He retired to Mawdesley, Lancs.

Cordell Hull Bay *see* **Hull Bay**

Cordell Hull Glacier *see* **Hull Glacier**

Caleta Cordero *see* **Mutton Cove**

Punta Cordero. 64°41' S, 62°19' W. A point immediately SW of Punta Castelli, on the NE coast of Península Poblete, on the W shore of Wilhelmina Bay, on the Danco Coast, on the W coast of Graham Land. Named by the Argentines.

Picos Cordiner *see* **Cordiner Peaks**

Cordiner, Douglas Lee Lipscomb "Doug." b. Feb. 11, 1912, Fort Hunt, Virginia, son of Army colonel Douglas Campbell Cordiner and his wife Florine (known as Sadie) Lipscomb. He went to Annapolis in 1930, graduating in 1934. He married Martha Jane Sturgeon on June 25, 1939, in NYC, and they went immediately to the Philippines, where their daughter was born in the November. During World War II he was on the *Dashiell*, at Leyte Gulf, as a commander. He was a captain when he became observer on the nonstop transcontinental flight in the P2V-2N Neptune aircraft from McMurdo Sound to the Weddell Sea and back on Jan. 13, 1956, and he was one of the crew on the *Que Sera Sera* on Oct. 31, 1956, which landed at the South Pole, the first plane to do so. He was also on the plane that Jack Torbert flew to the Pole on Dec. 7, 1956, the plane that got stuck there for 2 days. He died on Feb. 12, 1986, in Highlands, NC.

Cordiner Peaks. 82°48' S, 53°30' W. A group of peaks extending over an area of 10 km, 13 km SW of the Dufek Massif, in the N part of the Pensacola Mountains. They include: Rosser Ridge, Jackson Peak, Jaburg Glacier, and Sumrall Peak. Discovered and photographed aerially on the non-stop flight from McMurdo Sound to the Weddell Sea and back, on Jan. 13, 1956 (*see* that date under the entry **Operation Deep Freeze I**). Named by US-ACAN in 1957, for the observer on this flight, Doug Cordiner (q.v.). It appears on the 1957 *National Geographic* map, and in the 1960 American gazetteer. The entire Pensacola Mountains were photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS in 1967 and 1968 from these efforts. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer. The 1970 Argentine gazetteer accepted the translated name Picos Cordiner.

Cordini Glacier. 69°57' S, 62°32' W. A broad glacier flowing E from the vicinity of Mount Bailey to the Larsen Ice Shelf, S of Lewis Point, between that point and James Nunatak, on the Wilkins Coast, on the E coast of Palmer Land. Surveyed from the ground (but not named) by a combined sledging party comprising Fids from Base E and personnel from RARE 1947-48. Photographed aerially by USN between 1966 and 1969. Named by US-ACAN in 1976, for Isaías Rafael Cordini (known as Rafael) (1902-1966), Argentine scientist and author of several reports on the geology and ice of the Antarctic Peninsula and the Weddell Sea area. UK-APC accepted the name on Feb. 7, 1978. It appears on the 1979 USGS sketch map of the N part of Palmer Land. Originally plotted in 70°01' S, 62°30' W, it has since been replotted.

Bahía Cordovez. 64°38' S, 61°57' W. A bay, about 3 km wide at the mouth, oriented toward the W, off Brooklyn Island, on the E coast of Wilhelmina Bay, on the W coast of the Antarctic Peninsula. Named by the Chileans for Capitán de navío Enrique Cordovez Madariaga (1895-1965), hydrographer, the Chilean observer on the *Primero de Mayo* during ArgAE 1943. The Argentines call it Bahía González. *See also* **Seno Enrique** and **Lobodon Island**.

Islote Cordovez *see* **Lobodon Island**

Mount Cordwell. 66°52' S, 53°09' E. About 3.5 km E of Burch Peaks, and 32 km SSW of Stor Hånakken Mountain, in Enderby Land. Mapped by Australian cartographers from ANARE air photos taken in 1957. Named by ANCA for Tom Cordwell, radio officer at Wilkes Station in 1961. He had also been at Macquarie Island in 1958. US-ACAN accepted the name in 1965.

Core samples. Core sampling is a technique used in underground or undersea exploration and prospecting. A special drill goes beneath the surface, and brings up a cylindrical piece of material for examination. Thus the strata of history can be seen at a glance (in theory, anyway). In Antarctica the age and rate of ice accumulation can be determined from core samples.

Corell Cirque. 79°54' S, 155°57' E. A large cirque containing a glacier, it is located between Harvey Cirque and Duncan Bluff, at the E end of the extensive Prebble Icefalls, in the S part of the Darwin Mountains, and channels some of the ice from the Midnight Plateau ice-cap into Hatherton Glacier. Named by US-ACAN in 2001, for Robert Corell, head of the NSF's geosciences directorate, 1987-99.

Corelli Horn. 70°46' S, 69°25' W. A prominent rocky pinnacle with a distinctive pointed summit, rising to 1000 m (the British say about 1200 m), 6 km W of the N end of the LeMay Range, in central Alexander Island. First mapped by Searle of the FIDS in 1959-60, using air photos taken in late 1947 by RARE 1947-48, and plotted by him in 70°42' S, 69°49' W. Named by UK-APC on March 2, 1961, for the Italian violinist and composer Arcangelo Corelli (1653-1713). US-ACAN accepted the name later in 1961. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and, with the new coordinates, the feature appears in the 1982 British gazetteer.

Corelli Trio. 61°53' S, 57°59' W. Three closely spaced andesite lava offshore stacks, midway between False Round Point and Ridley Island, King George Island, in the South Shetlands. Named by the Poles in 1984, for Arcangelo Corelli (*see* **Corelli Horn**).

Mount Corey. 76°40' S, 145°08' W. A mountain, 5 km E of the Chester Mountains, between those mountains and the Fosdick Mountains, in the Ford Ranges of Marie Byrd Land. A group of mountains was discovered here in Nov. 1934, on Quin Blackburn's sledging party, during ByrdAE 1933-35, and named by Byrd as the Corey Mountains, for Stevenson Corey. They included Marujupu Peak and others. US-ACAN accepted the name in 1952. However, it was subsequently determined that the group is not well-defined enough, as a separate group, and the name was done away with, the name Corey being re-applied to this feature. The name Corey Mountains, however, is still seen to this day.

Corey, Stevenson. b. Jan. 29, 1906, Bronx, son of motor truck company vice president Charles H. Corey and his wife Carolyn. He first approached Norman Vaughan in his Boston office, to be taken on ByrdAE 1933-35, but Vaughan thought he was too small to make it. He made it. He was the supply officer, and one of the shore party who wintered-over at Little America in 1934. He married Jessie E. Page, and died on Jan. 29, 2000 (on his 84th birthday), in North Andover, Mass.

Corey Mountains *see* **Mount Corey**

Caleta Coria. 64°01' S, 61°53' W. A cove on the E side of Liège Island, in the Palmer Archipelago. Named by the Argentines for Juan Coria, a crewman on the frigate *25 de Mayo*, killed in action in 1826.

The *Corinthian II*. Ice-strengthened tourist vessel, built in 1992, and registered in Malta, she was refurbished in 2005, and was in Antarctic waters in 2005-06, with a carrying capacity of 114 passengers, run by Travel Dynamics International. She was also in at Pléneau Island in Dec. 2009, when her sister ship, the *Clelia II*, ran aground.

Cormorant Island. 64°48' S, 63°58' W. Off the S side of Anvers Island, about 3 km SE of Palmer Station, in the Palmer Archipelago. It was first shown on an Argentine government chart of 1954, but not named. In 1956-57 it was photographed aerially by FIDASE and surveyed by an RN Hydrographic Survey unit on the *Protector*. Named by UK-APC on July 7, 1959, for the many cormorants here. US-ACAN accepted the name in 1960. It appears on a British chart of 1960.

Cormorants. The most common shore birds in Antarctica. They nest close to the sea. The blue-eyed cormorant (*Phalacrocorax atriceps*) breeds on the Antarctic Peninsula, in the South Shetlands, and the South Orkneys.

Punta Cornejo *see* **Misnomer Point**

The *Cornelia*. American sealing brig which left New Bedford on Aug. 23, 1820, bound for Patagonia, under the command of Capt. John Johnson. She sealed off the South American

coast for the 1820-21 season, and was then heading down to the South Shetlands for the 1821-22 sealing season, when, 2 days out of port, 5 men mutinied, seized the quarter deck, and one of them, a Portuguese, stabbed the first mate. The mutineers planned to take the vessel to South America. The five, four of them Americans, were eventually overpowered, arrested, and dropped off with the authorities in South America. After the South Shetlands, the *Cornelia* pushed on to Valparaíso, and was sighted off the Chilean coast on Feb. 22, 1822. She was later sighted off the Peruvian coast, and finally made her way back to the USA. The *Cornelia*, under Capt. Johnson, was reported clearing the port of New York on March 1, 1824.

The *Cornelia Jacoba*. A 1200-ton Chilean transport sailing ship acquired from Norway in 1906 by Capt. Andresen for his Sociedad Ballenera de Magallanes, and which was associated with the *Gobernador Bories*, from 1906 to 1912, in the South Shetlands.

Cape Cornely. 76°14' S, 162°45' E. A cape marked by a rock exposure, at the S side of the terminus of Mawson Glacier, 5 km N of Cape Day, on the coast of Victoria Land, at the S side of the terminus of Mawson Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1961. Named by US-ACAN in 1965, for Joseph Robert Thomas Cornely (b. March 19, 1927, Philadelphia. d. Jan. 27, 1989, San Diego), USN, radioman who wintered-over at Little America V in 1958; at Pole Station in 1960; and at McMurdo in 1963. NZ-APC accepted the name on Feb. 1, 1965.

Isla(s) Corner *see* **Corner Island**

Pico Corner *see* **Corner Peak**

Roca (de) Corner *see* **Corner Rock**

Rocas Corner *see* **Corner Rock**

Corner, Harry. b. 1886, Newcastle. On Aug. 4, 1911, in London, he signed on to the *Aurora*, as 2nd engineer, at £10 per month, for the first part of AAE 1911-14. He left the ship, and the expedition, in Australia, on Sept. 10, 1912.

Corner Camp. 78°02, 169°00' E. The Number 6 camp during BAE 1910-13. Just to the E of White Island, on the Ross Ice Shelf. It was here that Scott's route to the Pole in 1911 turned the "corner" from E to S. Named that year.

Corner Cliffs. 72°04' S, 68°25' W. A rocky mass, rising to about 500 m, and surmounted by 2 flat-topped summits 2.5 km apart, immediately S of Saturn Glacier, in the SE part of Alexander Island, at George VI Sound. The rocks of these 2 cliffs were hidden from the line of sight by intervening ice slopes to the W, but the 2 rock ridges forming the NW shoulder of this feature were first seen and photographed aerially by Ellsworth on Nov. 23, 1935, and mapped from those photos in 1936 by U.S. cartographer W.L.G. Joerg. First surveyed from the ground by FIDS in Nov. 1949, and they gave the feature this name to mark the point where the exposed rock of eastern Alexander Island turns a corner from a N-S direction to a NE-SW direction. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears on British charts of 1956 and 1974.

Corner Glacier. 74°27' S, 163°40' E. A steep, broken glacier, about 1.5 km wide, it descends from the W slopes of Mount Dickason, between that mountain and Black Ridge (which forms the W boundary of the glacier), in the Deep Freeze Range, to merge with the large, rectangular area of confluent ice of the Nansen Ice Sheet, in Victoria Land. Explored by Campbell's Northern Party during BAE 1910-13, and so named by them because it was at a corner of the Nansen Ice Sheet. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

[1]**Corner Island**. 65°15' S, 64°14' W. A small island, 175 m NE of Galíndez Island, and between that island and Uruguay Island, at the SE end of Meek Channel, in the Corner Islands, in turn part of the Argentine Islands, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Charted in 1935 by BGLE 1934-37, as the Corner Islands, i.e., two small islands forming a crude L-shape, barely separated from one another by a narrows of 10 m width, as well as several nearby rocks, the main one being named by them as Corner Rock, the only other separate feature in the area worthy of a name. There were two reasons why John Rymill named these islands thus. One was that the 2 islands formed a "cornerstone" for this group, and the other was that the N sides of both islands formed a corner, or angle of 60 degrees. As such, Corner Islands (and Corner Rock) appears on Rymill's 1938 map of the expedition, and on a British chart of 1947, and was named thus by UK-APC on Sept. 8, 1953, appearing as such in the British gazetteer of 1955. The Chileans called it Islas Corner, but in 1962 the name Isla Corner appears on a Chilean chart, only the W of the two islands being charted. At least, that is what they thought. In fact, they had described it more accurately than they knew, because in 1964-65, an RN Hydrographic Survey unit recharted it as one island, and it appears as Corner Island on a British chart of 1973, and in the British gazetteer of 1980. US-ACAN followed suit in all of these changes. The Argentines also used to call it Islas Corner.

[2]**Corner Island** *see* **Cornet Island**

Corner Islands *see* **Corner Island**

Corner Nunatak. 82°52' S, 157°39' E. Also called Corner Peak. Between Nimrod Glacier and Marsh Glacier, it is the most northeasterly point in the Miller Range. Discovered and named descriptively by the Northern Party of NZGSAE 1961-62. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA also accepted the name.

[1]**Corner Peak** *see* **Corner Nunatak**

[2]**Corner Peak**. 63°35' S, 58°39' W. A pyramidal peak rising to 930 m (the Chileans say 1054 m), with considerable rock exposed on its N face, 14 km ESE of Cape Roquemaurel, it marks a corner in the broad glacial valley which rises immediately to the ESE and fans out NW to form a piedmont ice sheet on the NW side of Trinity Peninsula, on the W coast of the Antarctic Peninsula. Named descriptively by Fids from Base D, following a Sept. 1946 survey by them. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears on a British chart of 1954, and in the 1955 British gazetteer. Cdr. Frank Hunt, during his 1951-52 RN Hydrographic Survey of the area, inadvertently named it Pyramid Hill. It appears on a Chilean chart of 1961, as Pico Corner, and that name was accepted by the 1974 Chilean gazetteer.

Corner Rock. 65°15' S, 64°14' W. A submerged offshore rock, about midway between Galíndez Island and Corner Island (q.v. for more details), in the SE entrance to Meek Channel, in the Argentine Islands, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Charted and named in 1935 by BGLE 1934-37, in association with what they had just named Corner Islands (*see* **Corner Island**). It appears on Rymill's 1938 BGLE map of that expedition, and on a British chart of 1947. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955. It appears in the Argentine translations of Rymill's maps as Roca de Corner, but on a 1958 Argentine chart as Roca Corner. It has also been seen pluralized as Rocas Corner. The 1970 Argentine gazetteer accepted the totally translated name of Roca del Rincón. The Chileans call it Roca Corner.

Cornerpost Peak. 71°57' S, 164°40' E. Rising to 2160 m, at the SE end of the Leitch Massif, in the Concord Mountains, on the Polar Plateau. So named by the NZ Federated Mountain Clubs Antarctic Expedition 1962-63, because it was here, at the turning point of their traverse, that they established their most northerly survey station. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Punta Cornes. 63°20' S, 62°13' W. The easternmost point of Islote Gentile, which lies just NW of Cape Wallace (the SE extremity of Low Island), in the South Shetlands. Named by the Argentines.

The Cornet. 61°08' S, 54°47' W. A cone-shaped peak rising to 850 m, on the S side of Pardo Ridge, between Muckle Bluff and The Stadium, in the E part of Elephant Island, in the South Shetlands. Surveyed by the British Joint Services Expedition of 1970-71, and named descriptively by them as Cornet (the British call an ice cream cone a "cornet," with the stress on the first syllable; thus is it pronounced "kor-nit"). On Nov. 3, 1971, UK-APC accepted the name, but as The Cornet, and US-ACAN followed suit in 1972. It is in the British gazetteer of 1974 as The Cornet. It appears on a 1977 Argentine chart as Cerro Corneta (i.e., "cornet hill"). The British were the latest to replot this peak, in late 2008.

Isla Cornet *see* **Cornet Island**

Cornet Island. 65°34' S, 64°59' W. About 2.5 km NE of Milnes Island, along the W side of Grandidier Channel, in the Biscoe Islands, off the Graham Coast, on the W coast of Graham Land. First charted by BGLE 1934-37. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for its shape as seen from the air (*see* **The Cornet**, above). US-ACAN accepted the name later in 1959. It appears on a British chart of 1960. It appears, misspelled, as Corner Island in the 1974 British gazetteer.

Cerro Corneta *see* **The Cornet**

Cornice Channel. 65°15' S, 64°16' W. A narrow marine channel in the Corner Islands, it separates Galíndez Island from the E part of Skua Island, in the Argentine Islands, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Surveyed in 1935-36 by BGLE 1934-37, it appears (unnamed) on Rymill's expedition map of 1938. Named by UK-APC on Sept. 22, 1954, for the prominent cornice that overhangs the 30-m ice cliff on the Galíndez Island side of the channel. It appears in the 1955 British gazetteer, and on British charts of 1956 and 1967. US-ACAN accepted the name in 1956. Re-charted by an RN Hydrographic Survey unit on the *Protector* in 1964-65. The Argentines translated it as Canal Cornisa.

Canal Cornisa *see* **Cornice Channel**

Cape Cornish. 66°43' S, 163°05' E. Forms the N tip of Buckle Island, in the Balleny Islands. Named in 1938 by personnel on the *Discovery II*, for Allan Cornish. US-ACAN accepted the name in 1953, and it appears in the 1958 NZ gazetteer.

Islotes Cornish *see* **Cornish Islands**

Cornish, Allan William. b. Nov. 11, 1910, Fitzroy, Vic., son of William Cornish. He joined the Bureau of Meteorology in Dec. 1929, as a met assistant, and joined the *Discovery II* in Perth, for that vessel's 1937-38 cruise in Antarctic waters, as Australian observer. During World War II he served in the RAAF Met Service, and after the war transferred from the Met Office to the department of supply. He died on April 10, 1995, at his home in Sandringham, Vic.

Cornish Islands. 67°00' S, 67°28' W. Two small, snow-capped islands with a rock between them, 6 km S of Liard Island, in Hanusse Bay, on the Loubet Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from aerial photos taken by RARE 1947-48 and by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Vaughan Cornish (1862-1948), British geographer and pioneer student of snowdrift forms. The feature appears on a British chart of 1961. US-ACAN accepted the name in 1965. The feature appears on a Chilean chart of 1962 as Islotes Cornish, and that was the name accepted by the 1974 Chilean gazetteer.

Mount Cornu. 64°09' S, 60°35' W. Rising to about 1450 m, at the head of Gregory Glacier, and N of Breguet Glacier, on the SW side of Wright Ice Piedmont, on the Danco Coast, on the W coast of Graham Land. Photographed aerially by FIDASE 1956-57. Shown (but not named) on a 1957 Argentine chart. Named by UK-APC on Sept. 23, 1960, for Paul Cornu (1881-1944), French helicopter pioneer. US-ACAN accepted the name in 1965.

Cornu, Jean-Louis. b. Jan. 28, 1816, Rédon, France. Ordinary seaman on the *Zélée* during FrAE 1837-40.

Punta Cornwall *see* **Misnomer Point**

[1]**Cornwall Glacier**. 80°47' S, 26°16' W. A glacier, 14 km long, flowing S from Crossover Pass to Recovery Glacier, E of Ram Bow Bluff, in the Shackleton Range. Surveyed and mapped in Oct. 1957 by BCTAE, and named by UK-APC on Aug. 31, 1962, for Gen. Sir James Handyside Marshall-Cornwall (1887-1985), member of the Committee of Management for BCTAE 1955-58, and president of the Royal Geographical Society, 1954-58. US-ACAN accepted the name later in 1962. The feature was photographed aerially by USN in 1967.

[2]**Cornwall Glacier**. 83°04' S, 162°20' E. About 16 km long, it flows E to the S of Crowell Buttresses into Lowery Glacier, on the E side of the Queen Elizabeth Range. Named by the Northern Party of NZGSAE in 1961-62 for the English county, and also for the dukedom. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Cornwall Island. 62°21' S, 59°43' W. An island, 0.7 km long, midway between Heywood Island and the W extremity of Robert Island, in the South Shetlands. Fildes discovered it in 1821, but did not name it, merely describing it as an island in the approaches to Clothier Harbor. Powell, in 1822, included it among Heywood's Isles (*see* **Heywood Island**). In 1935 the Discovery Investigations personnel saw it from a distance in the *Discovery II*, charted it as the NW point of Robert Island, and named it Cornwall Point, after Cornwall House, in London, where the Admiralty Hydrographic Office was. It appears as such on 1942 and 1948 British charts, and that is how it appears in the 1955 British gazetteer. Consequently, the Argentines called it Punta Cornwall, and it appears as such on their charts of 1948 and 1954, and in their gazetteer of 1970. However, aerial photography by FIDASE in 1956 confirmed that the feature is an island, and it was therefore re-defined by UK-APC on Aug. 31, 1962. US-ACAN accepted the new name in 1963. The British were the latest to replot this feature, in late 2008.

[1]**Cornwall Point** *see* **Cornwall Island**

[2]**Cornwall Point** *see* **Misnomer Point**

Isla Cornwallis *see* **Cornwallis Island**

Cornwallis Island. 61°04' S, 54°28' W. A tiny island, 1.5 km long, and rising to about 470 m above sea level, 8 km NE of the E end of Elephant Island, and between that island and Clarence Island, in the South Shetlands. Roughly charted by Bransfield in 1820, and named before 1821, probably for Adm. Sir William Cornwallis, RN (1744-1819), commander-in-chief of the Channel Fleet, 1801-06. It appears on Powell's 1822 chart as Cornwallis's Isle. The island was re-charted by the Discovery Investigations in 1933-35. US-ACAN accepted the name Cornwallis Island in 1947. It appears as such on a 1949 British chart, UK-APC accepted the name on Sept. 8, 1953, and it appears in the 1955 British gazetteer. The Russians have been calling it Ostrov Mihajlova (or Mikhailova; Michailoff's Island) since 1831, and the Argentines have been calling it Isla Cornwallis since 1908. It appears as such on one of their 1958 charts, and in their gazetteer of 1970, as well as in the Chilean gazetteer of 1974. The island was photographed aerially by FIDASE in 1957.

Cornwallis's Isle *see* **Cornwallis Island**

Mount Cornwell. 77°40' S, 86°09' W. Rising to 2460 m, 3 km S of Mount Washburn, along the NE side of Newcomer Glacier, in the N part of the Sentinel Range. Named by US-ACAN in 1961, for Lt. James W. Cornwell, USN, VX-6 co-pilot on photographic flights over the Sentinel Range on Dec. 14-15, 1959, during OpDF 60 (i.e., 1959-60).

Cornwell Corner. 80°13' S, 158°59' E. An angular rock bluff, at an elevation of about 800 m, at the W end of Horney Bluff and the terminus of Merrick Glacier, where the glacial flow is forced E at an acute angle upon entering Byrd Glacier. In association with Admiral Byrd, it was named by US-ACAN in 2000, for Capt. (later Rear admiral) Delbert Strother Cornwell (b. April 16, 1900, Philippi, W. Va. d. Feb. 1974, Virginia Beach, Va.), USN, skipper of the *Philippine Sea* during OpHJ 1946-47. NZ-APC accepted the name on Feb. 20, 2001.

Isla Coronación *see* **Coronation Island**

Coronas *see* **Phenomena**

Coronation Island. 60°37' S, 45°35' W. The largest of the South Orkney Islands, it is 40 km long in a general E-W direction, is between 5 and 13 km wide, and has a permanent ice cap. The island comprises numerous bays, glaciers, and peaks, the highest rising to 1265 m. Discovered and partly charted by Palmer and Powell on Dec. 6, 1821. It was here that Powell landed and took possession of the South Orkneys for Britain, naming this island for the fact that it was the first land discovered since George IV's recent coronation. In 1822 Weddell re-discovered the island, and, not knowing that Powell had already named it, renamed it, in Jan. 1823, as Pomona, for the island in the Scottish Orkneys. He also named it Mainland (for the same reason). Weddell's names were published in 1825, but did not survive. It appears as Coronation Island on a British chart of 1839. It was surveyed again in 1912-13 by Petter Sørlle and Hans Borge, and re-charted by the Discovery Investigations in Jan. 1933. It appears as Coronation Island on the DI chart of 1934, and that was the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953, and which appears in the British gazetteer of 1955. Fids from Signy island Station re-surveyed it between 1956 and 1958. The Argentines have been calling it Isla Coronación since 1908, and

it appears as such in their 1970 gazetteer. Features on Coronation Island include: Brisbane Heights, Worswick Hill, Tønsberg Cove, Bridger Bay, Tickell Head, Conception Point (the N point of the island), Foul Point, Purdy Point, Ommanney Bay, Penguin Point, Prong Point, Deacon Hill, High Stile, Palmer Bay, Findlay Point, Sunshine Glacier, Mount Nivea, Meier Point, Mansfield Point, Norway Bight, Parpen Crags, Sandefjord Peaks, Pomona Plateau, Sandefjord Bay, Amphibolite Point, Saunders Point, Avalanche Corrie, Beaufoy Ridge, Iceberg Bay, Cape Bennett, Petter Bay, Breccia Crags, The Turret, Gibbon Bay, Cleft Point, Cockscomb Buttress, Echo Mountain, Coldblow Col, Cragsman Peaks, Crown Head, Laws Glacier, Return Point, Moreton Point, Fulmar Bay, Gibbon Bay, Roald Glacier, Mount Noble, Wave Peak.

The *Coronda*. The second Salvesen ship of that name, she was bought by the company in June 1922. She had been the 7503-ton, 482-foot *Politician*, built in 1899, but now her name was changed, and she was converted into a bulk whaling ship. She served as a whaling tanker in Antarctic waters in 1927–28, 1928–29, and 1929–30. In that first season, under Capt. Ridland, she helped the Discovery Investigations with their surveys. During World War II she was used as a storage ship in the Tyne, and in June 1946 was sold for scrap in Ghent.

Coronet Peak. 71°39' S, 164°21' E. Rising to 2175 m, at the E side of the terminus of Leap Year Glacier, in the SE extremity of the Bowers Mountains. So named by NZGSAE 1967–68 because it is a fine peak. It was climbed by two members of the expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1969.

The *Corral*. Chilean steam whale catcher owned by the Sociedad Ballenera Corral. She was in the South Orkneys in 1911–12 and 1912–13, with her sister catcher, the *Fyr*, their factory ship, the *Tioga*, and other catchers.

Fondeadero Corral. 64°54' S, 62°57' W. An anchorage in the N side of Argentino Channel, to the S of Bryde Island, immediately W of Punta Soffia, off the W coast of the Antarctic Peninsula. Named by the Chileans for the *Corral*.

Sociedad Ballenera Corral *see under* **S**

The Corral Company *see* **Sociedad Ballenera Corral**

Corral Point. 60°45' S, 45°43' W. A rocky point forming the SW extremity of Moe Island, off Signy Island, in the South Orkneys. Roughly surveyed in 1933 by the Discovery Investigations, and surveyed more accurately in 1947, by Fids from Signy Island Station, who named it for the *Corral*, and hence also for the Sociedad Ballenera Corral (q.v. and also *see* **The *Tioga***). UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Pasaje Correa *see* **Graham Passage**

Punta Correa *see* **Correa Point**

Correa Morales, Lucio *see* **Órcadas Station**, 1933

Correa Point. 62°30' S, 59°43' W. About 1.3 km SW of Ferrer Point, and N of Picacho D.I.C, on the S side of Discovery Bay, Greenwich Island, in the South Shetlands. Named Punta Correa by ChilAE 1947, for Hernán Correa Rodríguez, cameraman with the Dirección de Informaciones y Cultura (D.I.C.), of Chile, who was here with the expedition. It appears as such on a Chilean chart of 1951. UK-APC accepted the name Correa Point on May 11, 2005. The British were the latest to replot this feature, in late 2008.

Correll, Percy Edward. b. 1892, Adelaide. He was a science student at Adelaide University when he was accepted as mechanic and assistant physicist on AAE 1911–14. He married Myrtle Sinclair Drever, in Victoria, in 1919, and in Canada, in 1922, he patented a headlamp for vehicles. He became an art dealer, and died in June 1974.

Correll Nunatak. 67°35' S, 144°14' E. A rocky outcrop on the W margin of Mertz Glacier, 22 km S of Aurora Peak, and about 37 km SSW of Buchanan Bay, on the coast of George V Land. Discovered by AAE 1911–14, and named by Mawson for Percy Correll. US-ACAN accepted the name in 1952, and ANCA followed suit.

Islotes Correo. 65°43' S, 64°25' W. A group of islands in the NE side of Bigo Bay, off the Graham Coast, on the W coast of Graham Land. Named by the Argentines. The only island in this group that seems to be named is Lizard Island, and that was named before the group was.

The Corridor. 68°35' S, 78°08' E. A flat valley running from E to W, on Breidnes Peninsula, in the Vestfold Hills, on the Ingrid Christensen Coast. Along it runs the route from Davis Station to Ellis Rapids. Its entrance is marked by two buttresses, North Portal and South Portal (qq.v.). Named descriptively by ANCA.

Corrientes Refugio. 75°34' S, 26°36' W. Argentine summer refuge hut built on Jan. 10, 1961, by Army personnel off the *General San Martín*, during ArgAE 1960–61, on the shelf ice in the southern part of Halley Bay, S of the FIDS station. It was opened on Jan. 10, 1961.

Cap Corry *see* **Corry Island**

Cape Corry *see* **Corry Island**

Isla Corry *see* **Corry Island**

Kap Corry *see* **Corry Island**

Kapp Corry *see* **Corry Island**

Mount Corry *see* **Purka Mountain**

Corry, Maxwell John "Max." b. Aug. 11, 1940. Surveyor at Mawson Station for the winter of 1965, he was also leader and glaciologist of the Amery Ice Shelf party in 1968.

Corry Island. 63°43' S, 57°31' W. An almost circular island, rising to between 488 and 510 m, it is 3 km long, SSW of Eagle Island, between that island and Vega Island, in Prince Gustav Channel, off the SE coast of Trinity Peninsula. On Jan. 6, 1843, Ross sighted what may have been this feature, and named it Cape Corry, for Henry Thomas Lowry Corry (1803–1873), MP for Tyrone, 1826–73, and junior lord of the Admiralty, 1841–45. Ross charted it as part of Trinity Peninsula, and as such, it appears on a British chart of 1844, and as Cape Corry on a British sketch map of 1847. It is Kap Corry on the 1904 map drawn up by SwedAE 1901–04, Kapp Corry on a Norwegian sketch map of 1928, and still Cape Corry on a British chart of 1938. However, when Ellsworth flew over here on Nov. 21, 1935, he reported that this was an island, not a cape, and this was confirmed in Aug. 1945, by FIDS, who did, indeed, find that there was no cape here, only an archipelago; so they selected the island from this archipelago that was most conspicuous as seen from the eastward (the direction from which Ross would have seen it), and named it Corry Island. As such, it appears on a British chart of 1949, and that was the name accepted by UK-APC on Nov. 21, 1949, and which appears in the British gazetteer of 1955 and on a British map of 1974. It was photographed from the air by FIDASE 1956–57. US-ACAN accepted the name in 1952. It appears as Isla Corry on a Chilean chart of 1951, and in their gazetteer of 1974. The Argentines have never been quite sure what to call it. One sees it on a 1904 map as Cabo Corry, and in 1953 it was still being called a cape, but Cabo Circular. On a 1959 Argentine map it is seen as Isla San Carlos, but in the Argentine gazetteer of 1970 it is seen as Isla Corry.

Corry Massif. 70°27' S, 64°36' E. A large massif marked by an unusual moraine pattern on the N side, about 6 km WNW of the Crohn Massif, in the Porthos Range of the Prince Charles Mountains. Mapped by Australian cartographers from ANARE ground surveys and photos taken by Rob Lacey in 1955, and from ANARE air photos taken in 1959 and 1965. Named by ANCA for Max Corry. US-ACAN accepted the name in 1970. The Russians call it Gora Gol'covaja (pronounced, presumably, as "Gol-tso-vaya").

Corry Rocks. 70°20' S, 71°41' E. A cluster of about a dozen brown-colored rocks at the N extremity of Gillock Island, in the Amery Ice Shelf. One of them was occupied by an ANARE survey station in 1968, during the tellurometer traverse from the Larsemann Hills to the Reinbolt Hills. Named by ANCA on Oct. 22, 1968, for Max Corry (q.v.), who led the party that year. US-ACAN accepted the name in 1971. This is almost certainly the same feature as the one the Russians call Nunataks Bugry (q.v.).

Corsair Bight. 62°01' S, 58°15' W. Between Pottinger Point and False Round Point, facing Drake Passage, on the N coast of King George Island, in the South Shetlands. In association with the passage, it was named by the Poles in 1984, after the corsair, Sir Francis Drake.

Islote Corsario. 68°49' S, 71°46' W. A small island off the N coast of Alexander Island. Named by the Argentines.

Rocas Corsario *see* **Cruiser Rocks**

Corse, James *see* **USEE 1838–42**

Mount Cortes *see* **Mount Cortés**

Mount Cortés. 68°29' S, 66°06' W. Rising to 1490 m, and mainly ice-covered, on the SW side of Gibbs Glacier, on the Fallières Coast, on the W coast of Graham Land. It is separated from Hadley Upland by a col running at a height of about 1300 m. Photographed aerially on Nov. 27, 1947, by RARE 1947-48, and surveyed from the ground by Fids from Base E in Dec. 1958. Named by UK-APC on Aug. 31, 1962, for Martín Cortés, Spanish author of *Arte de Navegar* (1551), an important navigation manual. US-ACAN accepted the name later in 1962. Note: The Americans use an accent mark; the British don't.

Caleta Corthorn. 64°53' S, 63°34' W. A small cove, no more than 530 m wide at the mouth, about 3 km NE of Cape Errera (the extreme SW point of Wiencke Island), on Peltier Channel, in the Palmer Archipelago. Named by the Chileans for 1st Lt. Federico Corthorn, naval aviator, helo pilot on the *Piloto Pardo*, who took part in the rescue of personnel from Argentine, Chilean, and British bases during the erution on Deception Island in Dec 1967. One has to assume that the Chileans have spelled this gentleman's name right. The Argentines call it Caleta French.

Valle Corto. 62°27' S, 60°47' E. North of the hill the Chileans call Cerro El Jardín, it is the shortest valley (hence the name, meaning "short valley") between the E coast and the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno, during ChilAE 1990-91.

Ensenada Cosentino. 62°43' S, 61°25' W. An inlet just NW of Irnik Point, on the NW coast of Snow Island, in the South Shetlands. Named by the Argentines.

Cosgrove, Thomas. b. 1876, Dundee, son of mason's laborer James Cosgrove and his wife Mary. He married Mary. Able seaman on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04.

Cosgrove Glacier. 67°29' S, 59°10' E. A small glacier that flows into the S part of Stefansson Bay, just W of Mulebreen (what the Australians call Dovers Glacier), in Kemp Land. First seen from ANARE aircraft in 1956, and plotted in 67°30' S, 59°05' E. Named by ANCA on Oct. 11, 1960, for Mike Cosgrove, radio supervisor who wintered-over at Mawson Station in 1959. US-ACAN accepted the name in 1962. It was later re-plotted.

Cosgrove Ice Shelf. 73°34' S, 100°22' W. An ice shelf, about 56 km long and 40 km wide, occupying the inner (east) part of the embayment between King Peninsula and Canisteo Peninsula, in the area of the Walgreen Coast of Marie Byrd Land. Mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1968, for Lt. Jerome R. Cosgrove, USNR, assistant communications officer on the staff of the commander, U.S. Naval Support Force, Antarctica, during OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1967-68). First plotted in 73°25' S, 101°00' W, it was later replotted.

Rocas Cosme Maciel. 66°50' S, 67°51' W. A group of rocks lying in the cove the Argentines call Caleta Maciel, SSW of Mount Vélain, in the extreme NE of Adelaide Island. Named by the Argentines for Cosme Maciel (*see* **Caleta Maciel**, under **M**).

Cosmonaut Glacier. 73°26' S, 164°30' E. A short tributary glacier, 24 km long, it is 1.5 km from Aviator Glacier, and actually enters that glacier after flowing E along the S side of the Arrowhead Range, in the Southern Cross Mountains, in northern Victoria Land. Named by the Northern Party of NZGSAE 1962-63, in association with Aviator Glacier, Aeronaut Glacier, and Astronaut Glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Cosmonette Glacier. 73°37' S, 164°51' E. A small tributary glacier, 13 km long, in the Southern Cross Mountains, it flows E along the N side of the Daley Hills, to Aviator Glacier, in Victoria Land. Named by the Northern Party of NZGSAE 1962-63, in association with the other glaciers in the area, such as Aviator Glacier, Cosmonaut Glacier, and Astronaut Glacier, and also to honor the first woman in space. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Cossets Harbor *see* **Mitchell Cove**

Punta Cossio *see* **Blue Dyke**

Caleta Costa. 64°53' S, 62°51' W. A broad cove opening immediately N of Skontorp Cove, in the SE corner of Paradise Harbor, on the W coast of the Antarctic Peninsula. Named by the Chileans for José Costa (see the entry below).

Costa, José. Chilean capitán de corbeta, who went as Chilean observer on the *Patagonia*, during ArgAE 1946-47. He was also on the *Angamos* during the same expedition. Later a capitán de fragata.

Cabo Costa Lázara *see* **Cape Lázara**

Costa Spur. 73°08' S, 169°10' E. A prominent spur, 6 km SW of Quetin Head, descending eastward to the Ross Sea on Daniell Peninsula, on the Borchgrevink Coast, and marking the S extent of Mandible Cirque. Named by US-ACAN in 2005, for Daniel P. Costa, professor of ecology and evolutionary biology at the University of California, at Santa Cruz, who studied seals at McMurdo Sound, South Georgia, and Livingston Island (in the South Shetlands) for several seasons from 1977 on. He was chief scientist aboard the *Nathaniel B. Palmer* for 2 successive winter cruises associated with the U.S. Southern Ocean GLOBEC projects, 2001 and 2002. NZ-APC accepted the name on Sept. 12, 2005.

Coste, Jean-Marie. b. Sept. 26, 1808, Paramé, France. Ordinary seaman on the *Astrolabe* during FrAE 1837-40. On Jan. 1, 1840 he became a coxswain.

Costiou, Pierre-Célestin. b. April 17, 1817, Île d'Yeu, France. Junior seaman on the *Astrolabe* during FrAE 1837-40.

Cape Cotter *see* **Cotter Cliffs**

Cotter, Pownall Pellew. b. June 24, 1810, Lambeth, London, son of Richard Cotter and his wife Ellen. Master of the *Terror*, during RossAE 1839-43. He married Harriett, and died in Lambeth, in 1866.

Cotter Cliffs. 72°28' S, 170°18' E. A line of spectacular bare rock cliffs rising about 1500 m above the Ross Sea, and forming the seaward (east) face of Hallett Peninsula, in Victoria Land. In 1841 Ross named a cape somewhere in this area as Cape Cotter, for Pownall P. Cotter. Modern-day explorers failed to find this cape, but named these cliffs thus, in order to preserve Ross's naming. US-ACAN accepted the name in 1966.

Cotton, Leo Arthur. b. Nov. 11, 1883, Nymagee, NSW, son of journalist and politician Francis Cotton and his wife Evangeline Mary Geake Lane. He sailed to McMurdo Sound and back on the *Nimrod*, with Edgeworth David, during BAE 1907-09, i.e., he did not winter-over. On Feb. 9, 1910, at Hornsby, he married Florence Edith Channon, and in 1925 he succeeded his mentor, David, as professor of geology and physical geography at the University of Sydney. His wife died in 1930, and on Nov. 9, 1946, at Artarmon, he married Lilian Reed. He retired in 1948, and died on July 12, 1963, at Newport, Sydney.

Cotton Glacier. 77°07' S, 161°40' E. An ill-defined stream of glacial ice, about 16 km long, it flows E between Sperm Bluff and Queer Mountain, on the S side of the Clare Range, and also on the S side of Mackay Glacier, between that glacier and Debenham Glacier, and, with Mackay Glacier, occupies the broad basin opening out upon Granite Harbor, in Victoria Land. Discovered by Grif Taylor's Western Journey Party during BAE 1910-13, and named by Taylor for Leo Cotton. US-ACAN accepted the name, and NZ-APC followed suit. Originally plotted in 77°15' S, 161°45' E, it has since been replotted.

Cotton Plateau. 82°54' S, 159°40' E. A large snow-covered plateau, 540 sq km in area, just to the S of the Nimrod Glacier, and on the E side of the lower Marsh Glacier (or, to put it another way, just E of the mouth of that glacier), in the Queen Elizabeth Range. Discovered by the Northern Party of NZGSAE 1961-62, and named by them for NZ geomorphologist Charles Andrew Cotton (1885-1970), authority on glacial landforms. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA also accepted the name. Originally plotted in 82°52' S, 159°30' E, it has since been replotted.

Cottontoppen. 75°03' S, 12°41' W. A peak in the Tottan Hills, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for John Philip Douglas "Phil" Cotton (b. 1942), BAS surveyor who wintered-over at Halley Bay Station in 1964 and 1965. Name means "Cotton peak."

Coughran Peak. 77°32' S, 168°53' E. Rising to about 1700 m at the E end of Guardrail Ridge, in the Kyle Hills of Ross Island. Named by US-ACAN in 2000, for William Coughran,

long term USAP support employee who, from 1984, made 14 deployments to Pole Station and McMurdo, including 3 winter-over assignments. He was the winter manager at Pole in 1989, and winter manager at McMurdo in 2000. NZ-APC accepted the name on Feb. 20, 2001.

Isla Coughtrey *see* **Coughtrey Peninsula**
Coughtrey Cove *see* **Oscar Cove**
Coughtrey Island *see* **Coughtrey Peninsula**

Coughtrey Peninsula. 64°54' S, 62°53' W. A small, hook-shaped peninsula projecting toward the W from a point about 2.7 km SSW of Conesa Point, at the N side of the entrance to Skontorp Cove, on the E side of Paradise Harbor, Danco Coast, on the W coast of Graham Land. In 1913-14 David Ferguson mapped it as an island, Coughtrey Island. Who named it is unclear, but is sounds as if it should be named for Dr. Millen Coughtrey (1848-1908), an important figure in Dunedin, NZ, at a time when Antarctic expeditions were in and out of that city. It appears as such on a British chart of 1921, and the South Americans translated this as Isla Coughtrey, a name still occasionally seen into the 1950s. ArgAE 1949-50 re-charted it and re-defined it as a peninsula, calling it Península Coughtrey. They built a refugio here, and in April 1951 this became the site for Almirante Brown Station. In 1956 it appears on an Argentine chart as Península Sanavirón, named after their supply ship, and that is the name used in the 1970 Argentine gazetteer. UK-APC accepted the name Coughtrey Peninsula, on Sept. 23, 1960, and US-ACAN followed suit in 1965. That is how it appears on a 1965 British chart. The Chileans call it Península Aldunate, after Roberto Aldunate León, Minister of Foreign Affairs in 1954, who participated in ChilAE 1962-63.

Couling Island. 67°19' S, 59°39' E. Also called Couling Islands, and Froa. An island, 1.5 km long, 1.5 km N of Islay, in the William Scoresby Archipelago. Discoverd and named by the personnel on the *William Scoresby*, in Feb. 1936. US-ACAN accepted the name in 1947, and ANCA followed suit on July 22, 1959.

Couling Islands *see* **Couling Island**

Coulman High. 77°27' S, 171°26' E. A submarine feature running N-S through the Ross Sea, E of Victoria Land Basin. Named in association with Coulman Island.

Coulman Island. 73°28' S, 169°45' E. Pronounced as, and sometimes (especially in the old days) seen erroneously spelled as Colman Island. An island of volcanic rock, but completely covered with snow and ice, rising to a highest point of 610 m above sea level, 30 km long (the New Zealanders say 24 km) and about 13.5 km wide, it lies about 14 km SSE of Cape Jones, from which it is separated by a deep strait, off the extreme S end of the Borchgrevink Coast, at the W end of the Ross Sea, off the coast of northern Victoria Land. Discovered on Jan. 17, 1841, by Ross, and named by him for his (future) father-in-law, Thomas Coulman of Whitgift Hall, Yorks. There is a large penguin rookery on the island. US-ACAN accepted the name in 1947.

Couloir Cliffs. 77°01' S, 162°48' E. Granite cliffs, 30 to 60 m high, and 5 km long, on the E side of Avalanche Bay, in Granite Harbor, Victoria Land. So named by the Granite Harbour Geological Party, led by Grif Taylor during BAE 1910-13, because these cliffs have several chimneys and couloirs. US-ACAN accepted the name in 1964.

Coulomb, Marius. b. July 23, 1823, Toulon. Cabin boy on the *Zélée* during FrAE 1837-40. He became an apprentice seaman on his 16th birthday.

Coulston Glacier. 72°25' S, 167°58' E. A small tributary glacier flowing S from the Cartographers Range into Trafalgar Glacier, 16 km W of Bypass Hill, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Peter W. Coulston, VX-6 aviation electronics technician at McMurdo in 1967.

Mount Coulter. 83°17' S, 58°02' W. Rising to about 1000 m, 5 km NW of Mount Gorecki, in the Schmidt Hills of the Neptune Range, in the Pensacola Mountains. Photographed aerially by USN between 1956 and 1966, and surveyed from the ground in 1963-64 by USGS, who mapped the feature based on all these efforts. Named by US-ACAN in 1968, for Leroy G. Coulter (b. May 23, 1930. d. Feb. 5, 2001, Cochranville, Pa.), cook at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971.

Coulter Glacier. 69°20' S, 71°53' W. A steeply inclined glacier, about 8 km long, flowing S from the Havre Mountains, in the NW extremity of Alexander Island. Photographed aerially in 1947 by RARE 1947-48, and mapped from these photos in 1959-60 by Searle of the FIDS. Surveyed by BAS personnel from Fossil Bluff, 1975-76, and named by UK-APC on June 11, 1980, for Capt. R.W. Coulter, skipper of the *Alatna* for OpDF 66 (i.e., 1965-66), OpDF 68 (i.e., 1967-68), and OpDF 69 (i.e., 1968-69). US-ACAN accepted the name.

Coulter Heights. 75°21' S, 138°15' W. Snow-covered heights between Strauss Glacier and Frostman Glacier, near the coast of Marie Byrd Land. Protruding above the snow surface of the heights are Kuberry Rocks, Matikonis Peak, and Lambert Nunatak. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1975, for Neil M. Coulter, meteorologist at Byrd Station in 1963.

Coulter Point. 75°15' S, 138°38' W. A point in the area of Coulter Heights, near the coast of Marie Byrd Land. A term no longer used.

Countess Peninsula. 66°09' S, 101°14' E. Also called Countess Ridge. A rocky peninsula, 1.5 km long and 800 m wide, projecting W from the coastal ice between Booth Peninsula and the base of the Bunger Hills. Delineated from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1961, for Julius Countess (b. July 9, 1926, Manhattan, but raised in Brooklyn, son of Anatolian-Greek immigrant peddler Joseph Countess and his Hungarian wife Esther), radio operator on David Bunger's plane during OpHJ 1946-47. The Russians call it Poluostrov Skalistyj (i.e., "rocky peninsula"). Mr. Countess died in Fort Lauderdale, on Oct. 11, 1988. ANCA accepted the name on May 18, 1971.

Countess Ridge *see* **Countess Peninsula**

Mount Counts. 83°11' S, 160°26' E. A sharply pointed tabular peak on the E side of Marsh Glacier, it marks the end of the spur running 8 km W from Mount Rabot, in the S sector of the Queen Elizabeth Range. Named by the Northern Party of NZGSAE 1961-62, for Lt. Cdr. William D. "Bill" Counts, of East Greenwich, RI (*see* **Deaths**, 1961). NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Counts Icefall. 85°13' S, 90°48' W. A steep, heavily crevassed icefall, at the junction of Ford Massif and the W end of Bermel Escarpment, in the Thiel Mountains. Surveyed by the USGS Thiel Mountains Party of 1960-61, and named by US-ACAN in 1962, for Bill Counts (*see also* **Mount Counts**, and **Deaths**, 1961).

Coupar, James. b. Sept. 16, 1862, Dundee. Able seaman on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04. His name is also seen spelled (erroneously) as Cooper, and even Couper.

Couperin Bay. 72°08' S, 74°22' W. On the S coast of Beethoven Peninsula, between Perce Point and Berlioz Point, on the SW side of Alexander Island. Photographed aerially in 1947 by RARE 1947-48, and mapped from these photos in 1959-60 by Searle of the FIDS. Remapped by BAS cartographers from U.S. Landsat images of Jan. 1973. Named by UK-APC on Dec. 8, 1977, for French composer François Couperin (1688-1733), it appears in the British gazetteer of 1980. US-ACAN accepted the name.

Îles Coupvent *see* **Duroch Islands**
Roche Coupvent *see* **Coupvent Point**
Coupvent Islands *see* **Duroch Islands**

Coupvent Point. 63°16' S, 57°36' W. A point, with several offlying rocks, projecting N from the N coast of Trinity Peninsula, 8 km SW of the Lafarge Rocks. In Feb. 1838, during FrAE 1837-40, Dumont d'Urville named a feature near here as Roche Coupvent (i.e., "Coupvent rock"), for Auguste Coupvent-Dubois. Modern-day cartographers could not find Dumont d'Urville's rock, so, after a survey by Fids from Base D in 1945-47, and aerial photos taken by FIDASE in 1956-57, UK-APC, on Feb. 12, 1964, named this point as Coupvent Point, in order to preserve the French commander's naming. US-ACAN accepted this situation. Dumont d'Urville named another cape in this area, as Cap Huon, but in 1945 FIDS couldn't find such a cape either, and applied the name Huon to Huon Bay instead. The Cap Huon the Frenchman had thus named may well

have been what later became known as Coupvent Point.

Coupvent-Desbois, Auguste-Élie-Aimé. b. May 8, 1814, Dunkirk. Ensign on the *Zélée* during FrAE 1837-40. In the Torres Strait, on Dec. 13, 1839, he was transferred to the *Astrolabe* to replace Vincendon-Dumoulin when that officer fell sick. On Dec. 12, 1840 he was promoted to lieutenant commander. He eventually attained the rank of admiral, and died in 1892.

The *Courier*. Sealing schooner from Stonington, Conn., which spent the 1831-33 period in the South Shetlands, in company with the *Charles Adams*. Crew of the *Courier*: John Barnum (captain), Thomas Davisson (1st mate), George Elliott (2nd mate), William Lewis (3rd mate), Ebenezer Prentice, Jacob Walters, David Walker, Robert McBrian, William Lynch, Enoch Smith, Charles Williams, and William Weaver.

Bahía Court *see* **Pampa Passage**

Nunatak Court *see* **Court Nunatak**

Roca Court *see* **Court Nunatak**

Court, Arnold A. b. June 20, 1914, Seattle, but grew up in Norman, Oklahoma, son of Polish-Jewish immigrants, both teachers, university professor Nathan A. Court and his wife Sophie. He graduated from the University of Oklahoma, in 1934, in geography and mathematics, joined the U.S. Weather Bureau in 1938, and in Aug. 1939 was chosen to be their observer at West Base during USAS 1939-41, during which expedition he studied meteorology. He was only one of two meteorologists on the expedition (the other being Herb Dorsey). He left the Bureau in 1943, and from 1946 to 1951 was a meteorologist with the Army. In 1949 he got his masters degree, in climatology, from the University of Washington, and from 1962 was professor of climatology at California State University, at Northridge, and head of the department from 1972. He married Corinne. He died on Sept. 13, 1999, in Northridge.

Court Nunatak. 73°22' S, 61°36' W. A nunatak, 5 km long, and rising to 685 m (the Chileans say 671 m), close E of the mouth of Meinardus Glacier, on the W side (i.e., at the head) of New Bedford Inlet, NW of Cape Kidson, on the Lassiter Coast, on the E coast of Palmer Land. Discovered and photographed aerially on Dec. 30, 1940 by personnel from East Base, during USAS 1939-41. In Dec. 1947 it was photographed aerially by RARE 1947-48, and, at the same time, surveyed and charted from the ground by a combined sledging team of RARE personnel and Fids from Base E. Named later by FIDS for Arnold Court. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the British gazetteer of 1955, on a U.S. Hydrographic Office chart of the same year, and on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. It appears as Nunatak Court on a 1962 Chilean map, and, despite the fact that a 1966 Chilean map has it as Roca Court (i.e., "Court rock"), that (i.e., Nunatak Court) is the name that figures in their 1974 gazetteer. It was again photographed aerially by USN, 1965-67.

Court Ridge. 77°20' S, 146°52' W. A low, ice-drowned ridge, running from the NW extremity of the Haines Mountains to the Sulzberger Ice Shelf, in the Ford Ranges of Marie Byrd Land. Discovered on the Northeast Flight of Dec. 15-16, 1934, during ByrdAE 1933-35. Named by US-ACAN in 1947, for Arnold Court.

Mount Courtauld. 70°21' S, 67°28' W. A rounded, mainly ice-covered mountain, rising to 2105 m (the British say 1830 m), between Chapman Glacier and Meiklejohn Glacier, 14 km E of the N end of George VI Sound and the rocky ridge marking the N side of the mouth of Naess Glacier, on the W coast of the Palmer Land. First photographed aerially and surveyed from the ground in Oct. 1936, by BGLE 1934-37. Surveyed from a distance in 1949, by Fids from Base E. Named by UK-APC on March 31, 1955, for Augustine Courtauld (1904-1959), of Courtauld's, British Arctic explorer who helped BGLE. Mr. Courtauld later became high sheriff of Essex (1953). His autobiography is called *Man the Ropes*. US-ACAN accepted the name later in 1955, and it appears on a U.S. Hydrographic Office chart of that year. BAS personnel from Base E surveyed it again between 1962 and 1972.

Courtier Islands. 67°52' S, 68°44' W. A group of about 24 small islands and rocks, the highest reaching an elevation of 30 m above sea level, in Marguerite Bay, close SW of Emperor Island, in the Dion Islands, off the W coast of the Antarctic Peninsula. The Dion Islands were discovered and roughly mapped in 1909, by FrAE 1908-10. The Courtier Islands were visited and surveyed in June 1949 by Fids from Base E, and named by them as Courtier Islets, in association with Emperor Island. UK-APC accepted this name on on March 31, 1955, and US-ACAN followed suit that year. On July 7, 1959, UK-APC redefined them as islands, and US-ACAN followed suit in 1963. In 1963 an RN Hydrographic Survey unit, working on the *Protector*, surveyed these islands again, and they appear (as Courtier Islands) on the 1964 chart prepared by the survey.

Courtier Islets *see* **Courtier Islands**

Courtney Peak. 79°14' S, 83°35' W. Rising to 1060 m, in the N part of the Gross Hills, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Kenneth N. Courtney, USN, electronics technician in Antarctica for 6 summers between 1960 and 1966.

Cousins, Michael John "Mike." b. 1937, Leicester. On leaving school he became an apprentice engineer. A mountain climber, he joined FIDS in 1961, as a meteorologist, and wintered-over at Base B in 1962, at Base T in 1963, and at Base E in 1965 (that year also as base leader). He went to work for Outward Bound, in Abderdyfi, in Wales, at Glenmore Lodge, in Aviemore, in Scotland, and in 1970, in Wales, he married Alison Rushton. In 1971 he became a student mathematics teacher at Bangor Normal College, in Wales, but transferred to the new department of outdoor education at the same college. Then he became deputy manager of the Kent Mountain Centre, at Llanberis, in Snowdonia, where he and his wife also bought the Grosvenor Hotel in 1978. Then he became the manager of the Kent, and retired in 1995. In 1985 he and his wife had moved to the village of Capel Curig. Mrs. Cousins continued in the hospitality industry, and in 2000 they both bought and ran an art gallery. He died on Nov. 8, 2008.

Cousins Rock. 75°16' S, 133°31' W. An isolated rock, E of the upper part of Berry Glacier and Patton Bluff, 5.5 km NE of Coleman Nunatak, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Michael D. Cousins, ionosphere physicist at Siple Station in 1969-70.

Cousteau, Jacques-Yves. b. June 11, 1910, Saint-André-de-Cubzac, France. French naval officer and undersea explorer. He spent the summers of 1972-73, 1973-74, and 1974-75 in the Antarctic Peninsula area, in his vessel, the *Calypso*. He died on June 25, 1997.

Coutelenq, Joseph-Marie-Antoine. b. June 16, 1796, La Seyne, France. Carpenter on the *Zélée* during FrAE 1837-40. He died at Hobart on Jan. 8, 1840.

Caleta Couyoumdjian. 64°54' S, 63°06' W. A cove opening to the immediate SSE of Léniz Point, on the S coast of Argentino Channel, with southern access to Paradise Harbor, 1.5 km S of Bryde Island, on the Danco Coast, on the W coast of Graham Land. Named by the Chileans for Capitán de corbeta Hernán Couyoumdjian Bergamnali (b. 1942, Santiago), who joined the Navy in 1956, was skipper of the *Yelcho* when that vessel rescued the *Lindblad Explorer* during its 1979 accident, and retired in 2001, as a vice admiral. The Argentines call it Caleta Hubac, after Ángel Hubac (b. ca. 1780), a Frenchman who came to Argentina at the beginning of the 19th century, and who fought against the British in 1819.

Couzens Bay. 80°35' S, 160°30' E. A deep, wide, ice-filled bay, 16 km long, immediately S of Cape Selborne, entered between Senia Point and Cape Goldschmidt, on the W side of the Ross Ice Shelf. Named by the Northern Party of NZGSAE 1960-61, for Lt. Thomas Couzens, of the Royal NZ Armored Corps (*see* **Deaths**, 1959). NZ-APC accepted the name in 1961, and US-ACAN followed suit later that year.

Couzens Saddle. 80°31' S, 159°35' E. A saddle, at an elevation of about 500 m, between Miscast Nunataks to the W and Mount Madison to the E, and between Byrd Glacier to the N and Couzens Bay to the S. Named by US-ACAN in 2003, in association with the bay. NZ-APC accepted the name on Feb. 27, 2003.

The *Covadonga*. Chilean sloop which took

part in ChilAE 1947-48 (Capt. Jorge Gándara Bofill); ChilAE 1948-49 (Captain Gándara); ChilAE 1953-54 (Capt. Raúl del Solar Grove); ChilAE 1954-55 (Captain del Solar); and ChilAE 1964-65 (Captain Alfredo Barros Greve).

Bahía Covadonga *see* **Covadonga Harbor**

Paso Covadonga *see* **Rodman Passage**

Puerto Covadonga *see* **Covadonga Harbor**

Rada Covadonga *see* **Covadonga Harbor**

Covadonga Harbor. 63°19' S, 57°55' W. A small extension of the NE corner of Huon Bay, immediately S of Cape Legoupil, and in the vicinity of Schmidt Peninsula and Kopaitic Island, Trinity Peninsula, close to General Bernardo O'Higgins Station, off the W coast of the Antarctic Peninsula. Named by ChilAE 1947-48 as Puerto Fragata Covadonga, for their frigate, the *Covadonga*, which first anchored here that season. It appears on the expedition's charts of 1948 both as Puerto Fragata Covandonga and Bahía Covadonga. The S part of this harbor appears on the same charts as Ensenada Teniente Galvez, named for a lieutenant on the expedition. In 1951 the harbor itself appeared for the first time on a Chilean chart in its abbreviated form, Puerto Covadonga, and the S part now appeared as Ensenada Galvez (a name that would subsequently fall into disuse). Photographed aerially by FIDASE in 1956-57. Since 1961 the Chileans have been calling the harbor Rada Covadonga (i.e., the "Covadonga roads"), which gives a better idea of the feature. It appears as such on one of their 1967 charts, and in their 1974 gazetteer. It appears on a 1963 U.S. Hydrographic Office chart as Covadonga Harbor, and that is the name that was accepted by US-ACAN in 1964, and by UK-APC (as Covadonga Harbour, of course), on Feb. 12, 1964.

Roca Cove *see* **[2]Cove Rock**

Rocher Cove *see* **[2]Cove Rock**

[1]Cove Rock *see* **Cave Island**

[2]Cove Rock. 61°54' S, 57°48' W. A low offshore rock, 5 km W of North Foreland (the NE tip of King George Island) in the South Shetlands. Charted in 1937 by the personnel on the *Discovery II*, and descriptively named by them as Cone Rock. However, through an error, it appears as Cove Rock on a 1942 British chart, and that was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the British gazetteer of 1955. It appears as Roca Cove on a 1949 Argentine chart, and as Rocher Cove on a French chart of 1954. When the Chileans started calling it Roca Cove too, the Argentines changed it to Roca Bóveda, and as such it appears on one of their 1953 charts, and in their 1970 gazetteer. It appears in the 1974 Chilean gazetteer as Roca Cove. Originally plotted in 61°54' S, 57°51' W, it was replotted in late 2008 by the British.

Covert Glacier. 77°54' S, 163°04' E. Flows from the NE part of the Royal Society Range, between Pearsall Ridge and Stoner Peak, joining the Blue Glacier drainage in the vicinity of Granite Knolls, in Victoria Land. Named by US-ACAN in 1992, for Kathy L. Covert, USGS cartographer, leader of the two-person USGS satellite surveying and seismology team at Pole Station in the winter of 1982. She was also senior member of the geodetic control party at Minna Bluff, Mount Discovery, White Island, and Beaumont Island, in the summer of 1986-87.

Coves. There are many coves in Antarctica. The Spanish word for a cove is "caleta," but one might also *see* "ensenada."

Rocas Covey *see* **Covey Rocks**

Covey Rocks. 67°33' S, 67°43' W. A small, compact group of 6 rocks in Laubeuf Fjord, midway between Piñero Island and Cape Sáenz, off the Loubet Coast, on the W coast of Graham Land. First roughly surveyed in 1936, by BGLE 1934-37. Re-surveyed in Sept. 1948, by Fids from Base E, who named it for its resemblance to a covey of partridges sitting in a field. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears in the British gazetteer of 1956, and on a British chart of 1957. It appears on a Chilean chart of 1962 as Rocas Covey, and that is the name that figures in the Chilean gazetteer of 1974. By 1978 the Argentines were calling this feature Rocas Gorriti, after the Argentine patriot Juan Ignacio Gorriti (1776-1842).

Lake Cowan. 68°32' S, 78°25' E. A lake which, in plan, resembles a a seal, it lies about 800 m S of Lake Vereteno, in the E part of the Vestfold Hills. Visited by ANARE parties since 1957, it was named by ANCA on May 18, 1971, for Dave Cowan, weather observer who wintered-over at Davis Station in 1969. He passed this lake with an ANARE party in March 1969, on the way to Platcha. US-ACAN accepted the name in 1973.

Cowan, Alan Normington. b. June 13, 1929, London. A doctor in Red Hill, Australia, he became medical officer at Casey Station in 1977. An authority on seabirds, he later lived in Canberra.

Mount Cowart. 83°42' S, 56°09' W. Rising to 1245 m, midway along Gale Ridge, in the Neptune Range, in the Pensacola Mountains. Mapped by USGS from 1964 USN air photos, and from ground surveys conducted in 1965-66 during the USGS Pensacola Mountains Project. Named by US-ACAN in 1968, for Master Sgt. Ray J. Cowart (b. July 30, 1921, Pearl River, Miss. d. Sept. 20, 1992, Ferriday, La.), USAF, flight engineer and member of the USAF Electronics Test Unit, 1957-58. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974.

Cowell, Thomas Edwin. b. May 28, 1911, Boston, but raised partly in Hingham, Mass., son of railroad electrician David Holbrook Cowell and his wife Josephine Blaisdell. He joined the merchant marine at 16, and was one of the 3rd mates on the *Jacob Ruppert* during the 1st half of ByrdAE 1933-35. After the expedition he became a 3rd mate on United Fruit Company steamers down to Cuba, and on Nov. 20, 1940, he married Leah Pearl Scholes. On March 30, 1944, in Plymouth, Mass., he enlisted as a private in the U.S. Army. He later lived in Virginia Beach, Va., and died in Boston, on Jan. 2, 1977. His wife died in 1993.

Cowell Island. 69°16' S, 76°43' E. A small island partly contained in a glacier tongue, 5 km WSW of Hovde Island, on the Ingrid Christensen Coast. First mapped from air photos taken by LCE 1936-37. Max Corry and his ANARE survey party were the first to visit it, in Feb. 1969. Named by ANCA on May 18, 1971, for William D. "Bill" Cowell, cook who wintered-over at Mawson Station in 1969, and who was a member of the ANARE Prince Charles Mountains survey party that year. He had also wintered-over at Mawson in 1967, and was to winter-over at Davis Station in 1974 and 1987. US-ACAN accepted the name in 1973.

Cowie Dome. 86°25' S, 152°00' W. A dome-shaped summit at the E side of Bartlett Glacier, 3 km directly W of Lee Peak, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by NZ-APC for George Donald "Don" Cowie, leader of NZGSAE 1969-70, which was here. US-ACAN accepted the name in 1971.

Cowie Nunatak. 77°08' S, 160°21' E. A bold bluff-type nunatak, rising to 1782 m, with a cliffed E face, 8 km W of Detour Nunatak, in the upper part of Mackay Glacier, in Victoria Land. Named by NZ-APC on Nov. 4, 1999, for James Cowie, project manager of the Cape Roberts Drilling Project. US-ACAN accepted the name in 2000.

Cowley, William Ambrose. Known as Ambrose Cowley. British buccaneer, born in the West Indies, who reported that he had gone south of 60°S in 1684. That year he, William Dampier, and John Cook certainly reached the Falkland Islands in the good ship *Bachelor's Delight*, and also in 1684 Cowley drew the first maps of the Galapagos Islands, and may have named the group. He also mapped several Caribbean islands, and "discovered" the mythical Pepys Island, north of the Falklands.

Cows. Not many cows have been brought to Antarctica, for obvious reasons. During ByrdAE 1933-35, Byrd took 3 down with him on the *Jacob Ruppert*— Klondike (owned by Thurmond Chatham, of Winston-Salem, NC), Foremost Southern Girl (owned by J.C. Penney, of Hopewell Junction, NY), and Deerfoot. Refusing to walk the plank, they had to be put on board at Boston on slings. On Dec. 20, 1933, just short of the Antarctic Circle, Klondike gave birth to Iceberg, a bull calf. On Feb. 5, 1934 they were all unloaded in a crate swung over the side onto the ice just before the ship departed for NZ. Foremost Southern Girl didn't like the idea of being in Antarctica, and immediately began to walk back up the gangplank. In Dec. 1934, at Little America, Klondike, suffering from frostbite and a terrible sore, was put down. However, Foremost Southern Girl and Iceberg made it back to the States, where they were made much of, not as lunch but as luncheon guests, etc.

Cape Cox. 75°20' S, 63°08' W. Forms the NE extremity of Dodson Peninsula, at the W side of the Ronne Ice Shelf, on the Orville Coast. Discovered aerially by RARE 1947-48. Mapped by USGS from ground surveys conducted between 1961 and 1965, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Larry Eugene Cox, USARP radioman who wintered-over at Pole Station in 1964. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Mount Cox. 71°50' S, 160°32' E. A mainly ice-free peak, rising to 1960 m, in the N central part of the Emlen Peaks, 8 km N of Killer Nunatak. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Allen N. Cox, USN, R4D (Skytrain) crew chief supporting the USGS Topo East-West survey, 1962-63. He was back in Antarctica in 1963-64 and 1964-65.

Cox, Charles. b. NY. Crew member on the *Wasp*, 1822-24.

Cox, Edgar F. b. 1897, Ill. Known as "Red." He grew up first on an Illinois farm, but his parents divorced when he was a child, and his mother, Ida Schroeder (she pronounced the name as if it were "Schrader"), went to live in East St. Louis, with her brother, a railroad brakeman. In 1920, while a painter 2nd class in the U.S. Navy, serving on the *Texas*, Red married Ester, and they had a son Charles in 1922, in New York. After the Navy he became a carpenter, and they moved to Kearny, NJ, where Ester owned a beauty parlor. They later still moved to Buffalo, NY. He sold his farm there and went south on the *Jacob Ruppert* as carpenter and cowherd, and was on the shore party during the winter-over at Little America, during ByrdAE 1933-35. His mother died in Centralia, Ill., on Jan. 24, 1935, while he was away. One does not know what happened to Red.

Cox, Lawrence W. b. Christchurch, NZ. In late 1933, in Wellington, he signed on as a messman on the *Jacob Ruppert*, during the first half of ByrdAE 1933-35.

Cox, Nicholas Ievers "Nick." b. Sept. 20, 1953. BAS builder and boatman who wintered-over at Signy Island Station in 1975 and 1976. In 1980 he wintered-over at Rothera Station as builder and deputy base commander. He was later base commander at Rothera and at Signy. He was also in the Arctic, and was greatly involved in the restoration of Scott's ship, the *Discovery*.

Cox, William. b. NY. Crew member on the *Wasp*, 1822-24.

Cox Bluff. 75°49' S, 115°07' W. Composed of rock and ice, just W of Spitz Ridge, on the N side of Toney Mountain, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Tony L. Cox, geomagnetist and seismologist who wintered-over at Byrd Station in 1966. Originally plotted in 75°49' S, 115°11' W, it has since been replotted.

Cox Glacier. 72°12' S, 101°02' W. A small glacier, immediately E of Rochray Glacier, on Thurston Island, it flows S into the Abbot Ice Shelf, in Peacock Sound. Delineated from VX-6 air photos taken in Jan. 1960, and named by US-ACAN in 1960, for Lt. (jg) Jerry G. Cox, USN, helicopter pilot on the *Burton Island*, 1959-60, who made exploratory flights to Thurston Island in Feb. 1960. Originally plotted in 72°11' S, 101°15' W, it has since been replotted.

Cox Nunatak. 82°26' S, 50°34' W. Rising to 795 m, 1.5 km S of Rankine Rock, in the NE part of the Dufek Massif, in the Pensacola Mountains. Mapped by USGS from USN air photos of 1964, and from USGS ground surveys conducted during their Pensacola Mountains Project, 1965-66. Named by US-ACAN in 1968, for Walter M. Cox, photographer with MCB Special Detachment Bravo, at Ellsworth Station during the winter of 1957. Mr. Cox's studies of penguins made *Life Magazine*, but he is also remembered for setting up a secret still in his dark room and making raisin whisky. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974.

Cox Peaks. 86°03' S, 153°30' W. A series of peaks on a ridge, 8 km SE of Mount Crockett, extending eastward from the Hays Mountains to Scott Glacier, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Allan V. Cox, USGS geologist at McMurdo in 1965-66.

Cox Point. 74°56' S, 136°43' W. A rock point at the SW side of the terminus of Garfield Glacier, where that glacier discharges into Hull Bay, on the coast of Marie Byrd Land. First seen and photographed aerially during USAS 1939-41. Named by US-ACAN in 1974, for Edgar Cox.

Cox Reef. 67°45' S, 69°05' W. A group of drying rocks (rocks awash) NW of Box Reef, off the S end of Adelaide Island, and WNW of Base T. Named by UK-APC on Feb. 12, 1964, for Able Seaman Edward F. Cox (b. 1940), member of the RN Hydrographic Survey unit, which charted the reef from the *Protector*, in 1963. US-ACAN accepted the name later in 1964.

Coxcomb Hill *see* **Cockscomb Hill**

Coxcomb Peak. 76°38' S, 159°49' E. A dolerite elevation overlooking the S end of Plumstead Valley, in the Allan Hills of Victoria Land. Discovered and reconnoitered by the NZARP Allan Hills Expedition of 1964, and named by them for its coxcomb-like appearance in profile. NZ-APC accepted the name, and US-ACAN followed suit in 1965. ANCA accepted the name on Aug. 10, 1966.

Isla Coy *see* **Clear Island**, **Midas Island**

Coyer Point. 72°24' S, 113°13' W. An ice-covered point, at the N end of an ice-covered peninsula that extends into the Dotson Ice Shelf, 35 km SSE of Jacobsen Head, on the SE side of Martin Peninsula, on the Bakutis Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1967, and again from U.S. Landsat images taken in 1972 and 1973. Named by US-ACAN in 1978, for Lt. Ann E. Coyer, first U.S. Navy woman to participate in Antarctic operations (in OpDF 74 — i.e., 1973-74).

Coykendall, Kenneth Philip. b. March 12, 1900. He graduated from Dartmouth in civil engineering in 1926, and became a junior highway engineer, with the California Highway Commission, also working his way up through the officer ranks of the U.S. Naval Reserve. After World War II he was the public works officer at the Naval Air Station, in Atlanta, before being posted to San Francisco, as exec in naval construction. He was a captain when he joined the staff of Naval Support Force, Antarctica. He was at Little America V during OpDF III (i.e., 1957-58), and is reported to have uncovered Byrd's old "Snowcruiser" buried near the camp under 16 feet of snow. He married Phebe Key, and died on Dec. 7, 1960. He was buried in Arlington National Cemetery.

Crab Cove *see* **Cangrejo Cove**

Crab Creek. 62°01' S, 57°37' W. A small creek beginning at Crab Mound (hence the name given by the Poles in 1984), at the top platform of Melville Peninsula, and running down to a steep, ice-covered gully at Sherratt Bay, on the S side of King George Island, in the South Shetlands.

Crab Mound. 62°02' S, 57°37' W. A small mound, rising to an elevation of about 140 m above sea level, at the top platform of Melville Peninsula, on the S side of King George Island, in the South Shetlands. Numerous well-preserved fossil crabs were found here, hence the name given by the Poles in 1984.

Crab Stack *see* **Fortín Rock**

Crabeater Point. 68°46' S, 64°10' W. The NW extremity of a prominent ridge at the SE extremity of Mobiloil Inlet, 6 km E of Victory Nunatak, at the head of Bowman Inlet, and at the base of Hollick-Kenyon Peninsula, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Photographed aerially on Sept. 28, 1940, by USAS 1939-41, and again on Dec. 22, 1947 by RARE 1947-48, using trimetrogon air photography. Surveyed in Dec. 1958 by Fids from Base E, and named descriptively by them. From the air the ridge of which this point is the extremity resembles a recumbent crabeater seal. UK-APC accepted the name on on Aug. 31, 1962, and US-ACAN followed suit that year. In 1978 the Argentines named it (for themselves only) as Punta Pacheco, for Cabo de primera clase Federico Nicolás Pacheco, of the Argentine Air Force, who disappeared in 1950, off Tierra del Fuego, in an Avro Lincoln B019 airplane, after returning from Antarctica. They plotted it in 68°43' S, 64°04' W. The Chileans call it Punta Lepe, for Cabo (a "cabo"

is an enlisted man, equivalent to a corporal) Víctor Lepe, who took part in an exploration of Robert Island (in the South Shetlands) during ChilAE 1962-63. They plotted it in 68°42' S, 64°10' W.

Crabeater seals. *Lobodon carcinophagus*. The most common seal in the world; a true seal (family: Phocidae). There are between 6 and 15 million. Native to Antarctica, the crabeater is the fastest pinniped on land, able to travel at 15 or 16 mph. Average length is 8 feet, average weight is 450 pounds. The female is the larger. It feeds on krill rather than on crabs, and is itself the prey of killer whales. The pups are born in Sept. and Oct., at a period when humans used not to be able to get to Antarctica. Only three young ones had ever been seen (two in the 19th century) when, on Dec. 15, 1929 a young one was snared at the Bay of Whales and brought into Little America and placed in a playpen, where it whistled through its nose. On Oct. 22, 1945, Jock Lockley, FIDS leader at Port Lockroy, bagged one on the pack-ice off Graham Land. It was 59 inches long. It wound up at a good address, South Kensington, in the Natural History Museum. Dick Butson, in his published diary, tells the most sic [sic], awful story of killing a three-year old male crabeater. Butson shot it eight times in the head, but it still wasn't dead, and led the good doctor "quite an exciting chase over the ice. In his state of agony [i.e., the seal's, not Butson's], it was interesting to note that he [i.e., the seal, not Butson] tried to serve [sic] the female Weddell that was already dead [i.e., the four-year old female with a 6 mm embryo and a large corpus lutem [sic] that Butson had already killed]." It is far more interesting to speculate on how a FIDS physician might act if the shoe had been on the other foot.

Cap des Crabiers *see under* **Des**

Mount Crabtree. 77°00' S, 144°58' W. Rising to 820 m, 6 km ESE of Mount Fonda, in the north-central part of the Swanson Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41, and named later by Byrd for biologist Dr. Ernest Granville Crabtree (1883-1947), consultant to Byrd for Operation Highjump II (which never happened), and also for OpDF I (1955-56). US-ACAN accepted the name in 1970.

Crabtree, Richard David. b. May 31, 1952, Bradford, Yorks. BAS glaciologist who spent 1976-77, 1978-79, 1980-81, and 1983-84, at Rothera Station.

Crack Bluff. 86°33' S, 158°38' W. A bluff, rising to 2810 m, 13 km SE of Kutschin Peak, on the W side of Nilsen Plateau, in the Queen Maud Mountains. Named by Ed Stump of the Ohio State University field party here in 1969-70, which geologically mapped the bluff on Dec. 27, 1969. It has a peculiar sub-horizontal crack containing breccia fragment exposed on the SW face. US-ACAN accepted the name.

Cracktrack Glacier. 71°40' S, 166°30' E. Flows W from the central part of the Homerun Range into the upper part of Tucker Glacier, in the Admiralty Mountains of Victoria Land. The glacier provided an access route from Tucker Glacier to Field Névé, for Rob Findlay's NZARP geological party during the 1981-82 season. One of the motor toboggan tracks was torn badly here, necessitating a makeshift field repair with wire. Named by NZ-APC in 1982. US-ACAN accepted the name.

Mount Craddock. 78°38' S, 85°12' W. A prominent peak rising to 4638 m, at the S extremity of the Craddock Massif, it marks the highest point on the S end of the Vinson Massif, in the Sentinel Range of the Ellsworth Mountains. Named by US-ACAN in 1966, for Campbell Craddock. However, over the years since that time, it became evident that what had been called Mount Craddock was actually a massif, and in 2006, US-ACAN accepted the new name of Craddock Massif (q.v.), relegating the name Mount Craddock to the peak at the S extremity of the massif.

Craddock, John Campbell "Cam." b. April 3, 1930, Chicago. In 1953 he married Dorothy "Dottie" Dunkelberg, and from 1954 to 1956 was a geologist with Shell Oil. Long associated with the geology department of the University of Minnesota, he was one of the first geologists to be funded by USARP after IGY, and in 1960-61 led the University of Minnesota geological expedition to the Jones Mountains, and another of their expeditions to Antarctica in 1962-63. In 2003 he became professor of geology at Macalester, and in 2005 he returned to Antarctica, as a tourist, with his wife. He died on July 23, 2006, in a nursing home in St. Paul, Minn.

Craddock Crags. 80°16' S, 82°08' W. Steep, rugged rock summits rising to about 1450 m just E of Beitzel Peak, in the Marble Hills, in the Heritage Range, in the Ellsworth Mountains. Named by US-ACAN in 2004, for geologist John P. Craddock, member of a USARP Ellsworth Mountains expedition in 1979-80.

Craddock Massif. 78°36' S, 85°18' W. A mountain massif at the SE side of the the Vinson Massif, between Hammer Col and Severinghaus Glacier. Its highest point is Mount Rutford (4477 m), and it also includes (working from N to S): Bugueño Pinnacle, Rada Peak, and Mount Craddock. This massif was originally (in 1966) named Mount Craddock. For the story of the change in definition, *see* **Mount Craddock**.

Craddock Nunatak *see* **Cape Menzel**

Craft, Christian. b. Nov. 30, 1871, Hull, son of tallow chandler William Edmund Craft and his wife Rebecca Dalton. When Christian was three, the family left Hull on the *Othello*, arriving in New York on April 21, 1875, bound for Wisconsin (or "Westconstance" as it amusingly says on the ship's manifest), the father trying farming there, in Hartland. Rebecca had been there two years before she married. The family stayed on in Hartland, but Christian went back to England, joined the Merchant Navy as a stoker, and in 1892, in Hull, married Ellen Louisa Dimberline, and they would have many children (it ran in the family; his parents had 15). He eventually became a ship's engineer. On July 26, 1907, at Poplar, in London, he signed on as 2nd engineer of the *Nimrod*, during the first half of BAE 1907-09. He was discharged at Lyttelton, NZ, on March 21, 1908. He, Ellen and five of the 7 children left Liverpool on March 12, 1914, on the *Cedric*, and arrived in New York 10 days later (two of the children had come over the year before, on the *Baltic*), bound for Milwaukee where he got a job as an engineer. On May 11, 1920 he became a U.S. citizen. By that time his father was still farming in Hartland, and his mother was running a boarding house. In 1930 he and the family were still in Milwaukee, and his parents were still in Hartland. Ellen died in Milawaukee in 1960. It is not known when Christian Craft died.

Craft Glacier. 72°12' S, 101°22' W. A valley glacier, about 8 km long, just W of Hendersin Knob, on Thurston Island, it flows S to the Abbot Ice Shelf, in Peacock Sound. First delineated from air photos taken in Dec. 1946, during OpHJ 1946-47. Named by US-ACAN in 1961, for Ensign Charles Craft, USN, helicopter pilot on the *Glacier*, 1959-60. He made exploratory flights over here in Feb. 1960. Originally plotted in 72°11' S, 101°33' W, it has since been replotted.

Craggy Island. 62°28' S, 60°18' W. A long, narrow, craggy island, rising to an elevation of 64 m above sea level, close off the E side of Desolation Island, and about 700 m SE of Punta Este, it forms the NE side of Blythe Bay, off Livingston Island, in the South Shetlands. It was certainly known to sealers by 1820, as they used Blythe Bay, and it appears, roughly charted, on Fildes's chart of 1821, as Fildes Rocks. Charted and named descriptively as Craggy Islet, by the personnel on the *Discovery II* in 1935. It appears as such on a British chart of 1948, and that is the name that was accepted by UK-APC on Sept. 20, 1955. It appears in translated form on an Argentine chart of 1954, as Islote Escarpado, and that is the name seen in the 1970 Argentine gazetteer and in the 1974 Chilean gazetteer. On July 7, 1959, UK-APC re-defined it, as Craggy Island, and it appears as such in the British gazetteer of 1961, and on a British chart of 1962. US-ACAN accepted this new name in 1963. The British were the latest to replot this feature, in late 2008.

Craggy Islet *see* **Craggy Island**

Craggy Point *see* **Escarpada Point**

Cragsman Peaks. 60°38' S, 45°40' W. Peaks rising to 485 m, on the W side of Marshall Bay, extending from Cape Vik northwest to Coldblow Col, on the S coast of Coronation Island, in the South Orkneys. Surveyed by Fids from Signy Island Station in 1948-49, and again between 1956 and 1958, and so named by UK-APC on July 7, 1959, because the feature is excellent for mountain climbers. US-ACAN accepted the name in 1964.

The Craig *see* **Ailsa Craig**

Craig Pond. 77°34' S, 160°46' E. A frozen

freshwater pond, 1.4 km E of Dauphin Pond, in the flat upland area called Labyrinth, at the W end of the Wright Valley, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, for Scott D. Craig, of the U.S. Fish and Wildlife Service, a member of a USAP party that field-sampled Labyrinth ponds in 2003-04.

Craig Ridge. 77°31' S, 86°04' W. A small rock ridge, close NE of Polarstar Peak, in the Sentinel Range of the Ellsworth Mountains. Named by the University of Minnesota Geological Party 1963-64, for James A. Craig, helicopter crew chief with the 62nd Transportation Corps Detachment, who assisted the party here that year. On this ridge, the geological party found a fossil leaf of the plant Glossopteris. US-ACAN accepted the name in 1966.

Nunatak Craigdallic. 66°01' S, 60°30' W. Immediately to the E of Nunatak Montero, it is one of several nunataks on Jason Peninsula named by the Argentines. The name is an error, at least as it appears in the gazetteers. It should be Craigdallie.

Crain Ridge. 74°45' S, 63°50' W. A ridge, at an elevation of about 1050 m above sea level, along the N flank of Strange Glacier, in the Latady Mountains, at the Lassiter Coast, in Palmer Land. Roughly surveyed by a combined FIDS-RARE sledging team, in 1947-48. Mapped by USGS from ground surveys conducted between 1961 and 1965, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Harold D.K. Crain (b. June 1937), utilitiesman who wintered-over at Pole Station in 1967. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Crame, James Alistair. b. Aug. 15, 1949, Harrow. In 1976 he joined BAS as a geologist and paleontologist, and spent 4 summer seasons in Antarctica, collecting marine fossils —1977-78 at Alexander Island; 1981-82 at James Ross Island; 1983-84 at Livingston Island, in the South Shetlands; and 1985-86 back at Alexander Island.

Crame Col. 63°49' S, 57°54' W. It runs NE-SW, at an elevation of about 175 m above sea level, between the Bibby Point massif and Lachman Crags, near the N tip of James Ross Island. Surveyed by Fids from Base D between 1952 and 1954, and geological work was done here in 1981-83 by BAS personnel. Named by UK-APC on April 3, 1984, for James Crame. US-ACAN accepted the name.

Isla Crámer *see* **Lautaro Island**

Cramer, Parker Dresser "Shorty." b. March 16, 1896, Lafayette, Ind., son of Fannie Cramer (who later married a gentleman named Ward). When he was 13 he built his first glider, and at 19 went to work for Curtiss, as a mechanic. He joined the Army in 1917, and within a year had been a private, Air Corps cadet, pilot, instructor at Kelly Field and Brooks Field, in Texas, and test pilot at Scott Field, Belleville, Ill. After the war he went into commercial aviation, and was a member of Mayor Hylan's New York aerial police, and later barnstormed, operated airfields, and taught flying. In 1926 he joined the aeronautics branch of the Department of Commerce. He had Arctic experience, and was holder of the Nome to New York flying record, and in 1928, with Bert Hassel had tried to fly the Atlantic via Greenland. His 2nd attempt was in 1929. He was chosen to be the relief pilot on the 2nd half of the Wilkins-Hearst Expedition to Antarctica in 1929-30. On July 27, 1931, with radioman Oliver Pacquette, he left Detroit in a 3rd attempt to fly the Atlantic by way of Greenland. This was all done in some secrecy, and he landed in Greenland on Aug. 5, 1931. On Aug. 6 he took off for Iceland, and on Aug. 7 he came down in the sea off Iceland, but succeeded in getting the plane aloft and eventually getting to the Faeroes. On Aug. 9 he was in the Shetlands, taking off from Lerwick at 9 that morning, bound for Copenhagen. He was never seen again. On Sept. 16, 1931 they found the wreckage of the plane. The cockpit clock had stopped at 1.30 A.M. In October, William Cramer, Parker's brother, was in the Shetlands, on the hunt for his missing brother, who he was convinced was still alive. Three days later he gave up. In March 1932 a Dutch trawler found Cramer's papers floating in the North Sea.

Paso Crámer Norte *see* **Paso De Castilla**

Crampton, Roy William. b. 1925, Medway, Kent, son of William P. Crampton and his wife Rita Maud Bear. He joined FIDS in 1949, as a meteorologist, and sailed from London to Montevideo in 1949, wintering-over at Base G in 1950. He lived in Bath for a while, married Dorothy R. Scutts in Wells, in 1958, and became a planter in the Cameroons, moving to Nigeria about 1960.

Crandall Peak. 71°27' S, 168°41' E. A mostly snow-covered peak, rising to 1840 m, midway along the W wall of Pitkevich Glacier, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. Eugene D. Crandall, USNR, aircraft commander with VX-6 during OpDF 68 (i.e., 1967-68).

Ensenada Crane *see* **Crane Glacier**

Estrecho Crane *see* **Crane Glacier**

Glaciar Crane *see* **Crane Glacier**

Seno Crane *see* **Cabinet Inlet**

Crane Channel *see* **Crane Glacier**

Crane Cove. 66°17' S, 110°31' E. A small, shallow cove (or bay), about 160 m in extent, entered from the W between the N side of Bailey Peninsula and an unnamed island northward, just S of Budnick Hill, in the S part of Newcomb Bay, in the Windmill Islands, off the Budd Coast. Numerous low rocks almost join Bailey Peninsula and the unnamed island, forming the head of the cove and separating it from a similar cove just eastward. First charted in Feb. 1957, by a survey party from the *Glacier*. The name was suggested at that time by Lt. Robert C. Newcomb (*see* **Newcomb Bay**) for Electronics Technician 3rd Class Robert I. Crane, USN, member of the survey party. US-ACAN accepted the name in 1958. ANCA accepted the name on Oct. 22, 1968.

Crane Glacier. 65°20' S, 62°15' W. A narrow glacier flowing for about 50 km in an ENE direction through a deep trough into Exasperation Inlet, the largest of the glaciers that flow into this inlet, on the Oscar II Coast of Graham Land. Discovered and photographed on Dec. 20, 1928, by Wilkins, as he flew over this area. He thought it was a major channel cutting the Antarctic Peninsula in half from E to W, at a latitude of about 66°35' S, and called it Crane Channel, for Charles Kittredge Crane (1881-1932), of Dalton, Mass., and Los Angeles, social welfare expert and crusader against narcotics. It appears as such on an American Geological Survey map, in 67°S, and on a U.S. Hydrographic Office chart of 1930, in 66°30' S. It also appears as such on British charts of 1933 and 1940. However, in 1936, BGLE 1934-37 found that there was no such channel, and gave the name "Crane" to what they assumed to be a long inlet on the E coast of the Antarctic Peninsula, in 66°35' S, 64°W, calling it Crane Inlet. It appears as such on a U.S. Hydrographic Office chart of 1939, as Ensenada Crane (a translated name) on an Argentine chart of 1946, as Estrecho Crane (another way of translating it) on a Chilean chart of 1947, and on another South American chart of 1948 as Ensenada Mercedes (a name that never caught on). Following new surveys conducted by Fids from Base D, and from further study of Wilkins's photos, it was determined that the feature Wilkins has seen and photographed was, indeed, this glacier, even though the glacier lies about 120 km N of Wilkins' "Crane Channel." UK-APC accepted the name Crane Glacier on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears as Glaciar Crane on an Argentine chart of 1953, and that is the name found in the 1970 Argentine gazetteer, and in the 1974 Chilean gazetteer. It appears as Crane Glacier in the 1955 British gazetteer, and on a British chart of 1957.

Crane Inlet *see* **Crane Glacier**, **Cabinet Inlet**

Cranfield, William Joseph "Bill." b. May 1933, Christchurch, NZ. He joined the Air Training Corps at 18, and flew with the Canterbury Air Club. After 70 hours flying time, he joined the RNZAF. In 1956 he was a flying officer, an instructor at Wigram Flying School, had over 1000 hours flying time, and, most important, had experience with Austers, a plane to be used on BCTAE 1956-58, an expedition he was selected for. He flew as 2nd pilot with Claydon in support of Hillary's depot laying party, 1957-58. He was also a member of the Darwin Glacier Party of that year. He retired as wing commander. He was part of the 12-man reunion at Scott Base in 2000 that also included Wally Tarr and John Claydon.

Cranfield Icefalls. 79°56' S, 158°40' E. A series of about 8 spectacular icefalls, running

E-W, and falling steeply from Bucknell Ridge into the narrowest portion of Darwin Glacier, near that glacier's mouth. Named by the Darwin Glacier Party of BCTAE 1957-58, for Bill Cranfield. ANCA accepted the name on Nov. 24, 1961, and US-ACAN followed suit in 1965.

Cranfield Peak. 83°38' S, 160°54' E. Rising to 2850 m, 10 km S of Mount Weeks, in the most southerly sector of the Queen Elizabeth Range. Tentatively named Sentinel Peak in 1958, by the NZ Southern Survey Party of BCTAE, for the fact that in the peak's steep rocky slopes is exhibited horizontally stratified sandstone. Later renamed for Bill Cranfield (q.v.), who was of great assistance to this party. US-ACAN accepted the name Cranfield Peak in 1966.

Cranton Bay. 74°10' S, 102°10' W. A bay, 30 km long and 30 km wide, S of Canisteo Peninsula, at the E end of the Amundsen Sea. The S limit of the bay is formed by the Backer Islands and an ice shelf which separates this bay from Pine Island Bay. Mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1968, for Harvard-trained ex-flyer Lt. Elmer Mitchell Cranton (b. Sept. 17, 1932, Haverhill, Mass.), USN, who was flown down from Christchurch to McMurdo in a C-130, opened up the new dispensary there that had been built only the year before, and was due to be medical officer at McMurdo for that winter, but, instead, was transferred to Byrd, not only as medical officer but also as officer-in-charge of the station (he replaced the two men scheduled for those roles). Toward the end of his stay at Byrd, he broke a bone in his tibia, and was flown to McMurdo for a week, and from there on to Christchurch (followed by a week recuperating on the beach in Hawaii). In 1959, while flying from Copenhagen to Anchorage, he flew over the North Pole. Later, Dr. Cranton ran a clinic in Troutdale, Va., which became famous for chelation therapy, and subsequently the Mount Rainier Clinic, in Washington State.

Crary, Albert Paddock "Bert." b. July 25, 1911, Pierrepont, NY, son of dairy farmer Frank J. Crary and his wife Ella. Geophysicist, a pioneer in polar glaciogeophysics, and one of the leading figures in Antarctic history. Known as "The Unfreezable Man." During IGY (1957-58) he was the scientific leader at Little America V, heading the wintering-over scientific party in 1957. That season he made a seismic traverse of the Ross Ice Shelf. He was deputy leader of the U.S. scientific program in Antarctica, 1957-59, and from 1959 chief scientist with USARP, being co-ordinator of all scientific developments on the continent. He was back in Antarctica for the 1960-61 season. On Dec. 10, 1960 he led a scientific traverse party of 8 men out of McMurdo Sound in a Sno-cat, and 63 days later arrived at the South Pole, on Feb. 12, 1961. Crary thus became the first person to stand at both Poles (he had flown to the North Pole in 1952). His last trip south was in 1966, on board the *Eltanin*. On Feb. 16, 1968, in Washington, he married (as his second wife) Mrs. Mildred Reade Rodgers Bernhaut. He died on Oct. 29, 1987, in Washington, D.C.

Crary Bank. 75°00' S, 169°00' E. A NE-trending submarine feature of the Ross Sea. Named internationally in 1988, for Albert Crary.

Crary Fan. 74°00' S, 33°00' W. A trough mouth fan in the Weddell Sea. The name was proposed by Heinrich Hinze, and accepted internationally in June 1997, in honor of Albert Crary.

Crary Ice Rise. 82°56' S, 172°30' W. In the south-central part of the Ross Ice Shelf, at the Siple Coast, between the Transantarctic Mountains and Roosevelt Island. Named for Albert Crary, the name was accepted by US-ACAN in 1976. In the 1970s this feature was investigated by the USARP Ross Ice Shelf Project. The Americans built a camp here.

Crary Knoll. 78°16' S, 161°37' E. A symmetrical, ice-covered knoll, rising to a height of 1520 m above sea level, 3 km SSE of Holmes Block, in the area of the Skelton Glacier, in Victoria Land. Named by US-ACAN in 1995, for Albert Crary (q.v.), who led geological traverses past this feature on his way to the Polar Plateau, while en route to the Pole and other destinations.

Crary Mountains. 76°48' S, 117°40' W. A group of ice-covered mountains, 56 km in extent, and rising to 3665 m (in Mount Frakes), they lie about 80 km SW of Toney Mountain, just to the E of the Executive Committee Range, in Marie Byrd Land. Other features within this group include Mount Rees, Mount Steere, and Boyd Ridge. Probably seen by USAS during flights from the *Bear* on Feb. 24 and 25, 1940. Mapped during the 1957-58 oversnow traverse from Byrd Station to the Sentinel Mountains, led by Charlie Bentley, and named by him for Albert Crary. US-ACAN accepted the name in 1960.

Crary Trough *see* **Thiel Trough**

Crash Nunatak. 75°47' S, 160°38' E. An isolated nunatak between Beta Peak and Mount Bowen, in the Prince Albert Mountains, in Victoria Land. Named by the Southern Party of NZGSAE 1962-63 for the R4D plane crash near here on Nov. 25, 1962. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Crater Cirque. 72°38' S, 169°22' E. On the S wall of Tucker Glacier, immediately W of its junction with Whitehall Glacier. There is a an attractive small lake on the floor of this cirque, with red and green algae in it, and in the sunny, sheltered surrounding rock walls there are to be found some nests of Wilson's petrels and skuas, and an abundant nest of snow petrels, as well as running streams and relatively lush growths of moss and lichens. Named descriptively by NZGSAE 1957-58. A survey station, 540 m high, is located on a knob above the wall of the cirque. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Crater Heights. Just to the N of Crater Hill, on Hut Point Peninsula, Ross Island. Discovered in 1902 by BNAE 1901-04, and named by Scott. A term no longer used.

Crater Hill. 77°50' S, 166°43' E. A hill, rising to 335 m, and with a volcanic crater at its summit, about 1.5 km N of Observation Hill, and 1.7 km NE of McMurdo Station, in the S part of Hut Point Peninsula, Ross Island. The view from here is outstanding. Scott discovered and named it descriptively in Feb. 1902, during BNAE 1901-04, and climbed it many times during that expedition. US-ACAN accepted the name in 1952.

Crater Lake. 62°59' S, 60°40' W. A lake in the (now) water-filled volcanic crater on the W side of Port Foster, NW of Mount Kirkwood, on the S side of Deception Island, in the South Shetlands. Surveyed by FIDS in 1953-54, and named descriptively by UK-APC on July 7, 1959. US-ACAN followed suit with the naming in 1965. On Sept. 1, 1999, the Poles re-named it Jade Crater Lake.

Mount Craven. 71°08' S, 165°15' E. A projecting-type mountain, rising to 1500 m, in the N part of the Everett Range, 6 km N of Cantrell Peak, and about 14 km NE of Mount Works, it overlooks Ebbe Glacier from the south. Mapped by USGS from surveys (see immediately below) and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Lt. Cdr. Alexander T. Craven, USN, pilot here supporting the USGS Topo West Survey party in 1962-63. He was back in 1963-64.

Craven, Thomas Tingey. b. Dec. 30, 1808, son of naval purser Tunis Craven and his wife Hannah Tingey. Hannah's father, Thomas Tingey, was commandant of the Navy Yard at Washington, DC, and it was in his house that the child was born. After Phillips Academy, he joined the USN on May 21, 1823, as midshipman, and in May 1828 was promoted to passed midshipman. Promoted to lieutenant in 1830, the same year he married Virginia Ann Nesbit Wingate, he was the commander of the *Vincennes* during USEE 1838-42. He left the expedition at Valparaíso on June 6, 1839. On April 21, 1841, at West Point, NY, he married Emily Truxtun Henderson, and in 1852 he was promoted to commander. A brilliant seaman, he was attached to the Naval Academy from 1851 to 1855, and at the outbreak of the Civil War commanded the Potomac Flotilla, being promoted to captain on June 7, 1861. He then commanded the *Brooklyn*, and took part in Farragut's attacks on Confederate forts below New Orleans. On July 10, 1862 he was promoted to commodore. His brother, Cdr. Tunis Craven, USN, was killed at Mobile Bay, in 1864. On Oct. 10, 1866 he was promoted to rear admiral. He was in command of the Navy Yard at Mare Island, San Francisco, from 1866 to 1868, and retired in Dec. 1869, eventually living in Kittery, Maine. He died at the Boston Navy Yard on Aug. 23, 1887.

Craven, Trevor Michael "Mike." He wintered-over at Davis Station in 1988, at Mawson Station in 1991, at Davis again in 1994, and also

did two winters at Macquarie Island, in 1983 and 1985.

Craw Ridge. 78°00' S, 163°00' E. A prominent ridge, trending NE from Mount Lister along the S side of Lister Glacier, in the Royal Society Range of Victoria Land. Named by NZ-APC in 1985, for Dave Craw, member of a 1980-81 NZARP geological party that reached 3700 m on Mount Lister, by way of this ridge. US-ACAN accepted the name. Professor Craw was later with the geology department at Otago University.

Mount Crawford. 77°43' S, 86°28' W. It has 2 summits, rising to 2360 m and 2255 m respectively, 5.5 km NW of Mount Dawson, in the N part of the main ridge of the Sentinel Range. Discovered aerially by Ellsworth on Nov. 23, 1935. Named by US-ACAN in 1961, for William B. Crawford, Jr., USGS cartographer with the Branch of Special Maps, who drew up the map of the Sentinel Range in 1962.

Crawford Glacier. 70°53' S, 163°13' E. A tributary glacier flowing from the E slopes of the Explorers Range, between Mount Hager and Mount Ford, descending E to join Lillie Glacier, S of Platypus Ridge. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1965. Named by US-ACAN in 1970, for Douglas I. Crawford, biologist at McMurdo, 1965-66.

Crawford Valley. 77°20' S, 161°51' E. A valley, ice-free except at the headwall, between Deshler Valley and Bowser Valley, in the Saint Johns Range of Victoria Land. Named by US-ACAN in 2005, for photographer Neelon Crawford (b. 1946, son of famous painter and photographer Ralston Crawford), a participant in the NSF's Antarctic Artists and Writers Program, for 5 field seasons between 1989 and 1994. NZ-APC accepted the name on Sept. 12, 2005.

Creagh, Arthur Burton "Burt." Known as "Hump." b. Aug. 15, 1895, Abbotsford, Vic., the elder of two sons (there were also 3 daughters) of clerk John Bagwell Creagh and his wife Martha Marina Long. His parents' marriage was rocky, and the father left home for Port Headland, Western Australia, while the mother raised Burt and the other children by herself in Abbotsford. Burt was a naval cadet for two years, and then became a motor mechanic. In Nov. 1915, at Melbourne, he enlisted as a trooper in the Light Horse, adding 11 years to his age (something he did intermittently for the rest of his life, mostly to explain how he was in the Foreign Legion before the war), but on March 2, 1916, at Camp Seymour, he went AWOL. The court martial found him guilty of desertion, and charged him £8 3s 6d for missing kit. What had actually happened was that Burt, tired of inaction, had stowed away on the *Katuna* bound for Egypt. From Suez, he made his way to London, secured a place to live on Tottenham Court Road, became a trick motor cyclist, and on Jan. 1, 1917, enlisted as a 2nd airman in the Royal Flying Corps. After being wounded in France (he said in an air battle over the Somme), he was discharged on Nov. 12, 1917 with neurasthenia. Back to trick motor cycling, he made his way to Liverpool, worked his passage over to New York as a scullion on the *St. Louis*, got a room at the Seamans' Institute on South Street, then wound up in a hospital bed at Fort McHenry, in Baltimore, which, in March 1918, is where he managed to become a U.S. citizen. However, by March 11, 1918, he was in Toronto, trying to enlist in the Canadian Army. Instead, he found work as a baker in Toronto, then later that year went back to New York, going back to sea (which is not as exciting as the story he told later of joining the U.S. Army, being knocked out of commission only two days before the Armistice, breaking his back, and being laid up for 18 months, as well as getting a silver knee cap to replace the one that had been smashed. Later in life, he would carry with him 3 scars from bullet wounds on his left knee, as well as a horseshoe tattoo'd on his right arm, which, perhaps along with the bullet wounds, bears no relevance to the war). Between 1925 and 1928 he was a member of the Geographical Society's survey party on the Russian coast. Well, perhaps. On Sept. 11, 1925, the U.S. Secret Service nabbed him for forgery. He was using the name Albert Burton Creagh. A pilot and an amateur magician, he was a seaman during ByrdAE 1928-30. Midway through the expedition, he left Little America for NZ on the *City of New York* on Feb. 22, 1929, and, rather than wait in NZ for 6 months, he and 11 others decided to head for San Francisco on the *Tahiti*, arriving in the USA on April 12, 1929. He was back for the 2nd half of the expedition, and finally, after the expedition, arrived back in NYC in 1930 as a fireman, again on the *City of New York*. Immediately upon returning to the US, he shipped aboard a tramp heading for Spain. He and several other old Byrd lads were saved from starvation at Thanksgiving (*see* **King, Harry**). He was back in Antarctica as steward and 2nd cook on the *Jacob Ruppert* for the first part of ByrdAE 1933-35, but did not winter-over, returning to NZ with the ship after delivering the men onto the ice. In NZ he began a round of bilking NZ citizens, and of pilfering supplies from the ship, which caused Capt. English to throw him in the brig for 30 days. Upon his realese he was sent back to the USA in the spring of 1934, whereupon he embarked on a new careeer as unofficial Byrd Expedition con man, touring, lecturing, taking orders for expedition artifacts, and then disappearing. He continued on at sea, and never married. On March 22, 1942, while serving as an able seaman on the unarmed and unescorted steam tanker *Muskogee*, he was torpedoed 450 miles SSE of Bermuda. He did not survive the attack. His mother died the following year.

Creagh Glacier. 78°01' S, 161°10' E. A glacier, 6 km long, flowing NE from Creagh Icefall to the vicinity of Canoe Nunatak, in the Wilkniss Mountains, in Victoria Land. Named by US-ACAN in 1995, for Gerard "Father Gerry" Creagh (died 1994), a NZ citizen, priest of Hoon Hay, Christchurch, who served as honorary U.S. Navy chaplain for over 25 summers at McMurdo. He was known as "The Chaplain of Antarctica."

Creagh Icefall. 78°02' S, 161°08' E. At the head of Creagh Glacier, in the Wilkniss Mountains of Victoria Land. Named by US-ACAN in 1995, in association witb the glacier.

Mount Creak. 76°36' S, 162°09' E. A sharp peak, rising to 1240 m (the New Zealanders say 1584 m), just N of Shoulder Mountain, and N of Fry Glacier, in the S end of the Kirkwood Range, in the Prince Albert Mountains of Victoria Land. Discovered by BNAE 1901-04, and named by Scott for Capt. Ettrick William Creak (1835-1920), RN, superintendent of compasses at the British Admiralty. US-ACAN and NZ-APC both accepted the name.

Mount Crean. 77°53' S, 159°30' E. A massive, rocky mountain, rising to 2550 m, and composed of tilted strata which are prominently visible from the E, it forms the central and highest summit of the Lashly Mountains of Victoria Land. Named by NZ-APC for Tom Crean. US-ACAN accepted the name in 1961. ANCA has also accepted it.

Crean, Thomas "Tom." b. July 20, 1877, Annascaul, co. Kerry, Ireland. He enlisted in the Royal Navy in 1893, was promoted to able seaman on July 1, 1896, and was on the *Ringaroona* at Port Chalmers, NZ, when he volunteered for BNAE 1901-04. Ten years later, as a petty officer on the *Bulwark*, he transferred to the *Terra Nova*, for BAE 1910-13. He was a major figure in the supporting party to the Pole during that expedition. He almost went on the British Antarctic and Oceanographical Expedition of 1914-17 (which failed to get off the ground), but instead was 2nd officer on the *Endurance* during BITE 1914-17. During this expedition Crean went with Shackleton on the *James Caird*, and was still with him as the "Boss" crossed South Georgia in search of help for his other men. He served in World War I, was promoted to chief petty officer on Dec. 27, 1916, and retired from the Navy in 1920, to run the *South Polar Inn* in Annascaul, where he died on July 27, 1938. Michael Smith wrote his biography in 2002, *An Unsung Hero,* and there was even a one-man play called *Tom Crean of the Antarctic*, written and starring Aidan Dooley.

Creaney Nunataks. 83°14' S, 51°43' W. Rising to 1475 m, SW of the Herring Nunataks, and 9 km W of Mount Lechner, in the W portion of the Forrestal Range, in the Pensacola Mountains. Mapped from USN air photos taken in 1964, and from USGS ground surveys conducted in 1965-66. Named by US-ACAN in 1968, for a man who doesn't exist. The real person is David Bartholomew "Dave" Greaney, Jr. [sic] (b. Feb. 16, 1930, Chicago), VX-6 aviation electrician who wintered-over at Ellsworth Station in 1957. One day he got beaten up by a penguin. The feature is shown with its erroneous name on a U.S. map of 1969, and the name was accepted by UK-APC on Nov.

3, 1971, which shows that they don't check either.

Creehan Cliff. 75°47' S, 115°26' W. About 10 km ENE of Richmond Peak, on the N side of Toney Mountain, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1971. Named by US-ACAN in 1976, for Lt. Patrick E. Creehan, USNR, VX-6 flight surgeon during OpDF 71 (i.e., 1970-71) and OpDF 72 (i.e., 1971-72).

Creeping Slope. 62°12' S, 58°26' W. A gentle slope covered with gelifluction, above Paradise Cove, where Admiralty Bay meets the Bransfield Strait, King George Island, in the South Shetlands. Named by the Poles in 1980.

Mount Creighton. 70°25' S, 65°39' E. A mountain, 5 km ENE of Mount Gavaghan, and 6 km W of Mount Gardner, in the Porthos Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos. Named by ANCA for Donald Francis "Don" Creighton (b. Dec. 6, 1940; of Oakley, Vic.), electronics engineer and medical assistant who wintered-over at Mawson Station in 1963. From the mid-1960s until 1984 he ran the Mawson Institute for Antarctic Research, at the University of Adelaide. US-ACAN accepted the name in 1967.

Cabo Crépin *see* **Crépin Point**

Cap Crépin *see* **Crépin Point**

Cape Crépin *see* **Crépin Point**

Crépin Point. 62°05' S, 58°28' W. A point marking the W side of the entrance to Mackellar Inlet, in Admiralty Bay, King George Island, in the South Shetlands. Discovered during BelgAE 1897-99, and named by de Gerlache for François Crépin (1830-1903), the director of the State Botanical Garden, in Brussels. It appears on the expedition maps. Charted in Dec. 1909 by FrAE 1908-10, it appears on their expedition maps. It appears on a 1929 British chart as Cape Crépin, was re-charted by the Discovery Investigations in 1935, and the name Crépin Point was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the British gazetteer of 1955. It appears on a Chilean chart of 1947 as Cabo Crépin, and that was the name listed in the 1970 Argentine gazetteer and in the 1974 Chilean gazetteer. On July 7, 1959, UK-APC redefined it, and US-ACAN followed suit in 1962, even though it appears on a 1962 British chart still as Cape Crépin. In late 2008 the British were the latest to replot it.

Crescent Bay. 71°37' S, 170°04' E. A cove, or small bay, along the NE side of Duke of York Island, in the S part of Robertson Bay, in northern Victoria Land. Charted and named descriptively by Borchgrevink in 1899, during BAE 1898-1900. There is an Adélie penguin rookery here. US-ACAN accepted the name, and NZ-APC followed suit.

Crescent Glacier. 77°40' S, 163°14' E. A small alpine glacier, about 1.5 km long and about 2.5 km wide, about 2 km E of Howard Glacier, in the Kukri Hills, it flows N into Taylor Valley, in Victoria Land. It was seen, but not named, by BAE 1910-13. Troy L. Péwé (*see* **Lake Péwé**) studied it, and named it in Dec. 1957, for its shape when seen from the floor of Taylor Valley. US-ACAN accepted the name in 1960.

Crescent Lake. 68°38' S, 78°27' E. A crescent-shaped lake in the Vestfold Hills, measuring about 300 m by 75 m, on an ice-covered moraine. Named by ANCA on March 12, 1992, for its shape.

Crescent Scarp. 69°39' S, 66°20' W. A conspicuous north-facing escarpment of rock and ice cliffs, 13 km long, and rising to 1480 m, between Webb Peak and Page Bluff, on the S side of Fleming Glacier, on the Fallières Coast, on the W coast of Graham Land. Roughly surveyed from the ground in 1936-37, by BGLE 1934-37, it appears on Stephenson's 1940 map of the expedition. Photographed aerially in 1940 by USAS 1939-41, and again in Nov. 1947, by RARE 1947-48. Surveyed from the ground by Fids from Base E in Dec. 1958, and named descriptively by them (for its shape). UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Crescent Stream. 77°37' S, 163°11' E. A glacial meltwater stream, about 4 km long, flowing N from Crescent Glacier to the south-central shore of Lake Fryxell, in Taylor Valley, in Victoria Land. Named by USGS hydrologist Diane McKnight, in association with the glacier. US-ACAN accepted the name in 1992, and NZ-APC followed suit.

Cressey Peak. 85°29' S, 143°10' W. Rising to 870 m, 11 km E of the Harold Byrd Mountains, between those mountains and the Bender Mountains, or between the SE edge of the Ross Ice Shelf and the Watson Escarpment. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Richard N. Cressey, USN, who wintered-over as storekeeper at Byrd Station in 1958.

Mount Cresswell. 72°47' S, 64°20' E. Also spelled (erroneously) as Mount Creswell. A domed, elongated, dark rock outcrop in the shape of a mountain, with a small conical peak at the W end, 40 km (the Australians say 46 km) NNE of Mount Dummett, in the southern Prince Charles Mountains. Mapped by Australian cartographers from ANARE air photos taken in 1956, and plotted by them in 72°44' S, 64°14' E. First visited by an ANARE party led by Ric Ruker in 1960. Named by ANCA on July 4, 1961, for George R. Cresswell, aurora physicist at Mawson Station in 1960. US-ACAN accepted the name, but with different coordinates. In 1971-72 a summer field station was built here by ANARE, and ran until 1974.

The Crest. 63°25' S, 56°59' W. Rising to 125 m (the British say 410 m, and, given the number of times they have surveyed it, they should know), it forms the summit of a moraine just E of Lake Boeckella, and 0.8 km S of Hut Cove, at Hope Bay, on Trinity Peninsula. Roughly surveyed and charted by Fids from Base D in 1945, and so named by them because it is the top of the first steep slope of the sledge route S of the FIDS base here (Base D). It was surveyed again by Fids from Base D in 1948, and again in 1955. UK-APC accepted the name on Sept. 4, 1957, and US-ACAN followed suit in 1963. It appears on a British chart of 1960.

Mount Creswell *see* **Mount Cresswell**

Creswick Gap. 70°23' S, 67°44' W. A pass running NW-SE between Creswick Peaks (at the S end of the gap) and Campbell Ridges, on the W side of Palmer Land, it extends from Chapman Glacier to Meiklejohn Glacier, and one uses this gap as a safe sledging route from George VI Sound, via Naess Glacier and Meiklejohn Glacier, to the Dyer Plateau. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, in association with the nearby peaks. US-ACAN accepted the name later in 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Creswick Peaks. 70°28' S, 67°42' W. An impressive mountain massif with several peaks, the highest rising to 1465 m (the British say about 1525 m), it stands at the NE side of Moore Point, on the NW side of Meiklejohn Glacier, between that glacier and Naess Glacier, 5 km inland from the N end of George VI Sound, on the W coast of Palmer Land. Photographed aerially on Aug. 16, 1936, by BGLE 1934-37, and surveyed from the ground in Oct. 1936, during the same expedition. It figures on Stephenson's 1940 map of that expedition. Resurveyed by Fids from Base E in 1949. Named by UK-APC on March 31, 1955, for Frances Elizabeth Creswick (known as Elizabeth) (1907-2002), assistant to the director of the Scott Polar Research Institute, 1931-38. She helped organize BGLE 1934-37, which surveyed these peaks. She married James I. Moore (q.v.) in 1934. US-ACAN accepted the name later in 1955. It appears, misspelled as Crestwick Peaks, on a 1955 U.S. Hydrographic Office chart. The feature was further surveyed by BAS between 1962 and 1972.

The *Creustat*. French yacht, skippered by Bernard Espinet, which visited the South Shetlands and the Antarctic Peninsula in 1990-91. In late 1997 she left Wellington, NZ, and during the 1997-98 season, circumnavigated Antarctica.

Crevasse detectors. Composed of 4 semi-spherical aluminum pans, set apart from each other, mounted on a wooden framework projecting out in front of a vehicle, which rub over the surface of the ice like feelers. Each pan contained an electrode. A voltage applied to the two outer pans produced a local electrical field. The inner pans picked up the current, which the driver could see, amplified, on a meter in his cab. If the pans were pushed over a bridged crevasse, the void below would change the snow's electrical conductivity, and electric currents would cause a red light to flash in the driver's area, and the meter readings would sud-

denly decrease. Then a man would go ahead and probe. Crevasse detectors were developed in Greenland, by Phil Smith among others, and first used in Antarctica during IGY. One of the Weasels that left Little America V on Nov. 5, 1956, to build Byrd Station, had one.

Crevasse Valley Glacier. 76°46' S, 145°30' W. Also called Crevassed Valley. A broad glacier, about 50 km long, it flows WSW between the Chester Mountains and Saunders Mountain into the Sulzberger Ice Shelf, in Marie Byrd Land. Discovered in Dec. 1934 on a sledging party led by Quin Blackburn during ByrdAE 1933-35, and descriptively named. US-ACAN accepted the name in 1947. Originally plotted in 76°46' S, 145°00' W, it has since been replotted.

Crevassed Valley *see* **Crevasse Valley Glacier**

Crevasses. Fissures, or cracks, in glaciers or ice shelves. They can be of all sizes and depths, and are not always visible. They can be a danger, especially when a snow bridge has formed over one, rendering it invisible (*see* **Crevasse detectors**). There are gruesome stories of men, dogs, ponies, sledges, and vehicles plunging to their doom, others hanging by a rope upside down until rescue, and so on. If a party gets to a wide, uncrossable crevasse, it normally dynamites the edges so that snow falls into the crevasse to the height of the ground (so to speak). Previously, explorers had to go around such a crevasse. Crevasses are caused by stress produced by movement. There are longitudinal crevasses, transverse crevasses, marginal crevasses, and bergschrund crevasses.

Cricket. The sport of cricket will be played anywhere, even at the South Pole. On Dec. 15, 1980, when the Trans-Globe Expedition arrived there, they shocked the Americans at Pole Station with a demonstration. In 1982-83 a cricket match was played on the Beardmore Glacier. Chris Beeby (*see* **Beeby Peak**) was one of the players.

Crilly Hill. 85°06' S, 174°29' W. The central of 3 ice-free hills on the N side of McGregor Glacier, 10 km SSW of Mount Finley, in the Queen Maud Mountains. Named by the Texas Tech Shackleton Glacier Expedition of 1964-65, for Specialist 6th Class Clifford Lewis Crilly (b. July 13, 1938. d. April 19, 1993, Linn Co., Oregon), medic with the U.S. Army Aviation Detachment which supported the expedition. US-ACAN accepted the name in 1966.

Crime. There must have been crime on Captain Cook's ships as they crossed into Antarctic waters. There's no human life without crime. Crime, that is, and not just discipline infractions. The first recorded criminal trial may be the one held aboard the *Huron* on Sept. 5, 1821 (*see* **Tobias, Cato**). In Feb. 1939 the whaling expedition led by Otto Borchgrevink killed a 59-foot blue whale, which was against the law. The British whaling inspector aboard ordered the Norwegian to appear in a London court, but the case was dismissed (*see* **Borchgrevink, Otto**). The next criminal trial held in Antarctica was heard on Deception Island on April 14, 1953, before the Falkland Islands Dependencies magistrate. It concerned the protection of wildlife. During the winter of 1996 there was an alleged personal asssault at McMurdo, and in the October three FBI agents were flown into investigate. Given the number of Antarctic confrontations over the years that might well be called personal assaults, the intervention of the FBI implies either something very, very serious, or a sign of the politically correct times.

Cerro Crimson *see* **Crimson Hill**

Crimson Hill. 62°56' S, 60°36' W. A prominent, ice-free hill rising to 95 m, on the S side of Pendulum Cove, on Deception Island, in the South Shetlands. Charted by Foster in Jan. 1829, and so named by him because it exposes thick, prominent strata of "lateritium, or brickstone" in the hill. It was thus described in 1834 by Webster, who had been on Foster's *Chanticleer* expedition. It appears on a 1930 British chart, and was surveyed by FIDS in 1953. UK-APC accepted the name on Sept. 4, 1957, and US-ACAN followed suit in 1963. It appears on a 1962 Chilean chart as Morro Varela (i.e., "Varela hill"), probably named after Juan Varela, of the department of geology at the University of Chile, at Santiago, who was a member of ChilAE 1957-58. In 1964 there was an Argentine reference to it (by Lorenzo Casertano) as Cerro Crimson. The British were the latest to replot this feature, in late 2008.

Crisp, Gaston Morgan. Known as Morgan Crisp. b. March 5, 1898, Norfolk, Va., son of North Carolinians Robert and Ella Crisp, who ran a boarding house in Norfolk. He joined the Merchant Marine in 1917, and was 1st assistant engineer on the *Jacob Ruppert* during the very early stages of ByrdAE 1933-35. However, he never made it to Antarctica, went to Denmark instead. He died in May 1987, in Washington, DC.

Crisp Glacier. 77°12' S, 162°12' E. At the S side of Killer Ridge, between that ridge and Second Facet, it flows SE into Debenham Glacier, in Victoria Land. Named by US-ACAN in 1964, for Chief Electrician's Mate Kelton W. Crisp (b. April 12, 1919. d. Jan. 23, 1997), USN, in charge of the electric shop at McMurdo in 1962-63.

Nunatak Crispín. 74°30' S, 61°25' W. North of Nantucket Inlet, Trinity Peninsula. Named by the Chileans for Cabo (that was his rank) Crispín Reyes, who died aboard the *Esmeralda*, the ship commanded by Capitán Arturo Prat during the famous naval battle of Iquique, May 21, 1879. The Argentines call it Nunatak Trenque Lauquen. *See also* **Cordón Esmeralda**.

Crisscross Crags. 64°06' S, 58°21' W. An irregular-shaped system of crags, rising to an elevation of about 650 m, with arms extending in 4 directions, E of Rum Cove, on James Ross Island. Named descriptively by UK-APC on Feb. 15, 1988. US-ACAN accepted the name.

Isla Cristiania *see* **Intercurrence Island**

Islas Cristiania *see* **Christiania Islands**

Islotes Cristiania *see* **Christiania Islands**

Cristo Redentor Refugio. 63°33' S, 57°22' W. Argentine refuge hut built by Army personnel from Esperanza Station, and opened on May 25, 1955, on a rock surface at View Point, Duse Bay, on the S side of Trinity Peninsula. It became operational on June 1, 1955, and lasted until 1956. Much later it was brought back into use by personnel from Esperanza.

Mount Crockett. 86°01' S, 155°04' W. A prominent peak rising to 3470 m, between Scott Glacier and Amundsen Glacier, 3 km NE of Mount Astor, in the Hays Mountains, in the Queen Maud Mountains. Discovered by Larry Gould's Southern Geological Party during ByrdAE 1928-30, and named by Byrd for Freddy Crockett. ByrdAE 1933-35 re-plotted it to the extent that the name was re-applied to this mountain. US-ACAN accepted this situation in 1956, and NZ-APC followed suit.

Crockett, Frederick E. "Freddy." b. July 20, 1907, Ipswich, Mass., but grew up in Boston, son of ear, nose, and throat doctor Eugene A. Crockett and his Louisiana wife Elizabeth. Naturally, his younger brother was named Davy. He occasionally worked on fishing boats and in shipyards, and interrupted his studies at Harvard to be radio operator on the 6-man Southern Geological Party led by Larry Gould during ByrdAE 1928-30. He subsequently graduated, then went prospecting for gold in the southwest, and exploring South Pacific islands. He married Patricia, and died on Jan. 17, 1978, at Beverly Farms, Mass.

Crockford, Michael Andrew "Mike." b. 1938, Tenby, Wales, son of Ivor Crockford and his wife Marjorie Best. As a teenager he founded the Harbour Sports Club, and, in 1957, at the age of 19, joined FIDS as a radioman. On his trip down on the *Shackleton*, the ship was holed by an iceberg, and the crew and FIDS were rescued by the *Kista Dan*. Years later, Mike would name his house Kista Dan. He wintered-over at Port Lockroy Station in 1958 and 1959, and in 1960 returned to Tenby for the summer, then was off again for Port Lockroy, where he wintered-over for a third year, in 1961. He then went to college in Newport, qualified as a radio officer, and joined the Merchant Navy. In 1969 he married Liz Frost. He founded boys' soccer teams, took over Coastal and Island Cruises from his father, and was also a radio officer with Tenby Lifeboat for 27 years. He died at Withybush Hospital, Haverfordwest, in Wales, on March 13, 2008.

Crofford, William Newton "Bill," Jr. b. Oct. 3, 1894, Seymour, Tex., but raised partly in Oklahoma and Tucumcari, NM, son of saleman William Newton Crofford and his wife Florence. He joined the U.S. Navy, was promoted to lieutenant in 1928, and posted to Norfolk, Va. In Washington he married Helen Elizabeth Netz, and they lived in Beverly Hills, Calif. On Nov. 4, 1939, he transferred from the *Trinity* to the *Bear*, as 1st officer, for USAS 1939-41. On April 17, 1942, he was promoted to lieutenant commander (at which rank he

retired), and died of a cerebral hemorrhage at the Army-Navy Club on May 28, 1959. He was buried 4 days later in Arlington National Cemetery.

Bahía Croft *see* **Croft Bay**

Croft, William Noble "Bill." b. Oct. 9, 1915, Faversham, Kent, son of William Graham Croft and his wife Marjorie Hall, and younger brother of Sir John Croft, 4th Baronet. After Stowe, and Queen's, Cambridge, he went to work as a paleobotanist for the Natural History Museum in London, was in the Arctic in 1939, and in World War II became a captain in the Royal Engineers. After the War he went back to the Museum, and, in 1945, became a FIDS geologist, wintering-over at Base D in 1946. Between Jan. 23 and Jan. 26, 1947 he and Ray Adie visited Joinville Island, Dundee Island, and Paulet Island, on the *Trepassey*. He went back to work at the Museum on his return, and was working on the paleo-botanical material he had collected when he was killed in an accident on July 10, 1953. His Polar Medal came through from the Palace that July, and John Selwyn Bibby (q.v.) would finish his papers in 1957.

Croft Bay. 64°00' S, 57°45' W. An indentation in the central part of the NE coast of James Ross Island, it forms the S part of Herbert Sound, between Andreassen Point and Dagger Peak, S of the NE end of the Antarctic Peninsula. Discovered and roughly mapped in 1903 by SwedAE 1901-04. Surveyed and charted by Fids from Base D in Nov. 1945, and named by them for Bill Croft. It appears on a British chart of 1949, and UK-APC accepted the name on Nov. 21, 1949, with US-ACAN following suit in 1952. Further surveyed by FIDS between 1952 and 1954. It appears on a 1953 Argentine chart as Bahía Croft, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Crohn Island. 67°07' S, 50°52' E. An island, 0.8 km E of Beaver Island, at the head of Amundsen Bay, in Enderby Land. Discovered in 1956 by an ANARE airborne party led by Peter Wolfgang Israel Crohn (b. April 3, 1925, Germany; in Australia since 1939), geologist at Mawson Station in 1955 and 1956, and for whom it was named by ANCA on Nov. 24, 1961. Plotted in 67°07' S, 50°47' E. US-ACAN accepted the name in 1965, but with new coordinates. *See also* **Mount Peter**.

Crohn Massif. 70°27' S, 64°57' E. A large, domed massif, about 7 km long in an E-W direction, and about 4 km wide, rising to about 460 m above the surrounding plateau, 5 km W of Mount Kirkby, in the Porthos Range of the Prince Charles Mountains. It is not visible from the E or NE, and there are 2 small conical peaks at the E extremity. Discovered in Jan. 1957, by Bill Bewsher's ANARE Southern Party, and named by ANCA for Peter Crohn (*see* **Crohn Island**). US-ACAN accepted the name in 1961.

La Croix du Sud *see under* **L**

The *Croix Saint-Paul*. French yacht belonging to Polar Expeditions, with 2 crew (including skipper Alex Foucard), that could carry 9 passengers. She visited the Antarctic Peninsula and the South Shetlands in 1988-89, 1990-91, and 1991-92, each season under the command of Capt. Foucard. Capt. Foucard brought back the *Croix Saint-Paul II* for the 1993-94, 1994-95, 1995-96, and 1996-97 seasons, the last season carrying tourists, and the *Croix Saint-Paul II* was back in basically the same areas in 1997-98, 1998-99, and 1999-2000, with Foucard as skipper, and carrying tourists. She was back in Antarctic waters in 2000-01 (Capt. Eric Dupuis), and 2001-02 (Capt. Dupuis). She was back yet again in 2002-03.

Pasaje Croker *see* **Croker Passage**

Croker Inlet *see* **Croker Passage**

Croker Passage. 63°58' S, 61°41' W. A deep water passage between the Christiania Islands and Two Hummock Island to the E, and Hoseason Island and Liège Island to the W, it provides an alternative entrance to the N end of the Gerlache Strait, in the Palmer Archipelago. In 1829 Foster very roughly charted the N entrance to this passage (i.e., what would later be called Croker Passage), and named it Croker Inlet, or Croker's Inlet, for John Wilson Croker (1780-1857), secretary to the Admiralty. Following aerial photography by FIDASE in 1956-57 the name Croker was extended to the whole passage, and thus named by UK-APC on Sept. 23, 1960. US-ACAN accepted that situation later in 1960. It appears as such on a British chart of 1961. The northern approaches appear on a Chilean chart of 1951 as Paso Cordovez, named after Capitán de navío Cordovez Madariaga (*see* **Lobodon Island**, but better, *see* **Bahía Cordovez**). The Chileans also used the name Paso Comandante Cordovez, but the name accepted by the 1974 Chilean gazetteer was Paso Federico Puga Borne, named for Federico Puga Borne, Chilean physician and scientist (*see* **Punta Spring Refugio**, under **P**). The Argentines call it Pasaje Croker.

Croll Glacier. 72°29' S, 167°18' E. A tributary glacier, flowing SE for about 24 km along the N side of Handler Ridge, into Trafalgar Glacier, in the Victory Mountains of Victoria Land. Named by the Northern Party of the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, for engineer Wynne George Croll, a surveyor here that year with the expedition. Mr. Croll had also been surveyor on NZGSAE 1957-58.

Mount Cromie. 84°50' S, 179°14' W. A snow-covered mountain rising to 2950 m, 2.5 km SE of Mount Boyd, in the N portion of the Anderson Heights, in the Bush Mountains, in the Queen Maud Mountains. Discovered and photographed aerially by USAS 1939-41, on Flight C of Feb. 29-March 1, 1940. Surveyed by Albert Crary in 1957-58, during his Ross Ice Shelf Traverse, and named by him for William "Bill" Cromie, assistant glaciologist on the traverse. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Croneen, John. b. ca. 1749, Limerick. On June 25, 1772 he joined the *Resolution* as an able seaman for Cook's 2nd voyage, 1772-75. He later served on the *Montague*, and died in 1783.

Cronenwett Island. 77°00' S, 150°00' W. A high, ice-covered island, about 30 km long, between Vollmer Island and Steventon Island, it is the second largest of the grounded islands in the Marshall Archipelago, in the Sulzberger Ice Shelf, off the coast of Marie Byrd Land. Discovered and photographed aerially during ByrdAE 1928-30, and first roughly mapped from these photos. Named by US-ACAN in 1966, for Cdr. Wilson Robertson Cronenwett (b. Jan. 11, 1913, Butler, Pa. d. July 6, 1994, Holton, Mich.), USN, photographic officer during OpDF II (i.e., 1956-57), and public information officer for Task Force 43.1 during OpDF 61 (i.e., 1960-61).

Cronk Islands. 66°19' S, 110°25' E. A group of islands NE of Hollin Island, in the Windmill Islands. First mapped from aerial photos taken during OpHJ 1946-47. The area was subsequently photographed (again aerially) by ANARE in 1956 and 1962, and by the Russians in 1956. Named by US-ACAN in 1963, for Caspar Cronk (b. April 1935), glaciologist at Wilkes Station in 1958. ANCA accepted the name.

Crontu, James *see* **USEE 1838-42**

Glaciar Cronus *see* **Cronus Glacier**

Mount Cronus. 67°18' S, 50°03' E. A majestic, conical, partly snow-covered brown peak rising to 900 m above sea level and about 500 m above the surrounding plateau, 13 km S of Amundsen Bay, and 14 km WSW of Reference Peak, in Enderby Land. Discovered by Peter Crohn's ANARE party in Oct. 1956, and aptly named by ANCA on July 22, 1957, for the Greek god, Cronus. US-ACAN accepted the name in 1961.

Cronus Glacier. 68°51' S, 64°04' W. A glacier, 10 km long and 5 km wide, flowing NW into Bowman Inlet, between Calypso Cliffs and Crabeater Point, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Photographed aerially on Dec. 22, 1947 by RARE 1947-48, roughly surveyed from the ground by Fids from Base E in Dec. 1958, and mapped by FIDS cartographers in 1959-60, from these efforts. Named by UK-APC on Aug. 31, 1962, for the Greek god. US-ACAN accepted the name later that year. It appears in the 1964 British gazetteer. It was re-photographed aerially by USN between 1966 and 1969, and appears on the 1979 USGS sketch map of the N part of Palmer Land. The Argentines call it Glaciar Cronus.

Crooked Fjord *see* **Krok Fjord**

Crooked Island *see* **Krok Island**

Crooked Lake *see* **Krok Lake**

Crooked Lake Refuge Hut. 68°36' S, 78°29' E. An Australian refugio at Krok Lake (which the Australians call Crooked Lake), in the Vestfold Hills.

Mount Crooker. 71°03' S, 67°15' W. A gable-shaped mountain, with much exposed rock, rising to 570 m on the N side of Ryder Glacier, and at the S end of the Pegasus Moun-

tains, at George VI Sound, in Palmer Land. Surveyed by BAS between 1962 and 1972. Named by US-ACAN in 1976, for Allen R. Crooker, USARP biologist at Palmer Station in 1972. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Pico Crookes *see* **Crookes Peak**

Crookes Peak. 66°14' S, 65°18' W. Rising to about 1500 m on the NE side of Widmark Ice Piedmont, midway between Stair Hill and Rugg Peak, on the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Sir William Crookes (1832-1919), snow goggles pioneer. US-ACAN accepted the name in 1971. The Argentines call it Pico Crookes.

Croom Glacier. 70°13' S, 62°32' W. A steep, broad glacier flowing SE into the head of Smith Inlet between Moe Point and Hughes Ice Piedmont, on the Wilkins Coast, on the E coast of Palmer Land. Mapped by USGS in 1974 from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for John M. Croom, USARP biologist at Palmer Station, 1968-69, and U.S. exchange scientist at Bellingshausen Station in 1970. UK-APC accepted the name on July 21, 1976. Originally plotted in 70°18' S, 62°25' W, it has since been replotted.

Crosby, Joseph *see* **USEE 1838-42**

Crosby, William Edward. b. 1902, West Hartlepool, England. Fireman on the *Discovery* during the 2nd half of BANZARE 1929-31.

Crosby Nunataks. 66°46' S, 51°33' E. A group of 3 nunataks, 3 km NE of Mount Morrison, in the N part of the Tula Mountains of Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956. Named by ANCA for W.E. Crosby. US-ACAN accepted the name in 1965.

Cabo Cross *see* **Cape Hinks**

Cape Cross *see* **Cape Hinks**

Mount Cross. 84°37' S, 63°38' W. Rising to 1005 m, 4 km NE of King Ridge, in the Anderson Hills, in the central part of the Patuxent Range, in the Pensacola Mountains. Discovered aerially on a flight from Ellsworth Station in 1957-58, and named by Finn Ronne for Dr. Allan S. Cross, who had helped prepare Ronne's own RARE 1947-48 (of the previous decade). Dr. Cross had planned and prepared medical supplies, instruction in first aid, and selected trail rations. Mapped by USGS from ground surveys conducted by themselves in 1961-62, and from USN air photos taken in 1964. US-ACAN accepted the name in 1968, and UK-APC followed suit on Nov. 3, 1971. It appears in the British gazetteer of 1974.

Cross, Jacob. b. Feb. 12, 1876, Little Clacton, Essex, son of agricultural laborer James Cross and his wife Sarah Jane Turpin. His twin brother was named Esau. He worked in the Essex fields for 1/6 a week, then became an apprentice blacksmith. That didn't suit him, and in 1891 he joined the Royal Navy, serving first on the *Hotspur*, and then on the *Amphion*, in the Mediterranean. In 1901, he was married, and a petty officer 1st class on the *Jupiter* when he volunteered for BNAE 1901-04. He helped Wilson with the bird skinning, and was part of Wilson's 1903 sledging trip to Cape Crozier, to the emperor penguin colony there. Back to the Navy after the expedition, he worked at Chatham Detention Quarters during World War I, and worked for the government after the war. He retired to become a noted Sealyham terrier breeder, in Kent, and died on July 8, 1946, in Chatham.

Cross Grained Ridge. 72°33' S, 166°00' E. On the NW side of Mount McCarthy, in the Barker Range of Victoria Land. Named descriptively by NZ-APC.

Cross Hill *see* **Laguna Hill**

Cross Mesa. 62°12' S, 58°57' W. A vegetated mesa, about 40 m high, extending from Frei Station eastward to Square Rock Point, on Fildes Peninsula, King George Island, in the South Shetlands. About 1984, the Chileans named it Meseta la Cruz, in association with the large, conspicuous cross on the mesa. UK-APC accepted the name Cross Mesa (rather than, say, Cruz Mesa), on June 6, 2007. The British were the latest to replot this feature, in late 2008.

Cross Valley. 64°16' S, 56°42' W. A valley, 3 km long in a NW-SE direction, cutting through the NE part of Seymour Island, S of the NE end of the Antarctic Peninsula. Discovered and roughly mapped by SwedAE 1901-04, and named by Nordenskjöld as Querthal (i.e., "cross valley"), for the transverse alignment of the valley. He also spelled it Quertal, and also refers to it as Dwarsdal. Fids from Base D re-surveyed it in 1946, and UK-APC accepted the name Cross Valley on Nov. 21, 1949. US-ACAN followed suit with the naming in 1952. It appears as such in the 1955 British gazetteer. ArgAE 1953-54 called it Cañadón Díaz (which means "Díaz valley"), for Manuel Díaz, mechanic on the *Uruguay* in 1903, and that was the name accepted by the Argentine gazetteer of 1970.

Mount Crosscut *see* **Crosscut Peak**

Crosscut Peak. 72°22' S, 166°19' E. Also called Mount Crosscut. A prominent peak, rising to 3120 m, just N of Joice Icefall, between that icefall and Mount Aorangi, in the Millen Range. Named by the Southern Party of the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, for its jagged N ridge and summit. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Crosse Passage. 67°47' S, 68°55' W. A small passage leading SE from Adelaide Anchorage, between the Henkes Islands on the one hand and Avian Island and the Skeen Rocks on the other, off the SW end of Adelaide Island. Named by UK-APC on Feb. 12, 1964, for Lt. Cdr. Anthony Grant Crosse (b. Nov. 11, 1927, Southampton), who joined the Royal Navy in 1946, and was a 1st lieutenant on the *Protector*, which was used by the RN Hydrographic Survey unit in this area, 1961-63, and which charted this passage in early 1963. US-ACAN accepted the name later in 1964. It appears on a British chart of 1964, but with coordinates in error (they were corrected by 1982).

Cape Crossfire. 73°10' S, 168°21' E. A promontory at the SE extremity of the Malta Plateau, it is here that Mariner Glacier and Borchgrevink Glacier merge from the W and N respectively, in Victoria Land. Named by NZ-APC on April 19, 1966, for the crossfire of ice flows here. US-ACAN accepted the name later in 1966.

Crossley, G. On Aug. 4, 1911, in London, he signed on to the *Aurora* as a fireman, at £5 per month, for the first voyage to Antarctica during AAE 1911-14. He left the expedition at Hobart on March 15, 1912.

Crosson, Joseph Esler "Joe." b. June 29, 1903, Garfield, near Minneapolis, Kansas, son of farmer Esler E. Crosson and his wife Elizabeth "Lizzie" Wynant, and younger brother of Marvel Crosson. The family soon moved to Merino, Colorado, and from there to Sterling, Colorado. As children Joe and Marvel saw a plane fly overhead and from then on that's all they wanted to be — pilots. In 1922 the family moved again, to San Diego, and Joe and Marvel bought an old Curtiss and fixed it up, going into commercial flying in California. In 1926 Joe was offered a job in Alaska as a bush pilot, and Marvel followed him in 1927, as Alaska's first female pilot — "Bird Girl," they called her. She was killed in Arizona in 1929, when her plane plummeted during an air derby. In 1928 Joe was selected to be the relief pilot on the first half of the Wilkins-Hearst Expedition to Antarctica. He returned to New York in March 1929, and went back to Alaska. Joe was a good friend of Wiley Post, and after Post and Will Rogers were killed in Alaska in 1935, Joe flew their bodies back to Seattle. In 1937 he and several other pilots (Sir Hubert Wilkins among them) went looking for Levanevsy, missing in the Arctic. Joe later became manager of Pan Am's Alaska Division, and married Lilian. He died in his office at Boeing Field, Seattle, on June 21, 1949. Dirk Tordoff wrote his biography in 2002, *Mercy Pilot*.

Crosson Ice Shelf. 74°57' S, 109°30' W. About 56 km by 30 km in area, it lies N and NE of Mount Murphy, along the Walgreen Coast of Marie Byrd Land, and is fed by Smith Glacier, Pope Glacier, Vane Glacier, and Haynes Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1976, for Cdr. William Edward Crosson (b. 1933), USN, commanding officer of the Antarctic Construction Group during OpDF 73 (i.e., 1972-73). Originally plotted in 75°05' S, 109°25' W, it has since been replotted.

Crossover Pass. 80°38' S, 26°30' W. A pass, at an elevation of 1410 m above sea level, between Gordon Glacier and Cornwall Glacier,

in the central part of the Shackleton Range, it provides (along with the two aforementioned glaciers) a N-S sledging route across the range, hence the name given by BCTAE, who first traversed, surveyed, and mapped it, on Oct. 24, 1957. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Crosswell, Horace A. b. Nov. 21, 1918, Norfolk, Va., but raised in Atlanta, son of stevedore Grover Crosswell amd his wife Kate. On Feb. 10, 1941 he enlisted in the Air Corps, as an aviation cadet, and by 1943 was a captain. He was a USAF colonel, commander of the 63rd Troop Carrier Group, 18th Air Force, when he found himself pilot of the first Globemaster C-124 transport plane to fly out of NZ for McMurdo Sound during OpDF II, on Oct. 20, 1956, and that season (1956-57), helped set up Pole Station with airdrops. On Nov. 25, 1956, he flew the plane that dropped Dick Patton over the Pole. He married Nancy, and they lived in Atlanta, where he died on Jan. 17, 1983.

Crosswell Glacier. 78°17' S, 85°24' W. A glacier, 16 km long, it flows NNE from Mount Shinn into Ellen Glacier, in the central part of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Col. Horace Crosswell.

Crotchet Nunataks. 71°45' S, 70°21' W. Four nunataks rising to about 750 m on the NE side of Staccato Peaks, in the S part of Alexander Island. Photographed aerially in Dec. 1947, by RARE 1947-48, and mapped from these photos in 1959-60 by Searle of the FIDS. They were re-surveyed by Fids from Fossil Bluff Station in 1975-76, and named by UK-APC on June 11, 1980, in keeping with the musical motif that inspired the names of several features in this area.

Punta Crouch. 67°41' S, 69°04' W. A point on the S end of Adelaide Island, and due N of League Rock. Named by the Argentines.

Crouch, Alan. b. 1935, Halifax, Yorks, son of Alfred Crouch and his wife Eveline Greenwood. He joined FIDS in 1959, as a meteorological and general assistant, and wintered-over at Wordie House in 1960. He was one of the first Fids to winter-over at the new Base T, on Adelaide Island, in 1961.

Crouch Island. 67°49' S, 68°58' W. The second largest of the Henkes Islands, off the S end of Adelaide Island. Surveyed by an RN Hydrographic Survey unit on the *Protector*, in early 1963. Named by UK-APC on Feb. 12, 1964, for Alan Crouch. US-ACAN accepted the name later in 1964.

Croucher, George Beaver. b. May 9, 1881, Greenwich, Kent. He joined the RN in 1896, and was an able seaman on the *Narcissus*, when he transferred at Cowes to the *Discovery* for BNAE 1901-04, as the youngest man in the mess section. After the expedition, he settled down in Grimsby, where he married Mary Ann Davis in 1905. At the onset of World War I he was principal of the Grimsby Navigation School and Technical School for Fishermen. He joined the RNR in Aug. 1916, was made a lieutenant, and placed in command of the *Stoic*, on which he rescued the crew of a Norwegian ship that had been torpedoed. He was then sent to the Naval Transports at Cardiff. He died in Cardiff, as a lieutenant commander on the *President,* on April 16, 1918.

Crouse Spur. 82°53' S, 48°35' W. A spur, partly bare rock and partly snow-covered, rising to about 1000 m above sea level, 5 km S of Kester Peaks, descending from the E side of the Forrestal Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for builder Carl L. Crouse, USN, MCB Special Detachment Bravo, who wintered-over at Ellsworth Station in 1957. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

The *Croustet*. French yacht, skippered by Bernard Espinet, which visited the South Shetlands and the Antarctic Peninsula in 1990-91 and 1996-97.

Mount Crow. 77°11' S, 144°04' W. Just E of Mount McClung, in the Ford Ranges of Marie Byrd Land. Discovered and mapped by USAS 1939-41. Named by US-ACAN in 1966, for Lt. J.L. Crow, USN, one of the two officers in charge of Byrd Station in 1963 (the other being Herbert McClung).

Mount Crowder. 72°03' S, 166°23' E. A prominent mountain, rising to 2485 m, overlooking the upper part of Jutland Glacier, 10 km NE of Mount Tararua, in the Monteath Hills, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Dwight F. Crowder, geologist at Hallett Station in 1964-65.

Mount Crowell. 74°20' S, 64°05' W. Rising to about 1400 m in the N part of the Rare Range, on the Lassiter Coast, on the E coast of Palmer Land. Surveyed from the ground by the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for John C. Crowell, geologist at McMurdo in 1966-67. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Crowell, Mason *see* **USEE 1838-42**

Crowell Buttresses. 83°03' S, 162°30' E. A series of high snow and rock buttress-type peaks, 16 km long, which form the N wall of Cornwall Glacier for 8 km, and then trend NE for another 8 km along the W side of Lowery Glacier, in the Queen Elizabeth Range. Named by US-ACAN in 1966, for John T. Crowell (d. 1986), Antarctic vessel project officer with the National Science Foundation, 1960-63, and special projects officer with the same organization, from 1963 until he retired on Nov. 21, 1968. He was in the Antarctic Peninsula in Jan. 1963, leading a reconnaissance party looking for a site for a U.S. scientific station.

The Crown. A name given by sealers to a completely ice- and snow-free peak, 25-30 m high, near the beach at Potter Cove, King George Island, in the South Shetlands.

Pico Crown *see* **Crown Peak**

Crown Head. 60°37' S, 45°19' W. A headland that forms the E entrance point of Palmer Bay, on the N coast of Coronation Island, in the South Orkneys. Discovered by Powell and Palmer in Dec. 1821. Surveyed by Fids from Signy Island Station between 1956 and 1958. Named by UK-APC on July 7, 1959, in association with Coronation Island. US-ACAN accepted the name in 1964.

Crown Hills. 71°48' S, 163°57' E. A group of peaks and hills forming the SE end of the Lanterman Range, in the Bowers Mountains of Oates Land, in Victoria Land. They are located between Zenith Glacier and Gambone Peak to the W, Cooper Glacier to the N, Leap Year Glacier to the E, and Black Glacier to the S, and their main feature is All Black Peak (rising to 2000 m). Named by Malcolm Laird in association with Coronet Peak to the NE, King Range to the E, and the Molar Massif to the N. NZ-APC accepted the name in 1982, and US-ACAN followed suit in 1983.

Crown Mountain. 86°18' S, 158°45' W. Rising to 3830 m, it surmounts the W side of Nilsen Plateau, 6 km ENE of Mount Kristensen, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967. The summit is a somewhat circular rock band contrasting with the ice surface of the Nilsen Plateau, and therefore looks like a crown.

Crown Peak. 63°34' S, 58°33' W. An ice-covered peak rising to 1185 m (the Chileans say 1134 m), topped by a conspicuous crown-shaped ice formation, it forms the highest summit, and the S end of, Marescot Ridge, 16 km (the Chileans say 20 km) E of Cape Roquemaurel, on the NW side of Trinity Peninsula, on the W coast of the Antarctic Peninsula. Named descriptively by Fids from Base D following their 1946 survey. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears on a 1954 British chart, and also in the 1955 British gazetteer. There is a 1948 Chilean reference to it as Nevado O. Pinochet, named for Óscar Pinochet de la Barra (*see* **Playa Pinochet de la Barra**, under **P** for Pinochet). The Chilean word "nevado" signifies a snow-covered mountain. Cdr. Frank Hunt, during his 1951-52 RN Hydrographic Survey of the area, inadvertently named it Discovery Dome, after the 97-foot-high, 365-foot-in-diameter, saucer-shaped aluminum Dome of Discovery at the 1951 Festival of Britain, in London. It appears on a 1961 Chilean chart as Pico Crown, and that was the name accepted by the Chilean gazetteer of 1974.

Crown Prince Gustav Channel *see* **Prince Gustav Channel**

Crown Prince Olav Coast *see* **Prince Olav Coast**

Crown Prince Olav Land *see* **Prince Olav Coast**

Crown Prince Olav Mountains *see* **Prince Olav Mountains**

Crown Princess Martha Land *see* **Princess Martha Coast**

Crozier, Cape. 77°31' S, 169°24' E. The E extremity of Ross Island. It consists of a vertical bluff cliff, overhanging in places, and ranging between 200 m and 400 m high, and extending for some 5 km from the junction with the Ross Ice Shelf toward the island's large penguin rookery (which was the goal of Wilson's Winter Journey party during BAE 1910-13, the journey Cherry-Garrard called "the worst journey in the world"). Discovered by Ross in 1841, and named by him for Francis Crozier. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer. It became Specially Protected Area (SPA) #6, and in 1975 was re-designated Site of Special Scientific Interest (SSSI) #4. In 1989-90, the Americans built a refuge hut and cache here, in 77°30' S, 169°40' E. Since 2002 it has been Antarctic Specially Protected Area (ASPA) #24.

Crozier, Francis Rawdon Moira. b. Sept. 1796, Banbridge, County Down, Ireland, 5th son of lawyer George Crozier. He joined the RN as a first-class volunteer on the *Hamadryad*, on June 12, 1810, was promoted to midshipman in June 1812, and was on the *Briton* during the War of 1812. He was with Parry in the Arctic (on the *Fury*, in 1821, and the *Hecla* in 1824), and was promoted to lieutenant in March 1826. He was back in the Arctic with Parry in 1827, on the *Hecla* again. Promoted to commander in 1837, he skippered the *Terror* during RossAE 1839-43, and in 1845 commanded the *Terror* in the Arctic expedition led by Sir John Franklin (who commanded the *Erebus*), in search of the Northwest Passage. They were never seen again. Michael Smith wrote his biography in 2007 (*see* the Bibliography).

Crozier Shoal. 77°45' S, 171°00' E. Subterranean feature beneath the Ross Ice Shelf, just to the E of Ross Island. Named in association with Cape Crozier.

CRREL. U.S. Army Cold Regions Research and Engineering Laboratory. Set up in 1961, in Hanover, NH, it has sent many researchers to Antarctica.

Islote Crucero *see* **Basso Island**

Cruchley Ice Piedmont. 60°41' S, 45°01' W. An ice piedmont up to 1.5 km wide, between the E margins of Powell Island and its N-S range of hills, it extends 4 km northward from John Peaks, in the South Orkneys. Named by UK-APC on Feb. 15, 1988, in order to retain the old name Cruchley in this area (*see* **Powell Island**). US-ACAN accepted the name.

Cruchley's Island *see* **Powell Island**

Cruise Nunatak. 73°00' S, 69°03' E. A high, ice-capped nunatak, with exposed rock on the steep E ridge, about 19 km E of the Hay Hills, in the Mawson Escarpment of Mac. Robertson Land. Photographed by ANARE in 1956 and 1960. A fuel depot was established near here during the Prince Charles Mountains Survey of 1972. Named by ANCA on Nov. 27, 1973, for John Oliver "Clem" Cruise (b. 1936), a miner at Mawson Station in 1971, to do blasting and excavation for the new cosmic ray lab there.

Rocas Cruiser *see* **Cruiser Rocks**

Cruiser Glacier *see* **Lugger Glacier**

Cruiser Rocks. 61°13' S, 55°28' W. A group of two submerged rocks 11 km (the Chileans say 5 km) SW of Cape Lindsey, on the W coast of Elephant Island, in the South Shetlands. Known to the early sealers, the rocks appear on charts of that period as "Cruisers" (no one knows why). For example, they appear on Powell's chart of 1822, and there is an implication that he named them. They appear on the 1927 Discovery Investigations chart as Cruiser Rocks, and on the 1933 DI chart as Cruizer Rocks. They were re-surveyed again by DI between 1935 and 1937, and appear on their 1939 chart again as Cruiser Rocks. They appear on a 1939 Argentine chart as Rocas Cruiser, and on a 1958 Argentine chart as Rocas Cruizer, but the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer was Rocas Cruiser. They appear on a 1943 USAAF chart as Cruizers Rocks. The name that was accepted by US-ACAN in 1952 was Cruiser Rocks, and UK-APC followed suit on Sept. 22, 1954. They appear as such in the 1955 British gazetteer. However, on a 1951 Chilean chart they appear as Rocas Corsario. The Chileans and Argentines seem to plot this feature in 61°08' S, 55°38' W.

Cruisers *see* **Cruiser Rocks**

Cruizer Rocks *see* **Cruiser Rocks**

Crulls Island *see* **Cruls Islands**

Îles Cruls *see* **Cruls Islands**

Islotes Cruls *see* **Cruls Islands**

Cruls Islands. 65°11' S, 64°32' W. A group of numerous small islands, 1.5 km W of the Roca Islands, and WNW of the Argentine Islands, in the S part of the Wilhelm Archipelago, 18 km W of Redondo Point, on the Graham Coast, on the W coast of the Antarctic Peninsula. Discovered in Feb. 1898 by BelgAE 1897-99, roughly charted by them in 65°13' S, 65°00' W, and named by de Gerlache as Îles Cruls, for Louis-Ferdinand Cruls (1848-1908), Belgian astronomer, director of the observatory at Rio de Janeiro, who assisted the expedition on its way out in Sept. 1897. Further charted by FrAE 1903-05, when the name Île Roca was given to an island in 65°14' S, 64°40' W. This appears on Charcot's 1906 map of the expedition. Gourdon's 1908 map of the same expedition shows Îles Quintana, apparently meaning this group. The area was re-surveyed by FrAE 1908-10, and the name Îles Crulls (sic) was applied to a group of islands in 65°16' S, 64°27' W. They appear as such on Charcot's map of 1912. Following a survey in 1935-36, by BGLE 1934-37, the name Crulls Islands (sic) was applied to the present feature. It appears as such on Rymill's 1938 expedition map, and on a British chart of 1948. However, on a 1943 U.S. Hydrographic Office chart, the group appears as the Quintana Islands. UK-APC accepted that situation on Nov. 19, 1949, but as Crulls Islets. The group appears as Cruls Islands on a British chart of 1952, but it was the name Cruls Islets that was accepted by US-ACAN in 1952, and by UK-APC on Jan. 28, 1953, and which appears in the 1955 British gazetteer, and on a British chart of 1957. It appears on an Argentine chart of 1953 as Islotes Quintana, but 2 separate 1956 Argentine charts have the Cruls Islands and the Roca Islands grouped together erroneously as Islas Quintana and Islotes Quintana (*see* **Quintana Island**). A 1957 Argentine chart shows Islotes Cruls, but NW of the present feature, where they do not exist. In 1958 the feature was photographed by helicopter from the *Protector*, and a certain adjustment was made by UK-APC on July 7, 1959, when they renamed the feature Cruls Islands. US-ACAN accepted that name in 1963. On old Chilean charts the group is seen as Islas Crulls or Islotes Crulls, but on a 1962 Chilean chart the feature is shown as Islotes Cruls, which is the name that was accepted by the 1974 Chilean gazetteer (after they had rejected Islotes Crulls). An Argentine chart apparently shows them as Islotes Crulz, and we are told that that was the name accepted by the 1970 Argentine gazetteer. Whether that is true or not (and it hardly seems credible), the Argentines today use the name Islotes Cruls. *See also* **Anagram Islands**.

Cruls Islets *see* **Cruls Islands**

Crulz *see* **Cruls**

Crumble Crags. 62°10' S, 58°11' W. Rocky crags rising to about 125 m, at the S periphery of Teasdale Corrie, on King George Island, in the South Shetlands. So named by UK-APC on Feb. 15, 1998, to reflect the unstable nature of the crags, which crumble to form extensive lower scree slopes. The British were the latest to replot this feature, in late 2008.

Crume Glacier. 71°33' S, 169°21' E. A glacier, 8 km long, flowing E into Ommanney Glacier, near the N coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for William R. Crume, USN, VX-6 support equipment maintentance supervisor, at McMurdo during OpDF 68 (i.e., 1967-68).

Ghiacciaio Crummer. 75°04' S, 162°32' E. A glacier, 2.5 km long by 1.5 km wide, 60 km SW of Mario Zucchelli Station, at Terra Nova Bay, Victoria Land. It runs from a height of 850 m down to a height of 450 m. Discovered in Dec. 1999, by the Italians, who named it on Feb. 22, 2002, in association with nearby Mount Crummer.

Mount Crummer. 75°03' S, 162°34' E. A massive, brownish-colored, granite mountain, rising to 895 m (the New Zealanders say 914 m), immediately S of Backstairs Passage

Glacier, and southeastward of Mount Gerlache, on the NE side of Larsen Glacier, on the coast of northern Victoria Land. Charted and named during BAE 1907-09. US-ACAN and NZ-APC have accepted the name.

Crummey Nunatak. 76°48' S, 143°36' W. A linear rock nunatak, 2.5 km long, at the NE end of the Gutenko Nunataks, in the Ford Ranges of Marie Byrd Land. First mapped by USAS 1939-41. Named by US-ACAN in 1970, for Glenn Tillman Crummey (b. July 14, 1931. d. Oct. 29, 1988), USN, construction electrician at Byrd Station in 1967.

Crust. The average thickness of the Earth's crust in Antarctica is about the same as for other continents. The crust thickens along the front of the Transantarctic Mountains, is about 25 miles thick in East Antarctica, and about 20 miles thick in West Antarctica. Because the ancient crust was highly mobile, the bedrock shape of Antarctica is very different today to what it was then.

Crustaceans. Crustacea are a class of the invertebrate phylum Arthropoda (q.v.). They include crabs, shrimp, lobsters, krill, isopods, copepods, ostracods, amphipods, etc. There is a variety that live on the Antarctic sea bed, near the shore (*see* **Fauna**).

Pic Crutch *see* **Crutch Peaks**

Pico Crutch *see* **Crutch Peaks**

Crutch Peak *see* **Crutch Peaks**

Crutch Peaks. 62°27' S, 59°56' W. A group of dark, rocky peaks, the highest being 275 m, 2.5 km E of Greaves Peak, and 4 km E of the NW tip of Greenwich Island, in the South Shetlands. Descriptively named Crutch Peak by the personnel on the *Discovery II* in 1934-35 (they thought it was one peak). It appears as such on British charts of 1942 and 1949, and that was the name accepted by UK-APC on Jan. 28, 1953, and by US-ACAN later that year. It appears as such in the 1955 British gazetteer. It appears on an Argentine chart of 1949 translated as Pico Crutch, on a 1954 French chart as Pic Crutch, and on a 1953 Argentine chart as Pico Muleta, this last name being the one accepted by the 1970 Argentine gazetteer. FIDASE aerial photography of 1956-57 proved the existence of 2 pairs of high peaks, and a number of lower ones. UK-APC amended the name to Crutch Peaks on Aug. 31, 1962, and US-ACAN followed suit in 1965. It appears with the new name on a British chart of 1962. The British were the latest to replot this feature, in late 2008.

Crutcher Rock. 74°21' S, 72°47' W. A nunatak rising to about 1375 m, 10 km SSW of Staack Nunatak, in the Yee Nunataks, in the S part of Palmer Land, where Palmer Land becomes Ellsworth Land, at the base of the Antarctic Peninsula. Named by US-ACAN in 1988, for Mont C. Crutcher, USGS cartographer who worked in the field at the Ross Ice Shelf, at Pole Station, at Byrd Glacier, and at Dome Charlie, in 1974-75. UK-APC accepted the name on Feb. 15, 1988.

Crutchley, Dennis Rowland. b. June 23, 1925, Landywood, near Cannock, Staffs, son of Miss Crutchley (there was no Mr. Crutchley, as such). He joined FIDS in 1945, and left England on Nov. 6, that year, wintering-over at Base B in 1946. He and John Featherstone were due to winter-over again in 1947, but they quit in Feb. 1947, protesting against bad conditions. They made their way from Port Stanley to Montevideo, where, with Mike Hardy and Tom O'Sullivan, they boarded the *Condesa*, bound for London, which they reached on April 5, 1947. He returned to Landywood, married Elizabeth C. Darby in 1951, and lived in Langwood until he died in June 2001.

Cruyt Spur. 64°37' S, 60°37' W. A rocky spur, rising to 920 m, 6 km NE of Ruth Ridge, and extending 3 km SE from the S wall of the Detroit Plateau, on the Nordenskjöld Coast, on the E coast of Graham Land. Mapped by FIDS cartographers from ground surveys conducted by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, for William Cruyt, Belgian army engineer who (with William Van Brabant) designed the tracteur autopolaire in 1907. US-ACAN accepted the name later in 1964. Originally plotted in 64°37' S, 60°42' W, it has since been replotted.

Bahía Cruz *see* **Bolsón Cove**

Isla Cruz *see* **Cruz Rock**

Islote Cruz *see* **Cruz Rock**

Meseta la Cruz *see* **Cross Mesa**

Senãl Cruz Cristiana. 81°05' S, 40°31' W. A beacon in the immediate neighborhood of Sobral Station, on the Filchner Ice Shelf. Named by the Argentines.

The *Cruz de Forward*. A 486-ton Argentine ship, built as an American offshore vessel in 1972 by American Marine, in New Orleans, as *Gulf Fleet #3*. In 1987 she was sold to Argentina, and became the *Cruz de Forward*, going to Antarctica in 1988-89 (she took the South Korean Antarctic Expedition down that year), under the command of Capt. Werner Arturo de la Barra. In 1992 she was sold to Naviera Unitankers, out of Buenos Aires, and registered in Panama, becoming the *Cruz del Sur* (not to be, and hardly likely to be, confused with the famous airplane *Cruz del Sur* of the 1950s). Note: Her name is sometimes seen spelled (erroneously) as *Cruz de Froward*.

The *Cruz del Sur*. The name means "Southern Cross." Argentine Air Force airplane, a modified Avro Lincoln, LV-ZEI, actually the *Cruz del Sud* (but always known as the *Cruz del Sur*). On Dec. 19, 1951 it made its first flight to Antarctica, to San Martín Station, as part of Grupo Aéreo de Tareas Antárticas (GATA), which had been created a month before, to supply General San Martín Station, and to rescue personnel. The plane flew as far south as 70°S, then returned to Argentina, after 12 hours and 22 minutes in the air. The pilot was 1st Lt. José Facundo López (*see* **Kappa Island**). The plane was back, overflying the station, on March 26, 1953.

Cruz Mesa *see* **Cross Mesa**

Cruz Rock. 62°30' S, 59°42' W. A large rock N of Canales Island, about 420 m NE of the extreme NW of Ferrer Point, off the E coast of Discovery Bay, Greenwich Island, in the South Shetlands. ChilAE 1946-47 named it Isla Cruz, after a member of the hydrographic survey party, but it appears as Islote Cruz on a Chilean chart of 1951. UK-APC accepted the name Cruz Rock on May 11, 2005. The British were the latest to replot this feature, in late 2008.

Cruzen, Richard Harold. b. April 28, 1897, Gallatin, Mo., son of lawyer Nathaniel Green Cruzen and his wife Mary Edna Garheart. After Gallatin High School, VMI, and the Severn School, he went to the Naval Academy at Annapolis, actually serving on the *Mississippi* in the Atlantic toward the end of World War I, while still a cadet. He graduated in 1919, and served as an ensign on the *Claxton*. In 1923 he married Elizabeth J. Ingle, the daughter of a San Diego real estate man, and they had a couple of children. He was promoted to lieutenant on June 7, 1925, and to lieutenant commander on Oct. 1, 1935. During USAS 1939-41, he commanded the *Bear*, and was 2nd-in-command of the expedition. On April 1, 1941 he was promoted to commander, and was on the staff of the Naval War College until 1943, having been promoted to captain on June 20, 1942, and to rear admiral on April 1, 1944. After active service in the Pacific theatre during World War II, he was tactical leader of OpHJ 1946-47, in command of the fleet of 13 ships. He retired as a vice admiral in 1954, and died on April 15, 1970, at Camp Pendleton, Calif.

Cruzen Island. 74°47' S, 140°42' W. A rocky, but mostly snow-covered island, about 80 km NNE of the mouth of Land Glacier, off the Ruppert Coast of Marie Byrd Land. Discovered aerially in 1940 by personnel from West Base, during USAS 1939-41, and named for Richard Cruzen. US-ACAN accepted the name in 1947.

Cruzen Range. 77°19' S, 161°10' E. A mountain range reaching an elevation of about 1600 m (in Vashka Crag), it extends W-E for about 16 km between Salyer Ledge and Nickell Peak, in Victoria Land. It is bounded on the N by the Clare Range, on the E by the Victoria Valley, on the S by the Barwick Valley, and on the W by Webb Glacier. Named by US-ACAN in 2005, for Richard Cruzen. NZ-APC accepted the name on Sept. 12, 2005.

[1]**Cryptogam Ridge**. 60°43' S, 45°40' W. A ridge running E-W, at an elevation of about 140 m, SE of Cummings Cove, on Signy Island, in the South Orkneys. The north-facing slope of the ridge supports a diversity of lichens and mosses, collectively referred to as cryptogams (i.e., spore-producing plants), hence the name given by UK-APC on May 13, 1991, following terrestrial biological work done here by BAS. US-ACAN accepted the name.

[2]**Cryptogam Ridge**. 74°21' S, 164°42' E. On the S rim of the main summit crater of Mount Melbourne, at an elevation of 2733 m, it extends about 1.5 km by 0.5 km, between Terra Nova Bay and Wood Bay, in Victoria Land.

The ridge includes SPA #22. The geothermal ground supports a unique community of bryophytes, algae, and microbiota, hence the name given by the Italians on Feb. 22, 2002 (cryptogam being a spore-producing plant).

Crystal Glacier. 61°57' S, 57°56' W. Between Gam Point and Bolinder Bluff, at Esther Harbor, on the N coast of King George Island, in the South Shetlands. Named by the Poles in 1984.

Crystal Hill. 63°39' S, 57°44' W. An ice-free hill, rising to 150 m (the British say about 200 m), forming the summit of a headland between Bald Head and Camp Hill, on the N side of the Prince Gustav Channel, and on the S side of Trinity Peninsula. Surveyed by Fids from Base D in Dec. 1945, and so named by them for the rock crystals collected at the foot of the hill. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer, and on a British map of 1974. It appears as Cabo Carry on an Argentine map of 1959, but this well be a mistranslation of Corry Island. In Aug. 1963 Argentine personnel from Esperanza Station established San Nicolás Refugio here.

Crystal Mountain. 61°59' S, 57°55' W. An ice-covered mountain, rising to 619 m, S of Bolinder Bluff, along the axial mountain ridge of King George Island, in the South Shetlands. Named by the Poles in 1984.

Crystal Pond. 68°38' S, 78°25' E. A small pond in the Vestfold Hills, about 20 m in diameter, on an ice-covered moraine. There is a prominent ice cliff on the E side. Named descriptively by ANCA on Dec. 3, 1984. The surface of the lake freezes to form long needles or crystals of ice.

Crystal Slope. 77°32' S, 167°09' E. A western slope, at an elevation of 3700 m above sea level, between Camp Slope and Robot Gully, leading down from the summit crater rim of Mount Erebus, on Ross Island. So named by US-ACAN in 2000 because the slope includes a talus of large anorthoclase feldspar crystals. NZ-APC accepted the name on Feb. 20, 2001.

Crystal Sound. 66°28' S, 66°39' W. A sound extending in a NE-SW direction between the S part of the Biscoe Islands and the Loubet Coast, on the W coast of Graham Land. Its N limit is an imaginary line between Cape Leblond and Cape Evensen. Its S limit is Holdfast Point, Roux Island, Liard Island, and the Sillard Islands. Its N and S ends were discovered during FrAE 1908-10, when the name Baie Matha was applied collectively to Matha Strait, Darbel Bay, and the S part of the present feature (*see* **Matha Strait**), and the name Baie Pendleton to the N part of the present feature. The sound was probably first traversed by the *Penola*, after air reconnaissance in Feb. 1936, during BGLE 1934-37. A 1940 reference to Pendleton Strait includes Grandidier Channel and the present feature. Most of the sound and its islands were photographed from the air by FIDASE in 1956-57. So named by UK-APC on Sept. 23, 1960, because many features in the sound are named for ice crystal researchers. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. Originally plotted in 66°23' S, 66°30' W, it has since been replotted.

The *Crystal Symphony*. Operated since 1991 by the American cruise company, Crystal Cruises (owned by NYK, of Japan, but operating out of Los Angeles), this vessel was in Antarctic waters in 2002-03. She carried 1000 passengers, mostly Americans. She was back in the 2008-09 season. The *Crystal Harmony* was the company's first ship, from 1990 (when the company was founded). The *Harmony* transferred in Dec. 2005 to Crystal Cruises' parent company, NYK, and became the *Asuka II*. The *Crystal Serenity* followed in 2003.

Mount Csejtey. 82°30' S, 155°50' E. A mountain, about 3 km S of Mount Macpherson, in the central part of the Geologists Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Bela Csejtey, Jr. (b. Jan. 26, 1934, Budapest), USARP geologist at McMurdo in 1962-63. ANCA accepted the name.

Nunatak CTA-12 *see* **Butler Rocks**

Nunatak CTA-15 *see* **Vanguard Nunatak**

CTAE *see* **British Commonwealth Transantarctic Expedition**

Ctenophores. Ctenophora is a phylum of about 80 species of small marine invertebrates, many of them found in Antarctica.

Bahía Cuadrada *see* **Square Bay**

Isla Cuadrada *see* **Square End Island**

Roca Cuadrada *see* **Square Rock Point**

Cabo Cuadrilátero *see* **Cabo Pacheco**

Punta IV *see* **Roman Four Promontory**

Cuatro Rocas Romanas *see* **Roman Four Promontory**

Cerro Cuatro Romano *see* **Roman Four Promontory**

Promontorio Cuatro Romano *see* **Roman Four Promontory**

Punta Cuatro Romano *see* **Roman Four Promontory**

Cuba. On Aug. 16, 1984, Cuba was ratified as the 32nd signatory of the Antarctic Treaty. Cuba has sent scientists to work in Antarctica with the Russians.

The Cube *see* **Kubus Mountain**

Cube Rock. 63°37' S, 56°22' W. A small but notable rock (with another, even smaller, hardly above the surface, immediately hard by), in the extreme S entrance to Antarctic Sound, 5.5 km SE of Cape Scrymgeour (on Andersson Island), opposite the extreme E part of Trinity Peninsula. It appears as Roca Cubo on an Argentine chart of 1960, and a Chilean map of 1961. This was a descriptive name and was translated into English by US-ACAN in 1964.

Península Cubillos. 65°25' S, 63°59' W. A peninsula projecting toward the W, immediately N of Beascochea Bay, and which terminates in Cape Pérez, on the W coast of Graham Land. Named by the Chileans for Admiral Hernán Cubillos Leiva, director of the Chilean Naval Academy, March 13, 1950-March 3, 1953, who, when he went to Antarctica as part of ChilAE 1962-63, was commander-in-chief of the Chilean Navy. He was later ambassador to Brazil.

Roca Cubo *see* **Cube Rock**

Roca Cuca. 62°22' S, 59°44' W. A rock to the W of Chaos Reef, and about 2.1 km W of Fort William (the extreme W point of Robert Island), in the South Shetlands. Surveyed by personnel on the *Lautaro*, during ChilAE 1948-49, and named by them for the wife of one of the officers aboard. It appears on their expedition chart in 1949, and was the name accepted by the Chilean gazetteer of 1974.

Cucumbers. Cosmic microwave background radiation, or CMBR.

Punta Cuenca. 62°27' S, 59°46' W. The most salient point of Quito Glacier, 1.8 km W of Orión Point, on the N side of Greenwich Island, in the South Shetlands. Named by the Ecuadorians for their province.

Cabo Cuerno. 64°17' S, 63°36' W. A cape to the SW of Cape Grönland (the N extremity of Anvers Island), in the Palmer Archipelago. Named by the Argentines.

Cerro Cuerno *see* **^{2}Twin Peaks**

Punta Cueva. 64°09' S, 62°36' W. A point, S of Guyou Bay, Brabant Island. Named by the Argentines.

Cape Cuff *see* **Cuff Cape**

Cuff Cape. 77°00' S, 162°21' E. A dark rock point emerging from the ice, immediately to the S of the mouth of Mackay Glacier. Discovered and mapped by BAE 1910-13, and so named by them because it looks like a hand coming out of a snowy cuff. US-ACAN accepted the name in 1952, and it appears in the 1958 NZ gazetteer (but as Cape Cuff).

Cugnot Ice Piedmont. 63°38' S, 58°10' W. About 24 km long, and between 5 and 10 km wide, it extends from Russell East Glacier to Eyrie Bay, on Trinity Peninsula, on the NW side of the Prince Gustav Channel, and is bounded on the landward side by the Louis Philippe Plateau. Mapped by FIDS cartographers from ground surveys conducted in 1960-61 by Fids from Base D. Named by UK-APC on Feb. 12, 1964, for French military engineer Nicolas-Joseph Cugnot (1725-1804), the automobile pioneer. US-ACAN accepted the name later in 1964.

Cui Xi. 62°13' S, 58°58' W. A stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Roca(s) Cuis *see* **Tooth Rock**

Cullen, Nicholas "Nick." Canadian Merchant Navy man, who served as fireman on the *Eagle*, 1944-45, during the 2nd phase of Operation Tabarin. After the expedition, at Rio, he had a freak accident on or around Aug. 1, 1945, and injured his head. The *Eagle* made rapidly for Bahia, but Nick died as the ship entered port. He was buried there.

Cumbers Reef. 67°35' S, 69°40' W. A group of rocks aligned in an arc, and which form the N and W parts of the Amiot Islands, off the SW part of Adelaide Island, off the W coast of Graham Land. Charted in early 1963 by an RN Hydrographic Survey unit on the *Protector*, which spent the 1961-62, and 1962-63 seasons in this area. Named by the British in 1963 for Roger Neil Cumbers (b. 1939, Surrey), 3rd officer on the BAS relief ship *John Biscoe* over this period, and who assisted in the survey (he retired as captain). UK-APC accepted the name on on Feb. 12, 1964, and US-ACAN followed suit that year. It appears on a British chart of that year.

Cumbie, William Alvin "Bill," Jr. b. March 1, 1924, Milton, Fla., son of garage mechanic William A. Cumbie, Sr., and his wife Leila Ester. He enlisted in the U.S. Navy on Dec. 23, 1942, and married Louise Garnett in 1944. An aviation elctronics technician, he was the radioman on the *Que Sera Sera* during the famous flight to the South Pole on Oct. 31, 1956. He died in Florida in April 1988.

Cumbie Glacier. 77°13' S, 154°12' W. A short, steep glacier, just E of Scott's Nunataks, it flows N into the Swinburne Ice Shelf, along the SW side of Sulzberger Bay, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1971, for Bill Cumbie.

Mount Cumming. 76°40' S, 125°48' W. A low, mostly snow-covered mountain, volcanic in origin, it stands midway between Mount Hampton and Mount Hartigan, in the Executive Committee Range of Marie Byrd Land. A circular (snow-covered) crater occupies the summit area. Discovered aerially on Dec. 15, 1940 by USAS 1939-41, and named Mount Winifred Cumming, for the wife of Hugh S. Cumming, Jr. (1900-1986), State Department member of the USAS Executive Committee, and son of the surgeon general of the USA. US-ACAN accepted that name in 1947. The name was later shortened. The feature was mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1960.

Cumming, Alexander "Alec." b. March 2, 1933, Rassay, in the Scottish islands, son of crofter and fisherman John Cumming (later a grocer in Glasgow), and his wife Ann. He grew up summering in Rassay and wintering in Glasgow, and in 1939 was evacuated to the isle of Fladda, to live with his grandmother for the duration of the war, speaking Gaelic and English. There were 4 houses on the island, and a school, with 9 pupils. When he left, the number of pupils was down to 5. As a child he decided that when he gew up he would be a doctor, and in 1951 embarked on a 6 year medical course at Glasgow University. He did 6 months residency at Falkirk and 6 months at Stirling, and then joined the Army for his national service. While doing basic training in Hampshire in 1958 (he was known as Sandy then), he heard about FIDS, and conned his way in to an interview with Ray Priestley, who gladly took him on, as a medical officer. He shipped out of Southampton on the *John Biscoe*, bound for Uruguay, Port Stanley, and then on to South Georgia. He was scheduled to winter-over at Base W in 1959, but circumstances prevented that (*see* **Base W** for details). Instead, Vivien Fuchs decided to send him to Base F, which is where he wintered-over that year. In 1960 he arrived back in Southampton on the *John Biscoe*, did another year's army service in Singapore and Malaya, and then went in to general practice in Invergordon, marrying Katherine McLeod in 1962. He went to Edinburgh temporarily to take over the practice of a doctor who had had to go to the USA for 6 months for personal reasons, and wound up staying.

Cumming, Geoffrey Charles "Geoff." Joined FIDS in 1954, as a general assistant and builder, wintering-over at Base F in 1955, his main purpose being to build the radiosonde hut there. He then wintered-over at Base Y in 1956.

Mount Cummings. 73°14' S, 61°37' W. Rising to about 1000 m at the E end of Galan Ridge, to the NW of New Bedford Inlet, in the Dana Mountains, on the Lassiter Coast, on the SE coast of Palmer Land. Surveyed and first mapped by a combined sledging team of Fids from Base E and personnel from RARE 1947-48. Surveyed from the ground by the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Jack W. Cummings, radioman who wintered-over at Palmer Station in 1965. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Cummings, Edmund Thomas "Ed." b. 1925, Headington, Bucks, son of Edmund C. Cummings and his wife Elizabeth Mailing. He joined FIDS in 1945, as a radioman, and wintered over at Base C in 1946, and at Base B in 1947. In 1948 he shipped back to Port Stanley, then caught the *Lafonia*, which took him back to London, where they arrived on April 21, 1948. In 1951, in Oxford, he married Jean A. Smith.

Cummings, James *see* **USEE 1838-42**

Cummings, Thomas W. *see* **USEE 1838-42**

Cummings, W.H. *see* **USEE 1838-42**

Cummings Col. 60°43' S, 45°38' W. Between Tioga Hill and North Gneiss, on Signy Island, in the South Orkneys. Surveyed by Fids from Signy Island Station between 1947 and 1950, and photographed aerially by the RN in 1968. Named by UK-APC on Sept. 29, 2004, in association with the cove.

Cummings Cove. 60°44' S, 45°41' W. A cove, E of Porteous Point, between that point and Jebsen Point, on the W side of Signy Island, in the South Orkneys. Roughly surveyed by the Discovery Investigations in 1933, and re-surveyed by Fids from Signy Island Station in 1947. Named by UK-APC on March 31, 1955, for Ed Cummings. US-ACAN accepted the name in 1956. A BAS refuge hut, established on the cove in 1971, is called Cummings Hut.

Cumpston Glacier. 66°59' S, 65°02' W. A small glacier flowing between Breitfuss Glacier and Quartermain Glacier, into the head of Mill Inlet, on the E coast of Graham Land. Named by UK-APC on July 21, 1976, for John Stanley Cumpston (1909-1986) of the Australian Department of External Affairs, historian of the Antarctic, who, with E.P. Bayliss, drew up the 1939 map of Antarctica. US-ACAN accepted the name later in 1976.

Cumpston Massif. 73°33' S, 66°53' E. A prominent, flat-topped rock outcrop, between 7 and 13 km wide, trending N-S for about 14.5 km, and rising to 2070 m, at the junction of Lambert Glacier and Mellor Glacier, in the S part of the Prince Charles Mountains, in Mac. Robertson Land. Discovered aerially by ANARE in Nov. 1956. Named by ANCA on Aug. 10, 1966, for J.S. Cumpston (*see* **Cumpston Glacier**). US-ACAN accepted the name in 1970.

Isla Cúmulo *see* **Turnabout Island**

Mount Cumulus *see* **Cumulus Mountain**

Cumulus Hills. 85°20' S, 175°00' W. Several groups of largely barren hills in the Queen Maud Mountains, about 85 sq miles in area, divided by Logie Glacier, and standing near the head of, and overlooking, Shackleton Glacier, which bounds the hills on the west. McGregor Glacier bounds them on the N, and Zaneveld Glacier on the south. It was seen on several occasions that the exposed rock in this area gave rise to the creation of cumulus clouds (considered to be very rare at this altitide), hence the name given by the Southern Party of NZGSAE 1961-62. NZ-APC accepted the name, and US-ACAN followed suit in 1966. Originally plotted in 85°15' S, 175°00' W, they have since been replotted.

Cumulus Mountain. 71°51' S, 5°23' E. Also called Mount Cumulus. Rising to 2335 m, immediately N of Høgsenga Crags, and N of Breplogen Mountain, in the Mühlig-Hofmann Mountains of Queen Maud Land, about 8 km from Svarthamaren Mountain. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Cumulusfjellet. US-ACAN accepted the name Cumulus Mountain (which means the same thing), in 1967. Apparently, the Russians call this mountain Gora Gajdara.

Cumulusfjellet *see* **Cumulus Mountain**

Cuneiform Cliffs. 73°06' S, 167°38' E. Steep, irregular cliffs at the S end of the Malta Plateau, along the N side of the lower Mariner Glacier, in Victoria Land. So named in 1966 by both NZ-APC and US-ACAN, for the wedgelike (cuneiform) spurs which project from the face of the cliffs.

Cunningham, John Crabbe. b. Nov. 23, 1927, Glasgow, Scotland. A shipwright, he moved to NZ in 1952, and in 1955-56 was on

South Georgia, mountain climbing, after which he was in the Himalayas on two separate expeditions, in 1957 and 1958. In 1959 he joined FIDS, and wintered-over as base leader at Port Lockroy Station in 1960, at Base E in 1961 and 1962, and at Base T in 1964. Cunningham it was who led the advance party that began the establishment of Fossil Bluff Station in 1961. In 1961 and 1962 he covered over 1000 miles by dog sledge. On Nov. 23, 1964 he led the first ever party to the top of Mount Jackson. He died in 1980, in Ynys, Monmouthshire.

Cunningham, Willard Eugene "Gene," Jr. b. Nov. 27, 1936, Weirton, W. Va., son of Willard Eugene Cunningham and his wife Frances J. Trupiano, both workers at Weirton Steel Mill. He determined early that the mill wasn't for him, and in 1954 joined the Marines. It was in Hawaii that he decided to join the Seabees instead, and in 1958, when his Marine tour was up, he joined the U.S. Navy, and was based in Norfolk, Va., which is where he was when he read the notice for volunteers for Antarctica. On July 16, 1959 he was assigned to the Seabees at Davisville, RI, and on Nov. 26, 1959 arrived at McMurdo, where, as a construction mechanic 3rd class, he wintered-over in 1960. He was also part of the Byrd-South Pole Traverse (q.v.) in the summer of 1960-61, and in addition to that, with Maj. Antero Havola, broke a trail from McMurdo to Marble Point (60 miles away), in order to bring two D-9 tractors (one of 44 tons, the other of 40 tons) back to McMurdo, to do construction work on the first nuclear power plant. He was back at Byrd Station for the summer of 1962-63, and between Dec. 20, 1962 and Jan. 31, 1963 was the only mechanic on the 840-mile overland trek (Task Group 43.5) led by George Fowler (see **Fowler Knoll**), from Byrd to the new Eights Station, in order to deliver a D-8 LPG 38-ton tractor there. Then he wintered-over at Pole Station in 1963, as a construction mechanic 1st class. He did two tours in Vietnam, 1966-68, and retired in 1973 as a chief mechanic, to Plymouth, Ind. He married Pam Baker.

Cunningham Glacier. 84°16' S, 173°45' E. A tributary glacier flowing NE into Canyon Glacier, 8 km N of Gray Peak, in the Queen Maud Mountains. Named by US-ACAN in 1966, for Gene Cunningham.

Cunningham Peak. 79°16' S, 86°12' W. A mostly ice-covered peak, rising to 2170 m at the head of Gowan Glacier, along the Founders Escarpment, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1965. Named by US-ACAN in 1966, for John B. Cunningham, USN, ship's serviceman in charge of ship's stores and laundry at McMurdo during OpDF 66 (i.e., 1965-66).

Cupcake Peaks. 80°42' S, 158°36' E. Two rounded peaks, or nunataks, rising to 1391 m, 5 km SE of Mount Hamilton, in the Churchill Mountains. Named descriptively by US-ACAN in 2003. NZ-APC accepted the name on Feb. 27, 2003.

Isola della Cupola *see* **Delaite Island**

Mount Cupola. 69°21' S, 70°27' W. A dome-shaped mountain, rising to 2500 m (the British say about 1650 m), W of Hampton Glacier, and marking the SE limit of the Rouen Mountains, in the N part of Alexander Island. First seen and photographed aerially on Feb. 1, 1937, by BGLE 1934-37, it appears on Stephenson's 1940 map of that expedition. Surveyed from the ground by Fids from Base E in Dec. 1948, and named descriptively by UK-APC on March 2, 1961. US-ACAN accepted the name later in 1961. It appears on a British chart of that year, but in 69°21' S, 70°31' E.

Cupola Island *see* **Racovitza Islands**

Cuppel Dome Island *see* **Racovitza Islands**

Cuppel Island *see* **Racovitza Islands**

Isla Curanilahue *see* **Andresen Island**

Îles Curie *see* **Curie Island**

Point Curie *see* **Curie Point**

Pointe Curie *see* **Curie Point**

Punta Curie *see* **Curie Point**

Curie Island. 66°39' S, 140°03' E. The largest of the group of small, rocky islets which the French call Îles Curie, near the E end of the Géologie Archipelago, 1.5 km SW of Derby Island (in the Dumoulin Islands), close N of the Astrolabe Glacier Tongue. This area was photographed aerially during OpHJ 1946-47, but the group to which this particular feature belongs was charted by the French in 1949-51, and named by them as Îles Curie, for the French scientific family of physicians and chemists. Pierre Curie (1859-1906) married Marie Sklodowska (1867-1934), which made Marie "Madame Curie." In 1903 they both won a Nobel prize for physics, and in 1911 Madame Curie won a second, for chemistry, thus making her the first person ever to win two Nobel prizes. Their daughter Irène Curie (1897-1956) married Jean-Frédéric Joliot (1900-1958; known as Frédéric), and they both changed their names to Joliot-Curie. Irène and Frédéric Joliot-Curie both won a chemistry Nobel in 1935. Their daughter, Hélène Langevin-Joliot (b. 1927) is a nuclear physicist, and married fellow nuclear physicist Pierre Langevin, grandson of famous physicist Paul Langevin. Their son, Yves Langevin-Joliot, is an astrophysicist. Hélène's brother, Pierre Joliot (b. 1932), is a biologist. In 1956, US-ACAN accepted the name Curie Island for the largest of these little islands, and ignored the French pluralization.

Curie Point. 64°50' S, 63°29' W. Forms the NE extremity of Doumer Island, off Anvers Island, in the Palmer Archipelago. Discovered by FrAE 1903-05, and named by Charcot as Pointe P. Curie, for Pierre Curie (*see* **Curie Island**). It appears abbreviated as Pointe Curie on a 1911 French map, and translated as Point Curie on a 1943 U.S. Hydrographic Office chart. Surveyed in 1944 by Operation Tabarin personnel from Port Lockroy Station. Named Curie Point by UK-APC on Nov. 21, 1949, and this name was accepted by US-ACAN in 1951. It appears on an Argentine chart of 1949 as Punta Curie, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Mount Curl. 70°48' S, 63°07' W. The snow-covered summit of a ridge, rising to about 2300 m, 6 km ENE of Mount Gatlin, just NE of the Welch Mountains, in central Palmer Land. Mapped by USGS in 1974 from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for James E. Curl, USARP glaciologist in the South Shetlands in 1971-72, 1972-73, and 1973-74. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

The *Curlew*. Yacht in Antarctic waters in 1992-93, under the command of Tim and Pauline Carr.

Curphey Peaks. 71°18' S, 163°23' E. Two snow-covered peaks of about the same height (the W one is 1760 m), bounding the E side of Helix Pass, in the Bowers Mountains of Oates Land, in Victoria Land. Named by NZ-APC in 1982, for Ian Curphey, field leader of Malcolm Laird's NZARP geological party to the area in 1974-75. US-ACAN accepted the name in 1983.

Curran Bluff. 68°13' S, 65°02' W. A bluff, 3 km long, and rising to 910 m at its W end, it forms a part of the S coast of Joerg Peninsula, and, at the same time, the N entrance point of Solberg Inlet (indeed, it is the most prominent feature on the N side of that inlet), on the Bowman Coast, S of Reichle Mesa, on the E coast of the Antarctic Peninsula. Photographed aerially by Ellsworth on Nov. 21, 1935, and mapped from these photos in 1936-37 by U.S. cartographer W.L.G. Joerg. Surveyed by Fids from Base E in 1946-48. Named by US-ACAN for Martin P. Curran, a member of the Pine Island Bay reconnaissance survey on the *Burton Island*, in Ellsworth Land, in 1974-75, and project manager of the *Hero*-Palmer station research system, in 1976. UK-APC accepted the name on May 21, 1979. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Curreen Glacier *see* **Irving Glacier**

Currents. The ocean currents go clockwise around Antarctica, pulled by the winds (*see also* **Antarctic Circumpolar Current**, and **Antarctic Surface Water**).

Mount Currie. 67°42' S, 49°12' E. Rising to 1110 m between Mount Maslen and Mount Merrick, in the Raggatt Mountains of Enderby Land. Plotted from air photos taken by ANARE in 1956 and 1957. Named by ANCA on Nov. 24, 1961, for Graeme Currie. US-ACAN accepted the name in 1965.

Currie, Graeme James. Nicknamed "Chompers." b. Oct. 1, 1937. He got his PhD at Adelaide. Radio supervisor who wintered-over at Mawson Station in 1960. He was supervising technician (radio) at Wilkes Station in 1963 and 1967, and at Casey Station in 1969 and 1974, at Mawson again in 1977, and then had several postings to Macquarie Island in the 1980s. In 1981 he wintered-over at Pole Station,

as a meteorological technician with ITT. He was also radio operator on the *Hero*. He holds the Australian record for winterings-over —11 (that figure includes sub-Antarctic islands).

Currin, Howard. b. 1901, Nova Scotia. He went to sea as a teenager, and was a seaman and deckhand on the *Eagle*, in 1944-45, during the 2nd phase of Operation Tabarin.

The *Currituck*. A 14,000-ton, 540 foot 5 inch seaplane tender, built at the U.S. Navy Yard in Philadelphia, and launched on Sept. 1, 1943. She fought in World War II, and was flagship of the Western Task Group of OpHJ 1946-47. Capt. John E. Clark was skipper from Nov. 19, 1945 to June 5, 1947. Lt. Jack N. Parker, of Jackson, Mich., was exec during the cruise, and Lt. (jg) Wendell S. Palmer was ship's chaplain. On April 18, 1947, she arrived back in Norfolk, Va., by way of the Panama Canal. She was broken up in Oakland in 1972.

Currituck Island. 66°05' S, 100°40' E. An island of rock and ice, 11 km long, and marked by numerous small coves, on the NW side of Edisto Channel, at the W end of the Highjump Archipelago, N of the Bunger Hills. Photographed aerially in Feb. 1947, by OpHJ 1946-47, and plotted from these photos in 1955 by U.S. cartographer Gard Blodgett. From these photos it appeared that the N part of the island was a separate island, and in 1956, US-ACAN named it Mohaupt Island, for Harold Mohaupt (*see* **Mohaupt Point**). The S part of the island (or the southern of the 2 islands, as they thought it was then) was named Currituck Island, after the *Currituck*. SovAE 1956-57 corrected the error, the name Currituck Island was re-applied to the whole island, and the name Mohaupt was re-applied to the point. ANCA accepted this situation.

Isla Curtis *see* **Curtis Island**

Curtis, Leland Sterling "Lee." b. Aug. 7, 1897, Denver, Colo., but grew up mainly in Spokane and Los Angeles, son of salesman Charles E. Curtis and wife Alice. After a spell as a bank clerk, he became a landscape painter and mountain climber, and was the expedition artist on USAS 1939-41. He did not winter-over. He married Marjorie. He was back at McMurdo, on the first Globemaster in for OpDF III (1957-58), again as the expedition artist. He died on March 17, 1989.

Curtis, Robin. b. Nov. 24, 1933, Cwmtillery, near Bedwellty, Monmouthshire. After graduating from the University College of Wales, in Cardiff, in 1956, he joined FIDS as a geologist, and wintered-over at Base J in 1957. He fell from the roof one day, and broke his ankle, partly disabling him for the rest of the winter. He was attached to the RN Hydrographic Survey unit on the *Protector* in the summer season of 1957-58. On his return to the UK in June 1958, he went to work at the FIDS geology unit at the department of geography and geophysics at Birmingham University, from which institution he was awarded his PhD in 1960, writing his thesis on the petrology of the Graham Land coast and offshore islands. He left FIDS on Sept. 30, 1960, in 1965 went into the minerals exploration business as a chief geologist, and moved to Australia. In 1978 he started his own consulting firm, and died of cancer in Sydney, on Nov. 14, 2006.

Curtis, Roy Everett. b. July 3, 1915. He joined the Navy as an enlisted pilot, and worked his way up though the ranks. He was a lieutenant commander, and living in Costa Mesa, Calif., when he was selected to fly one of the R4Ds, from NZ to McMurdo on Oct. 18-19, 1956. The plane he was most identified with in Antarctica, during OpDF II (1956-57), was the *Takahe*. He married Dorothy, and spent some time in Guilderland Center, near Albany, NY, flying for the State Conservation Service. He was piloting one of their planes when it crashed into the Adirondacks on Sept. 21, 1959, killing one of the passengers. He moved to Winter Park Fla., where he died, on Sept. 4, 1998.

Curtis Island. 65°56' S, 65°37' W. An island, over 1.5 km long, 3 km NE of Jagged Island, off Holtedahl Bay, on the Graham Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and charted by an RN Hydrographic Survey unit on the *Protector* in 1957-58. Mapped by FIDS cartographers from these efforts, and named by UK-APC on July 7, 1959, for Robin Curtis, it appears on a British chart of 1960. US-ACAN accepted the name in 1971. There is an Argentine involvement here also. The island appears (apparently unnamed) on a 1957 government chart, but today the Argentines call it Isla Curtis. However, there is a 1978 reference to a feature called Islotes Halcón, named after the corvette *Halcón* in Almirante Brown's famous fleet of 1814. This name includes not only Isla Curtis but also a smaller island to the west. Having said that, there is a separate feature, Islas Halcón, listed in the gazetteer, which is the same thing as Islotes Halcón.

Curtis Peak. 79°56' S, 82°53' W. A peak, SSE of Chappell Peak, at the NW end of Horseshoe Valley, in the Enterprise Hills, in the Ellsworth Mountains. Mapped by USGS from USN air photos taken between 1961 and 1966. Named by UK-APC on Nov. 20, 2007, for Michael L. Curtis, BAS structural geologist since 1993, an authority on Gondwana tectonics, and a pioneer in the capture of electronic data for geologic maps. It was first climbed on Jan. 22, 2007, by Robert M. Kewarth and Tim Hewette.

Curtis Peaks. 84°56' S, 169°36' W. A small cluster of peaks, rising to elevations of between 1500 and 1600 m above sea level, and surmounting the end of an irregular-shaped ridge-type mountain which extends E from Mount Hall of the Lillie Range, about 10 km E of Mount Daniel, in the foothills of the Prince Olav Mountains, in the Queen Maud Mountains. Discovered by the U.S. Ross Ice Shelf Traverse Party led by Albert Crary in 1957-58, and named by him for Roy Curtis. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

The *Curtiss*. U.S. Navy seaplane tender, 8671 tons and 527 feet 4 inches long, built by New York Shipbuilding Co., Camden, NJ, and launched on April 20, 1940. Named for aviation pioneer Glenn Hammond Curtiss, and commissioned on Nov. 15, 1940. She could move at 20 knots, and had a compliment of 1195 officers and men. She survived Pearl Harbor and a kamikaze attack in 1945, and received 7 battle stars. She was involved in Korea, and in the Bikini atomic bomb testing. On Dec. 27, 1956 she left San Diego carrying scientists and U.S. Navy support personnel for OpDF II (i.e., 1956-57), under the command of Capt. Charles T. Fritter. On Jan. 12, 1957 she arrived at Christchurch, NZ, leaving there on Jan. 15 for McMurdo Sound, where she arrived on Jan. 19. On Jan. 28 she unfinished loading and from Jan. 30 to Feb. 6, 1957 unloaded at Little America. She then did ice reconnaissance at Okuma Bay and Sulzberger Bay, and left McMurdo on Feb. 10, 1957, stopping at Wellington (1 day), Auckland (7 days), and Sydney (7 days), before arriving at San Diego on March 25, 1957. She was decommissioned on Sept. 24, 1957.

Mount Curtiss. 77°06' S, 162°26' E. A peak, rising to about 1300 m at the E end of the main ridge of the Gonville and Caius Range, in Victoria Land. Named by US-ACAN in 1999, for the *Curtiss*. NZ-APC accepted the name on Nov. 4, 1999.

Curtiss Bay. 64°03' S, 60°47' W. An indentation, 6 km wide, into the Davis Coast, SW of Cape Andreas, between that cape and Cape Sterneck, on the W coast of Graham Land. It was surveyed by ChilAE 1946-47, and appears on their 1947 chart as Bahía Guesalaga, named after Federico Guesalaga Toro. It appears as such on a Chilean chart of 1961, and that was the name accepted by the 1974 Chilean gazetteer. Roughly charted by ArgAE 1951-52, and named by them as Bahía Inútil (i.e., "useless bay"), because of its poor holding ground and lack of shelter. It appears as such on their chart of 1952, on another Argentine government chart of 1957, and that was the name accepted by the 1970 Argentine gazetteer. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Portal Point in 1957-58. UK-APC found the Chilean name too foreign, and, as for the Argentine name, they were unable to countenance this, of course, and, besides, the bay is not useless. It has been used as an anchorage. So, they named it on Sept. 23, 1960, as Curtiss Bay, for Glenn Curtiss (1878-1930), U.S. seaplane pioneer, and it appears as such on a British chart of 1961. US-ACAN accepted that name in 1965.

Cabo Curuzú Cuatiá. 67°19' S, 68°00' W. A cape at the SE foot of Hunt Peak, at Stonehouse Bay, on the E coast of Adelaide Island. Named by the Argentines, for the Argentine city of Curuzú Cuatiá.

Punta Curva. 62°36' S, 59°54' W. A point (named by the Argentines), next W of the point they call Punta López (which the Chileans call

Punta Pallero), on the E coast of Half Moon Island, in the South Shetlands. It has a peak on it that the Argentine call Pico Destacamento.

Îles Curzon *see* **Curzon Islands**

Curzon Archipelago *see* **Curzon Islands**

Curzon Islands. 66°46' S, 141°35' E. Also called Curzon Archipelago, and Curzon Islets. A small archipelago of rocky islands and islets just off Cape Découverte, on the Adélie Coast, prolonged toward the N by a submerged reef. They include Chameau Island, Claquebue Island, Dauphin Island, Dru Rock, Guano Island, Nord Island, Piton Island, and Retour Island. Probably discovered in Jan. 1840 by FrAE 1837-40, but not identified as islands on the expedition's maps. They were not charted until 1912, when John King Davis did so in the *Aurora* during AAE 1911-14. Mawson named them for George, 1st Marquess Curzon (the famous Lord Curzon) (1859-1925), viceroy of India, 1899-1905, president of the Royal Geographical Society, 1911-14, and British foreign secretary, 1919-24. US-ACAN accepted the name in 1947. Mapped in detail by the French in 1950-52.

Curzon Islets *see* **Curzon Islands**

Cushing Col. 64°07' S, 23' W. A col, at a height of about 800 m above sea level, on the SE side of Cushing Peak, in the N part of Brabant Island, in the Palmer Archipelago. Named by the British (the name is unofficial), in association with the peak. It was the site of a rescue by helicopter from the *Endurance*, of an injured member of the British Joint Services Expedition, on March 9, 1985 (see that entry for details).

Cushing Peak. 64°06' S, 62°25' W. Rising to about 950 m, 2.5 km SE of Guyou Bay, at the head of Lister Glacier, in the N part of Brabant Island, in the Palmer Archipelago. Shown on an Argentine government chart of 1953, but not named. Photographed aerially by FIDASE in 1956-57, and mapped from these photos by FIDS cartographers in 1959-60. Named by UK-APC on Sept. 23, 1960, for Harvey Cushing (1869-1939), U.S. neurosurgery pioneer. US-ACAN accepted the name later in 1960.

Roca Custodio. 67°32' S, 67°14' W. A low, ice-free offshore rock, next SE of Guardian Rock, in Bigourdan Fjord, N of Pourquoi Pas Island, off the Loubet Coast, on the W coast of the Antarctic Peninsula. Named by the Argentines in association with Guardian Rock (which they call Roca Guardián).

Cutcliffe Peak. 70°32' S, 65°17' E. Just S of Mount Mervyn, in the Porthos Range of the Prince Charles Mountains. Plotted from ANARE aerial photos taken in 1965, and named by ANCA for Maxwell Arthur "Max" Cutcliffe (b. March 29, 1930), senior electrical fitter who wintered-over at Mawson Station in 1966, and who assisted with the ANARE survey program of that year. He was back at Mawson Station, in the same capacity, in 1972. US-ACAN accepted the name in 1971.

Cuthbertson, Steven Robert. b. Jan. 14, 1966. BAS meteorologist who wintered-over at Faraday Station in 1972, 1973, and 1974. He then worked as communications manager with Adventure Network International, in Chile.

Cuthbertson, William Alexander. b. 1882, Edinburgh, son of stationer William Cuthbertson and his wife Elizabeth. He studied art in Edinburgh and Paris, and was the artist on ScotNAE 1902-04. He moved to Glasgow about 1909, and was still alive in 1929.

Cuthbertson Snowfield. 60°42' S, 44°30' W. Rising to 340 m, and covering the high ground of eastern Laurie Island eastward of the Watson Peninsula, between (on the N side of the island) Macdougal Bay and Marr Bay, and (on the S side of the island) Fitchie Bay, in the South Orkneys. Named by UK-APC on Feb. 15, 1988, for William Cuthbertson. US-ACAN accepted the name.

Cutland, Gerald Thomas "Gerry." b. July 17, 1916, Barnstaple, Devon, son of William Cutland and his wife Martha Dennis. He was a ship's cook, who joined FIDS in 1955, and wintered-over at Base F in 1956 and 1957, as cook and general assistant. In 1959 he and E. Arthur Shuman, Jr. wrote an Antarctic cook book called *Fit for a FID, or How to Keep a Fat Explorer in Prime Condition*, which had, on its cover a penguin with a frying pan in his flipper and a whale in the pan. He was a steward on FIDS ships for a while, and died in London in 1980.

Arrecife Cutler *see* **Cutler Stack**

Cutler, Benjamin Sheffield "Ben." b. Jan. 28, 1800, New York. He lived in Stonington, Conn, which is where he married Sophronia Latham on Jan. 30, 1820, and had 11 children over the years. He was commander of the *Free Gift,* during the 1821-22 sealing expedition to the South Shetlands put together by the Fannings, and was also co-owner of the *Frederick*, Ben Pendleton's flagship during the expedition. In 1827-29, as captain of the *Uxor*, he visited the Prince Edward Islands in 1829, but did not go south of 60°S. He died on Aug. 27, 1860, in Stonington.

Cutler, Maurice. b. Dec. 10, 1937, Sydney. He was the 18-year-old UP reporter on the Globemaster circling overhead while Gus Shinn landed Admiral Dufek at the Pole on Oct. 31, 1956 (Mr. Cutler had arrived in Antarctica only 3 days before). He later spent most of his life in Canada.

Cutler Stack. 62°37' S, 60°59' W. A stack in the water, NE of Lair Point, off the N coast of Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1957-58. Named by UK-APC on July 7, 1959, for Ben Cutler. His name was found carved on a piece of whale vertebra excavated from a stone hut on Byers Peninsula by the FIDS survey party. US-ACAN accepted the name in 1964. The Argentines call it Arrecife Cutler. The British were the latest to replot this feature, in late 2008.

Cutting, David John "Dave." Known as "The Chief." Engineer on British research ships in Antarctica, 1987-95. In 1990 he was promoted to chief engineer, and sailed on the first voyage of the *James Clark Ross*. He was still chief engineer in 2003-04.

Cuttlefish. A marine cephalopod of the order Sepioidea. Related to the octopus and squid. Found in Antarctica.

Isla Cuverville *see* **[2]Cuverville Island**

Islote Cuverville *see* **[2]Cuverville Island**

[1]Cuverville Island *see* **Rongé Island**

[2]Cuverville Island. 64°41' S, 62°38' W. A dark, rocky island, reaching an elevation of 252 m, in Errera Channel, about 520 m off the NE coast of Rongé Island, between that island and Arctowski Peninsula, off the Danco Coast, on the W coast of Graham Land. Discovered and charted on Feb. 3, 1898, by BelgAE 1897-99, and named by de Gerlache as Île Cavelier du Cuverville (sic), for Jules-Marie-Armand, Comte de Cavelier de Cuverville (1834-1912), a vice admiral of the French Navy, known as Admiral de Cuverville, who was Georges Lecointe's superior officer at one point in his career. The opportunities for misspelling this name were taken full advantage of over the years, not least by the French themselves. It appears as Cuverville Island on a U.S. Hydrographic Office chart of 1943, and that was the name accepted by US-ACAN in 1949 (after rejecting Cavelier de Cuverville Island, which was the name used by the Discovery Investigations on their 1935 chart, albeit misspelled). UK-APC followed the American naming on Sept. 4, 1957, and it appears as such on a British chart of 1959. It appears on an Argentine chart of 1949 as Isla Cuverville, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer (the latter having rejected Isla Curville, and Isla de Rongé, the latter name having appeared on a 1947 Chilean chart). It was re-surveyed by Fids on the *Norsel* in April 1955, and photographed aerially by FIDASE in 1956-57. On a 1976 map it appears as Islote Cuverville. Not to be confused with Rongé Island itself.

Île Cuvier *see* **Cuvier Island**

Cuvier Canyon. 64°40' S, 140°00' E. An undersea feature out to sea in the Indian Ocean, beyond the point where Wilkes Land and Victoria Land meet (so to speak).

Cuvier Island. 66°39' S, 140°01' E. A rocky island, about 165 m long, and about 310 m N of the W part of Pétrel Island, in the Géologie Archipelago. Charted in 1951 by the French, and named by them as Île Cuvier, for Georges Cuvier (1769-1832), French naturalist. US-ACAN accepted the name Cuvier Island on in 1962.

Cycle Glacier. 77°12' S, 160°10' E. A glacier, 6 km long and 2 km wide, it flows N from the Polar Plateau between Mount Dearborn and Robinson Peak, to enter Mackay Glacier, in Victoria Land. Named by NZ-APC in 1995, in reference to the bike used by Trevor Chinn's 1992-93 NZ glacial mapping party in this area. US-ACAN accepted the name in 1996.

Cyclops Peak. 68°00' S, 55°40' E. A trian-

gular peak, at the NE end of the Dismal Mountains, in Kemp Land, in Enderby Land, it is marked by a round patch of light-colored rock, visible from the NW around to the E, which makes the feature look like the one-eyed giant of the *Odyssey*. Photographed aerially in 1956 by ANARE, visited and surveyed by Graham Knuckey while on a sledging trip from Amundsen Bay to Mawson Station, and mapped by ANARE from all these efforts. Named by ANCA on July 22, 1959. US-ACAN accepted the name in 1970.

Mount Cyril. 84°02' S, 172°35' E. Rising to 1190 m (the New Zealanders say 1863 m), and ice-covered, 3 km S of Celebration Pass, and 17.5 km SSE of Mount Kyffin, in the Commonwealth Range, just to the E of the foot of the Beardmore Glacier. Discovered in 1908 by BAE 1907-09. During BNAE 1901-04 Scott had named a mountain in the Cook Mountains as Mount Longhurst, for Cyril Longhurst (b. 1878, London. d. April 22, 1948, Oxford), secretary of that expedition. So, Shackleton named this one as Mount Cyril. Mr. Longhurst was the best man at Shackleton's wedding, and is described quaintly by Francis Spufford, in his book, *I May Be Some Time*, as "a languid-looking Oxbridge youth who was possibly [Clements] Markham's lover." US-ACAN accepted the name in 1949, and NZ-APC followed suit.

Cytadela *see* **Platt Cliffs**

Czajkowski Needle *see* **Pawson Peak**

Iglica Czajkowskiego *see* **Pawson Peak**

Czamanske Ridge. 82°35' S, 52°42' W. Rising to about 1300 m, NW of the Jaeger Table, between that table and Welcome Pass, in the Dufek Massif, in the Pensacola Mountains. Photographed aerially by USN in 1964, and surveyed from the ground by USGS from 1965 onwards. Named by US-ACAN in 1979, for USGS geophysicist Gerald Kent Czamanske (b. Jan. 17, 1934, Chicago), who worked here in 1976-77 as a member of the Pensacola Mountains party. UK-APC accepted the name on May 21, 1979.

Czech Creek. 62°10' S, 58°29' W. Immediately N of Vanishing Creek, South of Arctowski Station, at Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. It flows from a height of 165 m above sea level to a lowest point of 80 m above sea level. Named by the Poles. Originally it was part of Ornithologists Creek (q.v.).

Czechoslovakia. The first Czech in Antarctica was probably Vaclav Vojtech (q.v.), during ByrdAE 1928-30. In modern times, the first Czech scientist in Antarctica was astronomer Antonin Mrkos, who wintered-over at Mirnyy Station during IGY (1957-59). Oldrich Kostka died in the Mirnyy fire of Aug. 3, 1960. Dr. Mrkos was back, with three other Czech scientists, during SovAE 1961-63. On June 14, 1962 the country of Czechoslovakia (which didn't exist when Vojtech was born, and which no longer exists) was ratified as the 14th signatory of the Antarctic Treaty. Steffen Maagoe was a Czech-American, at Eights Station for the winter of 1964. Josef Sekyra was a geologist with SovAE 1966-68, and was at McMurdo, with the Americans, in 1969-70. On Dec. 26, 1969, he became the first Czech to stand at the South Pole. After this flurry of activity, nothing for 20 years, when Vaclav Vojtech Base was opened (*see* **Eco Nelson**). In 1993 the country was split up into the Czech Republic and the Slovak Republic, and both new countries inherited membership of the Antarctic Treaty. Beginning in 1994, Czech scientists began to go down again, working out of Peruvian, Ukrainian, and Polish Stations. It quickly became apparent that the Czechs needed their own station, and after the idea of a joint station with Hungary and Slovakia was aborted, Johann Gregor Mendel Station was constructed in 2005, as a Czech Station.

Mount Czegka. 86°21' S, 148°41' W. Rising to 2270 m, on the E side of Scott Glacier, just N of the terminus of Van Reeth Glacier, in the Queen Maud Mountains. Discovered in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35. Named by Byrd for Vic Czegka. US-ACAN accepted the name in 1956.

Czegka, Victor Hugo "Vic." b. May 21, 1880, Mähren, Austria, of Galician-Polish descent. He came to the USA in 1904, moved to Clifton, NJ, enlisted in the U.S. Marine Corps in 1905, became a master technical sergeant and distinguished marksman, and went on ByrdAE 1928-30, during which he wintered over in 1929 as machinist. He was general manager and supply officer on ByrdAE 1933-35, but didn't winter-over that second expedition. He left Little America on the *Jacob Ruppert*, on Feb. 5, 1934, for NZ, then caught the *Virginia*, with Granville Lindley, and they arrived in the USA on April 9, 1934. He was also involved in the planning of USAS 1939-41. He married Katherine, retired as a chief warrant officer, and died on Feb. 18, 1973, in Ipswich, Mass.

Czeslaw Point. 61°54' S, 57°45' W. The N promonotory of Brimstone Peak, between Emerald Cove and Venus Bay, on the N coast of King George Island, in the South Shetlands. Named by the Poles in 1984, for Czeslaw Milosz, the Poet (*see* **Milosz Point**).

D-10. 66°42' S, 139°48' E. An American automatic weather station in Adélie Land, at an elevation of 243 m. It monitored katabatic winds. It began operating on Jan. 15, 1980, and was named for the distance (10 km) from the coast. Formerly known as Dumont d'Urville AWS. There is a skiway here, called D-10 Skiway, in 66°40' S, 139°49' E, operated by the French.

D-17. 66°42' S, 139 42 E. An American automatic weather station in Adélie Land, at an elevation of 438 m (approximately 1350 feet). Named for the distance (17 km) from the coast. It began operating on Jan. 11, 1980, and monitored katabatic winds. It ceased operating on June 19, 1980.

D-47. 67°24' S, 138°42' E. An American automatic weather station in Adélie Land at an elevation of 1560 m. It began operating in Jan. 1983, ceased functioning, and was re-started on Nov. 13, 1985. It monitored katabatic winds. It was 47 km from the coast, hence the name. It was closed in 1990, but re-opened in 1992. It continues into 2009.

D-57. 68°12' S, 137°30' E. An American automatic weather station (8916B) in Adélie Land, at an elevation of 2105 m (approximately 6400 feet). Didier Simon, of the French Polar Expedition, built it to replace the old 8916, which had stopped functioning well on March 22, 1983. The new one began operating on Jan. 6, 1984, and monitored katabatic winds. It was visited in Jan. 1985, but in Jan. 1986 it was found to be not working. On Oct. 21, 1987 it stopped transmitting, and was closed in 1989, when the site was removed. It was re-opened on Feb. 8, 1996, and closed on Aug. 4, 1996, after a low battery had caused it to stop functioning. On Jan. 20, 1999 it was opened again, but performed erratically, and on Jan. 18, 2000, it stopped working.

D-66A. An American automatic weather station, at an elevation of 2485 m, 66 km inland from the coast of Adélie Land, hence the name. Opened in Dec. 2007. It became E-66 (q.v.).

D-80. 70°00' S, 132°42' E. An American automatic weather station in Adélie Land, at an elevation of 2500 m (approximately 7800 feet). It began operating on Jan. 14, 1983, and monitored katabatic winds. On Oct. 20, 1983 it stopped transmitting. It was restarted, but again stopped in March 1996. It was removed in Jan. 1999.

D-85. 70°25' S, 134°09' E. An American automatic weather station in Adélie Land, 85 km from the coast (hence its name), at an elevation of 2682 m. It was installed in Dec. 2007. There is a skiway here, called D-85 Skiway, operated by the French.

D.M. Little Glacier *see* **Kelsey Glacier**

Península Da Forno. 67°45' S, 67°00' W. Projects to the W, between Dogs Leg Fjord and Square Bay, terminating in Nicholl Head, in the NE corner of Marguerite Bay, off the W coast of the Antarctic Peninsula. Named by the Chileans for army colonel Ciro da Forno Baldovino, executive coordinator of the Chilean Antarctic Institute, who participated in ChilAE 1966-67. The Argentines call it Península Pata de Perro (i.e., "dog's leg peninsula").

Ensenada Da Silva. 66°03' S, 60°51' W. An inlet in Jason Peninsula, on the E coast of Graham Land. Named by the Argentines.

Da Vinci Bank. 77°30' S, 34°30' W. An undersea feature, with a minimum depth of 300 m. At the Jan. 1997 suggestion of Dr. Heinrich Hinze, of the Alfred Wegener Institute, it was named internationally for Leonardo Da Vinci (1452-1519), and the name was accepted in June of that year. The Americans accepted the name later that year, first as Vinci Bank, but then as Da Vinci Bank.

Dabnik Peak. 63°29' S, 57°18' W. Rising to 1090 m off the W extremity of the Laclavère Plateau, on the E side of Misty Pass, 14.2 km SE of Cape Ducorps, 11.14 km SW of Ami Boué

Peak, and 9.81 km WNW of Kanitz Nunatak, it surmounts Broad Valley to the S and Ogoya Glacier to the NW, on Trinity Peninsula. Mapped by the Germans and British in 1996, and named by the Bulgarians on June 3, 2010, for the town of Dolni (i.e., lower) Dabnik, in northern Bulgaria.

Bahía D'Abnour *see* **D'Abnour Bay**

D'Abnour Bay. 64°16' S, 63°14' W. A small bay, 5 km ESE of Cape Grönland, in the N part of Anvers Island, in the Palmer Archipelago. First charted by FrAE 1903-05, and named by Charcot as Baie Richard d'Abnour, in honor of Contre-amiral Claude-Marcel-Henri-Étienne Richard d'Abnour (i.e., his last name was Richard d'Abnour) (1845-1907), of the French Navy, who assisted the expedition. It appears on some of the expedition maps with the variant spelling Baie Richard D'Abnour (the "d" is small in the man's name; however, that does not always translate so well into indexes and the like, in any language, and so it appears as D'Abnour Bay on a 1943 U.S. Hydrographic Office chart). It was photographed aerially by FIDASE in 1956-57. UK-APC accepted the name d'Abnour Bay, on July 7, 1959, and US-ACAN accepted D'Abnour Bay in 1965. It appears on a 1949 Argentine chart as Bahía D'Abnour, and that is the way it is listed in the 1970 Argentine gazetteer. The Chileans call it Bahía Varas, for Capitán de corbeta Augusto Varas Orrego, leader at Capitán Arturo Prat Station in the winter of 1949.

Dadi Yuandian Yan. 69°22' S, 76°22' E. A hill, immediately E of Law-Racovitza Station, in the Larsemann Hills. Named by the Chinese.

Dadswell, Graham *see* **Casey Station**, 1972; **Mawson Station**, 1974 and 1981; **Davis Station**, 1983

Daedalus Point *see* **Zapato Point**

Daehli, Arne S. b. March 17, 1897, Kristiania, Norway, son of manufacturing manager Simen S. Daehli and his wife Normanna. He went to sea, and in 1930-31 was skipper of the *Hilda Knudsen*, in Antarctic waters.

Dagger Peak. 63°55' S, 57°29' W. A rock peak rising steeply from sea level to about 90 m, at the W end of Comb Ridge, it forms the E entrance point of Croft Bay, near the extremity of The Naze, on James Ross Island, close S of Trinity Peninsula. The area was discovered and first explored in 1902-03 by SwedAE 1901-04. This particular feature was surveyed and charted by Fids from Base D in 1945-46, and named descriptively by them. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the British gazetteer of 1955.

Daggoo Peak. 65°45' S, 62°20' W. A rocky peak, rising to 905 m, on the N side of the mouth of Flask Glacier, on the N side of Scar Inlet, 8 km WSW of Tashtego Point, on the Oscar II Coast, on the E coast of Graham Land. Surveyed and photographed by Fids from Base D in Dec. 1947. Named by UK-APC on Sept. 4, 1957, for the *Moby Dick* character. It appears on a British chart of 1961. US-ACAN accepted the name in 1963. In 1963-64 it was further surveyed by BAS personnel from Base E.

Daggrybreen *see* **Akebono Glacier**

Daggryfjellet *see* **Akebono Rock**

Dagless, James Edward "Eddie." b. Oct. 8, 1933, Walshingham, Norfolk, son of church furnisher James Edward Dagless and his wife Edith E. Taylor. On March 20, 1952, he began his national service, in the Army, as a medic in Egypt, and was demobbed precisely 2 years later. For a year and half he worked as an underwriter in the City of London, for Norwich Union Insurance Co., and then spent the 1955-56 summer working in the lab aboard the whaler *Balaena*. Back in the UK in 1956, he saw an ad for FIDS, in the *Daily Telegraph*, went to London for the interview with Johnny Green and Bill Sloman, and, after 3 months meteorological training at the Met Office in Stanmore, left England on the *Shackleton* in Oct. 1956, bound for Montevideo, Port Stanley, and finally South Georgia, where he spent a while sleeping in a stone hut on the beach with Duncan Carse. Then on to Leith Harbor, where, because of his whaling experience, he was loaned by FIDS to the Salvesen whaler *Southern Harvester*. He was on the *Harvester*'s catcher *Southern Lotus* when that vessel salvaged the remains of the beached *Southern Hunter* at Deception Island. He was responsible for certain arrangements at South Georgia for the Duke of Edinburgh's visit, and then went on the *Protector* to Base B for the winters of 1957 and 1958, the second year also as base leader. He had several unusual talents: an almost photographic memory, amazing physical reflexes, was a good skier, a phenomenal table tennis player, and could play the mouth organ twice as fast as anyone else. His "D'Ye Ken John Peel" had to be heard to be believed. After the expedition the *Protector* came to take him back to Port Stanley. He made one more Antarctic trip, to Base G, to pick up an emergency medical evacuation, and then left Port Stanley on the *Shackleton*, bound for Montevideo. From Montevideo, he and Dave Evans hitched across South America, including the Atacama Desert, and made their way to Peru, and from there caught the *Reina del Mar* back to Plymouth, where he arrived on Dec. 21, 1959. On his return to the UK he went into business, and married Mary McPherson in Oct. 1964. He later worked for an escalator company, and then at Heathrow, for the Airport Authority, and retired to London.

The *Dagmar Aaen*. A fishing cutter, built in 1931 at the Jensen Shipyard, in Esbjerg, Denmark. She worked as such until 1977, and in 1988 Niels Bach bought her and converted her into an ice-reinforced expedition vessel. She visited the South Shetlands and the Antarctic Peninsula in 1999-2000, under the command of skipper Arved Fuchs, during which she escorted the *James Caird II* from Elephant Island, after the latter vessel had been dropped off by the *Bremen* at Hope Bay. Mr. Fuchs led the voyage on the *James Caird II* (q.v.). She also spent a lot of time in the Arctic.

Glaciar Daguerre *see* **Daguerre Glacier**

Daguerre Glacier. 65°07' S, 63°25' W. Joins Niépce Glacier, and flows N into Lauzanne Cove, Flandres Bay, on the Danco Coast, on the W coast of Graham Land. It appears, unnamed, on an Argentine government chart of 1954. Photographed aerially by FIDASE 1956-57. Named by UK-APC on Sept. 23, 1960, for Louis-Jacques-Mandé Daguerre (1787-1851), French photography pioneer with Niépce, and inventor of the daguerreotype process of photography, perfected in 1839. US-ACAN accepted the name in 1965. The Argentines call it Glaciar Daguerre.

Daguien, Pierre. b. Nov. 29, 1813, Bordeaux. Able seaman on the *Zélée* during FrAE 1837-40.

Dagvola. 73°21' S, 14°06' W. A snow-covered mountain in the N part of the Kraul Mountains of Queen Maud Land. Named by the Norwegians for Dag Norberg, topographer with NorAE 1968-69.

Dahe Glacier. 77°15' S, 162°02' E. Flows NE between Stone Ridge and Wise Ridge, in the Saint Johns Range of Victoria Land, and terminates as a hanging glacier on a bluff 200 m above the head of Debenham Glacier. Named by US-ACAN in 2005, for glaciologist and climatologist Dr. Qin Dahe (b. 1947, Lanzhou, China), chairman of the Chinese National Meteorological Administration, 2003-07, and base leader at Great Wall Station for 2 years in the 1980s. In 1989-90, he was a member of Will Steger's International Transantarctic Expedition. NZ-APC accepted the name on Sept. 12, 2005.

Dahl, Astor. b. 1916, Norway, son of Oluf Bernhard Dahl. Although he had never been to sea before, his father secured him a place as messboy on the *Wyatt Earp* for Ellsworth's last expedition to Antarctica, 1938-39. He liked the life, and was still sailing on Norwegian vessels, as a cook, into the 1950s.

Dahl, Oluf Bernhard. b. 1895, Dale, Nordre Aurdal, Norway, son of Thore Dahl and his wife Mari. He went to sea as a steward in 1912, and in the early 1920s was plying the NW coast of the USA, as a cook. He became a U.S. citizen (as Oluf Bernhard Dal) in 1927, at Seattle, where his wife Ingrid had joined him from Ålesund. In 1933-34 he was cook on the *Wyatt Earp*, during Ellsworth's expedition to Antarctica. He was also chief steward on the *Wyatt Earp*, 1938-39, during Ellsworth's last expedition to Antarctica. His son, Astor, went with him on the latter expedition, as messboy. He was still sailing after World War II. On Sept. 16, 1949, he took the *Stavangerfjord* from Oslo to New York, to pick up the *Niderland* at Baltimore. We lose him after that.

Dahl, Thor. b. May 28, 1862, Sandefjord, Norway, son of Thor Dahl and Anne Oline Mathiasdatter. Whaling magnate. In 1887 he married Dorthea Kristine, and their daughter, Ingrid, married Lars Christensen. In 1920 he bought the Odd Company, and died that year.

Dahl Reef. 66°15' S, 110°29' E. A narrow rock reef, 46 m long, which uncovers at low water, 2.3 km NW of Stonehocker Point, on Clark Peninsula, and 5 km from the summit of Shirley Island, on the N side of Newcomb Bay, in the Windmill Islands, in the area of Vincennes Bay. Charted by ANARE under Tom Gale in 1962, during a hydrographic survey of Newcomb Bay and its approaches, and named by him for Egil Dahl, 3rd mate on the ANARE ship *Thala Dan*, that year. ANCA accepted the name, and US-ACAN followed suit in 1963.

Dahler, Hans. b. May 14, 1876, Dirschau, West Prussia. When the *Gauss* pulled into Cape Town in Dec. 1901, heading south on GermAE 1901-03, she lost her 2nd bosun. Hans Dahler joined as replacement, and went to Antarctica.

Dahmsalen. 74°20' S, 9°41' W. The area just S of Qvenildnova, in Helsetskarvet, in Milorgfjella, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Jan Øivind Dahm (b. 1921), Resistance worker in Norway during World War II.

Dai Yama. 72°34' S, 31°23' E. A flat-topped peak in the NE part of the Belgica Mountains. Photographed aerially by JARE 1976, and surveyed by JARE 1979-80. Named by the Japanese on Nov. 24, 1981 (name means "platform mountain").

Daigle, Joseph Austin "Joe." b. April 3, 1918, China Grove, Tex., son of Theophile Daigle and his wife Ida. He became a radioman, and joined the U.S. Navy on March 30, 1938, as a radioman 3rd class. He was on he *Bear* during USAS 1939-41, and was promoted to radioman 2nd class for the 2nd half of the expedition. Midway in the expedition, the ships went back to the US, and Daigle married Ruth Elaine Dodge, in China Grove, on July 29, 1940. After the expedition, he was in Greenland for a while, and in 1942 made radioman 1st class, serving in World War II. In 1946 he was commissioned as a lieuenant (jg), being promoted to 1st lieutenant in 1950, also serving in Korea. He was operations officer on the *Joseph P. Kennedy*, and exec on the *Woodson*. He retired from the Navy on May 1, 1958. *See* the bibliography.

Daiichi Rock *see* **Tensoku Rock**

Dailey, Frederick Ernest "Fred." b. Feb. 14, 1873, Portsea, Portsmouth, Hants, son of Cornish RN bosun (later a warrant officer) William Dailey and his wife Anna, who was from Kilkenny, Ireland. Fred did his shipwrighting apprenticeship in the dockyard at Stoke Damerel, Devon. He was a warrant officer, RN, and carpenter, on the *Ganges*, when he transferred to the *Discovery* for BNAE 1901-04. After the expedition he served with Scott on the *Bulwark*, and on June 1, 1914, for his services with Scott's expedition, he was promoted to chief carpenter in His Majesty's Fleet. During World War I he served on the *Lion*, and, in 1917, in Devonport, he married Annie Kirkwood. On Oct. 14, 1920 he was promoted to shipwright lieutenant, retired from the Navy as a lieutenant commander, and died on Nov. 19, 1961, in Plymouth.

Dailey Archipelago *see* **Dailey Islands**

Dailey Islands. 77°53' S, 165°06' E. Also called Dailey Archipelago. A group of 5 small morainic islands between 8 and 20 km NE of Cape Chocolate, in the N part of the Ross Ice Shelf bordering McMurdo Sound, just off the coast of Victoria Land. They are: West Dailey Island (the most westerly), Juergens Island, Hatcher Island, Uberuaga Island, and Kuechle Island. Discovered by BNAE 1901-04, and named by Scott for Fred Dailey. US-ACAN accepted the name, and NZ-APC followed suit.

Mount Daimler. 63°45' S, 58°29' W. Rising to 1280 m, it is the highest point of a rock massif between Russell East Glacier and Victory Glacier, 5 km S of Mount Canicula, in Trinity Peninsula. Surveyed by Fids from Base D in 1960-61, and mapped by FIDS cartographers from these efforts. Named by UK-APC on Feb. 12, 1964, for Gottlieb Daimler (1834-1900), German automobile pioneer. US-ACAN accepted the name later in 1964.

Dair, John Robertson. b. Feb. 23, 1869, Dundee, son of confectioner James Dair and his wife Elisabeth Robertson. He became a merchant seaman, and was an able seaman on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04.

Dairi-ike. 69°41' S. A pond in the central part of the Skallevikhalsen Hills, on the SE shore of Lützow-Holm Bay. Mapped by Japanese cartographers from air photos and surveys conducted by JARE 1957-59, and named by them on June 22, 1972, for a beautiful seam of marble here (name means "marble pond").

Dais. 77°33' S, 161°16' E. An elongated mesa between Labyrinth and Lake Vanda, in the center of the W end of Wright Valley, forming the junction of North Fork and South Fork, in Victoria Land. Named descriptively by VUWAE 1958-59. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Dais Col. 77°33' S, 161°03' E. An ice-free col, 600 m above sea level, which connects the E edge of Labyrinth and the W edge of Dais, in Wright Valley, in Victoria Land. Named by US-ACAN in 1997, in association with Dais.

Gora Dajkovaya *see* **Daykovaya Peak**

Dakers Island. 64°46' S, 64°23' W. Between Hartshorne Island and McGuire Island, in the eastern Joubin Islands, SW of Anvers Island. Studied by USARP personnel from Palmer Station, from 1965. Named by US-ACAN in 1974, for Hugh Brennan Dakers (b. Oct. 6, 1927, Port Glasgow, Scotland, but raised in Boston from infancy. d. Jan. 19, 2011, Scarborough, Yorks), cook on the *Hero* during that vessel's first voyage to Palmer Station in 1968. UK-APC accepted the name on Dec. 20, 1974.

Dakin, Arthur. b. 1892, Kew, Melbourne, eldest son of Victoria Racing Club handicapper Francis Ferdinand Dakin and his wife Lucy Chapman. He was a ship's engineer, had just returned from Europe, and was working for the Australian Transport Service when he became 2nd engineer on the *Aurora*, in 1917, during BITE 1914-17, taking his camera with him. After the expedition he went back to his job with the ATS, occasionally sailing as 3rd engineer on ships plying the east coast of Australia, and he moved back into the family house at Barry Street, in Kew, with his brother Ted and his sisters, Dorothy and Lucy. In 1924 he married Lottie Wood, they moved into a house in Mildura that he called Aurora, and had a family. He died in 1950, in Chelsea, Vic.

Dakota Pass. 83°50' S, 160°35' E. A low pass in the Queen Elizabeth Range, to the E of the Peletier Plateau. A Dakota (R4D) aircraft used this pass on a reconnaissance flight into the area surveyed by the Northern Party of NZGSAE 1961-62, who named this feature. US-ACAN accepted the name in 1966.

Dakshin Gangotri Glacier. 70°45' S, 11°35' E. At the Polar ice front, behind Maitri Station, on the S edge of the Schirmacher Hills, in Queen Maud Land. Named by the Indians after Dakshin Gangotri Station. The name is also seen as DG Glacier.

Dakshin Gangotri Station. 70°05' S, 12°00' E. India's first scientific station in Antarctica. It was originally built as a refugio (refuge hut) by the first Indian Antarctic Expedition (Operation Gangotri—1981-82) in 69°59' S, 11°07' E, on the Princess Astrid Coast, 18.5 km from the old Lazarev Station. During the 2nd Indian Expedition, 1982-83, a site was scouted for a real, full-time, year-round station, and such a site was found, in 70°05' S, 12°00' E. Work was begun on the station in late Dec. 1983, by the Third Indian Antarctic Expedition (1983-84). Essentially all of the buildings were wooden, and the outer scalding was made of metal. **Dec. 1983**: The first wintering-over party arrived, headed by scientist Lt. Col. (later Maj. Gen.) Satya Swaroop Sharma (b. 1942, Gwalior). The construction of the station was basically the responsibility of the 29 Army personnel, led by Maj. Pavan Nair, of the Corps of Engineers. They had been trained in Britain and West Germany, just for this purpose. **1984 winter**: 12 persons wintered-over. This was the first ever Indian wintering-over party in Antarctica. S.S. Sharma (leader); Dr. Syed Riffat H. Rizvi (meteorologist; b. 1958, Lucknow); Shivaprasad Ganesh Prabhu Matondkar (microbiologist; b. 1956, Goa); Capt. Paramjit Singh; Capt. Rajiv R. Sinha; Capt. R.A.M. "Ram" Kumar; Surgeon Lt. Cdr. Aloke Banerjee (b. 1953, Lucknow; Indian Navy); S. Joseph; V.S. Rana; H.A.V. Padmanabhan; S. Sadekar; C.S. Thambi. **March 1985**: Col. Sharma's wintering party left Antarctica, to be replaced by the 1985 wintering-over party. **1985 winter**: Padmanabhan Kumresh (leader). **1986 winter**: Vinod K. Dhargalkar (leader). **1987 winter**: Arun H. Paruleker (leader). **1987-88 summer**: Only when the post office was established, this season, was the station finally named, as Dakshin Gangotri (although it had been known before this as Dakshin Gangotri Base Camp). Dakshin

means "south" in Sanskrit, and Gangotri Glacier feeds the Ganges, in India. **1988 winter**: P. Ganesan (leader). **1988-89 summer**: Amitara Sengupta (leader). **1989 winter**: 26 persons. Col. S. Jagannathan (leader; he was of the Corps of Engineers), Lt. Col. J.P. Khadilkar (2nd in command). During this winter, ice covered the station up to roof level, and caused great inconvenience to the scientists. Built to last only 5 years, the station was converted into a supply base, was open for a few more summers, but was eventually buried by snow, and in 1991 abandoned, and replaced with Maitri Station (which had opened in 1989).

Dalbert, J. The *Los Angeles Times* of June 18, 1934, has him returning to California after being on the *Bear of Oakland* during the first half of ByrdAE 1933-35. He was going to make his way to New York on a Greyhound. This is, however, Jad Albert.

Dale, Frank. b. 1822, Gloucester, Mass. Skipper of the *Fleetwood* from 1852 until May 3, 1859, when the ship collided with an iceberg and sank, taking with it Capt. Dale, his wife and child, the one passenger on board, and most of the crew.

Dale, John B. *see* **USEE 1838-42**

Dale Glacier. 78°17' S, 162°00' E. A trench-like glacier with its head 3 km SW of Mount Huggins, and flowing W from the SW slopes of that mountain, in the Royal Society Range, into Skelton Glacier, in Victoria Land. First visited by F. Richard Brooke and Bernie Gunn of the NZ party of BCTAE 1957-58. Named by US-ACAN in 1963, for Lt. Cdr. Robert F. Dale, USN, VX-6 commander at McMurdo in 1960.

Ozero Dalëkoe *see* **Lake Dalekoje**

Lake Dalekoje. 66°20' S, 100°57' E. A lake in the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ozero Dalëkoe. ANCA accepted the translated name.

Dales, Bernard. b. July 27, 1889, Hull, Yorks, but raised in Great Farringdon, Berks, and then Barton-on-the-Humber (in Lincs, just over the river from Hull), son of coach builder (and later cycle liner) Fred Dales and his wife Dorothy Mary Good. He joined the Navy, and in 1915, in Hull, he married Violet Frank. They would live in the same house, on Chanterlands Avenue, until they died. He was chief engineer on the *William Scoresby*, 1935-38. Violet died in 1966, and Mr. Dales died in 1978.

Dales Island. 67°11' S, 59°44' E. A small island 1.5 km N of the Warnock Islands, it is the northernmost island in the William Scoresby Archipelago, about 15 km NNE of Couling Island. Discovered by the personnel on the *William Scoresby* in Feb. 1936, and named by them for Bernard Dales. US-ACAN accepted the name in 1947, and ANCA followed suit on July 22, 1959.

Daley, Dennis Noble. Fireman on the *Discovery II*, 1930-35.

Daley Hills. 73°42' S, 164°45' E. A group of high, ice-covered hills along the W side of Aviator Glacier, between the mouths of Cosmonette Glacier and Shoemaker Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Robert C. Daley, USN, flight engineer on Hercules aircraft during OpDF 66 (i.e., 1965-66), OpDF 67 (i.e., 1966-67), and OpDF 68 (i.e., 1967-68).

Bahía Dalgliesh *see* **Dalgliesh Bay**

Dalgliesh, Angus Robin Franklin. Known as Robin. b. May 31, 1928, Bromley, Kent, son of Kenneth Dalgliesh and his wife Ellen C. Franklin. Brother of David Dalgliesh. After Merchant Taylor's School, he entered Sandhurst in 1946, and served in Hong Kong with the Royal East Kent Regiment (the Buffs) from 1948 to 1950. In 1952 he was wounded at Suez, and from 1952 to 1955 was seconded to the Somali Scouts. Then he became a district officer in Kenya, first at Kitui, then at Wajir. In 1955 Capt. Dalgliesh volunteered to be tractor driver and handyman on his brother's part of the British Royal Society Expedition, i.e., 1955-57, wintering-over at Halley Bay in 1956, at a salary of £420 per year. He returned to London on the *Magga Dan*, on March 13, 1957. He later spent 7 years with British Cellophane, in the Far East, and 12 years with Memorex, in Brussels. In 1961, in London, he married Daphne A. Abrams, and he died on Dec. 25, 1987, in London.

Dalgliesh, David Geoffrey. Known as Dr. Dalgliesh. b. March 22, 1922, Barnet, Herts, son of Kenneth Dalgliesh and his wife Ellen C. Franklin. Brother of Robin Dalgliesh. After Merchant Taylor's School, he studied for his medical degree which including treating blitz victims in London. By 1946 he was houseman at Farnham General Hospital, and, as a probationary acting surgeon and a lieutenant in the RNVR, was called up for national service, serving as ship's doctor on the *John Biscoe*. He was promoted to surgeon and lieutenant commander, and served as FIDS medical officer at Base E for the winters of 1948 and 1949. In the early 1950s he was based at the Royal Naval Hospital at Stonehouse, in Plymouth, then moved to the Royal Naval Hospital in Portsmouth, and then on to Trincomalee, in Ceylon, as anesthetist and obstetrician. He then became the first of three successive leaders of the British Royal Society Expedition (Britain's contribution to IGY). His participation was in the period 1955-57, during which time he wintered-over as base leader and medical officer, at Halley Bay, in 1956, and returned to London on the *Magga Dan* on March 13, 1957. From 1959 to 1962 he was principal medical officer on the royal yacht *Britannia*. He was then appointed to the Britannia Royal Naval College, and while there married Carol "Cally" Scott, in Tonbridge, in 1969. His last posting was as deputy medical director general of the Navy, and he retired in 1975, as a surgeon captain, to Devon, where he became a county schools medical officer. He died on March 28, 2010.

Dalgliesh Bay. 67°42' S, 67°45' W. A bay, 1.5 km wide, it indents the W side of Pourquoi Pas Island for 5 km between Lainez Point and Bongrain Point, in Marguerite Bay, off the W coast of Graham Land. Roughly surveyed in 1936 by BGLE 1934-37, and re-surveyed in Sept. 1948 by Fids from Base E, who named it for David Dalgliesh (q.v.), who accompanied the 1948 sledge survey party to this area. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1957. It appears on a 1962 Chilean chart as Bahía Dalgliesh, and that was the name accepted by the 1974 Chilean gazetteer. The Argentines also call it Bahía Dalgliesh.

Dalgliesh Ice Stream *see* **Stancomb-Wills Glacier Tongue**

Dalgopol Glacier. 62°55' S, 62°28' W. Flows for 3.4 km from the NW slopes of the Imeon Range, N of Mount Pisgah, and NW of Mezek Peak, into the Drake Passage, on Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for the town of that name in NE Bulgaria.

Daliang Shan. 69°23' S, 76°21' E. A hill in the Larsemann Hills. Named by the Chinese.

Bahía Dalinguer. 63°25' S, 56°30' W. A bay, immediately S of Nunatak Buen Suceso, on the W side of Joinville Island. Named by the Argentines.

Dålk Glacier. 69°26' S, 76°27' E. A glacier, 13 km long, flowing into the SE part of Prydz Bay, between the Larsemann Hills (just to the W) and Steinnes, on the Ingrid Christensen Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Photographed aerially again during OpHJ 1946-47, and in 1952 named in association with Dålk Island, by U.S. cartographer John H. Roscoe, as he plotted features from these photos. US-ACAN accepted the name in 1956. Also photographed aerially by ANARE. ANCA accepted the name on May 18, 1971.

Dålk Island. 69°23' S, 76°30' E. A small coastal island at the terminus of Dålk Glacier, in the SE part of Prydz Bay. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Dålkøy (i.e., "Dålk island"). US-ACAN accepted the name Dålk Island in 1963. ANCA accepted the original Norwegian name, i.e., Dålkøy, on Nov. 24, 1987.

Dålkøy *see* **Dålk Island**

Dålkøy Bay. 69°23' S, 76°25' E. A wide open bay on the E side of the Larsemann Hills. Photographed aerially by LCE 1936-37. Named by ANCA.

Dallice Peak. 67°51' S, 62°53' E. A rather unprominent peak, rising from a ridge to an elevation of about 1190 m above sea level, it is the highest peak in the Central Masson Range, near the S end of the range. Named by ANCA on July 22, 1959, for Dallice Trost, daughter of Peter Trost (*see* **Trost Peak**).

Dallknatten. 74°35' S, 10°03' W. A crag at the head of Gabbibotnen, in XU-fjella, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for William Dall (b. 1913), a Norwegian Resistance leader in Kristiansund, during World War II.

Dallman *see* **Dallmann**

Bahía Dallmann *see* [1]**Dallmann Bay**

Baie Dallmann *see* [1]**Dallmann Bay**

Golfe de Dallmann *see* [1]**Dallmann Bay**

Mount Dallmann. 71°45' S, 10°18' E. A bold mountain, rising to 2485 m, 17.5 km E of the N part of the Conrad Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, plotted by them in 71°48' S, 10°20' E, and named by Ritscher as Dallmannberge, for Eduard Dallmann. US-ACAN accepted the name Mount Dallmann in 1966. The Norwegians call it Dallmannfjellet. It has since been replotted. SCAR gazetteer has given a separate and distinct ID number to a feature they call Dallmannberge, saying it was named by the Germans, and plotting it in 71°48' S, 10°30' E. However, this is most likely to be Mount Dallmann.

Nunatak Dallmann *see* **Dallmann Nunatak**

Roca Dallmann *see* **Dallmann Nunatak**

Dallmann, Eduard. b. March 11, 1830, Flehte, near Blumenthal, Bremen. At sea by 15, and a whaling captain by his late 20s, he was the first German leader of an Antarctic expedition. Under the sponsorship of the German Society for Polar Navigation he went sealing and exploring in the South Shetlands, the Palmer Archipelago, and the northern part of the Antarctic Peninsula in 1873-75, in his ship, the *Grönland*. He discovered the Bismarck Strait and the Kaiser Wilhelm Archipelago, and in 1873-74 met up with the American sealer *Thomas Hunt*, at Elephant Island. It was Dallmann who proved that the Antarctic Peninsula was indeed a peninsula (a fact later "disproved" by Wilkins, in 1928, then proved again after that by BGLE in 1934-37). From 1877 to 1884 he spent a lot of time in Siberian waters, and from 1884 to 1894 was in New Guinea, in the service of the New Guinea Company. He retired in 1894, and died on Dec. 23, 1896, in Blumenthal.

Dallmann Bai *see* [1]**Dallmann Bay**

[1]**Dallmann Bay**. 64°20' S, 62°55' W. A large indentation in the W side of Brabant Island, between that island and Anvers Island, and connected to the Gerlache Strait by Schollaert Channel, in the Palmer Archipelago. Not to be confused with Flandres Bay. Discovered and first roughly charted (in its W part) by Eduard Dallmann in Jan. 1874, and named for him (as Dallmann Bai or Dallmannbai) by the Society for Polar Navigation in Hamburg, the sponsor of his expedition. It appears as Dallmann Bai on Friederichsen's 1895 map. On Bartholomew's British map of 1898 it appears (misspelled) as Dalmann Bay, and on a 1902 map reflecting BelgAE 1897-99 it appears as Baie de Dallmann. FrAE 1903-05 and FrAE 1908-10 both conducted new surveys of this bay, and on maps from the latter expedition it appears as Golfe de Dallmann. It appears as Dallmann Bay on a 1908 British chart, as Dallman Bay (sic) on the 1929 Discovery Investigations chart, and the name Dallmann Bay was the one accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears that way in the 1955 British gazetteer, and on a 1961 British chart. David James had been on Operation Tabarin, and in 1949, in his book *That Frozen Land*, he refers to Melchior Channel, which, apparently is this bay and the Schollaert Channel combined as one feature (the term Melchior Channel has never been seen anywhere else, and has not survived). He also refers to the Dallmann Strait (similar story). The bay appears on a 1937 French chart as Baie Dallmann. As for Argentine charts, it appears on a 1946 one as Bahía Dallman, on a 1948 one as Bahía Dallmann, and on another from 1948 as Bahía de Dallmann. It appears on some 1947 Chilean charts as Bahía Dallmann, and that is how it was listed in both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57.

[2]**Dallmann Bay** *see* **Flandres Bay**

Dallmann Berge *see* **Mount Dallmann**

Dallmann Laboratory. 62°14' S, 58°40' W. In Jan. 1994 the Alfred Wegener Institute and the Instituto Antártico Argentino jointly opened the Dallmann Laboratory, as an annex at Jubany Station, on King George Island, in the South Shetlands (building had begun in 1992-93). Biology and earth sciences are the main studies.

Dallmann Nunatak. 65°01' S, 60°18' W. Is it a nunatak or an island? US-ACAN overcame this question by calling it a "nunatak island," which, inventive as that solution may be, is no solution at all. Many nunataks, especially in this area, were at first thought to be islands, because, particularly as seen from a ship, they look like islands. But they are nunataks, and this one is a nunatak, even though the Germans to this day call it Jasoninsel (i.e., "Jason Island"). It is one of the Seal Nunataks, and stands 2.5 km N of Bruce Nunatak, on the Nordenskjöld Coast, on the E coast of the Antarctic Peninsula. In Dec. 1893 Carl Anton Larsen was the first to see it, and he named it Jason Insel, after his ship, the *Jason*. It appears as such on Friederichsen's 1895 map. Charted in 1902 by SwedAE 1901-04, and named by Nordenskjöld as Nunatak Dallmann, for Eduard Dallmann. It appears that way on the Swedish expedition's charts, but on some of the (translated) charts of that expedition it is Dallmanns Nunatak or Dallmann Nunatak, and even Dallman Nunatak. It appears on a 1947 Chilean chart as Roca Dallman (sic). In Nov. 1947 it was re-surveyed by Fids from Base E. UK-APC accepted the name Dallmann Nunatak on Jan. 22, 1951, and US-ACAN followed suit in 1952. The name accepted by the 1974 Chilean gazetteer was Nunatak Dallmann.

Dallmann Seamount. 67°10' S, 96°53' W. An undersea feature, out to sea beyond the Eights Coast. Rick Hagen, of the Alfred Wegener Institute, in Germany, proposed the name, and it was accepted internationally in 1997. Named for Eduard Dallmann.

Dallmann Strait *see* [1]**Dallmann Bay**, **Schollaert Channel**

Dallmannbai *see* [1]**Dallmann Bay**

Dallmannberge *see* **Mount Dallmann**

Dallmannfjellet *see* **Mount Dallmann**

Dallmanns Nunatak *see* **Dallmann Nunatak**

Dallmannstrasse *see* **Orléans Strait**

Dallmeyer Peak. 64°53' S, 62°45' W. Rising to 1105 m, 3 km SE of Steinheil Point, on the SW side of Andvord Bay, on the Danco Coast, on the W coast of Graham Land. It appears (apparently unnamed) on an Argentine government chart of 1952. In 1956-57 it was surveyed from the ground by Fids from Base O, and also photographed aerially by FIDASE. Named by UK-APC on Sept. 23, 1960, for John Henry Dallmeyer (1830-1883), German-born English optician who independently developed the rectilinear photographic lens in 1886. It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

Dallwitz Nunatak. 66°57' S, 51°30' E. A small nunatak with a cliff face on its S side, it is composed of strongly banded metasedimentary rocks overlain by more massive felsic gneiss, and is located due S of Mount Selwood, and due N of Mount Sones, in the Tula Mountains of Enderby Land. Named by ANCA on July 26, 1983, for Wally B. Dallwitz, geologist with the (Australian) Bureau of Mineral Resources, who discovered the unusual metamorphic mineral assemblage.

Dalmann *see* **Dallmann**

Dalmation Knoll. 72°04' S, 0°16' W. This feature is seen on a 1993 South African map of Queen Maud Land. It is located in the Joungane Peaks, in the Sverdrup Mountains.

Nunatak Dalmedo. 66°12' S, 61°45' W. One of a large number of nunataks on Jason Peninsula named by the Argentines.

Mount Dalmeny. 71°07' S, 166°55' E. Rising to 1610 m, 10 km ESE of Drabek Peak, and 5 km W of Redmond Bluff, in the Anare Mountains, the most northwesterly peak in the Admiralty Mountains, standing above the S shore of Smith Inlet, in Victoria Land. Discovered by Ross on Jan. 3, 1841, and named by him for Archibald Primrose, Lord Dalmeny (1809-1851), then one of the three junior lords of the Admiralty (1835-41). US-ACAN accepted the name in 1951.

The *Dalmor*. Polish ship in Antarctic waters in 1976-77, skippered by Zenon Krzyminski.

Dalmor Bank. 62°10' S, 58°32' W. A submarine feature with a least depth of about 80 m, at Ezcurra Inlet, close off the E end of Dufayel Island, in the area of Admiralty Bay, King George Island, in the South Shetlands. First recognized from the ship *Dalmor*, in early 1977, during the first PolAE. Since then it has

provided the best anchorage for the Poles at Ezcurra Inlet, during their annual expeditions to King George Island. They named it in 1980, for their ship. UK-APC accepted the name on April 3, 1984, and it appears in the British gazetteer of 1986. US-ACAN also accepted the name. The British were the latest to replot this feature, in late 2008.

Gora Dal'njaja *see* **Mount Dal'nyy**

Mount Dal'nyy. 66°51' S, 51°44' E. About 9 km ENE of Mount Selwood, in the Tula Mountains of Enderby Land. Photographed aerially by ANARE in 1957 and 1958, and also by SovAE 1962, who named it Gora Dal'njaja (i.e., "distant mountain"). ANCA rendered it as Mount Dal'nyy.

Mount Dalrymple. 77°56' S, 86°03' W. Rising to 3600 m, between Mount Alf and Mount Goldthwait, in the N part of the Sentinel Range. Mapped by the Marie Byrd Land Traverse Party of 1957-58. Named by US-ACAN in 1960, for Paul Dalrymple.

Dalrymple, Paul Clement. b. Nov. 21, 1923, Rockland, Me., son of Professor Charles Dalrymple and his wife Marion Skinner. He grew up in Worcester, Mass., and went to Clark University there. He married Virginia Frith of Bermuda. A geographer by education, he was attached to the Army's Quartermaster Corps when he went south, flying into Little America in Jan. 1957, to be the meteorologist there for the winter-over of 1957. He stayed on, through the summer of 1957-58, and then Gus Shinn flew him in the *Que Sera Sera* to McMurdo, and from there in another R4D to the South Pole, where he wintered-over in 1958, as well as taking the first UK flag since Scott took one in 1912. He flew out of McMurdo in Dec. 1958, after 2 continuous years on the ice. Back in the States he spent 10 years assembling the Antarctic weather data, and retired in 1989.

Dalsnatten *see* **Dalsnatten Crag**

Dalsnatten Crag. 72°31' S, 0°30' E. A rock crag on the E side of Skarsdalen Valley, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. This feature was surveyed from the ground and photographed from the air by NBSAE 1949-53, and photographed aerially again in 1958-59, during the long NorAE 1956-60. From all these efforts it was mapped by Norwegian cartographers, and named by them as Dalsnatten (i.e., "the valley crag"). US-ACAN accepted the name Dalsnatten Crag in 1966.

Dalsnuten *see* **Dalsnuten Peak**

Dalsnuten Peak. 72°36' S, 3°11' W. A nunatak rising above the ice in the NE part of Raudberg Valley, just N of Jøkulskarvet Ridge, in the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-53, and named by them as Dalsnuten (i.e., "the valley peak"). US-ACAN accepted the name Dalsnuten Peak in 1966.

Dalten *see* **Dalten Nuntak**

Dalten Nunatak. 72°23' S, 3°42' W. A small isolated nunatak about 2.5 km ESE of Dilten Nunatak, in the area the Norwegians call Borghallet, 11 km NW of Borg Mountain, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Dalten. US-ACAN accepted the name Dalten Nunatak in 1966. As for the origin of this word, the Norwegians named it. Dilten seems to mean a course for the Norwegian sport of orienteering, and somehow Dalten is a play on words.

Cape Dalton. 66°53' S, 56°44' E. Marks the SE end of a snow-covered island, 1.5 km N of Abrupt Point, on the W side of Edward VIII Bay. Discovered and photographed aerially by LCE 1936-37. In 1946, when Norwegian cartographers mapped this area from these photos, they showed two features here — Skutenes (i.e., "barge point") and Skutenesmulen (i.e., "the Skutenes snout"). However, in 1954, Bob Dovers led an ANARE party here, and found the two features to be two islands. This cape was named by ANCA on Feb. 15, 1958, for Robert Frederick Martin "Bob" Dalton (b. April 13, 1907), former group captain in the Royal Australian Air Force, and officer-in-charge of ANARE at Macquarie Island (not in Antarctica) in 1953. In the late 1950s he was technical officer (aircraft) of the Antarctic Division, in Melbourne, and 2nd-in-command under Phil Law, of the 1958-59 and the 1959-60 ANARE expeditions in the *Magga Dan*. US-ACAN accepted the name in 1970. *See also* **Skutenes**.

Mount Dalton. 69°28' S, 157°52' E. Rising to 1175 m, on the E side of Matusevich Glacier, 9.5 km SE of Thompson Peak, in the NW part of the Wilson Hills, in Oates Land, in Victoria Land. Sketched and photographed by Phil Law on Feb. 20, 1959, during the ANARE expedition here off the *Magga Dan*. Named by ANCA on July 22, 1959, for Bob Dalton (*see* **Cape Dalton**), 2nd-in-command of this expedition. US-ACAN accepted the name in 1961.

Dalton, Brian C. b. May 2, 1931, Ireland. A physician, he arrived in the USA on Sept. 9, 1955, and before long was not only a lieutenant in the U.S. Navy, but also leader at Byrd Station during the winter of 1957.

Dalton, David *see* **USEE 1838-42**

Dalton Corner. 73°41' S, 68°29' E. A rock outcrop forming the S extremity of the Mawson Escarpment, in Mac. Robertson Land. Plotted by Australian cartographers from ANARE air photos taken in 1956, 1960, and 1973. Named by ANCA for Bob Dalton (*see* **Cape Dalton**).

Dalton Glacier. 77°33' S, 152°25' W. A broad glacier on the E side of the Alexandra Mountains, on Edward VII Peninsula, it flows northward into Butler Glacier, just S of Sulzberger Bay. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Brian Dalton.

Dalton Iceberg Tongue. 66°15' S, 121°30' E. A large iceberg tongue extending seaward (i.e., northward) from Cape Southard (which marks the boundary of the Sabrina Coast and the Banzare Coast), in the E part of the Moscow University Ice Shelf, off Wilkes Land. Partly delineated from air photos taken by OpHJ 1946-47, but first really seen by Phil Law, from an ANARE aircraft in 1958, and visited in Feb. 1960 by an ANARE party led by Law off the *Magga Dan*. It was mapped by Australian cartographers based on Law's observations, and named by ANCA on Oct. 11, 1960, for Bob Dalton (*see* **Cape Dalton**), 2nd-in-command of Law's expedition. US-ACAN accepted the name in 1962.

Cape Daly. 67°31' S, 63°47' E. An ice-covered promontory on the Mawson Coast, 5 km W of Safety Island, and close SE of the Robinson Group, in Mac. Robertson Land. Discovered on Feb. 13, 1931, by BANZARE under Mawson, and named by Mawson for lawyer John Joseph Daly (1891-1942), leader of the Australian Senate from 1929, and in 1931, minister of defence. US-ACAN accepted the name in 1947, and ANCA followed suit.

Daly, William Harold, Jr. b. Dec. 29, 1901, Mayfield, Nebr., and raised partly in North Platte, son of newspaper printer William Harold Daly and his wife Susie Phillips. He joined the U.S. Navy at 18, and was chief bosun on the *Bear* during both halves of USAS 1939-41. By the late 1940s he was a lieutenant commander, at Mare Island, in San Francisco. In 1946 he was skipper of the *Whitewood* in the Arctic, on an expedition led by Richard Cruzen, and retired from the Navy on Jan. 1, 1948. He died on July 22, 1959, in Contra Mesa, Calif., and is buried in San Diego.

Dalziel, Ian William Drummond. b. Nov. 26, 1937, Glasgow, son of public speaking instructor George Morton Dalziel and his actress wife Marjorie Richardson. Geologist who graduated from the University of Edinburgh in 1959, and taught there for 4 years before going to the University of Wisconsin, at Madison. He married Merle Black in Edinburgh in 1960. He taught at Columbia University, 1967-85, and at the University of Texas, at Austin, from 1985 to the present. His Antarctic field work in the late 1960s and 1970s mostly involved Scotia Arc tectonics and understanding the Andean process of mountain formation. He was in the South Shetlands for 2 months in 1969, on the *Edisto* and the *Hero*, and in 1970 in the South Shetlands and the Antarctic Peninsula, on the *Glacier*. In Feb. and March 1971 he was senior scientist on the *Hero* for 2 months, in the South Orkneys, and in 1976 was back in the South Shetlands. In 1977 he was back in the South Orkneys, again as senior scientist on the *Hero*. He combined all of this with much field work in the Andes and other regions, including South Georgia and Tierra del Fuego, and in 1977 married again, to Linda Clark. He spent 6 weeks as part of the Ellsworth Mountains Expedition of 1979-80, and in 1983-84 and again in 1984-85 was in West Antarctica

for 2 months at a time. He spent 6 weeks in Dec. 1986-Jan. 87 in the South Shetlands, as co-chief scientist on the *Glacier*, and during this cruise transferred to the *Polar Duke* in Jan. 1987, as chief scientist at Elephant Island. He spent 2 months in the Pensacola Mountains in 1987-88. In 1990-91, and again in 1992, he spent 2 months at a time in Marie Byrd Land and Pine Island Bay, as chief scientist on the *Polar Sea*, and in 1993-94 another 2 months in the Shackleton Range. He was back in Antarctica for 35 days in 1996, and for 2 months in 2002, 2003, and 2005. In 2003 he married Susan Austin Herr. In 2005-06 he was back in Antarctica for 8 weeks. In 2007-08 he was in the Ellsworth Mountains, and again in the Scotia Sea (although not south of 60°S) in April and May of 2008.

Dalziel Ridge. 70°15' S, 63°55' W. Rising to about 2200 m, it is the primary (western) ridge of the Columbia Mountains, in the north-central part of Palmer Land. There is considerable exposure of bare rock along the W slopes of this ridge. Photographed aerially by USN between 1966 and 1969, and mapped from these photos by USGS in 1974. Named by US-ACAN in 1976, for Ian Dalziel. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Damaske, Detlef. b. Sept. 14, 1947, Germany. After studying in Berlin, and at Imperial College, London, he got his PhD in geophysics from the Free University of Berlin, in 1976, and was employed there for four years as an assistant. In 1980 he became a research scientist at the Federal Institute for Geosciences and Natural Resources, in Hanover. In 1981-82 he took part in the aborted GANOVEX II, and in 1983-84 was with BAS in their aerophysical program in the Antarctic Peninsula. He took part in GANOVEX IV (1984-85), and in 1986-87 was back in Antarctica. In 1988-89, he coordinated the onshore geophysical program during GANOVEX V, and also led the aeromagnetic program. He was deputy leader of GANOVEX VI (1990-91), and in 1991-92 was part of the first German-Italian venture, as part of the 7th Italian Antarctic Expedition, at Terra Nova Bay. In 1992-93 he led the aeromagnetic program during GANOVEX VII, and in 1994-95 was at Cape Roberts, leading the joint Italian-German aeromagnetic program. He was also, that season, with the Americans at Byrd Station. He was deputy leader of the GEOMAUD aeromagnetic program in Queen Maud Land, and in 1997-98 led the joint US-German aeromagnetic survey TAMARA, over the Transantarcic Mountains. He led GANOVEX VIII, in 1999-200, and was a lecturer on the *Hanseatic*, in at the Antarctic Peninsula in 2000-01. In 2002 he was leader of a joint German-British aeromagnetic surveying expedition to Windless Bight and Black Island. He has also spent time in the Arctic.

Damaskegletscher. 73°22' S, 166°57' E. A glacier, due E of Schwarze Spinne, in Victoria Land. Named by the Germans for Detlef Damaske.

Acantilado Damero. 62°27' S, 60°48' W. A cliff, ENE of the beach the Chileans call Playa Angosta, on the N coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno, during ChilAE 1991-92 because this is the only place where nesting pairs of the Damero petrel (the Chilean name for the fulmar known as the cape pigeon, or pintado petrel) have been found.

D'Amico, Thomas J. b. Oct. 3, 1911, Marlborough, Mass., son of laborer in a shoe factory William D'Amico and his Irish wife Delia Ford Holden. His father died at the end of World War I, and the family moved to Woonsocket, RI. He joined the Merchant Marine and was a crewman (in a clerical capacity) on the *Bear of Oakland*, during both halves of ByrdAE 1933-35. He later lived in Mansfield, Mass., and died in Attleboro, Mass, on Oct. 13, 1985.

The *Damien*. A French yacht, skippered by Jérôme Poncet and Gérard Janichon, which visited the South Shetlands and the Antarctic Peninsula in the 1972-73 summer.

The *Damien II*. French yacht, skippered by Jérôme Poncet, in at the Antarctic Peninsula in 1978-79, and she wintered-over at Avian Island in 1979. Poncet's son, Dion Michael, was born on South Georgia (54°S) on April 15, 1979. Jérôme's wife, Sally Poncet, who was also aboard (of course), wrote *Le Grand Hiver*. The yacht and the Poncets were back in 1982-83, and 1983-84, visiting the South Shetlands and the Antarctic Peninsula, in the latter place meeting the *Graham*, and together the two yachts sailed down the west coast of the Antarctic Peninsula to as far south as 68°21' S. She (and the Poncets) were back in 1985-86, 1986-87, 1987-88 (these last three seasons chartered by scientists visiting the South Shetlands, the South Orkneys, and the Antarctic Peninsula), 1988-89, 1989-90, 1990-91, 1991-92, 1992-93, 1993-94, 1994-95, 1995-96 and 1996-97, on all these trips calling in at the South Shetlands and the Antarctic Peninsula.

Îlot des Damiers *see* **Île Lattanzi**

Daming Hu *see* **Lake Reid**

Mount Damm. 82°36' S, 162°37' E. A snow-covered mountain, rising to 1130 m between Heidemann Glacier and Nottarp Glacier, in the Queen Elizabeth Range. Mapped by USGS from USN air photos taken in 1960, and from tellurometer surveys taken between 1960 and 1962. Named by US-ACAN in 1966, for Robert Damm, USARP biologist at McMurdo in 1963-64.

Dammon, William *see* **USEE 1838-42**

Punta Damocles *see* **Damocles Point**

Damocles Point. 69°39' S, 69°21' W. A point, 5 km ESE of the summit of Mount Tyrrell, E of Toynbee Glacier, on the E coast of Alexander Island, at George VI Sound. Photographed aerially on Feb. 1, 1937, by BGLE 1934-37, and surveyed from the ground by Fids from Base E in 1948. A small rock exposure near sea level, where the Fids collected rock samples, is surmounted by a 60-meter ice-cliff, which hung over them like the Sword of Damocles. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. The Argentines call it Punta Damocles.

Pointe Damoy *see* **Damoy Point**

Punta Damoy *see* **Damoy Point**

Damoy Point. 64°49' S, 63°31' W. The W extremity of the little peninsula that separates Port Lockroy and Puerto Angamos, this point actually forms the NW entrance point of Port Lockroy, in Dorian Bay, on the W coast of Wiencke Island, 0.8 km WNW of Flag Point, in the Palmer Archipelago. Roughly charted in Feb. 1898, by BelgAE 1897-99. Further charted by FrAE 1903-05, and named by Charcot as Pointe Damoy, for Julien Damoy, a Paris food products dealer (later the famous chain stores) of Boul. de Sébastopol, who provisioned many expeditions. Surveyed by the Discovery Expeditions of 1927, it appears on their 1929 chart as Damoy Point. Re-surveyed in 1944-45, by personnel from Port Lockroy Station, during Operation Tabarin. It appears on a 1947 Chilean chart, as Punta Damoy, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name Damoy Point in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. A BAS summer air transit facility, named Damoy, was built here by BAS personnel from Rothera Station. Work began on Nov. 6, 1975, and it opened on Nov. 14. It was used intermittently as a transit station for personnel and stores from ships to be flown south during early summer when sea ice prevented access to Rothera. An additional skiway was used on nearby Doumer Island. The site was cleaned up in 1996-97, and is still operational.

Damschroder Rock. 85°38' S, 69°14' W. A conspicuous rock outlier, rising to 1595 m at the end of a snow-covered spur extending westward for 4 km from the central part of the Pecora Escarpment, in the Pensacola Mountains. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Gerald H. "Jerry" Damschroder (b. 1938), construction mechanic at Plateau Station for the winter of 1966. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Cap des Dan *see under* **des**

Dana Cirque. 77°18' S, 160°54' E. A cirque, 9.9 km wide, E of Conrad Ledge, in The Fortress, in the Cruzen Range of Victoria Land. Named by US-ACAN in 2005, for hydrologist Gayle Lynn Dana (b. Nov. 23, 1953, Sacramento, Calif.), of the Biological Research Center, at the Desert Research Institute, in Reno, Nev., a team member of the USAP McMurdo Dry Valleys Long Term Ecological Research Project for 5 seasons between 1993 and 2001. NZ-APC accepted the name on Sept. 12, 2005.

Mount Dana Coman *see* **Mount Coman**

Dana Glacier. 70°55' S, 62°23' W. About 50 km long, it drains the slopes at the SE side of the Welch Mountains and flows E then NE into the head of Lehrke Inlet, just N of the Parmelee Massif, on the Black Coast, on the E coast of Palmer Land. Roughly surveyed by a combined sledging team of members of RARE 1947-48 and Fids from Base E in late 1947. Photographed aerially by USN in 1966, re-surveyed by BAS personnel from Base E in 1972-73, and mapped by USGS in 1974 from these efforts. Named by US-ACAN in 1976, for Cdr. John B. Dana, USN, VXE-6 commander during OpDF 73 (i.e., 1972-73). He had been executive officer of VXE-6 during OpDF 72 (i.e., 1971-72) and operations officer during OpDF 71 (i.e., 1970-71). UK-APC accepted the name on July 21, 1976.

Dana Mountains. 73°12' S, 62°25' W. A group of mountains, rising to about 1700 m, just NW of New Bedford Inlet, bounded by Mosby Glacier on the NE, and (on the SW) by Haines Glacier and Meinardus Glacier, on the Lassiter Coast of eastern Palmer Land. The group includes Walsh Nunatak, Mount Axworthy, Mount Grimminger, Court Nunatak, and Mount Cummings. Discovered and photographed aerially by USAS 1939-41. Surveyed from the ground during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for U.S. geologist James Dwight Dana (b. Feb. 12, 1813, Utica, NY. d. April 14, 1895, New Haven, Conn.). Dana was part of USEE 1838-42, but did not venture into Antarctic waters. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Costa (de) Danco *see* **Danco Coast**

Isla Danco *see* **Danco Island**

Terre (de) Danco *see* **Danco Coast**

Tierra (de) Danco *see* **Danco Coast**

Danco, Émile. b. Nov. 29, 1868, Malines, Belgium. Artillery lieutenant and geophysicist who paid to go on BelgAE 1897-99, as magnetician and meteorologist. He had been a friend of de Gerlache's for years. He was one of the Jan. 31, 1898 sledging party on Brabant Island, and died of scurvy on June 5, 1898. He was buried in a hole in the ice.

Danco Coast. 64°40' S, 62°00' W. That portion of the NW coast of the Antarctic Peninsula between Cape Sterneck (i.e., what the British call Cape Herschel) and Cape Renard. It was discovered in its N part in 1829, by the *Chanticleer* Expedition of 1828-31, and, together with the N part of the Palmer Archipelago, was named by Foster as Prince William's Land (*see* **Palmer Archipelago**). Explored and roughly charted during Jan. and Feb. 1898, by BelgAE 1897-99, and named by de Gerlache as Terre Danco or Terre de Danco, for Émile Danco. It appears as Danco Land on Dr. Frederick Cook's 1900 English language translation of de Gerlache's maps. It appears as Danco Land on a British chart not long after this expedition, and refers to the coast between Hughes Bay and Flandres Bay, and as Danco Land on a 1901 British chart, but running between Wilhelmina Bay and Flandres Bay. On Irízar's Argentine map of 1903 it appears as Tierra de Danco, and on an Argentine map of 1908 as Tierra Danco. It appears on a British map of 1921, as Danco Land Coast, on another British chart from that year as Danco Coast (running between Charlotte Bay and Wilhelmina Bay), and on a British chart of 1927, as Danco Coast, running between Wilhelmina Bay and Flandres Bay. It appears on a 1940 U.S. Hydrographic Office chart as Danco Coast, running between Salvesen Cove and Wilhelmina Bay, yet on a 1942 USHO chart Danco Coast seems to be limited to the area around the head of Wilhelmina Bay, while on a USAAF chart of 1945 it runs between Salvesen Cove and Andvord Bay. It appears on a 1946 Argentine chart as Costa Danco, running between Cape Sterneck and Cape Reclus. US-ACAN accepted the name Danco Coast in 1947, and on a 1947 USHO chart it seems to run between Cape Anna and Andvord Bay. It appears on a Chilean chart of 1947, as Costa de Danco. Three different Argentine charts of 1949 vary in their definitions of Costa Danco; one has it running between Cape Murray and Cape Anna; another between Cape Sterneck and Cape Willems; and the third between Cape Sterneck and Cape Anna. On a 1951 British chart Danco Coast runs between Hughes Bay and Flandres Bay, and UK-APC accepted the name Danco Coast on Sept. 8, 1953. A 1953 Argentine chart has it running between Cape Kater and Cape Renard, while another, from 1954, has it from the area of the Orléans Strait to Wilhelmina Bay. It appears in the 1955 British gazetteer as Danco Coast, running between Cape Herschel (i.e., Cape Sterneck) and Cape Renard, but on a 1955 USHO chart it is between Brialmont Cove and Cape Renard. It was photographed aerially by FIDASE in 1956-57. On March 2, 1961, UK-APC accepted the Danco Coast as it is defined today, and US-ACAN followed suit later that year. The British had Base O here. The Chilean gazetteer of 1974 accepted the name Costa Danco, and has it running between Cape Sterneck and Cape Renard. However, today the Chileans call it Costa de Danco, which is how the Argentine gazetteer of 1970 has it, with those same boundaries.

Danco Coast Station *see* **Base O**

Danco Island. 66°44' S, 62°37' W. An island, 1.5 km long, in the S part of Errera Channel, mid-channel, off the Danco Coast, on the W coast of Graham Land. Discovered and charted in Feb. 1898, as the *Belgica* sailed through the Errera Channel during BelgAE 1897-99. Surveyed by ArgAE 1952-53, it appears descriptively on their 1953 chart as Isla Dedo (i.e., "finger island"), and that was the name accepted by the 1970 Argentine gazetteer. Surveyed by FIDS from the *Norsel* in April 1955, and from the *Shackleton* in 1956-57. The FIDS Base O was here. Named by UK-APC on Sept. 4, 1957, as Danco Island, in association with the Danco Coast. It appears as such on British charts of 1959 and 1960. US-ACAN accepted the name on March 1, 1965. It appears on a Chilean chart of 1962 as Isla Danco, and that was the name accepted by the Chilean gazetteer of 1974.

Danco Island Station *see* **Base O**

Danco Land *see* **Danco Coast**

Danco Land Coast *see* **Danco Coast**

Mount Dane. 76°51' S, 146°40' W. A mountain, 5 km WNW of Eilefsen Peak, in the N part of Radford Island, in the Sulzberger Ice Shelf, off the coast of Marie Byrd Land. Probably first seen on flights during ByrdAE 1928-30. Named by US-ACAN in 1966, for F.S. Dane.

Dane, Francis Smith, Jr. Known as Duke. b. July 8, 1908, Lexington, Mass, son of rubber boot salesman Francis Smith Dane and his wife Annie Lawrence Edmands. He graduated from Loomis School, in Windsor, Conn., and from Bowdoin College in 1931. He was with Cdr. Donald B. MacMillan in Labrador, and was dog driver in Antarctica, on the shore party of ByrdAE 1933-35, during their winter-over in 1934 at Little America. He later lived in Los Angeles, working there for Lederle Laboratories of New York, and on Sept. 20, 1937, in Ojai Valley, Calif., he married Edith Thacher. Bill McCormick was best man. He died on June 21, 1979, in Carmel, Calif.

Îles Danebrog *see* **Dannebrog Islands**

Danfeng Dao. 69°22' S, 76°23' E. An island in the Larsemann Hills. Named by the Chinese.

Mount Danforth. 85°56' S, 150°01' W. A pyramidal and ice-free mountain, rising to over 2000 m, immediately E of Mount Zanuck, on the S side of Albanus Glacier, in the Queen Maud Mountains. Discovered in Dec. 1934 by Quin Blackburn during ByrdAE 1933-35, and named by Byrd for William H. Danforth (1870-1955), founder of the Ralston Purina Company, in St. Louis, a supporter. US-ACAN accepted the name in 1956.

D'Angelo Bluff. 87°18' S, 154°00' W. A prominent north-facing rock bluff, 10 km long, it trends W from Mount McIntyre, at the W side of (and near the head of) Scott Glacier, 21 km S of Mount Early. Discovered by Quin Blackburn in Dec. 1934, during ByrdAE 1933-35. Visited on Dec. 5, 1962, by a geological party of the Ohio State University Institute of Polar Studies, led by George Doumani. Named by Mr. Doumani for CWO John D'Angelo, U.S. Army helicopter pilot who landed the party here. US-ACAN accepted the name in 1963.

Cabo Danger *see* **Cape Danger**

Cape Danger. 62°27' S, 60°22' W. Forms the NE end of Desolation Island, off Livingston Island, in the South Shetlands. Charted in 1934-35 by the personnel on the *Discovery II*, and probably named by them in reference to the group of sunken rocks which extend about 0.8 km NW from the cape, and pose a danger.

It appears on British charts of 1942 and 1948, and was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the British gazetteer of 1955. It appears on an Argentine chart of 1948 as Cabo Danger, and an Argentine chart of 1954 as Cabo Peligro (i.e., "cape danger"). However, it had appeared on a 1953 Argentine chart as Cabo Peligroso (i.e., "dangerous cape"), and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. The British were the latest to replot this feature, in late 2008.

Îles Danger *see* **Danger Islands**

Danger Island *see* **Danger Islands**

Danger Islands. 63°25' S, 54°40' W. A group of 7 tiny islands, including Darwin Island (the biggest), Beagle Island, Plato Island, Peine Island, Earle Island, Heroína Island, Islote Cirilo, and Dixey Rock, which lie about 24 km SE of Joinville Island. Discovered and roughly charted on Dec. 28, 1842 by RossAE, and named by Ross as Danger Isles because they were concealed by a heavy pack of ice until his ship was almost upon them. They appear as such on his 1844 map. However, they appear on his 1847 chart as Danger Islands, and as Îles Danger in Vincendon-Dumoulin's French atlas of 1847 (reflecting FrAE 1837-40). They again appear as Danger Islands on an 1887 British chart, but on an 1893 British chart as Danger Islets. On Larsen's chart of 1894 (reflecting his expedition on the *Jason*) they appear singularized as Danger Ø (i.e., "danger island"), as they do on one of Nordenskjöld's 1905 maps (reflecting SwedAE 1901-04), and also on certain other maps of that time. On one of Nordenskjöld's 1904 maps the group shows up as Darwin Inseln (i.e., "Darwin islands") or as Île Danger. Other names floating around about that time were Isla Danger (Argentina, 1908), Islas de Danger, Dangerous Islands, and variations thereof. On Charcot's 1912 map (reflecting FrAE 1908-10) they appear as Îlots Danger, and on a Chilean chart of 1947 they appear as Islotes Peligrosos (i.e., "dangerous islets"). On an Argentine chart of 1949 they appear as Islotes Danger, but on a 1953 Argentine chart as Islotes Peligro. Danger Islets was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. Surveyed by Fids from Base D between 1958 and 1961. On July 7, 1959, UK-APC redefined the feature as Danger Islands, and it appears as such on a British chart of 1962. US-ACAN accepted the new name in 1963. On a Chilean chart of 1966 they appear singularized as Islote Peligro, however Islotes Peligro was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Danger Isles *see* **Danger Islands**

Danger Slopes. 77°49' S, 166°40' E. An ice slope just S of Knob Point, it is very steep for 400 yards and then ends W in a sheer drop to Erebus Bay, on Hut Point, on the W side of Hut Point Peninsula, Ross Island. So named by Scott in 1902, during BNAE 1901-04, because it was here that George Vince fell to his death that year. US-ACAN accepted the name in 1964.

Dangerfield, Henry James "Harry." He joined FIDS in 1956, as a radio operator, and wintered-over at Hope Bay (Base D) in 1957 and 1958.

D'Anglade, Émile-Octave. b. July 5, 1893, Salles, just 30 km down the road from Bordeaux, France. In Sept. 1912, Raymond Rallier du Baty (q.v. under D) left Cherbourg for an expedition to the Kerguélen Islands, aboard the *La Curieuse*. He made several stops on the way down, and during, and after the expedition. His cooks came and went with alarming frequency, almost a new one every time they called in somewhere. One of the replacements was Émile D'Anglade, but it is not clear at which port he joined the expedition. The best bets are Buenos Aires or Melbourne, which implies he had been a ship's cook before. Anyway, in Aug. 1914, the *La Curieuse* found herself in Hobart. War had broken out, and the crew went back to France to join up. D'Anglade, however, got a job as a dishwasher at Hadley's Hotel, in old Hobart Town, and on Dec. 23, 1914, was poached to be ship's steward on the *Aurora,* just before that vessel sailed for Antarctica, as part of BITE 1914-17. Only a little fellow, occasionally he would act as cook when Wise was sick, and Stevens would act as steward. He and Shaw mutinied, and, when the ship got back to Port Chalmers, NZ, they were tried in court, but the charges were dropped. On April 20, 1916, D'Anglade joined the NZ Expeditionary Force, as an Army cook (he gave his last employer as Sir E. Shackleton), and shipped to England in July 1916. He stayed in the Army until June 12, 1919, then went back to Bordeaux. His address in 1920-21 (when they came to sending medals) was 27 Route de Toulouse, Bordeaux. After that, qui sait?

Mount Daniel. 84°54' S, 170°17' W. A prominent peak, rising to 2440 m (the New Zealanders say "about 914 m high," which is not only deceptively specific, but so different from the estimate that appears in the American gazetteer, that one has to assume that the peak is 2440 m above sea level, but rises to a height of 914 m above the neighboring surface), 1.5 km N of Mount Hall, W of Liv Glacier, and NE of Mount Wade, in the Lillie Range (the New Zealanders say it is in the Prince Olav Mountains), in the Queen Maud Mountains. Discovered in Nov. 1929, on Byrd's flight to the Queen Maud Mountains, during ByrdAE 1928-30, and named by him for Robert W. Daniel (1883-1940), of Brandon-on-the-James, Va., sportsman, financier, state senator, head of Liberty National Bank of Richmond, and a supporter and close friend of Byrd's. US-ACAN accepted the name in 1956.

Playa Daniel. 62°28' S, 60°46' W. A beach, immediately SE of Playa El Módulo, and which reaches as far as Punta Haydée, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno, during ChilAE 1965-66, for Daniel Torres Navarro, Chilean researcher who took part in the first census of marine mammals in the area.

Daniel, Honoré-Isidore. b. April 3, 1789, La Seyne, France. Carpenter 1st class on the *Astrolabe* during FrAE 1837-40.

Daniel Island. 66°14' S, 110°36' E. A small, rocky island off the S end of Honkala Island, it marks the S end of the Swain Islands, in the Windmill Islands, off the Budd Coast of East Antarctica, N of Wilkes Station. Photographed by OpHJ 1946-47, and first mapped, roughly, from these photos, as part of the Swain Islands. It was photographed aerially by ANARE in 1956 and by SovAE 1957. Included in a 1957 survey by personnel from Wilkes Station, under Carl Eklund, it was named by Eklund that year for Commissaryman 2nd class David "Dave" Daniel (b. Sept. 4, 1934, Fairfield, Tex.), who joined the U.S. Navy in Nov. 1951, and who was cook at Wilkes Station that winter of 1957. He retired from the Navy in Oct. 1971. US-ACAN accepted the name in 1960, and ANCA followed suit.

Mount Daniel Rex *see* **Mount Rex**

Cape Daniell. 72°42' S, 169°55' E. At the NE end of Daniell Peninsula, which marks the S side of the entrance to Tucker Inlet, on the W coast of the Ross Sea, in Victoria Land. Discovered on Jan. 15, 1841, by RossAE 1839-43, and named by Ross for meteorologist and geologist John Frederic Daniell (1790-1845), professor of chemistry at King's College, London, foreign secretary of the Royal Society, from 1839 until his death. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Daniell Peninsula. 72°50' S, 169°35' E. An elongated basalt dome, 2000 m (the New Zealanders say about 1524 m) above sea level, similar to Adare Peninsula and Hallett Peninsula. It lies between Cape Daniell and Cape Jones, on the Borchgrevink Coast of Victoria Land. It is partly separated from the Victory Mountains by Whitehall Glacier, which is afloat in its lower reaches (i.e., it descends below sea level), but is joined to the Victory Mountains at the S end by the higher land (the New Zealanders say by the low, ice-covered land, which seems to be a different concept) in the vicinity of Mount Prior. Named by NZGSAE 1957-58, in association with Cape Daniell, and by analogy with Adare Peninsula and Hallett Peninsula. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Daniels Hill. 70°34' S, 64°36' W. A prominent solitary nunatak rising above the ice to a height of about 1950 m, about 24 km W of the head of Clifford Glacier, in the E part of the Dyer Plateau, in the N part of Palmer Land. Mapped by USGS in 1974 from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1978, for Robert "Bob" Daniels, USARP biologist at Palmer Station in 1975. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Daniels Range. 71°15' S, 160°00' E. A major mountain range, 80 km long and 16 km wide, and predominantly ice-covered, between Harlin Glacier (which bounds it to the N) and Gressitt Glacier (which bounds it to the S), to the W of Rennick Glacier, in the Usarp Mountains of northern Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Ambassador Paul Clement Daniels (1903-1986), who helped formulate the Antarctic Treaty. ANCA accepted the name on June 9, 1964, and NZ-APC followed suit. *See also* **Arctic Institute Range**.

Îles Dannebrog *see* **Dannebrog Islands, Wilhelm Archipelago**

Islas Dannebrog *see* **Dannebrog Islands**

Dannebrog Islands. 65°03' S, 64°08' W. Also called Îles Danebrog [sic]. A group of islands and rocks, including Rollet Island and Elisabethinsel, between the Wauwermans Islands and the Vedel islands, in the Wilhelm Archipelago. For history, *see* **Wilhelm Archipelago**.

Danowski Glacier. 62°01' S, 57°39' W. Between Melville Peak and Melville Peninsula, terminating in an ice cliff at Sherratt Bay, on the S side of King George Island, in the South Shetlands. Named by the Poles in 1984, for geologist Wladyslaw Danowski, a member of PolAE 1980-81.

The *Dantas Barreto*. Brazilian whale catcher, built in 1912 for the Companhía de Pesca Norte do Brasil, and named after the Brazilian politician, Emidio Dantas Barreto. During the summer months she worked in Brazilian waters, and in the austral summer charted out to companies whaling in the South Shetlands, for example, the Hvalen Company, 1913-16.

Danum Platform. 79°59' S, 155°27' E. A mesa-like rock eminence, 6 km NE of Haven Mountain, forming the divide between Bibra Valley and Dubris Valley, in the Britannia Range. Named by a University of Waikato (NZ) geological party of 1978-79, led by Mike Selby, in association with other names in this area named for the Britannia theme. Danum was the Roman name for Doncaster. NZ-APC accepted the name, and US-ACAN followed suit.

The *DAP Mares*. A 1600-ton Chilean tourist motor vessel, formerly the *Chinook*, 76.51 meters long, built in Spain in 1970, she was bought in 2005 by the Pivcevic family, and refurbished especially for Antarctic cruises. Capable of 15 knots, she was in Antarctic waters in 2005-06, carrying 40 passengers, including the 22-man Peter I Island Radio Expedition led by Bob Allphin and Ralph Fedor. On Feb. 4, 2006 she crossed the Antarctic Circle, and on Feb. 5, 2006 she reached Peter I Island. On Sept. 20, 2006, she mysteriously sank in Catalina Bay, near Punta Arenas harbor, where she had been anchored for several days.

Bahía Darbel *see* **Darbel Bay**

Isla Darbel *see* **Darbel Islands**

Islotes Darbel *see* **Darbel Islands**

Darbel Bay. 66°30' S, 65°58' W. An indentation, 40 km wide, between Cape Bellue and Cape Rey, on the Danco Coast, on the W coast of the Antarctic Peninsula. Discovered and roughly charted by FrAE 1908-10. Parts of this bay and parts of Crystal Sound were included, with what became Matha Strait, in a much larger feature they called Baie Matha. This feature was later named by Charcot as Baie Marin Darbel, for Rear Admiral (later Vice Admiral) Laurent-Victor Marin-Darbel (1849-1928; known as Victor), chief of staff of the French Navy, 1909-11. It appears as Marin Darbel Bay on British charts of 1914 and 1948. There is a 1920 reference, probably to this bay, as Kerlu Bay. Wilkins flew over here on Dec. 20, 1928, and on his 1929 map erroneously showed this bay as the W part of a channel cutting through Graham Land, and called it Marin Darbel Fjord. It appears on *National Geographic*'s 1932 map as Marin-Darbel Fiord. In 1931 the Discovery Investigations charted it as a bay, and BGLE 1934-37 sketched it as a bay. It appears on a Chilean chart of 1947 as Bahía Marín Darbel, and that was the name accepted by the 1974 Chilean gazetteer (after they had rejected Bahía Darbel Marín). It appears on a 1952 British chart as Darbel Bay, but UK-APC accepted the name Martin Darbel Bay (sic) on Jan. 28, 1953, and US-ACAN followed suit that year. However, on Sept. 20, 1955, UK-APC changed the name to Darbel Bay, and it appears as such on a British chart of 1961. US-ACAN accepted that UK version in 1960. It appears on a 1953 Argentine chart as Bahía Darbel, and that was the name accepted by the 1970 Argentine gazetteer. It was photographed aerially by FIDASE in 1956-57.

Darbel Island *see* **Darbel Islands**

Darbel Islands. 66°23' S, 65°58' W. A group (one main island, with 2 attendant smaller islands to the NE, and some rocks) which extends 8 km SW from Cape Bellue across the N side of the entrance of Darbel Bay, off the W coast of Graham Land. A 1927 map seems to show the NW point of the main island as being named Kapp Bellue (*see* **Cape Bellue**). Charted by personnel on the *Discovery II* in 1930-31; they confused these islands with the Bragg Islands, which they named the Marin Darbel Islands, and which appear thus on their chart, being named in association with the bay, which was, in those days, called Baie Marin Darbel. This error was repeated on a 1942 British chart, but, by 1952, the British, knowing something was wrong, deleted all reference to the name Marin Darbel Islands. ChilAE 1946-47 grouped these islands together with the Owston Islands, and named them collectively Islas Quirihue, after the town in southern Chile. They appear as such on the 1947 expedition chart. What became the Darbel Islands were surveyed by Fids from Base W in 1957, UK-APC accepted the name Darbel Islands on July 7, 1959, and they appear on a 1961 British chart. US-ACAN accepted the name in 1965. The 1974 British gazetteer names the main island as Darbel Island, and the Argentines followed suit, as Isla Darbel, plotting it in 66°24' S, 65°57' W. The SCAR gazetteer lists Islas Quirihue as a separate feature, which, in a sense, it is, the Chileans not seeming to have changed that situation. The problem is, the SCAR gazetteer entry for Islas Quirihue does not alert the reader to the Darbel Islands. The SCAR gazetteer also lists Isla Darbel as a separate feature (but with no descriptor), where really, they should refer that name to the entry "Darbel Islands." The two small islands on the NE side of the group may assume official names — Depot Islet and Outer Islet (or, as the term "islet" is no longer used in the English-speaking world, perhaps "island" or "rock" would be more likely). There is at least one reference to them as such, in 1978.

Île Darboux *see* **Darboux Island**

Isla Darboux *see* **Darboux Island**

Islas Darboux *see* **Darboux Island**

Islote Darboux *see* **Darboux Island**

Darboux Island. 65°24' S, 64°13' W. More or less 1.5 km in diameter, and rising to 271 m above sea level, 5 km W of Cape Pérez, off the Graham Coast, on the W coast of Graham Land. Discovered and charted by FrAE 1903-05, and named by Charcot as Île Darboux, for the French mathematician, Jean-Gaston Darboux (1842-1917). It appears as Darboux Island on Rymill's 1938 map reflecting BGLE 1934-37, and also on a 1948 British chart, that name being accepted by US-ACAN in 1951, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears (pluralized in error) as Darboux Islands on a 1943 U.S. Hydrographic Office chart. It appears on an Argentine map of 1946 as Isla Darboux, but on a 1953 Argentine chart as Islote Darboux. Isla Darboux was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer (the latter after having rejected Islas Darboux). Photographed aerially by FIDASE in 1956-57.

Darboux Islands *see* **Darboux Island**

Mount Darby. 77°40' S, 162°13' E. Rising to 1750 m on the divide between Rhone Glacier and Matterhorn Glacier, 1.3 km NW of Mount J.J. Thomson, in the Asgard Range of Victoria Land. Named by NZ-APC on Oct. 7, 1998, for Marie Darby, marine biologist of Canterbury Museum, Christchurch. Her Jan. 1968 voyage to McMurdo Sound on the *Magga Dan* marked the first visit of a NZ woman scientist to Antarctica. US-ACAN accepted the name later in 1998.

Mount Darbyshire. 78°28' S, 158°05' E. A prominent bare rock mountain, rising to 2099 m, close W of the Warren Range, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1961. Named by US-ACAN in 1964, for Maj. (later Lt. Col.) Leslie Lawrence "Les" Darbyshire (b. April 25, 1929, Lamar, Colo.), who joined the U.S. Navy in 1947, and, after flight training, the U.S. Marines in Dec. 1950 (in

time for Korea). He was serving overseas when he was "volunteered" by the Marines to become a VX-6 pilot in Antarctica, in 1960-61 and 1961-62. *See* **Darbyville** (below). ANCA accepted the name. Col. Darbyshire later commanded a helo squadron in Vietnam, retired to Pensacola, and went into real estate.

Darbyville. On Jan. 1, 1962, a lone C-130 was about 100 miles from Byrd Station, on a cargo-transportation flight from McMurdo, when the third propjet in a row failed due to ice contamination in the fuel system. After ditching the cargo, pilot Maj. Les Darbyshire (*see* **Mount Darbyshire**) and co-pilot Lt. (jg) Don Moxley (*see* **Mount Moxley**) landed the Herc on the ice, with the chaplain, August Mendonza, leading some of the crew in silent prayer. Father Mendonza was on his way to Byrd to celebrate a special New Year's mass. A rescue C-47 took off from McMurdo, and as it flew in toward the downed aviators, they saw a sign stomped in the snow, "Darbyville." Darbyshire has set up a small village, with red tents and white cabins, and had been elected mayor. The visitors were just in time for a good meal, they stayed over, and four days later the Herc was fixed and heading back to McMurdo. The whole episode was named "The Darbyville Affair." Darbyville would later serve as a VX-6 emergency landing area for other crews.

Lednik Dargomyzhskogo *see* **Dargomyzhsky Glacier**

Dargomyzhsky Glacier. 71°50' S, 70°50' W. Flows W from the Staccato Peaks into Williams Inlet, on Alexander Island. Named by the USSR Academy of Sciences in 1987, as Lednik Dargomyzhskogo, for Russian composer Aleksandr Dargomyzhsky (1813-1869). US-ACAN accepted the translated name in 2006. However, the glacier may actually be a part of Williams Inlet, and therefore not a separate feature, a worry voiced by UK-APC on May 10, 2006.

Darkowski, Leon Stanislaus. b. June 10, 1917, Pittsburgh, son of Stanislaw Darkowski and his wife Helena Waszczak. After Duquesne University (graduated 1939), he went to St. Vincent's Seminary, in Latrobe, Pa., becoming a Catholic priest in 1943. He joined the Navy in 1952, and as a lieutenant and chaplain he replaced Father John C. Condit for OpDF II (1956-57) at McMurdo. He wintered-over at McMurdo in 1957, and left Antarctica in early 1958. He was the first priest to celebrate mass at the South Pole. He was back at the South Pole in 1965-66, as a visitor, and was in Vietnam in 1968. 28 years as a Navy chaplain, he retired from the Navy as captain, and later became a monsignor in Pittsburgh. His last parish was St. Mary Czestochowa, in McKeesport, Pa. He died on Aug. 22, 2009.

Darkowski Glacier. 77°52' S, 162°25' E. In the Cathedral Rocks, flowing N between Zoller Glacier and Bol Glacier, into Ferrar Glacier, in Victoria Land. Charted by BAE 1910-13. Named by US-ACAN in 1964, for Chaplain Leon Darkowski. NZ-APC accepted the name.

Darley Hills. 81°06' S, 160°10' E. A range of high, ice-covered coastal hills, overlooking the Ross Ice Shelf, and trending N-S for about 32 km between Cape Douglas and Cape Parr. Named by US-ACAN in 1965, for James Morrison Darley, chief cartographer of the National Geographic Society, 1940-63, and a seminal figure in Antarctic map making. ANCA accepted the name.

Mount Darling. 77°15' S, 143°20' W. The highest peak in the Allegheny Mountains, 1.5 km W of Mount Swartley, in the Ford Ranges of Marie Byrd Land. Discovered aerially from West Base in 1940 during USAS 1939-41, and named for botanist Chester Arthur Darling (1880-1963), head of the biology department at Allegheny College, Meadville, Pa., scoutmaster, and mentor of Paul Siple. US-ACAN accepted the name in 1947.

Darling, William Wallace. b. 1881, Albany, NY. He worked on the first American excavations of the Panama Canal, and in 1915 married Jane Oliver, of Kingston, NY. In 1929 he was a boilermaker for the Morse Dry Dock Corporation in Brooklyn when he was taken on at Panama as a machinist on the *City of New York* for the 2nd half of ByrdAE 1928-30. After the expedition, he joined Firestone and worked in their rubber plantations in the Amazon for 3 years. His wife died in 1941. After being ill for 6 weeks, he died on Aug. 17, 1951, in the Bronx.

Darling Ridge. 84°46' S, 115°54' W. A flat-topped, snow-covered ridge, 4 km long and with precipitous rock sides, it rises to 2350 m at the NW corner of the Buckeye Table, in the Ohio Range. Surveyed by the Horlick Mountains Traverse Party in Dec. 1958. Named by US-ACAN in 1962, for Fredric L. "Fred" Darling, glaciological assistant with the party.

Cabo Darlington *see* **Cape Darlington**

Cape Darlington. 72°00' S, 60°43' W. An ice-covered headland rising to 305 m, it forms the S entrance point of Hilton Inlet, on the Black Coast, on the E coast of Palmer Land. Discovered and photographed aerially in 1940 by USAS 1939-41, who also roughly surveyed it from the ground, and, thinking it to be an island, named it Darlington Island, for Harry Darlington. They plotted it in 71°55' S, 60°40' W. It appears as such on a 1942 USAAF chart, and that was the situation accepted by US-ACAN in 1947. The name Howard Island, after August Howard (*see* **Cape Howard**) was also applied to the same feature, which, through a navigation error on the USAS flight, was wrongly located in 72°40' S, 59°00' W, and, this, again, was accepted by US-ACAN in 1947. It appears on a 1946 Argentine map as Isla Darlington. It was re-defined as a cape by RARE 1947-48 (aerially) and by Fids from Base E (on the ground) in Nov. 1947, and appears on Finn Ronne's 1948 map as Cape Darlington, as it does also on Dougie Mason's 1950 FIDS map. UK-APC accepted the new name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer, and also in the 1956 American gazetteer (after they had rejected Cape Howard). It appears as such on the 1979 USGS sketch map of the N part of Palmer Land. It appears on a 1952 Argentine chart as Cabo Darlington, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Darlington, Harry III. b. June 2, 1918, Pittsburgh, son of Harry Darlington, Jr., and his wife, Washington society hostess Ethel Shields (later Mrs George Garrett). After working as a salesman for American Express, he joined the U.S. Navy, and was an ensign who wintered-over at East Base during USAS 1939-41, replacing Roger Hawthorne. He and Jennie (*see* **Darlington, Jennie**, below) moved to Marshall, Va. He was pilot on RARE 1947-48. He described himself as 3rd-in-command of the whole expedition; others have described him as the chief of aviation. Ronne, the leader of the expedition, and with whom Darlington had a severe row on this trip, describes him in his autobiography only as a "reserve pilot." No mention in the index even, of Darlington or his wife, Jennie (who also went on the trip), which is hardly surprising, given Darlington's "mutinous" actions. He died in Nov. 1996, in Marshall.

Darlington, Jennie. b. Jan. 25, 1924, Baltimore, as Jennie Russell, dau of Charles Russell and his wife Jennie Hilliard. After school in Baltimore and New York, she became a pilot with the Civil Air Patrol, on the West Coast, during World War II. After the war, she co-founded Save the Children in NYC, and while in Ponte Vedra recuperating from appendicitis, she met pilot Harry Darlington III, who had been to Antarctica during USAS 1939-41, and had just returned from the war in Britain. He was off again, to Antarctica, as one of the pilots on RARE 1947-48, and he and Jennie married on June 28, 1946. She went to Antarctica with her husband on that expedition (*see* **Women in Antarctica**), and, indeed, honeymooned there. While Finn Ronne, the leader of the expedition, had a hut to himself and his wife, the Darlingtons lived at the end of the main hut, which put a strain on everybody. Jennie co-wrote a book about the experience, *My Antarctic Honeymoon* (see the Bibliography). She became pregnant, and if the expedition had not left when it did, her daughter, Cynthia (later Mrs. Charles Beyer), would have been the first human being to be born on Antarctic terra firma (*see* **Births in Antarctica**). She and Jackie Ronne were probably the first two women to winter-over in Antarctica. Harry and Jennie made their way back from Buenos Aires to New York, aboard the *Uruguay*, and returned to Marshall, Va. Harry's parents were off to Europe (Mr. Garrett had been appointed ambassador to Ireland), so the Darlingtons moved into the big farm at Marshall, Va., and stayed there.

Darlington Island *see* **Cape Darlington**

Darmstadtpass. 70°56' S, 165°20' E. A pass NW of the Robertson Glacier, in the Anare Mountains. Named by the Germans.

Darnell Nunatak. 80°27' S, 155°54' E. A prominent nunatak, rising to 1405 m, 6 km

NW of Mount Rummage, in the SW part of the Britannia Range, about 44 km SW of Mount McClintock. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1965, for Chief Aviation Machinist's Mate Shepard R. Darnell, with VX-6, 1962-63. Between Dec. 27, 1962 and Jan. 4, 1963, Chief Darnell and 6 mechanics replaced in the field the engine of a helicopter downed on Emmanuel Glacier. ANCA accepted the name.

Cape Darnley. 67°43' S, 69°30' E. Also called Bjerkø Head, and Bjerkø Headland. An ice-covered cape forming the N extremity of Bjerkø Peninsula, at the W side of MacKenzie Bay, near the Amery Ice Shelf, in the E part of Mac. Robertson Land. The surface of the ice-cap in this area was seen on the SW horizon in the evening of Dec. 26, 1929, by Mawson, from the masthead of the *Discovery*, during a mirage while in 66°57' S, 71°57' E, during BANZARE 1929-31. This was entered in the log as an appearance of land, and left for later investigation. He returned closer, on Feb. 11-12, 1931, saw it properly, and named it for Ernest Rowland "E.R." Darnley (1875-1944), chairman of the Discovery Committee of the Colonial Office, London, 1923-33. US-ACAN accepted the name in 1953, and ANCA followed suit.

Darryl Zanuck Mountain *see* **Mount Zanuck**

The *Dart*. An 87-ton, 45-foot British schooner out of Whitstable, built in 1782. In 1820-21 she was sealing off the southern coast of South Africa, and by 1821 she was the oldest sealing vessel around, and owned by Francis and Thomas Duell. She was in the South Shetlands in the 1821-22 season, under the command of Thomas Duell. However, it was Capt. Yabsley who brought her back into London on May 18, 1822, with 1750 sealskins. On July 4, 1822, she left Gravesend, Kent, again under Duell, and the following day left Deal, Kent, bound for Falmouth, whence she left on July 13, 1822, bound for the South Shetlands again, and for the 1822-23 season. She arrived back in London on Aug. 13, 1823, with 2000 sealskins and 10 casks of black oil. At the end of this expedition, the Duells sold this vessel to Andrew and William Low, and, after repairs, William took her out of Gravesend on Sept. 13, 1823, bound for the South Seas. However, other sources say that L. Low bought her, and that on Sept. 8, 1823, Andrew Low was appointed master, and took her out of Gravesend on Sept. 13, 1823, bound for the South Seas. On May 17, 1825, the *Dart* arrived in Dublin, with 2400 seal skins. She was on her way to Greenock, and from there to London.

[1]**Cape Dart**. 73°07' S, 126°09' W. At the foot of Mount Siple, on the N coast of Siple Island, just southward of Lauff Island, at the E edge of the Getz Ice Shelf. Discovered in Dec. 1940 on a flight from West Base, during USAS 1939-41. Named by US-ACAN in 1947, for Justin Whitlock Dart, Sr. (1907-1984), of the Walgreen Company (he married Ruth Walgreen), a supporter of the expedition. Mr. Dart and his wife divorced, he left Walgreens, married actress Jane Bryan, and started Rexall.

[2]**Cape Dart** *see* **Cape Flying Fish**

Ilha Dart *see* **Dart Island**

Mount Dart. 70°12' S, 65°07' E. Between 2 and 2.5 km SE of Mount Dwyer, in the Athos Range of the Prince Charles Mountains. Mapped from 1965 ANARE air photos. Named by ANCA for Jack Dart. US-ACAN accepted the name in 1971.

Dart, John Robert "Jack." Radio operator at Mawson Station in 1969, 1971, 1973, and 1975. In 1969, he took part in the ANARE Prince Charles Mountains Survey. In the mid-1960s he did two tours on Macquarie Island. *See* **Mount Dart**, **Dart Moraine** and **Bainmedart Cove**.

Dart Island. 62°14' S, 59°01' W. The largest of several small islands in the W entrance to Fildes Strait, between King George Island and Nelson Island, in the South Shetlands, it was one of the 70 Islets (q.v.) surveyed and named by the personnel on the *Discovery II* in 1934-35. Photographed aerially by FIDASE in 1956-57. The name 70 Islets (there were actually only 3; the name did not signify their number, merely that 2 of them, at least, were 70 feet high) was changed by UK-APC on Aug. 31, 1961, and the largest of these islands was called Dart Island, for the *Dart*. US-ACAN accepted this change in 1965. It appears as Ilha Dart on the 1984 Brazilian map of Fildes Peninsula.

Dart Moraine. 70°54' S, 68°00' E. An area of chocolate brown moraine extending for about 11 km S of Radok Lake and Pagodroma Gorge, and W of Flagstone Bench, at the E end of the Aramis Range of the Prince Charles Mountains. Photographed aerially by ANARE in 1956. Crossed many times in Jan. and Feb. 1969 by Jack Dart (q.v.), with the ANARE party camped at Radok Lake, on his way to the aircraft landing strip used to supply the camp. Named by ANCA on May 18, 1971. US-ACAN accepted the name in 1973.

Dartmouth Peak. 80°12' S, 157°41' E. Rising to 3320 m, about 4.3 km ENE of Mount McClintock, in the central part of the Britannia Range. Named by US-ACAN in 2000, for Dartmouth, Devon, the home of the old British naval training ship *Britannia*. NZ-APC accepted the name on Feb. 20, 2001.

Daruma Rock. 68°32' S, 41°11' E. A coastal rock (on land), with an area of less than 1 sq km, at the W side of Nishi-naga-iwa Glacier (what the Norwegians call Darumabreen), and 8 km E of Cape Omega, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from ground surveys and air photos taken by JARE between 1957 and 1959, and named by them on Oct. 1, 1962, as Daruma-iwa. The Japanese have a thing called a Daruma doll, hollow and round, with a painted image on it of Bodhidharma (Daruma in Japanese), the founder of Zen Buddhism. This little rock reminded them of such a doll. US-ACAN accepted the translated name Daruma Rock in 1968.

Darumabreen *see* **Nishi-naga-iwa Glacier**

Darumafjellet *see* **Daruma Rock**

Daruma-iwa *see* **Daruma Rock**

Cap Darwin. 66°40' S, 140°02' E. A cape at the extreme NW of Lamarck Island, in the Géologie Archipelago. Named by the French in 1977, for Charles Darwin (*see* **Darwin Island**), who, in the 19th century, carried on the theories of the French naturalist Lamarck.

Isla Darwin *see* **Darwin Island**

Islote Darwin *see* **Darwin Island**

Mount Darwin. 85°02' S, 163°08' E. A prominent, but low-lying, ice-free mountain, rising to about 2500 m, about 8 km WSW of Mount Bowers, it is the most southerly peak in the Queen Alexandra Range, at the head of, and near the W wall of, the Beardmore Glacier, near the edge of the Polar Plateau. Discovered in Dec. 1908 by BAE 1907-09, and named by Shackleton for Major Leonard Darwin (1850-1943), MP for Litchfield, 1892-95, president of the Royal Geographical Society, 1908-11, and son of the famous naturalist Charles Darwin. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Darwin Glacier. 79°53' S, 159°00' E. A large glacier about 130 km long, 22 km across at its widest part, narrowing to just over 5 km, then widening again to 16 km at its mouth. Between Carlyon Glacier on the N and Byrd Glacier on the S, it flows from the Darwin Névé, on the Polar Plateau, eastward between the Darwin Mountains and the Cook Mountains, into the Ross Ice Shelf. The lower part of the glacier was mapped by BNAE 1901-04. The whole area was traversed by NZ parties during BCTAE 1956-58, and named by them in association with the mountains. NZ-APC accepted the name, and US-ACAN followed suit in 1962. The Americans had a field camp here (closed Dec. 30, 2000). ANCA also accepted the name.

Darwin Island. 63°26' S, 54°43' W. A cylinder-shaped island, with steep coasts rising up as vertical walls of bare, snow-free black rock, about 0.8 km by 0.8 km in area, it is the largest of the Danger Islands, 17.5 km ESE of the E tip of Joinville Island. Discovered and roughly charted on Dec. 29, 1842, by RossAE 1839-43, and named by Ross for Charles Robert Darwin (1809-1882), the famous naturalist. It appears on Ross's 1847 map, and also on Petermann's map of 1867. It appears on an 1894 U.S. Hydrographic Office chart as Darwin Islands (sic). The name Darwin Islet first appears on a 1901 British chart, and that was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. Surveyed by Fids from Base D in 1953-54 and again between 1958 and 1961, and on July 78, 1959, UK-APC renamed it Darwin Island, a name accepted by US-ACAN in 1963. It appears on a Chilean chart of 1947 as Islote Darwin, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Darwin Islands *see* **Darwin Island**

Darwin Islet *see* **Darwin Island**

Darwin Mountains. 79°51' S, 156°15' E. A glacier-enclosed group of mountains, rising to about 1900 m above sea level, between Darwin Glacier and Hatherton Glacier, or between the Cook Mountains and the Britannia Range, in southern Victoria Land, NW of Barne Inlet. Discovered on BNAE 1901-04, and named for Major Leonard Darwin (*see* **Mount Darwin**), at that time honorary secretary of the Royal Geographical Society. US-ACAN accepted the name, as did ANCA.

Darwin Névé. 79°30' S, 155°00' E. A large névé (snow field) on the W side of the Cook Mountains and the Darwin Mountains, and which feeds the Darwin Glacier and the Hatherton Glacier. Named by the NZ Darwin Glacier Party of BCTAE 1956-58, in association with nearby Darwin Glacier. NZ-APC accepted the name, and ANCA followed suit on Nov. 24, 1961. US-ACAN accepted the name in 1965. Originally plotted in 79°26' S, 155°00' E, it has since been replotted.

Darzalas Peak. 63°50' S, 58°41' W. The summit of a small, partly ice-free ridge rising to 1050 m in the E foothills of the Detroit Plateau, 3.01 km W of Gurgulyat Peak (in Kondofrey Heights), 6.74 km NNW of Mount Bradley, 9.58 km E of Golesh Bluff, and 6.73 km S of Skoparnik Bluff, it surmounts the upper course of Victory Glacier to the NE, and a tributary to Znepole Ice Piedmont to the SE, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the ancient Thracian god Darzalas.

Dash Patrol. Shirase's small team of 7 men who made a dash for the South Pole from the Bay of Whales during the Japanese South Polar Expedition of 1910-12. Two of the men — Muramatsu and Yoshino — stayed behind in the tent at the edge of the Ross Ice Shelf while Shirase, Takeda, Miisho, Hanamori, and Yamabe sledged to the SE across the shelf, each of the 28 dogs pulling 57 pounds. Their 2 sledges did 8 miles the first day and were stopped by a blizzard. On Jan. 28, 1912, totally exhausted, they reached 80°05' S, having covered 160 miles in what was, after all, a gesture (by that time they had realized that even if they reached the Pole they would have been preceded there by Amundsen and Scott). That was their limit, and they buried a copper case with a record of their visit, took a photograph, named the area they were in as Yamato Yukihara (i.e., "Japanese snowfield"), and then returned, in only 3 days amid better weather, to the Bay of Whales, where they were picked up by the *Kainan Maru*.

Mount Dasinger. 83°13' S, 55°03' W. Rising to 1360 m, 10 km NE of Neith Nunatak, in the N part of the Neptune Range, in the Pensacola Mountains. Mapped by USGS from their own ground surveys conducted between 1956 and 1966, and from USN air photos taken in 1963-64. Named by US-ACAN in 1968, for Lt. (jg) James R. Dasinger (b. Oct. 1933), USN, who wintered-over at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974.

Daspit Glacier. 68°11' S, 65°49' W. A glacier, 10 km long, flowing ENE along the S side of Mount Shelby to the head of Trail Inlet, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Discovered by members of East Base during USAS 1939-41, who photographed it aerially in Sept. 1940, and surveyed it from the ground in Nov. 1940. They named it Fleming Glacier, for W.L.S. Fleming of BGLE 1934-37. It appears as such on a 1942 USAAF chart of 1942. In Dec. 1947, it was surveyed by a joint sledging team of Fids from Base E and personnel of RARE 1947-48, and renamed by Finn Ronne (RARE also photographed it aerially), for Capt. (later Rear Admiral) Lawrence Randall Daspit (b. Oct. 18, 1905, Houma, La. d. May 19, 1979, Arlington, Va.), USN, who joined the U.S. Navy in July 1922, and helped get Navy support for RARE 1947-48. He retired in Oct. 1967. The name Fleming Glacier was given to another feature, one on the Fallières Coast. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. However, on a 1953 Argentine chart it was still appearing as Glaciar Fleming, and on a 1955 map as Ventisquero Fleming (which means almost the same thing). It appears as Daspit Glacier in the 1955 British gazetteer, and in the 1956 American gazetteer, as well as on the 1979 USGS sketch map of the N part of Palmer Land.

Mount Dater. 67°08' S, 64°49' W. A prominent flat-topped coastal mountain, marked by distinctive rock spurs and steep cliffs, and which rises to about 1200 m, just SW of Monnier Point, S of Mill Inlet, on the Foyn Coast, on the E coast of Graham Land. In late 1947 it was photographed aerially by RARE 1947-48, and roughly surveyed from the ground by FIDS. USN photographed it aerially again, in 1963, and BAS from Base E surveyed it from the ground again in 1963-64. Named by UK-APC on July 21, 1976, for Harry Dater. US-ACAN accepted the name later in 1976. It appears in the 1977 British gazetteer.

Dater, Henry Murray "Harry," Jr. b. Feb. 20, 1909, Brooklyn, NY, son of attorney Henry Murray Dater and his wife Maud Summerfield (who had previously been married to lawyer Rollin Breckenridge, who had committed suicide). A graduate of Yale, and a lieutenant commander in the Navy during World War II, in 1956 he became Byrd's chief historian, and remained the official historian of the U.S. Antarctic program and of Task Force 43 until he died on June 26, 1974, in Washington, DC. He was founding editor of the *Bulletin of the U.S. Antarctic Projects Officer*, and co-founding editor of its successor, the *Antarctic Journal of the United States*. He co-wrote the book *Antarctica* (*see* the Bibliography) and was 6 times in Antarctica.

Dater Glacier. 78°17' S, 84°35' W. A steep valley glacier, 40 km long and between 1.5 and 5 km wide, it flows NE following a sinuous course from the E slopes of the Vinson Massif to the Rutford Ice Stream which borders the E flank of the Sentinel Range, in the Ellsworth Mountains. At its lower end, Dater Glacier coalesces with the terminus of Ellen Glacier, the two emerging from the Sentinel Range as one stream just N of Mount Flowers. Discovered and photographed aerially by VX-6 on Dec. 14-15, 1959, and mapped in 78°14' S, 84°30' W from these photos by USGS. Named by US-ACAN in 1961, for Harry Dater. It has since been replotted.

Datum Peak. 77°58' S, 163°48' E. Rising to 1575 m above the S side of Gauss Glacier, near the SW extremity of Hobbs Ridge, 2.2 km W of Williams Peak, in Victoria Land. In keeping with the naming of several features in this area on the theme of surveying, this one was named by NZ-APC in 1992, for a datum (a practical representation of a reference system). US-ACAN accepted the name in 1993.

Daughtery Peaks. 73°29' S, 164°20' E. A small cluster of bare rock peaks, rising to 2680 m, surmounting the S wall of Cosmonaut Glacier, in the Southern Cross Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Franklin J. Daughtery (b. June 27, 1930. d. May 27, 1985, Phenix City, Ala.), aviation structural mechanic who served in Korea and Vietnam, and who was with VX-6 for 6 seasons. He was one of the metalsmiths on the Hercules that flew into Byrd Station on April 10, 1961 to evacuate Leonid Kuperov (q.v.).

Dauphin Island. 66°46' S, 141°35' E. A rocky island, about 250 m long, between Claquebue Island and Chameau Island, E of Cape Découverte, in the Curzon Islands. The island has two small summits, one at the N end and one at the S. Charted by the French in 1951, and named by them as Île des Dauphins, for the French province of Dauphiné, the home of geodesist Paul Perroud, a member of the expedition that year. US-ACAN accepted the (not very well) translated name in 1962.

Dauphin Pond. 77°33' S, 160°42' E. A frozen freshwater pond, near the SW extremity of Healy Trough, in the flat upland area known as Labyrinth, at the W end of the Wright Valley, and 300 m E of the terminus of Wright Upper Glacier, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2005, for a USGS Dauphin helicopter (HH-65A), that landed on the pond on Jan. 20, 2004, in the course of sampling the pond.

Île des Dauphins *see* **Dauphin Island**

Daussy Island *see* **Hope Island**

Davenport, Virl. b. March 13, 1898, Grand Junction, Colo., but raised in Bayfield and Ignacio, near Durango, Colo., son of dry goods store owner James William Davenport and his wife Sarah "Sadie" Wolf. He returned to Palisade, near Grand Junction, and got a job as a printer before being drafted into the Army in Sept. 1918, being posted to Fort Bliss, Tex., and rising, in short order, to the rank of corporal.

He then joined the U.S. Marines, as a private, being based in San Diego. In 1933 he married Marguerite Edie Hiner, and they lived in Bayfield, Colo. He was a machinist on the *Jacob Ruppert* during ByrdAE 1933-35, but, the thing is, he never got to go. His wife was pregnant with their first child, and, despite the fact that he had made various things for the expedition, such as cookers and pans, he stayed with his wife. He died on Jan. 22, 1947, in Bend, Oreg., as the result of a gun incident. Marguerite married again, in 1950, to Vernon Culhane, and died in California in 2000.

Daveri Hill. 63°35' S, 58°39' W. An ice-covered hill rising to 834 m at the NE extremity of Srednogorie Heights, 2.17 km N of Mount Ignatiev, 1.94 km SE of Corner Peak, 5.4 km SW of Crown Peak, and 2.89 km WNW of Lambuh Knoll, it surmounts Malorad Glacier to the N, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Daveri, in northern Bulgaria.

Davern Nunatak. 70°54' S, 65°20' E. Between 2.5 and 3 km W of Mount Bewsher, in the Aramis Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos, and named by ANCA for Edmund Vincent "Eddie" Davern, radio operator at Wilkes Station in 1963, and senior weather observer (radio) there in 1967. US-ACAN accepted the name in 1971.

Punta Davey *see* **Davey Point**

Davey, Graham John. b. March 1, 1934, Birmingham. He studied geography at the University of Birmingham, and in 1956 joined FIDS as an assistant surveyor, wintering-over at Base G in 1957 and 1958. During the first winter he, Geoff Monk, Lee Rice, and Dave Evans made their plans to sail through the Caribbean after their FIDS tour was over. However, that didn't work out, so they then planned a drive from Montevideo in a Landrover. That didn't work out either, and Lee Rice and Dave Evans dropped out. Davey and Monk then took a motorcycle ride through South and Central America, and split up in Laredo, Texas, Monk going to Vancouver and Davey to New York, where he took the *Queen Mary* back to Southampton, arriving there on Dec. 15, 1959.

Davey, Martin Clive. BAS plant ecologist who wintered-over at Signy Island Station in 1987, then spent the summer of 1989-90 there. He spent the summer of 1990-91 at Livingston Island, in the South Shetlands, and then the winters of 1993 and 1994 back at Signy, the latter year as base commander. His main studies were algae and mosses.

Davey Nunataks. 72°58' S, 74°52' E. A group of 7 small nunataks about 6 km SSW of Mount Harding, in the Grove Mountains of the American Highland, in Princess Elizabeth Land. Mapped by Australian cartographers from ANARE air photos taken between 1956 and 1960. Named by ANCA on July 29, 1965, for S.L. Davey, topographic draftsman with the Division of National Mapping, who contributed sustantially to the production of Antarctic maps. US-ACAN accepted the name in 1967.

Davey Peak. 75°53' S, 115°45' W. A small rock peak, rising to 1855 m, 13 km W of Scudder Peak, on the S side of Toney Mountain, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Gary R. Davey, of the U.S. Weather Bureau, meteorologist at Byrd Station in 1966.

Davey Point. 61°58' S, 58°32' W. A conspicuous rocky point, 5 km SW of Round Point, between Stigant Point and Owen Island, and 8 km SW of Pottinger Point, on the NW coast of King George Island, in the South Shetlands. Charted as an island in 1934-35 by the personnel on the *Discovery II*, in 61°56' S, 58°29' W, and named by them as Round Island. The next cruise of the Discovery Investigations plotted it in 61°57' S, 58°17' W, and it appears as such on their 1937 chart, still as Round Island. It appears on a 1939 Argentine chart as Isla Round, on another of their charts (1946) as Isla Redonda, and on yet another (1956) as Roca Redonda. Following aerial photography by FIDASE in 1956, it was re-plotted, re-defined by UK-APC on Sept. 23, 1960, and named by them for Graham Davey (q.v.), who triangulated King George Island, and extended the triangulation westward to Nelson Island, Robert Island, and Greenwich Island. US-ACAN accepted the name later in 1960. It appears as such on a 1962 British chart. The Argentines used to call it Punta Davey, but then decided they wanted their own name, and in 1978 named it Punta Agnese, for Cabo 2nd class Horacio Agnese, of the Argentine Navy, who was on the *Uruguay* in 1903. The Chileans reacted in a similar way, re-naming it (for themselves only) Punta Galindo, for Marinero primera clase José del Carmen Galindo, who was on the *Yelcho*, which rescued Wild's group on Elephant Island in 1916. The British were the latest to replot this feature, in late 2008. *See also* [1]**Isla Redonda**.

Monte David *see* **Mount Kirkwood**

Mount David *see* **Mount Kirkwood**

David, Pierre-Charles. b. May 29, 1812, Laudiac, France. He embarked on the *Astrolabe* on Dec. 27, 1839, at Hobart, just in time for the 2nd trip to Antarctica for FrAE 1837-40.

David, Tannatt William Edgeworth. Known as Edgeworth David. b. Jan. 28, 1858, St. Fagans, Wales, 4th son of Welsh cleric William David and his wife Margaret Harriett Thomson. His younger brother, Arthur, would become archdeacon of Brisbane. In 1882, the year he emigrated to Australia, he was appointed assistant surveyor to the government of NSW, and in 1891 became professor of geology at the University of Sydney. Over the years many Antarctic explorers studied or wished to study under him. Famous for his geological studies of Australia, he was an authority on ice ages. He was geologist and scientific officer on BAE 1907-09, and led the first ascent of Mount Erebus and the 3-man party which was the first to reach the South Magnetic Pole, in 1909. He was then 50. That year, on his return to Australia, he wrote *Glaciological Notes on the British Antarctic Expedition*. He advised on AAE 1911-14, was in the Australian Army in World War I, and was knighted in 1920. He returned to teaching, and retired in 1924. He died on Aug. 28, 1934, in Sydney.

David Cauldron. 75°20' S, 160°50' E. An icefall of turbulent iceblocks on David Glacier, in Victoria Land. Named by the Southern Party of NZGSAE 1962-63, in association with the glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1966. Originally plotted in 75°18' S, 160°50' E, it has since been replotted.

David Glacier. 75°19' S, 162°00' E. Over 100 km long and about 13 km wide, with many icefalls, seracs, and crevasses, it flows E from the Polar Plateau, through the Prince Albert Mountains, between Mount Bellingshausen and Mount Bowen, and enters the Ross Sea between Cape Philippi and Cape Reynolds, on the coast of Victoria Land, forming as it does the floating Drygalski Ice Tongue. Discovered by Edegworth David's South Magnetic Polar Party, in Nov. 1908, during BAE 1907-09, and it was named for him. US-ACAN accepted the name in 1947, and ANCA followed suit on Dec. 7, 1976. NZ-APC also accepted the name.

David Island. 66°25' S, 98°46' E. An ice-covered island, 16 km long (the Australians say 19 km) and between 10 and 11 km wide, marked by rock exposures along its N and E sides, off Davis Peninsula (or, to put it another way, off the mouth of Reid Glacier), in the Shackleton Ice Shelf, in Queen Mary Land. Discovered in Nov. 1912 by the Western Base Party of AAE 1911-14, and named by Mawson for Edgeworth David. US-ACAN accepted the name in 1947, and ANCA followed suit.

David Lee Glacier *see* **Rivard Glacier**

David Range. 67°54' S, 62°30' E. A range extending for about 27 km in a NNE-SSW direction, with peaks rising to about 1500 m above sea level, between 8 and 11 km W of the Masson Range, which it parallels in the Framnes Mountains, on the coast of Mac. Robertson Land. BANZARE saw the peaks of this range, together with those of the Masson Range and the Casey Range, miraged on the horizon during the evening of Jan. 4, 1931. They were seen again the next day, this time without mirage, from the airplane. Mapped from the *Discovery* during the same expedition, on Feb. 14, 1931, and named by Mawson for Edgeworth David. US-ACAN accepted the name in 1947, and ANCA followed suit.

David Valley. 77°37' S, 162°08' E. A small, partially ice-free valley, above Conrow Glacier and E of Horowitz Ridge, in the Asgard Range of southern Victoria Land. Named by Roy E. Cameron (*see* **Cameron Nunataks**), leader of a USARP biological party here in 1967-68, for Charles N. David, a member of the same party. US-ACAN accepted the name in 1969.

Davidsen, Nokard Monrad. b. 1877, Stokke, Norway, son of farmer and ship's captain Gustav Davidsen and his wife Olava. In 1903, in Nøtterøy, he married Anette Italie Alvilde Nilsen, and in 1905 he patented a stern slipway for whalers, a precursor to Petter Sørlle's 1922 patent. As manager of the Newfoundland Whaling Company (from 1903), he was operating in Antarctic waters in the 1907-08 season, as manager on the *Sobraon*. He died on Jan. 22, 1908, when he fell out of the whale catcher *Lynx* and was drowned (his engineer went overboard too, but was saved), off the coast of Deception Island, in the South Shetlands, while trying to snag a blue whale. His body was never found; nevertheless, he was "buried" on Feb. 9, 1908, in the Whalers Bay Cemetery, on Deception Island. A 22-foot-high obelisk was erected in the middle of the cemetery, which got its start with this funeral (the obelisk survived until 1967). His brother (either Carl Magnus, his older brother, or Klarius Olaf, his younger) was skipper of the catcher *Hauken*, working for the *Admiralen,* in 1907-08.

Cabo Davidson *see* **Cape Davidson**

Cape Davidson. 60°46' S, 44°46' W. Marks the most southerly part of Mackenzie Peninsula, and the W side of the entrance to Wilton Bay, in the W part of Laurie Island, in the South Orkneys. Charted in June 1903 by ScotNAE 1902-04, and named by Bruce for Robert Davidson. It also appears on his charts as Davidson Peninsula. It appears on a 1930 Argentine map as Cabo Davidson, and that was the name accepted by the Argentine gazetteer of 1970. It appears on the 1934 chart drawn up by the Discovery Invesigations, who surveyed it the year before. US-ACAN accepted the name Cape Davidson in 1952, and UK-APC followed suit on Sept. 8, 1953.

Islotes Davidson *see* **Davidson Island**

Mount Davidson. 76°43' S, 161°58' E. Rising to 1560 m (the New Zealanders say 2477 m), at the head of Albrecht Penck Glacier, it is the highest summit of the Prince Albert Mountains (so say the New Zealanders), NW of Granite Harbor, in Victoria Land. Discovered by BNAE 1901-04, and named by them for George Adam Davidson. US-ACAN accepted the name, and NZ-APC followed suit.

Davidson, George Adam. b. Oct. 16, 1874, Inch, Wigtown, Scotland, son of school teacher John Davidson and his wife Anna Pringle. Surgeon on the *Morning* in 1903, during the relief of BNAE 1901-04. He died on March 19, 1906, at Taunton, aged 31.

Davidson, James. b. 1865, Peterhead, Aberdeenshire, but grew up mostly in Dundee, son of ship's captain Robert Davidson and his wife Margaret. He went to sea at 14, and was captain of the *Polar Star* during DWE 1892-93. Referred to as "Polar Davidson" to distinguish him from his older brother, Robert, who commanded the *Diana* (and who was definitely not called "Diana Davidson").

Davidson, Robert. b. 1861, Peterhead, Aberdeenshire, son of ship's captain Robert Davidson by his wife Margaret. Brother of James Davidson. He spent most of his life in Dundee, as a sail maker and ship's skipper, having gone to sea at 14. About 1883 he married Annie. Captain of the *Diana* during DWE 1892-93. He was back in Antarctica as 2nd mate and ice master on the *Scotia* for ScotNAE 1902-04.

Davidson Glacier. 82°49' S, 166°07' E. Flows N along the E side of the Longstaff Peaks, in the Holland Range, into the Ross Ice Shelf. Mapped by USGS from USN air photos taken in 1960, and from tellurometer surveys conducted in 1961-62. Named by US-ACAN in 1966, for Cdr. (later Capt.) Edward Albert "Ed" Davidson (b. Jan. 16, 1921, Brooklyn), who joined the U.S. Navy in April 1942, and who was commander of the *Edisto* in 1962-63. He retired from the Navy in Oct. 1973.

Davidson Island. 66°26' S, 66°37' W. A small, dome-shaped, ice-covered island, between Wollan Island and Shull Rocks, in Crystal Sound, on the Loubet Coast, on the W ccoast of Graham Land. Mapped by FIDS cartographers from air photos taken by RARE 1947-48 and by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base W in 1958-59. Named by UK-APC on Sept. 23, 1960, for William A. Davidson, U.S. physicist who, by using neutron diffraction, determined the position of hydrogen atoms in ice. US-ACAN accepted the name in 1965. The Argentines pluralize this feature, as Islotes Davidson.

Davidson Peninsula *see* **Cape Davidson**

[1]**Cape Davies**. 71°50' S, 100°04' W. An ice-covered cape, at the NE end of Hughes Peninsula, on Thurston Island. First delineated from air photos taken by OpHJ 1946-47, and named by US-ACAN in 1960, for Frank Thomas "Taffy" Davies. First plotted in 71°46' S, 100°23' W, and later plotted by the Russians in 71°53' S, 99°55' W, it has since been replotted.

[2]**Cape Davies** *see* **Davis Ice Piedmont**

Davies, Antony Graham "Tony." b. 1934, Runcorn, Cheshire, but raised partly in Leatherhead, Surrey, son of Frank Davies and his wife Freda Bond. After graduating from the University of St Andrews, in 1958, he joined FIDS in 1959, as a medical officer, wintered-over at Base Y in 1960, and spent the 1960-61 summer at Base E. In 1963 he got his MD from St Andrews, and in March 1968 became a lecturer in physiology at the University of Birmingham. He was still there in 1982. He later worked extensively in Africa.

Davies, Francis Edward Charles "Frank." b. Jan. 26, 1885, Plymouth, but grew up in Egg Buckland, Devon, son of flour miller Francis Edward Davies and his Scottish tailoress wife Mary Ann Bryce. He did his shipwrighting apprenticeship in Plymouth, and was promoted to shipwright on the *Terra Nova*, specifically for BAE 1910-13. He fitted out the ship, and also designed and built the expedition's prefabricated winter quarters. He was on the party that went out looking for Scott, and built the memorial cross for the defeated polarfarers. Just after getting back to England, he married Ethel Stephens in Barnstaple, Devon. He served on the *Blanche* and the *Exmouth* during World War I, was in Murmansk in 1919, as a warrant officer, and then in the Baltic in 1919-20, on the *Sandhurst*. From 1927 to 1934 he served in Antarctic waters on the *Discovery II* and the *William Scoresby*, working his way through the mate ranks until he became chief officer of the *Scoresby* on April 9, 1931. He finally got his master's ticket in 1932, but in Oct. 1933 was passed over for 1st mate of the *Discovery II* (Leonard Hill got it). He resigned in protest, and sent back his Polar Medal from the Scott expedition. In 1934 he was invited back, to apply for the command of the *Scoresby*, but Claude Boothby got it. He was an RNVR lieutenant (temporary) during World War II, was transferred to the RNR, and promoted to temporary lieutenant commander. In 1941, when he should have got a medal for his 1920s and 1930s work, he didn't. In 1947 he applied to get his old Scott medal back, and it was finally sent to him in 1950. He died in Plymouth in 1952.

Davies, Frank Thomas "Taffy." b. Aug. 12, 1904, Merthyr Tydfil, Wales, son of a schoolmaster. He was a lecturer in physics at the University of Saskatchewan, and then a physicist at McGill University when he went on ByrdAE 1928-30 as a seaman on the *City of New York*. He wintered-over in 1929 at Little America, the only British member of that group. On his return he joined the Carnegie Institute, in Washington, DC, as a geomagnetician, and in 1932-33 he led an Arctic expedition. For the rest of the 1930s he headed Carnegie's high altitude lab in Peru, and in 1939 returned to Canada and joined naval intelligence. In the 1950s he worked on Arctic research and on the Alouette Satellite, launched in 1962. In 1969 he retired as director general of the Defence Research Telecommunications Establishment, and died on Sept. 23, 1981, in Ottawa.

Davies, Gwion "Taff." b. Sept. 3, 1917, Mostyn, Flintshire, Wales, son of a professor of Celtic studies at Liverpool University. He spoke only Welsh until he was four. He went to Cambridge, where he read zoology, and, at the outbreak of World War II he joined the merchant navy as a whaling laborer and assistant to Jimmy Marr, who was then whaling inspector on a Norwegian factory whaling ship in the Antarctic, there on a government mission to investigate the possibilities of whale meat as food. He was then hookman on another whaler until 1941, and took more ordinary jobs in the merch (able seaman and quartermaster) until 1943. Marr then got him on to Operation Tabarin, and he wintered-over as stores officer, handyman, and scientific assistant at Port Lockroy Station in 1944, and at Base D in 1945, and so was one of the first Fids. After a brief return to the sea, he went into agriculture for a short time, and then spent 20 years at the Fisheries Experimental Station, at Conway, close to his home, where he worked on mussel farming. He married Joscelyn, and died in June 2005.

Davies, Thomas Gwynn. Known as Gwynn Davies. b. Aug. 14, 1946. BAS geologist who studied the volcanic eruption on Deception Island in 1968-69, and then wintered-over at Base E in 1970 and 1971.

Davies, William. b. 1851, Aberaeron, near Lampeter, Wales. He became a merchant seaman, married an Irish girl named Catherine Ann, was mate on the *Ruby of Aberystwyth*, and moved, with his family to Dundee. He went on the *Polar Star* as a spectator, during DWE 1892-93. He was still sailing into the 20th century.

Davies, William Edward. b. Dec. 24, 1917, Cleveland. Graduated from MIT, married Geraldine in 1941, and came to Washington, DC, during World War II, when he was an officer with the Army Map Service, and stayed on as a civilian until 1949, when he joined USGS. A speleologist, his publications *Caverns of West Virginia* and *Caves of Maryland* did more to popularize spelunking than anything else up to that time. He was geologist on the *Atka* during the U.S. Navy Antarctic Expedition of 1954-55. He retired in the mid-1980s, and died of a heart attack on June 28, 1990, at his home in Falls Church, Va.

[1]**Davies Bay** *see* **Lockley Bay**

[2]**Davies Bay**. 69°18' S, 158°34' E. Also seen (erroneously) as Davis Bay. A bay, 16 km wide, between Drake Head (which lies just to the W) and Cape Kinsey, off Oates Land. Discovered in Feb. 1911 from the *Terra Nova*, commanded by Harry Pennell, and named by Pennell for Frank Davies. US-ACAN accepted the name in 1953. Photographed in Feb. 1959, by an ANARE party on the *Magga Dan*, led by Phil Law. ANCA accepted the name on July 22, 1959.

Davies Cliffs. 69°37' S, 72°23' W. Rising to about 600 m, ESE of Enigma Peak, on Rothschild Island. Surveyed by BAS between 1975 and 1977. Named by UK-APC on June 11, 1980, for Robin Albert "Bruce" Davies (b. 1951), who wintered-over at Base T as tractor mechanic in 1975 and 1976, the second year also as base commander. He worked on Adelaide Island and Rothschild Island.

Davies Dome. 63°53' S, 58°03' W. A small ice dome with rock walls at the margins containing important exposures of volcanic rocks with an unusual joint pattern (Kubbaberg type), rising to about 400 m, SE of Stoneley Point, on James Ross Island. Named by UK-APC on Feb. 15, 1988, for Gwion "Taff" Davies. US-ACAN accepted the name.

Davies Escarpment. 85°32' S, 89°48' W. An ice escarpment, over 16 km long, and facing east, southward of the Bermel Escarpment, in the S part of the Thiel Mountains. It seems to be devoid of rock outcroppings. Named by Pete Bermel and Art Ford, the leaders of the Thiel Mountains party here in 1960-61, for William E. Davies. US-ACAN accepted the name in 1962.

Détroit Davies Gilbert *see* **Gilbert Strait**

Estrecho Davies Gilbert *see* **Gilbert Strait**

Davies Gilbert Strait *see* **Gilbert Strait**

Davies Heights. 62°11' S, 58°56' W. An elevated steep-sided area, roughly elliptical in form, and 1.5 km long, with an undulating top, rising to about 150 m above sea level (it rises to about 60 m above the surrounding plain), in the north-central part of Fildes Peninsula, just to the W of Collins Harbor, on the S side of King George Island, in the South Shetlands. Surveyed from the ground by a BAS party in 1975-76, and named by UK-APC on Feb. 7, 1978, for Robert Elwyn Sandel Davies (b. 1953, Sodbury, Glos), BAS geologist with the party. It appears in the 1980 British gazetteer. It appears on a 1990 Chinese map as North Heights.

Davies Top. 69°24' S, 64°56' W. A conspicuous isolated peak, rising to 2360 m, on the E side of Wakefield Highland, near the head of Lurabee Glacier, in northern Palmer Land. Photographed aerially on Dec. 22, 1947, by RARE 1947-48. Surveyed from the ground by Fids from Base E in Nov. 1960. Named by UK-APC on Aug. 31, 1962, for Dr. Tony Davies. US-ACAN accepted the name later in 1962.

Cape Davis. 66°24' S, 56°50' E. A rounded, ice-covered cape, 14 km E of Magnet Bay, it forms a bend in the N coast of Edward VIII Plateau, and also forms the W fringe of Edward VIII Bay, in Kemp Land, in Enderby Land. Discovered on Jan. 12, 1930, by BANZARE, and named by Mawson for John King Davis. US-ACAN accepted the name in 1947.

Isla Davis *see* **Davis Island**

Mount Davis. 78°06' S, 86°15' W. Rising to over 3800 m, 1.5 km N of Mount Bentley, in the Sentinel Range of the Ellsworth Mountains. Discovered in 1957-58, by the Marie Byrd Land Traverse Party, and named by traverse leader Charles Bentley for Leo E. Davis, geomagnetician and seismologist at Byrd Station in 1957. US-ACAN accepted the name in 1960.

Point Davis. 60°46' S, 44°39' W. A point, 1.7 km WNW of Point Rae, on the N side of Scotia Bay, Laurie Island, in the South Orkneys. Charted in 1903 by ScotNAE 1902-04, and named by Bruce for Walter Gould Davis (b. 1851, Boston. d. 1919), director of the Servicio Meteorológico Nacional, in Buenos Aires, from 1885 to 1915, and director of the Oficina Meteorológica Argentina from 1915 until his death. *See also* **Davis Island**. It was re-charted by the Discovery Investigations in 1933. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1945 Argentine chart as Punta Davis, and that was the name accepted by the 1970 Argentine gazetteer.

Punta Davis *see* **Point Davis**

Davis, Alonzo B *see* **USEE 1838-42**

Davis, Dennis Robert Herbert "Rob." b. Jan. 4, 1931, Dublin, son of Dublin-born marine superintendent Captain William Henry Davis and his Kilkenny-born wife Esme Rosalie Knox. The Dennis and Herbert parts of his name are family surnames. He left school in 1948, worked on a farm, then joined the REME for 5 years, serving in the Korean War for 2 years as a communications technician. He joined FIDS in 1955 as an ionosphere physicist, arrived in Antarctica on the *Shackleton,* and wintered-over at Port Lockroy Station in 1956. He left Port Lockroy on the *John Biscoe* on Jan. 20, 1957, and then went to Canada, to work for the Defence Research Board, based in Ottawa, often going up into far northern regions. In 1962 he became a sound engineer with the National Film Board of Canada, and worked with them in Montreal until he retired in 1990. He married Isobel McCormick, an Irish teacher, on July 27, 1963, in Montreal, and they live on Vancouver Island, British Columbia.

Davis, Edward. Some said his name was John. Nobody knew where John came from, but he was a pirate who, in 1687, reported reaching as far south as "very near 63°S," in the South Atlantic. Aside from that he discovered Easter Island. He moved to England in 1688.

Davis, Graham Bruce. b. Aug. 13, 1931, North London, son of bus driver Joseph Davis and his wife Maude. He began his career in a newspaper office on Fleet Street, and did his national service in the RAF, as a radio operator. In 1953 he applied for FIDS, was interviewed in London by Frank Elliott and Bill Sloman, and left Southampton on the *John Biscoe*, via Montevideo and Port Stanley, to be radio operator who wintered-over at Signy Island Station in 1954, and at Base G in 1955. He did not go to Port Stanley in between winterings. He tried a couple of jobs back in England, and then interviewed with George Hemmen to go back to the Falkland Islands, which he did, 1956-60, at the met office there. On his return to England he worked for GCHQ until he retired, to Scalby, near Scarborough. He married Patricia Deamer.

Davis, J.R. An officer on the *Charity*, in the South Shetlands for the 1820-21 and 1821-22 seasons. He left a remarkably literate journal. *See* **The *Charity*** for more details.

Davis, Jerome *see* **USEE 1838-42**

Davis, John. American sealing captain from New Haven, Conn. Some say he was born in 1784, in Surrey, England, and that may be. He was certainly born in or around that year, as he was 19 in 1803 when he got his seamen's protection certificate in New Haven. He was commander of the *Huron,* which, teamed with Christopher Burdick in the *Huntress*, plied the South Shetlands for seals in the 1820-21 season. While there, Davis went south on an exploring expedition in the *Cecilia*, and made what is generally thought to be the first landing on the Antarctic continent itself (as opposed to the islands), near Hughes Bay, on what is now called the Davis Coast. The party stayed ashore for less than an hour (Davis himself did not land), on Feb. 7, 1821. It was about this time that he said, "I think this southern land to be a continent." He returned to Antarctica with the *Huron* and the *Cecilia*, for the 1821-22 season. There may be a clue to this captain. Aboard the *Huron* was a 14-year old boy named

John W. Davis, possibly (probably) son of the skipper. There was a John W. Davis, sailor, who died of strangulation at New Haven in July 1860. He was 53. This sounds like the 14-year-old. But finding a suitable John W. Davis being born in 1806 or thereabouts has proved too difficult.

Davis, John Edward. b. Aug. 9, 1815, in Alverstoke, Hants, son of Henry Davis and his wife Emily Dobbins. He entered the RN on July 5, 1828 as a 2nd class volunteer, on board the *Pearl*, stationed off the coast of Ireland. From June 1831 to May 1837 he served in South America, as master's assistant on the *Samarang* and the *Blonde*. While on the latter, in 1835, he became 2nd master and was loaned to the *Beagle* for that ship's first South American survey. After some months on the *Comus*, he was 2nd master, cartographer, surveyor and draftman [sic; the word used then for a government-employed artist] on the *Terror*, during RossAE 1839-43, and became a good friend of Joseph Dalton Hooker. On his return from the expedition he was promoted to master in Oct. 1843, and appointed assistant surveyor on the west coast of Ireland. In 1844, at Alverstoke, he married Mary and they lived in Greenwich. From 1853 he was engaged in surveying the south coast of England and the Orkneys. In 1860 he went on a deep-sea sounding expedition off the Irish coast, and in 1862 became naval assistant to the Hydrographic Office of the Admiralty, where he developed deep sea thermometers that formed the basis of those used later on the *Challenger* expedition. He also invented an improved astronomical sextant, and new techniques for deep-sea sounding. In June 1863 he was promoted to staff commander, and in 1870 to staff captain, when he was retired from the Navy List. He retired from the Hydrographic Office on Jan. 1, 1877, and died of a heart attack on Jan. 30, that year, at his home, Douglas House, in Greenwich.

Davis, John King. b. Feb. 19, 1884, Kew, London, only son of army coach James Green Davis and his wife Marion King. In 1900 his family moved to Cape Town, where John King joined the Merchant Navy, as a steward on a ship bound for London. There he apprenticed on the *Celtic Chief*, working his way through the mate ranks, and was selected by Shackleton in July 1907 as chief officer on the *Nimrod* for BAE 1907-09. He brought the ship back home to England in 1909. He was 25. A great navigator, he was captain of the *Aurora* during AAE 1911-14, led by Mawson, and was also 2nd-in-command of the expedition. During World War I he served as skipper of troop transports, taking time out in 1916 to captain the *Aurora* during the relief of the Ross Sea Party of BITE 1914-17, although he had refused Shackleton's offer of a position on the expedition itself. After the war he settled in Australia. He was 2nd-in-command of BANZARE 1929-31, during the first half of the expedition, i.e., 1929-30, as well as being captain of the expedition's ship the *Discovery*, during that same period. In Feb. 1949 he retired from his post as Director of Navigation for the Commonwealth of Australia. From 1947 to 1962 he was one of the directors of ANARE. He never married, and spent the last several years of his life in a St Kilda boarding house. He died on May 8, 1967, in hospital in Toorak. He wrote several books (*see* the Bibliography).

Davis, Malcolm "Dave." Known as "Bring 'Em Back Alive Davis." b. Dec. 25, 1899, Washington, DC, son of Allan Davis (the principal of Washington Business High School, and, later, of Roosevelt High) and his wife Maud. He served in the Army Signal Corps during World War I, went back to school, and got his degree in zoology from George Washington University. In 1927 he joined the National Zoological Park, as keeper of the birdhouse. In July 1935 he married Nellie, and they went to Panama for their honeymoon. He had just returned from a trip to India, when he became biologist on the *North Star* during the 1st half of USAS 1939-41. On his return, Nellie met him in Panama. He was ornithologist on OpHJ 1946-47 and OpW 1947-48. He was also famous for his field trips to Africa and Asia. In 1960 he retired from the zoo as curator and keeper of birds, and from then until he died, on Oct. 4, 1970, at Herndon, Va., he was a consultant to the National Wildlife Foundation.

Davis, Nathaniel Burt, Jr. "Known as "Burt," or "Jeff," or "Dave." b. Sept. 6, 1911, Hingham, Mass., son of wool salesman Nathaniel Burt Davis and his wife Caroline Quincy. He was admitted to the Naval Academy on July 1, 1929, and graduated in 1933, immediately becoming 2nd officer on the *Bear of Oakland*, 1933-34, during the 1st half of ByrdAE 1933-35. He died on Sept. 12, 1988, in San Diego.

Davis, Octavius E. b. March 17, 1891, Miss. He joined the U.S. Navy, and served as an engineer sailor on the USS *Connecticut*. In 1913 he married Delia Marren, and he, his wife, and what would be three children all moved in with her parents, in Newport, RI, and Davis became a carpenter contractor. He was an able seaman and carpenter on the *Jacob Ruppert* for both halves of ByrdAE 1933-35. In 1939-41 he was 1st assistant lighthouse keeper at Point Judith, Narragansett, RI, and died in Feb. 1970, in Newport. Delia died in 1985.

Davis, Patrick Eugene "Pat." b. April 25, 1926, Stanley, Falkland Islands, as Patrick Eugene Gleadell, son of laborer Franklin Edmund Gleadell and his wife Winifred Irene Davis. He took his mother's last name while still a child. He joined FIDS in 1947, as a handyman, and wintered-over at Base G in 1948. On Sept. 10, 1951, in Stanley, he married Lucy Phyllis McLaren (née Davis). His second wife was Nessie Butcher. He later moved to Auckland, NZ (he and his wife were there by 1963), where he worked as a carpenter, and in 2009 he was in a retirement home in Auckland.

Davis Anchorage. 68°35' S, 77°55' E. An anchorage, 1.5 km in extent, and generally 10-13 fathoms deep, it extends southwards from the S point of Anchorage Island, and is bounded on the W by Krat Rocks and Hobby Rocks, or more specifically by an imaginary line drawn between Krat Rocks and Newman Shoal, and on the E by the rocks and shoal water extending for 0.8 km offshore from Davis Station, off Breidnes Peninsula, in the Vestfold Hills. Used as an anchorage by ANARE since 1957, and named by them in association with the station. A hydrographic survey was carried out here by Tom Gale on the *Thala Dan*, in 1961. ANCA accepted the name on July 4, 1961, and US-ACAN followed suit in 1965.

[1]**Davis Bay**. 66°08' S, 134°05' E. A bay, 22 km wide at its entrance, indenting the coast of Wilkes Land for 13 km between Cape Cesney and Lewis Island. Discovered in Jan. 1912, from the *Aurora,* by AAE 1911-14, and named by Mawson for John King Davis. US-ACAN accepted the name in 1947, and ANCA followed suit.

[2]**Davis Bay** *see* **Salmon Bay**, **Davies Bay**

Davis Bluff. 78°09' S, 167°35' E. A rock bluff, rising to 400 m, 4 km NE of Isolation Point, in the E part of White Island, in the Ross Archipelago. Named by US-ACAN in 2005, for Randall W. Davis, of the Department of Marine Biology, at Texas A & N, who studied the Weddell seals in the ice areas of McMurdo Sound, between 1977 and 2000, including a winter at White Island with Michael A. Castellini, in 1981. NZ-APC accepted the name on June 17, 1995.

Davis Coast. 64°00' S, 60°00' W. The 74-km-long portion of the NW coast of Graham Land between Cape Kjellman and Cape Sterneck (the British refer to Cape Sterneck as Cape Herschel). In Jan. 1820, Bransfield discovered part of it, and Pendleton may have discovered more of it on a trip from Deception Island in 1820. On Nov. 17, 1820, Palmer discovered another part of it from Orléans Strait. John Davis further explored this coast in Feb. 1821, while searching for seals from the *Huron*. Powell, on his 1822 chart, refers to the N coast of the mainland, from about 57°W to the N entrance of Gerlache Strait and the N end of Liège Island, as Palmer's Land. This coast (i.e., what is now the Davis Coast), together with the N coast of what is now called the Trinity Peninsula, were referred to in the 1829 *Chanticleer* Expedition chart as Trinity Land. On Webster's 1834 map from the same expedition, this coast seems to be included in what was called Clarence Land, named for the Duke of Clarence. Charts from FrAE 1837-40 refer to this area as both Terre de Clarence and Terres de Palmer (i.e., "Palmer's lands"), but, as on Webster's map, the coordinates are somewhat vague. Similarly with a French map of 1851, which refers to it as Terre Palmer. Maps and charts from 1894 until the 1920s delineate this coast in a multitude of ways. On Shackleton's map of 1919, for example, he calls it Trinity Coast. However, in the 1920s, Palmer Coast

was the name that came to be generally accepted for that stretch of the coast between Cape Sterneck and Cape Kjellman, and it appears as such on U.S. cartographer W.L.G. Joerg's map of 1937, and on a 1948 British chart. On a 1946 Argentine map it appears as Costa de Palmer, but on one of their 1949 charts as Costa Palmer. On a 1947 Chilean chart is appears as Costa del Presidente González Videla, for the president of Chile, 1946-52. It appears as Palmer Coast in the British gazetteer of 1955. However, in 1965, US-ACAN renamed it for John Davis (there being too many features as it was with the name Palmer), the sealing captain, who landed here (the first recorded landing on the continent), at Hughes Bay, in 1821, in the *Cecilia*. UK-APC accepted that name on Feb. 7, 1978, and it appears as such in the 1980 British gazetteer. The Chilean gazetteer of 1974 accepted the name Costa Palmer, but, because that is the name used by the Argentines, they subsequently changed it to Costa de Palmer.

Davis Creek *see* **Salmon Stream**

Détroit (de) Davis Gilbert *see* **Gilbert Strait**

Davis Gilbert Bay *see* **Gilbert Strait**

Davis Gilbert Inlet *see* **Gilbert Strait**

Davis Gilbert Strait *see* **Gilbert Strait**

[1]**Davis Glacier** *see* **Arthur Glacier**

[2]**Davis Glacier**. 75°45' S, 162°10' E. A heavily crevassed glacier, 24 km long and 10 km wide, it flows in a NE and E direction from the NW slopes of Mount George Murray, in the interior upland of Victoria Land, to enter the Ross Sea opposite the S end of Lamplugh Island, contributing to the ice that flows N along the W side of that island and to the Cheetham Ice Tongue. Charted by BAE 1907-09, and named by them for John King Davis. US-ACAN accepted the name, and NZ-APC followed suit.

Davis Hills. 86°52' S, 150°00' W. A small group on the S side of Klein Glacier, where that glacier enters Scott Glacier, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Parker Davis, VX-6 photographer in Antarctica in 1965-66 and 1966-67.

Davis Ice Piedmont. 70°38' S, 166°16' E. About 16 km long and 6 km wide, on the N side of Missen Ridge, on the N coast of Victoria Land. In 1841 Ross named a feature in this area as Cape Davis, for John E. Davis. This name was also seen spelled (erroneously) as Cape Davies. Modern explorers could not find a cape here, so they named this ice piedmont in the same area in order to preserve Ross's naming. US-ACAN accepted the naming in 1970, and NZ-APC followed suit.

Davis Ice Rise. 74°56' S, 110°18' W. An ice rise, 6 km long, near the terminus of Smith Glacier, and 13 km SE of Mayo Peak, on Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from USN air photos taken in 1966, and from Landsat images from 1972-73. Named by US-ACAN for Cdr. Arthur Robert Davis, USN, supply officer during OpDF 1976 (i.e., 1975-76) and OpDF 1977 (i.e., 1976-77).

Davis Island. 64°06' S, 62°04' W. About 3 km long, and just E of Abbott Island, it blocks most of the channel which separates Liège Island from Brabant Island, at the head of Bouquet Bay, in the Palmer Archipelago. Photographed and roughly charted in Feb. 1898, by BelgAE 1897-99. De Gerlache gave the name Harry Island to either this island or nearby Harry Island (no one is sure which, but the issue resolved itself—*see* **Harry Island**). It was visited again by FrAE 1903-05, and named by Charcot as Île Davis, for Walter G. Davis (*see* **Point Davis**). It appears as Davis Island on a 1943 U.S. Hydrographic Office chart, but on another of their charts, in 1960, as Harry Islet. It was photographed aerially by FIDASE in 1956-57. The name Davis Island was the one accepted by UK-APC on Sept. 23, 1960, and by US-ACAN in 1965, and it appears as such on a British chart of 1961. It appears on a 1949 Argentine chart as Isla Davis, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Davis Islands. 66°40' S, 108°25' E. A small group of rocky islands and rocks, including Hudson Island, in the W part of the entrance to Vincennes Bay. Photographed aerially by OpHJ 1946-47, and first mapped from these photos by U.S. cartographer Gard Blodgett (*see* **Blodgett Iceberg Tongue**) in 1955. Photographed again in 1956, from an ANARE aircraft. Their position was fixed in Feb. 1960, by ANARE personnel who landed from the *Magga Dan*, under Phil Law. Named by US-ACAN in 1963, for Malcolm Davis. However, the Australian gazetteer says that ANCA accepted the name on Aug. 11, 1958.

Davis Knoll. 82°10' S, 155°01' E. A partly ice-covered nunatak, 13 km N of Mount Ester, at the head of Lucy Glacier. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Thomas C. Davis, Jr., USARP geologist at McMurdo in 1961-62. ANCA accepted the name.

Davis Nunataks. 85°37' S, 166°36' E. A small cluster of rock nunataks, 5 km NW of Mount Ward, forming a S outlier of the main body of the Dominion Range. Named by US-ACAN in 1966, for Ronald N. Davis, USARP geomagnetist and seismologist who wintered-over at Pole Station in 1963.

Davis Peninsula. 66°35' S, 98°47' E. A long strip of ice-covered land, 5 km wide, between Reid Glacier and Northcliffe Glacier, or (to put it another way) between Reid Glacier and Robinson Bay, in Queen Mary Land. Discovered in Nov. 1912 by the Western Base Party of AAE 1911-14, and named by Mawson for John King Davis. US-ACAN accepted the name in 1947, and ANCA followed suit.

Davis Point *see* **Point Davis**

Davis Promontory. 84°41' S, 96°30' W. A low south-facing promontory, completely snow-covered, near the NE end of Havola Escarpment. Occupied by the Horlick Mountains Traverse Party of 1960-61, and named by US-ACAN in 1962, for Chief Petty Officer Walter L. Davis (b. 1926. d. April 30, 2009), USN, chief construction mechanic at Ellsworth Station in 1957 and at Byrd Station in 1960. He was in charge of tractor maintenance on the Byrd-South Pole Overland Trek (q.v.) of 1960-61, which passed a few miles N of this promontory on Christmas Day, 1960.

Davis Ridge. 71°24' S, 63°00' W. An irregular-shaped ridge rising above the ice surface 10 km ESE of the summit of Mount Jackson, it is apparently an outlier of the massif upon which that mountain stands, in the E part of Palmer Land. Mapped by USGS in 1974, and named by US-ACAN in 1976, for Brent L. Davis, USARP biologist at Palmer Station in 1971, and elsewhere in the Antarctic Peninsula in 1974-75. UK-APC accepted the name on July 21, 1976.

Davis Saddle. 76°23' S, 147°09' W. An ice saddle, just E of Mitchell Peak, on Guest Peninsula, along the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Clinton S. Davis, USN, bosun's mate on the *Glacier* here in 1961-62.

Davis Sea. 66°00' S, 92°00' E. AAE 1911-14 discovered this sea from their ship, the *Aurora*, and gave the name to the expanse between Drygalski Island and Termination Ice Tongue, Mawson naming it for John King Davis. However, the name was later extended to include the coastal sea between the Shackleton Ice Shelf and the E end of the West Ice Shelf, between the Wilhelm II Coast and the Queen Mary Coast. US-ACAN accepted the name in 1947, and ANCA followed suit.

Davis Station. 68°35' S, 77°58' E. Year-round, permanently occupied Australian scientific station, on Breidnes Peninsula, on the E side of Prydz Bay, 27.5 m above sea level, in the Vestfold Hills, on the Ingrid Christensen Coast of Princess Elizabeth Land. Opened by Phil Law on Jan. 13, 1957, and named for John King Davis. **1957 winter**: Bob Dingle (q.v.) (meteorologist and officer-in-charge), Bruce Stinear (q.v.) (geologist), Alan Hawker (radio supervisor; *see* **Hawker Island**), Nils Lied (q.v.) (weather observer and assistant radio officer), and Bill Lucas (diesel mechanic; *see* **Lucas Island**). **1958 winter**: Max Flutter (weather observer and officer-in-charge; *see* **Flutter Island**), Elliott Trigwell (radio supervisor; *see* **Trigwell Island**), Peter Turner (weather observer and radio officer; *see* **Turner Island**), and Lin Gardner (q.v.) (senior diesel mechanic). **1959 winter**: Hans Otto "Hosie" Steiger (weather observer and officer-in-charge; b. April 12, 1922, Switzerland, and came to Australia in 1951; he's dead now; never had a feature named after him, but he did play the accordion), weather observers Mike O'Gorman (*see*

O'Gorman Rocks) and Claude Braunsteffer (*see* **Braunsteffer Lake**), Jannes Keuken [weather observer (radio); *see* **Keuken Rock**], Horace P. "Ted" Fuller (radio supervisor; he never had a feature named after him either), Ray Torckler (radio officer; *see* **Mount Torckler**), Alan Newman (senior diesel mechanic; *see* **Newman Shoal**), and James "Jock" Eadie (cook; he never had a feature named after him either). **1960 winter**: Ian Douglas (officer-in-charge; *see* **Mount Douglas**), weather observers Noel Barratt (*see* **Barratt Island**) and Leon Jennings-Fox (q.v.), Keith Oldroyd [weather observer (radio); *see* **Oldroyd Island**], M.T. Keith Power (radio supervisor; from Cabarlah, Qld.; he did not have a feature named after him), John Molle (radio officer; *see* **Molle Glacier**), Derrick Hobby (diesel mechanic; *see* **Hobby Rocks**), and Bill Suter (cook; *see* **Suter Island**). **1961 winter**: Malcolm Hay (medical officer and officer-in-charge; *see* **Mount Hay**), weather observers Vic Jabs (*see* **Lake Jabs**), Barry Mercer (*see* **Mount Mercer**), and Frank Trajer (*see* **Trajer Ridge**), Nils Lied (q.v.) (weather observer and assistant radio officer), Alex Brown (q.v. and *see* **Sørtindane Peaks**) (radio supervisor), Tony Warriner (q.v.) (radio operator), Harry Redfearn (diesel mechanic; *see* **Redfearn Island**), and Mike Scanlan (cook; *see* **Scanlan Peak**). **1962 winter**: Jim Harrop (weather observer and officer-in-charge; *see* **Harrop Island**), John Armanini [meteorological (radio) and weather observer; *see* **Armonini Nunatak** (sic)], weather observers Garry Bradley (*see* **Bradley Ridge**) and Norm Trott (*see* **Mount Trott**), John Boda (medical officer; *see* **Mount Boda**), John Molle (radio officer; *see* **Molle Glacier**), David J. "Dave" Ward (radio operator; he did not have a feature named after him), Geoff Hulcombe (senior diesel mechanic; *see* **Hulcombe Ridge**), and Paul Teyssier (cook; *see* **Teyssier Island**). **1963 winter**: William F. "Bill" Young (electrical fitter and officer-in-charge; *see* **Young Nunataks**), weather observers Jim Holder (*see* **Holder Peak**), Evan Lee [*see* [1]**Lee Nunatak**] and David Dodd (*see* **Dodd Island**), Bryan M. Eyre [weather observer (radio); he did not have a feature named after him], Des Lugg (medical officer and 2nd-in-command; *see* **Lugg Island**), Bill Strover (radio supervisor; *see* **Strover Peak**), Ron Foale (radio operator; *see* **Foale Nunatak**), and Ted Giddings (cook; *see* **Mount Giddings**). **1964 winter**: Norman E. "Norm" Trott (weather observer and officer-in-charge; *see* **Mount Trott**), weather observers Mike Wignall (*see* **Wignall Nunataks**) Peter Charles Griffin (he did not have a feature named after him), and Chris Kotterer (*see* **Kotterer Peaks**), Alf Svensson [weather observer (radio); *see* **Svensson Ridge**], Ken Mayman (medical officer; *see* **Mayman Nunatak**), Fred Bakker (radio supervisor; *see* **Mount Bakker**), Ron Whelan (radio officer; *see* **Whelan Nunatak**), Wally Goodall (diesel mechanic; *see* **Goodall Ridge**), and Rick Schmitter (cook; *see* **Schmitter Peak**). **Jan. 25, 1965**: The station was closed by Phil Law. **Feb. 15, 1969**: The station re-opened. **1969 winter**: Des Parker (medical officer and officer-in-charge; *see* **Parker Hill**), Ken Bennett (q.v.) (radio operator and 2nd-in-command), Peter Jackson (weather observer-in-charge; *see* **Jackson Hill**), Lou Ostril (senior weather observer; *see* **Bela Hill**), weather observers Dave Cowan (*see* **Lake Cowan**) and Alan McCallum (*see* **Lake McCallum**), Alan McNeill (physicist; *see* **Lake McNeill**), Ron McLean (radio supervisor; *see* **McLean Point**), Paul Watts (senior diesel mechanic and plant inspector; *see* **Watts Lake**), and John Tarbuck (cook; *see* **Tarbuck Crag**), and Barbarella (the dog). **1970 winter**: John Stalker (weather observer and officer-in-charge; *see* **Mount Stalker**), Jeff Boyd (medical officer; *see* **Boyd Island**), Mike Zappert (radio supervisor; *see* **Zappert Point**), Dick Westwood (radio officer; *see* **Westwood Point**), Leo Farrell (weather observer; *see* **Lake Farrell**), Brian Chambers [senior radio technician (meteorology); *see* **Chambers Inlet**], John Taaffe (senior diesel mechanic; *see* **Taaffe Ridge**), Allan Williams, Mark McGinley, Owen Powell, and Barbarella (the dog). **1971 winter**: Lin Gardner (q.v.) (senior diesel mechanic and officer-in-charge), Robbin Waterhouse (medical officer; *see* **Waterhouse Island**), Brian Ryder (radio operator; *see* **Mount Ryder**), Keith Anderson (electronics technician; *see* **Lake Anderson**), Bob Nicholson [senior radio technician (meteorology); *see* **Lake Nicholson**], Ian Cabrie, John Carr, Ralph Dyer, Ivan Hawthorn, Gil Maher, Mike McGann, Phil Vardy. **1972 winter**: Desmond A. "Des" Gillespie (officer-in-charge), Dave Armstrong, Don Baker, Ray Brookes, Peter Butcher, John Jackson, Tony Morgan, Mark Navin, John Squibb, Peter Stanimirovic, Charles Tivendale (radio technical officer), Lance Walkem, and Cactus (the dog). **1973 winter**: Barry M. Bromham (officer-in-charge), Dave Bishop, Richard Cody, Bruce Eyers, Dan Grace (biologist; *see* **Grace Lake**), Rod Gracie, Vic Grey, Ivan Hawthorn, Mark Meyer, John P. O'Shea (radio technical officer), Dave Rounsevell (q.v.) (biologist), Jorg Suckau, Russ Willey, and Trevor Tierney, and Cactus (the dog). **1974 winter**: Douglas Charles "Doug" Blandford (officer-in-charge), Mark Bedson, Peter Neilsen, Ray Brookes, Brian West, Dick Williams (limnologist; *see* **Williams Lake**), Harry Burton (biologist; *see* **Burton Lake**), Peter Cave, Bill Cowell (cook; *see* **Cowell Island**), Ted Elkington, Geoff Morgan (q.v.) (senior diesel mechanic and 2nd-in-command), Alan Johnstone, Gary March, Gerald "Gerry" Millward (radio technical officer), and Nina (the dog). **1975 winter**: Graeme E. Colbeck (officer-in-charge), Roger Barker (aquatic biologist; *see* **Barker Channel**), Eric Szworak (q.v.) (radio technical officer), Russ Willey, Dave Burns, Peter Campbell (limnologist; *see* **Lake Campbell**), Kevin Donovan, John Duncan, Jean-Pierre Franceschini, Graeme Goller, Tony Le Grip, Bruce Petersen, Ron Russell, Geoff Sadler, and Nina (the dog). **1976 winter**: Pieter Arriens (q.v.) (officer-in-charge), Bruce Alden, Brian Ball, David Barrett (q.v.), Lee Bowling, Read Edwards, Peter Horton, Darryl Kath, Neil Moffatt, Robert "Bob" Saunders (radio technical officer), Dagur Vilhjalmsson, Iain Watt, Vic Watt, Bob Waugh, and Nina (the dog). **1977 winter**: Alan Parker (q.v.) (carpenter and officer-in-charge), Nevil Alexander, Jonathan Broadhurst, Dave Burns, Col Christiansen, Max Ellis, Dave Everitt, Paul Fittock, Ray Hand, Eric King, Frank Nielsen (radio technical officer), Mark Podkolinski, Hans Vandersant, Don Ward. **1978 winter**: Phil Barnaart (q.v.) (officer-in-charge), Greg Brown, Harry Burton (biologist; *see* **Burton Lake**), Denis Carroll, Chas Cosgrove, Trevor Cowell, Lloyd Fletcher (q.v.) (medical officer — he would return in 2008), Ken Hanson (q.v.), Greg Hoffmann (q.v.) (building supervisor), Brian Kurtzer, Jim Lowe, Rich Reyes, Geoff Sadler, Alan Ward. **1979 winter**: Edward A. "Ted" Mitchener (officer-in-charge), Mike Burch (biologist; *see* **Burch Lake**), John Coverdale, Alistair Crombie, Malcolm Griffin, Ray Hinchey (q.v.), Neil Jones, Ian Kavanagh, Chris Minehan, John V. Morrissey, Eric Szworak (q.v.) (radio technical officer), Robin Regester (q.v.) (senior diesel mechanic), Will Twycross, Gordon Watson. **1980 winter**: Timothy J. "Tim" Halden-Brown (officer-in-charge), Rod Bunt, Graham Whiteside (q.v.), Ray Chant, Chris Corbett, David N. "Dave" Robertson (radio technical officer), Allan Davey, Werner Gaugler, John Hayes, Paul Horne, Lloyd McMurtie, Peter Murrell, John Niehof, Rob Partridge, Robin Welsh, Dave Paulin, John Pickard, Lindsay Swindells. **1981 winter**: Gert Herman Wantenaar (officer-in-charge), Geoff Beer, Bill Singleton, John Costin, Dale Smith, Andy Donaldson, Colin Heath, Karol Styk, Louise Holliday (the first Australian woman to winter-over at an Antarctic base), Dale Uren, Alan Jeffrey (q.v.), Terry Walker, Bruce Lees, Claude Llabres, Garry Watson (q.v.), Bob Mathews, Ian James McLean (radio technical officer), Ray Morris, Peter Naughton, Gary Owen, Mike Whitehouse, Ian Reid, Zhang Qingsong, Bob Sampson, Ron Sidebottom. **1982 winter**: Konrad Beinssen (officer-in-charge), Jan Adolph, Nikolay Voloshinov, Neil Sommers-Cain, Lu Peiding, Howard Berridge, Chris McCabe, Brian Brawley, Glen McAuliffe (radio technical officer), Joweli Bulu, Pat McSweeney, Dave Burrows, Mark Navin, Dave Coles, Rick Perrin, Ron Sykes, Greg Crow, Mark Tucker, Roger Welsh, Tony Dick, Fred Menk, David Paine, Ray Hinchey (q.v.), Shane Rollins, Don Horsley, John A. O'Connor. **1983 winter**: Peter A. Briggs (officer-in-charge), John Whitfield, Peter Sullivan, Daryl Grove, Chris Burke (biologist; *see* **Burke Basin**), Phillip Gumbrell, Ray Clark (radio technical officer), Dick Sibthorpe, Graham Dadswell (q.v.), Shane Jeppson, Kevin Denham, Ian McDonald, Vinod Dharkalgar, John Lee, John Duncan, Jiang Jialun, Col Evans, Stan Malachowski, Tony Everett (q.v.), Rhys Puddicombe, Ray Foxon, Roy Primm, Max Riley, Brent Fraser,

Abraham Robaard, Rodney Grice, Ron Sherwood. **1984 winter**: Phillip L. "Phil" Elliott (officer-in-charge), Bob Bandy (senior diesel mechanic; *see* **Bandy Nunataks**), Tony Jennings, Cao Chong, Ross Jongejans, Brendan Chappell, Bob Orchard (q.v.), Tony Costello, Gary Pilmore, Pat Deprez, George Seidl, Don Reid, Wang Zipan, Erwin Erb (q.v.), Peter Franzmann, John Wignall, Ed Gilmour, Ken Green, Pelham Williams (q.v.), Stuart Hodges (q.v.), Tony Howell. The station was re-built susbtantially in the 1980s. **1985 winter**: Paul Butler [officer-in-charge; *see* [1]**Butler Island**], Rick Besso (carpenter; *see* **Besso Peak**), Ed Piket, Tim Walker, Stephen Bunning (builder; *see* **Bunning Hill**, and **Deaths**, 1985), Peter Sprunk (q.v.), Peter Sullivan, Mal Ellson (q.v.), Robin Tihema, Barry Gallagher, Norbert Trupp, Kevin C. Walker, Peter Gray, Pat Haddock, Charlie Weir (q.v.) (plant inspector), John Hetherington (radio technical officer), Richard Wilson, Rob Hollingshead, Alan Jeffrey (q.v.), Jianping Lin, John Kirkwood, Ray Morris, Paul Munro. **1986 winter**: Rob Easther (q.v.) (officer-in-charge), Maurice Alafaci, Don Reid, Ken Bennett (q.v.) (radio operator and 2nd-in-command; he had last been at Davis in 1969), Geoff Wallace, Albert Bruehwiler (*see* **Lake Bruehwiler**), Bob Sampson, Alan Butterworth, Graham Canterbury (carpenter; *see* **Canterbury Hill**), Gillian Deakin, Michael Sherwood, John Ferris, John Francis, Nick Gales, Matthew K. Gould (radio technical officer), Richard Hill, Russell McLoughlin, Roger Milliet, Tim Price. **1987 winter**: Paul Butler [officer-in-charge; *see* [1]**Butler Island**], Terry Newton, Randall Bridgeford, Doug Cameron, Allen Rooke (q.v.), Bill Cowell (cook; *see* **Cowell Island**; Mr. Cowell had last been at Davis in 1974), Frank O'Rourke (radio technical officer), David DeLeacey, Simon French, David Rasch, Russell Garrick, Peter Sprunk (q.v.), John Gibson, Michael Whitehead, Graeme Hallyburton, Graham Haw, Pelham Williams (q.v.), Murray Hotchin, Brian Kinder, David Wythes, Trevor Lloyd, Lu-Qiang Xu, Wayne Strawbridge. **1988 winter**: Gert Herman Wantenaar (station leader), Denise Allen (q.v.), He Fu Yang, Mervyn "Max" Anderson, Bob Stow, John Armstrong, Steve Jourdain, Michael Blackwood, John W. Mason, Craig Collins, Andrew Martin, Mike Craven (q.v.), Brendan McMahon, Dennis Day, Derek Roach, Col Evans, Ian James McLean (radio technical officer), Dennis French, Tom Robinson, Andrew Gilder, Lidsay Swindells, Ian Gill, Tony Tymms, Geoff Watts, Dave Glazebrook, David B. Young, Robert Goble, Andrew McTaggart. **1989 winter**: Simon F. Young (station leader), Matthew Westbury, Roxanne Taylor, David Taylor, Rod Williams, John Webb, Tom Chlebowski, Robert Lang, Kevin Christensen, Ian LeFevre, Mick Cusick, Paul Kitchenman, Matt Dahlberg, Todd Mostyn, Paul Delaney (q.v.), Michael Reid, Paul Fenton, Russel McLoughlin, Paul Gleeson, Kevin Richardson, Brian C. Harvey, Keith Shadbolt, Col Hobbs, Carol Pye, Barry Smith, Steve Holland, Simon Townsend, Andrew Hucker, Brett Steers, Nigel Johnston, John Toms. **1990 winter**: Jon Akerman (station leader; *see* **Akerman Island**), Eddy Kretowicz, Morag Anderson, Graham Mills (q.v.), Peter Attard, Eric Osborn, Peter E. Brown, Ray Pike, Michael Clarke, Leigh Reardon (q.v.), Peter Croser, David Webb, Dick Graney, Pelham Williams (q.v.), Karen Hale, David Wilson, Michael Hesse, Simon James, Mike Knox-Little (q.v.), Ulla Knox-Little. By 1990 there were more people at Davis than any other Australian station, and more scientific programs being conducted. **1991 winter**: Alison Clifton (station leader), Garth Thompson, Lloyd Symons (q.v.), Peter Wilson, Des Addicoat, Alan Holmes, Alan Barber, Malcolm Kennedy, Peter J. Bourke, Peter Le Compte, Donald Miller, Terry Newton, Herbert Dartnall, Randall Wheaton (technical officer), Graham Pitson, Peter Dilger, Gary Eastwood, Nick Roberts, John Enfantie, Fiona Scott, Traci Hamilton, Jim Sebbens, Leigh Hasell, Dave Hunt, Mark Haste, Christine Spry, Peter Thompson. **1992 winter**: John Wilson (station leader), John Webb, Bob J. Thompson, Paul Synnott, Phil Berry, Phillip Bottomley, Ian Osborn, Graeme McDiarmid, Bruce Copplestone, Tracey Pitman, Steve Eiler, Dave Neudegg, Tony Galletti, Jeff Hunt, Janet Reynolds, David Grieve, Linda Pridham, Dave Jenkins, Glen Turner (technical officer), Mark Underwood, Di Mehonoshen, Lionel Whitehorn, Igor Pimenov, Graeme Germein, Lyn Rankin, Kevin Lee, Peter Sprunk (q.v.), David Stott, Stuart Mackle, Paul A. Smith. **1993 winter**: Peter Bayliss, John Niehof, Warren Blyth, Shane Phelps, Derek Bonar, Chris Legge, Dani Mayes, Joe Brennan, Selwyn Saunders, Brian Chilmaid, Paul Delaney (q.v.), Paul McCarthy, Robert Nixon, Jane Goddard, Simon Parcell, Dave Good, Alex Williams, Jon Grey, Tony Powell, Richard Teece, Dave Hunter, Peter A. "Fred" Rowell (technical officer), Greg Larkins. **1994 winter**: Michael Carr (station leader), Terry Newton, Trevor Bailey, Dale Hughes, Phil Berry, John Hinton, Denise Jones and Colin Blobel (they were married at the station on Sept. 3, 1994; the first ANARE couple to achieve this feat), Graham Smith (q.v.) (technical officer), Dave Cesar, Wayne Prier, Allan Riach, Helen Cooley, Rob Kiernan, Sunny Leung, Mike Craven, Peter Sprunk (q.v.), Rex Davies, Warren Miller, Robin Paton, Andrew Frankcombe, Kerrie Swadling, John Gibson, Robin Payne, Garry Watson (q.v.), Dick Graney, Pelham Williams (q.v.). **1995 winter**: Diana Patterson (q.v.) (station leader), John French, Scott Angelsey, Mark Milne, Gary Burton, Karen Quinnell, Geoff Cartwright, Lloyd Symons (q.v.), Mal Ellson (q.v.), Phillip Scholz, Andrew Frankcombe, Stuart Hodges (q.v.), Jenny Mackenzie, Paul Marshall, Glen McAuliffe (technical officer), Morris Pavlinovich, Di Mehonoshen. **1996 winter**: John Hancock (station leader), Ogilvie Thom, Frank Kenny, Wayne Heron, Jason Barnes, Roland Leschinski, Michael Ooyendyk, Robin Tihema, Phil Berry, Eleanor Bell, Gerry Clougher, Bob Libbiter, Sarah Mills, Peter Cockburn, Peter Field, Greg Stone (technical officer), Keith Finlayson, Russell Mudge, Brian Griffith, Robert Shanks. **1997 winter**: Peter Corcoran (station leader), Mark Atkinson, Graham Denny, David Gillies, Pene Greet (q.v.) (upper atmosphere physicist), Kevin Harland, Darren Houlihan, Bernie Keogh (technical officer), Stephen Koch, Michael Manion, Neville Martin, Dail Opulskis, Mario Martinez, Peter Orbansen (q.v.) (builder and carpenter), Ian Raymond, Bryan Ries, Fiona Scott, Calum Young, Meredy Zwar (q.v.). **Jan. 11, 1998**: Phil Law made a brief visit. **1998 winter**: B.V. Joseph "Joe" Johnson (station leader), Chris Hughes, Ross Garnsey, Neville Williams, John French, Noel Tennant, Andrew Bish, Mario Gonzalez, John Jones, Peter Pokorny, Cath Deacon, Karen Quinnell, Jeff Grove, Glenn Davies, Graham Mills, Justin Black, Christian Gallagher, and Wayne Heron. **1999 winter**: Ian Lanyon (station leader), Brian Clifford, Karl Rollings, Lloyd Symons, Jamie Ellett, Tim Last, Tracey Henshaw, John Breen, Ian Hall, Curtis Avenell, Ian John McLean, Sam Lake, Tim James, Mark Clear, Tony Morwood, John Innis, Colin Paterson, John Toms, Tom Stokes, Andrew Smith, Gareth Murtagh, Frances Phillips, Petra Heil, and Wayne Heron. **2000 winter**: Robert Tracey "Bob" Jones (station leader), Jack Gilbert, Brad French, Brendan Hill, Brett Hill, Mick Briscoe, Wally Owen, Peter Thompson, Robert Sharp, Joe Hopkins, Nick Jones, Darron Lehmann, Dennis Cooper, Andy Reid, Fredric Jobin, George Klich, Robin Tihema, Darren Harpur, Ray Bajinskis, Rob Pile, and Stay (who was, of course, a dog). **2001 winter**: Greg Carr, Dave Correll, Jenny Sheriden, Michael Terkildson, Graeme Wills, Colin Lee Hong, Krzysztof Krzton, Jacqui de Kroon, Peter McLean, Brian Clifford, Chad Marshall, Richard Taylor, Jeremy Smith, Jamie Dawns, Peter Orbansen (q.v.), Tim Chiselett, Sue Basson, Brett Noye, John Donaldson, Phil Smart, Mark Healy, Malcolm Lambert, Marek Tell. **2002 winter**: Ralph Botting, Mark Grainger, Nik Magnus, Frances Phillips, Mick Briscoe, Rob Thorne, Peter Bower, Andrew Dowdy, Felice Prosperi-Porta, Chris Legge, Jason Reinke, Barry Chester, Graham O'Hearn, Paul Wilson, Joseph Brennan, Peter Deith, David Mitchell, Trevor Ingram, Michael Carr, Brian Kittler, Adam Drinkell. **2003 winter**: Sean Wicks, Gil Barton, Cal Young, Cathie Saunders, Paul Peterson, Mark Maxwell, Chad Marshall, Richard Groncki, Tony Graham, Jim Milne, John Cadden Jeff Becker, Ian John Mclean, Dave Power, Nanette Madan, Dave Morgan, Geoff Fulton, Andrew Tink, Curtis Avenell, Malcolm Foster, Paula Mills, Sharon Labudda, Neil Hansen, Jeremy Smith, and Stay (the dog). **2004 winter**: Damon Ward, Mark Watson, David Van Duyl, Tim Edwards, Chris Goodfield, Finn Olsen, Steve Morrow, Ben

Manser, Peter Orbansen (q.v.) (builder and carpenter), Chris Sammut, Scott Madden, Tim Brown, Eleanor Bell, Tim Buckley, John Birss, Matthew McDonnell, Robert T. "Bob" Jones, Joseph Zagari, Colin Lee Hong, Peter Murphy, Gary Burton, Martin Tuxworth, Christin Hollas, Imojen Pearce. **2005 winter**: Peter Nink, Dave Nadin, Kirsten Johnston, Pat Brennan, Luke Ambry, Allan McAlister, Ian Phillips, Ruth Plathe, Barry O'Neill, Sharon Labudda, Rachael Robertson, Mark Austin, Chris Zale, Michael Woosey, John Travis, Howard Berridge, Kevin Gunn, Andrew Cunningham. **Nov. 19, 2005**: Peter Orbansen died. **2006 winter**: John Rich (station leader), Richard Umonas, Wayne Scandrett, Trevor Jackson, Chris Tickner, Darron Lehmann, Ross Reid, Tony Graham, Paul Dudley, Andrew Arnold, Camilla Stark, Dominic O'Sullivan, Graham Denyer, Mark Healy, Meredith Nation, Jason Allen, Leighton Ford, Daryl Xavier, Chris Sammut. **2007 winter**: Graham Cook (station leader), Jason Ahrens (plumber and deputy leader), Didier Monselesan (physicist), Luigi De Frenza (medical officer), Dave Correll (LIDAR engineer), Denise Allen (senior met observer), Annette Schlub (met observer), Colin Hughes (met technician), Glenn Roser (senior communications technical officer), Trevor Crews (communications technical officer), Glen Hoger (plant inspector), Dan Smith (carpenter), Barry Balkin and Glen Menere (electricians), Brendan Hopkins (plumber), Paul Barnes (mechanic), Matt Ryan (tradesman), and Tony Mortimer (chef). **2008 winter**: Pete Pedersen (leader), Andrew Thomas (supervising communicatons technical officer and deputy base leader), Jason Cull (communications technical officer), Andrew Cunningham (physicist), Harriet Paterson (marine scientist), Lloyd Fletcher (q.v.) (medical officer — he was last at Davis in 1978), Scott Adam (plant inspector), Mark Milnes (engineer), Greg Stone (meteorological technical officer), Ken Smith (carpenter and building services supervisor), Raymond Wright and Paul Jager (electricians), John Webb and Murray Rogers (plumbers), Noel Cottrell and Shane Thomas (diesel mechanics), and Dwayne Rooke (chef).

Davis Valley. 82°28' S, 51°09' W. An ice-free valley, just E of Forlidas Ridge, in the NE part of the Dufek Massif, in the Pensacola Mountains. The floor of this valley is about 1550 feet above sea level. Mapped by USGS from 1964 USN air photos, and from ground surveys conducted during USGS's own Pensacola Mountains Project of 1965-66. Named by US-ACAN in 1968, for Edward H. Davis, construction mechanic who wintered-over at Ellsworth Station in 1957. UK-APC accepted the name on Nov. 3, 1971.

Davison Peak. 77°53' S, 164°04' E. A coastal peak, rising to 1340 m, 2.8 km E of Hobbs Peak, in the Denton Hills of Victoria Land. Named by NZ-APC on Nov. 4, 1999, for William "Bill" Davison, of the zoology department of Canterbury University, in NZ, who, from 1983 onwards, specialized in Antarctic fish research. US-ACAN accepted the name in 2000.

Davis's Strait *see* **Nelson Strait**

Davisson, Thomas. b. 1804, Stonington, Conn. 1st mate on the *Courier*, in the South Shetlands, 1831-33. He was still alive and living in Stonington in 1860, still a sailor.

Davisville Glacier. 85°17' S, 128°30' W. About 50 km long, it flows from the N slopes of the Wisconsin Range, between Lentz Buttress and Moran Buttress, and trends NW to merge with the lower portion of Horlick Ice Stream. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Davisville, Seabee headquarters on the Narragansett Bay, in Rhode Island.

Cape Davydov. 68°39' S, 154°45' E. An ice cape on the E side of Mawson Peninsula, in George V Land. Photographed aerially by OpHJ 1946-47, and by SovAE 1956, who named it Mys Davydova, for Boris V. Davydov (1884-1925), Russian hydrographer, geodesist, and Arctic explorer. NZ-APC translated the name in 1961, and ANCA accepted that name on May 18, 1971.

Gora Davydova *see* **Mount Ruhnke**

Mys Davydova *see* **Cape Davydov**

Dawley, Frank Lucian. b. Dec. 14, 1907, Warwick, RI, son of farmer Alfred Dawley and his wife Phoebe Tillinghast. He joined the U.S. Navy at the age of 15 (his older sister went with him to the recruiting office and lied for him), and was machinist on both halves of USAS 1939-41. By 1942 he was a chief machinist, was then commissioned, and was a lieutenant commander and executive officer on the *Burton Island* during OpHJ 1946-47 and OpW 1947-48. He married again, in 1946, to Teresa Varney, retired as engineering officer at Portsmouth Naval Yard (NH) after 31 years and 18 days in the Navy, and died in Kittery, Me., on Sept. 21, 1970. Admiral Cruzen was the godfather of his younger son.

Dawrant, Allan John. b. Feb. 1, 1951, Christchurch, NZ. A Post Office radio technician, he wintered-over at Scott Base in 1973 and 1976, then back to the Post Office.

Islotes Dawson. 60°31' S, 45°46' W. A group of small islands off the W end of Conception Point (the northernmost point of Coronation Island), in the South Orkneys. Named by the Argentines.

Mount Dawson. 77°46' S, 86°21' W. A sharp, pyramidal mountain, rising to 2695 m, 4 km NW of Mount Reimer, in the Sentinel Range, in the Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse Party of 1957-58, and named by them for Merle Dawson. US-ACAN accepted the name in 1960.

Dawson, Merle R. "Skip." b. July 27, 1906, Maryland, son of Chesapeake Bay oysterman William Dawson and his wife Pearl. He entered the Army on July 1, 1924. He was a major in 1956 during OpDF II, and was on the first Globemaster out of NZ, on Oct. 20, 1956, bound for McMurdo Sound. From Nov. 7 to Dec. 16 of that year he led the Army-Navy Trail party from Little America V to open up the way to Byrd Station. He retired, highly decorated, as a colonel on Aug. 1, 1964, and became project manager for ship operations for the National Science Foundation's Office of Polar Programs from 1965 to 1970. He died at Annapolis, on Feb. 14, 1986, and is buried in Arlington National Cemetery.

Dawson Head. 70°44' S, 61°50' W. A high coastal point, or headland, along the NW side of Lehrke Inlet, on the Black Coast, on the E coast of Palmer Land. Photographed aerially by USN in 1966, surveyed from the ground by BAS personnel from Base E in 1972-73, and mapped by USGS in 1974 from these efforts. Named by US-ACAN in 1976, for Capt. Opie Lloyd Dawson (b. Dec. 20, 1919, Seattle), U.S. Coast Guard, commander of the *Glacier* during the International Weddell Sea Oceanographic Expedition of 1968. UK-APC accepted the name on July 21, 1976. Originally plotted in 70°43' S, 61°57' W, it has since been replotted.

Mount Dawson-Lambton. 78°54' S, 160°37' E. Also called "Mount Dawson and Lambton." Rising to 2295 m (the New Zealanders say 2644 m), 5 km (the New Zealanders say about 10 km) SW of the summit of Mount Speyer, in the Worcester Range, NW of Moore Bay, on the W side of the Ross Ice Shelf. Discovered by BAE 1901-04, and named by them for the Misses Dawson-Lambton, supporters, all born in Wetheral, Cumberland, daughters of Durham landed proprietor John Dawson (changed his name to John Dawson-Lambton) and his wife Eleanor Anderson — Ann Emilia (b. 1835), Liz (*see* **Dawson-Lambton Glacier**), and Emily Caroline (1840-1917). They lived part of the time at Swinburne Castle, in Northumberland. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Dawson-Lambton Glacier. 76°15' S, 27°30' W. A heavily crevassed glacier (or ice stream), it flows NW to enter the SE part of the Weddell Sea, just W of the Brunt Ice Shelf, S of Halley Station, on the Caird Coast of Coats Land. It is probably the world's largest glacier (or ice stream). Discovered on Jan. 16, 1915, by Shackleton, who described it as a "huge glacial overflow from the ice sheet," and named it Dawson-Lambton Glacier, for Elizabeth Dawson-Lambton (b. 1836, Wetheral, Cumberland), principal backer of BITE 1914-17. She had also been a backer of BNAE 1901-04, when Shackleton showed her around the *Discovery*. She had a soft spot for the great explorer, possibly for all great explorers, for she also backed Mawson's AAE 1911-14. There is a 1945 Argentine reference to it as Ventisquero Dawson Lamston (which is a not untypical cock-up), and on a 1946 Argentine map it appears as Glaciar Dawson Lamblon (another of the aforementioned cock-ups). However, it does appear on another Argentine chart of that time as Glaciar Dawson Lambton (without the hyphen). This was all too much for the Argentines, so,

when ArgAE 1953-54 surveyed the area, they renamed it for themselves as Glaciar Buenos Aires, after their capital, and that was the name accepted by the 1970 Argentine gazetteer. US-ACAN accepted the name Dawson-Lambton Glacier in 1947. Following a reconnaissance flight by BCTAE 1956-57, it was reported by Fuchs, Hillary, Blaiklock, et al, that the feature had receded quite considerably since 1915. It appears as Dawson-Lambton Glacier on the American Geographical Society's map of 1970, but on a USAF chart of that year as Dawsom Lambton Glacier (a cock-up). It appears on a 1971 British chart as Dawson Lampton Glacier (by now everyone had cocked up except the Chileans, who finally succumbed to the trend on a 1972 chart when they showed Glasiar Dawson Lambton). Following surveys by BAS personnel from Halley Station in 1967 and 1970, and after delineation from U.S. Landsat images taken on Feb. 22, 1974, the feature was redefined (by the British only) as Dawson-Lambton Ice Stream on June 11, 1980, and it appears a such in the 1982 British gazetteer. However, on a 1987 British chart it appears as Dawson-Lambton Glacier (which may be a cock-up, or it may be recognition of error).

Dawson-Lambton Ice Stream *see* **Dawson-Lambton Glacier**

Dawson-Lambton Trough. 76°00' S, 26°00' W. An undersea trough extending from the terminus of the Dawson-Lambton Glacier into the Weddell Sea. Named by Heinrich Hinze in 1997, the name was accepted that year by international agreement.

Dawson Nunatak. 70°13' S, 65°02' E. About 5.5 km SSE of Mount Peter, in the Athos Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos. Named by ANCA for Peter L. "Strawb" Dawson, senior diesel mechanic at Mawson Station in 1964. US-ACAN accepted the name in 1967.

Dawson Peak. 83°50' S, 162°33' E. A prominent ice-free peak rising to 2070 m, 8 km SW of Mount Picciotto, in the Queen Elizabeth Range. Named by US-ACAN in 1966, for John A. Dawson, aurora scientist at Pole Station in 1958.

Cape Day. 76°18' S, 162°46' E. About 17.5 km E of Mount Gauss, on the coast of Victoria Land, it is the S portal of the Mawson Glacier where that glacier becomes the Nordenskjöld Ice Tongue. First charted by BAE 1907-09, and named by Shackleton for Bernard Day. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Isla Day *see* **Day Island**

Day, Bernard Cartmell. b. Aug. 18, 1884, Wymondham, Leics, son of architect and surveyor John Day and his wife Ellen Adams. He was educated at Wellingborough Grammar School, Northants. An electrician and motor engineer, he left the Arrol-Johnston Motor Car Company to be in charge of the (Arrol-Johnston) motor car on BAE 1907-09 and BAE 1910-13. On the latter expedition, he made the covers for the *South Polar Times*, and he also painted watercolors. After the expedition he moved to North Sydney, and married Annie G. Womersley in 1913. He continued to live in North Sydney, and died in 1934.

Day, Crispin Mark Jeremy. b. Aug. 15, 1960, Aldershot. A Royal Marine (1979-84), he was basically an Arctic man, but did BAS work in the Antarctic (he wintered-over at Rothera Station in 1987 and 1988, as a field assistant) and South Georgia, and also worked for tour companies. He did the 1991-92 and 1993-94 summers at Rothera, and in 1994-95 was a member of the field party in the James Ross area. He wintered-over again, in 1999, as BAS field assistant at Rothera.

Day, Roderick Wilson. b. 1881, Hull, son of solicitor's clerk Charles Wilson Day and his wife Caroline Lambert Sykes (a music teacher). He joined the Merchant Navy, and was 3rd mate on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04. He stayed at sea, as a commander, RNR, won the OBE in 1919, and partly dreamed up the idea of a British trade ship that would tour the world as a floating exhibition, showing off British goods. The ship was to be called the *British Industry*, and Day would be the skipper when it was launched in 1923. However, the scheme came to nought. On the evening of Jan. 17, 1929, at the Café Royal, in London, they threw an Antarctic dinner, and people came from far and wide. Day was the only representative from that particular *Terra Nova* voyage. He died in 1935, in London, aged 54.

Day Island. 67°15' S, 67°42' W. An island, 11 km long and 4.5 km wide, immediately S of The Gullet, and 3 km N of Wyatt Island, in the N part of Laubeuf Fjord, between Arrowsmith Peninsula (on the Loubet Coast, on the W coast of Graham Land) and Adelaide Island. Named provisionally and descriptively as Middle Island in 1936, by BGLE 1934-37, who discovered it aerially, and were the first to (roughly) survey it. It appears as such on Rymill's 1938 chart of that expedition, and also on a 1946 USAAF chart. It appears on a 1947 Chilean chart as Isla Tinguiririca, after the volcano in Chile. It was surveyed again by Fids from Base E in 1948, and renamed by them for Vice Admiral Sir Archibald Day (1899-1970), later (1950-55) hydrographer of the Navy, and coordinator of operations for IGY. UK-APC accepted that name on March 31, 1955, and US-ACAN followed suit in 1956. It appears as such on a British chart of 1957, but on a 1956 U.S. Hydrographic Office chart it appears as "Middle (Day) Island." On a 1962 Chilean chart it appears as Isla Day, and that was the name accepted by the Chilean gazetteer of 1974, and also by the Argentines.

Day Nunatak. 64°30' S, 57°21' W. An area of rock, in the form of a nunatak, exposed on the W side of the main ice-cap of Snow Hill Island, about 5 km N of Dingle Nunatak. Named by UK-APC on Dec. 11, 1995, for Crispin Day. US-ACAN accepted the name in 1996.

Gora Daykovaja *see* **Daykovaya Peak**

Daykovaya Peak. 71°28' S, 12°11' E. A prominent peak, rising to 1995 m, between Mount Hansen and Kåre Bench, in the Westliche Petermann Range of the Wohlthat Mountains, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1960-61, and named Gora Dajkovaja (i.e., "dyke mountain") by the Russians in 1966. US-ACAN accepted the name Daykovaya Peak in 1970.

Daylight. There are 6 months of 24-hours-a-day daylight at the South Pole. The number of such daylight days decreases gradually as one goes north.

Cape Dayman. 70°46' S, 167°24' E. On the N side of Tapsell Foreland (which forms the S side of the entrance to Yule Bay), on the extreme W end of the Pennell Coast, in northern Victoria Land. Discovered by Ross in 1841 and named by him for Joseph Dayman. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Dayman, Joseph. b. Aug. 27, 1818, Dover, son of the curate there, Rev. Charles Dayman (later vicar of Great Tew, Oxford, from 1830 until his death in 1847) and his French wife Flave Restinde. He entered the Navy on Oct. 21, 1831, was promoted to midshipman on May 11, 1838, and transferred from the *Excellent* to the *Erebus* for RossAE 1839-43. On the completion of the expedition, he was promoted to lieutenant on Oct. 4, 1843, and in 1845 transferred to the steamer *Tartarus,* and in 1846 to the *Rattlesnake*, on which Huxley was naturalist. From 1852 to 1856 he was additional surveyor on the *Hydra*, at the Cape of Good Hope. By 1857 he was a lieutenant commander, skipper of the frigate *Cyclops* (from April to September of that year), as part of the Atlantic Telegraph Squadron, which helped make the telegraphic connection between the UK and the USA. On Jan. 1, 1858 he was promoted to commander, and took command of the *Gorgon*, and in May 1859 took over the *Firebrand*. In Nov. 1859 he went to the *Fisgard*, and to the *Hornet* in 1861. On Sept. 19, 1863 he was promoted to captain. He never married, moved to Poughill, Cornwall, and died on Nov. 21, 1868, at Plymouth.

Monte Dayné *see* **Dayné Peak**
Mount Dayné *see* **Dayné Peak**
Pico Dayne *see* **Dayné Peak**
Pico Dayné *see* **Dayné Peak**
Sommet Dayné *see* **Dayné Peak**

Dayné, Pierre-Joseph. b. Nov. 14, 1865, Valsavarenche, Italy. In June 1898 he became an Alpine porter, and on June 19, 1899, an Alpine guide. He wrote a letter to Charcot asking to go on his trip to the North Pole, and

went, even when the expedition's direction was changed to the South, hence he became part of FrAE 1903-05. On June 23, 1903 he left Valsavarenche, accompanied as far as Villeneuve by one his sisters, Maddalena, and on June 25, 1903, left Aosta on the train bound for Torino, and then on to Paris, where he arrived in the early hours of June 27, 1903. He finally met Charcot on June 30, 1903. By July 4, 1903 he was in St. Malo. In Antarctica, he and Jacques Jabet were the first climb Savoia Peak, on Wiencke Island, on Feb. 7, 1905.

Dayné Peak. 64°54' S, 63°36' W. A distinctive pyramidal peak rising to 730 m, immediately NE of Cape Errera (the SW tip of Wiencke Island), in the Palmer Archipelago. Discovered, photographed, and roughly mapped in Feb. 1898, by BelgAE 1897-99. Named by Charcot in 1903-05 as Sommet Dayné, for Pierre Dayné. During FrAE 1908-10, Charcot renamed it Pic Dayné. It appears as Mount Dayné on a 1943 U.S. Hydrographic Office chart. US-ACAN accepted the name Dayné Peak in 1951, and UK-APC followed suit on Sept. 4, 1957. It appears as such on a 1958 British chart, but in the 1958 British gazetteer it appears without the accent mark. It was resurveyed by Fids on the *Norsel* in April 1955. It appears on three 1953 Argentine charts variously as Pico Dayné, Monte Dayné, and Monte Dainé, but the name Pico Dayné was the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Daynes, Roger. b. 1942, Bromley, Kent, son of Harold A. Daynes and his wife Marjorie R. Sharvell. BAS meteorologist who wintered-over at Halley Bay Station in 1972 and 1973, the second year also as base commander. He was on the faculty of the Polytechnic, in central London. In 1976 he was in the Arctic. In 1988 he started a company called Snowsled, manufacturing polar clothing.

Days, Stephen W. *see* **USEE 1838-42**

Mount Dayton. 85°44' S, 158°41' W. A mostly ice-free mountain, rising to 1420 m on the E side of Amundsen Glacier, 8 km W of Mount Goodale, in the Hays Mountains of the Queen Maud Mountains. First mapped from ground surveys conducted during ByrdAE 1928-30, and from air photos taken during the same expedition. Named by US-ACAN in 1967, for Paul Kuykendall Dayton III (b. 1941), biologist who wintered-over at McMurdo in 1964.

Bahía D'Azure *see* **Azure Bay**

Estrecho de Bismarck *see* **Bismarck Strait**

Mont De Breuck *see* **Mont DeBreuck**

De Breuckbreen. 71°53' S, 24°23' E. A glacier, about 7 km long, in the W part of the Brattnipane Peaks, in the central part of the Sør Rondane Mountains. Named by the Norwegians for William DeBreuck (sic; *see* **Mount DeBreuck**).

Mont De Brouwer *see* **Mount Brouwer**

De Camp Nunatak. 72°16' S, 160°22' E. An isolated nunatak, 5 km SE of Welcome Mountain, in the Outback Nunataks. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for Michael A. de Camp, biologist at McMurdo, 1966-67.

Paso De Castilla. 64°49' S, 63°06' W. The marine passage between Lemaire Island and Lautaro Island, which connects the Gerlache Strait with Lientur Channel, in the approaches to Paradise Harbor, off the Danco Coast, on the W coast of Graham Land. Named by the Chileans for Gabriel de Castilla (see next entry). Note: the "D" in "De" is capitalized in the feature, but not in the admiral's name, unless at the beginning of a sentence. The Argentines call this feature Paso Crámer Norte (in association with Isla Crámer, their name for Lautaro Island).

De Castilla, Gabriel. b. 1577, Spain. A navigator, in March 1603 he was commissioned by the viceroy of Peru to go into southern Chilean waters to repel Dutch buccaneers. He left Valparaíso with a fleet of 3 vessels—*Nuestra Señora de las Mercedes*, *Nuestra Señora de la Visitación*, and the galleon *Jesús María*, and is thought to have gone as far south as 64°S (this is based on findings by Edwin Swift Balch in the municipal archives in The Hague). De Castilla died in 1620.

De Castillo, Manuel. Captain of the *Primeroso-Mariana*, in Antarctic waters in 1819.

De Cecca, Jeremiah "Jerry." b. Sept. 18, 1894, Calitri, Italy. He immigrated to the USA as a child, and lived in Long Island. He was a mechanic for Wright Aviation, an expert in the Whirlwind engine that ByrdAE 1928-30 took to Antarctica, which is why he was picked to go on the expedition. He fell sick at Little America in Jan. 1929, and was (almost) replaced by Alfred Wolfgang. De Cecca got back to Dunedin, NZ, on the *Eleanor Bolling*, and from there made his way to Wellington, sailing from there on April 23, 1929 on the *Martyra* to San Francisco, which he reached on May 10. Herr Wolfgang never made it south of NZ. Jerry bowed to the linguistic inevitable, and changed the spelling of his last name to DeCheca, moved to Connecticut, and went to work for the Sinclair Refining Company, in NYC. He died in Greenwich, Conn., in June 1966.

De Flotte, Paul-Louis-François-René. b. Feb. 1, 1817, Landernau, France, into an ancient and noble Breton family, and grandson of Admiral Boulainvilliers. He entered the de la Flèche Military School in 1828, then on to naval school. He took part in the scientific expedition on board the *Venus*, and embarked on the *Zélée* at Tahiti on Nov. 15, 1838, as an élève, as part of FrAE 1837-40. He was promoted to ensign on Aug. 20, 1839. In 1846 he was promoted to lieutenant, partly because of his technical innovations for steam ships. He took part in the February 1848 revolution in Paris, as a member of Blanqui's socialist group, was arrested on June 26 for his part in the May events in Paris, and was imprisoned in Belle Isle for a month. He resigned his naval commission on Dec. 13, 1849, and was elected deputy from Seine to the Legislative Assembly, served from March 10, 1850 to Dec. 2, 1851, and after the Dec. 2 coup was expelled from France. He went to Belgium, but returned to France secretly, and, under an assumed name, worked for a railroad company for 8 years, building tunnels and viaducts. Then he organized a group of French volunteers at Genoa to help Garibaldi in his fight for Italian liberty. Garibaldi gave him command of a flotilla, and on Aug. 22, 1860, in Reggio, Italy, he was struck in the forehead by a bullet. Garibaldi effected a subscription drive to get a monument erected to de Flotte where he had fallen.

De Gerlache de Gomery, Adrien-Victor-Joseph. Known as Baron de Gerlache. b. Aug. 2, 1866, Hasselt, Belgium, son of Auguste de Gerlache and his wife Emma-Thérèse Biscops (*see* **Emma Island**). Contrary to his father's wishes, he went to sea, and was a naval lieutenant when he led BelgAE 1897-99. In 1901 he was in the Persian Gulf (the Arabian Gulf) and in 1903 joined FrAE 1903-05, but resigned in Buenos Aires on the way down. On Dec. 21, 1904, in Nice, he married Suzanne Poulet, had two children by her, and then they divorced on May 17, 1913. He assisted Shackleton in preparing BITE 1914-17, and in fact sold his yacht to the British explorer (the vessel was renamed *Endurance*). On Dec. 28, 1918, in Stockholm, he married again, to Elisabeth Höjer, by whom he had Gaston (see below). Most of de Gerlache's later years were spent in the Arctic, and he died on Dec. 4, 1934.

De Gerlache de Gomery, Gaston. b. Nov. 17, 1919, Brussels, son of the great explorer Adrien de Gerlache (see above) by his second wife. On Aug. 27, 1946, he (Gaston) married Anne-Marie-Germaine "Lily" Van Oost. He led BelgAE 1957-58, which set up Roi Baudouin Station, and BelgAE 1958-59. He died on July 13, 2006.

De Gerlache Point *see* **Gerlache Island**

De Gerlache Seamounts. 65°00' S, 90°30' W. An undersea feature off the coast of Marie Byrd Land. Named by international agreement in 1988, for Adrien de Gerlache.

De Gerlache Strait *see* **Gerlache Strait**

De Gerlacheberget. 72°02' S, 27°19' E. A mountain N of Balchen Glacier, in the westernmost part of Balchen Mountain, in the E part of the Sør Rondane Mountains. Named by the Norwegians for Gaston de Gerlache.

De Giorgio, Georges. This is his story, basically as told by himself (with notes added by this writer that are based on independent research), and although it seems unbelievable, it would seem to be true. His father, Giorgio Donato Benedetto De Giorgio Di Barbarano, Conte di Santo Ponte, was a very wealthy and well-connected Italian boat-builder (among other things, including diplomat), had been a cavalry officer in World War I, and had climbed in the Alps with the Duke D'Abruzzi. In France he met a 14-year-old girl from Chile, half Araucanian and half Spanish, named Violeta Valdés Herrera, there on a study grant for Indian girls. They married when Violeta was 15, and the count, wishing his first child to be born in Italy, began the drive toward Ventimiglia. The car crashed at 2 A.M., on Oct. 31, 1928, at a little place called La Bergerette, near Cap d'Antibes, before they could get to the Italian border, and the baby (Georges) was born at the scene of the accident. He was baptized in Algeria, and spent his early years in France, England, and the USA. The count, having won in a bet some land in Viña del Mar, near Valparaíso, took the family to live there, and continued in the boat-building business. That year Sir Hubert Wilkins visited the count, and left, by chance, a can of pemmican, which, some years later, Georges discovered while he was a cub scout, and which he ate, much to his chagrin. In 1946, in the *Mercurio* (the Valparaíso newspaper), Georges, who was then helping his father in the boat yard, read of the forthcoming Finn Ronne expedition to Antarctica (RARE 1947-48), and, through Wilkins (who was helping select personnel for the expedition), volunteered. When Ronne's ship finally pulled into Valparaíso, Georges went out to it in a bum boat, went on board, and was shown around by McLean and Thompson. He met Ronne, who had just had a man desert, and was taken on at the last minute as mess boy, his job being to help Sig Gutenko. He may have been the first Chilean to winter-over in Antarctica. After the expedition, he did his national service, being taken on as supercargo on the Swedish ship *Trivia*, on charter by the Chileans. He then spent the 1949 winter as a vice primero aspirante (meaning a sergeant who would be in line for a commission after his tour of duty) and technical adviser at General Bernardo O'Higgins Station, and in 1950, after that expedition, went to sea, becoming a captain plying the Pacific for decades. In 1955-56 he was with Bill Tilman (q.v.) on the *Mischief* (not in Antarctic waters). He retired from the sea in 1994, and, having moved to the USA some years before, now settled in California, then Oregon, and finally Great Falls, Montana. Into his 80s he was a guide for the Lewis and Clark Tourism Center. Note: His name is, and always has been, Georges de Giorgio (sic), but the Chileans, of course, named him Jorge. In the traditional Chilean style his name therefore became (in Chile) Jorge de Giorgio Valdés, but, somehow, along the way, the "de" became "Di," and the error was perpetuated.

Rocher de Gravenoire *see* **Gravenoire Rock**

De Guébriant Islets *see* **Guébriant Islands**

De Haven, Edwin Jesse. b. May 7, 1816, Philadelphia, son of William de Haven and his wife Marice McKeever. He entered the U.S. Navy in 1830, and was acting master on USEE 1838-42. He joined the *Vincennes* at Callao, and later transferred to the *Peacock* at Fiji. He fought in the Mexican War, and was later at the U.S. Naval Observatory. In 1850 he led the first Henry Grinnell expedition to the Arctic looking for Sir John Franklin. He married Mary Norris (De Costa), retired from the Navy in 1862 due to ill health, and died on May 1, 1865.

De Haven Glacier. 67°03' S, 127°32' E. A piedmont glacier, about 22 km wide, flowing into the SW side of Porpoise Bay, on the Banzare Coast. Photographed aerially by OpHJ 1946-47, first delineated from these photos by U.S. cartographer Gard Blodgett in 1955, and plotted in 66°59' S, 127°32' E. Named by US-ACAN in 1955, for Edwin De Haven. ANCA accepted the name on May 18, 1971. It was later re-plotted.

Glaciar De Hoz *see* **Balch Glacier**

De Hoz Glacier *see* **Balch Glacier**

Mont De Kerckhove de Denterghem *see under* **K**

De Kermadec, Félix Casimir Marie Huon *see under* **Huon de Kermadec**

Anse de la Baleinière. 66°40' S, 140°01' E. A narrow channel penetrating deeply to the W of Mont Cervin, in the direction of "the pré," on the NE coast of Pétrel Island, in the Géologie Archipelago. It served as an embarcation shelter during the French expeditions.

Baie de la Christiane. 66°43' S, 140°31' E. A small bay between two points, in the N part of Cape Bienvenue, in the Géologie Archipelago, on the coast of Adélie Land. Named by Paul-Émile Victor for the *Christiane*, one of the 2 hydrographic vessels destroyed in the 1961-62 storm while in their normal mooring place (in what is now called Baie des Épaves). The name is not used anymore. *See also* **Baie de l'Evelyne** (under **D**).

Isla de la Colina *see* **Heywood Island**

Punta de la Colina. 63°11' S, 56°19' W. A point on the E coast of Joinville Island, at the W end of the Larsen Channel, off the NE end of the Antarctic Peninsula. Name means "point of the hill" in Spanish.

Cerro de la Costa *see* **Cerro Araos**

Punta de la Descubierta. 63°00' S, 60°44' W. A point on the SW coast of Deception Island, in the South Shetlands. Named by the Spanish for Malaspina's ship.

Mar de la Flota *see* **Bransfield Strait**

Islote De la Fuente *see* **Fuente Rock**

Île de la Houle *see* **Houle Island**

Mont de la Laguna *see* **Laguna Hill**

Îlôt de la Midwinter. 66°41' S, 139°56' E. A little island in Baie Pierre Lejay, ESE of Cap André Prud'homme, in the Géologie Archipelago. So named by the French because the first gravimetric measurements of this island were taken on Midwinter's Day, 1958 (June 21).

Cape de la Motte. 67°00' S, 144°25' E. A prominent cape that separates Watt Bay from Buchanan Bay, with Mount Hunt rising to 520 m above the continental ice just behind it, W of Mertz Glacier, on the coast of George V Land. This may be the Point Case that Wilkes discovered on Jan. 23, 1840, from Cape Disappointment, during USEE 1838-42. Charted by AAE 1911-14, and named by Mawson for C.P. de la Motte. US-ACAN accepted the name in 1952, and ANCA followed suit.

De la Motte, Clarence W. Petersen. b. 1892, Bulli, NSW, son of Charles Peter A.P. de la Motte and his wife Ada Lavonel. He received his early marine training on the barque *Northern Chief*, and became a 2nd mate in March 1911. Not long before becoming 3rd officer on the *Aurora* during AAE 1911-14, he had been 4th officer on the *Warrimoo*, for the Union Steamship Company of NZ. He signed on for Antarctica on Dec. 2, 1911, and signed off on March 18, 1913, at Lyttelton, NZ. On Sept. 23, 1913 he signed on again, as 3rd officer, and signed off finally on March 19, 1914. He was 1st officer on the *Aurora* in 1917, during BITE 1914-17. He died in Hornsby, Sydney, in 1970.

Îlot de la Sainte-Blanche. 66°41' S, 139°54' E. An islet W of Île du Navigateur, near the coastal ice cliff at the back of Baie Pierre Lejay. So named by the French in 1958, because on the previous July 9 (St. Blanche's Day) gravimetric measurements were taken here for the first time.

Îlot de la Selle *see* **La Selle** (under **L**)

Îlot de la Tortue. 66°40' S, 140°01' E. A rocky island, N of Rostand Island, in the Anse du Pré, in the Géologie Archipelago. So named by the French in 1977, because it is shaped like a tortoise ("tortue").

Îlot de la Vierge *see under* **L**

Costa de las Grutas. 63°53' S, 60°40' W. A coast, SW of the entrance to Mikkelsen Harbor, on the S side of Trinity Island, in the Palmer Archipelago, to the N of Orléans Strait. Named descriptively by the Chileans (the name means "coast of the grottoes"). It appears on Chilean charts and is still in use.

Collado de las Obisidianas. 62°56' S, 60°42' W. An ice-free hill rising above the lagoon on the SW side of Telefon Bay, Deception Island, in the South Shetlands. Named by the Spanish ("hill of the obsidians"), for the fragments of obsidian which exist here. Note: These coordinates match exactly those of Laguna Hill (known by the British as Cross Hill, and by the Argentines as Monte de la Laguna), so it is possible that Collado de las

Obsidianas is merely the Spanish name for that hill.

Mont de Launoit *see* **Mount Launoit**

Île de l'Empereur *see* **Empereur Island**

Baie de l'Evelyne. 66°44' S, 140°54' E. A small bay in the Géologie Archipelago. Named by Paul-Émile Victor for the *Evelyne*, one of the 2 hydrographic vessels that were destroyed during the 1961-62 storm, while moored in their normal place in what is now called Baie des Épaves. The term is no longer used. *See also* **Baie de la Christiane** (under **D**).

Mont De Limburg Stirum *see* **Mount Limburg Stirum**

Baie de l'Ionosphère *see* **Ionosphere Bay**

De Locke, George W. Of Queens Village, NY. Chief engineer on the *Bear of Oakland*, for ByrdAE 1933-35. This from the *New York Times* of Sept. 26, 1933. Aside from this entry, Mr. De Locke is untrackable. Byrd does not mention him at all, ever.

De Lorme, Jacques-Eugène. b. June 17, 1817, Bordeaux. Ordinary seaman on the *Zélée* during FrAE 1837-40. He died on board on Nov. 23, 1839.

Archipiélago de los Ríos. 66°26' S, 66°20' W. A group of islands, islets, and rocks, extending in a WSW direction from the north-central part of Darbel Bay toward the Pauling Islands, in Crystal Sound, off the W coast of the Antarctic Peninsula. Named by the Chileans for Capitán de corbeta Luis de los Ríos Echeverría, skipper of the *Lientur* during ChilAE 1962-63. The Argentines call it Archipiélago Entre Ríos, for their ship, the *Entre Ríos*.

Nunatak De los Santos. 66°02' S, 60°32' W. One of the numerous nunataks on Jason Peninsula name by the Argentines.

De Roquemaurel, Louis-François-Gaston-Marie-Auguste. b. Sept. 20, 1804, Auniac, but at the age of a few months moved to Grenade (both villages being near Toulouse), where he grew up. He became an officer in the Navy at 25, and was lieutenant on the *Astrolabe*, and 2nd-in-command of that ship, during FrAE 1837-40. On his return, he became captain of a corvette, on Dec. 20, 1840. He died in 1878.

De Rothschild Islets *see* **Splitwind Island**

De Sauls, James *see* **USEE 1838-42**

Cabo 18 de Setiembre *see* **Cabo Arauco**

De Soiza Reilly, Juan José. Argentine journalist commissioned by the magazine *Caras y Caretas*, to go to Antarctica on the *Pampa* in early 1933, when that vessel went on its annual relief expedition to Órcadas Station.

Península De Solier *see* **Península Poblete**

De Toledo, Joaquín. Skipper of the *San Telmo*, 1819-20.

De Tolnay, Albert. b. 1894, Hungary. He wintered-over at Órcadas Station in 1925.

Cap De Trooz *see* **Cape Pérez**

Acantilado De Urquiza. 66°03' S, 60°37' W. A cliff on the NW side of Nunatak Scheaffino, on Jason Peninsula. Named by the Argentines.

De Vicq Glacier *see* **DeVicq Glacier**

Cabo Deacon *see* **Cape Deacon**

Cape Deacon. 73°14' S, 59°50' W. An ice-covered cape forming the SE tip of Kemp Peninsula, on the Lassiter Coast, on the E coast of the Antarctic Peninsula. Probably first seen in Dec. 1940 by USAS 1939-41, when that expedition photographed part of Kemp Peninsula during exploratory flights over the area. Re-photographed by RARE 1947-48, who, with Fids from Base E, surveyed it from the ground in Nov. 1947. FIDS named it for George Deacon. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears on a 1954 British chart plotted in 73°17' S, 59°53' W, and that is how it appears in the 1955 British gazetteer. It was re-photographed aerially by USN between 1965 and 1967, and appears with corrected coordinates on the 1969 USGS sketch map of Ellsworth Land-Palmer Land, and also in the 1986 British gazetteer. It appears on an Argentine chart of 1957 as Cabo Deacon, and that is the name used today by the Argentines as well as by the Chileans. This cape is not to be confused with Punta Albornoz, which forms the SW tip of Kemp Peninsula.

Monte Deacon *see* **Deacon Peak**

Pico Deacon *see* **Deacon Peak**

Deacon, George Edward Raven. b. March 21, 1906, Leicester, only son of George Raven Deacon and his wife Emma Drinkwater, of Tadworth. As a child, he was known as "Ted." After a brief spell as a teacher, in Dec. 1927 he joined the Discovery Investigations as a chemist, being senior hydrographer on the *William Scoresby*, 1927-28, and on the *Discovery II* cruises of 1929-31, 1931-33, and 1935-37 (as leader). He married Margaret Elsa Jeffries (1903-1966; known as Elsa; she worked in the Discovery Committee office in the 1930s) on May 11, 1940, was involved in submarine detection during World War II, and in 1947 left the Discovery Committee. In 1949 he was appointed first director of the National Institute of Oceanography. He was knighted in 1971, retiring in 1972. In 1973 he was back in Antarctica, on the *Glacier*, and had to be winched off by helicopter when the ship ran into trouble. He was back again, in 1979, on the *Discovery*. He died on Nov. 16, 1984. *See also* the Bibliography.

Deacon Hill. 60°34' S, 45°48' W. A conspicuous, ice-covered peak rising to 330 m, on the divide between Bridger Bay to the N and Norway Bight to the S, in the W part of Coronation Island, in the South Orkneys. Discovered in Dec. 1821 by Powell and Palmer, and roughly charted on Powell's map published in 1822. Re-surveyed by the personnel on the *Discovery II*, who named it for George Deacon. It appears on their 1934 chart. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1952 Argentine chart translated literally, as Cerro Diácono, i.e., as if the word "deacon" were a common noun. That unfortunate translation was accepted by the 1970 Argentine gazetteer. It was re-surveyed by Fids from Signy Island Station between 1956 and 1958.

Deacon Peak. 62°06' S, 57°56' W. A summit volcanic cone rising to 170 m, and marking the summit of Penguin Island, at the E side of the entrance to King George Bay, King George Island, in the South Shetlands. Surveyed by the personnel on the *Discovery II*, and named by them for George Deacon. It appears on their 1938 chart. It appears on a 1949 Argentine chart translated as Pico Deacon, and that was the name accepted by the Argentine gazetteer of 1970. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1962 Chilean chart as Monte Deacon, and that was the name accepted by the 1974 Chilean gazetteer. On González-Ferrán and Katsui's 1970 Chilean map it appears as Volcán Penguin. The British were the latest to replot this feature, in late 2008.

Dead Glacier. 62°13' S, 58°28' W. A small, dead glacier, that used to flow from a height of 185 m to 95 m above sea level, between Baszta and Bastion, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles as Martwy Lodowiec. Dead Glacier is a translation. "Martwy" means "dead," and "lodowiec" is the Polish word for "glacier."

Dead men. Logs laid in pits dug in the ice. Water is poured over them, and the "dead men" are frozen in. So solidly are these "men" "dead" that ropes are attached to them and used as ship's moorings in the Antarctic seas.

Deadmond Glacier. 72°01' S, 96°27' W. About 10 km long, it flows from the E side of Evans Peninsula on Thurston Island into Cadwalader Inlet. Discovered by the USN Bellingshausen Sea Expedition in Feb. 1960. Named by US-ACAN in 1960, for Lt. Cdr. Robert P. Deadmond, executive officer on the *Burton Island* that season. Originally plotted in 71°58' S, 96°20' W, it has since been replotted.

Mount Deakin. 84°40' S, 170°40' E. A prominent peak, rising to 2810 m (the New Zealanders say 2771 m), on the E side of the Beardmore Glacier, just N of the mouth of Osicki Glacier, between the Hughes Range and the Commonwealth Range, it marks the N side of the Keltie Glacier at its confluence with the

Beardmore, in the Transantarctic Mountains. Discovered by Shackleton in Dec. 1908, during BAE 1907-09, and named by him for Sir Alfred Deakin (1856-1919), PM of Australia (1903-04, 1905-08, and 1909-10) and a supporter of the expedition. US-ACAN accepted the name in 1952.

Deakin Bay. 68°23' S, 150°10' E. A wide, open bay fronting the Cook Ice Shelf, just W of Cape Freshfield, between that cape and Horn Bluff, on the coast of George V Land. Roughly delineated by the Far Eastern Sledging Party during AAE 1911-14, and named by Mawson for Sir Alfred Deakin (*see* **Mount Deakin**). This may well be the Peacock's Bay that Wilkes discovered in 1840 (*see* **Peacock Bay**). US-ACAN accepted the name in 1947, and ANCA followed suit.

Mount Dean. 85°32' S, 163°00' W. Rising to 1620 m, at the NE end of the Quarles Range, 3 km NE of Mount Belecz. Probably first seen by Amundsen's polar party in 1911, but first mapped by ByrdAE 1928-30. Named by US-ACAN in 1967, for Jesse D. Dean, meteorologist at Pole Station in 1962.

Dean, Colin Hall "Booboo." b. 1938, Willesden, London. He joined FIDS in 1959, as a geophysicist, and wintered-over at Halley Bay Station in 1960 and 1961. He later went to South Africa, and worked in computers.

Dean, Nigel Brian. b. Oct. 10, 1966, Huntingdon, son of Alan B.C.T. Dean and his wife Yvonne Endersby. BAS diesel mechanic who wintered-over at Rothera Station in 1992 and 1993, and at Halley Bay Station in 1995. He did a final month at Rothera Station in March 1995, thus completing 40 months on the ice.

Dean, John N. *see* **USEE 1838-42**

Dean Cirque. 77°30' S, 160°45' E. A cirque, opening S to the feature called Labyrinth, between the SE part of Prentice Plateau and Apollo Peak, in the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, for Christopher T. Dean, Petroleum Helicopters Inc. (PHI) pilot with USAP in 8 consecutive field seasons between 1986 and 1997. NZ-APC accepted the name on Nov. 30, 2004.

Dean Island. 74°30' S, 127°35' W. An ice-covered island, 30 km long and 16 km wide, within the Getz Ice Shelf, midway between Grant Island and Siple Island, off the coast of Marie Byrd Land. Discovered from a distance of 30 km by the *Glacier* on Feb. 5, 1962, and named by US-ACAN in 1966, for CWO2 Samuel Lester Dean (b. April 26, 1925, Gem, W. Va.), who joined the U.S. Navy in May 1942, and who was electrical fitter on the *Glacier* at that time. He transferred to the *Gilmore* immediately after this tour, and retired from the Navy in June 1963.

Dean Nunataks. 74°31' S, 98°48' W. Two nunataks, about 10 km ENE of Mount Moses, in the Hudson Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1970, for William S. Dean, of Pleasanton, Texas, ham radio contact in the USA for several USARP field parties in the late 1960s.

Dean Rocks. 67°48' S, 68°56' W. A group of 4 rocks in water, rising to an elevation of about 2 m above sea level, between Preston Island and Biggs Island, on the E side of the Henkes Islands, off the S end of Adelaide Island. Named by UK-APC on Feb. 12, 1964, for engineer mechanic Thomas Dean (b. 1938), RN, of the RN Hydrographic Survey unit which charted these rocks from the *John Biscoe* in 1963. US-ACAN accepted the name later in 1964. The feature appears on the unit's chart of that year.

DeAngelo Glacier. 71°54' S, 170°10' E. A steep tributary glacier, N of Stone Glacier, and draining the slopes of Mount Robinson in the Admiralty Mountains, flowing SE to enter Moubray Glacier S of Mount Ruegg. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Richard J. DeAngelo, USAF, airman 1st class (*see* **Deaths**, 1958).

Mount Dearborn. 77°14' S, 160°08' E. Rising to 2300 m, between Mount Littlepage and the N part of the Willett Range, in Victoria Land. Named by US-ACAN in 1964 for John Dearborn, biologist at McMurdo in 1959 and 1961. NZ-APC accepted the name.

Mount Deardorff. 85°48' S, 162°34' W. A prominent peak, rising to 2380 m, and surmounting the massive ridge dividing the heads of Moffett Glacier and Steagall Glacier, in the Queen Maud Mountains. First mapped from ground surveys and air photos taken during ByrdAE 1928-30. Named by US-ACAN in 1967, for John Evan Deardorff (b. Nov. 9, 1941; known as Evan), cosmic ray scientist at McMurdo in 1964.

Deaths in Antarctica. There have been many more deaths in Antarctica than those listed below. To say that those listed below are some of the more salient is a polite way of saying that these are the ones that this writer was able to trace. Listed are human deaths only. For a related entry *see* **Disasters**. *See also* **Births in Antarctica**. From 1946 to the end of 1987, 52 Americans died in Antarctica while participating in U.S. Government programs. Thirty of these were in 9 aircraft crashes before 1970 (between 1946 and 1961 alone, 22 Americans died in 7 air accidents). There were 6 vehicle deaths, 4 aboard ship, 3 at stations, 3 during recreational activities, 3 in the field, and 1 under other conditions. **Oct. 1, 1719**: William Camell drowned. **Sept. 1819**: The crew of the *San Telmo*. For a sidebar on this incident, *see* **Punta El Hallazgo** (*under* **E**). **1819-21**: Three men died on von Bellingshausen's voyage. **Dec. 5, 1820**: A crew member on the *O'Cain*; **Early 1821**: Eight men died on the *Diana*, circumstances unknown. **1821-22**: One man died on the Weddell expedition. **1821-22**: One man was lost off the *Alabama Packet*, while in the South Shetlands. **Jan. 17, 1823**: The crew of the *Jenny*, presumably in Antarctic waters (however, *see* **The *Jenny***). **April 23, 1831**: The carpenter on the *Tula* during the Biscoe expedition. **April 27, 1831**: Another of Biscoe's crew on the *Tula*. **1831**: Seven men on the *Lively*, of sickness, during Biscoe's expedition. **March 11, 1839**: William Steward on the *Peacock*. **March 24, 1839**: All the crew of the *Sabrina*. **Jan. 18, 1840**: Jean-Baptiste Pousseau, on FrAE 1837-40. **May 3, 1859**: The *Fleetwood*'s crew of 20, including a woman. **1872 winter**: Four men died in the South Shetlands, off the *Franklin*, including (perhaps) a mate named Townsend. *See* **King, James A.**, for the full story. **Jan. 21, 1874**: Four men on the *Thomas Hunt* died in the South Shetlands, when their small boat capsized on the surf—Andrew Jacobs, James Meehan (b. 1851, Massachusetts), and 2 Cape Verde Islanders. **1874-75**: One man died on the *Thomas Hunt*. He was buried on Low Island, in the South Shetlands. **1877**: There is a myth that several of the crew of the *Florence* died of exposure, on King George Island, in the South Shetlands, the leader of the gang being a Mr. King, one of the mates. For the real story, *see* 1872 winter. **Jan. 22, 1898**: Wiencke drowned from the *Belgica*. **June 5, 1898**: Danco died of scurvy on the *Belgica*. **Oct. 14, 1899**: Hanson died of unknown causes, probably scurvy, during SwedAE 1901-04; he is the first recorded human to be buried on the continent itself. **March 11, 1902**: George T. Vince. **June 7, 1903**: Ole Christiaan Wennersgaard. **Aug. 6, 1903**: Allan Ramsay, chief engineer of the *Scotia*, of a heart ailment. **July 2, 1905**: 2nd class seaman Eduardo Guerrabut, of Argentina. **Sept. 25, 1905**: Otto Diebel, leader at Órcadas Station, died, and was buried 2 days later next to Allan Ramsay. **Jan. 22, 1908**: Nokard Davidsen, drowned overboard from the whale catcher *Lynx*. **Aug. 20, 1910**: John Elieson, at Órcadas Station. **Dec. 1910**: Whaling manager Peder Mikkelsen died at Deception Island. **Dec. 26, 1910**: Georg William Ødegaard, on the *Svend Foyn*. **March 8, 1911**: Henrik Lagerstedt, on the *Svend Foyn*, at Port Lockroy. **Dec. 10, 1911**: Hans Olsen, on the *Svend Foyn*. **Feb. 16, 1912**: Edgar Evans. **March 17, 1912**: L.E.G. Oates. **March 29, 1912**: Scott, Bowers, and Wilson. **Aug. 8, 1912**: Richard Vahsel. **Dec. 14, 1912**: B.E.S. Ninnis. **Dec. 18, 1912**: An unknown whaler died, buried at Whaler's Graveyard. **Jan. 7, 1913**: Xavier Mertz. **Feb. 4, 1913**: Cayetano Muñoz. **May 7, 1913**: Heraldo Wiström, at Órcadas Station. **Dec. 16, 1913**: Sigurd Carlsen, a whaler, in a flensing accident. **Jan. 7, 1914**: Olav Nielsen, whaling mate, of apoplexy. **Feb. 16, 1914**: Nils Sørensen, a flenser, of acute peritonitis. **March 1, 1914**: Søren Hansen, mate on the *Nor*, drowned. **Dec. 18, 1914**: Anton Antonisen, broke his neck in the Belgica Strait. **Jan. 7, 1915**: Karl Moe Johansen, whaling baker, died of blood poisoning, and Max Slavonski, foreman, fell overboard in the Belgica Strait. **April 30, 1915**: Hartvig Bache-Wiig, at Órcadas Station. **March 5, 1916**: Axel L. Johnson, sailor, died in an explosion on the *Svend Foyn*. **March 8,**

1916: Rev. A.P. Spencer-Smith. **May 8, 1916**: Mackintosh and Hayward. **Feb. 2, 1917**: Olav A. Kristiansen (AKA Arnov Arnouse, Olav Kristensen, and Anon Anonsen), a whaler, died of cancer. **Dec. 31, 1917**: Herbert Högberg, died on the *Solstreif*. **Dec. 22, 1918**: Nils Hansen blown up on the *Thor I*. **March 19, 1919**: Harald Sjövold, drowned while harpooning a whale in the South Shetlands. **April 3, 1922**: Emil Hansen Nybraaten, whaling laborer, died of heart failure. **March 11, 1924**: Georg R. Christensen, Carl Olaf Gjerdøe, Nils Ernst Samuelsen, and Mathias Andressen, all drowned on the *Bransfield* during a hurricane. **March 16, 1924**: Thorleif Bjarne Hansen, whaler, of nephritis. **Nov. 6, 1924**: The 10 men on the whale catcher *Graham* (*see* **Whalers Bay Cemetery** for names). **Dec. 8, 1924**: Carl Anton Larsen, at the edge of the pack-ice. **1925**: Erling Ostern and Carl Paul Hansen, two Norwegian whalers. **April 4, 1925**: Einar Mathisen, mate on the *Svend Foyn*, of septicemia. **Circa Feb. 1, 1926**: John Johnson, a sailor, died in the South Orkneys. **Nov. 16, 1927**: Carl Hansen, skipper of the *Solstreif*, of uremia. **1927-28**: Two young Norwegian whalers died. One, Andersen, was killed when a steel hawser pulling a whale aboard a factory ship snapped, and he was in the way. A second, named Holten, was washed overboard in a storm and drowned. **Jan. 4, 1928**: Hans Albert Gulliksen, ship's carpenter on the *Svend Foyn*, of heart disease. **Jan. 7, 1928**: Albert Langholt, a whaler. **Jan. 23, 1928**: 13 out of the 17 men on the Salvesen whale catcher *Scapa* when she capsized 15 miles off Laurie Island, in the South Orkneys. Gustav Mathisen captain. One of the men was Ragnar Gotfred Been. **April 7, 1928**: Andreas Andersen, a whaler, of beri beri. **Oct. 27, 1928**: Fortunato Escobar, of Argentina, on Laurie Island. **March 14, 1929**: Leif Thorvaldsen (AKA A.M.S. Begann), whaler. **April 1, 1929**: Ivar Likness Torresen, whaler. **Dec. 26, 1929**: Leif Lier and Ingvald Schreiner disappeared in a flight off the *Kosmos*. **Dec. 31, 1929**: Oskar Andersen, whaling riveter, died of fracture of the spine. **Jan. 3, 1930**: One man killed when he was thrown from the oil tank at Tand whaling station at Deception Island during an earthquake. **March 14, 1931**: Peder Knapstad, whaling workman, of a fracture of the skull. **March 31, 1931**: One man died when the whale catcher *Bouvet V* sank in the Ross Sea pack-ice. **Dec. 30, 1946**: Maxwell A. Lopez, navigator, and PO Wendell K. Hendersin, radio operator, killed in the crash of the U.S. Martin Mariner on Thurston Island. PO Frederick W. Williams, engineer, died 2 hours after the crash. **Jan. 1947**: Scotsman Stanley McLeery and 14 Norwegians were killed when the Salvesen whale catcher *Simbra* sank in a storm. John Leesk was the only survivor. **Jan. 21, 1947**: Vance Woodall, USN, in an unloading accident. **Nov. 8, 1948**: Two young British scientists, Oliver Burd and Michael Campbell Green, in a fire at Base D, at Hope Bay. **Nov. 10, 1948**: Geologist Eric Platt, FIDS station leader at Base G, died of a heart attack. **March 8, 1949**: Adrián Lagarrigue, of Argentina (*see* **Lagarrigue Cove**) fell in a crevasse near Orne Harbor, Graham Land. **May 23, 1949**: Three Argentine Army men, 1st Lt. Arnaldo Serrano, Sub Lt. Adolfo Arnoldo Ernesto Molinero Calderón, and Pvt. Emiliano Jaime. **Sept. 21, 1949**: Sargento 1° Ángel Custodio Rojas died while on a day's surveying trip from Capitán Arturo Prat Station. He was in company with station leader Augusto Varas and Sgt. José del Pozo (both of whom survived). **Feb. 24, 1951**: John E. Jelbart, Bertil Ekström, and Leslie Quar together in a Weasel during NBSAE 1949-52. **Nov. 17, 1953**: Arthur Farrant committed suicide. **Feb. 16, 1954**: Santiago Kehler, of Argentina. **Jan. 15, 1955**: Teniente de navío Juan Ramón Cámara, of the Argentine Navy, killed by a helicopter blade at Potter Cove. **Jan. 22, 1955**: Lt. (jg) John P. Moore in a helicopter crash at Kainan Bay. **March 15, 1955**: Mario I. Ortiz, of Argentina, a sailor on the *Bahía Aguirre* (*see* **Conscripto Ortiz Refugio**). **Jan. 6, 1956**: Richard T. Williams, drowned. **Jan. 1956**: I.F. Khmary, Soviet tractor driver at Mirnyy Station, when his tractor broke through the ice. **March 5, 1956**: Max R. Kiel. **March 9, 1956**: Humberto Rojo, of Argentina. **March 24, 1956**: Ron Napier of FIDS. His dinghy overturned after dark on a trip from Signy Island Station to Base G, and his body was never found. His cross is at Base G. **Oct. 18, 1956**: Lt. David Carey, USNR (*see* **Carey Glacier**), pilot of a Neptune coming in to land at McMurdo when it crashed. Also killed: Marion O. Marze, Charles S. Miller, and Capt. Rayburn A. Hudman (USMC). Those who survived were Ensign Kenneth D. MacAlpine (co-pilot), Staff Sgt. Robert C. Spann, USMC (navigator), Clifford C. Allsup, and Richard E. Lewis. **1957**: N.I. Buromskiy, of the USSR. **Jan. 14, 1957**: Ollie B. Bartley, USN construction driver at McMurdo. His Weasel dropped through the sea ice at Hut Point, on his way to *YOG-34*. **Feb. 3, 1957**: Yevgeniy Zykov, Soviet student navigator. **July 12, 1957**: Nelson Cole, from burns in a helo crash near McMurdo, the 9th victim of OpDF. **Aug. 12, 1957**: 1st Lt. Evaristo Sixto Rodríguez Argumedo, of the Argentine Army, died after falling down a 180-foot crevasse on Mount Taylor, near Esperanza Base. He was found unconscious 7 hours later, but died soon thereafter. **Jan. 1958**: Two Soviet scientists, N.A. Chugunov and geologist M.I. Rokhlin, were knocked off the ship by falling ice and died. **Feb. 26, 1958**: Three Argentines died in a helicopter crash at Marguerite Bay — Leónidas M. Carbajal, Pedro Garay, and Alberto O. Freytag. **May 18, 1958**: Argentine naval lieutenant Luis D. Ventimiglia. **May 27, 1958**: On this date Stan Black, Geoff Stride, and Dave Statham, all Fids, set out from Base Y to the Dion Islands to study emperor penguins. They were never seen again. Apparently the ice broke up under them. 9 of the 14 dogs came home. By July 15, 1958 the men were declared dead. **Oct. 15, 1958**: Six men in the cargo area of a Globemaster died when their plane crashed at Cape Roget, en route to make a mail drop at Hallett Station: Technical Sgt. Iman A. Fendley, Technical Sgt. Nathaniel Wallis, Staff Sgt. Leonard M. Pitkevich, Richard J. DeAngelo, Robert L. Burnette, and Kelly Slone. The 7 men on the flight deck survived. Maj. George Bone was the pilot. The snow-covered hill simply did not show up the radar. **Jan. 4, 1959**: Lt. Harvey E. "Dutch" Gardner, pilot, and Lt. (jg) Lawrence J. Farrell, co-pilot, of an Otter which crashed on take-off from Marble Point. Injured were: Joseph Bratina (*see* **Bratina Island**), James H. MacDonald (*see* **MacDonald Point**), and Richard W. Bundy, photographer, aged 22, of Royal Center, Ind. **Jan. 7, 1959**: André Prud'homme, head meteorologist of the French Antarctic team, disappeared in a storm near Pétrel Island. A cross has been erected nearby to commemorate him. **April 23, 1959**: Alan Sharman, of Base G, broke his skull in a fall on the rocks while out walking. **July 7, 1959**: Hartley Robinson, at Wilkes Station, hit by a runaway tractor. Robbie, 48, had been a POW in Malaya. **July 9, 1959**: Lorenzo Vera, of Argentina. **July 26, 1959**: Dennis Bell (q.v.) fell into a crevasse in Admiralty Bay, and was not found. **Oct. 13, 1959**: Walter Soto, of La Quiaca, Argentina. **Nov. 19, 1959**: Lt. Thomas Couzens, Royal New Zealand Armoured Corps, aged 28, in a crevasse accident near Cape Selborne. **Nov. 28, 1959**: Paul V. O'Leary, USNR, builder, of accidental poisoning, after drinking methyl alcohol at a party. **Dec. 17, 1959**: Ramón N. Gomez, 2nd class Argentine seaman. **1959**: One hears reports of petrographer Valeriy Aleksandrovich Sudakov (born 1927), dying in Antarctica. **Aug. 3, 1960**: Eight men died in a fire at Mirnyy Station. 6 Russians: Oskar G. Krichak, Vasiliy Samushkov, Alexei L. Dergach, Igor A. Popov, Aleksandr Z. Smirnov, and Anatoliy M. Belolikov; a Czech, Oldrich Kostka; and a German, Hans-Christian Popp. **Oct. 1960**: Shin Fukushima, Japanese physicist, in a blizzard near Showa Station. **Nov. 2, 1960**: Orlan F. John, USN, steelworker 1st class, building latrines at McMurdo Sound when an explosion killed him. **Feb. 13, 1961**: John Roger Filer, BAS biologist, fell to his death off the Signy Island cliffs while bird hunting, and was buried on this date at Signy Island. **April 9, 1961**: Captain Pedro González Pacheco, leader of Capitán Arturo Prat Station, fell to his death from López Nunatak, on Greenwich Island. **Nov. 9, 1961**: Five killed in a P2V Neptune "Bluebird" crash at Wilkes Station: Dr. Edward C. "Ed" Thiel, geophysicist; Lt. Cdr. William D. Counts, co-pilot; Lt. (jg) Romuald P. Compton, navigator; William W. Chastain, metalsmith; and James L. Gray, flight engineer. Those injured were: Lt. (later Cdr.) Elias J. "Al" Stetz (pilot), Lt. (jg) Ernest L. Hand, Aviation Electrician's Mate 1st Class Jack C. Shaffer, and Aviation Electronics Technician 2nd Class Clarence C. Allen. **Jan. 31, 1962**: Major Pedro Pascual Arcondo, of the Argentine Army. **Feb. 25, 1962**: Anatoliy Shcheglov,

driver-mechanic, died at Mirnyy Station. **Aug. 15, 1963**: Neville Sanders Mann, aged 23, of Godalming, Surrey, part of a 2-sledge party (Gordon Mallinson was the other one) on the ice out of Halley Bay Station, got lost and was never found. **Oct. 18, 1963**: Robert F. White, senior technician (electronics) at Mawson Station. **Dec. 27, 1964**: 2nd class Argentine seaman Ricardo A. Súarez. **May 8, 1965**: Carl R. Disch (q.v.), at Byrd Station. **Oct. 12, 1965**: Jeremy Thomas Bailey, David Peter Wild, and Dr. John Kershaw Wilson, all FIDS at Halley Bay, lost when their Muskeg fell into a crevasse in the Tottan Hills, en route from Halley Bay Station to the Kraul Mountains, on an over-snow radio echo-sounding traverse. Geologist John Ross (b. 1941; of Aberdeen) survived. **Feb. 2, 1966**: 6 men killed on an LC-47J crash on the Ross Ice Shelf: Lt. Harold M. Morris, pilot; Lt. William D. Fordell, co-pilot; Lt. Cdr. Ronald Rosenthal, navigator; Richard S. Simmons, flight radioman; and Charles C. Kelley and Wayne M. Shattuck, flight mechanics. **Feb. 13, 1966**: Andrew B. Moulder, USN, storekeeper, fatally injured in a cargo unloading accident at Pole Station. **May 1966**: Thomas John "Tom" Allan (26; of Innerleithen, Peebles), BAS general assistant at Stonington Island, and John Fraser Noel (24; of Cardiff), BAS radio operator, died of exposure while sitting out a storm in a snow hole near Tragic Corner, Marguerite Bay, on the Fallières Coast, during a sledge traverse. *See* Noel for more details. **July 22, 1968**: Reginald Sullivan, Australian radio operator at Wilkes Station, on a field trip (*see* **Sullivan Nunataks**). **1969 winter**: An East German scientist, wintering-over at Mirnyy station, died after plunging off an ice edge. **Nov. 19, 1969**: Jim Brandau was flying a helo, and Mike Mabry was co-pilot. The chopper crossed a ridge that was too high for it. It came down on a steep incline on Mount McLennan, slid 700 feet down the slope, but miraculously came to a rest. Being a magnesium piston powered helicopter, it burned to a cinder. Brandau and Mabry got out, but 2 of the 3 usarps in the back — University of Wisconsin investigator Thomas E. Berg, and NZ filmmaker Jeremy Sykes, aged 34 — were not so lucky. In all, 6 survived. Mabry hiked to a cache, and radioed for help. **Dec. 3, 1969**: Gordon Mackie, mechanic at Sanae Station. **Oct. 11, 1971**: William Dean Decker, the leading chief petty officer of VXE-6, in his sleep, at McMurdo Station, of a heart attack. **Feb. 8, 1972**: Argentine Army sergeant adjutant Oscar Kurzmann. **Aug. 18, 1972**: Kenneth Wilson, at Mawson Station. **Dec. 11, 1973**: American professor of biology, Dr Wolf Vishniac, fell 500 feet to his death down a slope in the Asgard Range. **Dec. 28, 1973**: Michael Laval, 2nd-in-command of Jacues Cousteau's *Calypso*, was hit by a helicopter propeller on Deception Island, and killed instantly. **March 24, 1974**: Geoffrey Cameron, at Mawson Station. **May 15, 1974**: Greg Nickell, 26, biology lab manager at McMurdo Station, went off the road in his Dodge truck, falling 600 feet (*see also* **Nickell Peak**). **April 27, 1975**: Eduardo C. Ortiz, Argentine Air Force non-commissioned officer. **May 1, 1975**: A member of the personnel at Molodezhnaya Station. This was only the second death at this station since it opened. **Oct. 12, 1975**: Jeffrey D. Rude, 26, drowned in McMurdo Sound, when his tracked vehicle fell through the ice near Turtle Rock. **Jan. 22, 1976**: Gerald E. Reilly, Jr. (*see* **Reilly Rocks**), 19, a Coast Guard seaman, electrocuted in the boiler room of the *Glacier* while in the Amundsen Sea. **Sept. 7, 1976**: Three British mountain climbers, all Fids from Base F, Geoffrey H. "Geoff" Hargreaves (21; meteorologist from Preston), Michael A. "Mike" Walker (21; cook from the Wirral), and Graham J. Whitfield (24; physicist from Rotherham), lost during the ascent of Mount Peary, on the west coast of Graham Land. They were not found, but a single cross marks them on Rasmussen Island. **Sept. 15, 1976**: An Argentine Neptune aircraft plunged into Mount Barnard, on Livingston Island, killing all aboard, all Navy men: Captain Arnoldo Mutto; lieutenants Miguel A. Berraz, Romualdo Migliardo, and Claudio M. Cabut; non-commissioned officers Nelson Villagra, Alberto Brizuela, Juan Noto, Jesús Arroyo, Omar Campastri, and Benjamín Soesa; and Rodolfo Rivarola. **Jan. 11, 1977**: Three Argentine Army men, 1st Lt. Mario García, 1st Lt. Alejandro Merani, and Sgt. Ricardo Segura, in a helo crash at Seymour Island. **Dec. 5, 1977**: Three Argentine air force men died in a helo crash at Half Moon Bay — Lt. José L. Venesia, and two first class cabos, Ramón J. Chávez and Jorge Oviedo. **Jan. 2, 1979**: Pilot, co-pilot and one passenger during take-off of an IL-14 plane from Molodezhnaya Station. **Jan. 19, 1979**: Polish artist and documentary filmmaker Wladzimierz Puchalski (*see* **Puchalski Peak**), at Penguin Rookery, on a hill to the south of Arctowski Station. **Feb. 8, 1979**: Raymond C. Porter (*see* **Porter Hills**), U.S. Coast Guard, from Belacre, Tex., while unloading the *Bland* at McMurdo Station. He was driving a small forklift. It went out of control, rolled over, and pinned him underneath. **March 5, 1979**: Naval Lt. Raúl Rusconi, and two Argentine naval non-commissioned officer, Dardo Leccene, and Jorge L. Martín, in a helo crash on Smith Island, in the South Shetlands. **May 3, 1979**: A helo crashed at Molodezhnaya Station, killing 3 Russians aboard, including summer leader Yev Korotkevich. **Aug. 6, 1979**: Geoffrey B. Reeve, at Casey Station. **Nov. 28, 1979**: Despite continual warnings by the Americans that such flights were dangerous (10,000 tourists had flown over Antarctica on 40 similar flights over the last 3 years), 257 crew and tourists on a "champagne" flight (the 14th such flight in 3 years) in an Air New Zealand DC-10, crashed into the side of Mount Erebus during a white-out. There were 200 New Zealanders aboard Flight TE901, 20 of them crew members, all from Auckland: Thomas James "Tom" Collins (pilot); Gregory Mark "Greg" Cassin (1st officer and co-pilot); Graham Neville Lucas (1st officer); Roy William McPherson (chief purser); Martin John Collins and Russell Morrison Scott (pursers); Gordon Barrett Brooks and Nicholas John Moloney (flight engineers); David John Bennett, Elizabeth Mary Carr-Smith, Martin John Cater, Michael James Finlay, Dianne Keenan, James Charles Lewis, Suzanne Margaret Marinovic, Bruce Rhodes Maxwell, Katrina Mary Morrison, David Brian Sicklemore, Stephen George Simmons, and Marie Therese Wolfert (cabin crew). The most famous person on board was Peter Mulgrew (q.v.), the commentator and ex-Antarctican. These were the NZ passengers who died, and their ages: Peter James Addis, 29; Alan Lawrence Malyon Allan, 59; Marjorie Townsley Allan, 66; Jane Phillipa Allan, 17; Margaret Isobel Anderson; Grant William Anglesey, 19; Mrs. Ethel Mary Armitage, 73; Melinda Maria Arnold; Valerie Ellen Arnold; Grahame Ashton, 63; Thomas Eric Bainbridge, 40; L. Peter Baldwin, 50; Earl Beaumont; Desmond Beckett, 62; Rolain Melville Bond, 54; Marilyn Edna Bond, 48; Ronald Thomas Brehaut, 39; Dr. John Phillip Broad, 51; Geraldine Brooks; Aubrey Conroy Brough, 68; Geoffrey Buchanan, 68; Heinz Buergi; Lindsay Robert Burgess, 60; Rose Eileen Burgess, 58; Lorraine Burton, 42; Mrs. Rae Jeanne Butler, 43; Miss Tangiaho Cameron, 57; Stuart Donald Campbell, 22; John Barry Carlton, 46; Mrs. Marion Rennie Carlton, 40; Margaret Bell Carr, 64; Bryan Harry Chadderton; Mrs. Valerie Enid Chadderton; Alla Christiansen; Hugh Francis Christmas, 58; David Clark, 60; Irene Clark, 75; William Henry Clark, 67; Iris Clark, 65; Joan Cockrill; Cyril Bernard Colbran, 49; Yvonne Louise Colbran, 45; John Wright Cole; Jean Ann Copas, 46; Audrey Joy Copsey, 55; Dr. Constance Corey, 46; Norman David Crabtree, 72; Mary Alison Crabtree; Marie Patricia Dahl, 57; Peter Massie Dawson, 50; Kay Dean, 22; Florence Daisy Debbage; Athol David Duke, 18; Herman Maria Douglas Dykzeul; Johannes Jacobs Dykzeul, 30; G. Eagles; Miriam Edwards; Cecilia Campbell Emmett, 62; John Barnham Emmett; Kathryn Frost; Alfred James Gallagher; Elsie Thelma Gallagher; Mrs. Bryn Gibbs, 78; Pamela Margaret Golland; Violet Gosling, 60; Richard Gullever; Marlene Anne Hansen; Hazel Phoebe Harris, 60; Annie Harrison, 50; Muriel Florence Harrison, 78; James Follett Hartley, 36; Myra Pearl Harty, 82; Eileen Hill, 73; Gordon Alexander Hill; Jean Marie Holloway, 63; Bryan Ernest Holtham, 35; Roy Henry Hotson, 58; John Houghton, 39; Bart Ralph Howarth, 31; Kathleen Maureen Howarth, 47; Peter Howarth, 52; Stephen Hughes, 32; Mildred Humphrey, 69; Thomas William Hyndman, 60; Nicholas Dunstan Jarvis, 43; Evelyn Lois Jenkins; Charles Ivory Jennings, 44; Miss Kathline Karl, 61; Denis Kearney, 40; John Edgar Keith, 39; Nancy Phyllis Kendon, 67; Betty Kerr; Francis Ronald Kerr; Geoffrey Ian Hamilton Kerr, 21; Anthony John Kilsby, 44;

Geoffrey Michael Kilsby, 35; Miss Nancy King, 62; Donald Clive Kirk; James Francis Lanvin, 58; Olaf William Larsen; Mrs. Alison Louise Ling, 60; Urs Locher, 29; B. Lomax; Charles Henry Loughnan, 66; Patrick Louis Loughnan, 61; Shirley Jane MacDonald, 35; Richard John McKendry, 33; John McKenzie, 62; Margaret Joyce McKenzie, 62; John Bruce McMillan, 64; Melba Pearl McMillan, 63; Bernard Joseph McNamara; Eric McNeil; Eudora Emily Madgewick; David Victor Manley, 37; Dorothy Maude Mann, 49; Dorothy Marsden; Joseph Alan Marsden, 45; Sally Martin, 65; Trevor John Maskelyne, 26; R. Mason; Aoxautere Matthews, 60; Olive Myrtle Maynard, 54; William John Maynard; Mark Geoffrey Mitchell, 17; Ross Munro, 34; Owen Murray, 33; Christine Margaret Nicholson, 26; Ian John O'Connor, 41; Mervyn John Oliver, 65; David Lloyd Palmer, 31; Edward James Palmer, 63; Gary Kent Palmer, 29; Ethel Mary Paterson, 54; Linda Jan Paterson, 22; Niola Minchin Paykell; Alfred Murray Payne, 34; Marjorie Ethel Peacocke; Mrs. Carla Pethers, 49; Alexander Francis Plummer, 85; Miss Hilda Francis Plummer, 52; Beatrice Irene Price, 86; Beverley Price; Joy Agnes Pridmore, 40; Miss Valgria Rawlins, 76; Basil Halvor Revell, 52; Mrs. Geraldine Revell, 60; Miss Pamela Gaye Richmond, 24; Lady Helen Robb; Allison Meryle Roberts, 46; Michael Seaver Roberts, 47; Betty Estell Robinson, 36; Mrs. Mary Theresa Scott, 40; Betty Louise Smith, 46; Henry Howard Smythe, 55; Anthony James Stevenson; Donald Mathew Stewart, 35; Alan Maxwell Stokes, 51; Phyllis May Storey, 58; Peter Alec Tanton, 60; Douglas Clement Frank Taylor, 56; Roy Pearce Thomas; Walter Daniel Thomas, 69; Floss Tremain; Robert David Tremain, 60; Henry Ward, 58; Valerie Ward, 57; Mrs. Isobel Watson, 65; Kathleen Watson, 64; Alfred William Webb; Jan Williams, 60; Miss Janet Challis Williams, 70; Leonard Heathcote Williams, 60; Barbara Annie Wood, 66; Irvine Kirkham Wood, 72; Mrs. Linda Worth, 74; Otto Zoll, 46. There were 24 Japanese (all men, unless otherwise stated): K. Furukawa, H. Higuchi, Mr. and Mrs. Hihashi, A. Imai and his wife, Miss A. Kitagawa, S. Noda, T. Ono, Mr. and Mrs. Osawa, Mr. and Mrs. Otani, N. Ozawa, Mrs. H. Sato, S. Segeta, Mr. and Mrs. T. Seki, R. Shionoya, S. Takada, Mr. and Mrs. N. Yanagisawa, and R. Yokoyama. There were 18 Americans: Mrs L.M. Aisenman; Miss D. Barnick and Miss M. Barnick; Miss P. Blair; Mrs. L. Burckhalter; Mrs. H. Duff; Mrs H. Ferrell; Mr. N. Goto; Mrs F. Hance; Mrs. M. Harron; Paul J. Klassovity (33; tour marketing manager for Air New Zealand, in North America); Mr. K. Klensch; Mrs. M.L. Lake; Mr. M. Lies; Mr. G. Shephard; Mr. R. Steel; Mr. and Mrs. Thompson. There were 8 British: Audrey Anderson, aged 75, of Guildford, who in the 1950s had been the head of the BBC's Czechoslovak Service; Nora V. Delmage, of Newbury, Berks; Michael Arthur Potter, 53, of Henley-on-Thames, Oxon; Mr. and Mrs. E. Jahn; and 3 women exchange teachers: Susan Copley, 35, of Rotherham; Elizabeth Jane Edwards, 29, of Newport, Wales; and Elaine Trinder, 29, of Dunstable. There were 3 Canadians: Mr. E. Beaumont, Mrs. E.K.H. Parkaari, and Mr. Karl Ruben, 79. There were 3 Swiss: Mr. and Mrs. Bagnall, and J. Mayer. And, finally, one Frenchman: Mr. E. Letines. By Dec. 18, 1979, only 92 of the bodies had been identified. **Jan. 9, 1980**: Casey A. Jones, the Holmes & Narver cook at Pole Station, under a falling column of snow, during a mining accident. His ashes were scattered over the Transantarctic Mountains. **Jan. 22, 1980**: 1st Sgt. Juan José Mariani, Argentine Army. **Feb. 2, 1980**: Miles V. Mosley (34; from Leeds), BAS base commander of Halley Station, hit by a low flying aircraft. He was buried at sea. Colin Morrell, ionosphere physicist, was injured. **May 16, 1981**: John H.M. Anderson (general assistant) and Robert Atkinson (25; cook; "He wanted to get away from the 9 to 5 existence," his father said later), of Rothera Station, disappeared when their motor sledge plunged into a crevasse on Shambles Glacier, on Adelaide Island. **Feb. 8, 1982**: Bosun's mate 1st class Raymond Thomas Smith (b. 1944), USN, while helping to unload the *Southern Cross* at McMurdo. A 1.5 cubic foot marble block with Smith's hardhat bronzed and mounted on top, was erected as a monument at McMurdo during the 1982-83 season. **April 12, 1982**: Aleksei Karpenko was the only fatality in the fire that destroyed the diesel generator at Vostok Station. **Aug. 14, 1982**: BAS members Ambrose C. Morgan (22; radio operator from Petersfield, Hants), Kevin P. Ockleton (22; physicist from Keyingham, near Hull), and John Coll (23; diesel mechanic from Glasgow), lost when the sea ice broke up during a field trip on Petermann Island. **Oct. 20, 1985**: Kim Nielsen, cook on the *Nella Dan*, died of head injuries after a fall, when the ship was off Enderby Land. **Oct. 29, 1985**: Stephen Bunning, 34, ANARE foreman of the Station Building Group, of burns sustained when he was critically injured in an explosion at Davis Station, during evacuation from there to McMurdo. **Dec. 31, 1985**: At 8 P.M., 2 Chilean pilots and 8 U.S. tourists in a crash landing (*see also* **Tourism**) on a flight from Punta Arenas to Teniente Rodolfo Marsh Station. The tourists on the 10-seat twin-engine Cessna Titan 404 had been planning to spend New Years with the penguins. Ivan Martínez Díaz and Martino Soto; Paul R. Cox, a Brooklyn teacher, aged 59; Ben Callis, 33, of Key West, Fla.; James C. Howell, 43, of Yellow Springs, Ohio, biology professor at Antioch College; James M. Jasper, 56, librarian, of Oxnard, Calif.; Irving Lambrecht, 63, retired, of Los Angeles; Tim Lang, 33, petroleum manager, of Carmichael, Calif; Walther P. Michael, 72, of Columbus, Ohio, economics professor at Ohio State; and Wayne Riddle, 61, engineer, of Buchanan, Mich. **Feb. 1986**: 6 in a USSR Ilyushin IL-14 crash on Philippi Glacier (for more details, *see* **Disasters**). **Nov. 23, 1986**: Two ITT/Antarctic Services, Inc. employees: Matthew M. Kaz, 25, of San Carlos, Calif., and John E. Smith, 44, of Portland, Oreg., who fell into a crevasse while hiking 3 km E of McMurdo Station. These were the first deaths of Americans on official business in Antarctica since Feb. 1982. **May 21, 1987**: 1st Sgt. Ermes Daniel Lescano, Argentine Army. **Nov. 14, 1987**: Mark T. McMillan, of San Jose, California, research assistant, aged 22, in a diving accident near the coast of southern Victoria Land, at New Harbor. He was collecting samples from under the sea ice for a biological research team. He was the 50th American to die on official business in Antarctica since World War II. **Dec. 9, 1987**: Two U.S. Navy crewmen in a ski-equipped Lockheed LC-130 Hercules in East Antarctica, while attempting to land at 9 A.M. Lt. Cdr. Bruce Bailey, aged 45, and Donald M. Beatty, 24. The 9 others aboard were injured, Aviation Storeman Einar Corelli, 45, seriously. The aircraft was making a routine supply flight to D-59, the site of another-long-crashed-Herc (*see* **Disasters**, 1971). The plane was completely destroyed. **1989-90**: One man died aboard the *Mikhail Somov*, and another died at Progress Station. **1990**: Four Indian expeditioners died of carbon monoxide poisoning at Balidaan Field Camp, in the Humboldt Mountains — Shri V.K. Shrivastava, A.K. Bedi, B.L. Sharma (geologists), and N.C. Joshi (of the Indian Navy). **March 1990**: Giles Kershaw, pilot (*see* **Kershaw Ice Rumples**). **1990-91**: One man died at Progress II Station. **Oct. 31, 1992**: New Zealanders Garth Varcoe (*see* **Varcoe Headland**) and Terry Newport (*see* **Newport Point**) in a VXE-6 helo crash at Cape Royds. Also killed was Benjamin W. Micou, USN, air crewman from Michigan. **Dec. 1993**: Jostein Helgestad died in a crevasse during Monika Kristensen's overland trek to the Pole. **1993-94**: One man died on the *Mikhail Somov*. **Feb. 24, 1994**: Argentine Navy man Leonardo Bordenave died at sea. **May 14, 1994**: Two Czech scientists died in a boat accident traveling from Vaclav Vojtech Station to King Sejong Station. **Nov. 23, 1994**: N.J. Armstrong, D.N. Fredlund, and J.C. Armstrong, all of Canada, along with Norwegian E.P. Odegard, in a Twin Otter air crash after re-fueling at Rothera Station, Adelaide Island. **Jan. 30, 1995**: James D. Sparks, USN, killed near Castle Rock. **1994-95**: Two men died at Molodezhnaya Station, and one at Novolazarevskaya Station. **Nov. 25, 1995**: Martin Davies at Davis Station. **1995-96**: A man died in a blizzard at Echo Base. **May 1, 1997**: Chuck Gallagher (*see* **Gallagher Ridge**), USN, retired, of a heart attack while suffering from pneumonia and dehydration. This was the 48th American Antarctica fatality since 1955. *See* **Gallagher Ridge**. **July 7, 1997**: Bruno Josef Leo Zehnder, 52, a Swiss photographer died while trying to find his way back to Mirnyy Station in a blizzard. **Dec. 7, 1997**: The Sydpolteamet parachuting disaster at the South Pole, when 3 men died on impact (*see* **Parachutes**). **1997-98**: One man died at

Progress II Station. **Feb. 24, 1998**: Three naval men from Argentina, Capt. Leandro Hormanstorfer, Daniel Néstor Tavella, and Ricardo Walter Álvez, at Laurie Island (*see* **Órcadas Station**, for details). **June 1, 1998**: Three expeditioners and 2 helicopter crew died in a Russian helicopter crash near Novolazarevskaya Station, while flying from the *Akademik Federov* to the coast. **July 3, 1998**: Argentine Air Force noncommissioned officer Daniel Tavello. **Jan. 28, 1999**: Chilean professor Eduardo García Soto, plunged into a 50-meter deep crevasse in his Snowmobile, on the Fuchs Ice Piedmont, near Teniente Carvajal Station. **Feb. 8, 1999**: A helicopter crashed while the relief of Dumont d'Urville Station was in progress, and 3 men died, Pascal Le Mauguen, Bruno Fiorèse, and Dario Lattanzi. **Jan. 8, 2000**: John G. Biesiada, a Canadian, aged 43, died of blood clots in the lungs, at McMurdo, while waiting for MEDEVAC. **May 12, 2000**: Dr. Rodney Marks died at the South Pole, while wintering-over. Cause of death unknown, but investigators have since discovered (without too much surprise) much use of drugs and alcohol at Pole Station. **2003**: Jeon Jaegyu, a young Korean scientist (*see* **Jaegyu Knoll**). **July 22, 2003**: Marine biologist Kirsty Brown, aged 28, while snorkeling off Rothera Station, was attacked and killed by a leopard seal. She was returned to the UK. **Sept. 17, 2004**: Two men in an Argentine patrol on their way back to base after visiting Artigas Station, disappeared in a crevasse. **Sept. 28, 2005**: Three Chileans, while traveling around doing maintenance and repair to Chilean refugios, died under mysterious circumstances, when their Tucker Sno-cat plunged down a 40-foot crevasse, 17 km from O'Higgins Station. Capt. Enrique Encina (aged 34), and suboficiales Fernando Burboa (the driver) and Jorge Bausalto Bravo (both 49). The 4 who were in the bucket managed to get out. There was a cover-up (not the first, by any means). **Sept. 17, 2005**: Argentine biologist, Augusto Thibaud, scientific leader at Jubany Station. **Nov. 19, 2005**: Peter Orbansen died at Davis Station (*see* **Suicides**). **April 2006**: Joshua Spillane, marine technician, disappeared on April 17 from the *Laurence M. Gould*, and the search was called off 2 days later. **March 2, 2008**: A helicopter crashed while transporting personnel from the *Polarstern* to Georg von Neumayer Station. Stefan Winter, the German pilot, and Willem Polman, a Dutch researcher from NIOS, were killed, and three passengers were injured. **Oct. 4, 2008**: A construction worker was killed at Progress II Station. **Oct. 28, 2010**: Four Frenchmen were killed in an AS350 Squirrel helicopter crash near Dumont d'Urville Station. The pilot (Lionel Gugnard), 2 mechanics (Anthony Mangel and Jean Arquier), and the expedition leader (Frédéric Vuillaume). **Oct. 29, 2010**: It was reported that Hamilton I. "Rocky" Rothrock (b. Jan. 17, 1939), a tourist, died of a heart attack on the sea-ice of the Weddell Sea. **Dec. 13, 2010**: North of the Ross Sea, and just south of 60°S, a 614-ton, 58-meter South Korean fishing boat, the *No. 1 In Sung* (built in 1979), sank. 20 survivors were pulled aboard another Korean vessel, the *No. 707 Hongjin*, but 5 dead persons were also taken on board. They were 2 Indonesians, 2 Koreans, and one Vietnamese. 17 were missing, later declared dead. The total dead were: 7 South Koreans (including the skipper), 7 Indonesians, 4 Chinese, and 4 Vietnamese. The names of the Vietnamese were: Nguyen Tuong, Nguyen Van Thanh, Nhuyen Van Son, and Nguyen Son Hao. The Koreans included: An Bo-seok, Ha Jong-geun, Yu Yeong-seob, Jo Gyeong-yeol, Kim Jin-hwan, and Choi Eui-jong.

DeAtley Island. 73°18' S, 73°54' W. A large, ice-covered island, 16 km E of Spaatz Island, at the S side of Ronne Entrance, on the English Coast. Discovered aerially and roughly mapped during RARE 1947-48. Later named by Ronne for Col. Ellsworth F. DeAtley (1905-2000), U.S. Army, and his wife, Thelma DeAtley (b. 1905), contributors of food and clothing to RARE. Re-mapped by USGS from air photos taken by USN between 1965 and 1967. US-ACAN accepted the name in 1968, and it appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on May 30, 1975, and it appears in the 1977 British gazetteer. It has also appeared as De Atley Island on a 1969 American chart, on a 1977 BAS chart, and on a British chart of 1987. It also appears on a British map of 1979 as Deatley Island.

Rocher Débarquement *see* **Débarquement Rock**

Débarquement Rock. 66°36' S, 140°04' E. An ice-free rock in water, about 160 m long, it marks the N end of the Dumoulin Islands and the NE end of the Géologie Archipelago. FrAE 1837-40 made a landing (débarquement) on a rock in this vicinity on Jan. 21 or 22, 1840, and named it Rocher du Débarquement. The name was later translated, and accepted by US-ACAN in 1955. It is not known with absolute certainty that this rock is the one landed upon, but a close study of air photos taken during OpHJ 1946-47, as well as of surveys and gelogical studies conducted by the French here in the period 1950-52, have led modern geographers to accept the seaward end of this rock as the débarquement place.

Debelt Glacier. 62°32' S, 60°04' W. Flows for 3 km in an E-W direction from the SE slopes of Vidin Heights, and then for 1.5 km in a N-S direction, into Moon Bay between Edinburgh Hill and Helis Nunatak, on Livingston Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for the settlement of Debelt, in southeastern Bulgaria, successor of the ancient town of Deultum.

Debelyanov Point. 62°24' S, 59°40' W. Forms the NW side of the entrance to Mitchell Cove, 2.75 km NW of Negra Point, and 4 km SE of Fort William Point, on Robert Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, after the poet Dimcho Debelyanov (1887-1916).

Islas Debenham *see* **Debenham Islands, Stipple Rocks**

Islotes Debenham *see* **Debenham Islands**

Mount Debenham *see* **Debenham Peak**

Debenham, Frank "Deb." b. Dec. 26, 1883, Bowral, NSW, the younger of twins of English immigrant Rev. John Willmott Debenham and his wife Edith Cleveland (*see* **Cleveland Glacier**). A teacher in NSW, he studied geology under Edgeworth David, and was geologist on BAE 1910-13. Only an old football injury to his knee prevented him from being one of the polarfarers who didn't make it back. However, he took part in both western geological trips during that expedition. After a year at Cambridge, he served as a lieutenant with the Ox and Bucks Regiment in Europe during World War I, and in 1916 was shell-shocked. On Jan. 17, 1917, at Kensington, he married Dorothy Lucy Lempriere of Melbourne. In 1919 he came out of the army as a major, and was awarded the OBE. He was then long associated with Cambridge, in 1925 becoming the founder-director of the Scott Polar Research Institute (from which he retired in 1946), and in 1931 founded the *Polar Record*. That year also he became the first professor of geography at Cambridge, a chair he held until 1949. During his tenure he led various African expeditions. He wrote many books, and believed that one day the Antarctic blizzards would be harnessed as a source of electrical power. He died on Nov. 23, 1965, at Cambridge.

Debenham Glacier. 77°10' S, 162°38' E. Flows ENE from Mount Harker into the N part of Wilson Piedmont Glacier, on the coast of Victoria Land. Although this glacier was indicated on charts prepared by BNAE 1901-04 and BAE 1907-08, it was named by BAE 1910-13, for Frank Debenham. US-ACAN accepted the name, as did NZ-APC.

Debenham Islands. 68°08' S, 67°07' W. A group of islands and rocks between the extreme NE of Millerand Island and the Fallières Coast, just N of Stonington Island, in the NE part of Marguerite Bay, off the W coast of Graham Land. During the summer the rock is exposed, but during winter the islands are covered with a cloak of ice. They include June Island, Brian Island, Barry Island, Audrey Island, Ann Island, and Barbara Island (all named after Debenham's children). Discovered aerially on Feb. 27, 1936, by BGLE 1934-37, surveyed by them between March and May of that year, and named by John Rymill for Frank Debenham. That expedition was based here (on Barry Island) for part of its stay in Antarctica, and the name appears on Rymill's 1938 map. The islands were re-surveyed by Fids from Base E between 1946 and 1950, and the name appears on a British chart of 1947. US-ACAN accepted the name in 1951, and UK-APC followed suit on Sept. 8, 1953. The feature appears in the 1955 British gazetteer. General San Martín Station was located here. Sometimes the Chileans call this group (or at least the rocks, as opposed to the islands; and sometimes the entire feature)

Islotes Alomar, after Sub Lieutenant F. Alomar M., hydrographer on the *Yelcho* in this area during ChilAE 1973-74. At other times they call it Islotes Debenham, as the Argentines do (the Argentine gazetteer of 1970 accepted the name Islotes Debenham, and the Chilean gazetteer of 1974 followed suit). On a 1966 Chilean chart the feature appears with the quaint misspelling "Islas de Benham," and today, despite the gazetteer, the Chileans tend to call the group Islas Debenham.

Debenham Peak. 67°21' S, 50°26' E. Also called Mount Debenham. Rising to 1140 m, S of Amundsen Bay, in the Scott Mountains of Enderby Land, about 11 km E of Mount Cronus. Discovered on Jan. 13 or 14, 1930 by BANZARE, and named by Mawson for Frank Debenham. The peak was more accurately positioned by ANARE, between 1954 and 1958. US-ACAN accepted the name in 1961, and ANCA followed suit.

Mount DeBreuck. 71°16' S, 35°40' E. A mainly ice-free mountain, linear in plan, and rising to about 2000 m, it is the most northerly massif in the Queen Fabiola Mountains. Discovered on Oct. 7, 1960, by BelgAE 1960-61, and named by Guido Derom as Mont De Breuck (sic), for William DeBreuck, U.S. glaciologist and observer on the expedition. On a Belgian plane he was on the flight that led to the discovery of the Queen Fabiolas. He was later at Pole Station, 1962-63. US-ACAN accepted the name Mount DeBreuck in 1966.

DeBreuck Glacier. 82°53' S, 162°50' E. A glacier, 13 km long, a southern tributary to the Kent Glacier, in the Queen Elizabeth Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for William DeBreuck (*see* **Mount DeBreuck**).

Mount DeBusk *see* **DeBusk Scarp**

DeBusk Scarp. 69°23' S, 62°57' W. A nearly vertical rock cliff, 3 km long, and rising to 300 m, at the S side of the mouth of Bingham Glacier, WSW of Cape Reichelderfer, on the Wilkins Coast, on the E coast of Palmer Land. Photographed aerially on Dec. 20, 1928, by Wilkins, who gave the collective name of Finley Islands to this feature, the Engel Peaks, Briesemeister Peak, and the unnamed nunataks to the SE (*see* **Finley Heights**). It was photographed aerially again in Sept. 1940, by USAS 1939-41, who also sledged along this coast. Re-sighted by RARE 1947-48, surveyed from the ground in Jan. 1948 by a combined sledging team of Fids from Base E and RARE personnel, and named by Ronne in 1948 as Mount DeBusk, for Clarence K. DeBusk (1898-1950), Beaumont, Texas Chamber of Commerce executive who helped RARE 1947-48. It appears as such on Ronne's map of 1949. UK-APC accepted that name on Jan. 28, 1953, and US-ACAN followed suit later that year. However, the name was changed to DeBusk Scarp, and it appears as such in the 1955 British gazetteer. It appears as De Busk Scarp on the 1979 USGS sketch map of the N part of Palmer Land.

Debussy Heights. 69°53' S, 71°23' W. Heights rising to about 1300 (in Ravel Peak), 14 km long, and rising to 1250 m, it overlooks Mozart Ice Piedmont to the W, 13 km SE of Mount Morley, in the N part of Alexander Island. First mapped in 1959-60 by Searle of the FIDS, using air photos taken by RARE 1947-48, and plotted by him in 69°44' S, 71°17' W. Named by UK-APC on March 2, 1961, for the French composer, Claude-Achille Debussy (1862-1918). US-ACAN accepted the name later in 1961. It appears on a British chart of 1961. The coordinates were corrected from U.S. Landsat images taken in Feb. 1975, and, with such, the feature appears in the 1977 British gazetteer.

Debutante Island. 69°34' S, 75°30' E. A narrow island, ice-covered except for a small rock outcrop, it is the most southerly of the Søstrene Islands, and barely protrudes above the general level of the Publications Ice Shelf, at the head of Prydz Bay, on the Ingrid Christensen Coast. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos in 1946, by Norwegian cartographers. They plotted it in 69°35' S, 75°33' E. Re-mapped by American cartographer John H. Roscoe in 1952, from air photos taken by OpHJ 1946-47, and so named by him because the island seems to be "coming out" of its ice cover. US-ACAN accepted the name in 1956, and ANCA followed suit.

The Decanter. 77°42' S, 166°22' E. The S point of Tent Island, in the Dellbridge Islands, just S of Cape Evans, in McMurdo Sound, off the W coast of Ross Island. Named descriptively by BAE 1910-13. NZ-APC accepted the name. Also known as Decanter Pillar.

Decanter Pillar *see* **The Decanter**

Islotes Decazes *see* **Decazes Island**

Pointe Decazes *see* **Decazes Island**

Decazes Island. 66°26' S, 67°20' W. An island, 0.8 km long, 2.5 km SW of Belding Island, at the SW extremity of the Biscoe Islands, it is one of the largest of many small islets and rocks that fringe the N side of Matha Strait, off the Loubet Coast, on the W coast of Graham Land. During FrAE 1908-10, Charcot roughly charted this area, and gave the name Pointe Decazes to the southernmost point on the island marking the SW end of the Biscoe Islands. It appears on some of the expedition's maps. On a British chart of 1914, it appears vaguely positioned, as Decazes Point. It appears on a 1943 U.S. Hydrographic Office chart as Point Decazes. US-ACAN accepted the name Decazes Point in 1951, and UK-APC followed suit on Sept. 20, 1955, with the point plotted in 66°30' S, 67°29' W. On a 1956 Argentine chart this island and nearby smaller islands are shown as Islotes Decazes. Following aerial photography by FIDASE in 1956-57, and ground surveys conducted by Fids from Base W in 1958, UK-APC, on July 7, 1959, discontinued the name Decazes Point, and re-applied the name to the island, as Decazes Island, and US-ACAN followed suit in 1963. Jean-Élie-Octave-Louis-Sévère-Amanien Decazes de Glücksbierg, 3rd Duc de Decazes, and 3rd Hertig of Glückbierg (1864-1912), was vice president of the Yacht Club of France, and donated 1000 francs to Charcot's expedition. He married Isaac Singer's daughter (Singer Sewing-Machine Company), but she committed suicide.

Decazes Point *see* **Decazes Island**

Decennial Peak. 84°22' S, 166°02' E. Rising to 4020 m, 5 km SW of Mount Kirkpatrick, in the Queen Alexandra Range. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1965. Named by US-ACAN in 1970, to commemorate the 10th year of the Institute of Polar Studies at Ohio State University, in 1970.

Base Decepción *see* **Decepción Station**

Isla Decepción *see* **Deception Island**

Decepción Station. 62°59' S, 60°41' W. Also called Primero de Mayo Station, its official name was Destacamento Naval Decepción ("Deception naval detachment"). Argentine scientific station on Primero de Mayo Bay, on Deception Island, in the South Shetlands. **1947-48 summer**: The *Pampa* and the *King* brought down the first expeditioners. **Jan. 25, 1948**: The station was inaugurated. It was maintained by the Argentine Navy, and its purported mission was to collect meteorological data. Its first base leader was Roberto A. Cabrera. **1948 winter**: Roberto A. Cabrera (leader). **1949 winter**: Jorge E.H. Pernice (leader). **1950 winter**: Carlos Nielsen Enemark (leader). **Jan.-April 1951**: Roberto Solari (leader). **1951 winter**: Eneas Gianella (leader). **1952 winter**: Wenceslao Adamoli (leader). **1953 winter**: Carlos Fraguio (leader). **1954 winter**: José Fort (leader). **1955 winter**: Eduardo Sciurano (leader). **1956 winter**: Edmundo Lema (leader). **1957 winter**: Zenón Saúl Bolino (leader). This was during IGY, when the station studied meteorology, geomagnetism, glaciology, ionosphere observations, and oceanography. **1958 winter**: Óscar Montes (leader). **1959 winter**: Rodolfo C. Castorina (leader). **1960 winter**: Luis Messiga (leader). **1961 winter**: Cecilio Robles (leader). **1962 winter**: Cecilio Robles (leader). **1963 winter**: Carlos Botto (leader). **1964 winter**: Juan C. Cánepa (leader). **1965 winter**: Daniel Perisse (leader). **1966 winter**: Pablo A. der Meguerditchian (leader). **1967 winter**: Enrique Francisco Domenech (leader). **Dec. 1967**: Deception Island erupted, and the station was evacuated. However, it was soon re-opened. **1968 winter**: Roberto Rodríguez (leader). **1969 winter**: Luis R. Villa (leader). A volcano closed the station again. **2006**: the station was still going, albeit temporarily, for summer-only scientific studies.

Deception Glacier. 78°33' S, 158°33' E. A wide glacier flowing between the Warren Range and the Boomerang Range. So named by the NZ party of BCTAE 1957-58 because it seems to flow direct into Skelton Névé, but instead flows S into the upper part of Mulock Glacier. US-ACAN accepted the name in 1961, and

ANCA followed suit. Originally plotted in 78°30' S, 158°30' E, it has since been replotted.

Deception Harbor *see* **Port Foster**

Deception Island. 62°57' S, 60°38' W. A horseshoe-shaped island, 13 km in diameter, 98.5 sq km in area, 16 km S of Livingston Island, in the South Shetlands. A narrow entrance (Neptunes Bellows) leads into a central, landlocked natural harbor called Port Foster, formed from a breached and drowned volcanic crater. In 1821-22 there are two mentions of this harbor as Dunbar's Harbor, or Port Dunbar. It was also called Williams Harbor, Yankee Harbor (not the Yankee Harbor on Greenwich Island, obviously), Deception Harbor, Deception Bay, or just Deception. It was only called Port Foster subsequent to Foster's visit in 1829. The volcano (Mount Pond) is 1890 feet (550 m) high, and the crater is one of the best anchorages in Antarctica. The waters here get to 100°F, and tourists swim in the caldera in the summer. William Smith may have mapped it as Edwards Island, in 1819-20, and Bransfield charted the E coast in 1820, but Palmer was the first to explore it, on Nov. 15, 1820. He refers to its deceptive nature (indicating that it had already been named by the early sealers). Von Bellingshausen charted it in 1821 (as Ostrov Yaroslava, or Yaroslav Island). It appears as Deception Island on an 1837 British map. The island erupted in 1842. In 1908 Britain claimed it and in 1912 granted a 21-year lease to the Hektor Whaling Company, which set up a whaling station here. The Norwegians tended to call it New Sandefjord. Deception Island became the administrative center for all British whaling activities in the South Shetlands, and operated as such until 1938. By that year the island had a post office, a stipendiary magistrate, and telegraph communications. Actually, the last whaling season based out of Deception was 1931. The island was claimed by Chile and Argentina, as well as by Britain; in the 1940s, it was the scene of rivalry between Argentina and Britain (*see* **Wars**), and the British built Base B, a military station, here during Operation Tabarin. The island erupted on Dec. 4, 1967, the first eruption there in modern times, and again on Feb. 21, 1969. The third, and most violent, eruption took place on Aug. 12, 1970. The explosions caused considerable change in the topography of the island. US-ACAN accepted the name in 1947, and UK-APC followed suit on Sept. 8, 1953. The Argentines and Chileans both call it Isla Decepción. The Russians seem to call it Ostrov Teil (i.e., "Teil island").

Deception Island Station *see* **Base B**

Deception Plateau. 73°15' S, 164°50' E. A high, ice-covered plateau, 17.5 km long, and 10 km wide, in Victoria Land. It is bounded by Aviator Glacier, Pilot Glacier, and Mount Overlord. So named by the Southern Party of NZGSAE 1966-67, because from a distance it looks small. NZ-APC accepted the name, and US-ACAN followed suit in 1968.

Deception Rocks *see* **Fort Point**

Decker Glacier. 77°28' S, 162°47' E. A steep, narrow glacier flowing from the NE slopes of Mount Newall, in the Asgard Range of Victoria Land. Named by US-ACAN in 1976, for Chief Aviation Machinist's Mate William D. Decker, USN, of VX-6 (*see* **Deaths**, 1971).

Cape Découverte. 66°46' S, 141°33' E. Also called Cape Discovery. The point or rocks which marks the NW extremity of the Curzon Islands, along the coast of Adélie Land, NE of Port-Martin. Discovered on Jan. 19 or 20, 1840 by FrAE 1837-40, and named by Dumont d'Urville as Cap de la Découverte (i.e., "cape of the discovery"). It was the first rocky point of the coast seen by the expedition. US-ACAN accepted the name Cape Découverte in 1947.

Découverte Ledge. 66°15' S, 140°15' E. A submarine feature off Cape Découverte, Adélie Land, hence the name.

Bahía Dedo *see* **Briand Fjord**

Cape Dedo. 76°03' S, 27°00' W. On the shore of Bahía Aguda, in the Dawson-Lambton Glacier, at the S of the Weddell Sea. Apparently named by the Russians.

Isla Dedo *see* **Danco Island**

Monte Dedo *see* **Mount Dedo**

Mount Dedo. 64°39' S, 62°33' W. A conspicuous needle-shaped peak, rising to 695 m, S of Orne Harbor, nar the N end of Arctowski Peninsula, above Errera Channel, on the Danco Coast, on the W coast of Graham Land. Roughly charted in Feb. 1898, by BelgAE 1897-99, it appears (unnamed) on Lecointe's 1903 map of the expedition. Named descriptively by ArgAE 1948-49 as Monte Dedo (i.e., "mount finger"), it appears as such on a 1954 Argentine chart, and was the name accepted by the 1970 Argentine gazetteer. In 1956-57 FIDASE photographed it aerially, and Fids from Base O surveyed it from the ground. On Sept. 23, 1960, UK-APC named it Zeiss Needle (for themselves only), after Carl Zeiss (1816-1888), German optical mathematician and founder of the famous Zeiss optical works, in Jena, in 1846. It appears as such on a British chart of 1961. It appears on a 1960 U.S. Hydrographic Office chart as Black Nunatak, but US-ACAN accepted the name Mount Dedo in 1965.

Punta Dedo *see* [1]**Finger Point**, **The Toe**

Isla Dee *see* **Dee Island**

Islas Dee *see* **Dee Island**

Pie de Hielo Dee *see* **Dee Ice Piedmont**

Dee Ice Piedmont. 68°40' S, 66°58' W. Between Pavie Ridge and the mouth of Clarke Glacier, on the E side of Mikkelsen Bay, on the Fallières Coast, on the W coast of the Antarctic Peninsula. Surveyed in 1936-37, by BGLE 1934-37. Photographed aerially on Nov. 27, 1947, by RARE 1947-48. Re-surveyed from the ground by Fids from Base E between 1948 and 1950. Named by UK-APC on Aug. 31, 1962, for John Dee (1527-1608), navigation pioneer and Queen Elizabeth's astrologer (he was the man who named her the Virgin Queen, because she was a Virgo, no less). Some say Dee was the most important man in Elizabethan England. US-ACAN accepted the name later in 1962.

Dee Island. 62°25' S, 59°47' W. A crescent-shaped island with a conspicuous sharp peak rising to 260 m above sea level at its S end, 4 km E of Ongley Island, NW of Discovery Bay, close off the N side of Greenwich Island, in the South Shetlands. Surveyed in 1934-35 by the personnel on the *Discovery II*, and named by them, presumably for its D-shape. It appears on their 1935 chart, as well as on a 1937 British chart. It appears on an Argentine chart of 1946 as Isla Dee, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. There is a 1947 reference to Islas Dee, signifying this island and small islands nearby. UK-APC accepted the name Dee Island on Sept. 8, 1953, and US-ACAN followed suit that year. It appears as such in the 1955 British gazetteer. The British were the latest to replot this island, in late 2008.

Dee Nunatak. 74°58' S, 136°31' W. A rock nunatak, it appears to be within the flow of Garfield Glacier, behind Cape Burks, on the Hobbs Coast, in the W part of McDonald Heights, 1.5 km W of Rhodes Icefall, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Lt. Thomas H. Dee, USN, medical officer at Byrd Station in 1970.

Monte Deeley *see* **Mount Deeley**

Mount Deeley. 67°01' S, 66°13' W. Rising to 2155 m, 10 km NE of Salmon Cove, E of Lallemand Fjord, on the Loubet Coast of Graham Land. Named by UK-APC on Jan. 28, 1953, for Richard Mountfort Deeley (1855-1954), British geologist and glaciology specialist. It appears in the 1960 British gazetteer, and on a 1961 British chart. US-ACAN accepted the name in 1965. The Argentines call it Monte Deeley.

Deep Freeze Range. 74°15' S, 163°45' E. A rugged mountain range, over 130 km long, and 16 km wide, between Priestley Glacier and Campbell Glacier, in Victoria Land, it extends from the edge of the Polar Plateau to Terra Nova Bay. It contains 3 peaks over 11,000 feet: Mount Hewson, Shafer Peak, and Mount Adamson. Peaks in the low and mid portions of the range were first observed from early ships coming into the Ross Sea. The range was mapped in detail by USGS, from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN for Operation Deep Freeze.

[1]**Deep Lake**. 68°33' S, 78°12' E. A nearly square-shaped saltwater lake, about 1.5 km wide, about 9 km ENE of Davis Station, it is one of the two most saline lakes in the Vestfold Hills of Princess Elizabeth Land. 36 m deep, it originated from the sea, and is now 50.4 meters below sea level, and has a surface temperature of -20°C during winter, and +10°C in summer. The bottom 15 meters remain constant at about -14°C. This makes it probably the deepest, and certainly the lowest below sea level, of the chain

of lakes extending eastward along Breidnes Peninsula. Mapped in 1946 by Norwegian cartographers, using the aerial photographs taken during LCE 1936-37. First visited in Jan. 1955, by an ANARE party led by Phil Law. Named by ANCA on April 29, 1958.

[2]**Deep Lake**. 77°34' S, 166°13' E. A little, elongated lake 0.8 km N of Cape Barne, on Ross Island. Named descriptively by BAE 1907-09. US-ACAN accepted the name in 1968, and NZ-APC followed suit.

Deep Lake Tarn. 68°33' S, 78°11' E. A permanent, roughly round, very shallow freshwater body, very close to Deep Lake, in the Vestfold Hills, with a maximum depth of 45 cm, and a surface area of 6500 sq m. Named by ANCA on Oct. 18, 1979, in association with Deep Lake.

Deep Snow Valley. 77°35' S, 166°13' E. A valley in Barne Glacier, near Turret Cone, 2.5 km inland from Cape Barne, on Ross Island. It forms the best approach for sledging to the lower slopes of Mount Erebus. Named descriptively by BAE 1907-09. It appears in the 1958 NZ provisional gazetteer.

Glaciar Defant *see* **Defant Glacier**

Defant Bank. 76°50' S, 31°40' W. A bank in the Weddell Sea. Named by Heinrich Hinze in 1997 for Albert Defant (*see* **Defant Glacier**), the name was accepted by international approval that year.

Defant Glacier. 72°32' S, 61°35' W. A glacier, 3 km wide at its mouth, it flows ESE to the W side of Violante Inlet, on the Black Coast, on the E coast of Palmer Land. Discovered and photographed aerially on Dec. 30, 1940, by USAS 1939-41. It appears (unnamed) on a 1943 U.S. Hydrographic Office photograph. It was surveyed from the ground in Nov. 1947, by a joint sledging expedition comprising personnel from RARE 1947-48 and Fids from Base E. Named by FIDS for Prof. Albert Josef Maria Defant (1884-1974), Austrian-born German geophysicist, meteorologist, and oceanographer, director of the German Hydrographic Office, 1927-46, and editor of the scientific reports of the German Atlantic Expedition (i.e., the *Meteor*). UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer, and on the 1979 USGS sketch map of the N part of Palmer Land. It appears on a 1966 Chilean chart as Glaciar Defant.

The Defile. 77°39' S, 162°43' E. A radiation gully which forms a narrow, ice-free passage between the terminus of Suess Glacier and the talus-covered slope of Nussbaum Riegel, in Taylor Valley, Victoria Land. Charted, described, photographed and named descriptively in 1911, by Grif Taylor, during BAE 1910-13. During OpDF III, Troy Péwé suggested that US-ACAN accept the name, as it was used often in scientific publications, as well as early accounts of the expeditions in the area. US-ACAN did so, in 1960, and NZ-APC followed suit.

Punta Defrancisco. 63°47' S, 61°43' W. A point on the SW side of Hoseason Island, in the Palmer Archipelago. Named by the Argentines.

DeGalan Peak. 80°07' S, 155°55' E. Rising to 2470 m at the head of Magnis Valley, in the Britannia Range. Named by US-ACAN in 2001, for Lee DeGalan, contractor employee in charge of USAP cargo shipments out of Port Hueneme, Calif., for more than 20 years.

DeGanahl, Joe. b. Dec. 30, 1902, Tampico, Mexico, son of explorer, shipbuilder, gold miner, sugar planter, and later airplane manufacturer Charles Francis DeGanahl and his wife Florence Josephine Wrotnowski. After a childhood on a sugar plantation near Tampico and in Mexico City he was forced, with his family, to leave Mexico because of the revolutions. He attended Hackley School, in Tarrytown, NY, from 1915 to 1921, then went to Harvard, graduating in 1925. After a spell as a cub reporter, he became a naval aviator. He went with Byrd to the North Pole in 1926, and married Josephine Coombs, of Scarsdale, NY. When he left for Antarctica as 2nd mate on the *Eleanor Bolling,* for ByrdAE 1928-30, he left behind a one-year-old son in critical condition in hospital with mastoids. He became navigator, reserve pilot, and dog driver and a member of the supporting party, during that expedition. After the expedition he resumed his occupation as reporter in White Plains, NY, and later moved to McLean, Va. He was a lieutenant commander flying a plane near Sitka, Alaska, with several passengers, when they crashed on July 21, 1943. Everyone died.

DeGanahl Glacier. 85°13' S, 170°35' W. A narrow, steep-walled glacier, about 16 km long (the New Zealanders say about 22 km), it flows SE from Jones Peak (the New Zealanders say from the SW shoulder of Mount Fisher, which is to the ESE by about 8 km) into the W side of Liv Glacier opposite June Nunatak. Discovered and photographed by Byrd during his flight to the Pole in Nov. 1929, during ByrdAE 1928-30. He named it for Joe DeGanahl. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Mount Degerfeldt. 66°58' S, 51°01' E. About 5.5 km (the Australians say about 7 km) S of Mount Storer, in the Tula Mountains of Enderby Land. Plotted by Australian cartographers from 1956 and 1957 ANARE air photos. Named by ANCA for Charles Degerfeldt. US-ACAN accepted the name in 1965.

Degerfeldt, Carl Larsson "Charles." b. 1867, Sweden. He moved to Wales, in the 1890s, and in 1898, married a Newport girl Elizabeth Ann Gillman, in Cardiff, where he raised a family. However, his wife died in Cardiff in 1904, aged 27, and Charles went back to sea, leaving his daughter May with his inlaws. On Jan. 8, 1914, while on a ship, he was granted British citizenship. He was ship's carpenter on the *Discovery* during the first half of BANZARE 1929-31, and on June 25, 1930 he arrived back in London on the *Bendigo*, from Melbourne, and returned to Cardiff. He died in Pontypridd in late 1945.

Lago degli Skua. 74°42' S, 164°06' E. A lake, with seasonal ice covering, measuring 70 m by 50 m, with a depth of 2 m, 12 km E of Mount Abbott, and 1.3 km SSW of Mario Zucchelli Station, at Terra Nova Bay, Victoria Land. Surveyed by Vittorio Libera in 1988, and named by him for the skuas that abound here. Italy accepted the name on July 17, 1997.

DeGoes Cliff. 71°44' S, 161°54' E. A steep rock cliff, over 10 km long, on the W side of the Morozumi Range, its N end is 10 km SW of Mount Van Veen. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Louis DeGoes of the U.S. National Academy of Sciences, executive secretary of the Committee on Polar Research, National Research Council.

Deigklumpen. 72°24' s, 27°05' E. A small nunatak, 3 km SE of Devold Peak, in the upper part of Byrdbreen, in the E part of the Sør Rondane Mountains. Named by the Norwegians ("the lump of dough").

Deildebreen. 71°28' S, 12°50' E. A glacier between the Östliche Petermann Range and the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians (the word "deild" means "boundary"). In Norway, boundary markers (deildesteinen) were a big deal in the old days, and anyone who moved them illegally was subject to the most outlandish punishments, which were not limited to this life. Such a villain would become a deildegast, a boundary ghost, who couldn't rest.

Deildedalen *see* **Deildedalen Valley**

Deildedalen Valley. 71°24' S, 12°43' E. A small valley, partly filled with ice, and opening to the N, lying between Mount Deildenapen and a similar mountain mass (known by the Norwegians as Lyrittaren) just westward, in the Östliche Petermann Range, in the N part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-plotted by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, anf from 1958-59 aerial photos taken during rhe same long expedition, and named by them as Deildedalen ("the boundary valley"). US-ACAN accepted the name Deildedalen Valley in 1970.

Deildegasten *see* **Deildegasten Ridge**

Deildegasten Ridge. 71°29' S, 12°42' E. About 8 km long, just S of Deildedalen Valley, in the southernmost part of the Östliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first mapped from these photos. Re-plotted by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and also from 1958-59 aerial photos taken during the same long expedition, and named by them as Deildegasten (*see* **Deildebreen**, for meaning). US-ACAN accepted the name Deildegasten Ridge in 1970.

Deildenapen *see* **Mount Deildenapen**

Mount Deildenapen. 71°24' S, 12°46' E. Rising to 2050 m, it forms the E wall of Deildedalen Valley, in the Östliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-plotted by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and also from 1958-59 aerial photos taken during the same long expedition, and named by them as Deildenapen ("the boundary mountain"). US-ACAN accepted the name Deildenapen Mountain in 1970.

Deimos Ridge. 71°56' S, 68°36' W. A prominent, narrow, rocky spur composed of sandstone and shale, rising to about 900 m, 5 km SW of Phobos Ridge and Mars Glacier, and between Mars Glacier and Saturn Glacier, in the SE corner of Alexander Island, at George VI Sound. Discovered by Ellsworth on his Nov. 23, 1935 flight, and first mapped from these photos in 1936, by U.S. cartographer W.L.G. Joerg. Surveyed in 1949 by Fids from Base E. Named by UK-APC on March 31, 1955, in association with the planet Mars and its two moons (*cf* **Phobos Ridge**). US-ACAN accepted the name in 1956.

Dekefjellet *see* **Dekefjellet Mountain**

Dekefjellet Mountain. 71°58' S, 13°25' E. An elongated mountain, partly rock and partly covered with snow, about 5 km long, and surmounted by Kamskaya Peak, it stands 2.5 km W of Skavlrimen Ridge, in the Weyprecht Mountains, in the W part of the Hoel Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Dekefjellet. US-ACAN accepted the name Dekefjellet Mountain in 1970.

Dekefjellrantane *see* **Dekefjellrantane Hills**

Dekefjellrantane Hills. 72°02' S, 13°23' E. A group of rock hills at the S end of the Weyprecht Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Dekefjellrantane, in association with nearby Dekefjellet Mountain. US-ACAN accepted the name Dekefjellrantane Hills in 1966.

Isla Del Campo *see* **Bonert Rock**

Playa del Canal. 62°28' S, 60°47' W. A beach NW of Punta Nacella, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91 because between the coast and some 30 m out to sea, this beach forms a true channel ("canal" means "channel").

Punta Del Canto *see* **Canto Point**

Del Canto M., Raúl. Chilean capitán de corbeta. Engineer on the *Iquique* during ChilAE 1946-47.

Nunatak del Castillo *see* **William Nunatak**

Isla del Diablo *see* **Devil Island**

Punta del Diablo *see* **Devils Point**

Bahía del Faro *see* [2]**South Bay**

Caleta del Glaciar Rocoso. 62°43' S, 60°24' W. One of several little coves on Hurd Peninsula, Livingston Island, in the South Shetlands, named by the Spanish, this one in reference to the rocky Sally Glacier nearby.

Playa del Lobero. 62°28' S, 60°47' W. A beach between Punta Las Torres to the N and Punta Mann to the S, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1987-88 because remains of 19th-century sealing operations can be seen on the beach ("lobero" means "sealer").

Ensenada del Mármol. 62°47' S, 61°31' W. An inlet indenting the SW coast of Snow Island, between Punta Esteverena on the NW and Vokil Point on the S, in the South Shetlands. Named by the Argentines ("inlet of marble").

Paso del Medio *see* **Summit Pass**

Punta del Medio. 62°28' S, 60°46' W. The point which separates Playa Marko (to the N) from Playa Larga (to the S), on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel of the Instituto Antártico Chileno, during ChilAE 1990-91, because this point divides the two beaches almost symmetrically ("medio" means "middle" or "half").

Playa del Plástico. 62°28' S, 60°47' W. A small beach, less than 175 m long, immediately N of Punta Óscar, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1984-85 because masses of plastic remains have been found here washed up by the sea.

Cabo Del Pozo. 64°23' S, 61°34' W. A cape projecting S from the central part of the S coast of Gándara Island, off the W coast of the Antarctic Peninsula. Named by the Chileans for Sargento 1st class José del Pozo, hospital corpsman at Capitán Arturo Prat Station for the winter of 1949 (*see* **Deaths**, 1949; even though he survived). He participated in a hydrographic expedition to Robert Island that season. The Argentines call this cape Cabo Benítez. Note: The name of the feature has to have a capital "D."

Roca del Rincón *see* **Corner Rock**

Punta Del Romero. 63°50' S, 60°51' W. A point forming the NW entrance of Krivina Bay, on the W coast of Trinity Island, in the Palmer Archipelago. Named by the Argentines.

Paso Del Solar. 64°33' S, 62°01' W. The passage between Lientur Island and Nansen Island, off the W coast of the Antarctic Peninsula. Named by the Chileans for Raúl del Solar Grove, director of the Naval Academy, Feb. 8, 1960-March 3, 1962. He was part of ChilAE 1962-63. The Argentines call it Paso Ocampo. *See* **Cabo Del Pozo** for orthographic note.

Mount Del Valle. 66°08' S, 61°50' W. On the N side of Jason Peninsula, E of Medea Dome, in Graham Land. Named by US-ACAN on July 7, 2008, for Rodolfo Del Valle, earth scientist with the Instituto Antártico Argentino, who worked on the geology of the Antarctic Peninsula for more than 3 decades from the early 1970s on.

Valle del Viento *see* **Windy Valley**

DeLaca Island. 64°47' S, 64°07' W. A tiny U-shaped island, 1.5 km W of Palmer Station, off the SW coast of Anvers Island. It was one of the 2 main investigation areas in a USARP study of terrestrial arthropods from 1965. Named by US-ACAN in 1975, for Ted E. DeLaca, a member of the University of California (at Davis) biological team working in this area between 1971 and 1974. UK-APC accepted the name on May 30, 1975, and it appears in the 1977 British gazetteer.

Île Delaite *see* **Delaite Island**

Isla Delaite *see* **Delaite Island**

Delaite Island. 64°34' S, 62°12' W. An island, 1.5 km long, and about 0.9 km wide, W of Nansen Island, and 5 km NE of Emma Island, about midway between Cape Anna and Reclus Peninsula, in the northwest-central part of Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Discovered and charted on Feb. 7, 1898, by BelgAE 1897-99, and named by de Gerlache as Île Delaite, for Walloon activist and scientist Julien Delaite (1868-1922), a supporter of the expedition. It appears as Delaite Island on Dr. Frederick Cook's 1900 English language map of that expedition, and as such it also appears on a 1901 British chart. On a 1902 map prepared by de Gerlache, it appears as Isola della Cupola (i.e., Italian for "cupola island"), and on Capt. Johannessen's chart of 1920 it appears descriptively named Saddle Island. It appears as Isla Delaite on a Chilean chart of 1947, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name Delaite Island in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a 1959 British chart. It was photographed aerially by FIDASE in 1956-57.

Delaney, Paul. Wintered-over at Mawson Station in 1979, at Davis Station in 1989 and 1993, and again at Mawson in 1996.

Delay Point. 66°27' S, 98°15' E. A brown, rocky bluff rising to 183 m above sea level, on the NW side of Melba Peninsula, about 10 km (the Australians say 7 km) W of Cape Charcot, in Queen Mary Land. Discovered by AAE 1911-14, and so named by the Eastern Sledge Party of the Western Base Party because bad weather delayed the party near here for several days in Nov. 1912. US-ACAN accepted the name, and ANCA followed suit.

Delbert Little Glacier *see* **Kelsey Glacier**
Delbridge Islands *see* **Dellbridge Islands**
Hrebet Delchev *see* **Delchev Ridge**
Vrah Delchev *see* **Delchev Peak**

Delchev Peak. 62°38' S, 59°56' W. Rising to about 1000 m, it forms the summit of Delchev Ridge, 7.05 km ENE of Great Needle Peak, 3.2 km SE of Rila Point, and 7.6 km WSW of Renier Point, and surmounts Iskar Glacier to the W, and Sopot Ice Piedmont to the N, in the Tangra Mountains of Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, as Vrah Delchev, for Gotse Delchev (1872-1903), leader of the Bulgarian liberation movement in Macedonia. The name has been translated.

Delchev Ridge. 62°38' S, 59°54' W. The E ridge of the Tangra Mountains, it runs for 10 km in an ENE direction from Devin Saddle to Renier Point, on Livingston Island, in the South Shetlands. Roughly mapped by the British in 1968, it was mapped in more detail by the Argentines in 1980. Named by the Bulgarians on March 15, 2002, as Hrebet Delchev, in association with Delchev Peak. The name has been translated.

Mount Deleon. 80°51' S, 159°57' E. A mainly ice-free rock outcrop rising to 780 m above sea level, on the S side of Entrikin Glacier, 14 km WNW of Cape Douglas. Mapped by USGS from USN air photos. Named by US-ACAN in 1966, for Emilio A. Deleon (b. Aug. 8, 1933, Waco, Tex.), who joined the U.S. Navy in Jan. 1952, and who was hauling equipment operator at Byrd Station in 1963. He retired from the Navy in July 1974. ANCA accepted the name.

Cerro Delfín. 62°27' S, 60°47' W. A hill, S of Playa Bahamonde, and immediately W of Punta La Caverna, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91 because, from a distance, this hill looks like the back of a dolphin.

Punta Delfín. 62°27' S, 60°47' W. A point directly SSE of Punta Ventana, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91 because, from a distance, this point resembles the back of a dolphin in shape.

Delinski Glacier. 77°29' S, 160°26' E. Flows S into Airdevronsix Glacier, between the McAllister Hills and the Prentice Plateau, Victoria Land. Named by US-ACAN in 2004, for George F. Delinski, Jr., geography discipline, USGS, cartographic technician involved in the massive 1966-2004 preparation of USGS maps of Antarctica. NZ-APC accepted the name on Nov. 30, 2004. *See also* **Airdevronsix Glacier**.

Delius Glacier. 69°38' S, 71°02' W. Between 10 and 13 km long, and between 3 and 5 km wide, it flows NW from the Elgar Uplands into the Nichols Snowfield, in the N part of Alexander Island. Discovered and roughly mapped aerially on Feb. 1, 1937, by BGLE 1934-37. It appears (unnamed) on Stephenson's 1940 map of that expedition. Mapped by Searle of the FIDS in 1959-60, using air photos taken during RARE 1947-48. He plotted it in 69°32' S, 70°43' W. Named by UK-APC on March 2, 1961, for the German-English composer, Frederick Delius (1862-1934). US-ACAN accepted the name later in 1961. With those coordinates, it appears on a British chart of 1961. The coordinates were corrected to 69°32' S, 70°50' W, and then again, using U.S. Landsat images taken in Feb. 1975, to those we know today. With the newest coordinates, it appears in the 1977 British gazetteer.

Cape Deliverance *see* **Deliverance Point**

Deliverance Point. 65°18' S, 64°07' W. A rocky point, 4 km S of Cape Tuxen, it forms the N entrance point of Collins Bay, on the Graham Coast, on the W coast of Graham Land. Discovered and charted in 1909, by FrAE 1908-10, and named by Charcot as Cap de la Délivrance, or Pointe de la Délivrance, after he and his companions (René Godfroy and Ernest Gourdon) were rescued here by their ship the *Pourquoi Pas?* in early Jan. 1909, "after fighting the ice for six days in the picket boat" while exploring the coast. It appears as both Cape Deliverance and Point Deliverance on a 1943 U.S. Hydrographic Office chart, and, in 1956, US-ACAN accepted the name Délivrance Point. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Deliverance Point on July 7, 1959, and US-ACAN followed suit in 1960. It appears as such on a British chart of 1960. It appears on a 1962 Chilean chart as Punta Délivrance, and that was the name accepted by the 1974 Chilean gazetteer.

Deliverance Reef. 66°13' S, 110°26' E. A submerged rocky reef near Casey Station, with a least depth of 7.5 m. The broken ground forming the reef is about 2.5 km long and about 0.8 km wide. Discovered by an RAN Hydrographic Office Detached Survey unit, 1992-93. Named by ANCA on April 27, 1995, for the *Deliverance*, the 10-meter survey boat used by the unit.

Cap (Pointe) de la Délivrance *see* **Deliverance Point**
Punta Délivrance *see* **Deliverance Point**
Délivrance Point *see* **Deliverance Point**

Dell, James William. b. Jan. 24, 1879, West Tarring, Sussex, illegitimate son of Charlotte Harriet Emma Dell, an unemployed domestic cook from Epsom, Surrey, living in Sussex with her parents, upholsterer Robert Dell and his wife Charlotte Herd. James was raised in Worthing with his grandparents, and joined the RN in 1895. He was an able seaman on the *Pembroke* when he transferred to the *Discovery* as bosun's yeoman, butcher, and sail maker for BNAE 1901-04. He took part in several sledging journeys during the expedition, and also played the mandolin. He was in the Navy during World War I, serving in the Dardanelles and the North Sea, and retiring as chief petty officer in 1921, to go back to Antarctica on the *Quest*, 1921-22, as bosun and electrician. He then worked as an engineer and electrician in private life. During World War II he worked in the Coast Guard, and finally retired to Somerset. He was a co-founder of the Antarctic Club. He died on Jan. 21, 1968.

Della Pia Glacier. 78°34' S, 85°03' W. Flows from the E slope of the Craddock Massif, between Mount Mohl and Elfring Peak, into Thomas Glacier, in the Sentinel Range, in the Ellsworth Mountains. Named by US-ACAN on Nov. 1, 2006, for Col. Max Della Pia, commander of the 109th Airlift Wing, NY Air National Guard, 1999-2006, which logistically supported the U.S. Antartcic program.

Dellbridge, James Henry. b. Nov. 17, 1871, Portsea, Portsmouth, son of boilermaker John Alfred Dellbridge and his wife Margaret Evans. He apprenticed to his father, but later joined the Royal Navy. He was a warrant officer engineer on the *Majestic* when he transferred to the *Discovery* as 2nd engineer during BNAE 1901-04. He died on Nov. 12, 1931, at Hawkhurst, Kent.

Dellbridge Islands. 77°40' S, 166°25' E. Also seen spelled (erroneously) as Delbridge Islands. A group of 4 little, but prominent, snow-free volcanic islands in Erebus Bay, just S of Cape Evans, in McMurdo Sound, off the W coast of Ross Island. Tent Island is the biggest, followed in order of size by Inaccessible Island, Big Razorback Island, and Little Razorback Island. The New Zealanders have come up with a term, Razorback Islands, to include only Big Razorback Island and Little Razorback Island, but this term is not recognized beyond NZ personnel. Scott named them Dellbridge Islands in 1902, during BNAE 1901-04, for James Dellbridge. US-ACAN accepted the name, and NZ-APC followed suit.

Pian delle Tectiti. 74°11' S, 162°14' E. A discontinuous granitoid outcrop, with a flat, glacially-eroded nunatak-like summit, 48 km ESE of Timber Peak, in the area of Mount New Zealand, in the Eisenhower Range of Victoria Land. It has an area of about 1000 sq km, although it is difficult to be more precise due to the snow cover. Named ("plain of the tectites") by the Italians on June 13, 2008, after they discovered microtectites in the Transantarctic Mountains, in 2006.

Bahía Deloncle *see* **Deloncle Bay**
Baie Deloncle *see* **Deloncle Bay**

Deloncle Bay. 65°05' S, 63°56' W. A bay, 2.5 km long, indenting the Graham Coast on the E side of Lemaire Channel, and opening on that channel opposite Booth Island, on the W coast of Graham Land between Loubat Point and Glandaz Point. Its coasts are formed by ice cliffs, and at its head a very active glacier discharges into the bay. Its use as a harbor is not recommended, partly due to its great depth, partly because an enormous quantity of floating ice almost completely covers the bay, and, in addition, because of the glacial activity which poses a threat to shipping. Discovered by BelgAE

1897-99. Re-charted by FrAE 1903-05, and named by Charcot as Baie Deloncle, for François Deloncle (1856-1922), French deputy of Cochin China, and secretary of the Geographical Society, who helped finance the expedition. It appears as Deloncle Bay on a British chart of 1916, and that was the name US-ACAN accepted in 1950, with UK-APC following suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a 1958 British chart. It appears on a 1949 Argentine chart as Bahía Deloncle, but (in error) on a 1954 Argentine chart as Bahía Girard. It was photographed aerially by FIDASE in 1956-57. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Bahía Deloncle.

Delphinidae *see* **Dolphins**

Isla Delta *see* **Acuña Island**, [1]**Delta Island**

Delta Bluff. 78°41' S, 161°22' E. A steep, triangular rock bluff immediately N of the mouth of Delta Glacier, on the W bank of Skelton Glacier and the E end of one of the spurs of Mount Harmsworth. Surveyed and climbed in Feb. 1957 by reconnaissance parties of the NZ party of BCTAE, and named by them for its shape. US-ACAN accepted the name in 1962.

Delta Creek *see* **Delta Stream**

Delta Glacier. 78°42' S, 161°20' E. A glacier flowing steeply from the Worcester Range, eastward between Northcliffe Peak and Mount Harmsworth, it is the most northerly of the glaciers entering the W side of Skelton Glacier, in fact entering that glacier immediately S of Delta Bluff. The NZ party of BCTAE surveyed and photographed it in Feb. 1957, and named it Cascade Glacier because of its broken lower icefalls. To avoid confusion with another feature of the same name, it was renamed by them in 1957-58, in association with nearby Delta Bluff. However, it does appear as Cascade Glacier in the 1958 Provisional gazetteer. NZ-APC accepted the name Delta Glacier, and US-ACAN followed suit in 1962.

[1]**Delta Island**. 64°19' S, 62°59' W. An island, 0.8 km long, close SE of Lambda Island, and E of Alpha Island, in Dallmann Bay, in the Melchior Islands, in the Palmer Archipelago. Roughly surveyed in 1927 by the personnel on the *Discovery*, who named it for the Greek letter. Resurveyed by ArgAE 1942 and ArgAE 1943, and named by them as Isla Delta (a translation of the British name). It appears as such on a 1946 Argentine map. ArgAE 1947-48 resurveyed it, and renamed it Isla Hermelo, for Teniente de fragata Ricardo J. Hermelo, 2nd-in-command of the *Uruguay* in 1903. He was captain of that ship in 1906-07. It appears as such on an Argentine chart of 1949, and that was the name accepted by the 1970 Argentine gazetteer. UK-APC accepted the name Delta Island on March 31, 1955, and US-ACAN followed suit in 1956. It was photographed aerially by USN in 1968-69. The Chilean gazetteer of 1974 accepted the name Isla Delta.

[2]**Delta Island** *see* **Acuña Island**

Delta Islands *see* **Acuña Island**

Delta Peak. 86°35' S, 147°30' W. A very sharp peak, 10 km NE of Mount Gjertsen, it marks a pronounced corner point on Ackerman Ridge, in the La Gorce Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. So named by NZGSAE 1969-70 because, seen from the south, its colorful and very visible rock strata suggest a "Delta." NZ-APC accepted the name, and US-ACAN followed suit in 1970.

Delta Stream. 77°38' S, 163°07' E. Also called Delta Creek. A small, intermittent meltwater stream flowing from Howard Glacier for about 3 km, into Lake Fryxell, between Canada Glacier and Commonwealth Glacier, on the S valley wall in Taylor Valley, Victoria Land. Although it was undoubtedly seen by geologists on BAE 1910-13, no record was made of it. First studied on the ground on Dec. 21, 1957, by Troy L. Péwé, and so named by him because the stream has a series of deltas along its length which have been cut though as the stream was rejuvenated, the rejuvenation being caused by the lowering of the former glacial lake. US-ACAN accepted the name Delta Stream in 1962, and NZ-APC followed suit.

Punta Delusión *see* **Delusion Point**

Delusion Point. 65°23' S, 62°00' W. A point marking the E end of a rocky range which forms the S wall of Crane Glacier, and also marking the S side of the terminus of that glacier, at the head of Exasperation Inlet, on the Oscar II Coast, on the E coast of Graham Land. Photographed aerially by Wilkins on Dec. 20, 1928. Surveyed from the ground and charted by Fids from Base D in 1947-48, and they named it in association with Crane Glacier, which had been incorrectly located and wrongly described as a channel cutting through Graham Land (hence the delusion). UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer and on a 1967 Briish chart. It was further surveyed by Fids from Base D in 1960-61. The 1974 Chilean gazetteer rejected Cabo Desengaño, and settled for Punta Delusión. The Argentines, however, had mistaken the mental state intended by the FIDS, and named it Punta Desilusión on a 1953 chart, then they got it right on a 1957 chart, as Punta Delusión, but then on a 1958 chart had Punta Desilusión. However, they finally got it right, as Punta Delusión.

Delyan Point. 62°52' S, 62°22' W. A rocky point forming the NE side of the entrance to Vedena Cove, on the NW coast of Smith Island, 4 km WSW of Cape Smith, 10.66 km NE of Markeli Point, and 1.4 km NW of Matochina Peak, in the South Shetlands. Surveyed by ArgAE 1947-48, and named by them as Cabo Smith (*see* **Cape Smith**). It appears as such on their 1948 chart, and was the name accepted by the 1970 Argentine gazetteer. Named by the Bulgarians on Dec. 15, 2006, for Petar Delyan, better known as Czar Peter II of Bulgaria (1040-41). Mapped by the Bulgarians in 2009.

Cerro Demaría *see* **Mount Demaria**

Mont Demaria *see* **Mount Demaria**

Monte Demaría *see* **Mount Demaria**

Mount Demaria. 65°17' S, 64°08' W. Also called Demaria Peak. A mountain with precipitous sides, rising to 635 m (so say the Americans; the British say 640 m, and the Chileans say 610 m), immediately SE of Cape Tuxen, on the Graham Coast, on the W coast of Graham Land. Probably discovered (but certainly not named) by BelgAE 1897-99. Roughly charted by FrAE 1903-05, and named by Charcot as Sommet Demaria, for Demaria Frères, French photographic pioneers, developers of an anastigmatic lens used on Charcot's expedition. The two brother were Jules (1865-1950) and Paul, sons of Isidore Demaria who had come to Paris in 1848 from Switzerland, and in 1858 opened up a photographic equipment factory which, in 1897, became Demaria Frères. Further mapped by FrAE 1908-10, and referred to on their maps as Pic Demaria. It appears as Mount Demaria on a 1916 British photograph, and that was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. Its position was fixed precisely by BGLE 1934-37. It appears on a French chart of 1937 as Mont Demaria, on an Argentine chart of 1946 as Cerro Demaría, on a 1949 Argentine chart as Monte Demaría, and that last name was the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. However, it is also seen on a 1953 Argentine chart as Pico Demaría. It was photographed aerially by FIDASE in 1956-57, and in 1957-58 was surveyed from the ground by Fids from Base J. It appears (by error) as Lumière Peak on a 1960 U.S. Hydrographic Office chart.

Pic Demaria *see* **Mount Demaria**

Pico Demaría *see* **Mount Demaria**

Sommet Demaria *see* **Mount Demaria**

Demaria Peak *see* **Mount Demaria**

Roca(s) Demas *see* **Demas Rocks**

Roche Demas *see* **Demas Rocks**

Rocher Demas *see* **Demas Rocks**

Demas, Epaminondas James "Pete." He was born Epaminondas Demopoulos on May 31, 1905, at Allisos, near Corinth, Greece. A close associate of Admiral Byrd's, he was with him in the Arctic in 1926, was his mechanic on the ground just before Byrd's flight across the Atlantic, and was aviation mechanic on ByrdAE 1928-30 and ByrdAE 1933-35. He died on Nov. 17, 1979, in Granada Hills, Calif.

Demas, François Barlatier *see under* **de Mas**

Demas Bluff. 76°34' S, 144°50' W. A rock bluff on the S side of the Fosdick Mountains, 3 km W of Mount Richardson, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41, and named by Byrd just after that expedition for Dr. Charles J. Demas, who provided medical assistance and supplies for USAS 1939-41, and also for ByrdAE 1933-35. US-ACAN accepted the name in 1970.

Demas Ice Tongue. 72°17' S, 103°07' W. A

conspicuous ice tongue, it juts out 30 km W from the Abbot Ice Shelf on the Eights Coast, into the NE part of the Amundsen Sea, and forms the westernmost part of Peacock Sound. Discovered on flights from the *Bear* in Feb. 1940, during USAS 1939-41. Named by US-ACAN in 1952, for Pete Demas. Originally plotted in 72°22' S, 103°20' W, it has since been replotted.

Demas Mountains *see* **Walker Mountains**

Demas Range. 75°00' S, 133°45' W. A range, 13 km long, forming the lower E edge of Berry Glacier, in Marie Byrd Land. The range trends N-S, culminating in Mount Goorhigian (1115 m). Discovered by USAS 1939-41. Named by US-ACAN for Pete Demas.

Demas Rock *see* **Demas Rocks**

Demas Rocks. 63°21' S, 58°02' W. A group of 4 low rocks in water off the NW coast of Trinity Peninsula, in the approach to Huon Bay, 5.5 km NE of Cape Ducorps, and separated from the continent by a channel about 5 km wide. Discovered in March 1838 by FrAE 1837-40, and named and charted by Dumont d'Urville, as Roche Demas (i.e., as one rock), for Lt. François de Barlatier de Mas (*see under* **de Mas**). The French were also, by 1841, calling it Rocher Demas, and it appears on an 1861 Spanish chart as Roca Demas, and on a British chart of 1901 as Demas Rock. The Norwegians charted it in 1928, as Demas Skjera. In 1946, Fids from Base D charted it as a group of rocks, and it appears as Demas Rocks on their chart of 1949. This name was accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. In 1948 the Chileans, on one of their charts, called it Grupo Sub-teniente Abott. It appears on a Chilean chart of 1951 as Rocas Demas, and as Demas Rocks it appears in the UK gazetteer of 1955, on a British chart of 1962, and in the British gazetteer of 1974. It appears as Rocas Demas in the Argentine gazetteer of 1970, and in the Chilean gazettteer of 1974.

Demas Skjera *see* **Demas Rocks**

DeMaster Point. 78°04' S, 164°25' E. At the foot of Marshall Valley, in the Denton Hills, on the Scott Coast of Victoria Land. Named by US-ACAN in 1995, for biologist Douglas P. DeMaster, of the University of Minnesota, who conducted seal studies at McMurdo Sound in 1976-77, in the South Shetlands in 1977-78, and in the Palmer Archipelago in 1978-79.

Punta Demay *see* **Demay Point**

Demay Point. 62°13' S, 58°25' W. Forms the W entrance point of Admiralty Bay, King George Island, in the South Shetlands. It was known to sealers from at least 1822. Charted in Dec. 1909 by FrAE 1908-10, and named by Charcot as Pointe Demay, for A. Demay, vice-president of the Gulf of Gascogne Societé d'Océanographie, at Bordeaux, and manager of their Museum-Laboratory there. It was surveyed by the Discovery Investigations in 1927, and appears on their 1929 chart as Demay Point. They surveyed it again between 1935 and 1939. It appears on a 1947 Chilean chart as Punta Demay, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name Demay Point in 1952, and UK-APC followed suit on Sept. 8, 1953. It appear as such in the 1955 British gazetteer, as well as on a British chart of 1962. The British were the latest to replot this feature, in late 2008.

Demidov, Dimitri. A sub lieutenant who, at the request of Rear Admiral Korobka, went on von Bellingshausen's 1819-21 expedition. On Jan. 17, 1820 he and Ivan Simonov landed on an iceberg and captured 30 penguins.

Demidov Island. 67°29' S, 48°21' E. A small island in the SE part of Casey Bay, 8 km N of the mouth of Rayner Glacier, and 14 km SW of the Hydrographer Islands, along the coast of Enderby Land. Photographed aerially by ANARE in 1956, and mapped by SovAE 1957, the latter naming it Ostrov Demidova, for Dimitri Demidov. ANCA accepted the translated name on Oct. 11, 1960, and US-ACAN followed suit in 1961.

Ostrov Demidova *see* **Demidov Island**

Deming Glacier. 72°00' S, 168°30' E. A tributary glacier, flowing along the N side of Novasio Ridge into Man-o-War Glacier, in the Admiralty Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Ralph A. Deming, USN, VX-6 aviation electrician at McMurdo in 1967.

Demock, John *see* **USEE 1838-42**

Glaciar Demorest *see* **Demorest Glacier**

Demorest Glacier. 67°22' S, 65°35' W. Flows SE into Whirlwind Inlet between Flint Glacier and Matthes Glacier, on the Bowman Coast, on the E coast of Graham Land. Discovered aerially by Wilkins on Dec. 20, 1928. Photographed aerially in 1940 by USAS 1939-41. Surveyed and charted by Fids from Base E in 1947, and named by them for U.S. glaciologist Max Harrison Demorest (1910-1942), who disappeared in a crevasse in Greenland, while on active service with the Army. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a British chart of 1954, and also in the 1955 British gazetteer. It appears on a 1957 Argentine chart as Glaciar Demorest, and that was the name accepted by the 1970 Argentine gazetteer. The Chileans call it the same thing.

Dempster, P. b. NZ. 2nd officer on the *Jacob Ruppert*, 1933-34, i.e., during the first half of ByrdAE 1933-35. Famous, perhaps, for (after several false alarms about seeing land) "Don't get me titillated, till ye see the smoke curlin' from the chimneys."

Den Hartog Peak. 84°20' S, 178°52' E. A small peak, rising to about 990 m, with dark rock exposures on its NE and E sides, on the NW side of the mouth of Ramsey Glacier, 5 km SE of Woodall Peak, to the NE of the Hughes Range, in the Transantarctic Mountains, overlooking, and close to, the SW edge of the Ross Ice Shelf. Discovered on Flight C of Feb. 29-March 1, 1940, during USAS 1939-41. Surveyed by Bert Crary in 1957-58, and named by him for Stephen Den Hartog, glaciologist on the Victoria Land Traverse Party of 1958-59, and who wintered-over at Little America V in 1958. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Denais. Crewman on the *Pourquoi Pas?* during FrAE 1908-10.

Anse Denais *see* **Denais Stack**

Caleta Denais *see* **Denais Stack**

Denais Stack. 62°08' S, 58°29' W. A conspicuous rock stack, 2.5 km N of Point Thomas, on the W side of Admiralty Bay, King George Island, in the South Shetlands. During FrAE 1908-10 Charcot, during a rough charting of the area, named a cove near here as Anse Denais (i.e., "Denais cove"), for Denais (q.v.), one of his crewmen. That anse was below the ice cliffs on the NW side of Ezcurra Inlet (i.e., SW of the present feature). What makes it a bit more complicated is that, on other maps from the same expedition, another cove, much closer to the present feature, bears the name. The one below the ice cliffs is seen on a 1929 British chart, prepared by the Discovery Investigations. It appears on a 1947 Chilean chart as Caleta Denais, and that was the name accepted by the Argentine gazetteer of 1970 and also by the Chilean gazetteer of 1974. FIDASE 1956-57 air photos revealed neither of the coves shown on the French maps, so UK-APC, on Sept. 23, 1960, gave the name to this stack nearby, in order to preserve the name Desnais. US-ACAN accepted that situation later in 1960. It appears as such on a British chart of 1962. The British were the latest to replot this feature, in late 2008.

Mount Denauro. 86°27' S, 151°30' W. Rising to 2340 m, 5 km S of Lee Peak, between Bartlett Glacier (to the W) and Scott Glacier (to the E), in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Ralph Denauro, VX-6 aviation mechanic during OpDF 66 (i.e., 1965-66).

Cabo Denax. 63°16' S, 62°00' W. A cape on the NE side of Low Island, in the South Shetlands. Named by the Argentines.

Dendtler Island. 73°01' S, 90°13' W. An ice-covered island, 21 km long, in the E part of the Abbot Ice Shelf, between Farwell Island and Fletcher Peninsula. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Major Robert Dendtler, U.S. Army, coordinating officer on the staff of the commander, U.S. Naval Support Force, Antarctica, during OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1967-68). Originally plotted in 72°58' S, 89°57' W, it has since been replotted.

The *Deneb of Rye*. A 20.85-meter British aluminum ketch, designed by Henry Scheel, built at the Royal Huisman Shipyard, in the Netherlands, and launched in 1995. Skippered by Hugues Delignières, she visited the South Shetlands and the Antarctic Peninsula in 1997-98.

Denfeld Mountains. 76°55' S, 144°45' W. A group of scattered mountains between Crevasse Valley Glacier and Arthur Glacier, in the Ford Ranges of Marie Byrd Land. Explored by ByrdAE 1928-30, ByrdAE 1933-35, and USAS 1939-41. Named by Byrd for Louis Emil Denfeld (b. April 13, 1891, Westboro, Mass. d. March 28, 1972, Westboro), who joined the U.S. Navy in June 1908, and who was the chief of naval operations who helped plan OpHJ 1946-47. He retired as an admiral in March 1950. US-ACAN accepted the name in 1970.

Denglu Wan. 62°15' S, 58°59' W. A cove indenting Fildes Peninsula, close to Great Wall Station, on King George Island, in the South Shetlands. Named by the Chinese.

Mount Denham. 66°55' S, 52°19' E. A mountain, 1.5 km NW of Mount Keyser, and about 4 km NE of Mount Ryder, in the E part of the Tula Mountains of Enderby Land. Plotted from 1957 ANARE aerial photos. Named by ANCA for William M. "Bill" Denham, weather observer who wintered-over at Mawson Station in 1961. He had also wintered-over at Macquarie Island in 1949. US-ACAN accepted the name in 1965.

Mount Denholm. 68°12' S, 49°07' E. A mountain, 1.5 km (the Australians say about 3 km) SE of Mount Marriner, in the Nye Mountains. Mapped from 1956 ANARE aerial photos. Named by ANCA for John Victor Denholm, physicist who wintered-over at Wilkes Station in 1959. He had also wintered-over at Macquarie Island in 1957. US-ACAN accepted the name in 1965.

Islote Deniau *see* **Deniau Island**

Deniau Island. 65°27' S, 64°19' W. A small island midway between Darboux Island and the Lippmann Islands, about 8 km W of the entrance to Beascochea Bay, on the Graham Coast, on the W coast of Graham Land. Discovered by FrAE 1908-10, and named by Charcot as Îlot Deniau, for a Monsieur Deniau who provided stationery for the expedition. It appears as Deniau Island on the 1938 map prepared by John Rymill from BGLE 1934-37. However, on a 1948 British chart it appears as Deniau Islet, and that was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 20, 1955. It appears on a 1953 Argentine chart as Islote Deniau, and that name was accepted by the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Photographed aerially by FIDASE in 1956-57. UK-APC redefined it as Deniau Island (the name Rymill had used in the 1930s) on July 7, 1959, and US-ACAN accepted that name in 1963.

Deniau Islet *see* **Deniau Island**

Deniel, Alexandre. b. Jan. 1817, Le Croisic, France. Junior seaman on the *Zélée* during FrAE 1837-40. He left sick at Hobart on Feb. 19, 1840, after having been twice to Antarctica during the expedition.

Bahía Denise *see* **Larvik Harbor**

Cape Denison. 67°00' S, 142°40' E. A rocky point, 1700 m across, which juts out 900 m into Commonwealth Bay, from the head of that bay, on the coast of George V Land. Discovered in 1912 by AAE 1911-14, and named by Mawson for Sir Hugh Robert Denison (1865-1940; born with the last name of Dixon, he changed it to his mother's name, in 1907), tobacco manufacturer and newspaper owner (i.e., the *Sun*) of Sydney, and the major patron of the expedition. Mawson set up his main base here. *See also* **Cape Denison Refuge Hut** (under **C**). US-ACAN accepted the name, and ANCA followed suit.

Denison Island. 66°18' S, 110°27' E. An island, 0.4 km W of Beall Island, in the Windmill Islands. First mapped from air photos taken in 1947 during OpHJ 1946-47, and in 1948 during OpW 1947-48. Named by US-ACAN in 1963, for Dean R. Denison, aurora scientist at Wilkes Station in 1958. ANCA accepted the name.

Arrecife Denisson *see* **Dennison Reef**

Denman Glacier. 60°45' S, 99°25' E. Between 110 and 130 km long, and between 11 and 19 km wide, it flows N from Wilkes Land into the Shackleton Ice Shelf, E of David Island, in Queen Mary Land. Discovered in Nov. 1912, by the Western Base Party of AAE 1911-14. Named by Mawson for Thomas, 3rd Baron Denman (1874-1954), governor general of Australia, 1911-14, and a patron of the expedition. US-ACAN accepted the name in 1947, and ANCA followed suit.

Denmark. Over the years the occasional Dane has gone to Antarctica, always with some other country's expedition. There were several Danish meteorologists at Órcadas Station over the years. Dr. Malver was the medical officer on the whaler *Gobernador Bories* in 1908-10. Dr. Krogsbaek, based on the whaler *Ronald*, worked at Deception Island in the 1920s. On May 20, 1965, this country was ratified as the 15th signatory of the Antarctic Treaty. In 2006-07 there was a worldwide Danish oceanographic voyage, which took in several stations and other sites on the Antarctic Peninsula. The Technical University of Denmark (TUD) was involved with SPRI and the NSF in radio echo-sounding programs.

Dennes Point. 76°41' S, 159°45' E. A dolerite point projecting from the W side of Shipton Ridge into the Shimmering Icefield, in the Allan Hills of Victoria Land. Discovered and explored by the NZARP Allan Hills Expedition of 1964, who named it for a similar dolerite feature on Bruny Island, Tasmania. NZ-APC accepted the name, and US-ACAN followed suit in 1965. ANCA accepted the name on Aug. 10, 1966.

Dennis Knoll. 78°14' S, 166°10' E. A gentle knoll, ice-free on its W slope, and rising to about 400 m, near the USAP communication facility on the SW shore of Black Island, 3 km SW of Mount Vision, in the Ross Archipelago. Named by US-ACAN on July 17, 2007, for Dennis Hoffman, who, in 2006, completed 20 years of service in support of the U.S. Antarctic program. He began as a carpenter, worked his way up to the computer tech shop, and finished as a network engineer, in 8 summer seasons and 13 winters at McMurdo. There are at least 3 features in the area with the name Hoffman, so it was thought best to be constructive in the naming.

Arrecife Dennison *see* **Dennison Reef**

Dennison Reef. 66°29' S, 66°50' W. Between Shull Rocks and the Pauling Islands, E of the S end of the Biscoe Islands, in Crystal Sound. Mapped from air photos taken by RARE 1947-48, and from ground surveys conducted by FIDS in 1958-59. Named by UK-APC on Sept. 23, 1960, for David M. Dennison, British physicist who took x-ray diffraction pictures which were used to interpret the crystal structure of ice. US-ACAN accepted the name in 1965. The Argentines call it Arrecife Dennison (a name also seen spelled erroneously as Denisson).

Dennistoun, James Robert "Jim." b. March 7, 1883, Peel Forest, Timaru, NZ, son of George James Dennistoun and his wife Emily Russell. After school in Wanganui, and Malvern College (in Worcestershire, England), he became a mountain climber, being the first up several NZ peaks, and was alpinist in charge of the mules on the *Terra Nova*, on the way to Antarctica during BAE 1910-13. From Dec. 1911 to April 1912 he kept a journal on the *Terra Nova*. After the expedition, he went into sheep farming, and, when World War I broke out, he returned to England, and got a commission in the 23rd Squadron, of the Royal Flying Corps. He was flying over Austria when his biplane caught fire and he came down. He was taken prisoner, and died of his wounds as a pow on Aug. 9, 1916.

Dennistoun Glacier. 71°15' S, 168°00' E. About 80 km long, it flows NW from the ice-covered N slopes of Mount Black Prince, Mount Royalist, Mount Adam, Mount Troubridge, and Mount Parker, in the Admiralty Mountains of Victoria Land, between the Lyttelton Range and the Dunedin Range, then turns E on rounding the latter range, and enters Robertson Bay, S of Cape Scott, on the N coast of Victoria Land. The coastal extremity of the glacier was surveyed and charted by Campbell's Northern Party of 1911-12, during BAE 1910-13, and the glacier was named by that expedition for Jim Dennistoun. The entire extent of the glacier was mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. US-ACAN accepted the name, and NZ-APC followed suit. Sometimes, erroneously, called Fowlie Glacier (q.v.).

Denson, Ralph Benjamin "Ben." b. May 30, 1908, Avon, Mass., but raised in Abington, Mass., and Middleboro, Mass., son of shoe factory operator and later sanitarium worker Benjamin F. Denson and his wife Alice. He was mess boy on the *Eleanor Bolling*, 1929-30. In between the two halves of the expedition he found himself faced with 6 months idleness in NZ, so he and 11 others took the *Tahiti* for San Francisco, where they arrived on April 12, 1929. He and John Jacobson traveled on to New York,

arriving on April 19, to much fanfare. He died in May 1985, in Oswego, NY.

La Dent *see under* **L**

Isla Dentada *see* **Kellick Island**

Rocas Dentadas *see* **Jagged Rocks**

Roca Denticulada *see* **Jagged Rocks**

Rocas Denticuladas *see* **Jagged Rocks**

Dentine Peak. 71°35' S, 163°44' E. Rising to 2210 m, it is the highest peak in the NE portion of the Molar Massif, in the Bowers Mountains of Oates Land, in Victoria land. Named by geologist Roger Cooper, leader of NZARP paleontological parties here in 1974-75 and 1981-82, in association with the "tooth" motif running through the names of certain features in this area. NZ-APC accepted the name, and US-ACAN followed suit.

Denton, George Henry. b. 1941. Of Winchester, Mass. Glaciologist with the department of geological sciences and director of the Institute for Quaternary Studies (1988-93), at the University of Maine at Orono. He conducted geological research in the Transantarctic Mountains and Victoria Land, including work in the Denton Hills (which were named for him), between 1958 and 1999. He made 25 visits to Antarctica. In 1958-59 he was geological assistant to Robert Nichols at Marble Point.

Denton Glacier. 77°29' S, 162°38' E. A small hanging glacier, 1.5 km long and 1.5 km wide, which drains the NW slopes of Mount Newall, to the E of Goodspeed Glacier, and which terminates on the S wall of Wright Valley, in Victoria Land. Named by U.S. geologist Robert Nichols for George H. Denton, the name was accepted by US-ACAN in 1962. NZ-APC also accepted the name.

Denton Hills. 78°05' S, 163°55' E. A group of rugged foothills, 38 km long in a SW-NE direction, and 15 km wide, to the E of the Royal Society Range, on the Scott Coast of Victoria Land. They comprise a series of east-trending ridges and valleys circumscribed by Howchin Glacier, Armitage Saddle, Blue Glacier, the coast, and Walcott Bay. The highest summits, Mount Kowalczyk (1703 m) and Goat Mountain (1634 m) rise from Hobbs Ridge, in the N part of the foothills. Elevations decrease southward, as in Kahiwi Maihao Ridge (1045 m), near the center of the group, and the Xanadu Hills (820 m) at the S end. The principal glaciers (Hobbs, Blackwelder, Salmon, Garwood, Joyce, Rivard, Miers, Adams, and Ward) flow E, but have receded, leaving several dry valleys. Discovered and roughly mapped by BNAE 1901-04. The hills were mapped in detail following IGY (1957-58), by USARP and NZARP personnel, and named by US-ACAN in 1999, for George H. Denton. NZ-APC accepted the name on Nov. 12, 1999.

Monte Denucé *see* **Mount Denucé**

Mount Denucé. 66°43' S, 64°12' W. A rounded mountain, rising to 1535 m, between Mount Hulth and Mount Haskell, on the SW side of Cabinet Inlet, on the Foyn Coast, on the E coast of Graham Land. In Dec. 1947 it was photographed aerially by RARE 1947-48, and surveyed from the ground by Fids from Base E, the Fids naming it for Jean Denucé (1878-1944), Belgian author of *Bibliographie Antarctique*, published in Brussels in 1913. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer. It appears on a Chilean chart of 1963, as Monte Denucé.

Denys, Charlene. American biologist, protégée of Dr. Mary Alice McWhinnie. She first went to Antarctica with Dr. McWhinnie in 1975-76, and spent the next four summers at Palmer Station. She took over Dr. McWhinnie's work when the latter died in 1980.

Departure Rocks. 67°37' S, 62°49' E. A group of 4 steep-sided rocks in water, 1.5 km N of Peake-Jones Rock, in Holme Bay, Mac. Robertson Land, and 2.4 km SW of Mawson Station. Photographed by LCE 1936-37, and mapped from these photos ten years later by Norwegian cartographers (but not named by them). So named by ANCA on Oct. 11, 1960 because ANARE parties leaving Mawson Station for the west on the sea ice always pass through or close to these rocks. US-ACAN accepted the name in 1965.

Point Depeaux *see* **Depeaux Point**

Pointe Depeaux *see* **Depeaux Point**

Punta Depeaux *see* **Depeaux Point**

Depeaux Point. 65°11' S, 64°10' W. Forms the S end of Petermann Island, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Discovered and charted by FrAE 1908-10, and named by Charcot as Pointe Depeaux, for Rouen industrialist, philanthropist and art collector François Depeaux (1853-1920), builder of the *Pourquoi Pas?* It appears as Point Depeaux on a 1943 U.S. Hydrographic Office chart. It appears as Punta Depeaux on a 1949 Argentine chart, and that was the name accepted by the 1970 Argentine gazetteer. It was photographed aerially by FIDASE in 1956-57, and on July 7, 1959, UK-APC accepted the name Depeaux Point. It appears as such on a U.S. Hydrographic Office chart of 1963, and US-ACAN accepted the name in 1971.

Cabo Depósito *see* **Cabo Depot**

Punta Depósito *see* **Store Point**

Cabo Depot. 64°24' S, 57°25' W. A prominent rocky cape, immediately S of Tortoise Hill, and 6 km W of Hamilton Point, on the SE coast of James Ross Island. Discovered (but, apparently, unnamed) by SwedAE 1901-04. Named by the Chileans. The Argentines call it Cabo Depósito, but plot it in 64°23' S, 57°30' W.

Depot 480. 79°51' S, 148°00' E. Depot established by Hillary on the Polar Plateau in support of BCTAE 1956-58. Hillary began building it on Nov. 25, 1957, and it was fully stocked by plane on Dec. 6, 1957.

Depot 700. Hillary set this depot up on the Polar Plateau, 500 miles from the South Pole. Begun on Dec. 15, 1957, it was completed by Dec. 20, 1957, having been fully stocked from air drops. This was where Hillary was to have met Fuchs during BCTAE 1957-58, but, instead, Hillary pushed on to the Pole from here.

Depot Bay *see* **Farr Bay**

Depot Crag. 62°05' S, 57°57' W. A small crag N of Turret Point, King George Bay, King George Island, in the South Shetlands. An old British depot was found here in Jan. 1980, and Andrzej Paulo, of the geological party of PolAE 1979-80 suggested the name, which was accepted officially by the Poles in 1981.

Depot Glacier. 63°25' S, 57°03' W. A well-defined valley glacier flowing NE, and flanked by lateral moraine, it terminates in a high, vertical ice cliff at the head of Hope Bay, at the NE end of the Antarctic Peninsula. Discovered and roughly mapped by SwedAE 1901-04, and named by Nordenskjöld as Depot-Gletscher because, as seen from Antarctic Sound on Jan. 15, 1902, it looked like the site for a depot. Resurveyed by Fids from Base D in 1945-46. UK-APC accepted the translated name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears as such on a British chart of 1950, and also in the 1955 British gazetteer. Re-surveyed by Fids from Base D in 1955. There is a 1955 Argentine reference to it as Glaciar Esperanza (they call Hope Bay "Bahía Esperanza").

Depot-Gletscher *see* **Depot Glacier**

[1]**Depot Island**. 66°56' S, 57°19' E. A small island in the Øygarden Group, 1.5 km N of the W end of Shaula Island, at the W end of the Sirius Islands. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos 10 years later by Norwegian cartographers. So named by ANCA on Feb. 18, 1958 because of the depot established here by ANARE in 1956. US-ACAN accepted the name in 1961.

[2]**Depot Island**. 76°42' S, 162°58' E. A small, glaciated granite island, about 3 km NW of Cape Ross, off the coast of Victoria Land. Discovered by Edgeworth David in Oct. 1908, on the South Magnetic Polar Party, during BAE 1907-09, and named by him for the depot of rock specimens he put on the island. US-ACAN accepted the name in 1956, and NZ-APC followed suit.

Dépôt Island. 66°37' S, 140°05' E. A small, but relatively important, rocky island, about 160 m long, 1 km NW of Pasteur Island, near the center of the Dumoulin Islands, N of the Astrolabe Glacier. Photographed aerially during OpHJ 1946-47. Charted in 1950-51 by the French, and named by them as Île du Dépôt, for the depot built here by the personnel from the *Commandant Charcot* in Jan. 1951, for use by expeditioners into the interior. US-ACAN accepted the name Dépôt Island.

Depot Islet *see* **Darbel Islands**

Depot Lake. 68°34' S, 78°22' E. An irregular-shaped lake, about 600 m long, in the Vestfold Hills. A depot was built here by ANARE in 1978. Named by ANCA on July 26, 1983.

Depot Mountains *see* **Depot Peak**

Depot Nunatak. 77°45' S, 16°04' E. Rising to 1980 m, 13 km W of Finger Mountain, and

the same distance SW of Beehive Mountain, at the head of Taylor Glacier, and at the W side of Cassidy Glacier and the Quartermain Mountains, in Victoria Land. Nearly vertical cliffs of columnar dolerite rise 152 m above glacier level at its E end. Named by BNAE 1901-04 during their 1903 western journey, for the food depot they made here. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Depot 1. 69°30' S, 41°28' E. A Japanese summer refuge hut built on April 21, 1959, at an elevation of 1470 m above sea level.

Depot Peak. 69°02' S, 64°36' E. A solitary nunatak lying in a N-S direction, and with a marked, single, needle-shaped peak, about 59 km N of the Stinear Nunataks, in Mac. Robertson Land. This excellent landmark is about 180 km SSE of Mawson Station. Discovered by Bob Dovers' ANARE Southern Party party on Dec. 21, 1954, and named by him for the depot he built here. ANCA accepted the name, and US-ACAN followed suit in 1961.

Depots. Marked stations of supplies and fuel for a traversing party. A depot-laying party would go out ahead of the main party and lay them for the outward and return trip of the main party. They figured most prominently in the expeditions of Amundsen, Scott, Shackleton, and Mawson, and during BCTAE 1955-58. Amundsen's depots, for example, at various points on his way to the Pole in 1911, consisted of a cube of 2 meters, built of hard snow blocks cut from the solid crust, with a dark pennant on top. Scott's and Shackleton's diaries are filled with stories of desperate rushes to get to the depots, while Amundsen's preparations saved him an enormous amount of anguish. *See also* **Depot 480, Depot 700, 150-Mile Depot, 300-Mile Depot,** and **One-Ton Depot**.

Deprez Basin. 68°30' S, 78°12' E. A near-circular body of water, about 400 m in diameter, adjacent to Partizan Island, in the Vestfold Hills. The basin is tenuously connected to Langnes Fjord, the connection being about 40 m wide and very shallow. The ice in the basin during winter is significantly above that of the fjord, suggesting that no water exchange occurs between the two features during winter. The maximum recorded depth of the basin is 13 m, and the salinity of its water ranges from above seawater (about 13gL-1) at the surface to about 120gL-1 at 13 m. The water is anoxic beneath 6 m. The basin has been stratified since at least 1991, when the first known sampling occurred, and should therefore be considered meromictic. The basin is similar to Lake Burton and Bayly Basin in being permanently stratified while maintaining a seasonal connection to marine waters. Named by ANCA on April 27, 1995, for Patrick Deprez, chemical limnologist who wintered-over at Davis Station in 1964.

Depth of ice. The average depth of ice on the Antarctic continent is 6500 feet, and in some places is over 2 miles deep. Of course, in some places there is no ice. The greatest recorded depth of ice in Antarctica, measured by radio echo soundings, is 15,670 feet, in 69°09' 38" S, 135°20°25" E. At the South Pole the depth of ice is 9186 feet. The average depth of ice on the Ross Ice Shelf is between 1100 and 2300 feet. *See also* **Core samples**.

Berge der Deutsch-Sowjetischen Freundschaft. 67°59' S, 47°22' E. A mountain, SW of Kichenside Glacier, in Enderby Land. Named by the Germans for German-Soviet friendship.

Dera Icefall. 62°10' S, 58°32' W. A steep icefall, an outlet of the Warszawa Icefield, at Hervé Cove, Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Jerzy Dera, leader of the oceanographical-biological party at Arctowski Station during PolAE 1977-78.

Île du Derby *see* **Derby Island**

Derby Island. 66°38' S, 140°05' E. A small rocky island close N of Astrolabe Glacier Tongue, 0.8 km SW of Pasteur Island, at the S end of the Dumoulin Islands, in the Géologie Archipelago. Photographed aerially during OpHJ 1946-47. Charted by the French in 1949-51, and named by them as Île du Derby, for the "Derby" which the French field parties held among themselves to reach it. US-ACAN accepted the name Derby Island in 1956.

Derbyshire Peak. 72°31' S, 161°06' E. A small rock peak, 8 km NNE of Mount Weihaupt, in the Outback Nunataks. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for Edward Derbyshire (b. Aug. 18, 1932), Australian geologist at McMurdo, 1966-67.

Morro Derecho. 64°21' S, 56°57' W. A hill in the Karlsen Cliffs, overlooking Wilckens Gully, on the E side of Spath Peninsula (the long ice-free peninsula that forms the NE extremity of Snow Hill Island), off the NE coast of the Antarctic Peninsula. Named by the Argentines. It means "right nunatak," as opposed to its neighbor just to the left, Morro Izquierdo (*see* **Morro Jaña**) .

DeRemer Nunataks. 69°45' S, 158°09' E. A group of nunataks centered about 6 km SE of Mount Blowaway, in the Wilson Hills, in Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Yeoman 1st Class Dennis Lee DeRemer (b. Sept. 25, 1942. d. Sept. 3, 2004), USN, who served as an administrative assistant with U.S. Naval Support Force, Antarctica, from Feb. 1967 to July 1970. ANCA accepted the name on July 31, 1972.

Mount Dergach. 70°36' S, 163°01' E. A flat-topped, ice-covered mountain, just W of Ob' Bay, and S of Lunik Point, in the Bowers Mountains. Photographed aerially during OpHJ 1946-47. Surveyed by SovAE 1958, and named Gora Dergacha, by the USSR in 1961 for meteorologist Alexei L. Dergach, a member of SovAE 1959-61, killed in the Mirnyy fire of 1960 (*see* **Deaths**, 1960). US-ACAN accepted the translated name in 1970.

Gora Dergacha *see* **Mount Dergach**

Gora Derjugina *see* **Mount Deryugin**

Derocher Peninsula. 71°25' S, 73°20' W. A snow-covered peninsula between Brahms Inlet and Mendelssohn Inlet, on the N side of Beethoven Peninsula, Alexander Island. Mapped by Searle of the FIDS in 1959-60, from air photos taken by RARE 1947-48. Named by US-ACAN for Paul J. Derocher, USN, commanding officer of VXE-6, May 1985 to May 1986. UK-APC accepted the name on May 13, 1991.

Mont Derom *see* **Mount Derom**

Mount Derom. 71°34' S, 35°38' E. A massif, rising to 2400 m, 3 km S of Mount Eyskens, in the Queen Fabiola Mountains. Discovered on Oct. 7, 1960, by BelgAE 1960-61, led by Guido Derom. Named Mont Derom, for Major Derom, by the Centre National de Recherches Polaires de Belgique. US-ACAN accepted the name Mount Derom in 1966.

Derom, Guido. Belgian aviator major, former Air Force pilot, leader of BelgAE 1960-61.

Deromfjellet. 72°04' S, 24°17' E. The most northeasterly mountain in the feature known as Mount Walnum, in the central part of the Sør Rondane Mountains. Named by the Norwegians for Guido Derom. The Russians call it Gora Arsen'eva.

Derrick Peak. 80°04' S, 156°23' E. A prominent, ice-free peak, rising to 2070 m, about 5.5 km W of the N end of Johnstone Ridge, it overlooks the S side of Hatherton Glacier in the vicinity of Byrd Glacier. Named by US-ACAN in 1965, for Robert O. Derrick of the U.S. Weather Bureau, assistant to the USARP representative at Christchurch, NZ, from 1960 until he died in 1966. ANCA accepted the name on Aug. 27, 1975.

Derrick Point. 77°33' S, 166°10' E. A point, between Backdoor Bay and Arrival Bay, 0.4 km NE of Cape Royds, on Ross Island. It was at this point that in 1908 a derrick was used by BAE 1907-09 to get supplies up to their winter quarters at Cape Royds. They named it. It appears in the 1958 NZ provisional gazetteer.

Mount Deryugin. 71°51' S, 11°20' E. Rising to 2635 m, on Vindegga Spur, in the Liebknecht Range of the Humboldt Mountains, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Remapped (but not named) by Norwegian cartographers working from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Mapped yet again by SovAE 1961-61, and named by the USSR in 1966 as Gora Derjugina, for Arctic Institute zoologist K.M. Deryugin. US-ACAN accepted the name Mount Deryugin in 1970.

Lednik Derzhavina. 80°35' S, 28°28' W. A glacier, SE of Lister Heights, in the W part of the Shackleton Range. Named by the Russians.

Anse des Baleiniers *see* **Whalers Bay**

Cap des Barres. 66°40' S, 140°00' E. A half-rock, half-glacial cape, forming the NW extremity of Pétrel Island, in the Géologie Archipelago. It was the lower extremity of the area where they placed the Seltzer fluxmeter

the ground by Fids from Base E in 1948-49, and again in 1958. Despite Charcot's wayward coordinates, the FIDS identified it, and applied the new coordinates. Deschanel Peak was the name accepted by UK-APC on Aug. 31, 1962, and by US-ACAN later that year.

Punta de la Descubierta *see under* **De**

Punta Desembarco *see* **Haulaway Point**

Cabo Desengaño *see* **[2]Delusion Point, Cape Disappointment**

Cabo Deseo *see* **Cape Longing**

Ensenada Desesperación *see* **Exasperation Inlet**

Rocas Desesperación *see* **Despair Rocks**

Desgraz, César-Louis-François. b. Aug. 28, 1816, Izmir, Turkey. French secretary to Dumont d'Urville on the *Astrolabe*, during FrAE 1837-40. There is a book called *The Guam Narrative of César Desgraz*. He and Vincendon-Dumoulin wrote two books together, *Îles Marquises, ou Nouka-Hiva*, and *Îles Taïti*.

Deshler Valley. 77°19' S, 161°46' E. A mostly ice-free valley, opening S toward Victoria Valley between Spain Peak and Morse Spur, in the Saint Johns Range of Victoria Land. Named by US-ACAN in 2005, for Terry Deshler, of the department of atmospheric science, at the University of Wyoming, at Laramie, a USARP investigator into the ozone hole for 13 field seasons between 1990 and 2004. NZ-APC accepted the name on Sept. 12, 2005.

Cabo Desilusión *see* **Delusion Point**

Cape Desire *see* **[2]Cape Disappointment**

Nunatak Desjatimetrovyj. 73°30' S, 65°15' E. A nunatak, SW of Mount Rubin, in the southern Prince Charles Mountains. Named by the Russians.

Desko Mountains. 69°37' S, 72°30' W. A mountain range rising to over 1000 m (in Enigma Peak, on Fournier Ridge), and running in a WNW-ESE direction for 30 km from Bates Peak to Overton Peak, on Rothschild Island, off the NW coast of Alexander Island. Other features in this group include Goward Peak, Schenck Peak, Morrill Peak, and Thuma Peak. Part of this group was seen from a distance by von Bellingshausen in 1821, and by Charcot in 1909 (during FrAE 1908-10), but the nature of the feature remained obscure. Mapped by Searle of the FIDS in 1959-60 from air photos taken by OpHJ 1946-47 and by RARE 1947-48. The group was further defined by USN air photos taken in 1966, from BAS ground surveys conducted in 1970-71, and from U.S. Landsat images taken in Jan. 1975. Named by US-ACAN for Cdr. Daniel A. Desko (b. 1937. d. July 24, 2009, Annandale, Va.), USN, an LC-130 Hercules aircraft commander during OpDF 76 (i.e., 1975-76), and commanding officer of VXE-6 during OpDF 77 (i.e., 1976-77). He retired as captain. UK-APC accepted the name on June 11, 1980.

The *Desmerestia*. Argentine ship in Antarctic waters in 1970-71.

Desmond, Francis William "Frank." b. 1888, Ireland. He moved to NZ, and joined the merchant service (Union Steamship Company), spending most of 1910 and part of 1911 as an able seaman on the *Moeraki* as she plied between Wellington and Sydney. Then to the *Warrimoo*, same route, and from there, at Hobart, on Nov. 2, 1911, he signed on to the *Aurora* as an able seaman, at £5 per month, for the first voyage to Antarctica during AAE 1911-14. He left the expedition at Hobart, on March 14, 1912, and went back to the *Moeraki*. The day World War I broke out saw him in a similar capacity on the *Maheno*. He joined the Otago regiment of the NZ Expeditionary Force, became a corporal, and died in France, on June 13, 1917, leaving a fiancée, May Booth, back in NZ.

Desmond, Gordon B. b. Oct. 25, 1908, Danvers, Mass., but grew up partly in Maryland, then in Needham, Mass., son of printing salesman William D. Desmond and his Canadian wife Jennie Luiger. Gordon went out west and became a waiter in a restaurant in San Francisco, and from there became a messman on the *Jacob Ruppert* for both halves of ByrdAE 1933-35. After World War II he lived in NJ, then moved to Arlington, Va., which is where he died in Aug. 1986.

Isla Desolación *see* **Desolation Island**

Puerto Desolación *see* **Blythe Bay**

Rada Desolación *see* **Blythe Bay**

Island of Desolation *see* **Desolation Island**

Desolation Harbor *see* **Blythe Bay**

Desolation Island. 62°27' S, 60°21' W. A small V-shaped island, in the entrance to Hero Bay, 9 km W of Williams Point, Livingston Island, in the South Shetlands. Its broken coastline has numerous inlets and coves indenting it, and its relief (maximum height of 152 m) seems smooth and even, due to the snow filling in the gaps between its rocky elevations. Discovered and roughly charted on Jan. 17, 1820, by Bransfield, and named by him as Island of Desolation, for its appearance. Capt. Smith, of the *Williams*, named it Hoseason's Aim, for his 1st mate, James Hoseason, and it appears as such, and as Hoseason's Land, on a few of those early charts. On Dec. 14, 1820, Robert Fildes, unaware that the island had already been named, called it Cora Island, or Cora's Island, for his vessel, but on his 1821 chart it appears as Desolation Island. The island was surveyed by the Discovery Investigations in 1934-35, and appears as Desolation Island on their 1937 chart. US-ACAN accepted that name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956-57. It appears as Isla Desolación for the first time on a Spanish chart of 1861, and that was the name accepted by the 1970 Argentine gazetteer, and also by the 1974 Chilean gazetteer. The British were the latest to replot this feature, in late 2008.

Rocas Despair *see* **Despair Rocks**

Despair Rock *see* **Despair Rocks**

Rocks of Despair *see* **Despair Rocks**

Despair Rocks. 60°33' S, 46°10' W. A group of rocks in water, rising to about 30 m above sea level, 3 km S of Melsom Rocks, and 12 km WSW of Penguin Point (the NW tip of Coronation Island), in the South Orkneys. Discovered and charted by Palmer and Powell in Dec. 1821, and they named the feature the Rocks of Despair. They appear that way on Powell's chart published in 1822. The feature appears singularized as Despair Rock on a British chart of 1839, and as Roche Despair on Vincendon-Dumoulin's atlas of 1847. On Sørlle and Borge's chart of 1913 it appears as Despair Rocks. The feature appears on an Argentine chart of 1930 as Rocas Despair. The rocks were surveyed by the Discovery Investigations in 1933, and appear as Despair Rocks on their chart of 1934. US-ACAN accepted that name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The feature appears on an Argentine chart of 1952 fully translated as Rocas Desesperación, and that was the name accepted by the 1970 Argentine gazetteer.

Isla Despedida *see* **Farewell Rock**, **Spert Island**

Desprez, Raoul. Chef on the French Polar Expedition of 1949-51, wintering-over at Port-Martin in 1951.

DesRoches Nunataks. 84°53' S, 67°08' W. Two nunataks, rising to about 1535 m, 5 km E of Postel Nunatak, in the SW part of the Patuxent Range, in the Pensacola Mountains. Surveyed from the ground by USGS in 1961-62, photographed by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Joseph DesRoches, USARP meteorologist at Pole Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears as Desroches Nunataks in the 1974 British gazetteer (a spelling error that has since been corrected).

Dessent Ridge. 73°25' S, 166°37' E. A mountainous, ice-covered ridge extending N-S for 16 km, 8 km E of Mount Murchison, in the Mountaineer Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Joseph E. Dessent, meteorologist at Hallett Station in 1961.

Pico Destacamento. 62°36' S, 59°54' W. A peak on the point the Argentines call Punta Curva, on the E coast of Half Moon Island, in the South Shetlands. Named by the Argentines for Teniente Cámara Station (called a "destacamento" in Argentine), which was here.

Destination Nunataks. 72°15' S, 165°28' E. A group of peaks and nunataks, 14 km long, 6 km wide, and rising to 2565 m (in Pyramid Peak), in the NE part of Evans Névé, 11 km NW of the Barker Range of Victoria Land. The group also includes Sphinx Peak, Andrews Peak, Mummy Ridge, and unnamed nunataks to the NW. The feature was visited in 1970-71 by the VUWAE party led by Malcolm Laird, who named it Destination Rocks because these nunataks were near the N limits of his expedi-

tion. US-ACAN and NZ-APC both accepted this name in 1985. However, the name Destination Nunataks, as accepted by both US-ACAN and NZ-APC in 1994, applies to the entire group, as opposed to just the 2 nunataks at the SE end, as indicated on some maps.

Destination Rocks *see* **Destination Nunataks**

Bahía Destrucción *see* **Destruction Bay**

Bay of Destruction *see* **Destruction Bay**

Destruction Bay. 61°59' S, 57°39' W. A bay, about 9 km wide, between Taylor Point and Cape Melville, on the E side of King George Island, in the South Shetlands. Charted and named Bay of Destruction in 1821 by Richard Sherratt from the *Lady Troubridge*. His vessel was wrecked here on Christmas Day 1820. It appears on Weddell's map of 1825 as Liverpool Bay, named for Robert Banks Jenkinson (1770-1828), 2nd Earl of Liverpool (known as Lord Liverpool), British prime minister from 1812 to 1827. It was charted by the Discovery Investigations in 1937, and photographed aerially by FIDASE in 1956. UK-APC accepted the name on Sept. 23, 1960, and US-ACAN followed suit that year. It appears on an Argentine chart of 1977, fully translated as Bahía Destrucción.

Îlot Detaille *see* **Detaille Island**

Isla Detaille *see* **Detaille Island**

Detaille Island. 66°52' S, 66°48' W. A small island, 3 km WNW of Andresen Island, in the (northern) entrance of Lallemand Fjord, off the Loubet Coast, about 6 km W of the coast of Graham Land. Discovered by FrAE 1908-10, and named in 1909 by Charcot as Îlot Detaille, for Ernest Detaille, shareholder in the Magellan Whaling Company of Punta Arenas, and (incidentally) director of the 5th Volunteer Fire Company of that town, who helped Charcot obtain supplies at the company's whaling station on Deception Island. It appears as Detaille Islet on a 1943 U.S. Hydrographic Office chart, and that was the name accepted by US-ACAN in 1951, and by UK-APC on Sept. 22, 1954. It appears as such in the 1955 British gazetteer. When FIDS were building Base W here they did not know that the island was already named. This was because the 1954 British chart (printed in 1955) that they were using (it was the *John Biscoe*'s chart) showed Detaille Islet to be a small island lying less than 1 km off the NW end of Andresen Island. The Fids were some 8 km to the W of that, and there was nothing mapped there. So they named their location Lent Island, because building was begun during Lent (the religious festival of Lent began on Feb. 15, and the team landed on the first Tuesday in Lent). That island, and the offlying islands, they named collectively as the Lent Islands. Their base was called Base W, or Loubet Coast Station. In the second half of May, Eric Salmon got the radio working, and in late May to early June the Fids opened their boxes of library book, survey gear, and maps (they did not have a copy of Charcot's book). All this and Salmon's radio conversations with Port Stanley and the Argentine Islands station, led him to the fact that they were on Detaille Islet, and so the name Lent Island was dropped (as was Lent Islands). From that time on the Fids called it Detaille Island (even though it was actually Detaille Islet). UK-APC re-defined the feature as Detaille Island on July 7, 1959. It was only then that the FIDS base could become, in any official way, known as Detaille Island Station. The island appears with the new name on a 1960 British chart, but on a 1960 U.S. Hydrographic Office chart it still appears as Detaille Islet. US-ACAN accepted Detaille Island in 1963, and it appears as such in the 1964 American gazetteer. It appears on a 1962 Chilean chart as Isla Detaille, and that was the name accepted by the Chilean gazetteer of 1974. The Argentines call it the same thing. However, the Argentines have occasionally revived the Lent concept; for example, the island and its offlying islands appear as Islas Lent on one of their 1960 charts.

Detaille Island Station *see* **Base W**

Detaille Islet *see* **Detaille Island**

Detling Peak. 75°14' S, 114°52' W. A cone-shaped, ice-covered peak, 20 km SW of Morrison Bluff, in the Kohler Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for James K. Detling, USARP biologist with the Marie Byrd Land Survey Party of 1966-67.

Islotes Detour *see* **Detour Island**

Detour Island. 65°01' S, 63°55' W. The largest of a chain of islets extending E-W for about 2 km, 4 km W of False Cape Renard, off the NW entrance to Lemaire Channel, in the Wilhelm Archipelago. Charted by FrAE 1903-05. Photographed aerially by FIDASE in 1956-57. So named by UK-APC on July 7, 1959, because the island lies near the entrance to Nimrod Passage which provides an alternative route for southbound ships W of Booth Island, when the Lemaire Channel is blocked by ice. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. The group (rather than the one island) appears as Islotes Detour on a 1962 Chilean chart, and that was the name accepted by the Chilean gazetteer of 1974.

Detour Nunatak. 77°08' S, 160°55' E. A broad nunatak, 6 km long and 3 km wide, in the upper part of Mackay Glacier, near its S side, between that glacier and Frazier Glacier, due S of Mount Gran, in Victoria Land. A survey station was established on its summit on Nov. 22, 1957, by the NZ Northern Survey Party of BCTAE, and the nunatak was so named by them because they had to make a detour here while going up the Mackay, passing S of this nunatak. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Detrick Peak. 77°32' S, 169°06' E. A sharp peak, rising to about 700 m, 1.5 km ESE of Lutz Hill, in the Kyle Hills, on Ross Island. Named by Theodore J. Rosenberg for physicist and engineer Daniel L. Detrick, of the Institute for Physical Science and Technology, at the University of Maryland, who was involved in long-term ionospheric research with USARP, including the design and fabrication, as well as deployment of instruments at McMurdo, Pole Station, and Siple Station. He made more than a dozen visits to Antarctica from 1980. US-ACAN accepted the name in 2000, and NZ-APC followed suit on Feb. 20, 2001.

Meseta Detroit *see* **Detroit Plateau**

Detroit Aviation Society Plateau *see* **Detroit Plateau**

Detroit Plateau. 64°10' S, 60°00' W. A major, steep-sided, ice-covered plateau, occupying the central part of Graham Land, and varying in height between 1500 and 1800 m above sea level. It extends 140 km in a general SW direction from the S wall of Russell West Glacier (the plateau's NE limit, in 63°45' S) to Herbert Plateau (its SW boundary, in 64°40' S), just S of Trinity Peninsula. Discovered aerially in 64°20' S by Wilkins on Dec. 20, 1928, and named by him as Detroit Aviation Society Plateau, for the society which helped get his expedition together. It appears as such on Wilkins' map of 1929, and also on a 1940 U.S. Hydrographic Office chart. On Bjarne Aagaard's 1930 map the S part of this plateau appears as Caledoniafjellane, or Caledoniafjellene, both names meaning, roughly, "Caledonia mountains," in honor of the contribution made to Antarctic discovery in this area by the Dundee Whaling Expedition of 1892-93. On a 1943 U.S. Hydrographic Office chart the name appears shortened as Detroit Aviation Plateau. The N and E sides of the plateau were charted by Fids from Base D in 1946-47. The name was later shortened even further, to Detroit Plateau, and, as such, was accepted by UK-APC on Jan. 22, 1951, and by US-ACAN in 1952. It appears as such in the 1955 British gazetteer, and also on a British chart of 1962. It was further surveyed by Fids from Base D in 1956-57, when it was traversed throughout its length. It appears on a 1962 Chilean chart as Meseta Detroit, and that was the name accepted by the Chilean gazetteer of 1974. If the gazetteers can be believed, the Argentines use the same name as the Chileans, but with an accent mark over the "e" in Detroit, thus making it mean "narrow plateau." This does not seem credible.

Dettman, Donald G. "Don." b. Sept. 17, 1940. Senior diesel mechanic at Casey Station in 1979, and at Mawson Station in 1981.

Berge der Deutsch-Sowjetischen Freundschaft *see under* **Der**

Deutsche Hütte. 62°13' S, 58°55' W. A German hut built on Ardley Island, on the W side of Maxwell Bay, King George Island, in the South Shetlands. Named by the Germans.

The *Deutschland*. Filchner's ship during GermAE 1911-12. Originally a 3-masted Norwegian sailing ship called the *Bjørn*, she had been designed for polar work, and had a 300 hp auxiliary engine. Shackleton supervised the strengthening of her hull for Filchner's expedition. The ship was later sold to Austria, and became the *Österreich*, and was the vessel that

Dr. König planned to use for his aborted Austrian Antarctic expedition of 1914. This unhappy little ship, which had seen so much madness (*see* **German Antarctic Expedition, 1911-12**), became a minesweeper in the Austro-Hungarian Navy during World War I.

Deutschland Canyon. 73°30' S, 29°50' W. A submarine feature in the Weddell Sea. Named by international agreement.

Île des Deux Hummocks *see* **Two Hummock Island**

Deverall Island. 81°28' S, 161°54' E. A small, ice-covered island, 3 km square, rising about 60 m above the Ross Ice Shelf just NE of Beaumont Bay. Named by the Southern Party of NZGSAE 1960-61, for William Harold Deverall, radio operator at Scott Base from Nov. 1960 to Nov. 1961. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

Devesil Bight. 62°27' S, 59°26' W. An embayment, 5.5 km wide, indenting the SE coast of Robert Island for 2.2 km, it is entered between Edwards Point and Robert Point, in the South Shetlands. Its shape has been enhanced by glacier retreat in the 1990s and early 2000s. Mapped by the Bulgarians in 2009, and named by them on June 3, 2010, after the town of Devesilovo, in southern Bulgaria.

DeVicq Glacier. 75°00' S, 131°00' W. Also seen (a little more correctly) as De Vicq Glacier. A large glacier flowing from the area between the Ames Range and the McCuddin Mountains, in Marie Byrd Land, into the Getz Ice Shelf to the SE of Grant Island. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Lt. (jg) David Charles "Dave" de Vicq (b. March 12, 1935, Newton, Mass.), USN, who, after a tour as a Seabee in the Caribbean and Greenland, went south as engineering officer in charge of building the new Byrd Station in 1960-61. He then went on to Hallett Station. He was back at Byrd in 1961-62, being promoted to lieutenant two thirds of the way through this stint. He served in many parts of the world, including Diego Garcia and Vietnam, and retired as a captain in 1986.

Devil Island. 63°48' S, 57°17' W. A narrow island, 1.5 km long, it has a low summit on each end, and is in the center of a small bay which opens 1.5 km SE of Cape Well-Met, in the extreme N part of Vega Island, S of the NE end of the Antarctic Peninsula. Its cliffed hillsides of bare rock, rising to 207 m, fall steeply toward the sea. Discovered and mapped on Oct. 12, 1903, by SwedAE 1901-04, and named by Nordenskjöld as Djävulsön, for its inhospitable appearance. English-language translations of Nordenskjöld's maps had this as Devil's Island. All the other interested countries translated this accordingly, but on one of Charcot's 1912 maps it appears as Île Devil. It appears as Devil Island on a 1921 British chart. It was re-surveyed by the Discovery Investigations between 1927 and 1929, and appears on their 1930 chart as Devil Islet. It was re-surveyed by Fids from Base D in 1945, and renamed by them as Devil Island. It appears on a Chilean chart of 1947 as Isla Diablo. The name Devil Island was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears on an Argentine chart of 1957 as Isla del Diablo, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Devil Islet *see* **Devil Island**

Glaciar Deville *see* **Deville Glacier**

Deville Glacier. 64°48' S, 62°35' W. A glacier flowing W along the S side of Laussedat Heights into Andvord Bay, on the Danco Coast, on the W coast of Graham Land. It is shown (unnamed) on a 1952 Argentine chart. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Édouard-Gaston-Daniel Deville (1849-1924), surveyor general of Canada from 1885 until his death, and who, from 1888, introduced and developed photogrammetric methods of survey in Canada. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines today call it Glaciar Deville.

The Devil's Ballroom. 86°50' S, 168°00' W. A glaciated area with a treacherous surface of thin ice and snow covering a series of particularly deadly crevasses, on the edge of the Polar Plateau, just below the rim of the plateau basin or névé of the Amundsen Glacier (and not of the Axel Heiberg Glacier, as has often been stated). Discovered on Dec. 4, 1911 by Amundsen. He originally called it the Devil's Dance Floor. "Our walk across this frozen lake was not pleasant. The ground under our feet was evidently hollow, and it sounded as if we were walking on empty barrels. First, a man fell through, and then a couple of dogs, but they got up again all right." Not to be confused with nearby Devil's Glacier.

Devils Corrie. 60°39' S, 45°25' W. A large, monumentally spectacular corrie (or cirque), with numerous hanging glaciers and crevasses, midway between Olivine Point and Amphibolite Point, on the S coast of Coronation Island, in the South Orkneys. Surveyed and named descriptively by Fids from Signy Island Station in 1948-49. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

The Devil's Dance Floor *see* **The Devil's Ballroom**

The Devil's Glacier *see* **Devils Glacier**

Devils Glacier. 86°23' S, 165°00' W. Also called Fandens Brae. A heavily-crevassed glacier, 30 km long and 13 km wide, on the edge of the Polar Plateau, in the Queen Maud Mountains, it drains the S part of the Mohn Basin, and flows NE to enter the upper part of Amundsen Glacier, just N of the mountain group comprising Mount Wisting, Mount Hassel, Mount Bjaaland, and Mount Prestrud. Discovered on Nov. 29, 1911 by Amundsen, who named it after being stuck here for 4 days as he crossed the glacier's upper (or western) portion (between 168°and 169°W), en route to the South Pole. Originally named The Devil's Glacier, and plotted in 86°20' S, 168°00' W, it has since been re-plotted and deprived of its definite article and apostrophe.

Devils Peak. 60°39' S, 45°27' W. A conspicuous rocky peak, rising to 735 m, between Sunshine Glacier and Olivine Point on the one hand, and Devils Corrie on the other, on the S side of Coronation Island, in the South Orkneys. Surveyed by Fids from Signy Island Station in 1948-49, and named by them in association with the corrie. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Devils Point. 62°40' S, 61°11' W. The most southwesterly point on Byers Peninsula, Livingston Island, and therefore the extreme SW point of the island itself, it projects into Morton Strait, in the South Shetlands. Roughly charted and named by Weddell between 1820 and 1823, it appears on his map of 1825. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960. It appears on a British chart of 1962. It appears on a 1954 Argentine chart translated as Punta del Diablo, and that was the name accepted by the 1970 Argentine gazetteer. However, it has also been seen as Punta Diablo, and even Punta Devils. The Chileans call it Punta Zúñiga, for Ernesto Zúñiga R., a cabo in the Chilean Navy, who showed great spirit of sacrifice when diving to find two anchors during ChilAE 1951-52.

Devils Punchbowl. 77°01' S, 162°24' E. Also called Punch Bowl. A bowl-shaped cove, really an empty cirque, the floor of which is below sea level, in the SW corner of Granite Harbor, between Devils Ridge and the S side of The Flatiron, in Victoria Land. Charted and named descriptively by BAE 1910-13. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Devils Ridge. 77°01' S, 162°22' E. A rocky, sickle-shaped knob, about 245 m high at its central and highest point (Devils Thumb), and extending from the S end of The Flatiron, and forming the N wall of New Glacier, close W of Granite Harbor, in Victoria Land. Charted and named by BAE 1910-13. US-ACAN accepted the name in 1952, and NZ-APC followed suit. The Devil is the lad with the sickle, in various mythologies.

Devils Thumb. 77°01' S, 162°22' E. A knob, rising to 245 m, it marks the central part of Devils Ridge, close W of Granite Harbor, between The Flatiron and New Glacier, in Victoria Land. Charted and named descriptively by BAE 1910-13. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Devin Saddle. 62°39' S, 59°59' W. A saddle, 500 m above sea level, forming part of the divide between the glacial catchments of Iskar Glacier to the N and Magura Glacier to the S, between Levski Ridge to the W and Delchev Ridge to the E, 1.1 km WSW of Ruse Peak, and 1.7 km E of Plovdiv Peak, in the Tangra Mountains of Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, as Sedlovina Devinska (i.e., "Devin saddle"), for the Bulgarian town of Devin.

Sedlovina Devinska *see* **Devin Saddle**

Devnya Valley. 62°39' S, 60°03' W. A valley, 2.5 km long and 700 m wide, between the N slopes of Great Needle Peak and Helmet Peak, in Levski Ridge, in the Tangra Mountains of Livingston Island, in the South Shetlands. It holds a side tributary of the Huron Glacier. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the town of Devnya, in northeastern Bulgaria.

Devold, Hallvard Ophus. b. 1898, Tysfjord, Norway, but raised in Ørsta, son of curate Harald Ophus Devold and his wife Alida Elise Marie. In 1926, while a telegraphist with the Geofysisk Institutt in Tromsø, he went on an expedition to Greenland. His brother, Finn Devold, led an expedition there in 1928-30, and Hallvard, now a whaler, was back there in 1931, exploring, and, on his own initiative, claiming East Greenland for Norway. Norway liked the idea, post facto, and supported the claim, but Denmark won it back in an international ruling in 1933. In 1933 he, Olav Kjelbotn, and Hjalmar Riiser-Larsen attempted a dog-sledge exploration of the Princess Ragnhild Coast, in Antarctica. In 1941 he led the expedition on the *Buskø* to relieve Norwegian trappers in Greenland. The ship was captured by the Americans, and taken to Boston. He died in 1957. His grandson, Leiv Igor Devold, made a movie documentary about him in 2007.

Devold Peak. 72°15' S, 26°44' E. Rising to 3280 m, between Kjelbotn Peak and the Pukkelen Rocks, 3 km NW of Deigklumpen, near the head of (i.e., the upper part of) Byrdbreen, in the E part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, from air photos taken by OpHJ 1946-47, and named by them as Devoldnuten, for Hallvard Devold. US-ACAN accepted the translated name in 1966.

Devoldkalven. 72°21' S, 27°04' E. A nunatak close to Devold Peak (in association with which it was named by the Norwegians), in the upper part of Byrdbreen, in the E part of the Sør Rondane Mountains. Name means "the Devold calf").

Devoldnuten *see* **Devold Peak**

Devoto, Rómulo *see* **Órcadas Station**, 1929, 1931, 1934, 1936

DeVries Bluff. 80°19' S, 157°45' E. A steep bluff rising to 1660 m, on the N side of Byrd Glacier, immediately E of DeVries Glacier, where that glacier enters the Byrd. Named by US-ACAN in 2003, in association with the glacier. NZ-APC accepted the name on Feb. 27, 2003.

DeVries Glacier. 80°20' S, 157°30' E. A steep tributary glacier just E of Peckham Glacier, it flows S from Mount McClintock (in the Britannia Range), into Byrd Glacier. Mapped by USGS from air photos taken by USN. Named by US-ACAN in 1965, for Arthur Leland DeVries (b. Dec. 1935), biologist at McMurdo, 1961-62 and 1963-64, who studied fish and their antifreeze systems. He was chief scientist for the 1965 winter-over at McMurdo. He was later at the University of Illinois, at Urbana. ANCA accepted the name Devries Glacier (which is wrong) on Aug. 27, 1975.

DeWald Glacier. 72°19' S, 167°00' E. A glacier, 8 km long, flowing NW from the NE slopes of Bramble Peak, in the Victory Mountains of Victoria Land, and merging with the terminus of Lensen Glacier, where both glaciers join the larger Pearl Harbor Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1973, for Lt. (jg) (later Lt. Cdr.) Bruce Frederick DeWald, USN, aerographer who wintered-over at McMurdo in 1963 and 1966. He was later forecast duty officer at McMurdo, 1972-73 and 1973-74.

Mount Dewar. 80°32' S, 21°11' W. Rising to about 1600 m (the British say about 1500 m), to the SW of Aronson Corner, NE of the Shotton Snowfield, in the Pioneers Escarpment of the Shackleton Range. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped in 1974 by USGS from these efforts. Named by UK-APC on Nov. 3, 1971, for Sir James Dewar (1842-1923), Scottish chemist and physicist who invented the thermos flask about 1892. US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer.

Dewar, Alexander. b. ca. 1748, Cockburnspath, Berwickshire. He was clerk on Wallis's trip around the world in the *Dolphin* in 1766-68, and fulfilled the same function when he joined the *Adventure* on Jan. 1, 1772 for Cook's 2nd voyage, 1772-75. He was on the *Resolution*, as able seaman but later as clerk, for Cook's 3rd voyage, 1776-80. In 1781 he and his wife Catharine were living in Fowey, Cornwall, and he died there in 1792.

Dewar, Graham James Alexander. b. July 17, 1938, Scotland. After Edinburgh University, he joined FIDS, and sailed south in Nov. 1960, on the *John Biscoe*, as geologist who wintered-over at Base T in 1961 and 1962, being base commander in the 2nd season. He returned to the UK in May 1963, on the *Shackleton*, and went to work at the BAS geology unit at Birmingham University, from where he gained his PhD in 1965, based on his thesis on the geology of Alexander Island. He left FIDS in June 1966.

Dewar Nunatak. 67°20' S, 68°13' W. A mainly snow-covered nunatak, rising to 520 m in the middle of Shambles Glacier, at the head of Stonehouse Bay, on the E coast of Adelaide Island. Surveyed by Fids from Base T in 1961-62. Named by UK-APC on Feb. 12, 1964, for Graham Dewar. US-ACAN accepted the name later that year.

Dewart, Gilbert. b. Jan. 14, 1932, NYC, son of journalist Gilbert F. Dewart and his wife Elizabeth Sowards. Seismologist and glaciologist from MIT and Ohio State, he was seismologist at Wilkes Station for the winter of 1957, and in 1960 wintered-over again as an exchange scientist with the Soviets, at Mirnyy Station.

Dewart Island. 66°13' S, 110°10' E. The central island in the Frazier Islands, in Vincennes Bay. The area was photographed aerially during OpHJ 1946-47, and the position of this island was fixed by an ANARE party led by Phil Law in Jan. 1956. Named by Carl Eklund in 1957 for Gilbert Dewart. US-ACAN accepted the name in 1960, and ANCA followed suit on July 4, 1961.

Dewdrop Glacier. 77°01' S, 162°22' E. A small hanging glacier discharging into the head of Devils Punchbowl, between The Flatiron and Devils Ridge, at the SW side of Granite Harbor, in Victoria Land. Charted by Grif Taylor's Western Geological Party, during BAE 1910-13, and so named by Taylor (at the suggestion of Frank Debenham) because it hangs on the lip of the Devils Punchbowl like a dewdrop. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Mount Dewe. 77°58' S, 68°39' W. Rising to 1080 m, in the SE part of the Hauberg Mountains, on the Orville Coast of Ellsworth Land. Surveyed from the ground by USGS during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Michael B. Dewe, USARP glaciologist at Byrd Station in 1965-66. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Dewees, Thomas *see* **USEE 1838-42**

Mount Dewey. 65°54' S, 64°19' W. Rising to 1830 m, 13 km SE of Mount Cheops, E of Barilari Bay, on the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Melvil Dewey (1851-1932), American creator of the Dewey Decimal System in libraries. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Nunatak Dewis. 66°03' S, 60°54' W. One of the many nunataks on Jason Peninsula named by the Argentines.

Mount DeWitt. 77°12' S, 159°50' E. Rising to 2190 m above sea level, on the ice plateau just W of Mount Littlepage and the Willett Range, just to the NW of Wright Valley, in Victoria Land. Plotted by USGS from USN air photos. Named by US-ACAN in 1964 for Hugh H. DeWitt, scientific leader of the *Eltanin* cruise of 1962-63. He had also been on the *Glacier* in 1958-59. ANCA accepted the name.

DeWitt Nunatak. 84°49' S, 67°42' W. Rising to 1295 m along the face of an escarpment 11 km W of Snake Ridge, in the W part of the Patuxent Range, in the Pensacola Mountains. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Steven R. DeWitt, USARP meteorologist who wintered-over at Palmer Station in 1966. UK-APC accepted the

name on Nov. 3, 1971, and it appears in the 1974 British gazetteer, as Dewitt Nunatak (the spelling error was later corrected).

DeZafra Ridge. 79°17' S, 157°27' E. A narrow but prominent rock ridge, 8 km long, extending N from the NE cliffs of the Longhurst Plateau, and rising to about 350 above the ice surface N of the plateau, 4 km W of Fault Bluff, in the Cook Mountains. Named by US-ACAN in 2001, for Robert L. DeZafra, professor of physics at the State University of New York, at Stony Brook, whose research at the South Pole and McMurdo Sound provided breakthrough contributions to understanding the formation of the Antarctic ozone hole.

Gora Dezhnëva. 72°35' S, 20°50' E. A nunatak, SE of the Blåklettane Hills, at the SW end of the Sør Rondane Mountains. Named by the Russians.

Islote d'Hainaut *see* **D'Hainaut Island**

D'Hainaut Island. 63°54' S, 60°47' W. A small island almost in the center of Mikkelsen Harbor, Trinity Island, about 2 km NNE of Cape Skottsberg, in the Palmer Archipelago. Charted by FrAE 1908-10. Named by ChilAE 1951-52 as Islote D'Hainaut (sic), for 2nd Lt. (later Capt.) Ladislao d'Hainaut Fuenzalida (sic), of the Chilean Navy, and a member of the expedition. Photographed aerially by FIDASE in Feb. 1956. ArgAE 1956-57 established a refugio and beacon on the island, and named it (i.e., the island) Islote Norte (i.e., North Island). It appears as such on their 1957 chart. UK-APC named it Bombay Island on Sept. 23, 1960, for the whaler *Bombay*, which made harbor here between 1910 and 1917. It appears on a 1961 U.S. Hydrographic Office chart of 1961 as Islote Norte Beacon Islet, and on a 1962 Chilean chart as Islote d'Hainault (sic). US-ACAN accepted the name D'Hainaut Island (sic) in 1965 (although it has also been seen as Hainaut Island), and the Chilean gazetteer of 1974 accepted the name Islote d'Hainaut (after rejecting various spellings as well as the possibility Isla d'Hainaut). The Argentines have, since 1991, officially accepted the name Isla Bombay. The reason for the sics is all to do with orthography.

D.I. *see* **Discovery Investigations**

Cerro Di Castri *see* **Virgin Hill**

Di Giorgio, Jorge *see* **de Giorgio, Georges**

Di Russo, Homero Alberto *see* **Órcadas Station**, 1949

Isla del Diablo *see* **Devil Island**

Punta del Diablo *see* **Devils Point**

Cerro Diácono *see* **Deacon Hill**

Cerro Diaguita. 62°27' S, 60°47' W. A hill, NE of Valle Corto, and NNW of Cerro Pehuenche, on Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91, for the Diaguita peoples of Chile.

Mont Diamant *see* **Chaigneau Peak**

Cordillera Diamante *see* **Forrestal Range**

Mount Diamond *see* **Chaigneau Peak**

Diamond dust. Tiny crystals of snow. When ice needles (q.v.) reflect sunlight, they are called diamond dust.

Diamond Glacier. 79°51' S, 159°00' E. A small distributary glacier of the Darwin Glacier, about 8 km long and 2 km wide, it flows ENE, narrowing to a snout which enters the narrow valley opening out at Lake Wilson on the N side of Diamond Hill. Discovered and mapped by VUWAE 1962-63, and named by them in association with the hill. NZ-APC accepted the name, and ANCA followed suit, as did US-ACAN in 1965.

Diamond Hill. 79°52' S, 159°09' E. A conspicuous, snow-free hill, diamond-shaped in plan, 16 km E of Bastion Hill, on the N side of the lower reaches of the Darwin Glacier. Named by the Darwin Glacier Party of BCTAE 1957-58, which surveyed the area. ANCA accepted the name on Nov. 24, 1961, and US-ACAN followed suit in 1965.

Isla Diamonen *see* **Diamonen Island**

Islote Diamonen *see* **Diamonen Island**

Diamonen Island. 64°02' S, 61°17' W. An island with bare-rock, cliffed sides, about 700 m long, and reaching an elevation of 171 m above sea level, N of Moreno Rock, in Gerlache Strait, W of Cape Sterneck on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. Over the years, not just in the early 20th century but into the 1960s, this island has often been confused with both Moreno Rock and Auguste Island, especially Moreno Rock. This was partly due to the ambiguity of its position on de Gerlache's maps, but also because the 3 features are so close together, and a certain confusion is bound to exist anyway. There is another island nearby, Small Island, and (what became) Diamonen Island was named "Small Island (Diamonen)," which was the Norwegian whalers' way of indicating that is was the small, diamond-shaped island not far from Small Island. It is shown thus on Capt. Johannessen's chart of 1919-20. Apparently it was named Big Diamonen Island in 1921-22, by Capt. Sverre Skedsmo. Lester and Bagshawe charted it, during their British Imperial Antarctic Expedition of 1920-22, variously as Big Diamonen Island, Dimonen Island (sic), Large Diamond Island, and Big Dimonen Island (sic). However, the confusion with Moreno Rock still lingered, and it appears as Moreno Island on a 1946 USAAF chart, and that was the name accepted by US-ACAN in 1951, and by UK-APC on Sept. 8, 1953, and is the name that appears in the 1955 British gazetteer. Photographed aerially by FIDASE in 1956-57. It appears on a 1957 Argentine chart as Islote Madariaga, named after Gen. Joaquín Madariaga (1799-1848), of the Argentine Army of Liberation, and that was the name accepted by the 1970 Argentine gazetteer. UK-APC, after studying the results of the FIDASE photos, corrected the situation, and renamed it Diamonen Island on Sept. 23, 1960, and it appears as such on a British chart of 1961. It appears on a Chilean chart of 1961 as Isla Diamonen, but on a 1963 Chilean chart as Islote Diamonen, and that latter name was the one accepted by the 1974 Chilean gazetteer. US-ACAN followed suit with the British naming in 1965.

[1]**The *Diana***. American sealing and whaling brig, 86 tons, 60 feet long, built at New Bedford in 1794, and registered on Aug. 23, 1820, in Nantucket. Owned, managed, and commanded by Calvin Bunker, she was in the South Shetlands for the 1820-21 season, and lost 2 whaling boats and 8 men. She arrived back at Nantucket on May 10, 1821, with 2000 sealskins.

[2]**The *Diana***. A 340-ton, 135-foot Scottish whaler, with a 40 hp engine, built in Drammen, and bought from Norway. She was the 3rd largest vessel of the four that went on DWE 1892-93. Captain Robert Davidson.

Arrecife Diana *see* **Diana Reef**

Islote Diana. 64°21' S, 62°56' W. One of 2 little islands (the other being Islote Nancy), at the W end of the Omicron Islands, SE of Omega Island, in the Melchior Islands, in the Palmer Archipelago. Named by the Argentines.

Diana Reef. 63°26' S, 56°11' W. An isolated reef, 5 km E of d'Urville Monument, between d'Urville Island and Joinville Island, in Active Sound. Roughly surveyed by Fids from Base D in 1954, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 4, 1957, for the *Diana* of DWE 1892-93. US-ACAN accepted the name in 1963. The Argentines translated it as Arrecife Diana.

The *Dias*. A sealer belonging to the Compañía Argentina de Pesca, chartered out occasionally (1931-32, 1933-34, and 1941-42) by the Argentine government to relieve Órcadas Station when regular shipping couldn't get into Laurie Island because of the ice. The vessel's skipper throughout was Captain Hans Olsen.

Isla Diatomeas. 64°24' S, 61°22' W. An island, about 1.5 km long, about 5 km SSE of Valdivia Point, off the coast of Hughes Bay, on the Danco Coast, on the W coast of Graham Land. Named by the Chileans for the greenish film which covers the ice below sea level. This film is formed by small corpuscles, of various forms, of living beings with silicose shells, which are classified as inferior algae known as diatoms.

Ozero Diatomovoe *see* **Diatomovoevatnet**

Diatomovoevatnet. 70°45' S, 11°35' E. A lake in the W part of Sundsvassheia, in the central part of the Schirmacher Hills of Fimbulheimen, in Queen Maud Land. Named by the Russians as Ozero Diatomovoe (i.e., "diatom lake"), and the name was translated by the Norwegians.

Diatoms. A type of algae. Any of the single-celled or colonial algae of the phylum Bacillariophyta found floating in the water. Because of its symmetry and beautiful design it is termed "The Jewel of the Sea." Plentiful in Antarctica.

Bahía Díaz. 63°47' S, 60°40' W. A bay indenting the S coast of Trinity Island, in the N part of the Palmer Archipelago. Named by the Argentines.

Cabo Díaz. 60°44' S, 44°46' W. One of the 2 capes forming the extremity of Mackenzie Peninsula, at the W end of Laurie Island, in the South Orkneys. Named by the Argentines. *See also* **Cabo Moneta**.

Cañadón Díaz *see* **Cross Valley**

[1]**Islote Díaz**. 62°35' S, 59°52' W. A little island, off the E coast of Half Moon Island, in the South Shetlands. Named by the Argentines.

[2]**Islote Díaz** *see* **Díaz Rock**

Díaz, Emilio L. A lieutenant (jg) in the Argentine navy, an observer on USAS 1939-41. He was captain of the *Granville*, during ArgAE 1947, and also skippered the *Fournier* to the Antarctic Peninsula in May of that year, on an independent mission. Still a captain, he led ArgAE 1951-52 and ArgAE 1955-56.

Díaz, Manuel. Mechanic on the *Uruguay*, 1903. *See also* **Cross Valley**.

Islote Díaz Martínez *see* **Díaz Rock**

Díaz Rock. 63°18' S, 58°45' W. The largest of several rocks close N of the W end of Astrolabe Island, off Trinity Peninsula, on the W coast of the Antarctic Peninsula. Named by ChilAE 1946-47 as Islote Díaz Martínez, for Sub Lieutenant Joaquín Díaz Martínez. It appears as such on a Chilean chart of 1951, but on a 1959 Chilean chart in its abbreviated form Islote Díaz, that last being the name accepted by the Chilean gazetteer of 1974. Between 1955 and 1957 FIDASE photographed it aerially and surveyed it from the ground. UK-APC accepted the name Díaz Rock on Aug. 31, 1962, and US-ACAN followed suit that year. The name often appears as Diaz Rock (i.e., without the accent mark over the "i").

Díaz Vieyra, Delfín *see* **Órcadas Station**, 1937

Dibble, Jonas. b. 1803, Saybrook, Connecticut, son of Jonas Dibble and Naomi Dee Divall. Ship's carpenter on the *Peacock* during USEE 1838-42. On Jan. 24-25, 1840 he left his sick bed and worked 24 hours with other carpenters without relief to fix a broken rudder after the ship was badly mauled by icebergs in 151°19' E. He then headed for Sydney in the ship. He lived in Brooklyn for years, and then during the Civil War worked as a carpenter in the Philadelphia Navy Yard. He died in Philadelphia on Feb. 4, 1885.

Dibble Basin. 65°20' S, 133°00' E. Also called Dibble Depression. A submarine feature off the Clarie Coast. Named by international agreement in 1971, in association with Dibble Glacier, which lies roughly in the same degree of longitude.

Dibble Bluff. 78°07' S, 167°13' E. A conspicuous rock bluff, 1.5 km S of Marshall Cirque, it rises abruptly from the McMurdo Ice Shelf to a height of over 400 m, on the W side of White Island, in the Ross Archipelago. Named by US-ACAN in 1999, for geophysicist Raymond Russell "Ray" Dibble, of the department of geology, at Victoria University of Wellington (NZ), who investigated volcanic eruptions and the seismicity of nearby Mount Erebus in the 1970s, and also in 5 seasons between 1980-81 and 1984-85, as a founding member of the International Mount Erebus Seismic Studies (IMESS). He had first visited Antarctica to record ice quakes at Cape Crozier, in 1962-63. In the 1990s, after retiring from VUW, he joined USAP, and was part of the team maintaining and upgrading the seismic stations run by the Mount Erebus Volcano Observatory, 1993-94, 1994-95, 1995-96, and 1997-98. NZ-APC accepted the name on Nov. 4, 1999.

Dibble Depresion *see* **Dibble Basin**

Dibble Glacier. 66°17' S, 134°36' E. A prominent channel glacier flowing from the continental ice and terminating in the Dibble Glacier Tongue, at the E side of Davis Bay, on the coast of Wilkes Land. Delineated from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Jonas Dibble. ANCA accepted the name.

Dibble Glacier Tongue. 66°08' S, 134°32' E. A large glacier tongue forming the disturbed continental ice just E of Davis Bay (where the Dibble Glacier emerges), in Wilkes Land. Delineated from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, in association with the glacier.

Dibble Iceberg Tongue. 65°30' S, 135°00' E. An iceberg tongue at the seaward end of the Dibble Glacier Tongue, off the Wilkes Coast, it extends northward (i.e., seaward) for about 110 km to as far as the edge of the continental shelf. Photographed aerially by OpHJ 1946-47, but not treated as a separate feature in 1955 by U.S. cartographer Gard Blodgett, when he mapped the area from these photos. It was assumed then that there was only the glacier and its glacier tongue. It was photos taken by Phil Law of ANARE, in 1956 and 1959, that determined the true nature and extent of the Dibble offshore system. Named by ANCA on Oct. 11, 1960, in association with the glacier tongue. US-ACAN accepted the name in 1962, but with a distinct difference. Whereas they accept the iceberg tongue as the seaward extension of the glacier tongue, the Australians do not recognize the glacier tongue at all, including that in the term Dibble Iceberg Tongue.

Dibble Peak. 77°29' S, 169°03' E. Rising to about 1100 m, about 3.6 km SW of Post Office Hill, it marks the highest and southwesternmost point on Warren Ridge, in the Kyle Hills, on Ross Island. Named by Phil Kyle for Ray Dibble (*see* **Dibble Bluff**). US-ACAN accepted the name in 2000, and NZ-APC followed suit on Feb. 20, 2001.

Dibdins Island *see* **Powell Island**

Picacho D.I.C. 62°30' S, 59°41' W. A sharp peak, rising to about 65 m above sea level, and with more or less cliffed sides, between Labbé Point and Ferrer Point, Greenwich Island, in the South Shetlands. Named by ChilAE 1947, for members of the D.I.C. (Dirección de Información y Cultura), who took part in the expedition.

Mount Dick. 80°49' S, 158°32' E. A prominent peak rising to 2410 m (the Australians say about 3000 m above sea level), 10 km E of Mount Egerton, E of the divide S of Byrd Glacier, in the Churchill Mountains. Named by NZGSAE 1960-61 for Russell Gladstone Dick (1898-1966), surveyor general of NZ. NZ-APC accepted the name, ANCA followed suit on Nov. 24, 1961, and US-ACAN did so in 1966.

Dick Formation *see* **Miscast Nunataks**

Dick Glacier. 84°53' S, 175°50' W. A tributary glacier, 11 km long, flowing W from Mount Campbell into Shackleton Glacier just N of Taylor Nunatak, in the Queen Maud Mountains. Named by US-ACAN in 1966, for Lt. Alan L. Dick, with VX-6 during OpDF 64 (i.e., 1963-64).

Dick Peaks. 67°40' S, 49°36' E. A group of peaks, between 1.5 and 4 km E of Mount Humble, at the E end of the Raggatt Mountains, in Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956. Named by ANCA on Nov. 24, 1961, for William T. "Bill" Dick, weather observer at Mawson Station in 1960. US-ACAN accepted the name in 1965.

The *Dick Smith Explorer*. A 3-masted, steel fishing schooner, 65 feet long, with a ¼ inch-thick steel hull, and a 120 hp Mercedes diesel engine. David Lewis was looking for a vessel to replace his unsuitable (for Antarctica) yacht *Solo*, and, in Lavender Bay, Sydney, found the *Tunney*, which he acquired, and renamed for Dick Smith, the Australian millionaire, explorer, adventurer, and personality. Lewis used her on the *Dick Smith Explorer* Expedition in 1981-82, and on the Frozen Sea Expedition of 1982-84. Later, this vessel became the *Alan and Vi Thistlethwayte*, and as such, was in at Cape Adare during a 1987-88 cruise, skippered by Australian Donald Richards.

The *Dick Smith Explorer* Expedition. 1981-82. Led by David Lewis in the *Dick Smith Explorer*. The principal supporter was, of course, Dick Smith, and the sponsor was Lewis's own company, ORF (Oceanic Research Foundation—*see also* **The *Solo***). **Dec. 12, 1981**: The all Australian and NZ crew left Sydney. Lewis; Jeni Bassett and Paul Ensor, marine biologists; Dorothy "Dot" Smith, mountain climber (from Lewis's previous, *Solo*, expedition); Harry Keys, geochemist; Karen Williams (field assistant); Dick Heffernan, geophysicist, mountain climber, and justice of the peace (this is important). All of these personnel had had prior Antarctic experience. Newcomers to the ice were: Don Richards, 1st mate and radio operator; Garry Satherley, mechanic and handyman, and his wife Barbara Muhvich; Malcolm Hamilton, cameraman; and Margaret Hennerbein. **Dec. 19, 1981**: They reached Hobart. **Dec. 23, 1981**: They left Hobart. **Jan. 4, 1982**: They entered Antarctic waters. **Jan. 8, 1982**: They sighted their first iceberg, in 65°S. **Jan. 9, 1982**: They crossed the Antarctic Circle, and reached the South Magnetic Pole (which was then at sea). **Jan. 10, 1982**: They were off George V Land, anchoring at Cape Denison. It was here that Keys was married to Williams, by Heffernan.

Jan. 29, 1982: They left Cape Denison. **Feb. 1, 1982**: They arrived at the Mertz Glacier Tongue. **Feb. 5, 1982**: They left the Mertz Glacier Tongue. **Feb. 7, 1982**: They were at the Antarctic Circle again. **Feb. 8, 1982**: They were in at Dumont d'Urville Station. **Feb. 22, 1982**: They left Dumont d'Urville. **Feb. 26, 1982**: They left Antarctic waters. **March 15, 1982**: They arrived back in Sydney. It had been a 4500 mile voyage, lasting 3 months. They burned their garbage as they went, so they would not pollute Antarctica.

Mount Dickason. 74°24' S, 163°58' E. A prominent mountain, rising to 2030 m (the New Zealanders say 2133 m), at the head of Boomerang Glacier, in the Deep Freeze Range of Victoria Land, WSW of Mount Melbourne. First mapped by Campbell's Northern Party during BAE 1910-13, and named by Campbell for Harry Dickason. US-ACAN accepted the name, and NZ-APC followed suit.

Dickason, Harry. b. Dec. 16, 1884, Barton Regis, Bristol, Glos, son of Herbert Dickason. He was an able seaman on the *Defiance* when he transferred to the *Terra Nova* for BAE 1910-13, and was a member of Campbell's Northern Party on that expedition. His diary is held by the Scott Polar Research Institute. He was later a petty officer. He died in 1943, in Battersea, London.

Rocas Dickens *see* **Dickens Rocks**

Dickens, Henry. b. 1802, Stonington, Conn. He was 1st mate on the *Charles Adams*, under Capt. Alex Palmer, during the 1831-32 sealing voyage to the South Shetlands. He lived for years in Westerly, RI, married a few times, and retired as a ship's master.

Dickens Peak. 72°08' S, 99°19' W. A peak, 2.5 km NNW of Smith Peak, in the north-central part of Thurston Island. Named by US-ACAN in 2003, for Aviation Machinist's Mate J.D. Dickens, air crewman in the Eastern Group of OpHJ 1946-47, which obtained air photos of this peak and adjacent areas.

Dickens Rock *see* **Dickens Rocks**

Dickens Rocks. 65°19' S, 65°25' W. Two rocks, rising to an elevation of about 7 m above sea level, they form the most northerly land mass of the Pitt Islands, in the Biscoe Islands. Being ice-covered, they have often been difficult to identify, being mistaken for pieces of floating ice. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Charles John Huffam Dickens (1812-1870), who had some success as a touring lecturer in the USA, and also as a novelist. It appears on a British chart of 1960. US-ACAN accepted the name in 1965. It appears on a Chilean chart of 1962 as Rocas Dickens, and that name was accepted by the 1974 Chilean gazetteer. The Argentines use that name too. It appears (erroneously singularized) as Dickens Rock in the 1974 British gazetteer.

Dickenson, Thomas *see* **USEE 1838-42**

Mount Dickerson. 84°20' S, 167°08' E. A prominent mountain, rising to 4120 m, 6 km E of Mount Kirkpatrick, in the Queen Alexandra Range. Named by US-ACAN in 1966, for Dick Dickerson.

Dickerson, Richard Gordon "Dick." b. July 21, 1921, Casper, Wyo., but raised in Pocatello, Id., son of farmer John Dickerson, Jr., and his wife Edna. He was working in baggage control for Transwestern Air when Pearl Harbor happened, and he volunteered for the Navy, flying planes in the South Pacific during World War II. He was VX-6 commander in 1963-64, during which time he flew to Pole Station, Byrd Station, and even Vostok Station. He retired (with the rank of lieutenant commander) to Alaska in 1964, and died in Springfield, Oreg., on July 26, 2000.

Dickey, Hugh. b. May 31, 1906, Caddo, Okla., son of Dr. Robert P. Dickey and his wife Della. Seaman on the *Bear of Oakland*, 1933-34, during the 1st half of ByrdAE 1933-35. He returned to California in June 1934, and made his way overland to Oklahoma by Greyhound. He died in Oklahoma in Feb. 1951.

Dickey, Willie Mills. Known variously as Mills Dickey and Willie M. Dickey. b. May 31, 1911. He joined the U.S. Navy in 1929, rose to the rank of captain, USN, and served in World War II and Korea. He was commander of U.S. Naval Support Force, Antarctica, in 1957, and was replaced by Eugene Maher on Nov. 28, 1957. He retired in 1959, died on April 21, 1995, in Palm Springs, Calif., and is buried at Fort Rosecrans National Cemetery.

Dickey Glacier. 81°33' S, 161°00' E. Flows N for 20 km along the E side of the Surveyors Range into Beaumont Bay on the Ross Ice Shelf. Named by US-ACAN in 1965, for W. Mills Dickey. The Russians have a glacier in these rough coordinates, Lednik Jakubova, plotted in 81°30' S, 160°50' E. It is hard to imagine a glacier in this area going unnamed by anyone else, so it is probably the same as Dickey Glacier.

Dickey Peak. 78°19' S, 84°26' W. In the NW part of the Flowers Hills, in the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Clifford R. "Cliff" Dickey, Jr., USN, electronics technician from California, who wintered-over at Pole Station in 1957.

Dickinson Rocks. 77°33' S, 147°55' W. Isolated rock outcrops near the N end of Hershey Ridge, 15 km NW of Linwood Peak, in the Ford Ranges of Marie Byrd Land. Mapped by USGS 1939-41. Re-mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for David N. Dickinson, USN, construction mechanic at Brockton Station in 1965-66 and 1966-67.

Dickinson Valley. 77°19' S, 161°26' E. A valley, 1.7 km long, on the W side of Nickell Peak, in the Cruzen Range of Victoria Land. Named by NZ-APC on Sept. 12, 2005, as Dickenson Valley, for Warren Dickinson (sic), studying quaternary geology as leader of VUWAE field parties in the McMurdo Dry Valleys for 5 seasons from 1996. US-ACAN accepted the name in 2006. On July 17, 2007, both US-ACAN and NZ-APC changed the spelling to Dickinson, based on the sound theory that if you're going to name a feature, you might as well spell it right — eventually.

Cabo Dickson. 60°45' S, 44°48' W. The name given by the Argentines to the point at the end of Mackenzie Peninsula, at the W end of Laurie Island, in the South Orkneys.

Dickson Icefalls. 76°02' S, 133°25' W. North-draining icefalls of moderate slope, at an elevation of between 1800 and 2000 m, between Mount Moulton and Mount Bursey, in the Flood Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Donald T. Dickson, USARP glaciologist with the Byrd Station Traverse of 1962-63.

Dickson Pillar. 71°54' S, 171°11' E. A rock in water, shaped like a pillar, close S of Possession Island, in the Possession Islands. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1963. Named by US-ACAN in 1969, for Paul Bevis Dickson (b. Dec. 15, 1930, Bascom, Fla.), who joined the U.S. Navy in June 1948, and who was VX-6 photographer on the flight of Jan. 18, 1958, when this rock was discovered. He retired from the Navy as a commander, in Aug. 1978.

Gora Dideriha. 81°58' S, 159°35' E. A nunatak close E of Stark Ridge, in the Churchill Mountains. Named by the Russians.

Mount Dido. 77°29' S, 160°57' E. A prominent peak, rising to 2070 m (the New Zealanders say 2255 m), between Mount Electra and Mount Boreas, in the Olympus Range of Victoria Land. Named by VUWAE 1958-59 for the Greek mythological figure. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Punta Diebel. 60°44' S, 44°43' W. A point at Uruguay Cove, at the head of Jessie Bay, on the N coast of Laurie Island. Named by the Argentines for Otto Diebel.

Diebel, Otto. He went south on the *Uruguay* in the 1904-05 season, to lead the 1905 wintering-over party at Órcadas Station. He died there on Sept. 25, 1905, being buried next to Allan Ramsay. J.A. Percy, the 2nd-in-command, took over.

Cabo 18 de Setiembre *see* **Cabo Arauco**

17 de Agosto Refugio. 68°09' S, 67°09' W. Argentine refugio built on a rock surface, on Aug. 17, 1957, on Millerand Island, by Army personnel from San Martín Station.

Dieglman Island. 66°00' S, 100°46' E. About 6 km long, and largely ice-covered, but with numerous rock outcrops, on the NW side of Edisto Channel, about 0.9 km N of Currituck Island, at the W end of the Highjump Archipelago, N of the Bunger Hills. First delineated from air photos taken during OpHJ 1946-47. In 1952, US-ACAN named the feature Dieglman Islets, for E.D. Dieglman, air

crewman on OpHJ air photo flights. Redefined by the USSR in 1956-57 as one island with several rock outcrops, and renamed accordingly by US-ACAN in 1961. ANCA has accepted the new name. However, there was no E.D. Dieglman. The man they are attempting to honor here is Max Eugene Diegelman. Max was born in Kansas City on Nov. 23, 1922, son of steel former Ben J. Diegelman and his wife Gladys E. Clowdis (later Mrs. Glaze). He joined the U.S. Navy, and was photographer's mate 1st class on the *Currituck*, part of Central Task Group 68.2 during OpHJ 1946-47. Max married twice, first to Lila Jean Conard, in Kansas City, on March 26, 1948 (they had taken out a license in KC on Aug. 19, 1942, but didn't go through with the marriage then, because of Max's war commitments). After all that, when Max was stationed at Pensacola, they were divorced in 1952. Max got married again, to Helen, but that ended in divorce, in Florida, in 1961. Max died in Jan. 1969, aged 46.

Dieglman Islets *see* **Dieglman Island**

Isla Diego Portales *see* **Veier Head**

Punta Dientes de Dragón *see* **Dragons Teeth**

Mount Dietz. 86°16' S, 153°10' W. Rising to 2250 m, just N of the confluence of Souchez Glacier and Bartlett Glacier, where it marks the S limit of the Hays Mountains, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lt. (later Cdr.) Donald Lee Dietz, USN, pilot on photographic flights during OpDF 64 (i.e., 1963-64) and OpDF 65 (i.e., 1964-65).

Dietz Bluff. 72°02' S, 62°08' W. A prominent bluff at the head of Hilton Inlet, on the Black Coast, on the E coast of Palmer Land. Photographed aerially in 1940 by USAS 1939-41, and by RARE 1947-48. Mapped by USGS from USN air photos taken between 1966 and 1969. Named by US-ACAN for Robert Sinclair Dietz (1914-1995), marine geologist with the Atlantic Oceanographic and Meteorological Laboratory, at Miami, from 1967. UK-APC accepted the name on May 21, 1979. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Diezberg. 73°52' S, 162°40' E. A peak to the SW of the glacier the Germans call Lahngletscher, N of Mount Hewson, in the Deep Freeze Range of Victoria Land. Named by the Germans.

Dike Cirque. 83°14' S, 157°57' E. A semicircular glacial cirque, 1.5 km wide, carved into Macdonald Bluffs, at the SE base of Kreiling Mesa, in the Miller Range. Named by the Ohio State University Geological Party of 1967-68, for the several black dikes cutting the granite cliffs surrounding the cirque. US-ACAN accepted the name in 1970.

Dikstra Buttresses. 69°48' S, 69°53' W. Summits rising to about 1500 m on the W side of the Douglas Range, in the N part of Alexander Island. Surveyed by BAS in 1975-76. Named by UK-APC on June 11, 1980, for Barry James Dikstra (b. 1950), BAS geophysicist who wintered-over at Base T in 1974, and who also spent some time at Rothera Station. US-ACAN accepted the name in 1995.

Dilemma Glacier. 78°45' S, 161°25' E. A steep, broken glacier flowing from the Worcester Range into the W side of Skelton Glacier, to the NW of Ant Hill. Surveyed and mapped in Feb. 1957, by the NZ party of BCTAE, and named by them for the dilemmas faced by them when descending the glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Dilemma Point. 67°24' S, 49°00' E. A group of outcrops and nearby islands on the S margin of Khmara Bay, on the coast of Enderby Land. Named by ANCA on July 26, 1983. A dilemma was the immediate response of a confused geologist faced with the very complex geology at this locality.

Dilixuezhe Wan. 62°13' S, 59°01' W. A cove at Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Dillenberget. 72°17' S, 23°16' E. A nunatak at the S side of Mount Widerøe, in the S-central part of the Sør Rondane Mountains. Named by the Norwegians.

Dillon, William *see* **USEE 1838-42**

Dillon Peak. 73°17' S, 62°40' W. Rising to about 1650 m in the Dana Mountains, it surmounts the N side of the terminus of Haines Glacier, on the Lassiter Coast of Palmer Land. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Raymond D. Dillon, USARP biologist at McMurdo in 1966-67 and at Palmer Station in 1967-68. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. The name was accepted by UK-APC on Dec. 20, 1974.

Dilten *see* **Dilten Nunatak**

Dilten Nunatak. 72°22' S, 3°47' W. A small, isolated nunatak in Borghallet, standing 2.5 km WNW of Dalten Nunatak, and 13 km NW of Borg Mountain, in Queen Maud Land. Surveyed from the ground and photographed from the air by NBSAE 1949-52. Mapped from these efforts by the Norwegians, who named it Dilten (i.e., "the jogger"). US-ACAN accepted the name Dilten Nunatak in 1966.

Dimaryp Peak. 63°26' S, 57°02' W. Rising to 500 m, it is the prominent NE peak of Mount Carroll (formerly called Mount Carrel), 1.5 km S of the head of Hope Bay, Trinity Peninsula. First charted by SwedAE 1901-04. Roughly surveyed by FIDS in 1945, and resurveyed by Fids from Base D in 1955, who named it palindromically for its similarity to The Pyramid (q.v.), 1.3 km to the E, a feature with which it has often been confused in bad weather. UK-APC accepted the name on Sept. 4, 1957, and US-ACAN followed suit in 1963.

Dimick Peaks. 78°18' S, 161°56' E. Two peaks, the higher rising to 1495 m, at the S side of the mouth of Dale Glacier, in Victoria Land. Named by US-ACAN in 1995, for Dorothy Dimick, USGS cartographer, an Antarctic specialist in the Branch of Special Maps.

Dimitrov Cove. 65°58' S, 65°04' W. A cove, 6.8 km wide, indenting the NW coast of Velingrad Peninsula for 4.8 km between Pripek Point to the W and Biser Point to the E, on the Graham Coast, on the W coast of Graham Land. Hoek Glacier and Rusalka Glacier flow into the cove, and Isla Camacúa is situated at its entrance. Mapped by the British in 1971. Named by the Bulgarians on Dec. 6, 2010, after historian and politician Bozhidar Dimitrov (b. 1945), for his support for the Bulgarian Antarctic program.

Dimkov Glacier. 64°25' S, 62°38' W. A glacier, 6 km long and 4.3 km wide, flowing southwestward from the W slopes of the Solvay Mountains, on Brabant Island, to enter Duperré Bay S of Husmann Point, in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, for Petar Dimkov (1886-1981), Bulgarian theoretician and practitioner of traditional medicine.

Dimov Gate. 62°36' S, 60°13' W. An ice-covered pass, 300 m wide and 550 m in elevation, which separates the glacial catchments of Kaliakra Glacier and the unnamed tributary glacier which flows WSW from the area between Hemus Peak and Bowles West Peak to enter Perunika Glacier. The gate provides an overland trail from the upper portion of Perunika Glacier to the area N of Mount Bowles, which bounds the pass to the SE (Hemus Peak bounds the pass to the NW). In fact, the midway point of the pass is 1.34 km WNW of Mount Bowles and 3.86 km NE of Rezen Knoll, on Livingston Island, in the South Shetlands. Roughly mapped by the British in 1968, and in more detail by the Spanish in 1991, it was surveyed in detail by the Bulgarians in 1995-96, and they named it on Aug. 19, 1997, as Porta Dimova, for Dino Dimov, geologist at St. Kliment Ohridski Station for several summers beginning in 1993.

Porta Dimova *see* **Dimov Gate**

Dinamet-Uruguay. 62°09' S, 58°50' W. A manned Uruguayan weather station, at an elevation of 10 m, installed in 1985, on Polar Friendship Glacier, at the head of Collins Harbor, Maxwell Bay, King George Island, in the South Shetlands.

Islote Dinamita *see* **Dynamite Island**

Lake Dingle *see* **Dingle Lake**

Dingle, William Robert John "Bob." b. Nov. 5, 1920. An RAF flight sergeant, he was meteorologist at Heard Island (53°S) in 1951, and met man and photographer at Mawson Station in 1954. He set up the met observatory that year. He was at Macquarie Island in 1956, and in 1957 was officer in charge at Davis Station, and at Wilkes Station in 1959. In 1967 he was at Plateau Station (an American station).

Dingle Dome. 67°03' S, 48°54' E. An ice-covered dome rising to 431 m above sea level,

and surmounting the N end of Sakellari Peninsula, in the area of Casey Bay, on the coast of Enderby Land. Discovered and photographed in 1956 during ANARE flights from Mawson Station. Named by ANCA on April 29, 1958, for Bob Dingle. US-ACAN accepted the name in 1965.

Dingle Lake. 68°34' S, 78°04' E. Also called Remnant Lake. A saltwater lake just W of Stinear Lake, on Breidnes Peninsula, in the Vestfold Hills. Photographed aerially by LCE 1936-37, and mapped from these photos (but not named, apparently) 10 years later by Norwegian cartographers. Later named by ANCA for Bob Dingle. US-ACAN accepted the name in 1965.

Dingle Nunatak. 64°31' S, 57°23' W. An area of rock, in the form of a nunatak, exposed within, and on the NW side of, the main icecap of Snow Hill Island, 4.6 km S of Day Nunatak. Named by UK-APC on Dec. 11, 1995, for Richard Vernon Dingle (b. 1943), a senior BAS geologist, a member of the field party in the James Ross Island area, 1994-95. US-ACAN accepted the name in 1996.

Dingo Pond. Just to the E of Mount Fleming, in southern Victoria Land. This name is not recognized officially. In fact, there is no reference to it anywhere, except, perhaps, in the first edition of this encyclopedia, published in 1991.

Dingsør, Bernt Theodor. b. Oct. 3, 1891, Bergen, Norway, son of Artillery officer Andreas Berentsen Dingsør and his wife Johanne Notland. His name is almost always seen as Captain Dingsør, but he was actually a Norwegian naval lieutenant, appointed in 1929 as Norwegian government whale fishery inspector. On Sept. 16, 1929, he boarded the *Sir James Clark Ross* for his first Antarctic trip. He was back, on the *Kosmos*, 1930-31.

Dingsør Dome. 68°01' S, 67°43' E. Also spelled Dingzor Dome. A small, distinct ice-covered elevation (an ice dome), rising inland from the coast, between 17.5 and 30 km SSW of Point Williams, on the Lars Christensen Coast of Mac. Robertson Land. Discovered on Feb. 12, 1931 by BANZARE, and named by Mawson for Bernt Dingsør. ANCA accepted the name on July 22, 1959, and US-ACAN followed suit in 1961.

Dingzor Dome *see* **Dingsør Dome**

Dinn, Michael Ernest. b. Sept. 6, 1959. BAS polar guide, 1986-92, and base commander 1992-96, doing 43 months altogether in Antarctica, at Rothera Station and Signy Island Station, and a month also at Deception Island in 1992, helping to clean up Base B. In 1997 he went to Italy.

Dinn Cliffs. 63°58' S, 57°51' W. Rising to about 30 m above sea level, at the NW entrance to Croft Bay, about 3 km SW of Saint Martha Cove, on James Ross Island. Named by UK-APC on Dec. 2, 1993, for Michael Dinn.

[1]**Dinsman, Samuel** *see* **USEE 1838-42**

[2]**Dinsman, Samuel** *see* **USEE 1838-42**

Dinsmoor Glacier. 64°24' S, 60°07' W. Flows E from the S edge of the Detroit Plateau (in Graham Land), into Edgeworth Glacier to the NE of Mount Elliott, on the Nordenskjöld Coast. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, for Charles Dinsmoor (1834-1904), of Warren, Pa., pioneer of tracked vehicles. US-ACAN accepted the name later in 1964. Originally plotted in 64°22' S, 59°59' W, it has since been replotted.

Dint Island. 69°24' S, 71°57' W. A rocky island, 2.5 km long, 3 km off the NW side of Alexander Island, on the NE side of Lazarev Bay. Probably first seen aerially by USAS 1939-41, it was first photographed aerially by RARE 1947-48, and from these photos, in 1959-60, Searle of the FIDS mapped the island, plotting it in 69°17' S, 71°49' W. So named by UK-APC on March 2, 1961, because of the dint (i.e., dent) made on the S side of the island by a distinctive cirque. It appears on a British chart of 1961. US-ACAN accepted the name later in 1961. It has since been replotted from Feb. 1975 U.S. Landsat images, and appears with the corrected coordinates in the 1977 British gazetteer.

Diomedea Island. 62°12' S, 58°57' W. A small island in Ardley Cove, Fildes Peninsula, in Maxwell Bay, King George Island, in the South Shetlands. It was charted (but not named) by the Discovery Investigations in 1935. SovAE 1968 called it Ostrov Al'batros. A possible English translation (Abatross Island) would have conflicted with an island of that name in South Georgia, so, on Feb. 7, 1978, UK-APC accepted the name Diomedea Island, Diomedea being the generic name for a number of species of albatross. US-ACAN accepted that situation. It appears on a 1990 British chart. One of the 1970s Argentine Antarctic expeditions descriptively named it Isla Torta, and there is a 1978 reference to it as such (a torta being a small round cake). The British were the latest to replot this island, in late 2008.

Îles de Dion *see* **Dion Island**

Îlots Dion *see* **Dion Islands**

Islas Dion *see* **Dion Islands**

Islotes Dion *see* **Dion Islands**

Dion Island *see* **Dion Islands**

Dion Islands. 67°52' S, 68°43' W. A group of small, low islands and rocks, snow-free in summer (the largest and most northerly of these islets reaches an elevation of about 50 m above sea level), including Embassy Island, Emperor Island, Consul Reef, Regent Reef, Envoy Rock, Jester Rock, Noble Rock, and the Courtier Islands, in the N part of Marguerite Bay, S of Woodfield Channel, 10 km SW of Cape Alexandra, Adelaide Island. They are often difficult to identify due to the icebergs floating around here. Discovered by FrAE 1908-10, and named by Charcot as Îles de Dion, for Albert, Marquis de Dion (1856-1946), French engineer and automobile manufacturer who donated three motor sledges and equipment to the expedition. The feature appears as such on Charcot's 1912 map. It appears on a 1914 British chart as Dion Islands, but on a 1930 U.S. Hydrographic Office chart as Dion Island (i.e., in the singular). It appears on a 1943 USHO chart as De Dion Islands. On a 1946 Argentine map it appears as Isla Roca (i.e., "rock island"), and on a 1947 Chilean chart as Isla Micalvi. The feature appears on a 1948 British chart as Dion Islets. Surveyed by Fids from Base E in 1948-49, when they discovered, on what they called Emperor Island, the only emperor penguin colony on the W side of Antarctic Peninsula. The other islands were named for courtiers in an emperor's court. The feature appears on a 1949 Argentine chart as Islotes Dion, and on a Chilean chart of 1966 as Islas Dion, but the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer was Islotes Dion. It appears on a 1954 French chart as Îlots Dion. UK-APC accepted the name Dion Islets on Sept. 20, 1955, but US-ACAN accepted the name De Dion Islets in 1956. However, on July 7, 1959, UK-APC renamed them Dion Islands, and US-ACAN followed suit with that naming in 1960. They appear as such on a British chart of 1964. In 1967, the islands were designated SPA #8.

Dion Islets *see* **Dion Islands**

The *Dione*. British yacht, skippered by Brian Harrison, which visited the Antarctic Peninsula and the South Shetlands in 1980-81.

Dione Nunataks. 71°56' S, 69°06' W. Rock exposures, in the form of nunataks, rising to about 500 m on the S side (i.e., at the head) of Saturn Glacier, 14 km W of Deimos Ridge, in the SE part of Alexander Island. It seems that they were discovered aerially by Ellsworth on Nov. 23, 1935, and roughly mapped from these photos by U.S. cartographer W.L.G. Joerg. Remapped by Searle of the FIDS in 1959-60, working from air photos taken in 1947 by RARE 1947-48, and he plotted the feature in 71°56' S, 69°06' W. Named by UK-APC on March 2, 1961, for one of the satellites of the planet Saturn. US-ACAN accepted the name later in 1961. It has since been replotted.

Diorite Glacier. 64°51' S, 62°47' W. A small tidewater glacier beneath the dioritic Docktor Peaks, on the N coast of Leith Cove, at Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Named descriptively by the Poles on Sept. 1, 1999.

Dipboye Cirque. 77°30' S, 160°50' E. Between Apollo Peak and Mount Electra, it opens S to the flat upland area called Labyrinth, on the S side of the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2005, for Richard L. Dipboye, helo pilot with PHI, a member of USAP for 8 consecutive field seasons between 1986 and 1997. NZ-APC accepted the name.

Diplock Glacier. 64°03' S, 58°50' W. A straight, narrow glacier, 16 km long, flowing eastward from the Detroit Plateau, Trinity Peninsula, Graham Land, into Prince Gustav Channel, 8 km S of Alectoria Island. Photographed aerially by FIDASE in 1956-57, surveyed by Fids from Base D in 1960-61, and mapped by FIDS cartographers from these

efforts. Named by UK-APC on Feb. 12, 1964, for Bramah Joseph Diplock (1857-1918), a British pioneer in chain-tracked tractors between 1885 and 1913. US-ACAN accepted the name later in 1964.

Direction Island *see* **Bearing Island**

Directions. At the South Pole any direction you take is north. To make it simpler for those stationed at the South Pole, they use a system whereby north = Greenwich and south is behind you as you look toward Greenwich.

Monte Director *see* **Mount Bradley**

Director Nunatak. 66°49' S, 65°06' W. A conspicuous nunatak, rising to about 1850 m, on the E side of the Avery Plateau, between the heads of Balch Glacier and Breitfuss Glacier, on the Foyn Coast, on the E coast of the Antarctic Peninsula. In 1956-57 it was photographed aerially by FIDASE and in early 1957 was surveyed from the ground by a FIDS sledging party from Base W, while traveling on the plateau. It was mapped by FIDS cartographers from these efforts. So named by UK-APC on July 7, 1959, because this nunatak was used as a landmark by the sledging party. US-ACAN accepted the name in 1964.

Directorate of Overseas Surveys. Abbreviated to DOS. Until 1957 it was known as the Directorate of Colonial Surveys, which had been set up by the British Colonial Office in 1946 to provide a central survey and mapping organization for British colonies and protectorates (which included British Antarctic Territory, as it would become known). In 1984 it merged with the Ordnance Survey, and became known as Overseas Surveys Directorate. In 1991 it became Ordnance Survey International, and was wound up in 2001.

Dirtbag Nunatak. 85°32' S, 144°52' W. A ridge-like nunatak rising to 940 m, 6 km SSW of Mount Manke, in the Harold Byrd Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Visited in 1977-78 by a USARP-Arizona State University geological field party led by Ed Stump, and named by Stump in keeping with Coalsack Bluff (q.v.). Thin layers of disintegrating mica and schist form a type of light soil on the slopes of the nunatak. US-ACAN accepted the name.

Cabo Disappointment *see* **[2]Cape Disappointment**

[1]Cape Disappointment. 60°42' S, 45°05' W. Midway along the W side of Powell Island, SE of Whale Skerries, in the South Orkneys. Palmer and Powell, on Dec. 13, 1821, charted it, but applied the name to the S end of the island, disappointed at that stage in having to return to their South Shetland bases due to lack of provisions and unfavorable winds. It appears as such on Powell's chart published in 1822. It was re-charted by the Discovery Investigations in 1933, and appears on their 1934 chart, but as applied to the the cape on the W side of the island. US-ACAN accepted the name (and that positioning) in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears on a 1954 Argentine chart, fully translated as Cabo Chasco.

[2]Cape Disappointment. 65°33' S, 61°43' W. It forms the tip of the ice-covered peninsula which extends for 14 km into the Weddell Sea, between Exasperation Inlet and Scar Inlet, on the Oscar II Coast, on the E coast of Graham Land. Its rounded summit rises to 225 m, and its high, looming sides reveal bunches of bare rock. Discovered and roughly mapped in 1902 by SwedAE 1901-04, and named by Nordenskjöld as Cape Desire, because he hoped to camp in the vicinity and walk to the shore. He later renamed it Besvikelsens Kap, or Besvikelsens Udde, for the constant disappointment experienced when encountering difficult crevasses while trying to get to the shore. It appears in the translated form of Cape Disappointment, on a 1934 Discovery Investigations chart. Visited again in Nov. 1947, by Fids from Base D, who surveyed it. UK-APC accepted the translated name on Jan. 21, 1951, and US-ACAN followed suit in 1952. It appears on a 1946 Argentine chart translated as Cabo Desengaño, and on a 1962 Argentine chart as Cabo del Desengaño, but the 1970 Argentine gazetteer accepted the name Cabo Disappointment, as did the 1974 Chilean gazetteer. In Sept. 1963, the Argentine refugio, Virgen de Loreto, was established near here, by personnel from Teniente Matienzo Station.

Point Disappointment. 76°55' S, 162°37' E. At the foot of the Kar Plateau, S of Dreikanter Head, at Granite Harbor, on the E coast of southern Victoria Land. Named by the Granite Harbour Geological Party, led by Grif Taylor during BAE 1910-13. It appears in the 1958 NZ provisional gazetteer.

Disappointment Bay *see* **Fisher Bay**

Disappointment Island *see* **Christoffersen Island**

Disasters. This entry seemed like a good idea to begin with, but in the making of it turned out to be somewhat unsatisfactory. This is partly because it is truly difficult to define a disaster. There are more specific entries in this book — e.g. earthquakes, deaths, fire, and so on — that, in the end, rob this one of much of its potential content. And there's no point in duplicating. Thus the entry winds up being bitty and lacking focus. One can only hope that the material that is, indeed, included, may, in some way, redeem it. In fact, there is much here that is not to be found anywhere else in this book, not in this detail, anyway. So, these are only some of the disasters recorded in Antarctica. **Sept. 4, 1819**: The *San Telmo* abandoned. **Dec. 7, 1820**: The wreck of the *Clothier*. **End of Dec. 1820**: The wreck of the *Lord Melville*. **Dec. 25, 1820**: The wreck of the *Lady Troubridge*. **Dec. 25, 1820**: The wreck of the *Hannah*. **Dec. 30, 1820**: The wreck of the *Ann*. **Jan. 6, 1821**: The wreck of the *Cora*. **March 7, 1821**: The wreck of the *Venus*. **April 8, 1821**: The *Sarah* lost at sea. **Jan. 17, 1823**: Death of the crew of the *Jenny*. **1833**: The *Rose* crushed between two icebergs in 60°S. **March 24, 1839**: The *Sabrina* disappeared in a gale. **Jan. 24, 1840**: The *Peacock* hit by icebergs and badly damaged. **Feb. 1845**: The wreck of the *Richard Henry* in the South Shetlands. **May 3, 1859**: the *Fleetwood* went down. **Feb. 12, 1903**: The sinking of the *Antarctic*. **1908-09**: The *Ørnen* went aground. **1910-13**: The whole Scott expedition was a disaster in a way. **Jan. 1911**: The *Selvik* foundered in Belgica Strait. **Jan. 1913**: The *Pisagua* wrecked at Deception Island. **Feb. 4, 1913**: The wreck of the *Tioga*. **1914-17**: Shackleton's British Imperial Transantarctic Expedtion was a disaster in every way. **Jan. 27, 1915**: The *Guvernøren* sank, in the South Shetlands. **Feb. 20, 1915**: The *Harpun* was lost at Melchior Harbor. **March 13, 1922**: The *Minerva* sunk. **March 29, 1923**: The whale catcher *Sacra* was lost in the Neumayer Channel. **Feb. 28, 1926**: The whale catcher *Southern Flower* hit a submerged rock near Morton Strait, and had to be condemned. **Jan. 23, 1928**: The *Scapa* capsized off Laurie Island, killing 15 out of 17 crew. **Feb. 24, 1928**: The *Southern Queen* sank in the Weddell Sea. **Feb. 28, 1929**: The *Star II* foundered in the Ross Sea. **March 14, 1929**: Byrd's Fokker plane, the *Virginia*, destroyed in the Rockefeller Mountains. **Dec. 15, 1929**: The *Southern Sea* foundered in the Ross Sea. **March 16, 1932**: The *Saragossa* caught fire and went down. **March 13, 1934**: Crash of the *Blue Blade*. **Sept. 28, 1934**: Crash of the *Pep Boy's Snowman!* **April 1, 1935**: The whale catchers *Klem* and *Splint* went down, crushed by the ice. **Dec. 30, 1946**: A U.S. Martin Mariner crashed in 71°23' S, 98°45' W. 3 killed. **Jan. 19, 1947**: Helicopter lost in the sea. No deaths. Survivors included George Dufek. **Jan. 22, 1947**: Helicopter crashed into the sea. No deaths. **Jan. 13, 1948**: Operation Windmill's Bell helicopter crashed in a whiteout in the Bunger Hills. **March 11, 1953**: The *Settsu Maru* was abandoned. **Jan. 22, 1954**: Helicopter crash at Kainan Bay. John P. Moore killed. **Dec. 22, 1955**: A U.S. Navy Otter plane crashed on take-off. Cdr. George R. Olliver sustained a broken leg. **Feb. 3, 1956**: A U.S. Navy Otter crashed into Edward VII Peninsula. No one hurt. **Feb. 10, 1956**: A third Otter wrecked, in a fall to the ice during unloading, at Little America V. **March 1956**: A blizzard destroyed much of the stores of the BCTAE. **Oct. 18, 1956**: A P2V-2N Neptune crashed on landing at McMurdo. 3 died. 4 injured. **Oct. 20, 1956**: A Globemaster crashed on landing at McMurdo. **Nov. 29, 1956**: The 90-ton, #3 million C124 Globemaster *State of Oregon*, coming in from NZ with civilian technicins aboard, hit a snow bank and crashed at McMurdo. No one died, but the pilot, Capt. Warren A. Fair (of Greenville, SC) broke a leg, and one passenger, James R. Farlow (a civilian technician from San Bernardino, Calif.) suffered an ankle injury. More to the point, a fire broke out, threatening the 3500 gallons of gasoline. This fire was put out, at great risk to themselves, by John C. Dore (of San Diego; leader of the crash crew), Charles L. Oliver (of Atas-

cadero, Calif.), Aubrey O. Weems (of Canton, Miss.), and Philip L. Newcomb, all of whom were recommended for heroism by Admiral Dufek. The plane was a write-off. **Dec. 21, 1956**: The *Southern Hunter* ran afoul of Ravn Rock in Deception Island's Port Foster. **Dec. 31, 1956**: A *Staten Island* helicopter crashed on the deck of the ship. **Jan. 19, 1957**: A *Glacier* helicopter crashed into the Ross Sea. **1957**: Charles E. Reed had a leg badly smashed by a falling antenna pole at McMurdo. **July 12, 1957**: A helicopter crash killed Nelson Cole. **Aug. 31, 1957**: 80 mph winds blew an Otter away from Little America V. **Dec. 1, 1957**: An *Atka* helicopter crashed on the flight deck. No deaths. **Dec. 3, 1957**: A second *Atka* helicopter crashed into the Ross Sea. No deaths. **Oct. 16, 1958**: A Globemaster crashed into a hill near Cape Roget. 6 dead. **Oct. 22, 1958**: An Otter literally cracked up while taxiing on the Ross Ice Shelf. **1958**: An Otter crashed while taking off from Marble Point. **Feb. 22, 1959**: A *Glacier* helicopter crashed on a test flight after an engine change. **Sept. 15, 1959**: A Dakota crashed on landing at Hallett Station. **Dec. 24, 1959**: A Dakota crashed during a whiteout at Byrd Station. **Jan. 1960**: The *City of Auckland*, a plane, crashed in the Queen Alexandra Range. **Oct. 31, 1960**: A U.S. Navy Constellation crashed near McMurdo runway. No deaths. **Feb. 15, 1961**: A helicopter exploded over the Eights Coast. No injuries. **Nov. 9, 1961**: A Neptune crashed at Wilkes Station. 5 killed. **Nov. 12, 1961**: A Dakota crashed in the Sentinel Mountains. The plane was a total wreck. **Nov. 22, 1962**: Two helicopters crashed, one in the Sentinel Range and one in the Wright Valley. **Nov. 25, 1962**: A helicopter crashed at Davis Glacier, and an R4D airplane crashed in the Albert Mountains. **Dec. 23, 1962**: A helicopter crashed on take-off at McMurdo**. Nov. 28, 1963**: A helicopter crashed in a whiteout outside McMurdo Station. **Oct. 22, 1964**: An LC-47H aircraft crashed. **Nov. 8, 1964**: A helicopter crashed in the Admiralty Mountains. No one injured. **Dec. 5, 1964**: A helicopter crashed. **Jan. 12, 1965**: A helicopter crashed at Camp Ohio, in the Horlick Mountains. **Oct. 6, 1965**: An LC-47H crashed on take-off outside Williams Field. **Dec. 5, 1965**: An LC-47H crashed on landing in the Horlick Mountains. **Feb. 2, 1966**: An LC-47J crashed on landing on the Ross Ice Shelf. All 6 men killed. **Nov. 5, 1966**: A helicopter crashed in a whiteout in Marie Byrd Land. **Jan. 22, 1967**: A helicopter landed on its nose during a near whiteout in 71°21' 30" S, 169°03' 48" E. **Aug. 24, 1967**: New lavatory complex at Williams Field destroyed. **Dec. 4/5, 1967**: Deception Island erupted (*see* **Volcanoes**, and **Deception Island**), and Presidente Pedro Aguirre Cerda Station destroyed. **Jan. 12, 1968**: An LC-117D aircraft fell during loading at McMurdo, and was wrecked. **Nov. 19, 1969**: A helicopter crashed in 77°34' S, 162°54' E. 2 killed. **Oct. 8, 1970**: American C-121 airplane veered off the runway at McMurdo, and was wrecked. **Jan. 9, 1971**: An HH-52 helicopter crashed into Mount Erebus while en route to Cape Bird. No deaths. **Feb. 15, 1971**: The *City of Christchurch*, a Hercules LC-130 aircraft, burned on take-off. The first Herc to be lost in Antarctica. **Dec. 4, 1971**: A ski-equipped LC-130 Hercules aircraft, BuNo 148321 (more popularly known as *Juliet Delta 321*), owned by the NSF, damaged during a JATO take-off in 68°20' S, 137°20' E (this spot was called D-59) in East Antarctica. They had just dropped off supplies to a US/French glaciological traverse team, and were headed back to McMurdo. The plane actually shot itself down with a JATO bottle that had come loose. At an altitude of 50 feet, two JATO bottles came loose from their attachments on the rear left fuselage. One went up the tailpipe of the Number 2 engine (inboard left side), and the other hit the Number 2 propeller. The damage multiplied from there. No one was hurt, but the men had to shelter for 80 hours until rescue could be effected. The 10-man crew were: Lt. Cdr. Ed M. Gabriel (aircraft commander and pilot), Cdr. Vernon W. "Vern" Peters (operations boss and 3rd pilot), Lt. Robert Schmuke (co-pilot), Lt. Billy Bounds (navigator), Virgil C. Harris (1st flight engineer), Dave L. Brown (2nd flight engineer), Douglas E. "Doug" Sargent (loadmaster), Tom Gregg (flight technician and radio man), Richard Horton (photographer's mate), and one civilian propane expert. 16 years later, the plane, after 3 years of effort, was finally dug out of 30 feet of snow and ice, and fixed up. It had been perfectly preserved. During the recovery, another LC-130 crashed and burned, killing 2 Navy crewmen. On Jan. 10, 1988, at 10.56 P.M., *Juliet Delta 321* landed again at Williams Field, piloted by Cdr. Jack Rector. The recovery cost was less than one third of the $35 million it would have cost for a new plane (not taking into account the two deaths). *Juliet Delta 321* arrived back in the USA on July 2, 1989. **Jan. 28, 1973**: An LC-130, #917, crashed at the South Pole. Although the plane was wrecked, no one was hurt. **July 1974**: McMurdo radio shack destroyed and other buildings were damaged during 125 mph winds. **Jan. 15, 1975**: 2 U.S. Hercules aircraft damaged in separate incidents, one at Dome Charlie. **Nov. 4, 1975**: another Hercules was damaged near Dome Charlie. **Jan. 11, 1976**: the *Zapiola* sank, after hitting a rock. **1978-79**: At Molodezhnaya Station, a Soviet transport plane crashed during take-off, when an engine failed. It killed the pilot, co-pilot, and a passenger. 11 others were injured. **Jan. 7, 1979**: A UH-1N helicopter crashed into the Gawn Ice Piedmont. No injuries. **Nov. 28, 1979**: An Air New Zealand DC-10 crashed into the side of Mount Erebus, killing 257, all aboard, mostly tourists on this "champagne flight" (*see* **Deaths**, 1979). **Dec. 18, 1981**: The sinking of the *Gotland II*. **1982**: The British lost 2 Twin Otter aircraft in a storm, eliminating much of the planned BAS summer research program. **Jan. 12, 1986**: The sinking of the *Southern Quest*. **Feb. 1986**: A Soviet IL-14 aircraft, a small cargo plane, crashed on Philippi Glacier, killing 6, while attempting an emergency landing during a whiteout. **1986**: Druzhnaya Station destroyed by an ice cave-in. **Jan. 28, 1989**: The *Bahía Paraíso* ran aground in Bismarck Strait, and 3 days later capsized, spilling oil in huge quantities (*see also* **Pollution**). **2006**: The *Nordkapp* went down. **Nov. 23, 2007**: The *Explorer* sank in the South Shetlands. **Dec. 2008**: The *Ushuaia* ran aground. Feb. 2009: The *Ocean Nova* ran aground.

Disbreen *see* **Kasumi Glacier**

Disbrow, John *see* **USEE 1838-42**

Disch, Carl Robert. b. 1938, Monroe, Wisc. Ionosphere physicist with the National Bureau of Standards, who wintered-over at Byrd Station in 1965. At 9.15 A.M., on May 8 of that year, during a severe storm and temperatures of -44° F, he left the radio noise building to return to the main base, a walk he had already made 25 times that season. A handline ran from the meteorology building at the main station to the ladder at the foot of the radio noise building. He had not arrived back at base by 10 o'clock, so a vehicle search party went out looking for him in the area of the handline. Indications were that he had not even touched the handline. By 11.30 his trail had been picked up, leading west out of the main station and heading for the SW corner of the skiway, about 4 miles away. The search Nodwell returned to base to re-fuel, and then spent 3 hours trying to find his trail, to no avail. The wind and snow drifts were so strong that the tracks of the search vehicle had become obscured, and placed the searchers in danger of not returning safely. At 6.15 P.M. they got back to base, without Disch. At 7 P.M. another search party went out, exploring the area around the handline again, the emergency Jamesway hut, and the dump. At 7.50 P.M. all able hands made a chain and searched from the end of the dump to the skiway. Flares were fired every half hour from the aurora tower until weather conditions made them impractical, and floodlights were lit from the station. At 6 P.M. the next day another vehicle search party went out, covering a mile-wide by 9-mile-long area running south of the skiway. They found occasional tracks, with no shortening of stride, and followed them to about 4 miles south of the station, where they disappeared. A 7.40 in the morning of May 10 an 8-man search party, equipped with 2 vehicles, an emergency Jamesway hut, and enough fuel and provisions for a week, set out heading south. It searched for about 12 miles south, found no tracks, but left flags along the way. On May 12 they searched the NE and SE sectors of old Byrd Station, 6 miles away. The next few days' search was impossible due to conditions, and Disch was declared dead.

Disch Promontory. 83°34' S, 162°52' E. A high, ice-covered promontory, extending for 10 km from the E side of Prince Andrew Plateau, in the Queen Elizabeth Range. Named by US-ACAN in 1966, for Carl Disch.

[1]**The *Discovery***. One of the great ships of Antarctic history. Designed by W.E. Smith, and built in Dundee specifically for Antarctic waters, at a cost of £34,050. An oak 3-master of 700 tons, with a 483-ton capacity, 177 feet long, and with a 33-foot beam, she had an elm keel and 400 hp engines. She was the sixth ship of that name, being named specifically for Sir George Nares's *Discovery* of 1876. She was Scott's vessel for BNAE 1901-04, and had a crew of 43. Scott deliberately froze her in the ice for 2 years, in McMurdo Sound, 1902-04. After that expedition she was bought by the Hudson Bay Company and used in the Arctic fur trade. In 1914 she almost took part in the British Antarctic and Oceanographical Expedition. In 1923 the Discovery Committee (q.v.) bought her, and refitted her as their expedition ship from which to conduct the Discovery Investigations (the *William Scoresby* would be added as the second such ship in 1926). The *Discovery* left Dartmouth in Sept. 1925. Scientific staff were: Stanley Kemp (expedition and scientific leader), Alister Hardy (chief zoologist), James Hamilton (naturalist), Henry Herdman (hydrographer), and Rolf Günther (zoologist). Ship's crew of 39 included: J.R. Stenhouse (master), W.H. O'Connor (1st officer), John Chaplin (2nd officer and navigator), T.W. Goodchild (3rd officer), John Cargill (bosun's mate; bosun on the 2nd half of the expedition), Engineer Commander William Horton (chief engineer), Andrew Porteous (2nd engineer), George Gourlay (3rd engineer), Surgeon Commander Edward Marshall (doctor), and seamen Alfred Briggs, James Purvis, John Cook, and Horace Sandford. There were 3 midshipmen (naval cadets) aboard as well: W.P. O'Connor, John Bentley, and Francis Peas. James Forbes was the sailmaker. At intervals during the expedition, the ship called at Cape Town, and would take on South African boys from the training ship *Botha*. The ship arrived back in Falmouth on Sept. 25, 1927. With the commissioning of the *Discovery II* in 1929 the older ship became known in some quarters as *Discovery I*. Mawson used her as his vessel during BANZARE 1929-31, during which she was commanded by John King Davis (1929-30) and Capt. K.N. MacKenzie (1930-31). In 1936 she became a training ship for Sea Scouts on the Thames, and in 1955 she became an RNR drill ship. The Maritime Trust took her over in 1979.

[2]**The *Discovery***. Tourist ship, registered in Bermuda, that could carry 650 passengers. She was in Antarctic waters in 2003-04.

Bahía Discovery *see* **Discovery Bay**

Cape Discovery *see* **Cape Découverte**

Estrecho Discovery *see* **Discovery Sound**

Isla Discovery *see* **Guépratte Island**

Lake Discovery. 78°20' S, 164°15' E. A lake, 5 km long, at the N end of Hurricane Ridge, on the W margin of Discovery Glacier, on the Scott Coast of Victoria Land. Named by US-ACAN in 1999, in association with the glacier, a partial source for this lake, and also with Mount Discovery, which is the dominant feature in the vicinity. NZ-APC accepted the name on Nov. 4, 1999.

Mount Discovery. 78°23' S, 165°01' E. A conspicuous, isolated, extinct volanic cone, rising to 2681 m (the New Zealanders say 2770 m), S and E of of Koettlitz Glacier, and overlooking the NW portion of the Ross Ice Shelf, at the head of McMurdo Sound, in southern Victoria Land. It forms the center of a 3-armed mass of which Brown Peninsula is one extension, to the NE; Minna Bluff is a 2nd, to the SE; and the 3rd is Mount Morning, to the W, and which is really part of the mainland. It is the most symmetrical of all the large craters, and presents a most striking appearance, rising, as it does, in a graceful bell-like dome (reminding one of Mount Egmont, on NZ's North Island) sheathed almost up to its summit in snow and ice, at least on its S side, yet on the N there is so much bare rock that, at midsummer, one could almost climb to the top entirely on bare rock. Discovered in Feb. 1902 by Scott, during BNAE 1901-04, and named by him for his ship. US-ACAN accepted the name in 1947, and NZ-APC followed suit. The NZ gazetteer says, "It has never been visited, in spite of the fact that there are no greater obstacles than rough ice in the way." That may have been true then, when that was written, but in 2006-07, a team of British and American geologists climbed it. At first glance, for the New Zealanders to be still using this obviously, but only comparatively recently, out-of-date gazetteer is somewhat understandable, yet that climb was not the first ascent of Mount Discovery. The first to climb it were VUWAE 1958-59, i.e., New Zealanders.

Discovery Bay. 62°29' S, 59°43' W. A bay, about 5 km wide, indenting the NE coast of Greenwich Island for about 5 km between Ash Point and Canto Point, in the South Shetlands. It was known to sealers as early as 1821. Surveyed by the personnel on the *Discovery II* in 1934-35, and named by them for their ship. It appears on their 1935 chart, and also on a British chart of 1937. It appears on a 1946 Argentine chart as Bahía Discovery, on another (from 1953) as Bahía Descubrimiento (which means "discovery bay," but with "discovery" being here a common noun, rather than the name of the ship), and the name Bahía Discovery was the one accepted by the Argentine gazetteer of 1970. ChilAE 1946-47 further charted the bay, in great detail, and established Soberanía Station (what later became known as Capitán Arturo Prat Station) here, on Guesalaga Peninsula, the first permanent Chilean station in Antarctica. They named the bay Bahía Soberanía, but almost immediately changed the name to Bahía Chile, and that latter name is the one that appears on their 1947 chart, and was the name accepted by the 1974 Chilean gazetteer. However, there are 1948 references to it as Bahía de Soberanía and Puerto Soberanía, but these are fleeting (however, *see* **Puerto Soberanía**, under **S**). The word "soberanía" means "sovereignty," a word much on the minds of Antarctic Chileans in those days). US-ACAN accepted the name Discovery Bay in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The name Chile Bay has also been seen. The bay was further charted by an RN Hydrographic Survey unit on the *Protector* in 1964. It is a control area, with summer studies going on here every year, and SSSI #26 was created here, occupying 2 small areas of the bay, and is of interest for its benthic research, which has been conducted here since 1967. The British were the latest to replot this bay, in late 2008.

Discovery Bluff. 77°01' S, 162°37' E. A conspicuous headland rising to about 500m, forming the W side of the entrance to Avalanche Bay, and projecting into the S part of Granite Harbor, between Botany Bay and Avalanche Bay, in Victoria Land. Discovered by BNAE 1901-04, and named by Scott as Rendezvous Bluff. BAE 1910-13 renamed it for the *Discovery*. US-ACAN accepted the name, and NZ-APC followed suit. Originally plotted in 77°02' S, 162°40' E, it has since been replotted.

Discovery Committee. A committee appointed by the British Colonial Office in 1923 to conduct oceanographic research in Antarctica, with a view to perpetuating and regulating the whaling industry, and to placing the whaling business on a scientific basis. Founding members included representatives of the Colonial Office, the Admiralty, the Natural History Museum, the Ministry of Fisheries, and the Royal Geographical Society. Ernest Rowland "E.R." Darnley was chairman, 1923-33. A marine biological lab was finished at Grytviken, South Georgia (54°S), in Jan. 1925, work began here under Neil Mackintosh, and continued each summer until 1931. The next, and most important, phase, the Discovery Investigations themselves (abbreviated as DI), run by the Falkland Islands Dependencies Administration, was begun in the 1925-27 period, on Scott's old ship, the *Discovery* (hence the name of the Committee and the Investigations), its main purpose being to investigate the biology and ecology of whales. Stanley Kemp was appointed director of research and leader of the first expedition. In 1926 the *William Scoresby* was commissioned as the second DI vessel, and from 1927 to 1939 did 7 Antarctic cruises (as they were called), calling regularly at Deception Island. The *Discovery* was replaced by the *Discovery II*, which was commissioned in 1929 and worked until war broke out in 1939, the DI being halted at that point. On March 31, 1949 the National Institute of Oceanography (sponsored by the Admiralty) took over the project. It lasted two years (*see* **The *Discovery II***). Many reports were drawn up which are invaluable today. *See also* **Marr, J.W.S.**, who was marine biologist on DI, and one of the most prominent figures on the project.

Discovery Dome *see* **Crown Peak**

***Discovery* Expedition** *see* **British National Antarctic Expedition 1901-04**

Discovery Glacier. 78°20' S, 164°30' E. A

broad glacier, 14 km long, between Hurricane Ridge and Mount Discovery, it flows N to coalesce with the E margin of the lower Koettlitz Glacier, on the Scott Coast of Victoria Land. Named by US-ACAN in 1999, in association with the mountain. NZ-APC accepted the name on Nov. 4, 1999.

Discovery Hut *see* **Scott's Huts**

Discovery Inlet. 78°20' S, 171°00' W. A deep, intensely cold inlet (it is actually a reentrant) near the Bay of Whales, extending ESE into the Ross Ice Shelf for about 30 km. Discovered on Jan. 26, 1902, from the *Discovery*, during BNAE 1901-04. Larsen moored here over the 1923-24 summer, in the *Sir James Clark Ross*, and ByrdAE 1928-30 used it. Originally plotted in 78°30' S, 170°00' W, it was later replotted. Its presence was confirmed by OpW 1947-48, but it is gone now. It still appears in the NZ gazetteer.

Discovery Investigations *see* **Discovery Committee**

Discovery Island *see* **Guépratte Island**

Discovery Ridge. 84°44' S, 114°06' W. A broad rock ridge with a rather flat summit, it projects NW from the Buckeye Table, in the Ohio Range, 3 km NW of Mount Glossopteris. Named by Bill Long (*see* **Long Hills**), geologist here in 1960-61 and 1961-62, who discovered the first tillite and the first Devonian branchiopods here, hence the name. US-ACAN accepted the name in 1965.

Discovery Sound. 64°31' S, 63°01' W. A marine channel, 0.8 km wide, and trending E-W for about 1.5 km between (on the one hand) Guépratte Island and (on the other) Briggs Peninsula and Parker Peninsula, on the NE side of Anvers Island, in the Palmer Archipelago. Discovered by Dallmann in 1873-74, and charted by FrAE 1903-05. Explored by the personnel on the *Discovery* in 1927, and they named it for their ship. It appears on their chart of 1929. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer and on a 1959 British chart. It appears on a Chilean chart of 1947, translated as Seno Descubrimiento, as if "discovery" were a common noun, and thus rendering the name useless. It appears on an Argentine chart of 1949 as Estrecho Discovery, which means Discovery Sound, and that was the name accepted by the 1970 Argentine gazetteer. It appears as Seno Discovery on a 1969 Chilean chart, thus rendering the name useful. However, the 1974 Chilean gazetteer accepted the name Estrecho Pinochet, for Óscar Pinochet de la Barra (*see*, among other entries, **Playa Pinochet de la Barra**), which may have been nice for those who named it, but, with everyone else in the world calling it Discovery, for those Chileans who have to navigate in its waters, the name is useless.

The *Discovery II*. Royal research ship which, in 1929, replaced the *Discovery* as one of the two ships used on the Discovery Investigations (the other was the *William Scoresby*). Built specifically for oceanographic work, the all-steel, single-screw motor vessel was launched at the yard of her builders, Messrs Ferguson Bros of Port Glasgow, on Dec. 2, 1929. 232 feet long, and 36 feet broad, she had a draft of 16 feet when fully loaded, and could travel at 13 knots. She carried enough fuel to be able to steam at full speed for 6000 miles, or 9000 at economical speed. Labs were on the upper deck, and a dark room and lab on the lower. **1929-31 cruise**. On Dec. 14, 1929 *Discovery II* left London. The expedition staff were: Stanley Kemp (research director), Neil Mackintosh (zoologist and chief scientific officer), Dilwyn John and Rolf Günther (senior zoologists), Francis Fraser and John Hart (zoologists), Henry Herdman and Archibald Clowes (senior hydrologists), George Deacon (hydrologist, from 1930), Alec Laurie (zoologist, Oct.-Nov. 1930), Robert Mackay (lab assistant), and Alfred Saunders (scientific assistant). The ship's crew included: Peter Carey (skipper), Jack Irving (1st officer until April 1930), Andrew Nelson (2nd officer, in charge of surveys, he was promoted to 1st officer in April 1930), Richard Ardley (3rd officer, 1929-30; 2nd officer, from April 1930), John Cargill (bosun), Edward Marshall (surgeon and bacteriologist), Albert Stevens (writer), William Horton (chief engineer), Andrew Porteous (2nd engineer), George Gourlay (3rd engineer), James Grant (carpenter), Duncan Kennedy (netman), Harold Johns, James Jameson, Harold Moreton, and Arthur Parry (able seaman), William Suffield (able seaman, 1929-30; then promoted to bosun's mate), James Purvis (able seaman, 1930-31), Alan Osgood, Leonard Thomas, and Daniel Milford (ordinary seaman), John Connolly (ordinary seaman, from 1930), Jack Coleman-Cooke (leading fireman), Jerry Ryan (fireman and greaser), Walter Hewitt (fireman), Horace Sandford (fireman, 1930-31), Dennis Daley and Heinrich Bockel (firemen, from 1930), Tom Berry (chief steward), Edward Saddler (2nd steward), Albert Wyatt (assistant steward), William Kebbell (cook). *Discovery II* arrived back in England on May 31, 1931. **1931-33 cruise**. *Discovery II* left England on Oct. 3, 1931. Scientists included: Dilwyn John (in charge of science), Jimmy Marr, George Rayner (1932-33), and Frank Ommanney (all three zoologists), George Deacon (hydrologist), Robert Mackay (lab assistant, 1931-32), and Alfred Saunders (scientific assistant). Ship's crew included: Peter Carey (captain), Andrew Nelson (1st officer, in charge of surveys), Richard Ardley (2nd officer), Leonard Hill (3rd officer), William Suffield (bosun), Harold Moreton (bosun's mate), William Horton (chief engineer), Andrew Porteous (2nd engineer), George Gourlay (3rd engineer), Cecil Buchanan (artificer, from 1932), Geoffrey Gibbon (surgeon), Albert Stevens (writer), James Grant (carpenter), Duncan Kennedy (netman), Jock Matheson (leading seaman), Alfred Briggs, Arthur Parry, James Jameson, Daniel Milford, Albert Braillard, George Ayres, and Harold Johns (able seaman), D. Stegmann (able seaman, 1932-33), Alan Osgood, Charles Lashmar, Norman Cobbett, and John Connolly (ordinary seaman), Joseph Reid (ordinary seaman, from 1932), Jack Coleman-Cooke (leading fireman), Jerry Ryan (fireman and greaser, 1931-32), Horace Sandford, Dennis Daley, Heinrich Bockel, William Peachey, and Leonard Thomas (fireman), Walter Hewitt (fireman, 1931-32), Tom Berry (chief steward), Edward Saddler (2nd steward), and Leslie Miller (assistant steward). In 1932 the ship circumnavigated Antarctica in the winter, the first vessel ever to do that. Near the end of the trip, off the coast of France, Captain Carey was washed overboard and lost on May 2, 1933. Andrew Nelson (who had been 1st officer for 3 years under Carey) took over, and brought the ship back to England. **1933-35 cruise**. *Discovery II* left England on Oct. 21, 1933, with a compliment of 51, including 4 scientists: Neil Mackintosh (leader), Dilwyn John (zoologist), Henry Herdman and Archibald Clowes (hydrologists), Alfred Saunders (photographer and lab assistant), and Walter Fry (scientific assistant). The ship's crew included: Andrew Nelson (captain), Leonard Hill (1st officer), Richard Walker (2nd officer), Henry Kirkwood (3rd officer), Tom Oates (extra 3rd officer, until 1934), William Suffield (bosun), Harold Moreton (bosun's mate), William Horton (chief engineer), Andrew Porteous (2nd engineer), George Gourlay (3rd engineer), Cecil Buchanan (artificer), Joseph Purser (surgeon), Albert Stevens (assistant purser), Albert Morris (radioman), Duncan Kennedy (netman, 1933-34), Jock Matheson (leading seaman), Alfred Briggs, George Ayres, Alan Osgood, Arthur Parry, Albert Braillard, Joseph Reid, and Harold Johns (able seaman), Johnny Dobson and Norman Cobbett (ordinary seaman), Charles Lashmar (ordinary seaman until 1934; then promoted to able seaman), Victor Vidulich (ordinary seaman, from 1934), Jack Coleman-Cooke (leading fireman), Leonard Thomas, Heinrich Bockel, and Dennis Daley (fireman), Horace Sandford and William Peachey (greasers), Tom Berry (chief steward), Leslie Miller (assistant steward), Frank Smedley (chief cook, from 1934), James Purvis (assistant cook), John Livermore (mess boy), and Herbert Jones (mess boy, from 1934). During this cruise she left Dunedin and sailed to the Ross Sea in Feb. 1934, with Dr. Louis Potaka aboard, to replace the ailing Dr. Guy Shirey, who had left Little America on the *Jacob Ruppert* during ByrdAE 1933-35. *Discovery II* made it back to London on June 4, 1935. **1935-37 cruise**. *Discovery II* left London on Oct. 3, 1935, with 50 men on board. The scientists included: George Deacon (leader), Jimmy Marr (senior zoologist), Frank Ommanney (zoologist), Alfred Saunders (photographer and lab assistant), and Walter Fry (scientific assistant). The ship's crew included: Leonard Hill (captain), Richard Walker (1st officer), Henry Kirkwood (2nd officer), Tom Oates (3rd officer), William Suffield (bosun), Jock Matheson (bosun's mate), J.R. Strong (surgeon), William Horton (chief

engineer), Andrew Porteous (2nd engineer), George Gourlay (3rd engineer), Cecil Buchanan (artificer), Albert Morris (radioman), Sydney Bainbridge (writer), George Ayres (netman), Charles Lashmar, Joseph Reid, Norman Cobbett, Arthur Moore, John MacKenzie, George Patience, and Alan Osgood (able seamen), James Matheson (ordinary seaman, from 1936), Johnny Dobson (ordinary seaman; promoted to able seaman in 1936), Jack Coleman-Cooke (leading fireman), Daniel Milford, Herbert Jones, Victor Vidulich, and Leonard Thomas (fireman), Tom Berry (chief steward), Frank Smedley (chief cook), John Livermore (mess boy). On Jan. 19, 1936 the ship picked up Ellsworth and Hollick-Kenyon after their aerial transantarctic crossing in the *Polar Star*. **1937-39 cruise**. This was *Discovery II*'s fifth consecutive cruise, and the last one before the war. She left London on Oct. 7, 1937, with a compliment of 52. Scientists included: Neil Mackintosh (leader, but only as far as Dunedin, when Henry Herdman took over), Archibald Clowes, John Hart, Alfred Saunders (photographer and lab assistant), Walter Fry (scientific assistant), and John Nicholson. The ship's crew included: Leonard Hill (captain), Archibald Macfie (1st officer), Henry Kirkwood (2nd officer until 1938), William Suffield (bosun), Arthur Moore (bosun's mate), Andrew Porteous (chief engineer), George Gourlay (2nd engineer; this was his 5th trip), Frank Swan (3rd engineer), Cecil Buchanan (artificer), Albert Morris (radioman), Sydney Bainbridge (writer), George Ayres (netman), John MacKenzie, George Patience, Daniel Milford and Norman Cobbett (able seamen), Jack Coleman-Cooke (leading fireman), Herbert Jones, Leonard Thomas and James Matheson (firemen), Victor Vidulich (until 1938), Tom Berry (chief steward), and Frank Smedley (chief cook). In Dec. 1937, at Perth, they picked up Australian observer Allan Cornish. On Feb. 8, 1938 the *Discovery II* left Dunedin with 52 men on board, including 4 scientists. In the summer of 1937-38 the *Discovery II* again circumnavigated Antarctica, and on May 9, 1939 she arrived back in London, after doing 100,000 miles. World War II halted the DI in 1939, and the *Discovery II*, and the *William Scoresby*, were taken over by the Ministry of War. **1950-51 cruise**. Henry Herdman led this last Antarctic cruise of the *Discovery II*, which, after delays, finally left England on May 11, 1950. Capt. John Fulford Blackburn commanded the ship's company of 50 strong. Neil Mackintosh was on board for the first part of the voyage, and 6 lads of 16 years of age from the training ship *Arethusa* also went along. The ship arrived in Western Australia in July 1950, was repaired, then went off on hydrographic missions in Australian waters, getting into Sydney in March 1951. After circumnavigating Antarctica, *Discovery II* made a roundabout way back to England, where she arrived in Dec. 1951. In 1952 she went north with Blackburn and Deacon, and after several adventures (none in the Antarctic, however), she pulled into Plymouth at the end of her last voyage, on Sept. 7, 1962, and was paid off. She had voyaged 700,000 miles. John Coleman-Cooke wrote a book, Discovery II *in the Antarctic* [1967].

Discussion Lake. 69°23' S, 76°21' E. A circular lake about 1 km W of Law-Racovitza Station, in the Larsemann Hills. Named by ANCA on Nov. 24, 1987. The Chinese call it Niuyan Hu.

Disease. The big problem in the old, pre-vitamin days, was scurvy (q.v.), but that has been eradicated now, although the danger of it will persist forever. Other forms of disease have been and always will be reasonably prevalent in Antarctica. For example, Amundsen turned gray during the wintering-over of the *Belgica* in 1898. Some scientists and explorers come back from Antarctica with their skin dry, cracked, or bleeding. Dehydration is a danger — the cold can make one forget to drink. The winter-over syndrome is depression, hostility, and lack of concentration, while insomnia ("the big eye") affects most people during the summer months when daylight is perpetual. In early 1979 there was a cholera outbreak among skuas at Palmer Station. For tourists going to Antarctica a gamma globulin inoculation, or its equivalent in natural remedies, is recommended. One does not catch cold easily in Antarctica, it being a supposedly germless environment, although in July 1934, at Little America, Byrd's men all came down with colds. In the extreme cold, one's white corpuscles drop from 5,000 per c.c. to 2,500 in about 9 months; upon return to "civilization" one is then more susceptible to diseases, colds, etc. USAS 1939-41 reported that the most common ailment was toothache. The cold contracted fillings and they dropped out of cavities. Fresh decay developed, and teeth were lost. During OpDF I (1955-56) both Little America and McMurdo Base had a doctor, but only McMurdo had a dentist (Dave Knoedler). Amundsen took a tooth extractor with him on his expedition of 1910-12, and had to take a man's tooth out.

Disheia *see* **Kasumi Rock**

The *Disko*. Danish tourist vessel, owned by Marine Expeditions, in at the South Shetlands, the South Orkneys, and the Antarctic Peninsula, in 1997-98 (Captain Arne Dethlevs) and 1998-99 (Capt. Frantz Jensen). She was replaced by the *Lyubov Orlova*.

Diskordanztal. 71°40' S, 162°00' E. A valley, NE of DeGoes Cliff, in the Morozumi Range of Victoria Land. Named by the Germans.

Dismal Basin. 68°38' S, 78°14' E. A large area S of Oblong Lake, in the Vestfold Hills. The surface is undulating, and littered with erratics. There are numerous small lakes and ponds. Named by ANCA on July 26, 1983.

Dismal Buttress. 85°27' S, 178°42' W. A mainly ice-free rock bluff overlooking the W side of the head of Shackleton Glacier about 5 km NW of the Roberts Massif. So named by the Southern Party of NZGSAE 1961-62, because of several dismaying incidents that took place here. First they were told they could not descend the Scott Glacier, as they had planned. Then a sledge, which had been broken, had to be temporarily fixed, and relaying of loads began, a thankless job. And, to cap it all, the only lead dog they had, Dismal, a Husky with 8 years Antarctic experience, had to be killed with a picket hammer. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Dismal Island. 68°06' S, 68°50' W. A mostly ice-covered island, 1.5 km long, and rising to 60 m above sea level, it is the largest of the Faure Islands, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. The Faure Islands were discovered and first charted in 1909, by FrAE 1908-10. This particular island was surveyed by Fids from Base E in June-July 1949, and named by them as Dismal Islet, for its extreme desolation and lifelessness. UK-APC accepted that name on March 31, 1955, and US-ACAN followed suit in 1956. UK-APC renamed it Dismal Island on July 7, 1959, and US-ACAN followed suit in 1963. The Argentines call it Islote Sombrío (which means the same thing).

Dismal Island Automatic Weather Station. An American AWS on Dismal Island, in Marguerite Bay, at an elevation of 10 m. It was installed in May 2001.

Dismal Islet *see* **Dismal Island**

Dismal Mountains. 68°05' S, 55°25' E. A group of nunataks, about 57 km SW of Rayner Peak, on the border of Kemp Land and Enderby Land. Photographed aerially by ANARE in 1956, and surveyed by Graham Knuckey during a dog-sledge journey from Amundsen Bay to Mawson Station in Dec. 1958. Named by ANCA on July 22, 1959, for the frequent cloud cover here. US-ACAN accepted the name in 1961.

Dismal Ridge. 78°17' S, 162°48' E. A forked ridge which leads N and E from the Mount Kempe-Mount Huggins saddle. It is bounded on the N and W by Radian Glacier and Glimpse Glacier, and on the S by Kempe Glacier. The two forks enclose Glee Glee Glacier, and descend to Roaring Valley. So named by VUWAE 1960-61 because of the persistently dismal weather conditions encountered here while they were mapping in Jan. 1961, and also because of difficulties encountered in establishing a high food camp on this ridge by helicopter, again owing to the weather. NZ-APC accepted the name, and US-ACAN followed suit in 1973.

Dismond, John *see* **USEE 1838-42**

Disney, Solomon *see* **USEE 1838-42**

Disthenwand. 73°21' S, 166°32' E. A wall, NE of Dessent Ridge, in the Mountaineer Range of Victoria Land. Named by the Germans.

Distinguished visitors. All the visitors to Antarctica are, of course, distinguished, because there have not been many (at least that was the case until recently; now there are many more undistinguished visitors than distinguished). But, in Antarctic circles, a DV, as they are

called, is anyone of prominent standing in the "civilized" world, a statesman, politician, etc., anyone to whom extra courtesy would normally be extended. Here is a brief list of some interesting DVs to Antarctica over the years. There have been, of course, many more — ambassadors, congressmen, senators, secretaries, undersecretaries, even Isabel Perón, 3rd wife of the famous Argentinian president: **Feb. 12, 1928**: Sir Arnold Hodson, governor of the Falkland Islands, was the first governor to visit Antarctica, which he did on the *Fleurus*, arriving at Deception Island, in the South Shetlands. He also visited the Palmer Archipelago, and on Feb. 17, 1928, arrived at the South Orkneys. **1947-48**: President Gabriel González Videla of Chile, Gen. Guillermo Barrios Tirado (minister of national defense), and an official party of 140, visited Soberanía Station (what would later be called Capitán Arturo Prat Station), and inaugurated General Bernardo O'Higgins Station, during the Presidential Antarctic Expedition. **1952-53**. Alan Ladd, on the *Kista Dan*, during the filming of *Hell Below Zero*. **1954-55**: Sir Oswald Raynor Arthur, governor of the Falkland Islands, did a tour of the FIDS bases. **March 1956**: Governor Arthur on his tour of bases. **Dec. 1956**: The Argentine vice president, Rear Admiral Isaac F. Rojas, visited some bases as part of ArgAE 1956-57. **Jan. 1957**: Prince Philip, on his own expedition to Graham Land, in the yacht *Britannia*. **1957**: Edwin Arrowmsith, governor of the Falkland Islands. **Nov. 16, 1957**: Hon. John P. Saylor, Republican congressman from Pennsylvania. The first congressman (from any country) to fly over the South Pole. Air Force captain Francis Burnett flew the plane. **Nov. 25, 1957**: The following U.S. congressmen: Hon. John J. Flynt, Jr. (D-Ga.), Hon. Steven B. Derounian (R-NY), Hon. Samuel N. Friedel (D-Md.), Hon. Robert Hale (R-Me.), Hon. Oren Harris (D-Ark.), Hon. Torbert H. MacDonald (D-Mass.). First they flew over the Pole in a Globemaster piloted by Lt. Col. Dixon J. Arnold, and they dropped supplies there; then, after lunch at McMurdo, they flew to Little America. **Mid-Dec. 1957**: Sir Hubert Wilkins visited Hallett Station. **March 8, 1961**: Dr. Arturo A. Frondizi, president of Argentina, visited Deception Island on the *Bahía Aguirre*. **1961**: Hon. Francis A. Russell, U.S. ambassador to NZ. **1962**: Gen. Jimmy Doolittle. **Nov. 26, 1962**: At the South Pole, when Adm. Reedy took over from Adm. Tyree as commander, U.S. Naval Support Force, Antarctica, those present included Larry Gould and the Rev. Theodore M. Hesburgh, president of Notre Dame. **1963-64**: Sir Bernard Fergusson, governor general of NZ. **Dec. 23, 1963**: Cardinal Spellman flew into McMurdo, in a plane piloted by Major Joseph R. Dobbratz. He was accompanied by Rear Admiral Floyd Dreith, chief of the Navy chaplains. **1963-64**: Lowell Thomas, the writer and Sir Walter Nash, former PM of NZ, visited the South Pole. **1964**: Sidney Nolan, the artist, visited for a short time, and painted a series of landscapes. **1964-65**: Svetlana, the Russian movie star, visited Signy Island Station on the *Gnevny* (*see* **Svetlana Passage**). **1966-67**: Wernher von Braun. **1966-67**: Pierre Roland, governor of the Terres Australes et Antarctiques Françaises, visited British bases. **1967-68**: Brian Lochore, captain of the All-Blacks NZ rugby team. **1968**: Tom Keneally, the author, visited McMurdo, and stole a Huntley & Palmer's biscuit from the tin on the floor of Scott's Hut. In 2003 he returned the biscuit, uneaten. **Nov. 11-14, 1968**: William H. Crook, Jr., aged 12, the youngest person in modern times to visit Antarctica. He was there with his father, the Hon. W.H. Crook, U.S. ambassador to Australia. **1968 and 1970**: Max Conrad (q.v.), the round-the-world aviator. **Jan. 5-10, 1969**: Sir Arthur Porritt, governor general of NZ, visited Scott Base and McMurdo. **Jan. 23-28, 1969**: Peter Snell, NZ track star and Olympic gold medallist. **March 1969**: President Frei, of Chile, inaugurated the station named after himself. **1969**: Tom Watson, head of IBM. **Nov. 24, 1969**: Dr. Laurence M. Gould (q.v.). **Jan. 7-14, 1970**: Donald K. Slayton and Col. David R. Scott, astronauts. **Nov. 1970**: Pierre Charpentier, French ambassador and a signer of the Antarctic Treaty 11 years before. **Dec. 1970-Jan. 1971**: Charles Neider, writer and historian. **Dec. 1971**: Senator Allan J. Ellender of Louisiana, president pro tem of the U.S. Senate. **Jan. 1972**: Sen. Barry Goldwater of Arizona, and Sen. Barry Goldwater, Jr., of California. **Jan. 1972**: William F. Buckley, Jr. **1973**: Argentine president, María Estela Martínez de Perón, and her cabinet ministers, flew in a Hercules C-130 from Argentina, over Vicecomodoro Marambio Station, and back. **Aug. 10, 1974**: The same Argentine president and her cabinet held a meeting at Vicecomodoro Marambio Station. A document, reaffirming Argentine sovereignty over Antártida Argentina, was signed. **1977:** President Pinochet, of Chile, on the *Aquiles*. **1980**: Anne Martindell, U.S. ambassador to NZ. **1982**: Sir Edmund Hillary (q.v.), and Robert Muldoon, prime minister of NZ. **Dec. 1982**: Prince Edward at Scott Base. **April 1984**: General Pinochet, president of Chile, visited Teniente Rodolfo Marsh Station, and inaugurated the married quarters there. **Sept. 11, 1990**: Chilean president Patricio Aylwin visited Teniente Rodolfo Marsh Station. **Jan. 11, 1993**: Luis Alberto Lacalle Herrera, president of Uruguay, visited Artigas Station. **1994-95**: Chavdar Nikolov, Bulgarian ambassador to Brazil, visited St. Kliment Ohridski Station. **Jan. 13-14, 1995**: President Lacalle visited Artigas Station again, as he had two years before. **Feb. 18, 1997**: Julio María Sanguinetti, president of Uruguay, visited Artigas Station. **1996-97**: Vasil Takev, Bulgarian ambassador to Argentina, visited St. Kliment Ohridski Station. Another DV was Rex Moncur, director of the Australian Antarctic Division. **Oct. 31, 1997**: Presidente Frei of Chile visited King George Island. **Jan. 17-19, 1998**: The following U.S. senators at McMurdo: Thad Cochran, Conrad Burns, Larry Craig, Slade Gorton, Pat Roberts, and Theodore Stevens. **Jan. 22-26, 1998**: U.S. deputy secretary of the Interior John Garamendi visited McMurdo. **1997-98**: President Carlos Saúl Menem of Argentina visited Marambio and Esperanza stations. **Jan. 2000**: Jim Lovell, the astronaut, visited the South Pole. **April 1, 2000**: Presidente Ricardo Froilán Lagos Escobar, of Chile, visited King George Island. **Feb. 7-10, 2002**: Princess Anne visited Scott Base, McMurdo, and Baia Terra Nova Station. **Jan. 2004**: King Juan Carlos of Spain, in company with Presidente Ricardo Froilán Lagos Escobar of Chile, visited Chilean and Spanish stations. **2004-05**: Solomon Passy, Bulgarian minister of foreign affairs, visited St. Kliment Ohridski Station. It was not, by any means, Mr. Passy's first visit to Antarctica (*see* **Bulgarian Antarctic Expeditions**). **Jan. 2007**: Sir Edmund Hillary (q.v.). Desmond Bagley, the novelist, was there. **March 2008**: Michelle Bachelot Jeria, president of Chile, visited Capitán Arturo Prat Station, on the 60th anniversary of the station. **Jan. 2009**: Prince Albert II, of Monaco, to study global warming.

Monte Ditte *see* **Mount Ditte**

Mount Ditte. 67°43' S, 68°37' W. Rising to 1400 m (the British say about 1550 m), it surmounts Cape Alexandra, at the SE extremity of Adelaide Island, to the N of Marguerite Bay. Discovered and roughly mapped by FrAE 1903-05, and named by Charcot as Massif A. Ditte, for chemist Alfred Ditte (1843-1908), a member of the French Academy of Sciences. It appears as such on Charcot's 1912 map (it was seen again by FrAE 1908-10). It appears as Mount Ditte on a 1916 British photograph, and on Wilkins' 1929 map, but on a 1943 U.S. Hydrographic Office chart it appears as Mount A. Ditte. It was surveyed by Fids from Base E in Oct. 1948, and appears on their chart of that year as Mount Ditte, and that was the name accepted by US-ACAN in 1951, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1953 Argentine chart as Monte Ditte, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Diversion Hills. 73°09' S, 163°30' E. A small group of low rock outcrops at the E extremity of Pain Mesa, in Victoria Land. So named by the Southern Party of NZGSAE 1966-67, because the party made a diversion eastward from their route at this point in order to visit Navigator Nunatak. NZ-APC accepted the name, and US-ACAN followed suit in 1968.

The Divide. 60°44' S, 45°10' W. A narrows (i.e., a narrow channel) between Matthews Island and the SE extremity of Coronation Island, in the South Orkneys. Charted as an isthmus in 1912-13, by Petter Sørlle, it appears as such on Sørlle and Borge's chart of 1913. In 1933 personnel on the *Discovery II* surveyed it, confirmed it as an isthmus (because that is what is was), and named it descriptivley as The Divide, which is how it appears on their 1934

chart. In 1952, US-ACAN accepted the name and the definition, and UK-APC followed suit on Sept. 8, 1953. The Argentines called it Istmo El Divisor. However, in 1957 Fids from Signy Island Station surveyed it, and found that it had become a channel. Although it was redefined by UK-APC on July 7, 1959, and by US-ACAN in 1963, it kept its name.

Divide Peaks. 60°43' S, 45°12' W. A series of ice-topped peaks, the highest rising to 635 m, extending for 3 km in a NW direction on the SE end of Coronation Island, in the South Orkneys. Surveyed in 1948-49 by Fids from Signy Island Station, and named by them as Divide Ridge, in association with The Divide, nearby. UK-APC accepted that name on March 31, 1955, and US-ACAN followed suit in 1956. Fids from Signy surveyed the feature again in 1956-58, and, as a consequence, the feature was redefined, and renamed by UK-APC on July 7, 1959, as Divide Peaks. US-ACAN followed suit with the renaming in 1963. The Argentines call them Picos Divisor.

Divide Ridge *see* **Divide Peaks**

Divin, John W. *see* **USEE 1838-42**

Istmo El Divisor *see* **The Divide**

Picos Divisor *see* **Divide Peaks**

Nos Divotino *see* **Divotino Point**

Divotino Point. 62°23' S, 59°38' W. A sharp, low, ice-free point on the SE coast of Alfatar Peninsula, projecting 200 m into Mitchell Cove, on Robert Island, 3 km NE of Debelyanov Point, and 3.35 km N by W of Negra Point, in the South Shetlands. Named by the Bulgarians on Nov. 23, 2009, as Nos Divotino, for the settlement of Divotino, in western Bulgaria. The name has been translated into English.

Mount Dixey. 70°10' S, 68°04' W. Rising to 1250 m (the British say about 1100 m), next to Mount Flower, at the S side of Riley Glacier, 5 km NE of Carse Point, at the NE end of George VI Sound, on the W coast of Palmer Land. First photographed aerially by Ellsworth on Nov. 23, 1935, and roughly plotted from these photos in 1936, by U.S. cartographer W.L.G. Joerg. Photographed aerially in 1936 by BGLE 1934-37, and surveyed from the ground by them later in the year. It appears (unnamed) on Stephenson's 1940 map of the expedition. Re-surveyed by Fids from Base E in 1949. It was named in 1954 by members of BGLE, for Charles Neville Douglas Dixey (known as Neville Dixey) (1881-1947), chairman of Lloyd's in 1931, 1934, and 1936, who raised a special fund at Lloyd's to contribute toward the cost of BGLE. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears on a U.S. Hydrographic Office chart of 1955.

Dixey Rock. 63°28' S, 54°40' W. Rising to 25 m above sea level, 2.5 km SE of Darwin Island, in the Danger Islands, about 24 km SE of Joinville Island. Mapped by FIDS in 1953-54 and again between 1956 and 1958, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on June 11, 1980, for David John Dixey (b. 1937), head of Nautical Branch 5, in the Hydrographic Department of the Ministry of Defence, who, after the feature had been unintentionally left off various (and successive) British charts, succeeded in re-identifying it from the FIDASE air photos. It appears in the 1982 British gazetteer and on a 1987 British chart. US-ACAN accepted the name in 1993.

Dixon, George Manley. b. Dec. 30, 1898, Woodford, Essex, son of insurance underwriter George Smith Dixon and his wife Minnie Augusta Drake. He went to sea as a merchant marine at the age of 14, jumped ship in Tasmania, and joined the Australian Army at the age of 15, being wounded at Gallipoli. He returned to sail, and was once blown off course to south of 60°S, in the windjammer *Kinross-shire*. After a period of being a naval instructor, he became a salesman in Sydney, worked as a sheepshearer, and was rescued from obscurity by World War II, which he joined full-bore as a naval commander, winning the DSO for heroism at Sicily. He continued in the Royal Australian Navy until 1957, during which time he commanded *LST 3501* to Heard Island and the Kerguélens in 1947-48 and 1948-49, as part of the first ANARE. He died in Southport, Queensland, on June 13, 1978.

Dixon Island *see* **Dixson Island**

Dixson Island. 68°08' S, 146°43' E. A high, ice-covered rock mass in the form of an island, 16 km long and 8 km wide, and rising to about 335 m above sea level, at the W side of the mouth of Ninnis Glacier, on the coast of George V Land. Discovered by AAE 1911-14, and named by Mawson for Hugh Dixson (1841-1926; knighted in 1921) of Sydney, tobacco company millionaire, great philanthropist, and a patron of the expedition. US-ACAN accepted the name in 1947, and ANCA followed suit.

Dizhixuezhe Wan. 62°11' S, 58°58' W. A little cove within Bothy Bay, on the NW coast of Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Djävulsön *see* **Devil Island**

Djerassi Glacier. 64°13' S, 62°27' W. A glacier, 6 km long and 7 km wide, N of Mount Parry, NW of Harvey Heights, and S of Mount Rokitansky, it flows westward into Lanusse Bay, on Brabant Island, in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, for Austrian-born American chemist Carl Djerassi (b. 1923), co-inventor of the oral contraceptive pill. Dr. Djerassi spent some time in Bulgaria as a child, fleeing the Nazi menace in 1939, for America.

The *Djerv*. Norwegian whale catcher (gunners: K. Berntsen and K. Hansen) belonging to Thor Dahl. She was in Antarctic waters in 1961-62, catching for the *Thorshavet* during that factory's final Antarctic season. She took 58 fins and 43 sperms.

Plateau des Djinns *see under* **des**

Djupedalen *see* **Djupedalen Valley**

Djupedalen Valley. 71°58' S, 7°06' E. A glacier-filled valley, separating the Mühlig-Hofmann Mountains from the Filchner Mountains, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Djupedalen (i.e., "the deep valley"). US-ACAN accepted the name Djuepdalen Valley in 1967.

Djupedalshausane *see* **Djupedalshausane Peaks**

Djupedalshausane Peaks. 72°05' S, 6°59' E. A group of peaks between Djupedalsleitet Saddle and the head of Lunde Glacier, on the SW side of Djupedalen Valley, in the SE portion of the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Djupedalshausane (i.e., "the deep valley peaks"). US-ACAN accepted the name Djupedalshausane Peaks in 1966.

Djupedalsleitet *see* **Djupedalsleitet Saddle**

Djupedalsleitet Saddle. 72°05' S, 7°22' E. An ice-saddle, or pass, between the head of Djupedalen Valley and Snuggerud Glacier, in the southernmost portion of the Filchner Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Djupedalsleitet, in association with nearby Djupedalen Valley. US-ACAN accepted the name Djupedalsleitet Saddle in 1966.

Djupranen. 70°15' S, 9°20' E. An ice ridge between Vigridisen and Nivlisen, on the Princess Astrid Coast. Named by the Norwegians ("the long ridge").

Djupvik Point. 69°43' S, 38°02' E. Marks the E limit of Djupvika, and the northernmost point of Djupvikneset Peninsula, along the SW shore of Lützow-Holm Bay, on the Prince Harald Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Djupvikodden (i.e., "the deep bay point"), in association with nearby Djupvika. US-ACAN accepted the name Djupvik Point in 1968.

Djupvika. 69°44' S, 37°54' E. A bay between Botnneset and Djupvikneset Peninsula, in the SW part of Lützow-Holm Bay, off the Prince Harald Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Djupvika (i.e., "the deep bay"), because of its deep indentation of the coast. US-ACAN accepted the name without modification, in 1968.

Djupvikbrekka. 69°46' S, 37°55' E. An ice slope, S of Djupvika, on the Prince Harald Coast. Named by the Norwegians in association with Djupvika.

Djupvikneset *see* **Djupvikneset Peninsula**

Djupvikneset Peninsula. 69°47' S, 38°06' E. A high, ice-covered peninsula between

Djupvika and Havsbotn, on the SW shore of Lützow-Holm Bay, on the Prince Harald Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Djupvikneset (i.e., "the deep bay ness"), in association with nearby Djupvika. US-ACAN accepted the name Djupvikneset Peninsula in 1968.

Djupvikodden *see* **Djupvik Point**

Morena Dlinnaja. 71°45' S, 68°00' E. A moraine just SE of the nunatak the Russians call Gora Pogrebënnaja, in the Prince Charles Mountains. Named by the Russians.

Gora Dlinnlyj Kamen'. 67°45' S, 62°14' E. A nunatak in the Casey Range of Mac. Robertson Land. Named by the Russians.

Ozero Dlinnoe *see* **Dlinnoye Lake**, **Long Lake**

Dlinnoye Lake. 70°44' S, 11°39' E. A narrow, serpentine lake, 0.8 km long, close NW of Tsentral'naya Hill, in Sundsvassheia, in the central part of the Schirmacher Hills of Queen Maud Land. Mapped by SovAE 1961, and named by them as Ozero Dlinnoe (i.e., "long lake"). US-ACAN accepted the translated name Dlinnoye Lake in 1970. The Norwegians call it Langen (which means pretty much the same thing).

Poluostrov Dlinnyj *see* **Dlinnyj Peninsula**

Dlinnyj Peninsula. 66°18' S, 100°57' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Poluostrov Dlinnyj. ANCA accepted the translated name on Jan. 19, 1989.

Cape Dmitriev. 68°18' S, 153°10' E. Those are the Australian coordinates for this feature, which the Russians call Mys Dmitrieva. The Russian coordinates are 68°25' S, 153°12' E. It is an ice cape on the coast of George V Land, about 28 km W of Cape Hudson. Photographed aerially during OpHJ 1946-47, and again by SovAE 1958. I.N. Dmitriev was a Soviet marine navigator.

Mys Dmitrieva *see* **Cape Dmitriev**

Gory Dmitrija Solov'ëva. 74°00' S, 67°00' E. A group of nunataks immediately NE of Mount Maguire, near the head of Lambert Glacier. Named by the Russians.

Gora Dneprovskaja *see* **Lyrittaren**

Doake, Christopher Samuel McClure. b. March 2, 1944. Senior BAS glaciologist from 1973, at Base T, 1973-74, and at Rothera Station, 1977-78, 1980-81, and 1984-85. He was involved in echo-sounding of the ice-sheet, both from the ground and from the air.

Doake Ice Rumples. 79°45' S, 67°00' W. An area of disturbed ice in the Ronne Ice Shelf, extending for about 90 km in a NW-SE direction between Korff Ice Rise and Henry Ice Rise. First visited and mapped in part by Ed Thiel's geophysical traverse party out of Ellsworth Station in 1957-58. Further delineated from U.S. Landsat images taken in 1974, and from radio echo-sounding by BAS in 1981. Named by UK-APC on Nov. 13, 1985, for Christopher Doake. US-ACAN accepted the name.

Dobbratz Glacier. 79°24' S, 85°05' W. A broad tributary glacier draining the S part of the White Escarpment, and flowing NE between the Watlack Hills and the Weber Peaks, into Splettstoesser Glacier, in the Heritage Range. Named by the University of Minnesota Geological Party 1963-64, for Maj. Joseph R. Dobbratz, U.S. Marine Corps pilot who supported the party. With VX-6, Dobbratz also flew Cardinal Spellman into McMurdo Station on Dec. 23, 1963. US-ACAN accepted the name in 1966.

Mount Doble *see* **Noire Rock**

Dobleman, Christian *see* **USEE 1838-42**

Dobrich Knoll. 62°45' S, 60°19' W. Rising to over 400 m in the middle of Veleka Ridge (it actually stands 700 m S of the summit of that ridge), 700 m N of Botev Peak, in the Tangra Mountains, overlooking Tarnovo Ice Piedmont to the E and Barnard Point to the SW, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for the city of Dobrich, in eastern Bulgaria.

Gora Dobrovol'skogo *see* **Mount Ormay**

Dobrowolski, Antoni Boleslav "Antoine." b. June 6, 1872, Worchowitze, Poland. Russian/Polish meteorologist on BelgAE 1897-99. After the expedition, from 1907, he worked with Georges Lecointe (q.v.) at the Royal Astronomical Observatory at Uccle, Belgium. He spent World War I in Sweden, later became director of the Polish Meteorological Institute, and died on April 27, 1954.

Dobrowolski, Vladimir de *see* **de Dobrowolski**

Dobrowolski Glacier. 62°05' S, 58°16' W. A large glacier flowing SW into the head of Martel Inlet, between Precious Peaks and Szafer Ridge, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Antoine Dobrowolski. UK-APC accepted the name on Dec. 16, 2003. The British were the latest to replot this feature, in late 2008.

Dobrowolski Island. 64°36' S, 62°55' W. A small island close off the SE coast of Parker Peninsula, Anvers Island, 5 km SW of Ryswyck Point, in the Palmer Archipelago. Named Astrolabe Island in 1927 by the personnel on the *Discovery* who charted it. They had set up an astrolabe station here. It appears on a Chilean chart of 1947 as Isla Astrolabio. UK-APC accepted the name Astrolabe Islet on Nov. 21, 1949, and it appears as such on a British chart of 1950. US-ACAN accepted that name in 1952. In order to avoid confusion with Astrolabe Island (what the Chileans call Isla Astrolabio), the name of this feature was changed by ChilAE 1948-49, to Islote Astrolabe, and as such it appears on their chart of 1949, and also on a chart of 1957. It was also the name accepted by the 1974 Chilean gazetteer. It appears on a 1953 Argentine chart as Islote Coria, named for Juan Coria (*see* **Caleta Coria**), but on a 1957 Argentine chart as Islote Capitán Martínez Canaveri, named after the commander of FATA (Fuerza Aérea de Tareas Antárticas) who died on active service (but not in Antarctica). That last was the name accepted by the Argentine gazetteer of 1970. UK-APC renamed it in on July 7, 1959, for Antoine Dobrowolski, and US-ACAN followed suit in 1960.

Dobrowolski Peak. 61°57' S, 58°14' W. In the Arctowski Mountains, in the S part of King George Island, in the South Shetlands. Named by the Poles in 1981, for Antoine Dobrowolski.

Dobrowolski Station. 66°16' S, 100°45' E. In the Bunger Hills, on the Knox Coast of Wilkes Land. It was formerly Oazis Station, under which name it was built as an IGY scientific station by the Soviets in 1957. Transferred from the USSR to Poland on Jan. 21, 1959, and renamed Antoni B. Dobrowolski Station, or Dobrowolski, for short, after Antoine [sic] Dobrowolski. A team of 7 scientists, under Wojciech K.E. Krzeminski, from the Polish Academy of Sciences came down on the Russian ship *Mikhail Kalinin*, and worked there for 2 weeks in early 1959. The station was then closed. It re-opened in 1985-86, for summers only, and was open in 1986-87 and 1987-88.

Dobrudzha Glacier. 62°39' S, 59°57' W. A glacier on Burgas Peninsula, Livingston Island, it is bounded by Ruse Peak and Asen Peak to the N, and flows SE into the Bransfield Strait, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for the region of Dobrudzha, in northeastern Bulgaria.

Mount Dobrynin. 71°42' S, 11°46' E. Rising to 1970 m, 1.5 km ESE of Eidsgavlen Cliff, on the E side of the Humboldt Mountains, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1960-61, and named by the USSR in 1966 as Gora Dobrynina, for geographer Boris Fedorovich Dobrynin (1885-1951). US-ACAN accepted the translated name Mount Dobrynin in 1970.

Gora Dobrynina *see* **Mount Dobrynin**

Dobrynintoppen *see* **Mount Dobrynin**

Dobson, John Edward "Johnny." b. Feb. 10, 1918, Hull, Yorks. Ordinary seaman selected from the training ship *Warspite*, to serve on the *Discovery II*, 1933-36. He was an able seaman on the same vessel, 1936-37, and, during the expedition was in a party of 6 adrift for 6 days in a disabled motorboat off King George Island, in the South Shetlands, before they got to him five days later from a jerry-built camp on shore. He died in Sept. 1993, in Beverley, Yorks.

Dobson, M. William. b. 1895. Englishman taken on as a fireman on the *Eleanor Bolling* in Dunedin on Jan. 20, 1930, i.e., the day the *Bolling* sailed to Antarctica on her 4th voyage during ByrdAE 1928-30. Les Quartermain, in his book *New Zealand and the Antartic*, has him as N.W. Dobson. Either way, no M.W. or N.W. Dobson was born anywhere remotely near 1895 in England.

Dobson Dome. 64°02' S, 57°55' W. A prominent, snow-covered, dome-shaped mountain, rising to 950 m, W of Croft Bay, between that bay and Röhss Bay, in the N part of James Ross Island. Surveyed by FIDS over the 1958-61 period. Named by UK-APC on Feb. 12, 1964, for Alban Tabor Austin Dobson (1885-1962), secretary of the International Whaling Commission, 1949-59. US-ACAN accepted the name later in 1964.

Docchar, Ernest Herbert "Ernie." b. Feb. 10, 1936, South Shields, Durham, son of gardener Ernest Herbert Docchar and his wife Jennie Waggott. After national service in the RAF, he joined FIDS in 1960, as a builder, and wintered-over at Halley Bay Station in 1961. His copy of *War and Peace* was his only reading material. He married Elizabeth MacLeod, in 1962, became a schoolteacher, raised his children and chrysanthemums, and just before he died in Nov. 1988, at his home in Corbridge, Northumberland, he gave a farewell banquet for his friends. His younger brother, Robert Henry "Bob" Docchar (b. 1945, South Shields) also wintered-over in Antarctica, at Halley Bay, as a BAS builder.

Cabo 12 de Febrero *see* **Exile Nunatak**

Mount Dockery. 71°13' S, 164°33' E. Rising to 1095 m, 5 km W of Mount Matthias, and 10 km W of Mount Works, in the W part of the Everett Range, in the Concord Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Lt. Olan Leroy Dockery (b. Aug. 13, 1919, El Centro, Calif.), VX-6 Constellation pilot out of McMurdo in 1962-63 and 1963-64, who flew photographic missions in northern Victoria Land, the Queen Maud Mountains, the Britannia Range, and the region around McMurdo. In the U.S. Navy from 1930 to 1970, he retired as a lieutenant commander. NZ-APC accepted the name.

Dr. Guillermo Mann Refugio *see* **Punta Spring Refugio** (under **P**)

The *Dóctor Eduardo Holmberg*. Argentine ship that took part in ArgAE 1993-94, ArgAE 1994-95, and ArgAE 1995-96. Skipper for all three voyages was Diego Maqui.

Doctor Guillermo Mann Refugio *see* **Punta Spring Refugio** (under **P**)

Doctor Rusch Glacier *see* **Reusch Glacier**

Doctors Icefall. 62°11' S, 58°39' W. A large icefall flowing E into the head of Goulden Cove, between Pond Hill and the mountain the Poles call Belweder, at Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, after their team of doctors led by Krzysztof Kwarecki (*see* **Kwarecki Point**). UK-APC accepted the name on July 8, 2003, and US-ACAN followed suit that year. The British were the latest to replot this feature, in late 2008.

Dodd Island. 69°42' S, 75°38' E. A small island in the SE part of the Publications Ice Shelf, about 16 km (the Australians say about 20 km) S of the Søstrene Islands. Photographed aerially by LCE 1936-37, and mapped from these photos by Norwegian cartographers in 1946. Named by ANCA on May 18, 1971, for David M. Dodd, who wintered-over as weather observer-in-charge at Davis Station in 1963. He had also wintered-over at Macquarie Island in 1961. US-ACAN accepted the name in 1973.

Dodd Nunatak. 69°41' S, 75°43' E. Immediately W of the Stein Islands, in the Publications Ice Shelf, on the Ingrid Christensen Coast. The SCAR gazetteer says it was named by the Russians.

Dodd Nunatak. 71°50' S, 160°24' E. A nunatak, 4 km W of Mount Cox, in the NW part of the Emlen Peaks, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Walter H. Dodd, of the NSF's Public Information Office, who was at McMurdo in 1966-67 and 1967-68.

Dodds, Edward Swayne. b. May 23, 1882, Tweed River, NSW, son of Richard William Dodds and his wife Sarah Lally. He joined the merchant service as a trimmer and fireman, plying Antipodean waters on a variety of vessels, and on Sept. 22, 1902, enlisted as a private in the 7th Battalion, Commonwealth Horse, Queensland (Strathearn's Horse), to fight the Boers in South Africa. During that war he copped a Boer bullet in the right leg. On his return to Australia, he went back to sea, and on Nov. 25, 1911, at Hobart, signed on to the *Aurora* as a fireman, for the first voyage south during AAE 1911-14. He left the ship when it returned to Hobart, and continued to serve on vessels for a few years, until Sept. 24, 1914, when, at Blackboy Hill, in Western Australia, he enlisted in the Australian Imperial Force, as a private, to fight the Turks in Mesopotamia. However, that very day, he went AWOL, was fined, and discharged with no pay.

Mount Dodge. 84°52' S, 172°22' W. A hugh, mainly ice-free peak, rising to 1760 m (the New Zealanders say about 1828 m) on a mountain spur descending northward from the foothills just N of the Prince Olav Mountains, at the confluence of Holzrichter Glacier and Gough Glacier, about 6 km NE of Mount Sellery. Discovered by the Ross Ice Shelf Traverse Party of 1957-58, led by Bert Crary, and named by him for Prof. Carroll William Dodge (1895-1988), lichen analyst for ByrdAE 1933-35. US-ACAN accepted the name in 1962.

Dodge Rocks *see* **Afuera Islands**

Isla Dodman *see* **Dodman Island**

Dodman Island. 65°58' S, 65°46' W. An island, 5.5 km long, 2.5 km wide, and shaped like a quarter-moon, 3 km W of Jagged Island, and 6 km SE of Rabot Island, in the Grandidier Channel, 17 km W of Ferin Head, off Holtedahl Bay, on the Graham Coast, on the W coast of Graham Land. Its coasts are formed from ice cliffs. First seen probably in Jan. 1909, by FrAE 1908-10, but certainly not mentioned by them. Roughly charted in 1935-36, by BGLE 1934-37, and named by them for Dodman Point, at Veryan Bay, in Cornwall. It appears on Rymill's 1938 map of the expedition, and also on a British chart of 1948, and was the name accepted by US-ACAN in 1951, and by UK-APC on Sept. 8, 1953. It appears in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956-57. Both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted the name Isla Dodman.

The *Dodo's Delight*. A 33-foot British Westerly Discus yacht, skippered by the Rev. Robert L.M. "Bob" Shepton (chaplain of Kingham Hill School, in Oxfordshire), which visited the South Shetlands and the Antarctic Peninsula in 1993-94, during a round-the-world trip.

Isla Dodson *see* **Dodson Peninsula**

Península Dodson *see* **Dodson Peninsula**

Dodson, Robert Haskins Thomas "Bob." b. March 15, 1926, New York, son of U.S. naval officer Harry L. Dodson and his wife Louise Freeman Swift. He spent the ages of 6 to 8 in China, and was educated at Phillips, Exeter, NH. While working as a messenger boy at the Navy Department in Washington, in the summer break of 1942, when he was 16, he met Finn Ronne, then a young lieutenant. He was in the Navy from 1943 to 1945, then back to school. Assistant geologist, surveyor, trailman, chief dog team driver, and deckhand on RARE 1947-48. Famous as a mountain climber, he led an expedition to the Himalayas in 1952. He was back in Antarctica in Dec. 1987, as a lecturer on the *World Discovery*, and he was back again in 2000. He lives in Vermont.

Dodson Island *see* **Dodson Peninsula**

Dodson Peninsula. 75°32' S, 64°12' W. An ice-covered peninsula, about 60 km long, projecting into the W end of the Ronne Ice Shelf, S of Hansen Inlet, on the Orville Coast of Ellsworth Land, at the E side of the base of Palmer Land. At first, in 1947 (RARE photographed it aerially on Nov. 21, 1947), Finn Ronne thought it was an island, and named it Harry Dodson Island, for Bob Dodson's father, Henry LeLuce "Harry" Dodson (1896-1969), who was a director of the American Antarctic Society (the organizing body of Ronne's expedition). It appears as such on his map of 1948. However, on his 1949 map it appears as Dodson Island. It appears on a 1952 Argentine chart as Isla Dodson. Then it became apparent, from the RARE photos, that the feature was actually a peninsula, and US-ACAN accepted the name Dodson Peninsula in 1956, recording it as being named after Bob Dodson himself, whch makes sense, because for Bob Dodson not to have his own feature would be totally ridiculous (it does seem a pity that both gentlemen could not have been thus honored individually, but perhaps this situation will be rectified some day). It appears as Dodson Peninsula in the 1956 U.S. gazetteer, and on on a 1956 U.S. Hydrographic Office chart. It was photographed from the air by USN between 1965 and 1967, mapped from these photos by USGS, and appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the peninsular

definition on Dec. 20, 1974. It appears on a 1962 Chilean chart as Península Dodson, and that was the name accepted by the 1974 Chilean gazetteer. It is also the name used by the Argentines.

Dodson Rocks. 69°55' S, 68°25' E. Two small, dark, rock exposures on the S side of Single Island, on the W side of the Amery Ice Shelf. Discovered aerially by ANARE in 1969, and aerially photographed by ANARE in 1971. Named by ANCA for Richard G. Dodson, senior geologist with the ANARE Prince Charles Mountains Survey of 1971. US-ACAN accepted the name in 1973.

Doe Nunatak. 72°22' S, 160°47' E. A somewhat isolated nunatak, 5 km WNW of Doescher Nunatak, and 24 km NNW of Mount Weihaupt, in the Outback Nunataks. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for Wilfrid I. Doe (b. Sept. 1942), USN, hospital corpsman who wintered-over at McMurdo in 1967.

Doescher Nunatak. 72°23' S, 160°59' E. A somewhat isolated nunatak, 22 km N of Mount Weihaupt, in the Outback Nunataks. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for Roger L. Doescher, glaciologist at McMurdo, 1967-68.

Dog Derby. Held on June 16, 1915, on the ice, while the *Endurance* was trapped in the pack and floating north, during BITE 1914-17. All the men had the day off, and the track was lit with hurricane lamps (the sun had gone). Shackleton acted as starter and there were several bookies laying odds. Frank Wild's team won, covering the 700 yards in 2 mins 16 secs.

Dog Island. 65°49' S, 65°05' W. The most northerly of the Llanquihue Islands (what the British call the Straggle Islands), it forms the NE entrance point of Harrison Passage, off the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37. In 1956-57 it was photographed aerially by FIDASE, and surveyed from the ground by Fids from Base J. So named by UK-APC on July 7, 1959, because it faces Cat Island across the navigable channel. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Doggers Bank. 69°05' S, 69°30' E. Another of those names that the SCAR gazetteer ascribes to the Russians. It was named in association with Doggers Bay, off which it lies, on the W side of the Amery Ice Shelf.

Doggers Bay. 69°07' S, 69°09' E. An ice-filled bay between 27 and 30 km long and about 8.5 km wide, on the W side of the Amery Ice Shelf, between Foley Promontory and Landon Promontory. Plotted by Australian cartographers from ANARE air photos taken in 1956. First visited in Nov. 1962 by an ANARE dog sledge party ("doggers") led by Ian Landon-Smith, which made a reconnaissance for a route from the plateau to the Amery Ice Shelf. Named by ANCA. US-ACAN accepted the name in 1967.

Doggers Nunataks. 67°46' S, 54°51' E. A group of peaks about 28 km E of Knuckey Peaks, and about 50 km SW of Rayner Peak, to the SW of Edward VIII Bay. Photographed aerially by ANARE in 1956. Surveyed in Dec. 1958, by Graham Knuckey, during a dog sledge journey from Amundsen Bay to Mawson Station. Named by ANCA on July 22, 1959, for the "doggers" (i.e., Knuckey's sledging party; actually the name "dogger" is used for any member of a dog sledge team). US-ACAN accepted the name in 1961.

Doggo Defile. 68°44' S, 66°48' W. A narrow, steep-sided defile, or pass, in some parts less than 1.5 km wide, which cuts through the coastal mountains E of Dee Ice Piedmont in a N-S direction, between that ice piedmont and Clarke Glacier, on the Fallières Coast, on the W coast of the Antarctic Peninsula. Photographed aerially on Nov. 27, 1947, by RARE 1947-48. Surveyed from the ground by Fids from Base E between 1948 and 1950, and again in 1958. So named descriptively by UK-APC on Aug. 31, 1962, because you have to look for this defile (i.e., it's lying doggo). The NW entrance is only partly visible to sledge parties traveling along the coast, and the true nature of the defile is completely hidden by the surrounding mountains. The naming was also a nod to the dogs of the sledging parties. US-ACAN accepted the name later in 1962.

Dogs. The first dog known to have ventured into Antarctica was Sydney, Wilkes' dog, whom he picked up in Sydney Town in Dec. 1839. There are pictures of an amused Sydney sitting on icebergs. Although there may have been other four-legged lads in Antarctica in the decade or so before and after Sydney (see, for example, **The *Jenny***, the ghost ship of 1822-23, but probably a hoax), 60 years went by before the next recorded one. Borchgrevink was the first explorer to use dogs in Antarctica, during his winter-over of 1899. Sembla was his best out of 90 Siberian sledge dogs. Lars was another, a heroic dog, who stayed with Per Savio during his two-legged friend's trial in the crevasse. On his way home, Borchgrevink left most of the dogs at Stewart Island, in New Zealand. Several years later, Shackleton swung by Stewart Island and picked up nine of their descendants for use on BAE 1907-09. In between those two expeditions, Scott was the first major pioneer of dogs as Antarctic workers, even though he didn't believe in them, didn't know how to handle them, and was too humane to see them suffer. In 1902 he went into the unknown with 19 dogs, including the famous Nigger (q.v.). In 1903 a dog wintered-over with Bruce's shore party on Laurie Island. Charcot's dog, Sögen, died during FrAE 1903-05. Von Drygalski, during GerAE 1901-03, took 40 Kamchatka dogs. During the Heroic Era (q.v.) there were two conflicting theories about the use of dogs in Antarctica. Scott and Shackleton, being British, tended to anthropomorphize the dogs. That's why dogs didn't work for these two explorers, even though the men knew that in order to get to the South Pole, one must have dogs. But the dogs they did take on their expeditions were token. It was not unknown for the explorers to pull a sick dog on a sledge! Amundsen's theory, on the other hand, was that dogs are animals, and, as much as he loved many of them, some of them had to die if the South Pole were to be attained. Some would be shot at prearranged stages of the trek, thus providing a meal for the others (dogs quite happily revert to cannibalism at moments of severe hunger. They don't reflect; they don't moralize). During the race for the Pole in 1911-12, Scott took 20 male dogs and 3 bitches, not well-trained at all. All the dogs died, and Scott suffered (in every way) because of that. Scott and his party manhauled their sledges to the Pole, an incredible achievement, but they never made it back alive. Amundsen, on the other hand, took 52 Greenland dogs of the highest quality and experience (all picked by the Danish inspector for northern Greenland, Jens Daugaard-Jensen), and 4 sledges. His trek went like a dream. 17 dogs reached the Pole, but Amundsen names only 11 of them — Lasse (affectionately known by his diminutive name of Lassesen), Uroa, Mylius, Ring, Obersten ("the Colonel"), Per, Svartflekken, Suggen, Nigger, Helge, and Frithjof. All the men on Amundsen's Polar trek were running dog teams. There are sources that say (and this is not necessarily to be trusted) that Bjaaland's dogs were: Kven, Lapp, Pan, Gorki, Jøla, and the aforementioned Uroa. Any one or all of these may have reached the Pole (we know Uroa did). Some of Amundsen's other famous dogs were Arne, Mikkel, Ravn, and Mas-Mas. Over the years a myth has grown up that a Samoyed named Etah was the first dog at the Pole, however there were no Samoyeds on Amundsen's expedition. It must have been some other pole. Shackleton's British Imperial Transantarctic Expedition of 1914-17 saw further British use of dogs. Because these dogs were inexperienced, many of them (dogs and men) died during the 1916-17 depot-laying venture from Ross Island, led by Aeneas Mackintosh. Nigger was the leader of the Ross Sea party's dogs. There were also: Gunboat, Duke, Scotty, Hector, Dasher, Tug, Briton, and Pat. On the other side of the continent, after his ship had gone down, Shackleton set up on the ice "dogloos," as he called the dogs' quarters. One of his dogs was Con, given to him by Mawson, who in turn had got him from Amundsen. Con was with Amundsen at the Pole, so it is said (again, a legend, not necessarily true). Tommy was the little black pup on the *Sir James Clark Ross* during Carl Anton Larsen's 1923-24 whaling expedition into the Ross Sea. On his 1928-30 expedition Byrd took not only his pet terrier buddy Igloo (they called him Iggie), who had been with Byrd in the Arctic and who would die on April 20, 1932, but 95 sledge dogs, mostly Greenland huskies. 79 came from Labrador, donated by Frank W. Clark of the Clark Trading Co., and 16 came from the farm of Arthur T. Walden of

Wonalancet, NH. (*see also* **Chinook** and **Spy**). These latter were heavy draft dogs. Rex (more informally known as Bum) was a waterfront bulldog who just walked onto the *Eleanor Bolling* in Panama, went straight to Frank McPherson's engine room, and never looked back (well, he did really. Despite his swagger, he got awfully homesick in the Pacific). Byrd took 150 huskies with him on ByrdAE 1933-35. There's the story of Toby, the mighty husky, who, during the winter-over of 1934, for a mysterious reason all his own, disappeared from Little America one day, wandered over the Ross Ice Shelf for 11 days, with no food, and then returned on the night of July 2, 1934, as if nothing had happened. The day Toby returned, Jock had to have his frostbitten tail amputated. BGLE 1934-37 took a lot of dogs with them when they went south in 1934, and several more were born in Antarctica. USAS 1939-41 took 160 dogs — West Base got 70 and East Base 90. Seven of them had been born in Antarctica, and many of them were veterans of ByrdAE 1933-35. 25 huskies, bought by Freddy Marshall in Labrador, were landed at Hope Bay for the 2nd phase of Operation Tabarin, in 1945. They were split into two teams, the Big Boys and the Odds and Sods. A few died in fights, and the Drinks — Gin, Whisky, Punch, and Bitters — disappeared, never to be seen again. Beauty and Pretty produced families, Pretty's three being named Fahrenheit, Centigrade, and Zero. However, these names were cumbersome, and soon changed to Reuben, Rachel, and Rebecca. Those are just some dog examples from Tabarin. In fact, dogs played a big role in FIDS operations in the 1940s and 1950s. And not just the working dogs. Mike Hardy brought down a sheepdog named Crown, to winter-over with him at Port Lockroy in 1946. At the end of the season, on Jan. 27, 1947, Hardy left Port Lockroy and sold Crown for £5 to John Huckle, who had just arrived at Port Lockroy for the summer season. Frank White, the cook, took Crown back to the Falklands with him in April 1947, and looked after him for Huckle. Huckle got trapped in Antarctica with several other FIDS, and in 1950, when he finally got out, he gave Crown to Frank. On RARE 1947-48 Finn Ronne took a corgi, a whippet, and a sheepdog, as well as 43 huskies, about half of whom died of distemper en route to Antarctica. Ronne's Weddell Coast sledging party made canvas shoes for the dogs out on the trail when their paws were wearing thin. However, Ronne wasn't always in favor of dogs. Much later, in the first year that he was in command at Ellsworth Station, Dave Greaney was given a gift of a dog by the Argentines as the Americans were about to leave General Belgrano Station after a visit. Ronne threw the dog out of the plane, killing it. The plane was on the ground, but still, Ronne did it. The Argentines gave Greaney another dog, and back at Ellsworth Ronne wanted to kill that one too, but after a meaningful death threat from Greaney, Ronne spared the canine. The Chileans, in 1948, tried out Saint Bernards in Antarctica. Until the 1990s, dogs were still favored by some explorers. For related canine entries, *see* **Taro and Jiro** (a remarkable story), **South Pole Station** (for the mascot of South Pole Station in 1957). There was also Mr. Sastrugus (Gus), the mascot at Byrd Station in 1965. On Aug. 18 of that year he disappeared from the station. Cobber, a Welsh corgi, wintered-over in the ParaLoft at McMurdo, in 1967. He would always come over to the Club Erebus to watch the evening movie. Being so short, he had to sit on the top of a table, drinking booze out of an old ashtray stolen from Bonners Hotel in Christchurch. One dark and stormy night Cobber ate a bowl of sawdust in the ParaLoft, and washed it down with a six-pack of Steinlager. The sawdust turned into a 2 × 4 (not really true, that part; just an amusing elaboration by Billy-Ace Baker), and the doctor had to operate, but Cobber died on the table. He was buried between the Chapel of the Snows and Hut 109 (the Airdale hut). The Antarctic Conservation Act of 1978 says, in Sub-part 3, Article 670.43, part (b). Dogs. All dogs imported into Antarctica shall be inoculated against the following diseases: (1) distemper, (2) contagious canine hepatitis, (3) rabies, and (4) leptospirosis. Each dog shall be inoculated at least 2 months before importation, and a certificate of inoculation shall accompany each dog. No dog shall be allowed to run free in Antarctica. In 1991, by international agreement, the importation of dogs into Antarctica ceased, and those still on the ice had to be out by April 1, 1994. It was the end of an era. For the record, 1204 dogs worked at FIDS/BAS bases from 1945 to 1993, in 28 teams. The teams were: the Admirals, Amazons, Beatles, Churchmen, Citizens, Counties, Darkie & Co., Debs, Gaels, Gangsters, Giants, Girls, Hairybreeks, Hobbits, Huns, Komats, Ladies, Mobsters, Moomins, Number Ones, Orange Bastards, Picts, Players, Spartans, Terrors, Trogs, Vikings, and Wags.

Dogs Leg Fjord. 67°43' S, 66°52' W. An inlet, 10 km long in an E-W direction, and 2.5 km wide, directly E of Ridge Island, and opening on the E side of Bourgeois Fjord between high mountains, along the Fallières Coast, on the W coast of Graham Land. Discovered in 1936-37 by BGLE 1934-37, and named by them as Dog's Leg Fjord, for its shape. That is how the name appears on Rymill's 1938 map of the expedition. It appears on a 1943 U.S. Hydrographic Office chart as Dog's Leg Fiord, but on a 1948 British chart as both Dog's Leg Fjord (i.e., the way Rymill named it) and Dogs Leg Fjord (i.e., without the apostrophe). It appears on a 1947 Chilean chart translated as Fiordo Pata de Perro. It was re-surveyed by Fids from Base E in 1948-49. It appears on a 1949 Argentine chart as Fiord Dog's Leg. US-ACAN accepted the name Dogs Leg Fjord in 1951, and UK-APC followed suit on Sept. 8, 1953 (in both cases without the apostrophe), and that is how it appears in the 1955 British gazetteer. However, it appears in the 1954 British gazetteer as Dog Leg Fjord (which was, of course, wrong, and was subsequently corrected). It appears on a 1953 Argentine chart as Fiord Pata de Perro, but the name accepted by the Argentine gazetteer of 1970 was Fiordo Pata de Perro. It appears on a 1962 Chilean chart as Seno Pata de Perro, and that was the name accepted by the 1974 Chilean gazetteer.

Dogwatch Saddle. 76°53' S, 161°41' E. A snow saddle between Mount Brogger and Mount Morrison, separating the glacial catchments of the Benson Glacier and the Cleveland Glacier, in the Prince Albert Mountains of Victoria Land. An NZARP field party made a late night temporary camp on the saddle in Jan. 1990, and the name commemorates the midnight hours kept at this location. NZ-APC accepted the name in 1992, and US-ACAN followed suit in 1993.

Doherty, J. An aviator loaned out by the Royal Australian Air Force, he signed on to the *Aurora* at Sydney, on April 30, 1912, at £5 per month, as an able seaman, for the second run to Antarctica during AAE 1911-14. He left the expedition at Lyttelton, NZ, on March 18, 1913, but rejoined on Oct. 20, 1913, this time as bosun, at £9 per month, for the 3rd and last trip south. He left the expedition on March 19, 1914, with a bonus of £6.

Dohle Nunatak. 71°17' S, 66°06' E. A rock feature, consisting of 2 small peaks and a connecting ridge, between Mount Gleeson and Mount Gibson, in the Prince Charles Mountains. Named by ANCA on May 18, 1971, for Cliff Dohle (b. 1936. d. Feb. 2, 2009, Melbourne), helicopter pilot with the ANARE Prince Charles Mountains Survey in 1971, during which the position of this feature was fixed by theodolite intersection from Mount Willing and the Fisher Massif. Capt. Dohle had served with distinction with the RAAF in Vietnam. US-ACAN accepted the name in 1973.

Dokkene *see* **Dokkene Coves**

Dokkene Coves. 69°14' S, 39°38' E. Two coves just NW of Hamna Bay, on the W side of the Langhovde Hills, along the E shore of Lützow-Holm Bay, on the Prince Olav Coast. Mapped by Norwegian cartographers in 1946, from air photos taken during LCE 1936-37, and named by them descriptively as Dokkene (i.e., "the docks"). US-ACAN accepted the name Dokkene Coves in 1968.

Dokkhøgda. 71°59' S, 27°27' E. A mountain N of Rusegropa, in the S part of Gropeheia (the N part of Balchen Mountain), in the Sør Rondane Mountains. The name means "depression heights" in Norwegian, the feature being surrounded by depressions.

Doktor Peaks. 64°51' S, 62°47' W. A group of dioritic peaks rising to about 500 m above sea level, on the N coast of Leith Cove, at Pardise Harbor, on the Danco Coast, on the W coast of Graham Land. Named by the Poles on Sept. 1, 1999, for Doctor Marek Doktor (sic), who assisted Birkenmajer in geological studies at Paradise Harbor during PolAE 1984-85.

Gora Dokuchaeva. 71°10' S, 66°09' E. One

of two nunataks (*see also* **Pik Tanfil'eva**) standing due N of Mount Gleeson, in the Prince Charles Mountains. Named by the Russians.

Lednik Dokuchaeva. 71°38' S, 11°41' E. A glacier, about 12 km long, in the NE part of the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Russians. The Norwegians call it Dokuchaevbreen (which means the same thing).

Dokuchaevbreen *see* **Lednik Dokuchaeva**

Dolan, John J. He was on the *North Star* for the 2nd half of USAS 1939-41. His address was 323 West 89th St., Seattle.

Dolan Peak. 85°56' S, 133°15' W. A rock peak, rising to 2070 m, 3 km WNW of Hendrickson Peak, in the NW part of the Quartz Hills. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Theodore G. Dolan, glaciologist at Byrd Station for the 1959-60 summer season.

Mount Dolber. 77°07' S, 145°31' W. A prominent mountain, rising to 865 m, with a large snow-free summit, between Mount Rea and Mount Cooper, in the Sarnoff Mountains of the Ford Ranges, in Marie Byrd Land. Mapped by USAS 1939-41, and again by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Capt. Sumner Raymond Dolber (b. Feb. 1922, Waltham, Mass.), U.S. Coast Guard, captain of the *Southwind*, 1967-68 and 1968-69.

Mount Dolence. 79°51' S, 83°13' W. A remarkably spired, bare rock mountain, rising to 1950 m, in the NW extremity of the Enterprise Hills, and separated from the Edson Hills by the upper part of Union Glacier, in the Heritage Range of the Ellsworth Mountains. Named by the University of Minnesota Ellsworth Mountains Party of 1962-63, for Jerry D. Dolence, geologist in the party. US-ACAN accepted the name in 1964.

Dolevar, Joseph *see* **USEE 1838-42**

Lake Dolgoe. 66°17' S, 100°39' E. A narrow lake, about 7.5 km long and with an average width of 200 m, 3 km S of Edgeworth David Station, in the Bunger Hills. It has steeply rising land along its S shores, and cliffs along the W edge of its N shore. Mapped by SovAE 1956, and named by the Russians as Ozero Dolgoe. ANCA translated the name on March 12, 1992.

Ozero Dolgoe *see* **Lake Dolgoe**

Ozero Dolinnoe *see* **Dolinnoje Lake**

Dolinnoje Lake. 66°16' S, 100°54' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ozero Dolinnoe. ANCA translated the name on Jan. 19, 1989.

Lednik Dolinnyj *see* **Dolinnyy Glacier**

Dolinnyy Glacier. 73°01' S, 68°14' E. A small valley glacier, 4 km S of Petkovic Glacier, in the Mawson Escarpment, it flows W into the Lambert Glacier. Named by the Russians as Lednik Dolinnyj, it appears as such on one of their 1977 maps. US-ACAN accepted the name Dolinnyy Glacier on Oct. 20, 2009.

Doll Peak. 80°18' S, 155°06' E. Rising to 2130 m in the NW part of the Ravens Mountains, in the Britannia Range. Named by US-ACAN in 2001, for Brigadier General Karl H. Doll, director of operations of the 109 Tactical Airlift Group, who was instrumental in early transition planning of the LC-130 operations from the USN to the Air National Guard.

Isla Dolleman *see* **Dolleman Island**

Dolleman, Hendrik "Dutch." b. March 20, 1905, Deventer, Netherlands, son of Hendrik Dolleman and his wife Susanna Oshebeke. He, his mother, and four siblings left Rotterdam on the *Nieuw Amsterdam*, and arrived in New York on July 6, 1916. The father, who had secured a job with the R.J. Sullivan Cigar Factory in Manchester, NH, had come over three years before. After working with his father in the cigar factory, Dutch joined the U.S. Army Air Force, as a private, and was the machinist and tractor driver at East Base during USAS 1939-41, replacing Fred Dustin. In 1942, Dutch (by now a sergeant), Bernt Balchen, and Joe Healy rescued 13 downed airmen in Greenland. He was stationed in Germany after the war. In 1955 he was at Wonalancet, NH, teaching dog driving, and married Frances Fischer. He was back in Antarctica for OpDF. He died on Sept. 8, 1990, in Manchester, NH, and his wife died in 1999.

Dolleman Island. 70°37' S, 60°45' W. A rounded and grounded island, completely covered with a level mantle of ice (it is really an ice rise), 21.5 km long (N-S), 16 km wide, and rising gradually to an elevation of about 350 m (the Chileans say about 400 m) at the center of the island, in the Larsen Ice Shelf, 13 km E of Cape Boggs, and just S of Hearst Island, off the Wilkins Coast and the Black Coast, on the E side of the Antarctic Peninsula. Discovered and photographed aerially in Dec. 1940 by personnel from East Base, during USAS 1939-41. The feature was surveyed from the ground by the same expedition, and named by them for Dutch Dolleman. It appears on a 1942 USAAF chart of 1942, and US-ACAN accepted the name in 1947. In Nov. 1947, a combined sledging team of Fids from Base E and members of RARE 1947-48 surveyed it again from the ground, and it appears on Dougie Mason's 1950 FIDS map. UK-APC followed suit with the naming, on Jan. 28, 1953, and it appears on a British chart of 1954, and also in the 1955 British gazetteer. It appears on an Argentine chart of 1946, as Isla Dolleman, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Altimetric data for this feature was obtained on a BAS radio echo-sounding flight of Feb. 1975.

Dolleman Island Automatic Weather Station. 70°36' S, 60°45' W. An American AWS, on Dolleman Island, in the Larsen Ice Shelf. Elevation 396 m. It was installed on Feb. 18, 1986, and began operating the next day. The aerovane was found to have a broken weld, and the AWS was removed on Dec. 27, 1988, because its data was too similar to that of Butler Island AWS. The Dolleman AWS was reinstalled at Cape Adams.

Dollman, Harold "Harry." b. July 4, 1924, Newmarket, Suffolk, son of Claude Dollman and his wife Rosa May Thurlbourn. He joined FIDS in 1954, as a general assistant, and left Dover later that year, bound for the Falkland Islands, and from there to winter-over as base leader at Signy Island Station in 1955. He is reckoned by some to be one of the best of the FIDS base leaders. He returned to London on March 2, 1956, on the *Highland Princess*. In 1962 he was in South Georgia, as a usarp on Bird Island. He was chief warden of the nature reserve at Ludham (retired by 1985), and died in March 2003, in Norfolk. Jim Shirtcliffe and Murdo Finlayson Tait were at his funeral.

Islotes Dolores. 62°14' S, 58°26' W. A group of small islands off Telefon Point, on the S side of King George Island, in the South Shetlands. Named by the Argentines. These coordinates would actually place this feature to the immediate SE of the Telefon Rocks. It is odd that in such a well-traveled area as the southern part of King George Island, no one aside from the Argentines has seen fit to name this group, and one is automatically led to the suspicion that it is another Argentine name for the Telefon Rocks. However, the Argentines have always used the name Rocas Telefon for the Telefon Rocks.

Dolphin Spur. 84°12' S, 172°48' E. A broad, ice-covered spur, descending in a northerly direction from the area just E of Mount Patrick, in the Commonwealth Range, into the upper reaches of Hood Glacier. So named by the NZ Alpine Club Antarctic Expedition of 1959-60, who explored this area in Dec. 1959, because its several rock outcrops, when seen from the lower levels of the Hood Glacier, resemble a school of dolphins diving through the sea. US-ACAN accepted the name in 1966.

Dolphins. There are two types of dolphin. One is a mammal, and the other is a fish, *Coryphaena hippuras*. Both are occasionally seen in Antarctic waters. The mammal belongs to the family Delphinidae (dolphins), of the suborder Odontoceti (toothed whales), of the order Cetacea (whales). The mammal is what most people mean when they talk about dolphins, and is the most agile of the cetaceans. They hunt fish and squid primarily, and their conical teeth are used merely to trap the prey, which they then swallow whole. The largest dolphin is the Orca, known as the killer whale (q.v.), which is found in Antarctica, as are: Commerson's dolphin (q.v.), Peale's dolphin (q.v.), the dusky dolphin (q.v.), the southern right whale dolphin (q.v.), and the hourglass dolphin (q.v).

Banka Domashnjaja *see* **Domashnyaya Bank**

Domashnyaya Bank. 67°39' S, 45°50' E. A small submarine bank, or shoal, covered by between 0.6 and 0.8 m of water, just off shore, about 0.8 km SW of Cape Granat, near Molodezhnaya Station, in Enderby Land. Discovered by SovAE 1961-62, and named by them as

Banka Domashnjaja (i.e., "domestic bank"), for its closeness to the station. ANCA translated the name on Oct. 22, 1968, and US-ACAN accepted the Australian naming in 1971.

Domashnyaya Bay. 67°40' S, 45°50' E. An indentation of Alasheyev Bight into Enderby Land, at Molodezhnaya Station. Named by the USSR. The name means "domestic," and relates to its closeness to the station.

Dome *see* **Pearce Dome**

[1]**The Dome** *see* **McLeod Hill**

[2]**The Dome**. 85°22' S, 166°00' E. A knoll, rising to 1724 m, to the E of Jotunheim Valley, and to the S of Mount Mills, in the Dominion Range. Named by BAE 1910-13. It appears in the 1958 NZ Provisional Gasetteer (with a height of 2883 m).

Dome A Automatic Weather Station. 80°22' S, 77°22' E. An Australian AWS on the Polar Plateau, at an elevation of 4093 m, which was installed on Jan. 17, 2005, and which still operated in 2009.

Dome C *see* **Dome Charlie** (under **C**)

Dome C Automatic Weather Station. 74°39' S, 124°10' E. An American AWS at Dome C, at an elevation of 3250 m. It measured katabatic winds, and began operating on Jan. 13, 1983. It was removed on Jan. 3, 1996.

Dome C II Automatic Weather Station. 74°39' S, 124°10' E. An American AWS at Dome C, at an elevation of 3250 m, which was installed in Dec. 1995.

Dome C Camp. 74°39' S, 124°10' E. A summer-only American camp, inland from the Banzare Coast, on the Polar Plateau, opened in 1981-82. It consisted of 8 Jamesway huts, and was last visited in Jan. 1984.

Dome C Scientific Station. 75°06' S, 123°23' E. From 2003 it has been called Concordia Scientific Station. Joint Italian-French scientific station opened as a summer station in Dec. 1993 (they had scouted out the site the season before), 950 km inland from the Banzare Coast, 560 km from Vostok Station, and 3220 m above sea level on the Antarctic Ice Cap. It had 12 main buildings and conducted research in several disciplines, including surveying, geomagnetics, glaciology, human biology, and meteorology. It could accommodate 45 persons in summer, and during the winter there were usually 10 or slightly fewer. It was supplied by air from Baia Terra Nova Station (i.e., Mario Zucchelli Station) and by an annual overland traverse by a heavy tractor haul from Dumont d'Urville Station. In 2003 it became a year-round station. In Jan. 2005 Concordia Automatic Weather Station (q.v.) was installed here.

Dome F Automatic Weather Station. An American AWS, at an elevation of 3810 m, on the Polar Plateau, it replaced Dome Fuji AWS (see below), and began operating in Feb. 1997.

Dome Fuji Automatic Weather Station. An American AWS, at an elevation of 3810 m, on the Polar Plateau, it was installed in Feb. 1995, and removed in Dec. 1997, to be replaced immediately by Dome F AWS (see above).

Dome Fuji Station. 77°19' S, 39°42' E. Established by JARE 35 and JARE 36, and opened on Jan. 29, 1995, as Japan's second scientific station in Antarctica. It was, at that time, called Domu Fuji-kansoku-kyoten (i.e., "Dome Fuji observation base"). It was located at an elevation of 3810 m above sea level, on the highest point of the Queen Maud Land ice-sheet, 100 km south of Showa Station, inland from the Prince Harald Coast. It had an electrical power plant, a dining hall, living quarters, labs, a medical and residential building, a drilling workroom, an excavation control room, passageways, an ice-core processing and experimentation facility, and evacuation facilities. Nobuhiko Azuma led the 1995 wintering-over party; Yoshiyuki Fuji led the 1996 wintering-over party; and Susumu Chosa led the 1997 wintering-over party. From 1998 it was open only as a summer station. On April 1, 2004, it changed its name to Domu Fuji-kichi (i.e., "Dome Fuji station").

Dome Nunatak. 77°01' S, 161°27' E. A dome-shaped nunatak protruding through the ice of Mackay Glacier to a height of 990 m above sea level (the New Zealanders say 850 m), about 6 km WNW of Mount Suess, in Victoria Land. Charted and named by BAE 1910-13. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Domen *see* **Domen Butte**

Domen Butte. 72°43' S, 3°50' W. A butte with steep rock sides, and a snow-covered summit in the shape of a dome, in the Seilkopf Peaks, just SW of Høgskavlen Mountain, in the W part of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Domen (i.e., "the dome"). US-ACAN accepted the name Domen Butte in 1966.

Domes. A raised feature shaped like a dome. The word "dome" can mean various things in Antarctica. It can be an icefield, an ice cap, a snow dome, or an ice dome (Americans prefer the term "dome"; Eastern Europeans use "kupol"), or it can be a domed mountain, hill, or nunatak. It can even be a peninsula, as long as the shape is right. The vast majority, regardless of the type, lie in the higher southern latitudes. These are the the domes in Antarctica: Allison, Anderson, Arctowski, Argus, Beacon, Bellingshausen, Bennett, Bonnabeau, Burmester, Burrage, Charlie (also known as Circe Dome), Constellation, Cowie, Davies, Dingle, Dingsør, Dobson, Frustration, Fuchs, Fuller, Hercules, Holman, Horteriset, Hurd, Husky, Jøkulhest, Kohler, Kraków, Lamykin, Law, Lookout, Maaske, Martin, Medea, Moore, Murray, Pearce, Phleger, Pionerskiy, Ricker, Rotch, Roundel, Shepherd, Siege, Siple, Snøhetta, Talos, Taylor, Titan, Valkyrie, Venture, Vrana, Warszawa, Wehrle, and Wimple.

Dometa Point. 62°40' S, 61°01' W. On the S coast of Byers Peninsula, 1.2 km SW of Negro Hill, 4.3 km WNW of Rish Point, 4.6 km SE of Chester Cone, and 4.2 km ENE of Nikopol Point, on Livingston Island, in the South Shetlands. Named by the Bulgarians on Dec. 15, 2006, after the dometa (i.e., governor) of the southwestern Bulgarian province of Kutmichevitsa (now in Macedonia), who hosted the mission of St. Kliment Ohridski, which had been sent by Czar Boris I of Bulgaria in the 9th century to organize the teaching of theology to future priests in Old Church Slavonic. St. Kliment was a native of Kutmichevitsa.

Domeyko Glacier. 62°04' S, 58°29' W. The largest glacier at Mackellar Inlet, it flows SE into that inlet, at Admiralty Bay, between Crépin Poitn and Keller Peninsula, King George Island, in the South Shetlands. Named by the Poles in 1980, for Ignacy Domeyko (1802-1889), Polish-born Andean explorer and professor of mineralogy and chemistry at the University of Chile, at Santiago (where he was, of course, known as Ignacio, and was also the rector there), and also at Coquimbo. UK-APC accepted the name on July 8, 2003, and US-ACAN followed suit that year. The British were the latest to replot this glacier, in late 2008. *See also* **Lavoisier Island**.

Cabo Domínguez. 63°54' S, 57°14' W. A cape, next N of Mahogany Bluff, and immediately SE of the hill the Argentines call Cerro Dubos, on the peninsula that forms the extreme SE point of Vega Island, on the E side of Pastorizo Bay, in the Weddell Sea. Named by the Argentines.

Rocas Domínguez. 63°18' S, 57°58' W. A group of rocks in the form of a reef, about 330 m S of Bulnes Island, in Covadonga Harbor, in the W part of the Duroch Islands, off Cape Legoupil, Trinity Peninsula. Named by ChilAE 1949-50, for Capitán de corbeta Jorge Domínguez K., 2nd-in-command of the *Iquique* during the expedition.

Dominican gull *see* **Gulls**

Dominion Hill. 77°32' S, 163°08' E. A hill just E of Noxon Cliff, at the S end of Flint Ridge, in the Asgard Range of Victoria Land. Named by US-ACAN in 1998, in association with Commonwealth Glacier. NZ-APC accepted the name on Oct. 7, 1998.

Dominion Range. 85°20' S, 166°30' E. A broad mountain range about 50 km long, forming a prominent salient at the junction of the Beardmore Glacier and the Mill Glacier (it is at the top of the Beardmore, and flanks the Mill on its S side), S of the Commonwealth Range, in the Transantarctic Mountains. Forming part of the Polar Plateau escarpment, it includes such rugged peaks (several of them over 3000 m above sea level) as Mount Saunders, Mount Nimrod, Mount Ward, Mount Emily, Mount Cecily, Mount Raymond, Mount Mills, and The Dome. Discovered by the Southern Polar Party in Dec. 1908, during BAE 1907-09, and named by Shackleton for the dominion of New Zealand, a country more than helpful to Antarctic expeditions of all nationalities, from the very beginning. US-ACAN accepted the name in 1947, and NZ-APC fol-

lowed suit. Originally plotted in 85°22' S, 166°00' E, it has since been replotted.

Dommarringen. 72°12' S, 16°05' E. A small nunatak in the S part of the group of nunataks the Norwegians call Steingarden, in the southeasternmost part of Fimbulheimen, in Queen Maud Land. Named descriptively by the Norwegians (name means "the judge's ring").

Domu-iwa. 68°24' S, 41°45' E. A dome-like rocky hill, rising to an elevation of 58 m above sea level, on Temmondai Rock, on the coast at the E side of the terminus of Higashi-naga-iwa Glacier, in Queen Maud Land. Named during a JARE geological survey of 1981 (name means "dome rock"). Japan accepted the name officially on Nov. 24, 1981.

Cerro Don Bosco *see* **Cairn Hill**

Cordón Don Bosco *see* **Cairn Hill**

The *Don Ernesto*. Whale catcher named for Don Ernesto Tornquist (1842-1908), major Argentine businessman. The catcher, one of the fastest of her day, was based in South Georgia. She relieved Órcadas Station in 1925-26. Hans T. Johannessen was her skipper that season.

Isla Don Jorge *see* **Fuente Rock**

Lake Don Juan *see* **Don Juan Pond**

Don Juan Pond. 77°34' S, 161°10' E. Also called Lake Don Juan. A small, shallow, very saline closed lake, S of The Dais, in the S fork of the upper Wright Valley, in Victoria Land. Discovered by a field reconnaissance helicopter on Oct. 11, 1961. Shortly therafter, George H. Meyer and others came here several times to study it, and ingeniously named it for Lts. Donald Roe (the Don part—*see* **Mount Roe**) and John Hickey (the Juan part—*see* **Cape Hickey**), of VX-6, who helped the party. US-ACAN accepted the name in 1966, and NZ-APC followed suit. Antarcticite was discovered here.

Mount Don Pedro Christophersen. 85°31' S, 165°47' W. A massive, largely ice-covered, smoothly-rounded gabled peak, rising to 3765 m (the New Zealanders say 3925 m), and surmounting the divide between the heads of the Axel Heiberg Glacier and Cooper Glacier, and flanking the S side of the Axel Heiberg, in the Queen Maud Mountains, at the head of the Ross Ice Shelf. Discovered by Amundsen on Nov. 19, 1911, while he was on his way to the Pole, and first named by him as Haakonshallen, after its resemblance to a Norwegian castle of that name. He later renamed it for one of his major patrons, Norwegian-born Pedro Christophersen Petersen (as he is called in Argentina; 1845-1930), of Buenos Aires. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Don Quixote Pond. 77°32' S, 161°09' E. A pond, 1.7 km NE of Dais Col, in the north fork of the Wright Valley, in Victoria Land, it consists of a layer of fresh water over a body of salt water, with an ice topping. It is 30,000 sq m in area, and is several feet deep. It was named thus (in association with Don Juan Pond) on various reports drawn up by field parties here in the 1970s, and was the name accepted by US-ACAN in 1997, and by NZ-APC.

The *Don Samuel*. Argentine whale catcher, built in 1925, and owned by the Compañía Argentina de Pesca, in Grytviken, South Georgia. She caught for the factory whaling ship *Patagonia*. She took part in ArgAE 1947, and was commanded by Capt. Luis Miguel García. Jorge R. Pisani Reilly was interpreter aboard. Out of a crew of 15, 8 were Norwegians. Lt. Pennesotte was aboard. She helped set up Melchior Station, on Melchior Island, and cruised around the Antarctic Peninsula area. **Feb. 10, 1947**: She visited Port Lockroy Station. **Feb. 11, 1947**: She visited the British FIDS Base E, at Stonington Island. **Feb. 14, 1947**: She got back to Melchior. **Feb. 23, 1947**: She visited Port Lockroy. **Feb. 28, 1947**: She left Port Lockroy. **March 2, 1947:** She was back at Port Lockroy. **Nov. 11, 1951**: She was wrecked on a reef in Queen Maud Bay, in South Georgia, while sealing. Thorleif Hammerstad was her skipper that season. The crew got ashore.

Bahía Don Samuel *see* **Edgell Bay**

Isla Donald *see* **Donald Nunatak**

Nunatak Donald *see* **Donald Nunatak**

Roca Donald *see* **Donald Nunatak**

Donald, Charles William. b. Nov. 24, 1870, Kirkwall, Orkney, son of Edinburgh bank agent James Donald and his much younger wife, Isabella Traill Clouston. In his late teens the family moved back to Edinburgh, where Charles went to university to study medicine (and boxing). He had just graduated, when he became doctor and naturalist on the *Active* during DWE 1892-93. After serving in South Africa during the war there, he moved to Carlisle in 1901, going into private practice, and in 1904 he became assistant physician at Cumberland Infirmary. In 1916 he became senior physician there, and also police surgeon, and during World War I served in Egypt. He had an attack of angina pectoris, and died a few days later, on Nov. 8, 1932, at his home in Carlisle.

Donald, David. b. 1885, Dundee. Ordinary seaman on the *Polar Star*, during DWE 1892-93.

Donald Nunatak. 65°05' S, 60°06' W. Rising to about 100 m above the Larsen Ice Shelf, 2.5 km N of Gray Nunatak, in the Seal Nunataks, off the Oscar II Coast, on the E coast of the Antarctic Peninsula. Charted in 1902 by SwedAE 1901-04, and named by Nordenskjöld as Nunatak Donald, for Dr. Charles Donald. On various other of Nordenskjöld's charts it is seen as Donald Nunatak, and Donalds Nunatak. It appears on a 1908 Argentine map as Isla Donald, but as Donald Nunatak on a British chart of 1921. It appears by error as Gray Nunatak on a USAAF chart of 1946. It was surveyed by Fids from Base D in 1947. It appears on a 1947 Chilean chart as Roca Donald. Donald Nunatak was the name accepted by UK-APC on Jan. 22, 1951, and by US-ACAN in 1952, and it appears as such in the 1955 British gazetteer. The Chilean gazetteer of 1974 accepted the name Nunatak Donald, which is also what the Argentines call it.

Donald Ridge. 79°37' S, 83°10' W. A narrow ridge extending S from Mount Capley, in the Pioneer Heights of the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Donald L. Willson, meteorologist at Little America in 1958.

Mount Donald Woodward *see* **Mount Woodward**

Donald Woodward Mountains *see* **Mount Woodward**

Donalds Nunatak *see* **Donald Nunatak**

Mount Donaldson. 84°37' S, 172°12' E. Rising to 3930 m (the New Zealanders say 2057 m), 8 km NNE of Flat Top, W of the head of Ludeman Glacier, between the Hughes Range and the Commonwealth Range. Discovered and named in 1908, by Shackleton, during BAE 1907-09, for Isabella "Belle" Donaldson (b. 1885, Salford, Lancs; her name was not Isobel, despite what looks like unimpeachable evidence to the contrary), a blonde, bubbly actress whom Shackleton had met and had an affair with on the *India*, as he traveled from England to Australia at the beginning of this very expedition. US-ACAN accepted the name in 1962, and NZ-APC followed suit. Miss Donaldson, as Shackleton found out, bears inspection. She debuted on the stage in London, as Lucy in "Monsieur Beaucaire," in 1904. After several more parts, she was in "Lights Out," at the London Waldorf, and then set sail on the *India* as a member of Frank Thornton's comedy troupe, heading out to do a tour of Australia and NZ. Then it was back to England, and then out to South Africa with the troupe. She gave up the stage and became a journalist, never married, and was still traveling the world into the 1930s.

Donaldson, John. b. 1885, Dundee. Ordinary seaman on the *Polar Star*, during DWE 1892-93.

Isla Donati *see* **Kappa Island**

Punta Donati *see* **Punta Leiva**

Donburi-ike. 68°27' S, 41°26' E. A small, bowl-shaped lake on Cape Akarui, NE of Cape Omega, on the coast of Queen Maud Land. Named descriptively by the Japanese on Nov. 24, 1981 (name means "bowl pond").

The *Dong Bang 115*. Korean Fisheries vessel, skippered by Hong-Bae Jhoo, which took the 1986-87 South Korean Fisheries expedition to Antarctica, led by Ki-Bong Lim. She was back for a similar expedition in 1987-88, this time skippered by Hong-Kook Choo, and for one in 1988-89 (Capt. Hui-Kook Oh).

Dong Pingtai. 69°23' S, 76°22' E. A platform in the Larsemann Hills. Named by the Chinese.

Dongchangbai Shan. 69°24' S, 76°24' E. A hill in the Larsemann Hills. Named by the Chinese.

Dongping Hu. 69°23' S, 76°14' E. A lake in the Larsemann Hills. Named by the Chinese.

Dongpo Shitan. 69°22' S, 76°23' E. A beach in the Larsemann Hills. Named by the Chinese.

Dongtaiping Shan *see* **Base Ridge**

Le Donjon *see under* **L**

Donnachie, Thomas "Tommy." b. 1921, Ireland, but raised in Glasgow. He joined the Merchant Navy as a radio operator, and, as such, left Liverpool in 1944, bound for Montevideo, and then on to Base D, where he wintered-over in 1945, during the 2nd phase of Operation Tabarin, i.e., 1944-45. After the expedition, he returned to Glasgow, and went back to sea. He died in Glasgow.

Donnachie Cliff. 64°01' S, 58°04' W. Rising to about 500 m, on Ulu Peninsula, WNW of Dobson Dome, and NE of Back Mesa, on James Ross Island. Notable for good exposure of debris flow hyalclastites. BAS did geological wotk here in 1985-86. Named by UK-APC on Feb. 15, 1988, for Tommy Donnachie. US-ACAN accepted the name.

Donnally Glacier. 81°37' S, 159°18' E. About 19 km long, it flows NE along the N side of the Swithinbank Range, and enters Starshot Glacier, in the Churchill Mountains. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Cdr. Edward W. "Ed" Donnally, USN, commanding officer of detachment Alpha, and officer-in-charge of U.S. Naval support personnel at McMurdo in the winter of 1962. ANCA accepted the name on Aug. 27, 1975.

Donnellan Glacier. 78°36' S, 85°48' W. A steep valley glacier fed by highland ice adjacent to Fukushima Peak on the summit plateau of the Vinson Massif, flowing westward from that massif along the N side of Mount Slaughter into Nimitz Glacier, in the Sentinel Range. Named by US-ACAN in 2006, for Andrea Donnellan, of the Satellite Geodesy and Geodynamics Systems Group, Jet Propulsion Lab, California Institute of Technology, involved from the mid 1990s in research projects involving the use of GPS in studies of earth crustal deformation in Southern California, and also in Antarctica.

Donnelly, Alan Kenneth "Gene." b. Oct. 21, 1930, Cape Town, son of Edinburgh-born Daniel McKay Donnelly and his wife Ethel May Scurr. His parents had him registered as A.K. Donnelly, but being a Catholic family, they baptized him as Eugene Allen Donnelly, "Gene" for short. In 1933 the father, who had been gassed in the trenches during World War I, left the family. Educated at Christian Brothers' College, in Cape Town, Gene worked for Lever Brothers for a brief while, then did 6 months in the Namib Desert, driving a bulldozer for Consolidated Diamond Mines. The pay was good, and enabled him to fund a trip to Scandinavia, then on to England, where he joined FIDS in 1955, as a radio operator (he had seen a small news item in an English-language newspaper in Cape Town; for 6 years he had been a skilled morse code radio operator, and as a ham, had been building radio transmitters, so he knew a thing or two). He sailed from Southampton on the *John Biscoe*, bound for Montevideo and the Falkland Islands. The radio operator scheduled at Base Y for the winter of 1956, wanted out, and Gene was a last-minute replacement, and so wintered-over there in 1956. It was during this time that he received signals from BCTAE 1955-58, asking him to let London know that there had been a disaster (*see* **Blaiklock, Ken**). He was at Marguerite Bay in 1956-57, and then wintered-over at Signy Island Station in 1957. At the end of his tour, in 1958, he hitched a ride home on a British warship which was calling in at Cape Town on its way back to Southampton. Back in South Africa, he became a reporter and photographer, first with the English-language daily morning newspaper *The Cape Times*, and, 10 years later became the managing editor of South Africa's national weekly Catholic newspaper, *The Southern Cross*. He lives in the Western Cape, and still works part-time on the paper. He married Margery Montrose Rhodes.

Donnelly, Charles Adrian. b. Dec. 1893, Hawthorn, Vic., and raised on Hoddle Street, East Melbourne, son of warehouse manager Joseph Ignatius Donnelly and his wife Nellie Jones. On Dec. 12, 1914, he was working in a locomotive shop in Sydney, and had never been to sea, when he was taken on as 2nd engineer on the *Aurora*, 1914-16, during BITE 1914-17. He became a professional, and was 5th engineer on the *Prinzessin*, in 1919. He married Lillian Hazel Taylor, and in the 1930s they ran a series of hotels in Queensland. He returned to engineering work in Newcastle, NSW, and died on July 2, 1959, in Queensland. Lillian died in 1973, in Victoria.

Donnelly Island. 67°37' S, 68°12' W. An island, 150 m SE of Anchorage Island, in the Léonie Islands, in Ryder Bay, off the SE coast of Adelaide Island. Named by UK-APC on Dec. 2, 1993, for John Donnelly (1948-1993), chief engineer on the *James Clark Ross*, who became seriously ill at the end of the 1992-93 season, and subsequently died in Jan. 1993.

Donnelly Nunatak. In the Grosvenor Mountains, between the Beardmore Glacier and the Amundsen Glacier, in the Queen Maud Mountains. Named by NZ-APC in 1960, for Adrian Donnelly, this nunatak must have existed at one time, as it was one of the five included in the group named by the New Zealanders that year, as the Aurora Nunataks (q.v.), but only two of the so-called Aurora Nunataks are listed today in any gazetteer — Larkman and Mauger. Donnelly Nunatak (the name is glimpsed occasionally in records, but usually misspelled as Donelly) seems to have disappeared without trace.

Donner Valley. 77°37' S, 161°27' E. A small, mainly ice-free valley, NNE of Mount Thundergut, in the Asgard Range of Victoria Land. Named by NZ-APC, possibly for the German word meaning "thunder," because of its closeness to Mount Thundergut. US-ACAN accepted the name in 1976.

Donovan, D. b. Kinsale, Cork, 1882. He joined the Merchant service as an able seaman. In 1903 he was on the *Ophir* (with Vic Berry), spent a few years on that vessel, served as such on the *Fifeshire*, and had just returned from a voyage to Chile when, on Dec. 28, 1907, at Lyttelton, he signed on as a fireman on the *Nimrod*, for the first half of BAE 1907-09. He was discharged at Lyttelton on March 28, 1908. He continued to ply Antipodean waters for several years.

Donovan Islands. 66°11' S, 110°24' E. Also called Chappel Islands. A chain of about 8 islands (the Australians say 5), lying well offshore, 8 km NW of Clark Peninsula, and (therefore) about 11 km NW of Casey Station, in the E part of Vincennes Bay. The only named ones are Chappel Island (the largest), Glasgal Island (the most southwesterly), Grinnell Island (S of Chappell Island), and Lilienthal Island (just N of Glasgal Island). Chappell Island has very large Adélie penguin rookeries, and the other islands have smaller rookeries. First mapped from air photos taken during OpHJ 1946-47. An ANARE expedition, led by Phil Law on the *Kista Dan*, sailed close by here on Jan. 20, 1956, and, about the same time, an ANARE aircraft took photos. Named by ANCA on Sept. 4, 1956, for Jeremiah "Jerri" Donovan, administrative officer of the Antarctic Division, Melbourne, and leader of the relief expedition to Macquarie and Heard Islands (not in Antarctica), 1952-53, and also of those in 1954-55, 1955-56, and 1956-57. US-ACAN accepted the name in 1958.

Donovan Promontory. 69°24' S, 76°07' E. A long, thin promontory on the NE part of Storsnes Peninsula, in the Larsemann Hills. Named by ANCA on Sept. 29, 1988, for Jerri Donovan (*see* **Donovan Islands**). The Chinese call it Tianlong Bandao.

Ostrova Donskië *see* **Donskiye Islands**

Donskiye Islands. 68°36' S, 77°54' E. A group of islands, including Warriner Island and Redfearn Island, off Breidnes Peninsula, in the Vestfold Hills. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named this feature Mulvikholmane (i.e., "the mule bay islets"). Photographed aerially again by OpHJ 1946-47, by SovAE 1956, and by ANARE in 1957 and 1958. The Russians named them Ostrova Donskië, a name translated by ANCA on Nov. 27, 1973.

Doolette Bay. 67°55' S, 147°00' E. At the junction of the W side of Ninnis Glacier Tongue and the mainland, on the coast of George V Land. Discovered by AAE 1911-14, and named by Mawson for Irish-born George Philip Doolette (1840-1924), Australian mining magnate and philanthropist, and a patron of the expedition. US-ACAN accepted the name, and ANCA followed suit.

Doolittle Bluff. 77°37' S, 162°38' E. A large rock bluff at the head of Suess Glacier, on the N side of Taylor Valley, in Victoria Land. From the Suess Glacier névé, the bluff rises 500 m to a summit area of 1835 m. Named by US-ACAN in 1997, for physicist John S. "Jack" Doolittle, at McMurdo and Pole stations from

1975-76, including a wintering-over as science leader at Siple Station in 1977. He has continued to investigate aurora at the Pole since 1983. NZ-APC accepted the name.

Doolittle Massif. 80°50' S, 156°42' E. A compact group of mountain heights, 16 km long, and rising to 2050 m (in Mount Rainbow), between Zeller Glacier and Sefton Glacier, where those 2 glaciers enter the larger Byrd Glacier, in the NW part of the Churchill Mountains. Named by US-ACAN in 2003, for Gen. James H. "Jimmy" Doolittle (b. Dec. 4, 1896, Alameda, Calif. d. Sept. 27, 1993, Pebble Beach, Calif.). He visited McMurdo in 1962. One needs no excuses to name anything for Gen. Doolittle, but the one offered by US-ACAN is that he pioneered heavy aircraft operations, which led to the possibility of that sort of operation during OpHJ 1946-47. His greatest contribution to aeronautics, however, was in the development of instrument flying, and his greatest contribution to World War II was the planning and execution of the famous Doolittle Raid in 1942, which showed that American bombers could reach Japan. In late 2008 US-ACAN changed its coordinates to the above.

Mount Doorly. 77°23' S, 162°54' E. Rising to about 1066 m, it surmounts the E part of the rocky ridge, at the N side of Wright Lower Glacier, between that glacier and Greenwood Valley, just behind Wilson Piedmont Glacier, about 17.5 km WSW of Spike Cape, in Victoria Land. Discovered by BNAE 1901-04, and named by them for Gerald Doorly. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Doorly, James Gerald Stokely. Known as Gerald S. Doorly. b. June 4, 1880, Port of Spain, Trinidad, son of the Rev. Wiltshire Stokely Doorly (later archdeacon of Trinidad) and his wife Jane Driggs. A merchant seaman he served on the P & O Line from 1901 to 1902, during the South African War, and was 3rd officer (as well as being a midshipman, RNR) on the *Morning*, 1903, with his friend and former fellow cadet, E.R.G.R. Evans (q.v.), during the relief of BNAE 1901-04. From 1905 to 1911 he was a 2nd and 1st officer with the Union Steam Ship Company of NZ, and from 1911 to 1924 commanded 24 ships for the same company. On Nov. 18, 1908, at Dunedin, he married Forrestina Muriel "Ina" Whitson. In Nov. 1917, during World War I, while in command of the *Aparimo* in the English Channel, he was torpedoed. He moved from NZ to Melbourne in 1925, and joined the Port Phillip Sea Pilots' Service. He served in World War II. He wrote: *The Voyages of the "Morning"* (1915), *The Handmaiden of the Navy* (1917), *In the Wake* (1937), and *Songs of the "Morning"* (1943). His wife died in 1933, and on Dec. 29, 1934, in Melbourne, he married Bertha Lutzia Wildman (née Webber). In 1951 he moved to NZ, and died on Nov. 3, 1956, in Wellington.

Doppler Nunatak. 74°51' S, 71°41' W. A nunatak rising to about 1450 m, SW of Mount Mende, in the Sky-Hi Nunataks of Ellsworth Land. Named by US-ACAN in 1988, for Christian Johann Doppler (1803-1853), Austrian scientist who discovered the Doppler effect in physics. UK-APC accepted the name on Feb. 15, 1988.

Doran Glacier. 77°43' S, 162°40' E. Between Sollas Glacier (to the W) and Marr Glacier (to the E), on the N slopes of the Kukri Hills, in Victoria Land. Named by US-ACAN in 1997, in association with Doran Stream which flows N from this glacier into Taylor Valley. NZ-APC accepted the name.

Doran Stream. 77°42' S, 162°34' E. A meltwater stream, 3 km long, flowing N from Doran Glacier to Priscu Stream, in Taylor Valley, in Victoria Land. Named by US-ACAN in 1996, for paleolimnologist Peter T. Doran, of the Desert Research Institute, in Reno, Nev., who, from 1993 on, conducted studies of the paleolimnology and climate of the McMurdo Dry Valleys.

Dorchuck Glacier. 74°44' S, 113°56' W. A narrow glacier, 14 km long, flowing NE from Jenkins Heights, between Klinger Ridge and Ellis Ridge, into the Dotson Ice Shelf, at Martin Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1967, and also from U.S. Landsat images taken in Jan. 1973. Named by US-ACAN for Robert E. Dorchuk, USN, power plant operator with the Naval Nuclear Power Unit at McMurdo, during OpDF 65 (i.e., 1964-65) and OpDF 69 (i.e., 1968-69), including winterings-over.

Anse Dorian *see* **Dorian Bay**
Bahía Dorian *see* **Dorian Bay**
Baie Dorian *see* **Dorian Bay**
Caleta Dorian *see* **Dorian Bay**
Ensenada Dorian *see* **Dorian Bay**
Puerto Dorian *see* **Dorian Bay**

Dorian Bay. 64°49' S, 63°30' W. A cove on the NW side of Wiencke Island, 0.8 km ENE of Damoy Point, and N of Port Lockroy, in the Palmer Archipelago, off the Danco Coast, on the W coast of Graham Land. Discovered by FrAE 1903-05, and named by Charcot as Anse Dorian, for Paul-François-Marc-Antoine Ménard-Dorian (1846-1907), a member of the French Chamber of Deputies, and closely intertwined by blood and society to the Charcots, the Hugos, and the Lockroys. It appears as such on Charcot's expeditions charts, and also on those of his FrAE 1908-10. Re-surveyed by the Discovery Investigations in 1927-28, it appears as Dorian Bay on their 1929 chart. It appears on a 1937 French chart as Baie Dorian. It was surveyed by personnel from Port Lockroy Station in 1944, during Operation Tabarin. It appears on one 1947 Argentine chart as Puerto Dorian, and on another as Bahía Dorian, and it was the latter name that was was accepted by the 1970 Argentine gazetteer. It appears on one 1947 Chilean chart as Ensenada Dorian, and on another as Caleta Dorian, and it was the latter name that was accepted by the 1974 Chilean gazetteer. US-ACAN accepted the name Dorian Bay in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer and also on a 1960 British chart. It was recharted by an RN Hydrographic Survey unit in 1951. In 1953 the Argentines established Bahía Dorian Refugio (*see under* **B**) here. It appears on a 1956 U.S. Hydrographic Office chart as Dorian Cove, and on a 1963 USHO chart as "Dorian Bay (Cove)." It appeared on a 1962 Chilean chart as part of what they called Puerto Angamos (q.v.). The BAS hut Damoy was built here, at Damoy Point, in 1975.

Dorian Cove *see* **Dorian Bay**
Dorián Refugio *see* **Bahía Dorián Refugio**
[1]**Punta Doris** *see* **Dyke Point**

[2]**Punta Doris**. 62°27' S, 60°48' W. A point immediately N of the beach the Chileans call Playa Chica, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for Doris Oliva Eklund, of the University of Chile, who took part in the scientific activities of the Instituto Antártico Chileno in this area, during ChilAE 1984-85.

Doris Point *see* **Dyke Point**
Canal d'Orléans *see* **Orleans Strait**

Dornan, Patrick O. b. 1899, Ireland. He went to sea during World War I, as a merchant seaman. He was a crewman on the *Jacob Ruppert*, 1933-34, i.e., during the first half of ByrdAE 1933-35, and in the later 30s sailed as able seaman on the *Cape Corso*, in South American and Caribbean waters. He was still sailing, after World War II, as a bosun, into his 50s.

Dorngletscher. 70°46' S, 162°46' E. A glacier, just to the SW of Lotzegletscher, in the Explorers Range of the Bowers Mountains. Named by the Germans.

Dornin, Wilbur Hodges. b. July 19, 1912, Va., son of Thomas Bernard Dornin and his wife Eliza Daniel Hodges. He left school at 14, and was a photographer and engine room wiper on the *Bear of Oakland* (and subsequently on the *Jacob Ruppert*), during both halves of ByrdAE 1933-35. He married and settled in Philadelphia. On April 8, 1944, in New Cumberland, Pa., he enlisted in the Army as a private, and became a corporal in the 5th Squadron, 9th Bombardier Goup. He died on Oct. 23, 1973, in Quakertown, Pa.

Ledjanoj val Dorozhka. 72°04' S, 67°18' E. A wall, just E of the lake the Russians call Ozero Serp, in the Prince Charles Mountains of Mac. Robertson Land. Named by the Russians.

Dorrel Rock. 75°26' S, 111°22' W. A rock outcrop on land, 17.5 km SW of the summit of Mount Murphy, protruding through the ice near the head of Pope Glacier, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Leo E. Dorrel, USN, hospital corpsman who wintered-over at Byrd Station in 1966.

Dorrer Glacier. 82°41' S, 163°05' E. Just S of Mount Heiser, it flows E into Lowery Glacier from the NE slopes of the Queen Elizabeth Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Egon Dorrer (b. Feb. 14, 1934, Munich), German-born USARP glaciologost on the Ross Ice Shelf, 1962-63 and 1965-66.

La Dorsale *see under* **L**

Isla Dorsey *see* **Dorsey Island**

Dorsey, Herbert Grove "Herb," Jr. b. Sept. 15, 1912, East Orange, NJ, but raised in Gloucester, Mass., and Washington, DC, son of physicist and U.S. Coast Survey research engineer Herbert Grove Dorsey (who invented the fathometer, among many other things, and who was later with the U.S. Weather Bureau for years) and his wife Julia Virginia Rowlett (known as Virginia). After Harvard and MIT, Herb Jr. worked for the U.S. Weather Bureau, at the Blue Hill Observatory and the Mount Washington Observatory. On Oct. 29, 1939, in the Bethlehem Chapel of Washington Cathedral, he married Elizabeth Copley "Betty" Ballantine, a senior at Wellesley College, and 3 weeks later he left Boston on the *Bear*, bound for Antarctica as meteorologist at East Base during USAS 1939-41, his son, Herb 3rd, being born while he was on the expedition. After the expedition, he returned to Washington, and in 1945 the growing family moved to Orange Co., Fla. He was a USAF captain in Greenland in 1947, stayed in the USAF until 1952, and then settled in Los Angeles, and later Ojai, Calif., conducted hydrological research on one of California's water projects, and finally became a printer. On March 10, 1964, in Ventura, Calif., he married Marian E. Barter Mifflin, and he died on July 28, 1977, at Selma, Oregon.

Dorsey Island. 70°22' S, 71°33' W. A small, rocky, mainly ice-covered island, 20 km long (originally thought to be 16 km long), it averages 2.5 km wide, in Wilkins Sound, off the W coast of Alexander Island. Discovered aerially by personnel from East Base during USAS 1939-41, and roughly mapped by them. Named for Herb Dorsey. It appears on a USAAF chart of 1942. US-ACAN accepted the name in 1947. The island was photographed aerially in 1947 during RARE 1947-48, and in 1959-60 Searle of the FIDS mapped it from these photos, plotting it in 70°00' S, 71°50' W. As such, it was accepted by UK-APC on March 2, 1961. The coordinates were corrected from U.S. Landsat images of Jan. 1973, and 1979. The Chilean gazetteer of 1974 accepted the name Isla Dorsey, and that is what the Argentines call it too.

Dorsey Mountains. 67°04' S, 67°04' W. Rising to about 2000 m, and running N-S, just E of Somigliana Glacier, in the N part of Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. They include Mount Lagally and Vanni Peak. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Noah Ernest Dorsey (1873-1959), U.S. physicist specializing in ice. The feature appears in the British gazetteer of 1961. US-ACAN accepted the name in 1965.

Mount Dort. 85°54' S, 158°53' W. A conspicuous, ice-free mountain, rising to 2250 m, projecting into the E side of Amundsen Glacier, just S of the mouth of Cappellari Glacier, in the Queen Maud Mountains. Discovered and first mapped during ByrdAE 1928-30. Named by US-ACAN in 1967, for Wakefield Dort, Jr. (b. 1923), geologist at McMurdo in 1965-66, and U.S. exchange scientist at Showa Station in 1967.

Dory Nunatak. 76°47' S, 161°18' E. An isolated sandstone nunatak, 1.7 km long, rising above the SW part of Flight Deck Névé, 2.5 km SW of Dotson Ridge, in the Convoy Range of Victoria Land. So named by a 1989-90 NZARP party because the feature appears to be sailing like a small boat in the midst of the glacier névé. NZ-APC accepted the name, and US-ACAN followed suit.

Punta Dos Monjes. 64°21' S, 62°58' W. The point on the SE extremity of Gamma Island, off which Normanna Reef lies, in the Melchior Islands, in the Palmer Archipelago. Named by the Argentines ("two-monks point").

Isla Dos Morros *see* **Two Summit Island**

Cerro Dos Patrullas *see* **Cone Nunatak**

Cabo Dos Peñones. 64°31' S, 61°51' W. A cape at the W foot of the Jacques Peaks, at the NW end of Reclus Peninsula, on the Danco Coast, on the W coast of Graham Land. Named by the Argentines.

Dospat Peak. 62°32' S, 60°09' W. A peak rising to about 500 m in Vidin Heights, 1 km ESE of Miziya Peak, 960 m S of Krichim Peak, and 300 m N of Ahtopol Peak, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the town of Dospat, in the Rhodope Mountains of Bulgaria.

Dospey Heights. 62°36' S, 61°08' W. Ice-free heights, about 2.6 km wide, and rising to 265 m (in Start Hill), on Ray Promontory, on Byers Peninsula, they extend 6 km southeastward from Essex Point and Start Point, on Livingston Island, in the South Shetlands. Mapped by the British in 1968, and by the Spanish in 1993. Named by the Bulgarians on Dec. 15, 2006, for the settlement of Dospey, in Rila Mountain, in southwestern Bulgaria.

Doss Glacier. 82°30' S, 162°21' E. A small glacier just E of Mount Boman, flowing into Nimrod Glacier from the N slopes of the Queen Elizabeth Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Edgar L. Doss (b. April 17, 1926, Arkansas. d. April 16, 1990, Dayton, Ohio), USARP glaciologist at Roosevelt Island, 1962-63.

Gora Dostoev'skogo *see* **Trerindane**

Mys Dostupnyj *see* **Dostupnyy Point**

Dostupnyy Point. 67°38' S, 46°08' E. A point, 13 km E of Molodezhnaya Station, on Alasheyev Bight, Enderby Land. Named by the Russians as Mys Dostupnyj. The name was translated by ANCA.

Dot Cliff. 78°19' S, 161°57' E. A small rock cliff at the W end of the snow-covered mountain spur between Dimick Peaks and Berry Spur, in the Royal Society Range of Victoria Land. Descriptively named by US-ACAN in 1995.

Dot Peak. 79°45' S, 159°11' E. A small eminence, rising to 1450 m, marking the highest point of Cooper Nunatak, at the E side of the Brown Hills. Mapped by VUWAE 1962-63, and named by them for its size. NZ-APC accepted the name, and ANCA followed suit. US-ACAN accepted the name in 1965.

Dotson Ice Shelf. 74°24' S, 112°22' W. About 50 km wide, between Martin Peninsula and Bear Peninsula, between the Bakutis Coast and the Walgreen Coast, in Marie Byrd Land. First mapped by USGS from air photos taken in Jan. 1947 during OpHJ 1946-47. Named by US-ACAN in 1967, for Lt. William A. Dotson, USN, with the Ice Reconnaissance Unit in Alaska, who died on the job in Nov. 1964.

Dotson Ridge. 76°46' S, 161°25' E. A ridge-like nunatak (the New Zealanders describe it as a sharp rock ridge), between 1.5 and 2.5 km long and rising to 1640 m above sea level, projecting above the ice surface E of Staten Island Heights, in the NE part of Flight Deck Névé, in the Convoy Range of Victoria Land. Mapped by USGS from ground surveys and USN air photos. Named by US-ACAN in 1965, for Morris F. Dotson, electrician at McMurdo in 1962. NZ-APC accepted the name.

Dott Ice Rise. 79°18' S, 81°48' W. A peninsula-like feature, 30 km long, ice-drowned except for the Barrett Nunataks, it extends eastward from the Heritage Range in the Ellsworth Mountains, and terminates at Constellation Inlet, at the SW edge of the Ronne Ice Shelf. Mapped by USGS from ground surveys conducted in 1961-62, and from USN air photos taken in 1965-66. Named by US-ACAN in 1966, for Robert H. Dott, USARP geologist and senior U.S. representative at General Bernardo O'Higgins Station in the summer of 1961-62.

Dotten *see* **Dotten Nunatak**

Dotten Nunatak. 71°57' S, 24°05' E. A nunatak, 3 km N of Smalegga Ridge, near the mouth of Gillock Glacier, SW of Brattnipane Peaks, in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Dotten (i.e., "the hump"). US-ACAN accepted the name Dotten Nunatak in 1966.

Rocher de Douanier *see* **Douanier Rock**

Douanier Rock. 66°49' S, 142°04' E. A small, rocky island close to the coast, just E of Point Alden, at the junction of Adélie Land and George V Land. It was discovered by the French under Liotard in 1949-50, during a trip to Cape Denison, and named by them as Rocher de Douanier, because of its relation to the coast (douanier means "customs man" in French). ANCA accepted the translated name Douanier Rock on Nov. 28, 1955, and US-ACAN followed suit in 1961.

Île Double *see* **Double Islands**

Double Curtain Glacier. 77°39' S, 163°31' E. A small glacier on the S slope of the Kukri Hills, just SW of Mount Barnes, flowing toward the mouth of Ferrar Glacier, between that glacier and the Taylor Valley, in Victoria Land. Mapped by, and named for its shape by, BAE 1910-13. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Double Islands. 66°45' S, 141°11' E. Two small rocky islands, close E of the tip of the Zélée Glacier Tongue, and 0.7 km NNW of the Triple Islands. Photographed aerially by OpHJ 1946-47. Charted and named by the French in 1949-51, as Île Double (i.e., "double island"). US-ACAN accepted the name Double Islands in 1956.

Doublefinger Peak. 76°53' S, 162°15' E. A peak, rising to 1050 m at the top of Hunt Glacier, it overlooks Granite Harbor, from which it is 6 km inland, just NE of Mount Marston, in Victoria Land. So named by BAE 1910-13, because a snow-filled cleft along the E face of the peak separates 2 dark rock exposures, giving the impression of 2 fingers. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

The Doublets. 66°25' S, 98°40' E. Rock outcrops located centrally on the W side of David Island, about 6 km S of The Triplets, on the coast of Queen Mary Land. Discovered and named by the Western Base Party of AAE 1911-14. US-ACAN accepted the name in 1967, and ANCA also accepted the name.

Doubtful Island. 77°44' S, 166°10' E. Between Cape Adare and Downshire Cliffs. In 1841 Ross reported it as being either an island or a large berg with mud and rocks on it. On Feb. 9, 1900, BAE 1898-1900, on the *Southern Cross*, passed close to its charted position, but saw no sign of it, and likewise BNAE 1901-04 in Jan. 1902, while aboard the *Discovery*. However, Shackleton's map in his book *Heart of the Antarctic*, published in 1909, shows it. In 1911-12, during BAE 1910-13, the *Terra Nova* passed several times close to the assigned position, but saw no sign of it, and the *Star II* (one of the whale catchers for the *Sir James Clark Ross*), in Jan. 1924, likewise. The existence of this island is, therefore, extremely doubtful. It appears, with the above name, in the 1958 Provisional NZ gazetteer.

Doug Automatic Weather Station. 82°18' S, 113°15' W. An American AWS, at an elevation of 1433 m, in the Whitmore Mountains, which was installed on Nov. 29, 1994, and continued to operate into 2009. Named for the pilot of a Twin Otter.

Mount Dougherty. 82°43' S, 161°05' E. Rising to 2790 m, between Mount Sandved and Mount Cara, on the main N-S ridge in the N part of the Queen Elizabeth Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Ellsworth C. Dougherty, USARP biologist at McMurdo in 1959-60 and 1961-62.

Dougherty, Daniel. b. 1804, New Orleans. In 1833 he found himself as 3rd mate on the *James Stewart*, a whaling brig out of St. John, New Brunswick, and on this voyage he went to NZ for the first time. On Sept. 9, 1837, he married Sarah McAuley, an Irish girl who had been in NB since childhood. He took her to Sydney on the *James Stewart*, which he had now purchased, and of which he was now skipper, and from 1838-39 Dougherty was off on another voyage, while his wife had a child in NZ. She made her way back to Canada, and Dougherty joined her there. He left St. John in Aug. 1839, and while on the way back from Antarctic waters, still on the *James Stewart*, he discovered Dougherty Island on May 29, 1841 (see the entry below). He and his family moved to NZ, where he became a shore whaler and, from 1849, a pilot in Wellington, and he died on Dec. 4, 1857. Sarah then ran boarding houses until she died in 1898.

Dougherty Island. Also called Dougherty's Island, and Swain's Island. On May 29, 1841 the New Brunswick whaler *James Stewart* was in the waters just north of 60°S, and her skipper, Capt. Daniel Dougherty, claimed he saw an island in 59°20' S, 120°20' W (due north of what would later be called Marie Byrd Land). On Sept. 4, 1859, Capt. Edwin Keates, in the *Louise*, said he sighted a dark, round island, about 80 feet high, in 59°21' S, 119°07' W. He also said that a large iceberg was aground on the NW side of the island. There were also other reports of sighting the island, but these were less authoritative. In 1909, on the homeward journey of the *Aurora* from BAE 1907-09, Capt. John King Davis made a thorough search for Dougherty Island, and also for Nimrod Island (q.v.), and failed to find either. Dougherty Island was then struck off the charts. Scott looked for it too, but couldn't find it. On Dec. 24, and 25, 1915, the *Carnegie* was right there, looking for it. On Dec. 24 they thought they'd found it, but it was a huge iceberg. They could see for 35 miles, clear weather, and no land. Capt. Larsen, in the *Norvegia*, in early 1929, couldn't find it either.

Doughty, John *see* **USEE 1838-42**

Cadena Douglas *see* **Douglas Range**

Cape Douglas. 80°55' S, 160°52' E. An ice-covered cape (the New Zealanders call it a rocky projecting headland) marking the S side of the entrance to Matterson Inlet, between Barne Inlet and Beaumont Bay, on the W side of the Ross Ice Shelf. Discovered by BNAE 1901-04, and named by them for Sir Archibald Lucius Douglas (1842-1913), lord of the Admiralty, who persuaded the Admiralty to assign naval seamen to the expedition. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Montes Douglas *see* **Douglas Range**

[1]**Mount Douglas**. 67°39' S, 50°00' E. A mountain, 3 km NNW of Simpson Peak, in Enderby Land. Plotted from ANARE air photos taken in 1956. Named by ANCA for Ian E. Douglas, of Melbourne, officer-in-charge of Davis Station for the winter of 1960.

[2]**Mount Douglas**. 76°31' S, 161°18' E. A striking, pyramidal peak rising to 1750 m near the head of Fry Glacier, in fact on the divide between that glacier and Mawson Glacier. It has a spire-like rock summit at the S end of a narrow snow ridge, and overlooks almost the entire watersheds of the Fry and Mawson. The NZ Northern Survey Party of BCTAE established a survey station on its summit on Dec. 11, 1957, and named the feature for Murray Douglas. NZ-APC accepted the name, and US-ACAN followd suit in 1962.

Douglas, George Vibert. b. July 2, 1892, in Montreal. A geologist, he served in World War I in France and Flanders as a highly decorated captain in the 17th Northumberland Fusiliers. He was geologist on the *Quest*, 1921-22; it was Douglas who erected the memorial cross to Shackleton at Grytviken. He taught at Harvard until 1926, then became a commercial geologist, and finally, in 1932, professor of geology at Dalhousie University, retiring in 1957. He married Olga Margaret Crichton. He died on Oct. 8, 1958, in Toronto.

Douglas, Gilbert Eric. Known as Eric. b. Dec. 6, 1902, Parkville, Melbourne, 2nd son of watchman Gilbert Douglas and his wife Bessie Thompson. In 1920 he joined the Australian Air Corps, and in 1921 the RAAF, as an aircraftman, class II. He became a flyer, an airman pilot in 1927, and a sergeant in 1928. He was flying officer on BANZARE 1929-31, for both halves of the expedition. He became an instructor after this expedition, and on Jan. 6, 1934, at South Yarra, married Ella Sevior. That was the year he was promoted to flight lieutenant, and in Dec. 1935 he led the RAAF contingent on *Discovery II* to look for Lincoln Ellsworth and Herbert Hollick-Kenyon in Antarctica. Douglas and Ellsworth became great friends. Going into engineering, he worked his way through the ranks to group captain, retiring in 1948 as CO of RAAF Amberley. He died of heart disease at Heidelberg, Vic., on Aug. 4, 1970.

Douglas, Murray Hamilton. b. 1926, Dunedin, NZ. Assistant chief guide at the Hermitage, on Mount Cook, in NZ, when he was selected for BCTAE 1956-58, as assistant dog handler, tractor driver, and mechanic. He was originally going to be part of the summer party only, but Ed Hillary picked him to winter-over. He was a member of the NZ Northern Survey Party during that expedition.

[1]**Douglas Bay**. 67°47' S, 66°43' E. A crescent shaped bay, about 1.3 km across at the base of, and between the arms of, Scullin Monolith, on the Mawson Coast of Mac. Robertson Land. Named by ANCA on May 1, 2007.

[2]**Douglas Bay**. 68°40' S, 70°30' E. A bay. The coordinates would place it SW of Mackenzie Bay, in the Amery Ice Shelf. The SCAR gazetteer says this feature was named by the Russians. *See* **Douglas Point** for comments about that feature that would, in general terms, fit this one.

Douglas Gap. 71°05' S, 167°44' E. A glacier-filled gap, 2.5 km wide, between Hedgpeth Heights and Quam Heights, in the Anare Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Donald S. Douglas, USARP biologist at Hallett Station, 1959-60 and 1960-61.

Douglas Glacier. 73°31' S, 61°45' W. Flows ENE through the central Werner Mountains, in Palmer Land, and merges with Bryan Glacier, just N of Mount Broome, where it enters New Bedford Inlet, at the Lassiter Coast. Mapped by USGS from ground surveys conducted in 1961-62, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Everett L. Douglas, USARP biologist at Palmer Station, 1967-68. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Douglas Inlet *see* **New Bedford Inlet**

Douglas Islands. 67°23' S, 63°22' E. Two small islands, with 3 rocky outliers, 20 km NW of Cape Daly, off the coast of Mac. Robertson Land, about 33 km NE of Mawson Station. Discovered aerially from the *Discovery* on Dec. 31, 1929, during BANZARE 1929-31, and plotted in 66°40' S, 64°30' E. Mawson named them for Vice Admiral Percy Douglas (*see also* **Douglas Range**), (1876-1939), hydrographer of the RN, 1924-32, a member of the Discovery Committee, 1928-39, and a member of the advisory committee for BGLE 1934-37. In 1931 the islands were re-plotted in 67°20' S, 63°32' E. US-ACAN accepted the name in 1947. However, Norwegian explorers raised doubts about the existence of these islands, and in 1956 an ANARE sledge party led by Peter Crohn could not find them in the new position, but did find 2 uncharted islands in 67°23' S, 63°22' E, which they named the Douglas Islands. ANCA accepted this, as did US-ACAN.

Douglas Peak. 66°24' S, 52°28' E. Rising to 1524 m, 17.5 km (the Australians say about 20 km) SW of Mount Codrington, and 13 km E of Mount Marr, in Enderby Land. Discovered on Jan. 13 or 14, 1930 by BANZARE 1929-31, and named by Mawson for Eric Douglas. US-ACAN accepted the name in 1947, and ANCA followed suit.

Douglas Peaks. 80°00' S, 81°25' W. A group of peaks standing S of Plummer Glacier, in the SE end of the Heritage Range, in the Ellsworth Mountains. Named by the University of Minnesota Ellsworth Mountains Party of 1962-63, for Lt. Cdr. John Douglas, USN, pilot who flew one of the party out for an appendectomy. US-ACAN accepted the name in 1964.

Douglas Point. 66°30' S, 162°43' E. The SCAR gazetteer says this feature was named by the Russians, but why the Russians would name a feature thus is a mystery. It is hard to say what or where this feature is. It is certainly in the Balleny Ialands, but it is difficult to be more specific. It may be the Russian name for Cape Scoresby or Cape Beall, or neither. Given the paucity of information, it remains, at this stage, an ignis fatuus.

Douglas Range. 70°00' S, 69°35' W. A sharp-crested range, with peaks rising to about 3100 m (in Mount Stephenson), it extends in a NW-SE direction for about 120 km (it was once thought to extend for only 56 km) from Mount Nicholas to Mount Edred, i.e., between 69°20' S and 70°40' S, it overlooks the N part of George VI Sound, and forms a steep escarpment on the NE coast of Alexander Island. In Jan. 1909 two of the peaks were seen from a distance by FrAE 1908-10, and, their true nature not being known at that time, named by Charcot as Île Gordon Bennett (i.e., what became Mount Edgell) and Île Guernsey (i.e., what became Mount Guernsey). They may also have seen Mount Nicholas, which forms the N limit of the range. It was found to be a range by Ellsworth on his flyover on Nov. 23, 1935 (he saw the S part), and was first roughly mapped from his air photos by U.S. cartographer W.L.G. Joerg in 1936. On March 13, 1936 it was seen again from the air, by BGLE 1934-37, roughly mapped by them from the E side (i.e., from George VI Sound), and named by them for Vice Admiral Sir Percy Douglas (*see* **Douglas Islands**). It appears on Stephenson's 1940 map of that expedition. It appears on an Argentine chart of 1946 as Cordón Douglas, on a 1947 Chilean chart as Cordillera Douglas, and on a 1949 Argentine chart as Cadena Douglas (all of which mean the same thing). US-ACAN accepted the name Douglas Range in 1947. RARE 1947-48 aerially photographed the entire range, Fids from Base surveyed it from the ground in 1948-49, and FIDASE re-photographed it aerially in 1956-57. Mapped by Searle of the FIDS in 1959-60, using mainly the RARE aerial photos of 1947-48. It appears on a 1962 Chilean chart as Montes Douglas, and that was the name accepted by the 1974 Chilean gazetteer. Interestingly, the Chilean descriptor says it was probably named for the Douglas DC-6B aircraft which made the first commercial flight over Chilean bases on Dec. 22, 1956. As for the Argentines, today they call it Cadena Douglas (which means the same thing).

Mount Douglass. 77°19' S, 145°20' W. An ice-covered mountain, 13 km ESE of Mount Woodward, on the S side of Boyd Glacier, in the Ford Ranges of Marie Byrd Land. Discovered on aerial trips in 1934 during ByrdAE 1933-35. Named by US-ACAN in 1947, for Malcolm Douglass.

Douglass, Malcolm Chetwode "Malc." Also known as "Doug." b. July 15, 1903, East Orange, NJ, son of coach engineer John L. Douglass and his wife Mary. According to Jack Richardson (see later in this article), "his early home life was not a normal one." He worked in a New York bank for 3 years, then spent 12 years as a Boy Scout executive in NY, Ohio, and NJ. Richardson tells us that some time before 1937 Douglass had a "most unhappy love affair," and on Jan. 8, 1937, he was involved in a car smash, in which he broke his back and suffered brain concussion. There were two long-term damaging results of these events. One was the headaches that would plague him for the rest of his life, and the other was the fatalistic depression that governed him from this time on. Not long after the crash, he tried to kill himself with carbon monoxide in his car. He was unemployed in April 1939 when, through the influence of fellow Boy Scout Paul Siple (Douglass it was who had introduced Siple to Byrd), he became an (unpaid) assistant in the preparation of USAS 1939-41. On July 1, 1939, he was taken onto the books of the expedition, as dog driver and assistant meteorologist, eventually boarding the *North Star* bound for West Base and the 1940 winter. On July 26, 1940, during the winter-over, Douglass walked out of the base. He was presumed to have killed himself, but 44 hours later he showed up, "a weird, shuffling, half-frozen wraith of a figure." He lost a toe. On Jan. 12, 1941, he threatened suicide again, and had to be locked up on the *Bear*. He soon recovered, and was cleared for duty (details of the case can be found in the reports by Siple, Vernon Boyd, and the medical board of the three expedition doctors). Douglass also became attached to a Malemute husky named Lucky, who had been born on the base, but whose paws were wrecked in a crevasse fall. However, on his return to the USA, he and Lucky did the Antarctic lecture circuit together, but were eventually separated. On Jan. 5, 1943, at the age of 40, Malcolm joined the Army as a private, serving as an Army ski instructor at Camp Hale, in Colorado, and who should he find there, serving in the K-9 Corps, but Lucky. Together he and Lucky moved on to a camp in Montana, which is where Lucky stayed while Malcolm transferred to bases in Oregon, California, and Alaska. He found out that Lucky was to be shot, so arranged with his former commanding officer to buy the dog at auction, for as much as $300 if necessary, and Lt. James Patnode, aged 25, agreed to be Malcolm's proxy bidder. By strange coincidence, Lucky sold for $300, and Malcolm took possession. However, Lt. Patnode had only paid $7.50 for the dog, and this all came out, resulting in the officer being cashiered. But Malcolm got his money back, and Lucky went to Malcolm's mother's home, in East Orange. After the war Malcolm's Antarctic gold medal was reduced to bronze because

of "moral turpitude," and he returned to East Orange, never married, and lived at 21A Melmore Gardens, becoming the head of the East Orange Veterans Housing Project. On Sept. 22, 1951, police found a car parked 100 feet from the Flatbrookville Road, in Wallpack, near East Orange. There was a hose, one end of which was in the exhaust pipe, and the other end was inside the car. Malcolm was inside the car too, dead. His suicide note mentioned his money problems, and also requested that his body be sent to the Mayo Clinic for research into migraine headaches.

Douguet, Max-Henri-Jacques. b. July 16, 1903, Port-Launay, France. Naval officer, hydrographer and cartographer, who was in Greenland in 1932-33. He was in Antarctica, as commander of the *Commandant Charcot* during the French Polar Expeditions of 1948-51. He was later an admiral, on the committee for national defense, and died in 1989. His biography, *Amiral Max H. Douguet*, was written by René G. Hervieu, in 1994.

Douilliet, Victor-Pierre-Joseph. b. Jan. 31, 1804, Paris. Pilot on the *Astrolabe* during FrAE 1837-40. He was left at hospital in Bourbon on the way to back to France in 1840.

Mount Doumani. 85°49' S, 137°38' W. A prominent mountain rising to 3240 m, between Johns Glacier and Kansas Glacier, at the N side of the Watson Escarpment. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for George Doumani.

Doumani, George Alexander. b. April 26, 1929, Acre, Palestine. American geologist many times in Antarctica. He worked for Shell and Aramco in the 1950s, often in Saudi Arabia. He was geologist and seismologist at Byrd Station, 1958-59, was on the Executive Committee Range Traverse of Feb. 1959, and wintered-over at Byrd that year (1959). He was part of the Marie Byrd Land Traverse Party of 1959-60. In 1960-61 and again in 1961-62 he was in the Horlick Mountains. In 1962-63 he was at Mount Weaver, and in 1964-65 was back in the Horlick Mountains. In 1985 he married Anne Davenport, and from 1985 to 1987 was director of the Peace Corps in Yemen.

Doumani Peak. 77°07' S, 126°03' W. A subsidiary peak, rising to 2675 m, on the S slopes of Mount Sidley, in the Executive Committee Range of Marie Byrd Land. Named by US-ACAN in 1962, for George Doumani.

Île Doumer *see* **Doumer Island**

Isla Doumer *see* **Doumer Island**

Mount Doumer *see* **Doumer Hill**

Doumer Hill. 64°51' S, 63°34' W. A snow-covered, pyramidal peak, rising to 515 m (the British say 510 m, and the Chileans say 508 m), it is the highest point on Doumer Island, off the SE part of Anvers Island, in the Palmer Archipelago. Charted by FrAE 1903-05, and re-charted by an RN Hydrographic Survey unit in 1952, on the *John Biscoe*. They named it Mount Doumer, in association with the island, and it appear as such on Frank Hunt's 1952 chart of that survey. ArgAE 1952-53 called it Monte Capitán, and it appears as such on their 1953 chart. Following another RN Hydrographic Survey unit survey in 1956-57, it was renamed Doumer Hill by UK-APC, on July 7, 1959. US-ACAN accepted the name in 1960. The Argentines changed their name too, to Monte López. *See also* **Stokes Hill**.

Doumer Island. 64°51' S, 63°34' W. An island, 7 km long and 3 km wide, at the SW entrance to Neumayer Channel, between the S portions of Wiencke Island and Anvers Island, in the Palmer Archipelago. It is surmounted by Doumer Hill, and Cape Kemp forms the SW tip of the island, that SW coast being made up of high ice cliffs, inaccessible from the sea. The extreme NE of the island is low, rocky, accessible, and ice-free in summer. Discovered by BelgAE 1897-99. Charted in 1904-05 by FrAE 1903-05, and named by Charcot as Île Doumer, for Paul Doumer (1857-1932), president of the French Chamber of Deputies, and (later) president of France, 1931-32. Surveyed by the Discovery Investigations in 1927, it appears on their 1929 chart as Doumer Island, but on a 1943 U.S. Hydrographic Office chart it is misspelled as Doumier Island. It was surveyed again by Operation Tabarin personnel from Port Lockroy Station in 1944. US-ACAN accepted the name Doumer Island in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a Chilean chart of 1947 as Isla Doumer, and on a 1953 Argentine chart misspelled as Isla Doumier, but the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer was Isla Doumer.

Dourille, Jean-Baptiste-Paul. b. June 24, 1823, Valence. Cabin boy on the *Astrolabe* during FrAE 1837-40.

[1]**The *Dove***. A 58-ton square-sterned British smack, built in Ipswich in 1807, and owned by Daniel Bennett & Sons, of London. In the 1818-19 season she was commanded by George Powell in the South Seas (he had taken command on Aug. 19, 1818) on a major sealing expedition, going to South Georgia. She arrived back in London on July 19, 1819. She was in the South Shetlands for the 1820-21 season, commanded by John Wright. On George Powell's sealing expedition to the South Shetlands, for the 1821-22 season, she was commanded by John Wright (Powell skippered the *Eliza*). With the *James Monroe* under American Nat Palmer, Powell's expedition discovered the South Orkneys on Dec. 6, 1821. She was back in the South Shetlands for the 1822-23 season, again under Wright. She got back to London on June 20, 1823, with 2100 sealskins. Her skipper from 1823 to 1826 (although not in Antarctic waters) was David Rankin (q.v.).

[2]**The *Dove***. A whale catcher working for the *Tioga* in the South Orkneys in 1912-13.

[3]**The *Dove***. British yacht, skippered by Larry Tyler, which visited the Antarctic Peninsula in 1998-99 and 1999-2000.

Estrecho Dove *see* **Dove Channel**

Dove Channel. 60°44' S, 45°35' W. A narrow marine channel, running NW-SE, and bisecting the Oliphant Islands, between the 2 larger islands on the N and the main group of smaller islands and rocks on the S, 0.6 km S of Gourlay Peninsula (the SE tip of Signy Island), in the South Orkneys. Surveyed in 1933 by the Discovery Investigations, and named by them as Dove Strait, for either George Powell's sealing vessel of the early 1820s, or the whale catcher of 1912-13. It appears as such on their charts of 1933 and 1934. It appears on a 1945 Argentine chart as Estrecho Dove (which means the same thing), and that was the name accepted by the 1970 Argentine gazetteer. Due to its small size, UK-APC accepted the name Dove Channel on on March 31, 1955, and ACAN followed suit that year.

Dove Strait *see* **Dove Channel**

Mount Dover. 83°46' S, 55°50' W. Rising to 1645 m, it surmounts the SE end of Gale Ridge, where that ridge abuts the Washington Escarpment, in the Neptune Range of the Pensacola Mountains. Surveyed from the ground by USGS in 1963-64, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1965, for James H. Dover, USGS geologist with the Patuxent Range field party in 1962-63. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Dovers. 70°13' S, 65°52' E. An Australian refuge hut on the Farley Massif, in the Athos Range of the Prince Charles Mountains. Named for Bob Dovers.

Cape Dovers. 66°29' S, 97°08' E. A prominent cape fronting the Shackleton Ice Shelf, 8 km S of Henderson Island, in Queen Mary Land. Discovered by the Western Base Party of AAE 1911-14. Named by Mawson for George Dovers. US-ACAN accepted the name in 1947, and ANCA followed suit.

Mount Dovers. 70°08' S, 64°59' E. A high, exposed brown rock ridge with a very steep N face, it trends E-W, and rises to 2027 m, 3 km NW of Mount Dwyer, in the Athos Range of the Prince Charles Mountains. First seen from the Stinear Nunataks in 1954 by Bob Dovers' ANARE Southern Party, and named by ANCA for him. Its position was plotted in Dec. 1955 by Rob Lacey while part of the ANARE Southern Party led by John Béchervaise. US-ACAN accepted the name in 1962.

Dovers, George Harris Serjeant. b. 1887, Bombala, NSW, son of William Anthony Dovers and his wife Harriet Elizabeth D. Curry. He was a surveyor with the Commonwealth Government Office in Sydney when he became cartographer and surveyor on AAE 1911-14. In 1916 he married Ursula Dabbs. He died on July 7, 1971, in St. Leonards, Sydney. He was the father of Bob Dovers.

Dovers, Robert George "Bob." b. May 6, 1921, son of George Dovers (*see* above) and his wife Ursula Dorothy Dabbs, and brother of the future Admiral Bill Dovers, he was also a surveyor and cartographer. After fighting as a com-

mando in World War II, he joined the first ANARE party that went to Heard Island (53°S), as 2nd-in-command for the winter of 1948. He spent 6 months surveying on Macquarie Island in 1949-1950, and in 1951-52 was an observer, surveyor, and dog-handler on loan to the French Polar Expedition, in Adélie Land, wintering-over at Pointe Géologie after the fire at the main base. He led the ANARE that set up Mawson Station, 1953-55, leading the first wintering-over party there in 1954. His wife, Wilma, had a glacier named for her (*see* **Wilma Glacier**). He died on Dec. 10, 1981, in Sydney.

Dovers Glacier *see* **Mulebreen**

Dovers Nunatak *see* **Dovers Peak**

Dovers Peak. 69°42' S, 64°26' E. Also called Dovers Nunatak. Rising to 2030 m in the W part of the Stinear Nunataks, in Mac. Robertson Land. Discovered by Bob Dovers' ANARE Southern Party in 1954, and named by ANCA for him. US-ACAN accepted the name in 1961.

Dovizio *see* **Dovizio Rock**

Islote Dovizio *see* **Dovizio Rock**

Dovizio Rock. 62°27' S, 59°43' W. A rock off Spark Point, in the NW entrance to Discovery Bay, Greenwich Island, in the South Shetlands. Charted by ChilAE 1948-49, who named it Islote Dovizio, after Sgt. Dovizio, a member of the expedition. It appears as such on a Chilean chart of 1951. UK-APC accepted the translated name on May 11, 2005. The British were the latest to replot this feature, in late 2008.

Dovzboen *see* **Lay-brother Rock**

Dow, Steven Thomas "Steve." b. July 28, 1968, Colchester, Essex, son of Leslie Thomas Dow and his wife Edith A. Seeley. BAS plumber who, on his way south for his first Antarctic assignment, a summer-over at Halley Bay Station, was offered a winter-over instead at Rothera Station, in 1992. He wintered-over again at Rothera in 1993, and then spent a third winter at Halley Bay Station in 1994.

Dow Nunatak. 75°01' S, 136°14' W. A small, relatively isolated nunatak, 5.5 km NW of Mount Sinha, in the SW part of McDonald Heights, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Charles R. Dow, glaciologist at Byrd, 1969-70.

Dow Peak. 71°03' S, 163°04' E. A peak, 3 km ESE of Mount Sturm, in the Bowers Mountains. Named by NZGSAE 1967-68 (which was working in northern Victoria Land that season) for its senior geologist, John A.S. Dow. US-ACAN accepted the name in 1969. Mr. Dow later lived for years in Australia, retiring in 2005.

Mount Dowie. 70°42' S, 66°00' E. A ridge-like mountain, about 6 km long, which rises to a central crest, 6 km W of Mount Hollingshead, in the N part of the Aramis Range, in the Prince Charles Mountains. Discovered by Bill Bewsher's ANARE Southern Party in Jan. 1957, and named by ANCA for Donald Alexander "Don" Dowie (b. Sept. 24, 1917, Adelaide), medical officer at Mawson Station in 1956. He also built the new aircraft hangar there that season. US-ACAN accepted the name in 1962. Dr. Dowie had fought as a pilot in the Malayan campaign, during World War II, and was the first Australian to be taken prisoner of war by the Japanese. He was still alive in 2004.

Mount Dowling. 72°31' S, 98°03' W. A small mountain overlooking the S coast of Thurston Island, 21 km E of Von der Wall Point, in the Walker Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966, and originally plotted in 72°27' S, 98°08' W. Named by US-ACAN in 1968, for Forrest Leroy Dowling (b. 1934), University of Wisconsin geophysicist at Byrd Station in 1960-61, there to make weather observations and other scientific studies under a grant from the NSF, and who was on the Byrd Station-South Pole Traverse of that season. The feature has since been re-plotted.
